02 41 16 Structure Demolition

DIVISION 03 – CONCRETE
03 33 00 Cast-In Place Concrete

DIVISION 04 – MASONRY
04 20 00 Unit Masonry

DIVISION 05 – METALS
05 12 00 Structural Steel Framing
05 21 00 Steel Joist Framing
05 31 00 Steel Decking
05 40 00 Cold-Formed Metal Framing
05 50 00 Metal Fabrications
05 51 00 Metal Pan Stairs
05 52 13 Metal Railings

DIVISION 06 – WOOD, PLASTICS, AND COMPOSITES
06 10 00 Rough Carpentry
06 16 00 Sheathing

06 40 23 Interior Architectural Woodwork

DIVISION 07 – THERMAL AND MOISTURE PROTECTION
07 10 00 Damp-Proofing and Waterproofing
07 21 00 Thermal Insulation
07 27 26 Fluid Applied Air Barrier Membrane
07 41 13 Metal Roof Panels
07 42 43 Composite Metal Panels
07 53 23 Epdm Roofing
07 62 00 Metal Flashing and Trim
07 71 00 Manufactured Roof Specialties
07 84 13 Penetration Firestopping
07 92 00 Joint Sealants
07 95 00 Expansion Control

DIVISION 08 – OPENINGS
08 11 13 Hollow Metal Doors and Frames
08 14 16 Flush Wood Doors
08 33 23 Overhead Coiling Doors
08 33 26 Overhead Coiling Grilles
08 33 26.13 Overhead Coiling Grilles - Egress
08 41 13 Aluminum Framed Entrances and Storefronts
08 44 13 Aluminum Curtain Wall
08 71 00 Door Hardware
08 80 00 Glazing
08 88 53 Security Glazing

DIVISION 09 – FINISHES
09 21 16 Gypsum Board Systems
09 30 00 Tiling
09 51 00 Acoustical Ceilings
09 64 66 Wood Athletic Flooring
09 65 00 Resilient Flooring
09 66 23 Epoxy Terrazzo Flooring
09 67 23 Resinous Flooring
09 68 13 Tile Carpeting
09 72 00 Wall Coverings
09 84 13 Fixed Sound Absorptive Panels
09 91 33 Paintings and Coatings

DIVISION 10 – SPECIALTIES
10 11 00 Visual Display Surfaces
10 14 00 Signage
10 21 13 Toilet Compartments
10 21 23 Cubicle Curtains and Track
10 22 26 Operable Partition
10 28 13 Toilet Accessories
10 44 00 Fire Protection Specialties
10 75 00 Flagpoles

DIVISION 11– EQUIPMENT
11 40 00 Food Service Equipment
11 61 43 Stage Curtains
11 66 23 Gymnasium Equipment

DIVISION 12– FURNISHINGS
12 24 13 Window Shades
12 32 16 Manufactured Plastic Laminate Clad Casework
12 66 00 Telescoping Stands - Alternate

DIVISION 14 – CONVEYING EQUIPMENT
14 24 00 Hydraulic Elevators

DIVISION 20 – MECHANICAL
20 01 00 General Provisions – Mechanical
20 02 00 Scope of the Mechanical Work
20 03 00 Shop Drawings, Descriptive Literature, Maintenance Manuals, Parts Lists, Special Keys and Tools
20 05 00 Coordination Among Trades, Connection of Equipment
20 11 00 Sleeving, Cutting, Patching and Repairing
20 12 00 Excavation, Trenching, Backfilling & Grading
20 13 00 Pipe, Pipe Fittings, and Pipe Support
20 13 20 Geothermal (Earth Coupled) Loop Piping System
20 21 00 Valves and Cocks
20 21 10 Access to Valves, Equipment, Filters, Etc.
20 22 00 Insulation - Mechanical
20 23 00 Thermometers and Others, Monitoring Instruments
20 24 00 Identifications, Tags, Charts, Etc.
20 25 00 Hangers, Clamps, Attachments, Etc.
20 31 00 Testing, Balancing, Lubrication and Adjustments

DIVISION 21 – FIRE SUPPRESSION
21 01 00 Fire Protection System

DIVISION 22 – PLUMBING
22 01 00 Plumbing Specialties
22 02 00 Plumbing Fixtures, Fittings and Trim
22 03 00 Plumbing Equipment

DIVISION 23 – HEATING, VENTILATING AND AIR CONDITIONING (HVAC)
23 02 00 HVAC Equipment and Hydronic Specialties
23 03 00 Condensate Drainage System
23 08 00 Fundamental Commissioning of HVAC
23 11 00 Registers, Grilles, Diffusers and Louvers
23 12 00 Sheet Metal and Flexible Duct

DIVISION 25 – INTEGRATED AUTOMATION
25 01 00 Motor Starters
25 02 00 Controls - Direct Digital

DIVISION 26 – ELECTRICAL

26 05 01 General Provisions - Electrical
26 05 02 Scope of the Electrical Work
26 05 03 Shop Drawings, Literature, Manuals, Parts Lists and Special Tools
26 05 04 Sleeving, Cutting, Patching and Repairing
26 05 05 Demolition, Restoration and Salvage
26 05 06 Lightning Protection
26 05 08 Coordination Among Trades, Systems Interfacing and Connection of Equipment Furnished Others
26 05 19 Conductors, Identifications, Splicing Devices and Connectors
26 05 26 Grounding and Bonding
26 05 29 Hangers and Supports for Electrical Systems
26 05 31 Cabinets, Outlet Boxes and Pull Boxes
26 05 33 Raceways and Fittings for Electrical Systems
26 05 44 Excavation, Trenching, Backfilling and Grading
26 05 53 Identifications
26 05 73 Electrical Studies
26 09 43 Digital Network Lighting Control Devices
26 24 00 Electrical Distribution Equipment
26 27 26 Wiring Devices and Plates
26 32 13 Natural Gas Emergency Generator
26 32 15 Emergency Generator Docking Station
26 36 00 Automatic Transfer Switches
26 43 13 Surge Suppression Systems
26 51 13 LED Lighting Fixtures and Lamps
26 55 61 Theatrical Lighting Systems

DIVISION 27 – COMMUNICATIONS

27 06 10 Voice/Data/Video Communications System
27 23 02 Audiovisual Systems
27 51 23 Integrated IP Based Safety and Intercommunication System with Classroom Sound Enhancement
27 53 13 GPS Wireless Clocks Systems
27 53 19 Bi-Directional Amplifier (BDA) Testing
27 53 19 Emergency Responder Communication Enhancement System

DIVISION 28 – ELECTRONIC SAFETY AND SECURITY

28 13 00 Access Control System
28 31 00 Addressable Fire Alarm System
28 48 00 Two-Way Emergency Communication System

DIVISION 31 – EARTHWORK

31 05 13 Soils for Earthwork
31 05 16 Aggregates for Earthwork
31 05 19.13 Geotextiles for Earthwork
31 10 00 Site Clearing
31 20 00 Earth Moving
31 22 13 Rough Grading
31 23 16 Excavation
31 23 16.13 Trenching

31 23 16.26 Rock Removal
31 23 19 Dewatering
31 23 23 Fill
32 23 23.33 Flowable Fill
31 25 00 Erosion Controls
31 37 16.13 Rubble-Stone Riprap
31 50 00 Excavation Support and Protection

DIVISION 32 – EXTERIOR IMPROVEMENTS
32 05 13 Soils for Exterior Improvements
32 05 16 Aggregates for Exterior Improvements
32 11 23 Aggregate Base Course
32 12 16 Asphalt Paving
32 13 13 Concrete Paving
32 13 73 Concrete Paving Joint Sealants
32 16 23 Sidewalks
32 17 13 Parking Bumpers
32 17 23 Pavement Markings
32 17 26 Tactile Warning Surfacing
32 18 16.13 Playground Protective Surfacing
32 31 13 Fences and Gates
32 31 19 Decorative Metal Fences and Gates
32 31 29 Wood Fences and Gates
32 33 00 Site Furnishings
32 91 13 Soil Preparation
32 91 19 Landscape Grading
32 92 00 Turf and Grasses
32 92 19 Seeding
32 92 23 Sodding
32 93 00 Plants

DIVISION 33 – UTILITIES
33 01 10.58 Disinfection of Water Utility Piping Systems
33 01 30.86 Manhole Rim Adjustment
33 05 00 Common Work Results for Utilities
33 05 09.33 Thrust Restraint for Utility Piping
33 05 61 Concrete Manholes
33 14 16 Site Water Utility Distribution Piping
33 14 19 Valves and Hydrants for Water Utility Service
33 31 00 Sanitary Utility Sewerage Piping (With Testing)
33 31 15 Site Sanitary Sewerage Piping
33 42 00 Stormwater Conveyance
33 42 00.01 Stormwater Conveyance for Infrastructure
33 42 13 Stormwater Culverts
33 47 13 Pond and Reservoir Liners

END OF SECTION 00 01 00

SECTION 00 11 13 – ADVERTISEMENT FOR BIDS

The Upper Dublin School District is soliciting sealed bids for Work Scope 1 through 4 for the New Jarrettown Elementary School Project located in Upper Dublin Township, Montgomery County, Pennsylvania. Sealed Bids for all work scopes shall be delivered to Ryan Murphy, Project Manager, no later than 9:00 AM prevailing time on Tuesday, December 1st, 2026, to the Upper Dublin School District Building, 1580 Ft Washington Ave, Maple Glen, PA 19002. The bid opening will be held at Upper Dublin Township Municipal Building, located at 801 Loch Alsh Ave, Fort Washington, PA 19034 at 10:00 AM prevailing time on Tuesday, December 1st, 2026 at which time bids will be publicly opened and read.

A MANDATORY pre-bid conference for ALL work scopes will be held at Upper Dublin Township Municipal Building, located at 801 Loch Alsh Ave, Fort Washington, PA 19034 at 10:00 AM prevailing time on Thursday, November 12th, 2026. Attendance by all Prime Bidders is mandatory.

Construction will be bid for the following Work Scopes.

Work Scope No. 1: General Construction
Work Scope No. 2: Electrical Construction
Work Scope No. 3: Mechanical Construction
Work Scope No .4: Plumbing/Fire Protection Construction

The Project Architect is ALLOY5, 530 W Broad St. Bethlehem, PA 18018, Phone: 610-419-4055. The Project Construction Manager is ICS Consulting, LLC, 1400 North Providence Road, Building 2, Suite 4045 Media, PA 19063, Phone: 610-424-4172.

Work Scope 1 through 4: Documents will be available digitally through the ICS Project Procore site. For electronic access to the bidding documents, contact the Project Coordinator, Theresa Kalman, at theresa.kalman@cmta.com. Bidders must supply the following information with their request for documents: the work scope(s) you are bidding on, company name, contact person, complete address, phone and cellular numbers, and email address. **Documents will be available on October 29th, 2026**.

This Project is subject to the Pennsylvania Prevailing Wage Act, (43 P.S. §§ 1651 et seq), as amended and supplemented. The Contractor shall comply with all requirements of the Act, and reference as made to the wage rates applicable to this Project.

Upper Dublin School District

Andrew Lechman, Chief Financial Officer

TO APPEAR: October 29th, 2026
November 5th, 2026
November 11th, 2026

SECTION 00 11 53 - CONTRACTOR QUALIFICATION STATEMENT

1.01 GENERAL

A. The AIA Document A305-2020 series forms with corresponding Exhibits that follow this page as listed below shall be completed by the Contractor and submitted in conjunction with Bids. Substitute forms will not be acceptable. All forms shall be fully executed by an authorized person and notary seals applied where indicated.

1. A305-2020, Contractors Qualification Statement
2. A305-2020, Exhibit A – General Information
3. A305-2020, Exhibit B – Financial and Performance Information
4. A305-2020, Exhibit C – Project Specific Information
5. A305-2020, Exhibit D – Contractor's Past Project Experience. Contractor may duplicate Exhibit D for as many project examples as needed.

END OF SECTION 00 11 53

AIA® Document A305® – 2020 Exhibit A

General Information

This Exhibit is part of the Contractor's Qualification Statement, submitted by and dated the day of in the year
(In words, indicate day, month and year.)

ADDITIONS AND DELETIONS:
The author of this document may have revised the text of the original AIA standard form. An *Additions and Deletions Report* that notes revisions to the standard form text is available from the author and should be reviewed. A vertical line in the left margin of this document indicates where the author has added to or deleted from the original AIA text.

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

§ A.1 ORGANIZATION
§ A.1.1 Name and Location
§ A.1.1.1 Identify the full legal name of your organization.

§ A.1.1.2 List all other names under which your organization currently does business and, for each name, identify jurisdictions in which it is registered to do business under that trade name.

§ A.1.1.3 List all prior names under which your organization has operated and, for each name, indicate the date range and jurisdiction in which it was used.

§ A.1.1.4 Identify the address of your organization's principal place of business and list all office locations out of which your organization conducts business. If your organization has multiple offices, you may attach an exhibit or refer to a website.

§ A.1.2 Legal Status
§ A.1.2.1 Identify the legal status under which your organization does business, such as sole proprietorship, partnership, corporation, limited liability corporation, joint venture, or other.

.1 If your organization is a corporation, identify the state in which it is incorporated, the date of incorporation, and its four highest-ranking corporate officers and their titles, as applicable.

.2 If your organization is a partnership, identify its partners and its date of organization.

.3 If your organization is individually owned, identify its owner and date of organization.

AIA Document A305 – 2020 Exhibit A. Copyright © 2020. All rights reserved. To report copyright violations, e-mail docinfo@aiacontracts.com.
User Notes: (6a0605093e51419369bf7183)

.4 If the form of your organization is other than those listed above, describe it and identify its individual leaders:

§ A.1.2.2 Does your organization own, in whole or in part, any other construction-related businesses? If so, identify and describe those businesses and specify percentage of ownership.

§ A.1.3 Other Information

§ A.1.3.1 How many years has your organization been in business?

§ A.1.3.2 How many full-time employees work for your organization?

§ A.1.3.3 List your North American Industry Classification System (NAICS) codes and titles. Specify which is your primary NAICS code.

§ A.1.3.4 Indicate whether your organization is certified as a governmentally recognized special business class, such as a minority business enterprise, woman business enterprise, service disabled veteran owned small business, woman owned small business, small business in a HUBZone, or a small disadvantaged business in the 8(a) Business Development Program. For each, identify the certifying authority and indicate jurisdictions to which such certification applies.

§ A.2 EXPERIENCE

§ A.2.1 Complete Exhibit D to describe up to four projects, either completed or in progress, that are representative of your organization's experience and capabilities.

§ A.2.2 State your organization's total dollar value of work currently under contract.

§ A.2.3 Of the amount stated in Section A.2.2, state the dollar value of work that remains to be completed:

§ A.2.4 State your organization's average annual dollar value of construction work performed during the last five years.

§ A.3 CAPABILITIES

§ A.3.1 List the categories of work that your organization typically self-performs.

§ A.3.2 Identify qualities, accreditations, services, skills, or personnel that you believe differentiate your organization from others.

AIA Document A305 – 2020 Exhibit A. Copyright © 2020. All rights reserved. To report copyright violations, e-mail docinfo@aiacontracts.com.
User Notes: (6a0605093e51419369bf7183)

§ A.3.3 Does your organization provide design collaboration or pre-construction services? If so, describe those services.

§ A.3.4 Does your organization use building information modeling (BIM)? If so, describe how your organization uses BIM and identify BIM software that your organization regularly uses.

§ A.3.5 Does your organization use a project management information system? If so, identify that system.

§ A.4 REFERENCES

§ A.4.1 Identify three client references:
(Insert name, organization, and contact information)

§ A.4.2 Identify three architect references:
(Insert name, organization, and contact information)

§ A.4.3 Identify one bank reference:
(Insert name, organization, and contact information)

§ A.4.4 Identify three subcontractor or other trade references:
(Insert name, organization, and contact information)

ADDITIONS AND DELETIONS:
The author of this document may have revised the text of the original AIA standard form. An *Additions and Deletions Report* that notes revisions to the standard form text is available from the author and should be reviewed. A vertical line in the left margin of this document indicates where the author has added to or deleted from the original AIA text.

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

§ B.1 FINANCIAL

§ B.1.1 Federal tax identification number:

§ B.1.2 Attach financial statements for the last three years prepared in accordance with Generally Accepted Accounting Principles, including your organization's latest balance sheet and income statement. Also, indicate the name and contact information of the firm that prepared each financial statement.

§ B.1.3 Has your organization, its parent, or a subsidiary, affiliate, or other entity having common ownership or management, been the subject of any bankruptcy proceeding within the last ten years?

§ B.1.4 Identify your organization's preferred credit rating agency and identification information.
(Identify rating agency, such as Dun and Bradstreet or Equifax, and insert your organization's identification number or other method of searching your organization's credit rating with such agency.)

§ B.2 DISPUTES AND DISCIPLINARY ACTIONS

§ B.2.1 Are there any pending or outstanding judgments, arbitration proceedings, bond claims, or lawsuits against your organization, its parent, or a subsidiary, affiliate, or other entity having common ownership or management, or any of the individuals listed in Exhibit A, Section 1.2, in which the amount in dispute is more than $75,000?
(If the answer is yes, provide an explanation.)

§ B.2.2 In the last five years has your organization, its parent, or a subsidiary, affiliate, or other entity having common ownership or management:
(If the answer to any of the questions below is yes, provide an explanation.)

.1 failed to complete work awarded to it?

.2 been terminated for any reason except for an owners' convenience?

User Notes: (6a0605ac4c28019c5ab0e72f)

.3 had any judgments, settlements, or awards pertaining to a construction project in which your organization was responsible for more than $75,000?

.4 filed any lawsuits or requested arbitration regarding a construction project?

§ B.2.3 In the last five years, has your organization, its parent, or a subsidiary, affiliate, or other entity having common ownership or management; or any of the individuals listed in Exhibit A Section 1.2:
(If the answer to any of the questions below is yes, provide an explanation.)

.1 been convicted of, or indicted for, a business-related crime?

.2 had any business or professional license subjected to disciplinary action?

.3 been penalized or fined by a state or federal environmental agency?

§ B.2.4 List any debarments, suspensions, and denials of prequalification of the organization for any federal, state, local, or governmental contracting.

§ B.2.5 List any prevailing wage disputes, investigations, or complaints filed against the firm or any officers.

AIA® Document A305® – 2020 Exhibit C

Project Specific Information

This Exhibit is part of the Contractor's Qualification Statement, submitted by and dated the day of in the year
(In words, indicate day, month and year.)

PROJECT:
(Name and location or address.)

New Jarrettown Elementary School
1520 Limeklin Pike
Dresher, PA 19025

CONTRACTOR'S PROJECT OFFICE:
(Identify the office out of which the contractor proposes to perform the work for the Project.)

TYPE OF WORK SOUGHT
(Indicate the type of work you are seeking for this Project, such as general contracting, construction manager as constructor, design-build, HVAC subcontracting, electrical subcontracting, plumbing subcontracting, etc.)

CONFLICT OF INTEREST
Describe any conflict of interest your organization, its parent, or a subsidiary, affiliate, or other entity having common ownership or management, or any of the individuals listed in Exhibit A Section 1.2, may have regarding this Project.

§ C.1 PERFORMANCE OF THE WORK
§ C.1.1 When was the Contractor's Project Office established?

§ C.1.2 How many full-time field and office staff are respectively employed at the Contractor's Project Office?

§ C.1.3 List the business license and contractor license or registration numbers for the Contractor's Project Office that pertain to the Project.

ADDITIONS AND DELETIONS:
The author of this document may have revised the text of the original AIA standard form. An *Additions and Deletions Report* that notes revisions to the standard form text is available from the author and should be reviewed. A vertical line in the left margin of this document indicates where the author has added to or deleted from the original AIA text.

User Notes: (6adb84c63d6ef85515d548e0)

§ C.1.4 Identify key personnel from your organization who will be meaningfully involved with work on this Project and indicate (1) their position on the Project team, (2) their office location, (3) their expertise and experience, and (4) projects similar to the Project on which they have worked.

§ C.1.5 Identify portions of work that you intend to self-perform on this Project.

§ C.1.6 To the extent known, list the subcontractors you intend to use for major portions of work on the Project.

§ C.2 EXPERIENCE RELATED TO THE PROJECT

§ C.2.1 Complete Exhibit D to describe up to four projects performed by the Contractor's Project Office, either completed or in progress, that are relevant to this Project, such as projects in a similar geographic area or of similar project type. If you have already completed Exhibit D, but want to provide further examples of projects that are relevant to this Project, you may submit additional copies of Exhibit D as needed.

§ C.2.2 State the total dollar value of work currently under contract at the Contractor's Project Office:

§ C.2.3 Of the amount stated in Section C.2.2, state the dollar value of work that remains to be completed:

§ C.2.4 State the average annual dollar value of construction work performed by the Contractor's Project Office during the last five years.

§ C.2.5 List the total number of projects the Contractor's Project Office has completed in the last five years and state the dollar value of the largest contract the Contractor's Project Office has completed during that time.

§ C.2.6 List any work the organization has performed for the Owner.

§ C.2.6 Other public work that the organization has performed in Pennsylvania (up to ten most recent projects). For each, identify the name and address of owner, location of project, nature of contract (prime, sub, etc.), contract amount, change orders, final contract amount, if completed on time, kind of work, and nature of project.

§ C.2.7 Other projects involving multi-prime contracts on which the organization has served as a prime contractor (up to ten most recent projects). For each, identify the name and address of owner, location of project, nature of

User Notes: (6adb84c63d6ef85515d548e0)

contract (prime, sub, etc.), contract amount, change orders, final contract amount, if completed on time, kind of work, and nature of project.

§ C.2.8 Portion of the contract to the nearest ten percent (10%) that the bidder expects to perform using its own labor and equipment. The Bidder shall self-perform with its own employees not less than ten percent (10%) of the field construction work included in the Contract. Project management, supervision, safety management, overhead, profit, bonds, insurance, permit costs, and other administrative costs shall not be included in determining either the total value of work subject to this requirement or the value of self-performed work.

§ C.3 SAFETY PROGRAM AND RECORD

§ C.3.1 Does the Contractor's Project Office have a written safety program?

§ C.3.2 List all safety-related citations and penalties the Contractor's Project Office has received in the last three years.

§ C.3.3 Attach the Contractor's Project Office's OSHA 300a Summary of Work-Related Injuries and Illnesses form for the last three years.

§ C.3.4 Attach a copy of your insurance agent's verification letter for your organization's current workers' compensation experience modification rate and rates for the last three years.

§ C.4 INSURANCE

§ C.4.1 Attach current certificates of insurance for your commercial general liability policy, umbrella insurance policy, and professional liability insurance policy, if any. Identify deductibles or self-insured retentions for your commercial general liability policy.

§ C.4.2 If requested, will your organization be able to provide property insurance for the Project written on a builder's risk "all-risks" completed value or equivalent policy form and sufficient to cover the total value of the entire Project on a replacement cost basis?

§ C.4.3 Does your commercial general liability policy contain any exclusions or restrictions of coverage that are prohibited in Article 11 of the General Conditions? If so, identify.

§ C.5 SURETY

§ C.5.1 If requested, will your organization be able to provide a performance and payment bond for this Project?

§ C.5.2 Surety company name:

SECTION 00 21 13 - INSTRUCTIONS TO BIDDERS

The INSTRUCTIONS TO BIDDERS, American Institute of Architects (AIA), AIA Document A701-2018, containing Articles 1 through 8, are hereby made part of this Project Manual and bound herein.

Refer to Section 01 11 00 – Summary of Work for scope of work for the bid packages.

AIA® Document A701® – 2018

Instructions to Bidders

for the following Project:
(Name, location, and detailed description)

New Jarrettown Elementary School
1520 Limeklin Pike
Dresher, PA 19025

THE OWNER:
(Name, legal status, address, and other information)

Upper Dublin School District
1580 Fort Washington Ave.
Maple Glen, PA 19002

THE CONSTRUCTION MANAGER:
(Name, legal status, address, and other information)

ICS Consulting, LLC (ICS)
1400 N. Providence Road
Building 2, Suite 4045
Media, PA 19063

THE ARCHITECT:
(Name, legal status, address, and other information)

Alloy5, LLC
530 West Broad Street
Bethlehem, PA 18018

ADDITIONS AND DELETIONS:
The author of this document has added information needed for its completion. The author may also have revised the text of the original AIA standard form. An *Additions and Deletions Report* that notes added information as well as revisions to the standard form text is available from the author and should be reviewed. A vertical line in the left margin of this document indicates where the author has added necessary information and where the author has added to or deleted from the original AIA text.

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

FEDERAL, STATE, AND LOCAL LAWS MAY IMPOSE REQUIREMENTS ON PUBLIC PROCUREMENT CONTRACTS. CONSULT LOCAL AUTHORITIES OR AN ATTORNEY TO VERIFY REQUIREMENTS APPLICABLE TO THIS PROCUREMENT BEFORE COMPLETING THIS FORM.

It is intended that AIA Document G612™–2017, Owner's Instructions to the Architect, Parts A and B will be completed prior to using this document.

ARTICLE 1 DEFINITIONS

§ 1.1 Bidding Documents include the Bidding Requirements and the Proposed Contract Documents. The Bidding Requirements consist of the advertisement or invitation to bid, Instructions to Bidders, supplementary instructions to bidders, the bid form, and any other bidding forms. The Proposed Contract Documents consist of the unexecuted form of Agreement between the Owner and Contractor and that Agreement's Exhibits, Conditions of the Contract (General, Supplementary and other Conditions), Drawings, Specifications, all Addenda, and all other documents enumerated in Article 8 of these Instructions.

§ 1.2 Definitions set forth in the General Conditions of the Contract for Construction, or in other Proposed Contract Documents apply to the Bidding Documents.

§ 1.3 Addenda are written or graphic instruments issued by the Architect, which, by additions, deletions, clarifications, or corrections, modify or interpret the Bidding Documents.

§ 1.4 A Bid is a complete and properly executed proposal to do the Work for the sums stipulated therein, submitted in accordance with the Bidding Documents.

§ 1.5 The Base Bid is the sum stated in the Bid for which the Bidder offers to perform the Work described in the Bidding Documents, to which Work may be added or deleted by sums stated in Alternate Bids.

§ 1.6 An Alternate Bid (or Alternate) is an amount stated in the Bid to be added to or deducted from, or that does not change, the Base Bid if the corresponding change in the Work, as described in the Bidding Documents, is accepted.

§ 1.7 A Unit Price is an amount stated in the Bid as a price per unit of measurement for materials, equipment, or services, or a portion of the Work, as described in the Bidding Documents.

§ 1.8 A Bidder is a person or entity who submits a Bid and who meets the requirements set forth in the Bidding Documents.

§ 1.9 A Sub-bidder is a person or entity who submits a bid to a Bidder for materials, equipment, or labor for a portion of the Work.

ARTICLE 2 BIDDER'S REPRESENTATIONS

§ 2.1 By submitting a Bid, the Bidder represents that:

.1 the Bidder has read and understands the Bidding Documents;

.2 the Bidder understands how the Bidding Documents relate to other portions of the Project, if any, being bid concurrently or presently under construction;

.3 the Bid complies with the Bidding Documents;

.4 the Bidder has visited the site, become familiar with local conditions under which the Work is to be performed, and has correlated the Bidder's observations with the requirements of the Proposed Contract Documents;

.5 the Bid is based upon the materials, equipment, and systems required by the Bidding Documents without exception; and

.6 the Bidder has investigated all required fees, permits and regulatory requirements of authorities have jurisdiction and has properly included in the submitted bid the cost of such fees, permits and requirements not otherwise indicated as provided by the Owner. Refer to Specification Section 00 72 00 General Conditions of the contract for fees that the Owner is responsible for;

.7 the Bidder has incorporated into the Bid adequate sums for work performed by installers whose qualifications meet those indicated in the Procurement and Contracting Documents.

.8 the Bidder is a properly licensed Contractor according to the laws and regulations of the State of Pennsylvania and meets the qualifications indicated in the Procurement and Contracting Documents;

a. To demonstrate qualifications to perform the Work, each Bidder must be prepared to submit within five (5) days of Owner's request, written evidence such as financial data, insurance certificates, previous experience of the Bidder and its assigned personnel, present commitments, and any other information that may be requested by the Owner. Each Bid must contain evidence of Bidder's qualification to do business in the Commonwealth of Pennsylvania, or covenant to

AIA Document A701 – 2018. Copyright © 1970, 1974, 1978, 1987, 1997 and 2018. All rights reserved. "The American Institute of Architects," "American Institute of Architects," "AIA," the AIA Logo, and "AIA Contract Documents" are trademarks of The American Institute of Architects. This document was produced at 11:52:05 ET on 10/27/2026 under Order No.4104246198 which expires on 12/31/2026, is not for resale, is licensed for one-time use only, and may only be used in accordance with the AIA Contract Documents® Terms of Service. User Notes: (1246384756)

obtain such qualification prior to award of the Contract. Owner reserves the right to reject Bidder if he cannot satisfy all of the Qualification Requirements, including those listed in the Technical Specifications.

b. In determining the lowest responsible Bidder, the Owner will consider the integrity, efficiency, and experience of the Bidder and its assigned personnel, promptness, current workload, financial capability, performance on recent projects, references from owners, architects, and engineers, list of potential sub-contractors, schedule of values, and ability to successfully and timely complete the Project. The apparent low Bidder must demonstrate competency and provide any or all of the above information requested within five (5) days of request. Owner reserves the right to reject the Bidder as non-responsive if all the information is not received on time and/or does not reasonably satisfy the Owner's evaluation process.

c. In addition to all the requirements listed above regarding qualifications of Bidders, the Owner will evaluate Bidders using the following additional criteria:

1) The Bidder and its assigned personnel must have successfully performed a minimum of 3 previous Pennsylvania public school projects within the last 5 years of similar type or a contract value of at least seventy percent (70%) of the amount of the Bidder's Base Bid. Provide references including telephone number and contact person.

2) The Bidder shall self-perform with its own employees not less than ten percent (10%) of the field construction work included in the Contract. Project management, supervision, safety management, overhead, profit, bonds, insurance, permit costs, and other administrative costs shall not be included in determining either the total value of work subject to this requirement or the value of self-performed work.

3) The Bidder, or its assigned personnel, must have successfully performed at least 3 Pennsylvania public school projects within the last 5 years where they have managed multiple trades and coordinated and scheduled all the activities for projects as per above Article 1. Provide references including telephone number and contact person.

4) The Bidder's performance on previous projects including claims, litigation, coordination of work, staffing, and timely completion. If it is determined that the Bidder has not fully performed previous projects in a coordinated, timely, and good and workmanlike manner, the Owner reserves the right to reject the Bid.

d. All Bidders should be aware that the Owner encourages and promotes MBE (Minority Business Enterprise) and WBE (Women's Business Enterprise) participation for this Project. Bidders are encouraged to do their own research on the qualifications, and other factors, in preparing a comprehensive and responsible bid.

e. The Bidder acknowledges that a condition of the Contract is that time is of the essence of the Contract and the number of calendar days within which, or the dates by which, the Work is to be substantially completed and finally completed and ready for final payment (the Contract Time) are set forth in the Contract Documents and are accepted by the Bidder without exception or conditions.

ARTICLE 3 BIDDING DOCUMENTS

§ 3.1 Distribution

§ 3.1.1 Bidders shall obtain complete Bidding Documents, as indicated below, from the issuing office designated in the advertisement or invitation to bid, for the deposit sum, if any, stated therein.
(Indicate how, such as by email, website, host site/platform, paper copy, or other method Bidders shall obtain Bidding Documents.)

Bid documents are distributed electronically.

§ 3.1.2 The deposit sum, if any for the Bidding Documents is non-refundable.

§ 3.1.3 Bidding Documents will not be issued directly to Sub-bidders unless specifically offered in the advertisement or invitation to bid, or in supplementary instructions to bidders.

§ 3.1.4 Bidders shall use complete Bidding Documents in preparing Bids. Neither the Owner nor Architect assumes responsibility for errors or misinterpretations resulting from the use of incomplete sets of Bidding Documents. Bidder is

AIA Document A701 – 2018. Copyright © 1970, 1974, 1978, 1987, 1997 and 2018. All rights reserved. "The American Institute of Architects," "American Institute of Architects," "AIA," the AIA Logo, and "AIA Contract Documents" are trademarks of The American Institute of Architects. This document was produced at 11:52:05 ET on 10/27/2026 under Order No.4104246198 which expires on 12/31/2026, is not for resale, is licensed for one-time use only, and may only be used in accordance with the AIA Contract Documents® Terms of Service. To report copyright violations, e-mail docinfo@aiacontracts.com.
User Notes: (1246384756)

responsible to make sure that the set of Bidding Documents is complete and that any printed contract document is legible and represents properly all the information as represented in the PDF file.

a. Bidders shall thoroughly examine and be familiar with the Specifications and Drawings. The failure or omission of any Bidder to receive or examine any form, instrument, document, or visit the site and acquaint himself with conditions there existing, shall in no way relieve any Bidder from obligation with respect to his Bid. By submitting a Bid, the Bidder agrees and warrants that he has examined the site and the Specifications and Drawings and, where Specifications and/or Drawings require in any part of the Work a given result to be produced, that the Specifications and Drawings are adequate, the required result can be produced under the Specifications and Drawings, and that the proposed schedule affords the Bidder sufficient time to complete the Work if award the Contract. No claim for any additional costs or additional time will be allowed because of alleged impossibilities in the production of the results specified or because of inadequate or improper plans and specifications and whenever a result is required, the successful Bidder shall furnish any and all extras and make any changes needed to produce the required result for the sum stated in the form of proposal.

b. Should any Bidder find discrepancies, duplications, errors, or omissions in the documents or have doubt as to the meaning expressed by the Contract Documents, he shall make inquiry at once in writing to the Architect and/or Construction Manager. Where changes, corrections, or clarifications to Contract Documents are deemed necessary by the Architect and/or Construction Manager, he will issue written Addenda accordingly. Addenda shall be a part of the Contract Documents. No oral, telephone, or letter instructions will be considered as having effect upon the Contract Documents; Addenda only shall constitute change to them. Bidders and sub-Bidders are urged to make early examination of Contract Documents and make inquiries about them if necessary, even though prices may not be determined until late in the bidding period. No claim for additional cost or time will be permitted for any discrepancies, duplications, errors, or omissions in the Contract Documents for any such matters that were apparent to the or discoverable by the Bidder though a complete review of the Contract Documents prior to submission of the bid.

c. Information and data reflected in the Contract Documents with respect to underground facilities at or contiguous to the site is based upon information and data furnished to Owner and Architect and/or Construction Manager by owners of such underground facilities or others. Owner and Architect and/or Construction Manager do not assume responsibility for the accuracy or completeness of the location of underground facilities at or contiguous to the site. Successful Bidder shall verify the location of all underground utilities prior to any excavation.

d. The Owner, Architect, and Construction Manager will not be responsible for the adequacy of data furnished to prospective Bidders on subsurface conditions, underground facilities, and other physical conditions. This information is provided based on information available. Bidder assumes responsibility for verifications, adjustments, and modifications that may be required since this is generally recognized as inherent to the work of the Contract Documents.

e. Successful Bidder for the General Contract is responsible, on behalf of the Owner, for providing the physical markings of all existing utilities including those on site as indicated on the drawings, if any, or those that may be identified in the field. The locations shown on the drawings are approximate. The Bidder must include in his proposal the cost for hand-dug test holes, or other means, to ascertain the precise position of such underground facilities on the site owned by the Owner. This verification should be performed for any utilities to be relocated, removed, modified, or that may otherwise interfere with planned work. The utilities in the public right of way will be identified and marked by the appropriate facility owner as per the requirements of the PA One Call Act as amended. Physical layout is to be performed in full compliance with the PA One Call PA Act 287 of 1974 as amended by Act 18 of 1996 and Act 50 of 2017.

f. Before submitting a Bid, each Bidder will, at Bidder's expense, make or obtain any additional examinations, investigations, explorations, tests and studies, and obtain any additional information and data which pertain to the physical conditions (surface, subsurface, and underground facilities) at or contiguous to the site or otherwise which may affect cost, progress, performance, or furnishing the Work and which Bidder deems necessary to determine its Bid for performing and furnishing the Work in accordance with the time, price, and other terms and conditions of the Contract Documents.

g. On request in advance, Owner will provide each Bidder access to the site to conduct such explorations and tests, as each Bidder deems necessary for submission of a Bid. Bidder shall fill all holes, clean up, and restore the site to its former condition upon completion of such explorations.

h. The lands upon which the Work is to be performed, rights-of-way, and easements for access thereto and other lands designated for use by the Bidder in performing the Work are identified in the Contract Documents. All additional land and access thereto required for temporary construction facilities or storage of materials and equipment are to be provided by Bidder. Easements for permanent structures or permanent changes in existing structures are to be obtained and paid for by Owner unless otherwise provided in the Contract Documents.

i. The submission of a Bid constitutes an incontrovertible representation by Bidder that Bidder has complied with every requirement of the Bidding Documents and that without exception, the Bid is premised upon performing and furnishing the Work required by the Contract Documents and such means, methods, techniques, sequences, or procedures of construction as may be indicated in or required by the Contract Documents, and that the Contract Documents are sufficient in scope and detail to indicate and convey understanding of all terms and conditions for performance and furnishing of the Work.

§ 3.1.5 The Bidding Documents will be available for the sole purpose of obtaining Bids on the Work. No license or grant of use is conferred by distribution of the Bidding Documents.

§ 3.1.6 Owner, Architect, and Construction Manager, in making copies of the Bidding Documents available on the above terms, do so only for the purpose of obtaining Bids for the Work and do not confer a license or grant for any other use.

§ 3.1.7 Provisions for liquidated damages are set forth in the Contract Documents.

§ 3.1.8 Retainage will be in accordance with the Contract Documents. Reference Article 9.3.4 of the General Conditions.

§ 3.2 Modification or Interpretation of Bidding Documents

§ 3.2.1 The Bidder shall carefully study the Bidding Documents, shall examine the site and local conditions, and shall notify the Architect of errors, inconsistencies, or ambiguities discovered and request clarification or interpretation pursuant to Section 3.2.2 of these Instructions to Bidders.

§ 3.2.2 Requests for clarification or interpretation of the Bidding Documents shall be submitted by the Bidder in writing and shall be received by the Architect and Construction Manager at least seven days prior to the date for receipt of Bids. *(Indicate how, such as by email, website, host site/platform, paper copy, or other method Bidders shall submit requests for clarification and interpretation.)*

All Bidders shall submit requests for clarification or interpretation of the Bidding Documents through email to the parties listed in Article 3.4.2 of these Instructions to Bidders.

§ 3.2.3 Modifications and interpretations of the Bidding Documents shall be made by Addendum. Modifications and interpretations of the Bidding Documents made in any other manner shall not be binding, and Bidders shall not rely upon them.

§ 3.3 Substitutions

§ 3.3.1 The materials, products, and equipment described in the Bidding Documents establish a standard of required function, dimension, appearance, and quality to be met by any proposed substitution.

§ 3.3.2 Substitution Process

§ 3.3.2.1 Written requests for substitutions shall be received by the Architect at least ten days prior to the date for receipt of Bids. Requests shall be submitted in the same manner as those established for submitting clarifications and interpretations in Section 3.2.2. The various materials and products specified in the specifications by name or description are given to establish a minimum acceptable standard of quality and of cost for bid purposes. When proprietary names are used, and there does not follow a "listing" of acceptable approved manufacturers and/or products, then the proprietary named item must be included in the Bid proposal without substitution. When proprietary names are used, and there follows a "listing" of acceptable "approved" manufacturers and/or products, then the Bidder may base the Bid on either the proprietary product or any from the "listing" acceptable "approved" manufacturers and/or products for the Base Bid

User Notes: (1246384756)

and alternate Bid as indicated. When proprietary names are used, and there are alternates on the Bid form, then the Bidder shall base his Bid on the proprietary product or any from the "listing" of approved manufacturers and/or products for the Base Bid and alternate bid(s) as indicated. Bidders may request approval prior to Bid opening of non-listed items as substitutions in accordance with these specifications and Instructions to Bidders. No substitutions will be considered prior to receipt of Bids unless written request for approval has been received by the Architect only from prime contract Bidders at least ten days prior to the date for receipt of Bids. Such requests shall be in accordance with substitution request procedure listed in this Article 3.3 of these Instructions to Bidders, and any other requirements at the Architect, Owner, or Construction Manager's discretion. Unless the Bidder obtains approval of a substitution prior to the submission of Bids, the Bidder must furnish the specified or listed item regardless of whether or not they were included in his Bid. The Bidder shall be required to coordinate and pay for any conditions which are required to accommodate the listed or alternate item, including the reimbursement of other affected prime contractors if the project is a multi-prime project.

§ 3.3.2.2 Bidders shall submit substitution requests on a Substitution Request Form included in the Bidding Documents as Section 00 43 25 and should include:

a. Technical, warranty, and manufacturer's data specified. A line-by-line comparison of all specified items in the Specification must be made. Submission must be made ten (10) days prior to Bid opening.
b. Architect will review submission and any acceptable substitutions will be listed in an addendum. All manufacturers not specifically approved as a substitution by addendum shall not be considered.
c. Only manufacturers that are qualified prior to the Bid opening will be considered acceptable manufacturers.

§ 3.3.2.3 Intentionally deleted.

§ 3.3.3 The burden of proof of the merit of the proposed substitution is upon the proposer. The Architect's decision of approval or disapproval of a proposed substitution shall be final.

§ 3.3.4 If the Architect approves a proposed substitution prior to receipt of Bids, such approval shall be set forth in an Addendum. Approvals made in any other manner shall not be binding, and Bidders shall not rely upon them. If a proposed substitution is not specifically approved by addendum, it shall be considered rejected.

§ 3.3.5 No substitutions will be considered after the Contract award absent proof that the specified item is not commercially available and cannot be provided through no fault of the Bidder.

§ 3.4 Addenda

§ 3.4.1 Addenda will be transmitted to Bidders known by the issuing office to have received complete Bidding Documents.

(Indicate how, such as by email, website, host site/platform, paper copy, or other method Addenda will be transmitted.)

Addenda is distributed electronically to all Contacts on the current invited bidder list and to any others upon request.

§ 3.4.2 All questions about the meaning or intent of the Contract Documents are to be directed to the parties listed below. Interpretations or clarifications considered necessary by the Architect in response to such questions will be issued by Addenda mailed or delivered to all parties recorded by Architect and/or Construction Manager as having received the Bidding Documents. Questions received less than five (5) days prior to the date for opening of Bids may not be answered. Only interpretations or clarifications issued by formal written Addenda will be binding. Oral or other interpretations or clarifications will be without legal effect. All questions must be submitted in writing as follows. Phone calls are not permitted.

a. All questions must be sent to:
ALLOY5, LLC.
Jamie Bortz, jbortz@alloy5.com

b. All ME questions must be copied to:
CMTA, Inc.

§ 3.4.3 Addenda may also be issued at any time to modify the Bidding Documents as deemed advisable by Construction Manager, Owner, or Architect.

§ 3.4.4 Prior to submitting a Bid, each Bidder shall ascertain that the Bidder has received all Addenda issued, and the Bidder shall acknowledge their receipt of each Addendum in the space indicated on the Project Bid Form(s).

ARTICLE 4 BIDDING PROCEDURES

§ 4.1 Pre-Bid Conference

§ 4.1.1 The Pre-bid Conference will be held on the date and time listed in the Advertisement for Bids. Representatives of Owner, Construction Manager, and Architect will be present to discuss the Project. Architect and Construction Manager will transmit to all prospective Bidders of record such Addenda, as Architect considers necessary in response to questions arising at the Conference.

§ 4.1.2 The site may be made available for visits at the pre-bid conference and at the other specific dates and times determined at the pre-bid.
(Paragraphs deleted)

§ 4.2 Preparation of Bids

§ 4.2.1 Bids shall be submitted in duplicate on the forms included with or identified in the Bidding Documents. THE BID FORM SHALL NOT BE ALTERED. ALTERED BID FORMS MAY BE CONSIDERED NON-RESPONSIVE AND MAY BE REJECTED.

§ 4.2.2 All blanks on the bid form shall be legibly executed. Paper bid forms shall be executed in a non-erasable medium.

§ 4.2.3 Sums shall be expressed in both words and numbers, unless noted otherwise on the bid form. In case of discrepancy, the amount entered in words shall govern.

§ 4.2.4 Edits to entries made on paper bid forms must be initialed by the signer of the Bid.

§ 4.2.5 Alternates:

a. The Bidder agrees to modify the Base Bid by the amounts stated for alternates as requested on the Bid Form and specified in the Bidding documents.

b. The Owner shall have the right to accept or reject alternates in any order or combination, and to determine the low Bidder on the basis of the sum of the Base Bid and alternates accepted.

c. Alternate work shall be completed within the same time frame as indicated on the Contract Documents for associated work. No alternate shall modify the project material allowances unless stated within the allowance description.

AIA Document A701 – 2018. Copyright © 1970, 1974, 1978, 1987, 1997 and 2018. All rights reserved. To report copyright violations, e-mail docinfo@aiacontracts.com.
User Notes: (1246384756)

d. The Bidder shall provide a response for every Alternate listed on the Bid Form by entering an ADD amount, a DEDUCT amount, "NO CHANGE," or "NO BID," as applicable. "NO CHANGE" indicates that the Bidder shall perform the Alternate Work with no adjustment to the Base Bid.

e. "NO BID" indicates that the Bidder declines to provide the Alternate Work. Failure to provide a response for any Alternate shall be treated as a "NO BID". If the Owner elects to accept an Alternate for which the Bidder has entered "NO BID," the Bidder shall not be eligible for award of the Contract.

f. Enter the amount for each alternate on the line pre-marked as "ADD" and/or "DEDUCT". Where both the words "ADD" and "DEDUCT" are provided for an alternate, strike through one of the words so that the appropriate word remains.

g. The failure to enter an amount of "NO CHANGE" or "NO BID" in the blanks for an alternate shall be treated conclusively as a Bid of zero dollars for the work described in the alternate.

§ 4.2.6 The Bid shall contain an acknowledgment of receipt of all Addenda (the numbers of which must be filled in on the Bid Form). Properly issued Addenda shall be binding upon all Bidders, regardless of whether a Bidder fails to acknowledge receipt.

§ 4.2.7 Each copy of the Bid shall state the legal name and legal status of the Bidder. As part of the documentation submitted with the Bid, the Bidder shall provide evidence of its legal authority to perform the Work in the jurisdiction where the Project is located. Each copy of the Bid shall be signed by the person or persons legally authorized to bind the Bidder to a contract. A Bid by a corporation shall further name the state of incorporation and have the corporate seal affixed. A Bid submitted by an agent shall have a current power of attorney attached, certifying the agent's authority to bind the Bidder.

§ 4.2.8 A Bidder shall incur all costs associated with the preparation of its Bid.

§ 4.2.9 Bidder shall include all applicable sales and use taxes in its bid. Bidder shall consult Section 3.6 of the General Conditions regarding the Owner's exemption from sales and use tax on "building machinery and equipment" and comply with all provisions set forth therein.

§ 4.3 Bid Security

§ 4.3.1 Each Bid shall be accompanied by the following bid security:
(Insert the form and amount of bid security.)

Certified Check or Bid Bond in the amount of ten percent (10%) of the total bid

(Paragraphs deleted)

§ 4.3.2 No bid will be considered unless it is accompanied by a Bid Security in the amount of ten percent (10%) of the total bid payable without condition to the Owner. Bid Security shall be in the form of a Certified/Bank Cashier's Check or Bid Bond in the form provided in the documents, and shall be submitted with the express understanding that it shall be a guarantee that the Bidder will not withdraw his/her bid for a period of sixty (60) days after the date specified for receipt of bids, that the Bidder will enter into a formal Contract with the Owner; and that the Bidder will submit the required Performance, Labor and Material Payment Bonds, Public Works Employment Verification Forms and Certificates of Insurance as specified. In the event of withdrawal of the Bid by the Bidder, the Bidder will forfeit the full amount of the Bid Bond (Guarantee). All Certified Checks will be returned to the Bidders after the Owner and the successful Bidder have executed the Contract; and the executed Performance and Labor and Material Payment Bonds and Certificate of Insurance have been approved by the Owner.

§ 4.3.3 If Bid Bond is provided as the bid security, it shall be written on the form provided in the Bidding Documents. No other forms will be accepted. The attorney-in-fact who executes the Agreement or Surety or bid bond on behalf of the surety shall affix a certified and current copy of an acceptable power of attorney, authorizing said attorney-in-fact to act on behalf of the surety. The Power of Attorney must be dated the same date as the Bid Bond, or if dated prior to the date of the submission of the bid security, the Power of Attorney shall have a Certification that certifies that the Power of Attorney remains in full force and effect as of the date of the bid security, and both the bid security and Power of Attorney shall have affied the raised corporate seal of the surety The Bid Bond form must be executed by a surety licensed and authorized to conduct business as a surety within the Commonwealth of Pennsylvania, have an AM Best rating of 'A-' or higher and a financial rating of Class X or higher and shall be named in the current list of companies holding Certificates of Authority as acceptable sureties on federal bonds and/or as acceptable reinsuring companies as published in Circular

570 (as amended) by the Audit Staff, Bureau of Government Financial Operations, U.S. Treasury Department, and the amount of the bond shall not exceed the underwriting risk of such surety set forth in said circular of revisions thereof.

§ 4.3.4 If the Bid Security is submitted in the form of a certified check or bank cashier's check, the Bidder shall submit an Agreement of Surety certifying that a surety company will provide the Bidder with a Performance Bond and Payment Bond each in the amount of one hundred percent (100% of the Contract Sum). The Agreement of Surety shall be in the form included in the Bidding Documents as Section 00 43 15. The Agreement of Surety shall be executed by a surety satisfying the requirements set forth in the Contract Documents.

§ 4.3.5 The Owner will have the right to retain the bid security of the three (3) lowest Bidders to whom an award is being considered until (a) the Contract has been executed and bonds, if required, have been furnished; (b) the specified time has elapsed so that Bids may be withdrawn; or (c) all Bids have been rejected. However, if no Contract has been awarded or a Bidder has not been notified of the acceptance of its Bid, a Bidder may, beginning Sixty-One (61) days after the opening of Bids, withdraw its Bid and request the return of its bid security. Upon request, the Bid Security of the other Bidders will be returned by the Owner after the Owner and successful Bidder have executed a Contract. The Owner shall not be liable for any interest on Bid Security which is held in accordance with these Instructions to Bidders.

§ 4.4 Submission of Bids

§ 4.3.1 A Bidder shall submit its Bid as indicated below:
(Indicate how, such as by website, host site/platform, paper copy, or other method Bidders shall submit their Bid.)

Paper copy of the bid, bid security and any other documents required enclosed in a sealed envelope, addressed/labeled per instructions and delivered to the Bid Opening site prior to the bid date / time.

(Paragraphs deleted)

§ 4.4.2 Paper copies of the Bid, the bid security, and any other documents listed in Specification Section 00 43 93, Bid Submittal Attachments, are required to be submitted with the Bid shall be enclosed in a sealed opaque envelope. The envelope shall be addressed to the party receiving the Bids and shall be identified with the Project name, the Bidder's name and address, and, if applicable, the designated portion of the Work for which the Bid is submitted. If the Bid is sent by mail, the sealed envelope shall be enclosed in a separate mailing envelope with the notation "SEALED BID ENCLOSED" on the face thereof.

§ 4.4.3 Bids shall be submitted by the date and time and at the place indicated in the invitation to bid. Bids submitted after the date and time for receipt of Bids, or at an incorrect place, will not be accepted.

§ 4.4.4 The Bidder shall assume full responsibility for timely delivery at the location designated for receipt of Bids.

§ 4.4.5 A Bid submitted by any method other than as provided in this Section 4.4 will not be accepted.

§ 4.5 Modification or Withdrawal of Bid

§ 4.5.1 Prior to the date and time designated for receipt of Bids, a Bidder may submit a new Bid to replace a Bid previously submitted, or withdraw its Bid entirely, by notice to the party designated to receive the Bids. Such notice shall be received and duly recorded by the receiving party on or before the date and time set for receipt of Bids. The receiving party shall verify that replaced or withdrawn Bids are removed from the other submitted Bids and not considered. Notice of submission of a replacement Bid or withdrawal of a Bid shall be worded so as not to reveal the amount of the original Bid.

§ 4.5.2 Bids shall be irrevocable for sixty (60) days after the actual day of opening thereof unless the Owner is delayed in awarding the Contract due to the failure to receive a required approval/permit from one or more reviewing bodies/governmental agencies having jurisdiction over the Project, the sale of bonds, or the award of a grant, in which case, Bids shall be irrevocable for 120 days after Bid opening. Absent an exception for extending time for the award of the Contract, the Owner and the lowest responsible and responsive Bidder may mutually agree in writing to extend the time for the Owner to award the Contract.

§ 4.5.3 Neither the designation of the apparent lowest responsible Bidder, nor the issuance of a Notice of Intent to Award to the Bidder so designated shall operate to release any other Bidder from its Bid. Each such other Bidder, unless earlier

AIA Document A701 – 2018. Copyright © 1970, 1974, 1978, 1987, 1997 and 2018. All rights reserved. User Notes: (1246384756)

released from its Bid by specific action of the Owner, shall remain bound by its Bid until the earlier of (1) the date of actual execution by Owner of the Agreement Between Owner and Contractor with the Bidder whom the Award of Contract has been made, or (2) the expiration of the firm Bid period stipulated above.

§ 4.5.4 Negligence by the Bidder in preparing his Bid confers no right of withdrawal or modification of his proposal after such proposal has been opened. No claims on account of mistakes or omissions of any proposal will be considered. Notwithstanding the above, after the date and time designated for receipt of Bids, a Bidder who discovers that it made a clerical error in its Bid shall notify the Architect of such error within two business days, after the Bid opening time in accordance with the Public Contracts – Withdrawal of Bids Law, Act of January 23, 1974, P.L. 9, No. 4, 73 P.S. §1601 et seq., as amended. A Bid which has been opened may be withdrawn only in accordance with the causes set forth in said Act and for no other reasons. Strict compliance with said Act is required to withdraw a Bid after opening. Upon providing evidence of such error to the reasonable satisfaction of the Architect, the Bid shall be withdrawn and not resubmitted. If a Bid is withdrawn pursuant to this Section 4.5.4, then (1) the withdrawing bidder shall not supply any material or labor to, or perform any subcontract or other work agreement for any person to whom a contract or subcontract is awarded in the performance of the contract for which the withdrawn bid was submitted, without the written approval of the Owner, (2) , the Owner may award the contract to the next lowest responsive and responsible bidder or reject all bids and rebid, (3) if the Owner elects to rebid, then the withdrawing bidder shall pay the costs of printing new contract documents and required advertising and upon receipt of such costs, the Owner will return the withdrawing bidder's bid security, and (4) if the Owner elects to award to the next lowest responsible and responsive bidder, then the Owner will return the bid security of the withdrawing Bidder following execution of the contract with the next lowest responsible and responsive bidder.

ARTICLE 5 CONSIDERATION OF BIDS

§ 5.1 Opening of Bids

Bids properly identified and received within the specified time limits will be publicly opened and read aloud. A summary of the Bids may be made available to Bidders after opening of the Bids.

§ 5.2 Rejection of Bids

§ 5.2.1 The Owner shall have the right to reject any or all Bids.

§ 5.2.2 More than one proposal for the contract from an individual, partnership, corporation, or an association under the same or different name will be grounds for the rejection of all proposals in which such Bidder is interested. Any or all proposals will be rejected if there is reason for believing that collusion exists among any of the Bidders. Participants in such collusion will not be considered in future proposals. A Non-Collusion Affidavit shall be executed, notarized, and submitted with the Bidder's proposal using the form set forth in Specification Section 00 45 19.

§ 5.3 Acceptance of Bid (Award)

§ 5.3.1 It is the intent of the Owner to award a Contract to the lowest responsive and responsible Bidder, provided the Bid has been submitted in accordance with the requirements of the Bidding Documents. The Owner reserves the right to reject any and all bids. The Owner reserves the right to waive informalities and irregularities, technicalities, or non-material defects in a Bid received and to accept the Bid which, in the Owner's judgment, is in the Owner's best interests and in accordance with law. The Owner reserves the right to disregard all nonconforming, non-responsive, unbalanced, or conditional bids. Also, Owner reserves the right to reject the Bid of any Bidder if Owner believes that it would not be in the best interest of the Project to make an award to that Bidder, whether because the Bid is not responsive or the Bidder is unqualified or of doubtful financial ability or fails to meet any other pertinent standard or criteria established by the Bidding Documents. Discrepancies in the multiplication of units of Work and unit prices will be resolved in favor of the correct sum.

§ 5.3.2 Unless otherwise prohibited by law, the Owner shall have the right to accept Alternates in any order or combination, unless otherwise specifically provided in the Bidding Documents, and to determine the lowest responsive and responsible Bidder on the basis of the sum of the Base Bid and Alternates accepted. Alternates offered by the Bidder and not listed on the Bid Form will not be considered; nor will they be a determining factor in the low Bidder.

§ 5.3.3 In evaluating Bids, Owner will consider the qualifications of such Bidders, whether or not the Bids comply with the prescribed requirements, and such alternates, unit prices and other data, as may be requested in the Bid Form or prior to the Notice of Award.

User Notes: (1246384756)

§ 5.3.4 Owner may consider the qualifications and experience of Subcontractors, suppliers, and other persons or organizations proposed for any portions of the Work requested by Owner. Owner also may consider the operating costs, maintenance requirements, performance data, and guarantees of major items of materials and equipment proposed for incorporation in the Work when such data is required to be submitted prior to the Notice of Award.

§ 5.3.5 Owner may conduct such investigations as Owner deems necessary to assist in the evaluation of any Bid and to establish the responsibility, qualification, and financial ability of Bidders, subcontractors, suppliers, and other persons or organizations to perform and furnish the Work in accordance with the Contract Documents to Owner's satisfaction within the prescribed time.

§ 5.3.6 If the Contract is to be awarded, Owner will give the Successful Bidder a Notice of Intent to Award within sixty (60) days after the day of Bid opening unless extended as set forth in these Instructions to Bidders.

ARTICLE 6 POST-BID INFORMATION

§ 6.1 Contractor's Qualification Statement

Intentionally deleted.

§ 6.2 Owner's Financial Capability

Intentionally deleted.

§ 6.3 Submittals

§ 6.3.1 After notification of selection for the award of the Contract, the Bidder shall, as soon as practicable or as stipulated in the Bidding Documents, submit in writing to the Owner through the Architect:

- **.1** a designation of the Work to be performed with the Bidder's own forces;
- **.2** names of the principal products and systems proposed for the Work and the manufacturers and suppliers of each; and
- **.3** All Subcontractors proposed for the project shall have been in business for a minimum of five (5) years and must have a successful record of completing, at a minimum, five (5) projects of similar size and cost. Subcontractors must also have business insurance including commercial general liability insurance, automotive liability insurance, and worker's compensation insurance, adequate resources of manpower, tools, and equipment and must meet the IRS criteria for an independent contractor. Contractors shall reference the IRS website for the definition of an independent contractor: https://www.irs.gov/businesses/small-businesses-self-employed/independent-contractor-self-employed-or-employee

§ 6.3.2 The Bidder will be required to establish to the satisfaction of the Architect and Owner the reliability and responsibility of the persons or entities proposed to furnish and perform the Work described in the Bidding Documents.

§ 6.3.3 Intentionally deleted.

§ 6.3.4 Intentionally deleted.

§ 6.3.5 Pennsylvania Prevailing wage rates will apply to this project. The Contractor and its subcontractors shall comply with the provisions, duties, obligations, remedies, and penalties of the Pennsylvania Prevailing Wage Act, 43 P.S. § 165-1 et seq. which is incorporated herein by reference as if fully set forth herein. The general prevailing minimum wage rates, as determined by the Secretary of Labor and Industry shall be paid for each craft or classification of all workmen needed to perform work on the Project during the term hereof for the locality in which the work is to be performed.

ARTICLE 7 PERFORMANCE BOND AND PAYMENT BOND

§ 7.1 Bond Requirements

§ 7.1.1 The Bidder shall furnish bonds covering the faithful performance of the Contract and payment of all obligations arising thereunder.

§ 7.1.2 Refer to Specification Section 00 72 00 General Conditions of the Contract for Construction for complete Bond Requirements.

§ 7.1.3 The apparent low Bidder must provide Payment and Performance Bonds in the forms included in the Contract Documents, Public Works Employment Verification Form, and all Certificates of Insurance or other insurance information as required pursuant to the General Conditions of the Contract within ten (10) days of the issuance of Notice of Intent to Award. Other bond forms will not be accepted. Failure of the apparent low Bidder to provide original executed Payment and Performance Bonds in the required form within the required time will result in forfeiture of the Bid Security.

§ 7.1.4 Unless otherwise indicated below, the Penal Sum of the Payment and Performance Bonds shall be the amount of the Contract Sum.
(If Payment or Performance Bonds are to be in an amount other than 100% of the Contract Sum, indicate the dollar amount or percentage of the Contract Sum.)

(Paragraphs deleted)
§ 7.1.5 The bonds shall be dated on or before the date of the Contract.

§ 7.1.6 The Bidder shall require the attorney-in-fact who executes the required bonds on behalf of the surety to affix to the bond a certified and current copy of the power of attorney.

ARTICLE 8 ENUMERATION OF THE PROPOSED CONTRACT DOCUMENTS

§ 8.1 Copies of the proposed Contract Documents have been made available to the Bidder and consist of the following documents:

.1 AIA Document A132™–2019, Standard Form of Agreement Between Owner and Contractor, as modified, unless otherwise stated below.
(Insert the complete AIA Document number, including year, and Document title.)

.2 Intentionally Omitted as it is Not Applicable

.3 AIA Document A232™–2019, General Conditions of the Contract for Construction, as modified, unless otherwise stated below.
(Insert the complete AIA Document number, including year, and Document title.)

.4 Intentionally Omitted as it is Not Applicable

.5 Drawings:

SECTION 00 22 20 – BACKGROUND CHECKS & VERIFICATIONS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes administrative and procedural requirements governing clearance requirements of all Contracts, inclusive of Prime Contractors and their subcontractors.

1.03 REQUIRED CLEARANCES AND VERIFICATIONS

A. Competent Workmen, Prohibition of Illegal Alien Labor / Public Works Employment Verification Act

1. No person shall be employed to perform any work under the Contract if they are not legally eligible to be employed under applicable state and federal law or if they are not a trained, competent workman or mechanic, as applicable. For purposes of this Section, no workman or mechanic, as applicable, shall be regarded as competent unless he shall be duly skilled in the applicable branch of labor, and paid the applicable prevailing wage pursuant to Article 3.4.10 of the General Conditions.
2. Pursuant to the Act of May 11, 2006, (P.L. 173, No. 43), known as the Prohibition of Illegal Alien Labor on Assisted Projects Act, Contractor shall not knowingly employ, or knowingly permit any of its subcontractors to knowingly employ, the labor services of an illegal alien.
3. The Commonwealth of Pennsylvania enacted Act 141 of 2022, 71 P.S. Secs. 656.1-656.11, known as the Public Works Employment Verification Act (‘the Act’ or ‘Act 141’) which requires all public work contractors and subcontractors to utilize the Federal Government’s E-Verify system to ensure that all employees performing work on public work projects are authorized to work in the United States. The Contractor and its Subcontractor (as such term is defined in the Act) are required to comply with the Act and the Statement of Policy as published in the Pennsylvania Bulletin, July 22, 2023, and effective January 3, 2023. A separate and complete Verification Form required by the Public Works Employment Verification Act, Act No. 141 or 2022, 71 P.S. Secs. 656.1-656.11, (formerly Senate Bill 637 and Act 127) for itself and each of the proposed Subcontractors (as such term is defined therein) acknowledging its responsibilities and its compliance with the Public Works Employment Verification Act as a precondition of the Owner's Award of the Contract. The Act

requires all public work contractors and subcontractors to utilize the Federal Government's E-Verify system to ensure that all employees performing work on public work projects are authorized to work in the United States. The Contractor and its subcontractor (as such term is defined in the Act) are required to comply with the Act and the Statement of Policy as published in the Pennsylvania Bulletin, July 22, 2023, and effective January 3, 2023. The Verification Form shall include a certification that the information is true and correct, subject to sanctions provided by law. The respective Verification Form shall be executed by a representative who has sufficient knowledge and authority to make the representations and certifications contained in the Verification Form. Form included as Section 00 22 21.

4. A "Public Work" is defined to be construction, reconstruction, demolition, alteration and/or repair work other than maintenance work, done under contract and paid for in whole or in part out of the funds of a public body where the estimated cost of the total project is in excess of twenty-five thousand dollars ($25,000) but shall not include work performed under a rehabilitation or manpower training program.
5. The Department of General Services' Public Works Employment Verification Compliance Program is responsible for the administration, education and enforcement of the Act. It provides contractors and subcontractors with educational outreach, conducts investigations when complaints are received and random audits to ensure compliance with the requirements of the Act. Please direct your questions to the Public Works Employment Verification Compliance.

1.04 BACKGROUND CHECKS

Pennsylvania School Law, as required by Act 151 and Act 114 of 2006, as amended, requires that all applicants for employment in public and private schools, and employees of independent contractors seeking business with public and private schools undergo background checks if they will have direct contract with students. Prior to commencing Work, the Contractor and each Subcontractor shall submit on the prescribed form listed below for each employee or person performing work at the Project site on behalf of the Contractor and Subcontractor prior to such person performing any work at the Project site. The original clearances must be presented to the Owner prior to each employee, agent or subcontractor coming on the Owner's property. The Owner shall retain a copy of all such clearances in its file. Notwithstanding any other provision of the Contract, violation of this provision shall constitute grounds for immediate termination of the contract by the Owner.

Owner shall review the clearance submissions prior to each individual being permitted to come onto the Owner's property. The Owner reserves the right to reject any employee, agent or subcontractor that the Owner determines in its sole discretion has an unsatisfactory criminal history or child abuse clearance. The Owner shall retain a copy of all such clearances in its file. Notwithstanding any other provision of the Contract, violation of this provision shall constitute grounds for immediate termination of the contract by the Owner. Any individual rejected by the Owner shall not be permitted on the Owner's property. Owner's right to declare such person unfit shall not be limited to the required exclusion of persons from direct contact with children as set forth in Section 1-111 of the Pennsylvania Public School code and/or Subchapter C2 of

the Child Protective Services Law.

Each employee or person performing work at the Project site on behalf of the Contractor or Subcontract must complete each of the following clearances:

1. **Department of Human Services (DHA) Child Abuse History**

   Act 151 of December 16, 1994: Official clearance statement obtained from the Pennsylvania Department of Public Welfare pursuant to Act 151 of December 16, 1994 (P.L. 1292), subchapter C.2 of the Child Protective Services Law, as amended from time to time. Form included as Section 00 22 22. **Child Abuse reports shall be no more than one (1) year old at the time of employment.** Form is included as Section 00 22 22.

   Procedure for Obtaining Child Abuse History Clearance:

   a. You may obtain forms from schools or the Department of Human Services website. http://keepkidssafe.pa.gov/resources/clearances/index.htm.
   b. The Pennsylvania Child Abuse History Clearance can be submitted and paid online through the Child Welfare Information Solutions (CWIS) self-service portal, https://www.compass.state.pa.us/cwis/public/home, or mailed in.
   c. If you chose to mail the form, please enclose money order or check for each application in the amount indicated. No cash accepted. Personal, agency or business checks are acceptable.
   d. Clearances results will be mailed within 14 days from the date that the clearance is received. There will be no replacement after 90 days.
   e. Indicate SCHOOL as the “Purpose of Clearance.”
   f. For status of a request, please call the Department of Human Services, Childline and Abuse Registry at (717) 783-6211.

2. **Pennsylvania Access to Criminal History (PATCH)**

   Act 34 of 1985: Original report of criminal history record information from the Pennsylvania State Police or a statement from the Pennsylvania State Police that the Pennsylvania State Police central repository contains no such information relating to any of Contractor’s employees or its subcontractor’s employees working on the Project site prior to such persons performing work at the Project site. **Clearances shall be dated no earlier than one year prior to the date presented to the Owner, but** such report of criminal history shall be no older than sixty (60) months old at any time the individual performs services under this Agreement. To obtain this document, contact the nearest Pennsylvania State Police barracks. Form included as Section 00 22 23.

   Procedures for obtaining the PA State Police Background Clearance and associated costs can be found via the following link:
   https://www.psp.pa.gov/Pages/Request-a-Criminal-History-Record.aspx#.U_Y5c010zlV.

3. Federal Criminal History Record Information (CHRI) – FBI Report

Act 114 of 2006, 24 PS 1-111 as amended (Act 61 of 2008): Copy of the Federal Criminal History record from the Federal Bureau of Investigation in the manner prescribed by the Department of Education. **Clearances shall be dated no earlier than one year prior to the date presented to the Owner**. The fingerprint-based background check is a multiple-step process, as follows:

a. **Registration** - The applicant must register prior to going to the fingerprint site. Walk in service is allowed but all applicants are required to complete pre-enrollment in the new Universal Enrollment system. Pre- enrollment can be completed online or over the phone. The registration website is available online 24 hours/day, seven days per week at https://uenroll.identogo.com/ Telephonic registration is available at 1- 844-321-2101 Monday through Friday, 8am to 6pm EST. During the pre-enrollment process, all demographic data for the applicant is collected (name, address, etc.) along with notices about identification requirements and other important information.

b. When registering on-line, an applicant must use the PA Department of Education specific Service ***Code #1KG6XN.*** Fingerprint requests processed through any other agency or purpose cannot be accepted and are not transferrable. If an applicant enters the wrong code by mistake, the incorrect applicant type will appear at the top of the screen. The applicant should select the “Back to Home” button and begin the process again, by reentering the correct Service Code. If the applicant proceeds with the process under the incorrect code, the pre-enrollment and/or results cannot be transferred to another state agency and the applicant will have to start the process over and pay for the background check again.

c. Payment - The applicant will pay for the fingerprint service and to secure an unofficial copy of the Criminal History Record. Major Credit Cards as well as Money orders or cashier’s checks payable to MorphoTrust will be accepted on site for those applicants who are required to pay individually. Applicants shall verify the cost of the clearance if using money order or cashier’s check. No cash transactions or personal checks are allowed.

d. IDEMIA has also established a payment option for fingerprinting services for entities interested in paying the applicant’s fee. This new option provides a payment ‘coupon’ that the entity will provide to each applicant for use. Each coupon is unique and may only be used one time. Account applications must be completed prior to the applicant visiting the fingerprint site. The authorized representative must complete the account application. To establish a billing account, you will need to complete an application at https://www.identogo.com/uploads/general/PA_NCAC_Package_Fillable_Fields.pdf with IDEMIA.

e. Fingerprint Locations – After registration, the applicant proceeds to the fingerprint site of their choice for fingerprinting. The location of the fingerprint sites and days and hours of operation for each site are posted on IDEMIA's website at https://uenroll.identogo.com/ . The location of fingerprint sites may change over time; applicants are encouraged to confirm the site location nearest to their location. PDE encourages entities where access to the fingerprint location is more than 25 miles away to

contact IDEMIA and suggest areas where another closer site could be established.

f. Fingerprinting - At the fingerprint site the Enrollment Agents (EA) manages the fingerprint collection process. The fingerprint transaction begins when the EA reviews the applicant's qualified State or Federal photo ID before processing the applicant's transaction. Applicants will not be processed if they cannot produce an acceptable photo ID. After the identity of the applicant has been established, all ten fingers are scanned to complete the process. The entire fingerprint capture process should take no more than three to five minutes.

g. Report Access – For the public or private school or higher education institution to access the official report via the electronic system, applicants must present their UEID to the hiring entity (as shown on the receipt provided after fingerprint capture). This process allows an applicant to provide multiple potential employers with their UEID, as the report is linked to the UEID number and not assigned to a specific school. If an applicant has lost their receipt or needs to confirm UEID, the applicant may visit the UEP website (https://uenroll.identogo.com/) and simply check status of their file by providing alternate personal information. Applicants will enter their personal information after clicking in the lower portion of that screen to obtain their receipt with the UEID.

h. Applicants will receive an unofficial copy of their report.

4. **Act 24: Reporting Arrests and Convictions**

Act 24 of 2011 contains a number of significant changes to the Pennsylvania Public School Code that are designed to enhance the safety of school children. Among the changes, Act 24 amends Section 111 of the School Code to expand the list of prohibitive criminal offenses and ensure that then-current employees or those who will have contact with school children who may have been subject to a previous background check were required to provide assurances that they had not been previously arrested or convicted of a Section 111(e) offense.

Act 24 of 2011 and Act 82 of 2012: Original background check in accordance with Section 111 of the Public School Code of 1949, Act 34 of March 10, 1949, P.L. 30, No. 14, as amended by from time to time including, without limitation, by Act 114 of July 11, 2006, P.L. 1092, and Act 24 of 2011 (P.L. 112, No. 24) (24 P.S. Section 1-111, et seq.) on the form PDE 6004, Arrest/Conviction Report and Certification Form, published by the Pennsylvania Department of Education. The Contractor shall require employees performing at the Project Site on behalf of the Contractor and/or its Subcontractors to file form PDE-6004 within seventy-two (72) hours of an arrest or conviction of an offense listed in Section 1-111(e)of the Pennsylvania School Code. Contractor shall immediately notify the Owner in writing of such filing and shall preclude the affected employee from performing any work at the Project Site. The Owner shall also have the right to prohibit any such individual from coming onto its property. Form included as Section 00 22 24.

5. **Act 168: Commonwealth of Pennsylvania Sexual Misconduct/Abuse Disclosure Release**

   Act 168 of 2014: "Commonwealth of Pennsylvania Sexual Misconduct/Abuse Disclosure Release" has been developed by the Pennsylvania Department of Education, pursuant to Act 168 of 2014, to be used by school entities and independent contractors of school entities and by applicants who would be employed by or in a school entity in a position involving direct contact with children to satisfy the Act's requirement of providing information related to abuse or sexual misconduct. As required by Act 168, in addition to fulfilling the requirements under Section 1-111 of the School Code and the Child Protective Services Law ("CPSL"), an applicant who would be employed by or in a school entity in a position having direct contact with children, must provide the information requested in SECTION 1 of this form and complete a written authorization that consents to and authorizes the disclosure by the applicant's current and former employers of the information requested in SECTION 2 of this form. The applicant shall complete one form for the applicant's current employer(s) and one for each of the applicant's former employers that were school entities or where the applicant was employed in a position having direct contact with children (therefore, the applicant may have to complete more than one form). Upon completion by the applicant, the hiring school entity or independent contractor shall submit the form to the applicant's current and former employers to complete SECTION 2. A school entity or independent contractor may not hire an applicant who does not provide the required information for a position involving direct contact with children. No employee or person who has been convicted of any of the offenses enumerated under 24 P.S. Section 1-111(e) shall be permitted to perform any work at the Project Site. Form included as Section 00 22 25.

   PDFs of required clearance and verification forms can be found in the Project Manual as the followings Sections:

   a. 00 22 21Act 141: Public Works Employment Verification Form
   b. 00 22 22Act 151: Child Abuse Clearance Form
   c. 00 22 23Act 34: Pennsylvania State Police Clearance Form
   d. 00 22 24Act 24/Act 82: PDE Form 6004
   e. 00 22 25Act 168: PA Sexual Misconduct-Abuse Disclosure Release

For additional information regarding the PDE Clearances and Background Checks please visit: https://www.education.pa.gov/Educators/Clearances/Pages/default.aspx

PENNSYLVANIA CHILD ABUSE HISTORY CERTIFICATION

Type or print clearly in ink. If obtaining this certification for non-volunteer purposes or if, as a volunteer having direct volunteer contact with children, you have obtained a certification free of charge within the previous 57 months, enclose an $13.00 money order or check payable to the PENNSYLVANIA DEPARTMENT OF HUMAN SERVICES or a payment authorization code provided by your organization. **DO NOT send cash.**

Certifications for the purpose of "volunteer having direct volunteer contact with children" may be obtained free of charge once every 57 months.

Send to CHILDLINE AND ABUSE REGISTRY, PA DEPARTMENT OF HUMAN SERVICES, P.O. BOX 8170 HARRISBURG, PA 17105-8170.

APPLICATIONS THAT ARE INCOMPLETE, ILLEGIBLE OR RECEIVED WITHOUT THE CORRECT FEE WILL BE RETURNED UNPROCESSED. IF YOU HAVE QUESTIONS CALL 717-783-6211, OR (TOLL FREE) 1-877-371-5422.

PURPOSE OF CERTIFICATION (Check one box only)

- ☐ Foster parent
- ☐ Prospective adoptive parent
- ☐ Employee of child care services
- ☐ School employee governed by the Public School Code
- ☐ School employee not governed by the Public School Code
- ☐ Self-employed provider of child-care services in a family child-care home
- ☐ An individual 14 years of age or older applying for or holding a paid position as an employee with a program, activity, or service
- ☐ An individual seeking to provide child-care services under contract with a child care facility or program
- ☐ An individual 18 years or older who resides in the home of a foster parent for children for at least 30 days in a calendar year
- ☐ An individual 18 years or older who resides in the home of a certified or licensed child-care provider for at least 30 days in a calendar year
- ☐ An individual 18 years or older, excluding individuals receiving services, who resides in a family living home, community home for individuals with an intellectual disability, or host home for children for at least 30 days in a calendar year
- ☐ An individual 18 years or older who resides in the home of a prospective adoptive parent for at least 30 days in a calendar year
- ☐ Volunteer having direct volunteer contact with children

  If purpose is volunteer having direct volunteer contact with children, choose SUB PURPOSE:
  - ☐ Big Brother/Big Sister and/or affiliate
  - ☐ Domestic violence shelter and/or affiliate
  - ☐ Rape crisis center and/or affiliate
  - ☐ Other: _____
- ☐ PA Department of Human Services Employment & Training Program participant (signature required below)

INSTRUCTIONS TO COMPLETE THE PENNSYLVANIA CHILD ABUSE HISTORY CERTIFICATION APPLICATION:

General:

- Type or print clearly and neatly in ink only.
- If obtaining this certification for non-volunteer purposes or if, as a volunteer having direct volunteer contact with children, you have obtained a certification free of charge within the previous 57 months, enclose an $13.00 money order or check for each application. No cash will be accepted. Personal, agency, or business checks are acceptable. Certifications for the purpose of "volunteer having direct volunteer contact with children" may be obtained free of charge once every 57 months. If no payment is enclosed for a non-volunteer purpose, you must provide a payment authorization code, otherwise your application will be rejected and returned to you.
- **DO NOT SEND POSTAGE PAID RETURN ENVELOPES** for us to return your results. Results are issued through an automated system generated mailing process.
- Certification results will be mailed to you within 14 days from the date the certification application is received at the ChildLine and Abuse Registry.
- Failure to comply with the instructions will cause considerable delay in processing the results of an applicant's child abuse history certification application.

Purpose of Certification - Do not check more than one box**:**

- Check the **foster parent** box if applying for purposes of providing foster care.
- Check the **prospective adoptive parent** box if applying for the purpose of adoption.
- Check the **employee of child care services** box if applying for the purpose of child care services in the following:
  - Child day care centers; group day care homes; family day care homes; boarding homes for children; juvenile detention center services or programs for delinquent or dependent children; mental health services for children; services for children with intellectual disabilities; early intervention services for children; drug and alcohol services for children; and day care services or other programs that are offered by a school.
- Check the **school employee governed by the Public School Code** box if you are a school employee who is required to obtain background checks pursuant to Section 111 of the Public School Code and will continue to be required to obtain background checks prior to employment in accordance with that section and on the periodic basis required by Act 153.
- Check the **school employee not governed by the Public School Code** box if you are a school employee not governed by Section 111 of the Public School Code, but covered by Act 153 (pertaining to school employees in institutions of higher education).

  Definition of school employee: A school employee is defined as an individual who is employed by a school or who provides a program, activity or service sponsored by a school. The term does not apply to administrative or other support personnel unless they have direct contact with children.

  Definition of school: A facility providing elementary, secondary or postsecondary educational services. The term includes the following:

  (1) Any school of a school district.
  (2) An area vocational-technical school.
  (3) A joint school.
  (4) An intermediate unit.
  (5) A charter school or regional charter school.
  (6) A cyber charter school.
  (7) A private school licensed under the act of January 28, 1988 (P.L.24, No. 11), known as the Private Academic Schools Act.
  (8) A private school accredited by an accrediting association approved by the state Board of Education.
  (9) A non-public school.
  (10) An institution of higher education.
  (11) A private school licensed under the act of December 15, 1986 (P.L. 1585, No. 174), known as the Private Licensed Schools Act.
  (12) The Hiram G. Andrews Center.
  (13) A private residential rehabilitative institution as defined in section 914.1-A(c) of the Public School Code of 1949.
- Check the **self-employed provider of child-care services in a family child-care home** if providing child care services in one's home (other than the child's own home) at any one time to four, five, or six children who are not relatives of the caregiver.
- Check the **individual 14 years of age or older who is applying for or holding a paid position as an employee** box if the employment is with a **program, activity, or service, as a person responsible for the child's welfare or having direct contact with children:** Applying as an employee who is responsible for the child's welfare or having direct contact (providing care, supervision, guidance, or control to children or having routine interaction with children) in any of the following in which children participate and which is sponsored by a school or public or private organization:
  - A youth camp or program;
  - A recreational camp or program;
  - A sports or athletic program;
  - A community or social outreach program;
  - An enrichment or educational program; and
  - A troop, club, or similar organization
- Check the **individual seeking to provide child care services under contract with a child care facility or program** box if you are providing child care services as part of a contract or grant funded program.
- Check the box for **individual 18 years or older who resides in the home of a foster parent for at least 30 days in a calendar year** if you are an adult household member in this setting and require certification.
- Check the box for **individual 18 years or older who resides in the home of a certified or licensed child-care provider for at least 30 days in a calendar year** if you are an adult household member in this setting and require certification.

- Check the box for **individual 18 years or older, excluding individuals receiving services, who resides in a family living home, community home for individuals with an intellectual disability, or host home for children for at least 30 days in a calendar year** if you are an adult household member in this setting and require certification.
- Check the box for **individual 18 years or older who resides in the home of a prospective adoptive parent for at least 30 days in a calendar year** if you are an adult household member in this setting and require certification.
- Check the **volunteer having direct volunteer contact with children** box if applying for the purpose of volunteering as an adult for an unpaid position as a volunteer with a child-care service, a school, or a program, activity or service as a person responsible for the child's welfare or having direct volunteer contact with children. In addition, check the box of one of the organizations listed, i.e. Big Brother/Big Sister, domestic violence shelter, rape crisis center. If you are **NOT** applying for a volunteer in one of the organizations listed, please check the **other** box and write the name of the organization in the space provided.
- Check the **PA Department of Human Services employment & training program participant** box if you are applying for the purpose of participating in a PA Department of Human Services employment and training program through a county assistance office (CAO) or the Office of Income Maintenance (OIM). The signature **AND** phone number of the CAO or OIM representative is required. If there is no signature and no phone number, your application will be rejected and returned to you.
- If you were provided a "**PAYMENT AUTHORIZATION CODE**" by an organization, please provide the **agency/organization name** in the space provided and the **payment authorization code** in the space provided.
- Please check the **CONSENT/RELEASE OF INFORMATION** box if you included a payment code in the space above and attached the completed Consent/Release of Information Authorization form to your Pennsylvania Child Abuse History Certification application when you mail it to our office. The Consent/Release of Information Authorization form allows the department to send your results to a third party. If the Consent/Release of Information Authorization form is **NOT** attached to the certification application, the results **WILL** be mailed to the applicant's home address and not to the third party.

Applicant Demographic Information:

- Name - Include the applicant's full legal name. Initials are not acceptable for a first name. If your full legal name is an initial, please provide supporting documentation along with your certification application.
- Social Security number - Include the applicant's social security number. A social security number is voluntary; **HOWEVER, PLEASE NOTE THAT APPLICATIONS THAT DO NOT INCLUDE SOCIAL SECURITY NUMBERS MAY TAKE LONGER TO BE PROCESSED.**
- Gender - Please check one box.
- Date of birth - Fill in the applicant's date of birth (Example: 01/22/1990).
- Age - Fill in the applicant's current age.

Address:

- The address listed must be the applicant's current home address. This is also where the results of the certification will be mailed, unless otherwise noted. If the **different mailing address** box is checked and a mailing address is provided in the "different" mailing address column, the results will be mailed to the "mailing" address and not the "home" address. **Note:** If the consent/release of information box is checked and an "other" address is provided, the results will be mailed to the "other" address.

Contact Information:

- Please provide your home, work or mobile telephone number. Fill in the number where the applicant can be reached in the event that there are questions about the information on the application.
- Please provide an email address. By providing an email address, you are consenting to ChildLine contacting you by email in the event that you cannot be reached by phone. **NO CONFIDENTIAL INFORMATION WILL EVER BE SHARED OR PROVIDED IN AN EMAIL FROM OUR OFFICE.**

Previous Names Used Since 1975:

- The applicant must list any and all full legal names that they have ever had since 1975. This includes maiden names, nicknames, aliases and also known as (aka) names.

Previous Addresses Since 1975:

- List all addresses where the applicant has resided since 1975. The applicant can attach an additional sheet of paper with all of the addresses listed if necessary. If the applicant cannot remember the exact mailing addresses since 1975, filling in as much information as possible about the location is acceptable.

Household Members:

- Include anyone that the applicant lived with since 1975 (parents, guardians, siblings, children, spouse (ex), paramour, friends, etc.). In addition, include the household member's relationship to the applicant, their age (to the best of your knowledge) and their gender. If the applicant was under the age of 18 in 1975, this section **MUST** include the applicant's PARENT(S) or GUARDIAN(S). If this section is left blank, the application will be rejected and returned to the applicant.

Signature:

- Applications **MUST** be signed and dated. Applications that are not signed and dated will be rejected and returned to the applicant.

CHILDLINE USE ONLY:

- Please DO NOT WRITE in this section. This is for CHILDINE staff only.

Additional Information:

Applicants can visit https://www.compass.state.pa.us/CWIS for more information about submitting the child abuse certification online or to register for a business/organization account.

ARREST/CONVICTION REPORT AND CERTIFICATION FORM
(under Act 24 of 2011 and Act 82 of 2012)

Section 1. Personal Information

Full Legal Name: _____

Date of Birth: _____/_____/_____

Other names by which you have been identified: _____

Section 2. Arrest or Conviction

☐ By checking this box, I state that I have NOT been arrested for or convicted of any Reportable Offense.

☐ By checking this box, I report that I have been arrested for or convicted of an offense or offenses enumerated under 24 P.S. §§1-111(e) or (f.1) ("Reportable Offense(s)"). See Page 3 of this Form for a list of Reportable Offenses.

Details of Arrests or Convictions

For each arrest for or conviction of any Reportable Offense, specify in the space below (or on additional attachments if necessary) the offense for which you have been arrested or convicted, the date and location of arrest and/or conviction, docket number, and the applicable court.

_____

_____

Section 3. Child Abuse

☐ By checking this box, I state that I have NOT been named as a perpetrator of a founded report of child abuse within the past five (5) years as defined by the Child Protective Services Law.

☐ By checking this box, I report that I have been named as a perpetrator of a founded report of child abuse within the past five (5) years as defined by the Child Protective Services Law.

Section 4. Certification

By signing this form, I certify under penalty of law that the statements made in this form are true, correct and complete. I understand that false statements herein, including, without limitation, any failure to accurately report any arrest or conviction for a Reportable Offense, shall subject me to criminal prosecution under 18 Pa.C.S. §4904, relating to unsworn falsification to authorities.

Signature *Date*

INSTRUCTIONS

Pursuant to 24 P.S. §1-111(c.4) and (j), the Pennsylvania Department of Education developed this standardized form (PDE-6004) to be used by current and prospective employees of public and private schools, intermediate units, and area vocational-technical schools.

As required by subsection (c.4) and (j)(2) of 24 P.S. §1-111, this form shall be completed and submitted by all current and prospective employees of said institutions to provide written reporting of any arrest or conviction for an offense enumerated under 24 P.S. §§1-111(e) and (f.1) and to provide notification of having been named as a perpetrator of a founded report of child abuse within the past five (5) years as defined by the Child Protective Services Law.

As required by subsection (j)(4) of 24 P.S. §1-111, this form also shall be utilized by current and prospective employees to provide written notice within seventy-two (72) hours after a subsequent arrest or conviction for an offense enumerated under 24 P.S. §§1-111(e) or (f.1).

In accordance with 24 P.S. §1-111, employees completing this form are required to submit the form to the administrator or other person responsible for employment decisions in a school entity. Please contact a supervisor or the school entity administration office with any questions regarding the PDE 6004, including to whom the form should be sent.

PROVIDE ALL INFORMATION REQUIRED BY THIS FORM LEGIBLY IN INK.

LIST OF REPORTABLE OFFENSES

- **A reportable offense enumerated under 24 P.S. §1-111(e) consists of any of the following:**

(1) An offense under one or more of the following provisions of Title 18 of the Pennsylvania Consolidated Statutes:

- Chapter 25 (relating to criminal homicide)
- Section 2702 (relating to aggravated assault)
- Section 2709.1 (relating to stalking)
- Section 2901 (relating to kidnapping)
- Section 2902 (relating to unlawful restraint)
- Section 2910 (relating to luring a child into a motor vehicle or structure)
- Section 3121 (relating to rape)
- Section 3122.1 (relating to statutory sexual assault)
- Section 3123 (relating to involuntary deviate sexual intercourse)
- Section 3124.1 (relating to sexual assault)
- Section 3124.2 (relating to institutional sexual assault)
- Section 3125(relating to aggravated indecent assault)
- Section 3126 (relating to indecent assault)
- Section 3127 (relating to indecent exposure)
- Section 3129 (relating to sexual intercourse with animal)
- Section 4302 (relating to incest)
- Section 4303 (relating to concealing death of child)
- Section 4304 (relating to endangering welfare of children)
- Section 4305 (relating to dealing in infant children)
- A felony offense under section 5902(b) (relating to prostitution and related offenses)
- Section 5903(c) or (d) (relating to obscene and other sexual materials and performances)
- Section 6301(a)(1) (relating to corruption of minors)
- Section 6312 (relating to sexual abuse of children)
- Section 6318 (relating to unlawful contact with minor)
- Section 6319 (relating to solicitation of minors to traffic drugs)
- Section 6320 (relating to sexual exploitation of children)

(2) An offense designated as a felony under the act of April 14, 1972 (P.L. 233, No. 64), known as "The Controlled Substance, Drug, Device and Cosmetic Act."

(3) An offense SIMILAR IN NATURE to those crimes listed above in clauses (1) and (2) under the laws or former laws of:

- the United States; or
- one of its territories or possessions; or
- another state; or
- the District of Columbia; or
- the Commonwealth of Puerto Rico; or
- a foreign nation; or
- under a former law of this Commonwealth.

- **A reportable offense enumerated under 24 P.S. §1-111(f.1) consists of any of the following:**

(1) An offense graded as a felony offense of the first, second or third degree, other than one of the offenses enumerated under 24 P.S. §1-111(e), if less than (10) ten years has elapsed from the date of expiration of the sentence for the offense.

(2) An offense graded as a misdemeanor of the first degree, other than one of the offenses enumerated under 24 P.S. §1-111(e), if less than (5) five years has elapsed from the date of expiration of the sentence for the offense.

(3) An offense under *75 Pa.C.S. § 3802(a)*, (b), (c) or (d)(relating to driving under influence of alcohol or controlled substance) graded as a misdemeanor of the first degree under *75 Pa.C.S. § 3803* (relating to grading), if the person has been previously convicted of such an offense and less than (3) three years has elapsed from the date of expiration of the sentence for the most recent offense.

COMMONWEALTH OF PENNSYLVANIA
SEXUAL MISCONDUCT/ABUSE DISCLOSURE RELEASE
(Pursuant to Act 168 of 2014)

Instructions

This standardized form has been developed by the Pennsylvania Department of Education, pursuant to Act 168 of 2014, to be used by school entities and independent contractors of school entities and by applicants who would be employed by or in a school entity in a position involving direct contact with children to satisfy the Act's requirement of providing information related to abuse or sexual misconduct. As required by Act 168, in addition to fulfilling the requirements under section 111 of the School Code and the Child Protective Services Law ("CPSL"), an applicant who would be employed by or in a school entity in a position having direct contact with children, must provide the information requested in SECTION 1 of this form and complete a written authorization that consents to and authorizes the disclosure by the applicant's current and former employers of the information requested in SECTION 2 of this form. The applicant shall complete one form for the applicant's current employer(s) and one for each of the applicant's former employers that were school entities or where the applicant was employed in a position having direct contact with children (therefore, the applicant may have to complete more than one form). Upon completion by the applicant, the hiring school entity or independent contractor shall submit the form to the applicant's current and former employers to complete SECTION 2. **A school entity or independent contractor may not hire an applicant who does not provide the required information for a position involving direct contact with children.**

Relevant Definitions:

Direct Contact with Children is defined as: "the possibility of care, supervision, guidance or control of children or routine interaction with children."

Sexual Misconduct is defined as: "any act, including, but not limited to, any verbal, nonverbal, written or electronic communication or physical activity, directed toward or with a child or a student regardless of the age of the child or student that is designated to establish a romantic or sexual relationship with the child or student. Such acts include, but are not limited to: (1) sexual or romantic invitation; (2) dating or soliciting dates; (3) engaging in sexualized or romantic dialogue; (4) making sexually suggestive comments; (5) self-disclosure or physical exposure of a sexual, romantic or erotic nature; or (6) any sexual, indecent, romantic or erotic contact with the child or student."

Abuse is defined as "conduct that falls under the purview and reporting requirements of the CPSL, 23 Pa.C.S. Ch. 63, is directed toward or against a child or a student, regardless of the age of the child or student."

Please Note

A prospective employer that receives any requested information regarding an applicant may use the information for the purpose of evaluating the applicant's fitness to be hired or for continued employment and shall report the information as appropriate to the Department of Education, a state licensing agency, law enforcement agency, child protective services agency, another school entity or to a prospective employer.

If the prospective employer decides to further consider an applicant after receiving an affirmative response to any of the questions listed in SECTIONS 1 and 2 of this form, the prospective employer shall request that former employers responding affirmatively to the questions provide additional information about the matters disclosed and include any related records. The **Commonwealth of Pennsylvania Sexual Misconduct/Abuse Disclosure Information Request** can be used to request this follow-up information. Former employers shall provide the additional information and records within 60 calendar days of the prospective employer's request.

The completed form and any information or records received shall not be considered public records for the purposes of the Act of February 14, 2008 (P.L. 6, No. 3) known as the "Right to Know Law."

The Department of Education shall have jurisdiction to determine willful violations of Act 168 and may, following a hearing, assess a civil penalty not to exceed $10,000. School entities shall be barred from entering into a contract with an independent contractor who is found to have willfully violated the provisions of Act 168.

COMMONWEALTH OF PENNSYLVANIA
SEXUAL MISCONDUCT/ABUSE DISCLOSURE RELEASE
(under Act 168 of 2014)

(Hiring school entity or independent contractor submits this form to ALL current employer(s) and to former employer(s) that were school entities and/or where the applicant had direct contact with children)

To:

Name of Current or Former Employer:		☐ No applicable employment
Street Address:		
City, State, Zip:		
Telephone Number:	Fax Number:	Email:
Contact Person:		Title:

The named applicant is under consideration for a position with our entity. The Pennsylvania General Assembly has determined that additional safeguards are necessary in the hiring of school employees to ensure the safety of the Commonwealth's students. The individual whose name appears below has reported previous employment with your entity. We request you provide the information requested in SECTION 2 of this form within **20 calendar days** as required by Act 168 of 2014.

SECTION 1: APPLICANT CERTIFICATION AND RELEASE (TO BE COMPLETED BY THE APPLICANT EVEN IF THE APPLICANT HAS NO CURRENT OR PRIOR EMPLOYMENT TO DISCLOSE)

Applicant's Name (First, Middle, Last):	
Any former names by which the Applicant has been identified:	
DOB:	
Last 4 digits of Applicant's Social Security Number:	PPID (if applicable):
Approximate dates of employment with the entity listed above:	
Position(s) held with the entity:	

Pursuant to Act 168, an employer, school entity, administrator, and/or independent contractor that provides information or records about a current or former employee or applicant shall be immune from criminal liability under the CPSL, the Educator Discipline Act, and from civil liability for the disclosure of the information, unless the information or records provided were knowingly false. Such immunity shall be in addition to and not in limitation of any other immunity provided by law or any absolute or conditional privileges applicable to such disclosure by the virtue of the circumstances of the applicant's consent thereto. Under Act 168, the willful failure to respond to or provide the information and records as requested may result in civil penalties and/or professional discipline, where applicable.

Have you (Applicant) ever:

Yes ◯ No ◯ Been the subject of an abuse or sexual misconduct investigation by any employer, state licensing agency, law enforcement agency or child protective services agency (unless the investigation resulted in a finding that the allegations were false)?

Yes ◯ No ◯ Been disciplined, discharged, non-renewed, asked to resign from employment, resigned from or otherwise separated from employment while allegations of abuse or sexual misconduct were pending or under investigation or due to adjudication or findings of abuse or sexual misconduct?

Yes ◯ No ◯ Had a license, professional license or certificate suspended, surrendered or revoked while allegations of abuse or sexual misconduct were pending or under investigation or due to an adjudication or findings of abuse or sexual misconduct?

By signing this form, I certify under penalty of law that the statements made in this form are correct, complete, and true to the best of my knowledge. I understand that false statements herein, including, without limitation, any willful failure to disclose the information required, shall subject me to criminal prosecution under 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities) and to discipline up to, and including, termination or denial of employment, and may subject me to civil penalties and disciplinary action under the Educator Discipline Act. I also hereby authorize the above-named employer to release to the entity listed on page 3, the information requested in SECTION 2 of this form and any related records. I hereby release, waive, and discharge the above-named employer from any and all liability of any kind that may arise from such disclosure or release of records. I understand that third party vendors may be used to process this Act 168 pre-employment history review.

_____ _____

Signature of Applicant Date

SECTION 2: CURRENT/FORMER EMPLOYER VERIFICATION (TO BE COMPLETED BY THE APPLICANT'S CURRENT EMPLOYER(S) AND ALL FORMER EMPLOYERS THAT WERE SCHOOL ENTITIES AND/OR WHERE THE APPLICANT HAD DIRECT CONTACT WITH CHILDREN)

Dates of employment of Applicant: _____ Contact telephone #:_____

To the best of your knowledge, has Applicant ever:

Yes ◯ No ◯ Been the subject of an abuse or sexual misconduct investigation by any employer, state licensing agency, law enforcement agency or child protective services agency (unless the investigation resulted in a finding that the allegations were false)?

Yes ◯ No ◯ Been disciplined, discharged, non-renewed, asked to resign from employment, resigned from or otherwise separated from employment while allegations of abuse or sexual misconduct were pending or under investigation or due to adjudication or findings of abuse or sexual misconduct?

Yes ◯ No ◯ Had a license, professional license or certificate suspended, surrendered or revoked while allegations of abuse or sexual misconduct were pending or under investigation or due to an adjudication or findings of abuse or sexual misconduct?

☐ No records or other evidence currently exists regarding the above questions. I have no knowledge of information pertaining to the applicant that would disqualify the applicant from employment.

SECTION 00 31 00 – AVAILABLE PROJECT INFORMATION – EXISTING DRAWINGS

A. All Prime Bidders will receive the below listed items as part of the Bidding Documents. The below listed items can be found in a separate file on Procore.

   1. The following drawing set(s) of the Jarrettown Elementary School are being included as part of the Bidding Documents for reference only:

      a. Jarrettown Elementary School Addition and Renovation Drawings dated January 12, 1993, 74 Drawings.

B. Bidder shall determine the adequacy of the attached drawings for use in preparing their Bid for the Work. Bidders should visit the site to familiarize themselves with existing conditions. No claims will be honored for inadequacy of data. Should Bidder determine that additional information is required, the Bidder shall make, prior to bidding, his own exploration, tests, and analyses.
C. Existing drawings that have been made available to Bidders shall not constitute a Contract Document and shall be considered as “general information” only. The Existing Drawings set is not a representation or guarantee of the continuity of any condition. The Owner, Construction Manager, or Architect will not be responsible for interpretations or conclusions drawn from the existing drawings by the Bidder. The Owner, Construction Manager, and Architect are not responsible for the accuracy or completeness of the information given in the existing drawings.
D. Contact ICS, Construction Manager (CM), Ryan Murphy at 610-368-2373 to schedule site visits for further evaluation of existing conditions. Bidders shall provide insurance certificates as per General Conditions Article 11 and other information required prior to performing additional exploration or tests.

END OF SECTION 00 31 00

SECTION 00 41 16 – BID FORM - WORK SCOPE NO.1 - GENERAL CONSTRUCTION

BID TO: UPPER DUBLIN SCHOOL DISTRICT
1580 FORT WASHINGTON AVE., MAPLE GLEN, PA 19002

BID FROM: _____

_____

_____

THIS BID FORM SHALL NOT BE ALTERED IN ANY MANNER. ANY ALTERED BID FORMS SHALL BE CONSIDERED NON-RESPONSIVE AND WILL BE REJECTED.

1. The undersigned Bidder proposed and agrees, if written notice of the acceptance of this Bid is received by the undersigned within 60 days after date set for opening of this Bid, or at any other time thereafter before Bid is withdrawn, the undersigned agrees to enter into and execute a Contract with the Owner in accordance with this Bid as accepted. This shall be in a form acceptable to Owner, and the successful Bidder shall furnish and deliver to Owner the Performance Bond and Labor and Material Payment Bond in the forms provided in the Bidding Documents, and proof of insurance coverage, all within ten (10) days after notice of acceptance of this Bid.

2. BIDDER accepts all of the terms and conditions of the Instructions to Bidders, including without limitation, those dealing with disposition of Bid Security. This Bid will remain open for 60 days after the day of Bid Opening unless the OWNER is delayed in awarding the Contract due to the failure to receive a required approval/permit from one or more reviewing bodies/governmental agencies having jurisdiction over the Project, the sale of bonds or the award of a Grant, in which case, Bids shall be irrevocable for 120 days. BIDDER will sign the Agreement and submit the required bonds and other documents required by the Contract Documents within ten (10) days after the date of OWNER'S Notice of Award.

3. In submitting this Bid, BIDDER represents, as more fully set forth in the Agreement, that:

    a. Bidder has certified that it has examined copies of all Contract Documents. Bidder has made a thorough inspection of the premises and that the equipment and the construction activities that form the basis of this agreement can be completed in a good and workman-like manner for the amount of its Bid. Further, Bidder certifies that all of the equipment, installation, and construction activities to be supplied pursuant to this Bid and an agreement with Owner, if awarded. Bidder has reported any discrepancies, duplications, errors, or omissions in the Contract Documents, as required in the Contract Documents and hereby waives any claims for additional cost or time for such matters that were apparent or discoverable by Bidder from a thorough and complete review of the Contract Documents prior to submission of this Bid. Additionally, the Bidder hereby acknowledges receipt of the following addenda:

Addenda No. _____ Dated _____

Addenda No. _____ Dated _____

Addenda No. _____ Dated _____

Addenda No. _____ Dated _____

Addenda No. _____ Dated _____

Addenda No. _____ Dated _____

b. The Undersigned here certifies that this Bid is genuine and not a sham, collusive or fraudulent or made in the interest of or in behalf of any person, firm or corporation not herein named; and that the Undersigned has not, directly or indirectly, inducted or solicited any bidder to submit a sham bid, or any other person, firm or corporation from bidding, and that the Undersigned has not, in any manner, sought by collusion to secure for himself any advantage over any other Bidder.

c. In accordance with the Advertisement for Bids and the proposed Construction Documents distributed by ICS, 1400 N. Providence Rd, Building 2, Suite 4045, Media, PA 19063, dated October 29th, 2026, relating to Work Scope No. 1, General Construction, for Work generally described as the New Jarrettown Elementary School Project, the undersigned, having visited the site of proposed construction and having become thoroughly familiar with local conditions affecting the cost and performance of the work and with all requirements of the Contract Documents and related Addenda, hereby proposes and agrees to provide all labor, materials and equipment required to construct and complete the Work in accordance with the Contract Documents and Addenda for the following amounts:

4. Base Bid:

Work Scope #1 Base Bid Price (INCLUDING Project Allowances) for all Work indicated on the Contract Documents for Work Scope No. 1, General Construction:

_____ Dollars.
(Written Amount)

($_____)
(Numerical Amount)

5. Alternates:

Reference Section 01 23 00, Alternates, for the full description of the included Project Alternates for this Work Scope. Do not adjust material allowances under any alternate bid items. Indicate whether alternate cost is an add or deduct when a choice is provided.

Alternate No. 1 Reduced Gym Size, as described in Specification Section 01 23 00 Alternates.

(Add, Deduct, No Change) $_____.
(Circle One) *(Numerical Amount)*

(Written Amount)

Alternate No. 11 ADD – Replace the base bid mechanical system with a Geothermal well mechanical system as indicated in the project drawings, as described in Specification Section 01 23 00 Alternates.

(Add, Deduct, No Change) $_____.
(Circle One) *(Numerical Amount)*

_____Dollars.
(Written Amount)

6. Unit Prices:

The Bidder is required to bid unit prices on the following items as identified in Section 01 22 00 – Unit Prices and Material Allowances in accordance with the Contract Documents. Unit Prices shall include costs for furnishing and installing all materials, labor, tools, equipment, and other incidental costs necessary to complete the specified operation. Unit Prices will be used to ADD/DEDUCT to the Contract cost where appropriate. The BIDDER agrees that in the event of any inconsistency between a Unit Price and the extension of a Unit Price in a Material Allowance, the Unit Price shall control and the Material Allowance extension shall be recalculated.

If any extra work is required in these categories beyond the contract requirements, the unit prices shall be used as a basis for determining the amount of additional payment to the Contractor. The Bidder agrees that Owner reserves the right to reject or otherwise not agree to use the Unit Prices submitted, if in the Owner's opinion, the nature or quantity of the Work encountered is such that the Unit Price cost no longer applies to the Work. The Owner also reserves the right to solicit independent proposals as required by the Department of Education guidelines, under a separate contract, to perform the services required. **The responsiveness of the Bid may be determined by the Owner on the basis of the Unit Prices proposed by the BIDDER. Unit Prices shall be consistent with verifiable average costs for the Work to be performed. Bidders agree that a Bid may be rejected if the Unit Prices submitted are inconsistent with the average cost. Under NO circumstances will BIDDER perform Unit Price Work without prior written authorization from OWNER.** The Construction Manager must field measure and approve all allowance work prior to the Contractor performing the Work. Should the allowance amount be exceeded, the Contractor will be paid by Change Order addition at the Unit Price established for the related Work. Similarly, should the allowance used be less than the allowance amount, the Contractor will credit the Owner for the unused quantity in accordance with the related Unit Price by a Change Order deduction.

The contract Unit Price per (UOM) for Unit Price WS-1A as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1B as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1C as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1D as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1E as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1F as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1G as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1H as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1I as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1J as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1K as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1L as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1M as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1N as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1O as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1P as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1Q as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1R as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1S as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1T as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1U as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1V as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1W as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1X as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1Y as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-1Z as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

END OF SECTION 00 41 16

SECTION 00 41 17 – BID FORM - WORK SCOPE NO. 2 - ELECTRICAL CONSTRUCTION

BID TO: UPPER DUBLIN SCHOOL DISTRICT
1580 FORT WASHINGTON AVE., MAPLE GLEN, PA 19002

BID FROM: _____

_____

_____

THIS BID FORM SHALL NOT BE ALTERED IN ANY MANNER. ANY ALTERED BID FORMS SHALL BE CONSIDERED NON-RESPONSIVE AND WILL BE REJECTED.

1. The undersigned Bidder proposed and agrees, If written notice of the acceptance of this Bid is received by the undersigned within 60 days after date set for opening of this Bid, or at any other time thereafter before Bid is withdrawn, the undersigned agrees to enter into and execute a Contract with the Owner in accordance with this Bid as accepted. This shall be in a form acceptable to Owner, and the successful Bidder shall furnish and deliver to Owner the Performance Bond and Labor and Material Payment Bond, in the forms provided in the Bidding Documents, and proof of insurance coverage, all within ten (10) days after notice of acceptance of this Bid.

2. BIDDER accepts all of the terms and conditions of the Instructions to Bidders, including without limitation, those dealing with disposition of Bid Security. This Bid will remain open for 60 days after the day of Bid Opening unless the OWNER is delayed in awarding the Contract due to the failure to receive a required approval/permit from one or more reviewing bodies/governmental agencies having jurisdiction over the Project, the sale of bonds or the award of a Grant, in which case, Bids shall be irrevocable for 120 days. BIDDER will sign the Agreement and submit the required bonds and other documents required by the Contract Documents within ten (10) days after the date of OWNER'S Notice of Award.

3. In submitting this Bid, BIDDER represents, as more fully set forth in the Agreement, that:

    a. Bidder has certified that it has examined copies of all Contract Documents. Bidder has made a thorough inspection of the premises and that the equipment and the construction activities that form the basis of this agreement can be completed in a good and workman-like manner for the amount of its Bid. Further, Bidder certifies that all of the equipment, installation, and construction activities to be supplied pursuant to this Bid and an agreement with Owner, if awarded. Bidder has reported any discrepancies, duplications, errors, or omissions in the Contract Documents, as required in the Contract Documents and hereby waives any claims for additional cost or time for such matters that were apparent or discoverable by Bidder from a thorough and complete review of the Contract Documents prior to submission of this Bid. Additionally, the Bidder hereby acknowledges receipt of the following addenda:

Addenda No. _____ Dated _____

Addenda No. _____ Dated _____

Addenda No. _____ Dated _____

Addenda No. _____ Dated _____

Addenda No. _____ Dated _____

Addenda No. _____ Dated _____

b. The Undersigned here certifies that this Bid is genuine and not a sham, collusive or fraudulent or made in the interest of or in behalf of any person, firm or corporation not herein named; and that the Undersigned has not, directly or indirectly, inducted or solicited any bidder to submit a sham bid, or any other person, firm or corporation from bidding, and that the Undersigned has not, in any manner, sought by collusion to secure for himself any advantage over any other Bidder.

c. In accordance with the Advertisement for Bids and the proposed Construction Documents distributed by ICS, 1400 N. Providence Rd, Building 2, Suite 4045, Media, PA 19063, dated October 29th, 2026, relating to Work Scope No. 2, Electrical Construction, for Work generally described as the New Jarrettown Elementary School Project, the undersigned, having visited the site of proposed construction and having become thoroughly familiar with local conditions affecting the cost and performance of the work and with all requirements of the Contract Documents and related Addenda, hereby proposes and agrees to provide all labor, materials and equipment required to construct and complete the Work in accordance with the Contract Documents and Addenda for the following amounts:

4. Base Bid:

Work Scope #2 Base Bid Price (INCLUDING Project Allowances) for all Work indicated on the Contract Documents for Work Scope No. 2, Electrical Construction:

_____ Dollars.
(Written Amount)

($_____)
(Numerical Amount)

5. Alternates:

Reference Section 01 23 00, Alternates, for the full description of included Project Alternates for this Work Scope. Do not adjust material allowances under any alternate bid items. Indicate whether alternate cost is an add or deduct when a choice is provided.

Alternate No. 1 Reduced Gym Size, as described in Specification Section 01 23 00 Alternates.

(Add, Deduct, No Change) $_____.
(Circle One) *(Numerical Amount)*

_____Dollars.
(Written Amount)

Alternate No. 2 ADD – Replace the base bid mechanical system with a Geothermal well mechanical system as indicated in the project drawings, as described in Specification Section 01 23 00 Alternates.

(Add, Deduct, No Change) $_____.
(Circle One) *(Numerical Amount)*

_____Dollars.
(Written Amount)

6. Unit Prices:

The Bidder is required to bid unit prices on the following items as identified in Section 01 22 00 – Unit Prices and Material Allowances in accordance with the Contract Documents. Unit Prices shall include costs for furnishing and installing all materials, labor, tools, equipment, and other incidental costs necessary to complete the specified operation. Unit Prices will be used to ADD/DEDUCT to the Contract cost where appropriate. The BIDDER agrees that in the event of any inconsistency between a Unit Price and the extension of a Unit Price in a Material Allowance, the Unit Price shall control and the Material Allowance extension shall be recalculated.

If any extra work is required in these categories beyond the contract requirements, the unit prices shall be used as a basis for determining the amount of additional payment to the Contractor. The Bidder agrees that Owner reserves the right to reject or otherwise not agree to use the Unit Prices submitted, if in the Owner's opinion, the nature or quantity of the Work encountered is such that the Unit Price cost no longer applies to the Work. The Owner also reserves the right to solicit independent proposals as required by the Department of Education guidelines, under a separate contract, to perform the services required. **The responsiveness of the Bid may be determined by the Owner on the basis of the Unit Prices proposed by the BIDDER. Unit Prices shall be consistent with verifiable average costs for the Work to be performed. Bidders agree that a Bid may be rejected if the Unit Prices submitted are inconsistent with the average cost. Under NO circumstances will BIDDER perform Unit Price Work without prior written authorization from OWNER.** The Construction Manager must field measure and approve all allowance work prior to the Contractor performing the Work. Should the allowance amount be exceeded, the Contractor

will be paid by Change Order addition at the Unit Price established for the related Work. Similarly, should the allowance used be less than the allowance amount, the Contractor will credit the Owner for the unused quantity in accordance with the related Unit Price by a Change Order deduction.

The contract Unit Price per (UOM) for Unit Price WS-2A as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-2B as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-2C as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-2D as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-2E as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-2F as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-2G as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-2H as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-2I as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-2J as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

END OF SECTION 00 41 18

SECTION 00 41 19 – BID FORM - WORK SCOPE NO. 4 – PLUMBING/FIRE PROTECTION CONSTRUCTION

BID TO: UPPER DUBLIN SCHOOL DISTRICT
1580 FORT WASHINGTON AVE., MAPLE GLEN, PA 19002

BID FROM: _____

_____

_____

THIS BID FORM SHALL NOT BE ALTERED IN ANY MANNER. ANY ALTERED BID FORMS SHALL BE CONSIDERED NON-RESPONSIVE AND WILL BE REJECTED.

1. The undersigned Bidder proposed and agrees, if written notice of the acceptance of this Bid is received by the undersigned within 60 days after date set for opening of this Bid, or at any other time thereafter before Bid is withdrawn, the undersigned agrees to enter into and execute a Contract with the Owner in accordance with this Bid as accepted. This shall be in a form acceptable to Owner, and the successful Bidder shall furnish and deliver to Owner the Performance Bond and Labor and Material Payment Bond in the forms provided in the Bidding Documents, and proof of insurance coverage, all within ten (10) days after notice of acceptance of this Bid.

2. BIDDER accepts all of the terms and conditions of the Instructions to Bidders, including without limitation, those dealing with disposition of Bid Security. This Bid will remain open for 60 days after the day of Bid Opening unless the OWNER is delayed in awarding the Contract due to the failure to receive a required approval/permit from one or more reviewing bodies/governmental agencies having jurisdiction over the Project, the sale of bonds or the award of a Grant, in which case, Bids shall be irrevocable for 120 days. BIDDER will sign the Agreement and submit the required bonds and other documents required by the Contract Documents within ten (10) days after the date of OWNER'S Notice of Award.

3. In submitting this Bid, BIDDER represents, as more fully set forth in the Agreement, that:

    a. Bidder has certified that it has examined copies of all Contract Documents. Bidder has made a thorough inspection of the premises and that the equipment and the construction activities that form the basis of this agreement can be completed in a good and workman-like manner for the amount of its Bid. Further, Bidder certifies that all of the equipment, installation, and construction activities to be supplied pursuant to this Bid and an agreement with Owner, if awarded. Bidder has reported any discrepancies, duplications, errors, or omissions in the Contract Documents, as required in the Contract Documents and hereby waives any claims for additional cost or time for such matters that were apparent or discoverable by Bidder from a thorough and complete review of the Contract Documents prior to submission of this Bid. Additionally, the Bidder hereby acknowledges receipt of the following addenda:

Addenda No. _____ Dated _____

Addenda No. _____ Dated _____

Addenda No. _____ Dated _____

Addenda No. _____ Dated _____

Addenda No. _____ Dated _____

Addenda No. _____ Dated _____

b. The Undersigned here certifies that this Bid is genuine and not a sham, collusive or fraudulent or made in the interest of or in behalf of any person, firm or corporation not herein named; and that the Undersigned has not, directly or indirectly, inducted or solicited any bidder to submit a sham bid, or any other person, firm or corporation from bidding, and that the Undersigned has not, in any manner, sought by collusion to secure for himself any advantage over any other Bidder.

c. In accordance with the Advertisement for Bids and the proposed Construction Documents distributed by ICS, 1400 N. Providence Rd, Building 2, Suite 4045, Media, PA 19063, dated October 29th, 2026, relating to Work Scope No. 4, Plumbing/Fire Protection Construction, for Work generally described as the New Jarrettown Elementary School Project, the undersigned, having visited the site of proposed construction and having become thoroughly familiar with local conditions affecting the cost and performance of the work and with all requirements of the Contract Documents and related Addenda, hereby proposes and agrees to provide all labor, materials and equipment required to construct and complete the Work in accordance with the Contract Documents and Addenda for the following amounts:

4. Base Bid:

Work Scope #4 Base Bid Price (INCLUDING Project Allowances) for all Work indicated on the Contract Documents for Work Scope No. 4, Plumbing/Fire Protection Construction:

_____ Dollars.
(Written Amount)

($_____)
(Numerical Amount)

5. Alternates:

Reference Section 01 23 00, Alternates, for the full description of included Project Alternates for this Work Scope. Do not adjust material allowances under any alternate bid items. Indicate whether alternate cost is an add or deduct when a choice is provided.

Alternate No. 1 Reduced Gym Size, as described in Specification Section 01 23 00 Alternates.

(Add, Deduct, No Change) $_____.
(Circle One) *(Numerical Amount)*

_____Dollars.
(Written Amount)

Alternate No. 2 ADD – Replace the base bid mechanical system with a Geothermal well mechanical system as indicated in the project drawings, as described in Specification Section 01 23 00 Alternates.

(Add, Deduct, No Change) $_____.
(Circle One) *(Numerical Amount)*

_____Dollars.
(Written Amount)

Alternate No. 3 Allow for HDPE, PVC, or CPVC in lieu of Copper/Steel, as described in Specification Section 01 23 00 Alternates.

(Add, Deduct, No Change) $_____.
(Circle One) *(Numerical Amount)*

_____Dollars.
(Written Amount)

6. Unit Prices:

The Bidder is required to bid unit prices on the following items as identified in Section 01 22 00 – Unit Prices and Material Allowances in accordance with the Contract Documents. Unit Prices shall include costs for furnishing and installing all materials, labor, tools, equipment, and other incidental costs necessary to complete the specified operation. Unit Prices will be used to ADD/DEDUCT to the Contract cost where appropriate. The BIDDER agrees that in the event of any inconsistency between a Unit Price and the extension of a Unit Price in a Material Allowance, the Unit Price shall control and the Material Allowance extension shall be recalculated.

If any extra work is required in these categories beyond the contract requirements, the unit prices shall be used as a basis for determining the amount of additional payment to the

Contractor. The Bidder agrees that Owner reserves the right to reject or otherwise not agree to use the Unit Prices submitted, if in the Owner's opinion, the nature or quantity of the Work encountered is such that the Unit Price cost no longer applies to the Work. The Owner also reserves the right to solicit independent proposals as required by the Department of Education guidelines, under a separate contract, to perform the services required. **The responsiveness of the Bid may be determined by the Owner on the basis of the Unit Prices proposed by the BIDDER. Unit Prices shall be consistent with verifiable average costs for the Work to be performed. Bidders agree that a Bid may be rejected if the Unit Prices submitted are inconsistent with the average cost. Under NO circumstances will BIDDER perform Unit Price Work without prior written authorization from OWNER.** The Construction Manager must field measure and approve all allowance work prior to the Contractor performing the Work. Should the allowance amount be exceeded, the Contractor will be paid by Change Order addition at the Unit Price established for the related Work. Similarly, should the allowance used be less than the allowance amount, the Contractor will credit the Owner for the unused quantity in accordance with the related Unit Price by a Change Order deduction.

The contract Unit Price per (UOM) for Unit Price WS-4A as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-4B as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-4C as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-4D as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-4E as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-4F as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-4G as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-4H as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

The contract Unit Price per (UOM) for Unit Price WS-4I as described in Section 01 22 00, Unit Prices and Material Allowances is:

$ _____per (UOM) x Cost extension of quantity indicated in Section 01 22 00:

$_____ (total cost allowance for Unit Price).

END OF SECTION 00 41 19

SECTION 00 43 13 - BID SECURITY FORM

The Bid Security Form utilized for this project shall be a “Bid Bond”, included herein in the Project Manual. Reference Section 00 21 13, “Instructions to Bidders” for the execution of the Bid Bond.

END OF SECTION 00 43 13

SECTION 00 43 13 - BID BOND

KNOW ALL MEN BY THESE PRESENTS that we, _____ (hereinafter called the "Principal"), and _____, a corporation authorized to transact business in Pennsylvania, and having its principal office at _____ (hereinafter called the "Surety"), as Surety, are held and firmly bound unto Upper Dublin School District (hereinafter called the "Obligee"), as Obligee, in the sum of _____ _____ Dollars ($_____) lawful money of the United States of America, for payment of which we bind ourselves, and each of our respective heirs, legal representatives, successors and assigns, jointly and severally, by these presents on this _____day of _____, 20____.

WHEREAS, said Principal is herewith submitting to the Obligee a bid to perform work for the Obligee's proposed _____ Project, pursuant to plans, specifications, and other Contract Documents incorporated into said bid by reference; and it is a condition of the Obligee's receipt and consideration of said bid that such shall be accompanied by bid security to be held by the Obligee on terms embodied herein.

THEREFORE, the condition of this obligation is that in the event of acceptance of his bid by Obligee and within the period specified therefore in the bidding requirements, said Principal shall, within the time set forth in the Bidding Documents, provide to the Obligee (i) the required bonds in the required amounts and on the required forms, (ii) certificates of insurance evidencing the coverages and minimum limits required by the Contract documents, (iii) a properly executed Public Works Employment Verification form, and (iv) signed copies of the contract for construction, then this obligation shall be void and of no effect, but otherwise it shall remain in full force. In the event of the failure to enter into such contract, give such bonds, and furnish such certificates within the time specified, the Principal and Surety will pay to the Obligee the amount of this Bid Security together with interest as liquidated damages.

IN WITNESS WHEREOF, the Principal and Surety, intending to be legally bound, have executed this Bond the day and year aforementioned.

SECTION 00 43 15 – AGREEMENT OF SURETY

KNOW ALL MEN BY THESE PRESENTS, that we, _____, as Surety, a corporation existing under the laws of the State of _____, and authorized to transact business in the Commonwealth of Pennsylvania hereby agrees intending to be legally bound hereby, to execute and deliver to the Upper Dublin School District, within the time limit specified in the Contract Documents, the Performance Bond and Payment Bond in the forms included in the Contract Documents each in an amount of 100% of the Contract Sum, in favor of the Upper Dublin School District, as required for the faithful performance and proper fulfillment of the Contract for Work Scope No. _____ for the New Jarrettown Elementary School Project, Upper Dublin Township, Montgomery County, Pennsylvania, on behalf of _____ (hereinafter called the Bidder) provided that the above contract be awarded to the Bidder within sixty (60) days after the date of opening of the bids or otherwise as set forth in the Instructions to Bidders.

Surety further agrees that should the Surety, after notification of intent to make such award, omit or refuse to execute the required bonds and agreement, then the Surety shall pay to the Upper Dublin School District, hereinafter called the Obligee, any difference between the total amount specified in said Bidder's proposal for the required work and the amount of which said Obligee may procure the same work, if the latter amount be in excess of the former, plus any advertising, architectural, legal, and other expenses incurred by Obligee; provided, however, that the obligations of Surety hereunder shall not exceed the amount of bid security provided by the Bidder together with interest.

SECTION 00 43 93 - BID SUBMITTAL ATTACHMENTS

1.01 GENERAL

A. The below referenced forms with corresponding Specification Section number shall be submitted in conjunction with Bids. Substitute forms will not be acceptable. All forms shall be fully executed by an authorized person and notary seals applied where indicated.

1. Section 00 11 53, Request for Qualifications, and associated Exhibits A through D:

    a. Exhibit A: General Information
    b. Exhibit B: Financial and Performance Information
    c. Exhibit C: Project-Specific Information
    d. Exhibit D: Past Project Experience

2. Section(s) 00 41 16 through 00 41 19, Bid Form(s) for Work Scope being Bid.
3. Section 00 43 13, Bid Bond Form, if bid security provided is a Bid Bond.
4. Section 00 43 15, Agreement of Surety.
5. Section 00 45 19, Non-Collusion Affidavit.

END OF SECTION 00 43 93

SECTION 00 45 19 – NON-COLLUSION AFFIDAVIT OF CONTRACTOR

STATE OF _____

COUNTY OF _____

_____, being duly sworn, deposes and says that:

(1) He is _____ of _____.
(owner, partner, officer, representative, or agent) (company)

the Bidder who has submitted the attached Bid, and is authorized to make this Affidavit on behalf of the company, and its Owners, Directors, and officers:

(2) He is fully informed respecting the preparation and contents of the attached Bid and of all pertinent circumstances respecting such Bid;

(3) Such Bid is genuine and is not collusive or sham Bid;

(4) Neither the said Bidder nor any if its officers, partners, owners, agents, representatives, employees or parties of interest, including the affiant, has, in any way, colluded, conspired, connived, or agreed to any of the following:

- To work directly or indirectly with any other Bidder, firm or person to submit this Bid.
- To collude in any way to submit or to have submitted a sham Bid for the Contract for which this Bid has been submitted.
- To collude in any way to prevent another Bidder from bidding for this Contract.
- To agree, collude, communicate or conference with any other Bidder, firm or person to fix the price or prices in the attached Bid, or in the Bids of any other Bidder.
- To fix any overhead, profit or cost element of the Bid price or the Bid price of any other Bidder.
- To secure through any collusion, conspiracy, connivance or unlawful agreement any advantage against the Upper Dublin School District (Owner) or any person(s) in the proposed Contract.

(5) The price or prices quoted in the attached Bid are fair and proper and are not tainted by any collusion, conspiracy, connivance or unlawful agreement on the part of the Bidder or any of its agents, representatives, owners, employees, or parties in interest including this affiant.

(6) I state that, _____,
(Name of My Firm)

understands and acknowledges that the above representations are material and important and will be relied on by the Upper Dublin School District in awarding the contract(s) for which this Bid is submitted. I understand, and my firm understands, that any misstatement in this Affidavit is and shall be treated as fraudulent concealment from the Upper Dublin School District of the true facts relating to the submission of bids for this contract.

3 DATE OF COMMENCEMENT AND DATES OF SUBSTANTIAL COMPLETION

4 CONTRACT SUM

5 PAYMENTS

6 DISPUTE RESOLUTION

7 TERMINATION OR SUSPENSION

8 MISCELLANEOUS PROVISIONS

9 ENUMERATION OF CONTRACT DOCUMENTS

ARTICLE 1 THE CONTRACT DOCUMENTS

The Contract Documents consist of this Agreement, Conditions of the Contract (General and other Conditions), Drawings, Specifications and Addenda issued prior to execution of this Agreement, other documents listed in this Agreement, and Modifications issued after execution of this Agreement, all of which form the Contract, and are as fully a part of the Contract as if attached to this Agreement or repeated herein. The Contract represents the entire and integrated agreement between the parties hereto and supersedes prior negotiations, representations, or agreements, either written or oral. An enumeration of the Contract Documents, other than Modifications, appears in Article 9. For purposes of this Agreement, the term "General Conditions" as used herein shall mean the AIA A232-2019, General Conditions of the Contract for Construction, as modified.

ARTICLE 2 THE WORK OF THIS CONTRACT

The Contractor shall fully execute the Work described in the Contract Documents or reasonably inferable by the Contractor as necessary to produce the results intended by the Contract Documents except as specifically indicated in the Contract Documents to be the responsibility of others.

ARTICLE 3 DATE OF COMMENCEMENT AND DATES OF SUBSTANTIAL COMPLETION

§ 3.1 The date of commencement of the Work shall be:
(Check one of the following boxes.)

[ ] The date of this Agreement.

[**X**] A fixed date set forth in the Notice to Proceed issued by the Owner or Construction Manager.

[ ] Established as follows:
(Insert a date or a means to determine the date of commencement of the Work.)

If a date of commencement of the Work is not selected, then the date of commencement shall be the date of this Agreement.

§ 3.2 The Contract Time shall be measured from the date of commencement of the Work.

§ 3.3 Substantial Completion of the Project or Portions Thereof

§ 4.2.3 Allowances, if any, included in the Contract Sum: Project Material Allowances included in the Stipulated Sum are listed on Contractor's Bid Form, attached hereto as Exhibit D, and made a part hereof. No quantity limitations shall apply to the Project. The allowances shall be solely owned by the Owner and, as such, the Owner shall have the sole discretion relating to the use of these allowances. Furthermore, any unused portion of the allowances shall be deducted from the Contractor's Contract Sum. The Contractor shall receive no compensation on the unused portion of the allowances. The Contractor will be required to furnish documentation to the Owner evidencing the expenditures to be charged to the allowance and the reasons therefor prior to the Owner's approval of expenditures from the allowances.

ARTICLE 5 PAYMENTS
§ 5.1 Progress Payments
§ 5.1.1 In accordance with the provisions of AIA A232-2019 General Conditions of the Contract, based upon Applications for Payment submitted to the Construction Manager by the Contractor, and Certificates for Payment issued by the Construction Manager and Architect, the Owner or their designated representative shall make progress payments on account of the Contract Sum, to the Contractor, as provided below and elsewhere in the Contract Documents.

§ 5.1.2 In accordance with the provisions of AIA A232-2019 General Conditions of the Contract. The period covered by each Application for Payment shall be one calendar month ending on the last day of the month, or as follows.

Except as set forth elsewhere in the Contract Documents, payments to the Contractor will be made monthly for work completed as of the last calendar day of the month or during a period of one calendar month ending on a day mutually agreed to by the Owner and the Contractor provided that all requirements of the Contract Documents have been and are complied with by the Contractor.

§ 5.1.3 Provided that an Application for Payment is received by the Construction Manager not later than the 25th day of a month, the Owner shall make payment of the amount certified to the Contractor not later than the last day of the following month. If an Application for Payment is received by the Construction Manager after the application date fixed above, payment of the amount certified shall be made by the Owner not later than sixty (60) days after the Construction Manager

receives the Application for Payment. The Contractor hereby expressly waives any rights to penalties, interest, and attorney's fees that the Contractor has or may have under the Pennsylvania Prompt Pay Act, 62 Pa.C.S.A. § 3931, et seq. as amended from time to time.

§ 5.1.4 Progress Payments Where the Contract Sum is Based on a Stipulated Sum

§ 5.1.4.1 Each Application for Payment shall be based on the most recent schedule of values submitted by the Contractor in accordance with the Contract Documents. The schedule of values shall allocate the entire Contract Sum among the various portions of the Work. The schedule of values shall be prepared in such form, and supported by such data to substantiate its accuracy, as the Construction Manager and Architect may require. This schedule of values, unless objected to by the Construction Manager or Architect, shall be used as a basis for reviewing the Contractor's Applications for Payment.

§ 5.1.4.2 Applications for Payment shall show the percentage of completion of each portion of the Work as of the end of the period covered by the Application for Payment.

§ 5.1.4.3 In accordance with AIA Document A232™–2019, General Conditions of the Contract for Construction, Construction Manager as Adviser Edition, and subject to other provisions of the Contract Documents, the amount of each progress payment shall be computed as follows:

§ 5.1.4.3.1 The amount of each progress payment shall first include:

.1 That portion of the Contract Sum properly allocable to completed Work as determined by multiplying the percentage completion of each portion of the Work by the share of the total Contract Sum allocated to that portion of the Work in the schedule of values, less the retainage; and;

.2 That portion of the Contract Sum properly allocable to materials and equipment delivered and suitably stored at the site for subsequent incorporation in the completed construction, or, if approved in advance by the Owner, suitably stored off the site at a location agreed upon in writing

§ 5.1.4.3.2 The amount of each progress payment shall then be reduced by:

.1 The aggregate of any amounts previously paid by the Owner;

.2 The amount, if any, for Work that remains uncorrected and for which the Construction Manager or the Architect has previously withheld a Certificate for Payment as provided in Article 9 of AIA Document A232–2019;

.3 Any amount for which the Contractor does not intend to pay a Subcontractor or material supplier, unless the Work has been performed by others the Contractor intends to pay;

.4 For Work performed or defects discovered since the last payment application, any amount for which the Construction Manager or the Architect may withhold payment, or nullify a Certificate of Payment in whole or in part, as provided in Article 9 of AIA Document A232–2019; and

.5 Retainage withheld pursuant to Section 5.1.7.

(Paragraphs deleted)

§ 5.1.7 Retainage

§ 5.1.7.1 For each progress payment made prior to when the Work of this Contract is substantially complete, the Owner may withhold

(Paragraphs deleted)

retainage as set forth in Section 9.3.4 of the AIA A232 - 2019.

(Paragraphs deleted)

§ 5.2 Final Payment

§ 5.2.1 Final Payment Where the Contract Sum is Based on a Stipulated Sum

§ 5.2.1.1 Final payment, constituting the entire unpaid balance of the Contract Sum, shall be made by the Owner to the Contractor as set forth in the General Conditions and when

.1 the Contractor has fully performed the Contract except for the Contractor's responsibility to correct Work as provided in Article 12 of AIA Document A232–2019, and to satisfy other requirements, if any, which extend beyond final payment; and

.2 a final Certificate for Payment or Project Certificate for Payment has been issued by the Architect or Construction Manager; and

.3 the Contractor has completed all Work in compliance with all applicable codes, law, ordinances, and regulations which affect the Project and the Work has passed all inspections.

§ 5.2.1.2 Intentionally deleted.

(Paragraphs deleted)
§ 5.3 Except as otherwise set for in the Contract Documents, payments due and unpaid under the Contract shall bear interest
(Paragraphs deleted)
at a rate of three percent (3%) simple interest per annum from the date the payment is due.

ARTICLE 6 DISPUTE RESOLUTION
§ 6.1 Initial Decision Maker
The Architect will serve as Initial Decision Maker pursuant to Article 15.2 of AIA Document A232–2019, unless the parties appoint below another individual, not a party to this Agreement, to serve as Initial Decision Maker.
(If the parties mutually agree, insert the name, address and other contact information of the Initial Decision Maker, if other than the Architect.)

§ 6.2 Binding Dispute Resolution
For any Claim involving the Contractor and Owner, the method of binding dispute resolution shall be as follows:
(Check the appropriate box.)

[ ] Litigation in a court of competent jurisdiction.

[X] Other: *(Specify)*

Per Article 15.4 of the General Conditions

ARTICLE 7 TERMINATION OR SUSPENSION
§ 7.1 Where the Contract Sum is a Stipulated Sum
§ 7.1.1 The Contract may be terminated by the Owner or the Contractor as provided in Article 14 of AIA Document A232–2019.

§ 7.1.1.1
(Paragraphs deleted)
Intentionally deleted.

§ 7.1.2 The Work may be suspended by the Owner as provided in Article 14 of AIA Document A232–2019.

(Paragraphs deleted)
ARTICLE 8 MISCELLANEOUS PROVISIONS
§ 8.1 Terms in this Agreement shall have the same meaning as those in AIA Document A232 - 2019 as amended for the Project. Where reference is made in this Agreement to a provision of AIA Document A232–2019, General Conditions, or another Contract Document, the reference refers to that provision as amended, modified, deleted or supplemented by other provisions of the Contract Documents.

§ 8.2 The Owner's representative:

Robert Lester, Director of Facilities
Upper Dublin School District
1580 Fort Washington Ave.
Maple Glen, PA 19002

§ 8.3 The Contractor's representative:
(Name, address, email address, and other information)

§ 8.4 Neither the Owner's nor the Contractor's representative shall be changed without ten days' prior notice to the other party.

§ 8.5 Insurance and Bonds

§ 8.5.1 The Owner and the Contractor shall purchase and maintain insurance as set forth in Article 11 of the AIA Document A232™–2019, Standard Form of Agreement Between Owner and Contractor, General Conditions of the Contract for Construction, Construction Manager as Adviser Edition, as amended for the Project, and elsewhere in the Contract Documents.

§ 8.5.2 The Contractor shall provide bonds as set forth in Article 11.1.2 AIA Document A232™–2019, General Conditions of the Contract for Construction, Construction Manager as Adviser Edition, as amended for the Project, and elsewhere in the Contract Documents.

§ 8.6
(Paragraphs deleted)
Intentionally deleted.

§ 8.7 Relationship of the Parties

The Contractor accepts the relationship of trust and confidence established by this Agreement and covenants with the Owner to cooperate with the Architect and Construction Manager and exercise the Contractor's skill and judgment in furthering the interests of the Owner; to furnish efficient business administration and supervision; to furnish at all times an adequate supply of workers and materials; and to perform the Work in an expeditious and economical manner consistent with the Owner's interests. The Owner agrees to furnish and approve, in a timely manner, information required by the Contractor and to make payments to the Contractor in accordance with the requirements of the Contract Documents.

§ 8.8 Other provisions:

§ 8.8.1 The Owner and Contractor acknowledge that no representations, inducements, promises, or agreements, orally or otherwise, have been made by any party or by anyone acting on behalf of any party which are not embodied in this Agreement, and that any agreement, statement or promise that is not contained in this Agreement shall not be valid or binding on any party and shall not have any force or effect.

§ 8.8.2 As between Architect, Construction Manager and Contractor, it is understood that the Architect and Construction Manager shall not be held responsible to Contractor for any errors or omissions on the part of Contractor, including, but not limited to, the Contractor's failure to adhere to the plans and specifications, regardless of whether or not the Architect or Construction Manager is performing observation services.

ARTICLE 9 ENUMERATION OF CONTRACT DOCUMENTS

SECTION 00 61 13 – PERFORMANCE AND PAYMENT BOND FORMS

A. Within ten (10) days of receipt of the Notice of Intent to Award , the successful Bidder shall furnish a Performance Bond (00 61 14) and a Payment Bond (00 61 15) in the forms provided in these Bid Documents, each in the amount of one hundred percent (100%) of the Contract Sum. No other forms will be accepted. There is no implied permission to reproduce this document. The original document purchased by the user is intended to be consumed in the course of this project.

B. The Attorney-in-Fact who executes the Performance and Payment Bonds on behalf of the surety shall affix to the bonds a certified and current copy of its Power of Attorney, authorizing said Attorney-in-Fact to act on behalf of the surety, and a valid Certificate of Authority from the Pennsylvania Department of Insurance. The Power of Attorney must be dated the same day as the bonds and both the bonds and Power of Attorney shall have affixed the raised corporate seal of the surety.

C. The Performance and Payment Bonds must be executed by a surety licensed and authorized to conduct business within the Commonwealth of Pennsylvania and named in the current list of companies holding Certificates of Authority as accepted sureties on Federal Bonds and as acceptable reinsuring companies as published in Circular 570 (as amended) by the Audit Staff, Bureau of Government Financial Operations, U.S. Treasury Department, and the amount of the bond shall not exceed the underwriting risk of such surety set forth in said Circular or revision thereof.

END OF SECTION 00 61 13

SECTION 00 61 14 - PERFORMANCE BOND

And Now, we _____ as Principal (the “Principal”), and _____, a Corporation organized and existing under the laws of the _____ of _____ as Surety (the “Surety”), are jointly and severally held and firmly bound to the Upper Dublin School District, its successors and assigns (the “Obligee”), for the performance of the Contract hereinafter identified and incorporated herein by this reference in the sum of _____, lawful money of the United States of America to be paid to the Obligee; to which performance or payment, well and truly to be made, we bind ourselves and each of our successors and assigns, jointly and severally.

I. RECITALS

WHEREAS, the Principal has submitted to the Obligee a certain proposal, dated _____ (the "Proposal"), to perform certain _____(Name of Contract) for the _____(Name of Project) for the Obligee, in connection with plans, specifications and other related documents, which are incorporated into the Proposal by reference (the "Contract Documents"); and

WHEREAS, the Obligee, is a "contracting body" under provisions of Act No. 385 of the General Assembly of the Commonwealth of Pennsylvania, approved by the Governor on December 20, 1967, known as and cited as the "Public Works Contractors' Bond Law of 1967" (the "Act");

WHEREAS, the Act, in Section 3 (a), requires that, before an award shall be made to the Principal by the Obligee in accordance with the Proposal, the Principal shall furnish this Bond to the Obligee, with this Bond to become binding upon the award of a contract to the Principal by the Obligee in accordance with the Proposal; and

WHEREAS, it also is a condition of the Contract Documents that this Bond shall be furnished by the Principal to the Obligee and

WHEREAS, under the Contract Documents, it is provided, inter alia, that if the Principal shall furnish this Bond to the Obligee, and if the Obligee shall make an award to the Principal in accordance with the Proposal, then the Principal and the Obligee shall enter into an agreement with respect to performance of such work (the "Agreement"), the form of which Agreement is set forth in the Contract Documents.

II. CONDITIONS OF BOND

NOW, THEREFORE, the terms and conditions of this Bond are and shall be that if:

(a) the Principal well, truly, and faithfully shall comply with and shall perform the Agreement in accordance with the Contract Documents, at the time and in the manner provided in the Agreement and in the Contract Documents, and if the Principal shall satisfy all claims and demands incurred in or related to the performance of the Agreement by the Principal or growing out of the performance of the Agreement by the Principal, and if the Principal shall indemnify completely and shall hold harmless the Obligee and all of its officers, directors, agents or employees from any and all costs and damages which the Obligee and any or all of its officers, directors, agents and employees may sustain or suffer including, but not limited to, attorney’s fees, costs, expenses and interest by reason of the failure of the Principal to do so, and if the Principal shall reimburse completely and pay to the Obligee any and all costs, damages and

expenses, including interest and attorney's fees) which the Obligee and any or all of its officers, directors, agents and employees may incur by reason of any such default or failure by the principal and

(b) the Principal shall remedy, without cost to the Obligee, all defects, deficiencies or failures in any labor, materials or equipment performed or provided by the Principal in its performance of the Agreement which may develop during the period of one (1) year from the date of final completion by the Principal and final acceptance of the Obligee of the work to be performed under the Agreement in accordance with the Contract Documents, which defects, in the sole judgment of the Obligee or its legal successors in interests, shall be caused by or shall result from defective or inferior materials or workmanship, then this Bond shall be void; otherwise, this Bond shall be and shall remain in force and effect.

We further agree to indemnify and hold harmless the Obligee against any and all costs, liabilities, expenses, attorney's fees and obligations which the Obligee sustains by reason of the failure of the Principal or the Surety to comply with the terms of the Contract Documents or this Obligation. This Bond is executed and delivered under and subject to the Act, to which reference hereby is made.

The Principal and the Surety agree that any alterations, changes or additions to the Contract Documents, or any alterations, changes or additions to the work to be performed under the Agreement in accordance with the Contract Documents, or any alterations, changes or additions to the Agreement, or any act of forbearance of either the Principal or the Obligee toward the other with respect to the Contract Documents and the Agreement, or the reduction of any percentage to be retained by Obligee as permitted by the Contract Documents and by the Agreement, shall not release in any manner whatsoever, the Principal and the Surety or either of them, their heirs, executors, administrators, successors and assigns, from liability and obligations under this Bond; and the Surety, for value received, waives notice of any such alterations, changes, additions, extensions of time, acts of forbearance or reduction of retained percentage.

It is further agreed that, in the sole discretion of the Obligee and upon notice therefrom, the Surety may be required to perform and carry out the provisions of the Contract in the event of a breach thereof by the Principal, whereupon the rights and responsibilities of the Surety and the Obligee to each other shall be the same as those of the Principal and the Obligee immediately prior to the breach giving rise to the Surety's obligation hereunder. If the Surety does not proceed promptly to render such performance or cause such performance to be rendered by a third party satisfactory to the Obligee, then, the Surety shall be deemed to be in default on this obligation fifteen (15) days after the receipt of notice from Obligee that the Surety shall so proceed, and the Obligee shall be entitled to enforce against Surety any remedy it may then or thereafter have against the Principal. If the Principal is a foreign corporation (incorporated under any laws other than those of the Commonwealth of Pennsylvania) then further terms and conditions of this Bond are and shall be that the Principal or the Surety shall not be discharged from liability on this, nor this Bond surrendered until such Principal files with the Obligee a certificate from the Pennsylvania of Revenue evidencing the payment in full of all bonus taxes, penalties and interest, and a certificate from the Bureau of Employment and Unemployment Compensation of the Pennsylvania Department of Labor and industry, evidencing the payment of all unemployment compensation, contributions, penalties and corporations, subcontractors thereunder or for such liability has accrued but the time for payment has not arrived, all in accordance with provisions of the Act of June 10,1947, P.L. 493, of the Commonwealth of Pennsylvania.

This obligation incorporates by reference the Public Works Contractors' Bond Law of 1967, provided, however, that in the event of any inconsistencies or ambiguity in the meaning of this obligation and the said Public Works Contractors' Bond Law of 1967 the express terms of this obligation shall govern and control.

IN WITNESS WHEREOF, the Principal and Surety cause this Bond to be signed, sealed and delivered this _____ day of _____, 20__.

END OF SECTION 00 61 14

SECTION 00 61 15 - PAYMENT BOND

KNOW THESE MEN BY THESE PRESENTS that we, _____ _____, as Principal (the "Principal"), and _____, a corporation organized and existing under laws of _____ _____ of _____, Surety (the "Surety", are held and firmly bound unto Upper Dublin School District as Obligee (the "Obligee"), as hereinafter set forth, in the full and just sum of _____ _____ Dollars ($_____) lawful money of the United States of America, for the payment of which we bind ourselves, our heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

WITNESSETH THAT:

WHEREAS, the Principal heretofore has submitted to the Obligee a certain proposal, dated ,20____ (the "Proposal"), to perform certain _____Work for the Obligee, in connection with _____pursuant to plans, specifications and other related documents, which are incorporated into the Proposal by reference

(the "Contract Document"), as prepared by the Obligee.

WHEREAS, the Obligee, is a "contracting body" under the provisions of Act No. 385 of the General Assembly of the Commonwealth of Pennsylvania, approved by the Governor on December 20, 1967, known as and cited as the "Public Works Contractors' Bond Law of 1967" the "Act");

WHEREAS, the Act, in Section 3 (a), requires that, before an award shall be made to the Principal by the Obligee in accordance with the Proposal, the Principal shall furnish this Bond to the Obligee, with this Bond to become binding upon the award of a contract to the Principal by the Obligee in accordance with the Proposal; and

WHEREAS, it also is a condition of the Contract Documents that this Bond shall be furnished by the Principal to the Obligee and

WHEREAS, under the Contract, it is provided, inter alia, that if the Principal shall furnish this Bond the Obligee, and if the Obligee shall make an award to the Principal in accordance with the Proposal, then the Principal and the Obligee shall enter into an agreement with respect to performance of such work (the "Agreement"), the form of which Agreement is set forth in the Contract Documents.

NOW, THEREFORE, the terms and conditions of the bond are and shall be that if the Principal and any subcontractor of the Principal to whom any portion of the work under the Agreement shall be subcontracted, and if all assignees of the Principal and of any such subcontractor, promptly pay or shall cause to be paid, in full, all money which may be due any claimant supplying labor or materials in the prosecution and performance of the work in accordance with the Agreement and in accordance with the Contract Documents, including any amendment, extension or addition to the Agreement and/or to the Contract Documents, for material furnished or labor supplied or labor performed, then this Bond shall be void, otherwise, the Bond shall be and shall remain in force and effect.

This Bond, as provided by the Act, shall be solely for the protection of claimants supplying labor or materials to the Principal or to any subcontractor of the Principal in the prosecution of the work covered

by the Agreement, including any amendment, extension or addition to the Agreement. The term "Claimant", when used herein and as required by the Act, shall mean any individual, firm, partnership, association or corporation. The phase "Labor or Materials" when used herein and as required by the Act, shall include public utility services and reasonable rentals of equipment, but only for periods when the equipment rented is actually used at the site of the work covered by the Agreement. As required by the Act, the provisions of this Bond shall be applicable whether or not the material furnished or labor performed enters into and becomes a component part of the public building, public work or public improvement contemplated by the Contract Documents and the Agreement.

As provided and required by the Act, the Principal and the Surety agree that any claimant, who has performed labor or furnished material in the prosecution of the work in accordance with the Agreement and in accordance with the Contract Documents, including any amendment, extension or addition to the Agreement, and/or to the Contract Documents, and who has not been paid therefore, in full, before the expiration of ninety (90) days after the day on which such claimant performed the last of such labor or furnished the last of such materials for which payment is claimed, may institute an action upon this Bond, in the name of the claimant in assumpsit, to recover any amount due the claimant for such labor or material; and may prosecute such action to final judgment and may have execution upon the judgment provided however, that: (a) any claimant who has a direct contractual relationship with any subcontractor of the Principal but has contractual relationship, express or implied, with the Principal, may institute an action upon this Bond only if such claimant first shall have given written notice, served in the manner provided in the Act, to the Principal, within ninety (90) days from the date upon which such claimant performed the last of the labor or furnished the last of the materials for which payment is claimed, stating, with substantial accuracy, the amount claimed and the name of the person for whom the work was performed or to whom the material was furnished; and (b) no action upon this bond shall be commenced after the expiration of one (1) year from the day upon which the last of the labor was performed or material supplied, for the payment of which such action is instituted by the claimant; and (c) every action upon this Bond shall be instituted either in the appropriate court of the County where the Agreement is to be performed or of such other County as Pennsylvania statutes shall provide, or in the United States District Court for the district in which the project, to this Agreement relates, is situated, and not elsewhere.

This Bond is executed and delivered under and subject to the Act, to which reference hereby is made.

The Principal and the Surety agree that any alterations, changes and/or additions to the Contract Document, and/or any alterations, changes and/or additions to the work to be performed under the Agreement in accordance with the Contract Documents, and/or any alterations, changes and/or additions to the Agreement, and/or any giving by the Obligee of any extensions of time for the performance of the Agreement in accordance with the Contract Documents, and/or any act of forbearance of either the Principal or the Obligee toward the other with respect to the Contract Documents and the Agreement, and/or the reduction of any percentage to be retained by the Obligee as permitted by the Contract Documents and by the Agreement, shall not release in any manner whatsoever, the Principal and the Surety, or either of them, their heirs, executors, administrators, successors and assigns, from liability and obligations under this Bond; and the Surety, for value received, does waive notice of any such alterations, changes, additions, extensions of time acts of forbearance and/or reduction of retained percentage.

Provided, that it is expressly agreed that this Bond shall be deemed amended automatically and immediately, without formal and separate amendments hereto, upon amendment to the Contract Documents not increasing the contract price more than twenty percent (20%), so as to bind the Principal and the Surety to the full and faithful performance of the Contract Documents as so amended. The term "Amendment", wherever used in this Bond and whether referring to this Bond, the Contract Documents,

or the Agreement, shall include any alteration, addition, extension or modification of any character whatsoever.

Provided, further, that no final settlement between the Obligee and the Principal shall abridge the right of any beneficiary, whose claim may be unsatisfied.

If the Principal is a foreign corporation (incorporated under any laws other than those of the Commonwealth of Pennsylvania) then further terms and conditions of this Bond are and shall be that the Principal or the Surety shall not be discharged from liability on this Bond, nor this Bond surrendered until such Principal files with the Obligee a certificate from the Pennsylvania Department of Revenue evidencing the payment in full of all bonus taxes, penalties and interest, and a certificate from the Bureau of Employment and Unemployment Compensation of the Pennsylvania Department of Labor and Industry, evidence the payment of all unemployment compensation, contributions, penalties and interest due the Commonwealth from said Principal or any foreign corporations, subcontractors thereunder or for which liability has accrued but the time for payment has not arrived, all in accordance with provisions of the Act of June 10, 1947, P.L. 493, of the Commonwealth of Pennsylvania.

IN WITNESS WHEREOF, the Principal and the Surety cause this Bond to be signed, sealed and delivered this _____ day of _____, 20_____.

ACORD™ CERTIFICATE OF LIABILITY INSURANCE

DATE (MM/DD/YYYY): 01/01/20xx

THIS CERTIFICATE IS ISSUED AS A MATTER OF INFORMATION ONLY AND CONFERS NO RIGHTS UPON THE CERTIFICATE HOLDER. THIS CERTIFICATE DOES NOT AFFIRMATIVELY OR NEGATIVELY AMEND, EXTEND OR ALTER THE COVERAGE AFFORDED BY THE POLICIES BELOW. THIS CERTIFICATE OF INSURANCE DOES NOT CONSTITUTE A CONTRACT BETWEEN THE ISSUING INSURER(S), AUTHORIZED REPRESENTATIVE OR PRODUCER, AND THE CERTIFICATE HOLDER.

IMPORTANT: If the certificate holder is an ADDITIONAL INSURED, the policy(ies) must be endorsed. If SUBROGATION IS WAIVED, subject to the terms and conditions of the policy, certain policies may require an endorsement. A statement on this certificate does not confer rights to the certificate holder in lieu of such endorsement(s).

SECTION 00 72 00 - GENERAL CONDITIONS

1.01 GENERAL

A. The attached copy of AIA Document A232, General Conditions of the Contract for Construction, 2019 Edition, Articles 1 through 15, is hereby made a part of the Contract Documents and Specifications. There is no implied permission to reproduce this document. The original document purchased by the used is intended to be used during the course of this Project. This document shall always be the most recent form unless otherwise noted by ICS to be a certain year or edition posted by the AIA.

END OF SECTION 00 72 00

AIA® Document A232® – 2019

General Conditions of the Contract for Construction, *Construction Manager as Adviser Edition*

for the following PROJECT:
(Name, and location or address)

New Jarrettown Elementary School
1520 Limeklin Pike
Dresher, PA 19025

THE CONSTRUCTION MANAGER:
(Name, legal status, and address)

ICS Consulting LLC
1400 N. Providence Rd, Building 2, Suite 4045
Media, PA 19063

THE OWNER:
(Name, legal status, and address)

Upper Dublin School District
1580 Fort Washington Ave.
Maple Glen, PA 19002

THE ARCHITECT:
(Name, legal status, and address)

Alloy5, LLC
530 West Broad Street
Bethlehem, PA 18018

ADDITIONS AND DELETIONS:
The author of this document has added information needed for its completion. The author may also have revised the text of the original AIA standard form. An *Additions and Deletions Report* that notes added information as well as revisions to the standard form text is available from the author and should be reviewed. A vertical line in the left margin of this document indicates where the author has added necessary information and where the author has added to or deleted from the original AIA text.

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

This document is intended to be used in conjunction with AIA Documents A132™–2019, Standard Form of Agreement Between Owner and Contractor, Construction Manager as Adviser Edition; B132™–2019, Standard Form of Agreement Between Owner and Architect, Construction Manager as Adviser Edition; and C132™–2019, Standard Form of Agreement Between Owner and Construction Manager as Adviser.

ARTICLE 1 GENERAL PROVISIONS

§ 1.1 Basic Definitions

§ 1.1.1 The Contract Documents. The Contract Documents are enumerated in the Agreement between the Owner and Contractor (hereinafter the Agreement) and consist of the Agreement, Conditions of the Contract (General and other Conditions), Instructions to Bidders, Drawings, Specifications, Addenda issued prior to execution of the Contract, other documents listed in the Agreement, and Modifications issued after execution of the Contract. A Modification is (1) a written amendment to the Contract signed by both parties, (2) a Change Order, (3) a Construction Change Directive, or (4) a written order for a minor change in the Work issued by the Architect. Unless specifically enumerated in the Agreement, the Contract Documents do not include the advertisement or invitation to bid, Instructions to Bidders, sample forms, other information furnished by the Owner in anticipation of receiving bids or proposals, the Contractor's bid or proposal, or portions of addenda relating to bidding or proposal requirements.

§ 1.1.1.1 The Contractor is responsible to read the entire AIA A232-2019 General Conditions of the Contract for Construction as it has been modified from the original AIA Document A232-2019.

§ 1.1.2 The Contract. The Contract Documents form the Contract for Construction. The Contract represents the entire and integrated agreement between the parties hereto and supersedes prior negotiations, representations, or agreements, either written or oral. The Contract may be amended or modified only by a Modification. The Contract Documents shall not be construed to create a contractual relationship of any kind (1) between the Contractor and the Architect or the Architect's consultants, (2) between the Owner and the Construction Manager or the Construction Manager's consultants, (3) between the Owner and the Architect or the Architect's consultants, (4) between the Contractor and the Construction Manager or the Construction Manager's consultants, (5) between the Owner and a Subcontractor or Sub-subcontractor (6) between the Construction Manager and the Architect, or (7) except as provided in Article 6 of these General Conditions, between any persons or entities other than the Owner and Contractor. The Construction Manager and Architect shall, however, be entitled to performance and enforcement of obligations under the Contract intended to facilitate performance of their duties. Each Subcontractor, having received and reviewed the Contract Documents, as evidenced by its execution of a subcontract with the Contractor, agrees that these General Conditions have been incorporated in the Subcontractor's subcontract by reference and, to the extent such General Conditions conflict with the express provisions of the subcontract with respect to obligations Subcontractor may have to Owner, these General Conditions shall take precedence.

§ 1.1.2.1 Contractor acknowledges and warrants that it has closely examined all of the Contract Documents, that they are suitable and sufficient to enable the Contractor to complete the Work in a timely manner for the Contract Sum, and that they include all Work, whether or not shown or described, which reasonably may be inferred to be required or useful for the completion of the Work in full compliance with all applicable codes, laws, ordinances, regulations and/or requirements of any local, state, federal or other governmental agency.

§ 1.1.3 The Work. The term "Work" means the construction and services required by the Contract Documents, whether completed or partially completed, and includes all other labor, materials, equipment, and services provided or to be provided by the Contractor to fulfill the Contractor's obligations, and further including any Subcontractor and Sub-subcontractor Work, material suppliers, and/or any other entity from whom the Contractor is responsible whether on or off the site of the Project. The Work may constitute the whole or a part of the Project.

§ 1.1.3.1 The Work shall include, without limitation, the obligation of the Contractor to visit the Project site before submitting a Bid. Such site visit shall be for the purpose of familiarizing the Contractor with the conditions as they exist and the character of the operations to be carried on under the Contract Documents, including, without limitation, all existing site conditions, access to the site, and the physical characteristics of the site and surrounding areas.

§ 1.1.3.2 Nothing in these General Conditions shall be interpreted as imposing on either the Owner, Construction Manager or Architect, or their respective agents, employees, officers, directors or consultants, any duty, obligation or authority with respect to any items that are not intended to be incorporated into the completed Project, or that do not comprise the Work, including, but not limited to, the following: shoring; scaffolding; hoists; weatherproofing; or any temporary facility; or activity, since these are the sole responsibility of the Contractor.

User Notes: (846491751)

§ 1.1.4 The Project. The Project is the total construction of which the Work performed under the Contract Documents may be the whole or a part and which may include construction by other Contractors, and by the Owner's own forces and Separate Contractors.

§ 1.1.5 Contractors. Contractors are persons or entities, other than the Contractor or Separate Contractors, who perform Work under contracts with the Owner that are administered by the Architect and Construction Manager. This includes all Prime Contractors who have mutual responsibility to each other.

§ 1.1.6 Separate Contractors. Separate Contractors are persons or entities who perform construction under separate contracts with the Owner not administered by the Architect and Construction Manager.

§ 1.1.7 The Drawings. The Drawings are the graphic and pictorial portions of the Contract Documents showing the design, location and dimensions of the Work, generally including plans, elevations, sections, details, schedules, and diagrams.

§ 1.1.7.1 The Drawings are diagrammatical and show the general arrangement and extent of the Work; exact locations and arrangements of parts shall be determined as the Work progresses and shall be subject to the Architect's approval. No extra compensation will be allowed due to conflicts, inconsistencies, or discrepancies between actual dimensions and those indicated. The right is reserved by the Architect to make any reasonable change in location of equipment, ductwork and piping prior to roughing in without involving additional compensation to the Prime Contractors. Each Prime Contractor shall coordinate its Work with the Work of others, so that interference between trades does not occur. Each Prime Contractor shall furnish and install offsets, bends, turns, and the like in connection with its Work to avoid interference with Work of other Contractors, to conceal Work where required, and to secure necessary clearance and access for operation and maintenance.

§ 1.1.7.2 Contractor shall carefully examine the Architectural, Mechanical, Plumbing, Electrical, and other Contract Drawings and Specifications. If any discrepancies occur between the Drawings or between the Drawings and Specifications, the Contractor shall report such discrepancies to the Architect and Construction Manager in writing and obtain written instructions as to the manner in which to proceed. No departures from the Contract Documents shall be made without prior written approval of the Architect and Construction Manager.

§ 1.1.8 The Specifications. The Specifications are that portion of the Contract Documents consisting of the written requirements for materials, equipment, systems, standards and workmanship for the Work, and performance of related services.

§ 1.1.9 Instruments of Service. Instruments of Service are representations, in any medium of expression now known or later developed, of the tangible and intangible creative work performed by the Architect and the Architect's consultants under their respective professional services agreements. Instruments of Service may include, without limitation, studies, surveys, models, sketches, drawings, specifications, and other similar materials.

§ 1.1.10 Initial Decision Maker. The Initial Decision Maker is the person identified in the Agreement to render initial decisions on Claims in accordance with Section 15.2. The Initial Decision Maker shall not show partiality to the Owner or Contractor and shall not be liable for results of interpretations or decisions rendered in good faith and in accordance with the applicable standard of care.

§1.1.11 Construction Manager: The terms Program Manager (PM) and Owner's Representative shall be interchangeable with Construction Manager (CM) for this Project and shall mean ICS Consulting, Inc.

§ 1.1.12 Owner: The term Owner shall refer to the Upper Dublin School District.

§ 1.1.13 All references to "Architect" shall mean "Architect/Engineer."

§ 1.1.14 Completion Date: The term Completion Date means any substantial completion, final completion, milestone, phase, or other time sensitive date identified in the Contract Documents.

User Notes: (846491751)

§ 1.2 Correlation and Intent of the Contract Documents

§ 1.2.1 The intent of the Contract Documents is to include all items necessary for the proper execution and completion of the Work by the Contractor. The Contract Documents are complementary, and what is required by one shall be as binding as if required by all; performance by the Contractor shall be required only to the extent consistent with the Contract Documents and reasonably inferable from them as being necessary to produce the indicated results unless it is specified that the Contract includes specific phases or elements to complete a certain part of the Work for reason of coordination or responsibility. Where the Specification has been divided into sections, it is for convenience in use. Unless otherwise specified, the scope of Work of each section shall be to furnish labor, materials, equipment, skill, erection, installation, services and related items for the phase of Work of that section, as required by the Drawings, as specified or as otherwise required to provide and complete the entire Work of the section.

§ 1.2.1.1 The invalidity of any provision of the Contract Documents shall not invalidate the Contract or its remaining provisions. If it is determined that any provision of the Contract Documents violates any law, or is otherwise invalid or unenforceable, then that provision shall be revised to the extent necessary to make that provision legal and enforceable. In such case the Contract Documents shall be construed, to the fullest extent permitted by law, to give effect to the parties' intentions and purposes in executing the Contract.

§ 1.2.1.2 Notwithstanding anything else to the contrary in the Contract Documents, in the event of conflicts, inconsistencies or discrepancies between and/or within the Contract Documents and/or applicable codes, laws, ordinances, regulations and/or requirements of any state, federal or any other governmental agency, the Contractor shall (1) provide the better quality or greater quantity of Work or (2) comply with the more stringent requirement, or both, in accordance with the Architect's interpretation. The terms and conditions of this Section 1.2.1.2, however, shall not relieve the Contractor of any of the obligations set forth in Sections 3.2 and 3.7.

§ 1.2.1.3 In the event of conflicts or discrepancies among the Contract Documents, interpretations will be based on the following priorities:

1. Change Orders
2. Construction Change Directives
3. Architect's Supplemental Instructions / Minor Change Orders
4. Agreement
5. Addenda
6. Supplementary Conditions
7. General Conditions
8. Specifications
9. Drawings
10. Large-scale Drawings shall supersede smaller-scale Drawings
11. Dimensions shall govern over scaling of the Drawings
12. In the case of conflicts, inconsistencies or discrepancies in the Drawings or in the Specifications or within Documents not clarified by Addendum, the latter shall be submitted to the Construction Manager and Architect, who will promptly provide a determination in writing. In the case of a conflict, inconsistency, or discrepancy between and/or within the Drawings and Specifications not clarified by Addendum, the better quality or greater quantity of Work shall be provided in accordance with the Initial Decision Maker's or Architect's interpretation, and no additional compensation or extension of time will be allowed.

§ 1.2.1.4 If a minor change in the Work is found necessary due to actual field conditions, each Contractor shall submit detailed drawings of such departure for the approval by the Architect before making the change.

§ 1.2.2 Organization of the Specifications into divisions, sections and articles, and arrangement of Drawings shall not control the Contractor in dividing the Work among Subcontractors or in establishing the extent of Work to be performed by any trade. The Contractor represents that the Subcontractors, manufacturers, and suppliers engaged or to be engaged by it are and will be familiar with the requirements for performance by them.

§ 1.2.3 Unless otherwise stated in the Contract Documents, words that have well-known technical or construction industry meanings are used in the Contract Documents in accordance with such recognized meanings,**§ 1.2.4** Where the Work is shown in complete detail on only a portion of the Drawings or

AIA Document A232 – 2019. Copyright © 1992, 2009, and 2019. All rights reserved. User Notes: (846491751)

there is an indication of continuation, the remainder being shown in outline, the Work drawn out in detail shall be understood to apply to the other portions of the structure. The Drawings and Specifications are intended to be a common and complimentary set of documents. Anything shown on the Drawings but not in Specifications shall be equally binding as if both noted on the Drawings and called for in the Specifications.

§ 1.2.5 No measurement of a drawing by scale shall be used as working dimension. Working measurements shall be taken from figure dimensions. Work shown diagrammatically on Drawings shall be agreed upon for exact location before being installed. Where the activities of two or more trades are in close proximity, the Contractor shall confer with the other Prime Contractor(s) concerned before making its installation. Work installed by the Contractor in an arbitrary manner without regard for the work of other Separate Contractors or Prime Contractors shall be promptly repaired and/or replaced by the Contractor to the satisfaction of the Architect at no additional cost to the Owner.

§ 1.2.6 The Contractor shall carefully examine the civil, architectural, plumbing, electrical, fire protection and other Drawings and Specifications. If any conflicts, inconsistencies, or discrepancies occur between and/or within the Drawings and Specifications and is discovered after the submission of bids, the Contractor shall promptly report such a conflict, inconsistency, or discrepancy to the Architect in writing and obtain written instructions as to the manner in which to proceed. No departures from the Contract Documents shall be made without the prior written approval of the Architect and written notice to the Owner.

§ 1.2.7 The Drawings and Specifications, as a part of the Contract Documents, are for the purpose of illustrating and describing the general character and extent of the Work; and they are intended to agree and be mutually explanatory. Further, it is the intention that these instruments of service shall be complete in their meaning and shall represent completeness in design as well as any fragments thereof. It is the intent and purpose of the Specifications and Drawings to cover and include each item of material, machinery, apparatus, equipment, labor, and services necessary to properly install, equip, adjust, and put into perfect operation the respective portions of the installations specified, and to so interconnect the various items or sections of the Work as to form a complete and operating whole, and deliver the Work in the specified time. Any apparatus, machinery, material, equipment, labor, and services not specifically mentioned which may be found necessary to complete or perfect any portion of the Work in a substantial manner, and in compliance with the requirements stated, implied, or intended in the Contract Documents, shall be furnished without extra cost to the Owner. This shall include all material, devices, or methods peculiar to the type of construction furnished and installed by the Contractor.

§ 1.2.8 If the Contractor, in the course of the Work, finds any discrepancy between the Drawings and the physical conditions of the locality, or any errors in Drawings or in the layout as given by the points and instruction, the Contractor shall immediately inform the Construction Manager and Architect in writing and the Construction Manager and Architect, with reasonable promptness, shall verify the same. Any work done after such discovery, until authorized, shall be done at the Contractor's risk.

§ 1.2.9 In Multiple Prime Contract construction where the Contract Documents duplicate the same work or materials under more than one Prime Contract or subcontract, such duplication shall be settled by the Construction Manager and Architect in writing upon request of a Prime Contractor concerned prior to submission of Bid. Any such duplication which may exist in the Contract Documents after Bids are received will be interpreted by the Construction Manager and Architect as having duplicate values in the multiple contracts or subcontracts and proper credit to the Owner, therefore shall be made by the Contractors as the Architect shall designate.

§ 1.2.10 Division 01 shall govern the execution of all Specification Sections.

§ 1.3 Capitalization

Terms capitalized in these General Conditions include those that are (1) specifically defined, (2) the titles of numbered articles, or (3) the titles of other documents published by the American Institute of Architects.

§ 1.4 Interpretation

In the interest of brevity, the Contract Documents frequently omit modifying words such as "all" and "any" and articles such as "the" and "an," but the fact that a modifier or an article is absent from one statement and appears in another is not intended to affect the interpretation of either statement. Unless otherwise indicated, any reference to a Section means the Section of these General Conditions, including any subsections thereof.

§ 1.5 Ownership and Use of Drawings, Specifications, and Other Instruments of Service

§ 1.5.1 Except as otherwise agreed to between Owner and Architect, the Architect and the Architect's consultants shall be deemed the authors and owners of their respective Instruments of Service, including the Drawings and Specifications, and retain all common law, statutory, and other reserved rights in their Instruments of Service, including copyrights. The Contractor, Subcontractors, Sub-subcontractors, and suppliers shall not own or claim a copyright in the Instruments of Service. Submittal or distribution to meet official regulatory requirements or for other purposes in connection with the Project is not to be construed as publication in derogation of any reserved rights thereto.

§ 1.5.2 The Contractor, Subcontractors, Sub-subcontractors, and suppliers are authorized to use and reproduce the Instruments of Service provided to them, subject to any protocols established pursuant to Sections 1.7 and 1.8, or the Agreement, solely and exclusively for execution of the Work. All copies made under this authorization shall bear the copyright notice, if any, shown on the Instruments of Service. The Contractor, Subcontractors, Sub-subcontractors, and suppliers may not use the Instruments of Service on other projects or for additions to the Project outside the scope of the Work without the specific written consent of the Owner, Architect, and the Architect's consultants, as applicable.

§ 1.6 Notice

§ 1.6.1 Except as otherwise provided in Section 1.6.2, where the Contract Documents require one party to notify or give notice to the other party, such notice shall be provided in writing to the designated representative of the party to whom the notice is addressed and shall be deemed to have been duly served if delivered in person, by mail, by courier, or by electronic transmission.

§ 1.6.2 Notice of Claims as provided in Section 15.1.3 shall be provided in writing and shall be deemed to have been duly served only if delivered to the designated representative of the party to whom the notice is addressed by certified or registered mail, or by courier providing proof of delivery.

§ 1.6.3 Written Notice

Written notice shall be deemed to have been duly served if delivered by registered or certified mail or by courier service providing proof of delivery to party's respective address identified in the Agreement, or by electronic transmission provided that the party providing notice receives a delivery notification confirming receipt of its sent communication.

§ 1.7 Digital Data Use and Transmission

The parties shall agree upon protocols governing the transmission and use of, and reliance on, Instruments of Service or any other information or documentation in digital form.

§ 1.8 Building Information Models Use and Reliance

Any use of, or reliance on, all or a portion of a building information model without agreement to protocols governing the use of, and reliance on, the information contained in the model shall be at the using or relying party's sole risk and without liability to the other party and its contractors or consultants, the authors of, or contributors to, the building information model, and each of their agents and employees.

ARTICLE 2 OWNER

§ 2.1 General

§ 2.1.1 The Owner is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The Owner shall designate in writing a representative who shall have express authority to bind the Owner with respect to all matters requiring the Owner's approval or authorization. Except as otherwise provided in Section 4.2.1, the Construction Manager and the Architect do not have such authority. The term "Owner" means the Owner or the Owner's authorized representative and provided, however, the Construction Manager and Architect shall have the authority to act on behalf of the Owner with respect to providing notification, administering or enforcing the Contract Documents.

§ 2.1.2 Intentionally deleted.

§ 2.2 Evidence of the Owner's Financial Arrangements

AIA Document A232 – 2019. Copyright © 1992, 2009, and 2019. All rights reserved. § 2.2.1 Intentionally deleted.

§ 2.2.2 Intentionally deleted.

§ 2.2.3 Intentionally deleted.

§ 2.2.4 Intentionally deleted.

§ 2.3 Information and Services Required of the Owner

§ 2.3.1 Except for permits and fees that are the responsibility of the Contractor under the Contract Documents, including those required under Section 3.7.1, the Owner shall secure and pay for necessary approvals, easements, assessments and charges required for construction, use or occupancy of permanent structures or for permanent changes in existing facilities.

§ 2.3.2 The Owner shall retain an architect lawfully licensed to practice architecture, or an entity lawfully practicing architecture, in the jurisdiction where the Project is located. That person or entity is identified as the Architect in the Agreement and is referred to throughout the Contract Documents as if singular in number.

§ 2.3.3 The Owner shall retain a construction manager adviser lawfully practicing construction management in the jurisdiction where the Project is located. That person or entity is identified as the Construction Manager in the Agreement and is referred to throughout the Contract Documents as if singular in number.

§ 2.3.4 If the employment of the Construction Manager or Architect terminates, the Owner shall employ a successor construction manager or architect to whom the Contractor has no reasonable objection and whose status under the Contract Documents shall be that of the Construction Manager or Architect, respectively.

§ 2.3.5 The Owner shall not be responsible for furnishing surveys or other information as to the physical characteristics, legal limitations of, or utility locations for the site of the Project. The Contractor shall confirm the location of each utility, shall excavate and dispose of each on-site utility, and shall cap each off-site utility as required by the Work and as may be included in the Contract Documents. The Contractor represents that it is familiar with the Project site and has received all information it needs concerning the condition of the Project site. The Contractor represents that it has inspected the location of the Work and has satisfied itself as to the condition thereof, including, but not limited to, all structural, surface, and reasonably ascertainable subsurface conditions. Based upon the foregoing inspections, understandings, agreements and acknowledgments, the Contractor agrees and acknowledges: (1) that the Contract Sum is just and reasonable compensation for all Work, including, without limitation, foreseen and foreseeable risks, hazards and difficulties in connection therewith, and (2) that the Contract Time is adequate for the performance of the Work. The Contractor shall have no claims for surface or reasonably ascertainable subsurface conditions encountered. The Contractor shall exercise special care in executing subsurface Work in proximity of known subsurface utilities, improvements, and easements.

§ 2.3.6 The Owner shall furnish information or services required of the Owner by the Contract Documents with reasonable promptness. The Owner shall also furnish any other information or services under the Owner's control and relevant to the Contractor's performance of the Work with reasonable promptness after receiving the Contractor's written request for such information or services.

§ 2.3.7 Unless otherwise provided in the Contract Documents, the Owner shall furnish to the Contractor one copy of the Contract Documents for purposes of making reproductions pursuant to Section 1.5.2.

§ 2.3.8 The Owner shall forward all communications to the Contractor through the Construction Manager and shall also provide the same communications to the Architect about matters arising out of or relating to the Contract Documents. Other communication shall be made as set forth in Section 4.2.6.

§ 2.3.9 The Contractor shall confirm the location of all utilities on the site prior to the commencement of any Work on site. To the extent required for the execution of the Work, the Contractor shall provide all temporary or permanent connections, terminations, removal, or alterations of the utility services to the site. Individual responsibilities of the separate Prime Contractors are delineated further in the Specifications.

User Notes: (846491751)

§ 2.3.10 The Owner will provide such test borings and information that it has as to the existing subsurface conditions and site geology. The Owner does not assume any responsibility whatsoever with respect to sufficiency or accuracy of borings made, or of the logs of test borings, or of other investigations, or of the interpretations made thereof, and there is no warranty or guarantee, express or implied, that the conditions indicated by such investigations, borings, logs, or other information are representative of those existing throughout the Project site. There is no warranty or guarantee, express or implied, that unforeseen developments may not occur.

§ 2.3.11 The Contractor acknowledges that it has inspected the site and familiarized itself with visible, observable, and reasonably ascertainable conditions. The Contractor shall have no claim arising from conditions that were reasonably discoverable prior to bid. Concealed or unknown conditions shall be governed exclusively by Section 3.7.4. Geotechnical reports are provided for information only and do not relieve the Contractor of its obligation to perform its own investigation of the site.

§ 2.4 Owner's Right to Stop the Work

If the Contractor fails to correct Work that is not in accordance with the requirements of the Contract Documents as required by Section 12.2 or fails to carry out Work in accordance with the Contract Documents, the Owner may issue a written order to the Contractor to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, the right of the Owner to stop the Work shall not give rise to a duty on the part of the Owner to exercise this right for the benefit of the Contractor or any other person or entity. Upon notice from the Owner, the Contractor shall resume performing such Work. This right shall be in addition to and not in restriction or derogation of the Owner's rights under Article 14 hereof. The Owner's right to stop the Work shall not relieve the Contractor of any of its responsibilities and obligations under or pursuant to the Contract Documents.

§ 2.5 Owner's Right to Carry Out the Work

If the Contractor defaults or neglects to carry out the Work in accordance with the Contract Documents or fails to adequately staff the Project with the proper management, supervision, materials and workforce, including its duty to proceed expeditiously with adequate forces so as to maintain the Project schedule, achieve the Project milestones, and substantial completion, and fails within a 72 hours period after receipt of notice from the Owner to commence and continue correction of such default or neglect with diligence and promptness, the Owner may, without prejudice to other remedies the Owner may have, correct such default or neglect.. Notwithstanding the above, Owner shall not be required to comply with the notice provisions hereof and may proceed to correct such default and neglect if Contractor fails to, within a 24-hour period after receipt of written notice from the Owner, commence and continue correction of such default and neglect where further delay would cause disruption to the Project schedule. Owner shall have the further right to carry out work without any prior notice to Contractor, in an emergency affecting safety of persons or property, and said work is necessary to prevent threatened damage, injury or loss. The right of the Owner to carry out the Work pursuant to this Section 2.5 shall not give rise to any duty on the part of the Owner to exercise this right for the benefit of the Contractor or any other person or entity. The Owner's rights set forth in Sections 2.4 and 2.5 hereof shall be in addition to all other rights of the Owner granted in the Contract Documents, at law, or in equity. In such case an appropriate Change Order shall be issued deducting from payments then or thereafter due the Contractor the reasonable cost of correcting such deficiencies, including, but not limited to, Owner's expenses, attorneys' fees and compensation for the Construction Manager's and Architect's and their respective consultants' additional services made necessary by such default, neglect, or failure. Such action by the Owner and amounts charged to the Contractor are both subject to prior approval of the Architect, after consultation with the Construction Manager. If payments then or thereafter due the Contractor are not sufficient to cover such amounts, the Contractor shall pay the difference to the Owner.

§ 2.6 Limitation of Responsibility

In no event shall the Owner, Construction Manager, and Architect have control over, charge of, or any responsibility for construction means, methods, techniques, sequences, or procedures or for safety precautions and programs in connection with the Work, notwithstanding any of the rights and authority granted the Owner in the Contract Documents. Hence, the Owner and Contractor hereby acknowledge and agree that the Owner has retained the Contractor as an independent contractor to perform the Work on the Project. It is expressly understood and agreed that the presence on the jobsite of the Owner's visiting officers or employees, the Owner, Architect, Construction Manager, or supervisory personnel employed by Owner, and the making by such personnel of any inspections of the Contractor's Work, materials, tools or equipment, or of the finished Work of the Contractor and their approval of same, or failure to take exception thereto, shall in no way relieve the Contractor from its absolute responsibility to perform its Work and furnish its materials in accord with the requirements of the Contract Documents. Any failure by

the Owner or Architect to take exception to any Work of the Contractor shall not constitute a ratification or approval of the Work or work methods employed by the Contractor if the same did not in fact comply with the requirements of the Contract Documents.

ARTICLE 3 CONTRACTOR

§ 3.1 General

§ 3.1.1 The Contractor is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The Contractor shall be lawfully licensed, if required by applicable laws in the jurisdiction where the Project is located. The Contractor shall designate in writing a representative who shall have express authority to bind the Contractor with respect to all matters under this Contract. The term "Contractor" means the Contractor or the Contractor's authorized representative.

§ 3.1.2 Where the term "Contractor" is modified in any way, such as, without limit, "this Contractor", "Plumbing Contractor", "HVAC Contractor" or "Mechanical Contractor", "General Contractor", "Electrical Contractor", the modified term shall be deemed to refer to the Prime Contractor, but such meaning does not relieve the Contractor from his responsibility for all Work, whether or not such Work is sublet or subcontracted. The Contractor shall perform the Work in strict accordance with the Contract Documents. The plural term "Prime Contractors" or "Multiple Prime Contractors" refers to persons or entities who perform construction under contracts with the Owner that are administered by the Construction Manager and Architect. The term does not include the Owner's own forces, including persons or entities under separate contracts not administered by the Construction Manager.

§ 3.1.3 The Contractor shall not be relieved of its obligations to perform the Work in accordance with the Contract Documents either by activities or duties of the Construction Manager or Architect in their administration of the Contract, or by tests, inspections or approvals required or performed by persons or entities other than the Contractor. The Contractor shall be responsible for the coordination of its Work with the other Prime Contractors. The Owner, Architect and its consultants, and the Construction Manager and its consultants, shall not be responsible for coordination of the Contractor's Work.

§ 3.1.4 The General Contractor is designated as the Project Coordinator for this Project unless noted otherwise. See all of Articles 3 and 6 for additional information.

§ 3.2 Review of Contract Documents and Field Conditions by Contractor

§ 3.2.1 Execution of the Contract by the Contractor is a representation that the Contractor has visited the site, become generally familiar with local conditions under which the Work is to be performed, and correlated personal observations with requirements of the Contract Documents.

§ 3.2.2 The Contractor shall carefully study and compare the Drawings, Specifications, Addendum, and other Contract Documents relative to the Work, , shall take field measurements of any existing conditions related to the Work, and shall observe any conditions at the Project site affecting the Work. Any design errors, omissions, or inconsistencies noted by the Contractor shall promptly be reported to the Construction Manager and Architect. Contractor acknowledges that the Contract Documents are full and complete, are sufficient to have enabled it to determine the Contract Sum and that the Drawings, the Specifications and all Addenda are sufficient to enable such Contractor to construct the Work outlined therein in accordance with applicable laws, statutes, ordinances, codes, building codes and regulations of any local, state, federal or any other governmental agency, and otherwise to fulfill all of its obligations under the Contract Documents.

§ 3.2.2.1 Except as to any reported errors, inconsistencies or omissions that have been acknowledged and corrected by the Architect and Construction Manager via Addendum, and to concealed or unknown conditions defined in Section 3.7.4 by executing the Agreement, the Contractor represents the following:

.1 The Contract Documents are sufficiently complete and detailed for the Contractor to: (1) perform the Work required and to produce the results intended by the Contract Documents; and (2) comply with all requirements of the Contract Documents.

.2 The Work required by the Contract Documents, including, but not limited to, all construction details, construction means, methods, procedures, and techniques necessary to perform the Work, use of materials, selection of equipment, and requirements of product manufacturers are consistent with: (1) good and sound practices within the construction industry; (2) generally prevailing and accepted industry standards applicable to Work; (3) requirements of any warranties applicable to the Work; and

User Notes: (846491751)

(4) all laws, statutes, ordinances, regulations, rules, orders, codes, and building codes of any state, federal or any other governmental agency which bear upon Contractor's performance of the Work.

§ 3.2.3 The Contractor shall satisfy itself as to the accuracy of all dimensions and locations. In all cases of interconnection of its Work with existing or other Work, the Contractor shall verify at the site all dimensions relating to such existing or other Work. Any errors due to the Contractor's failure to verify all such locations or dimensions shall be promptly rectified by the Contractor without any additional cost to the Owner.

§ 3.2.3.1 Measurement

Before ordering any materials or doing any Work, each Contractor and each Subcontractor shall verify measurements at the Project site and shall be responsible for the correctness of such measurements. No extra charge by the Prime Contractors or compensation to the Prime Contractors will be allowed on account of differences between actual dimensions and the dimensions indicated on the Drawings. Any difference which may be found shall be submitted by the Prime Contractor to the Architect in writing for resolution before proceeding with the Work.

§ 3.2.3.2 Prior to proceeding with any Work, and in sufficient time as not to delay the Work, the Contractor shall:

.1 Review, compare and analyze the Contract Documents and any information or surveys provided by the Owner; and

.2 Inspect and check such portion of the Work for proper fit and matching with continuous Work and for proper coordination with other Work and the Work of the Owner or of Separate Contractors; and

.3 Verify all dimensions and measurements with actual field conditions at the Project.

§ 3.2.3.3 The Contractor shall immediately notify the Owner, Construction Manager, and Architect of any errors, omissions or inconsistencies noted as the result of the Contractor's activities under Section 3.2.3 as a request for information submitted to Construction Manager in such form as the Construction Manager and Architect may require. If the Contractor knows or reasonably should know of any such error, omission or inconsistency and proceeds with the construction in question without first giving such notice, any claim for an adjustment to the Contract Sum or the Contract Time shall be deemed waived and released and the Contractor and its Surety shall assume all responsibility and liability on a joint and several basis for such performance and shall indemnify the Owner for all costs, expenses, losses and damages incurred by the Owner, including, but not limited to, legal fees, costs, and expenses, incurred by the Owner as the result thereof, including any cost to repair, correct or rework the construction in question.

§ 3.2.4 If the Contractor believes that additional cost or time will be required as a direct result of clarifications or instructions the Architect issues in response to the Contractor's notices or requests for information pursuant to Sections 3.2.2 or 3.2.3 and its sub-Sections, the Contractor shall submit Claims as provided in Article 15. If the Contractor fails to perform the obligations of Sections 3.2.2 or 3.2.3 and its sub-Sections, the Contractor shall pay such costs and damages to the Owner, subject to Section 15.1.7, as would have been avoided if the Contractor had performed such obligations. If the Contractor performs those obligations, the Contractor shall not be liable to the Owner or Architect for damages resulting from errors, inconsistencies or omissions in the Contract Documents, for differences between field measurements or conditions and the Contract Documents, or for nonconformities of the Contract Documents to applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities.

§ 3.2.5 The Contractor shall review the drawings and the Work of others to determine if that Work affects the Contractor's planned Work and also to coordinate and schedule all required Work.

§ 3.3 Supervision and Construction Procedures

§ 3.3.1 The Contractor shall supervise and direct the Work, using the Contractor's best skill and attention. The Contractor shall be solely responsible for, and have control over, construction means, methods, techniques, sequences, and procedures, and for coordinating all portions of the Work under the Contract. If the Contract Documents give specific instructions concerning construction means, methods, techniques, sequences, or procedures, the Contractor shall evaluate the jobsite safety thereof and shall be solely responsible for the jobsite safety of such means, methods, techniques, sequences, or procedures. If the Contractor determines that such means, methods, techniques, sequences or procedures may not be safe, the Contractor shall give timely notice to the Owner, the Construction Manager, and the Architect, and shall propose alternative means, methods, techniques, sequences, or procedures. The Contractor shall not proceed with that portion of the Work without further written instructions from the Architect. If the Contractor is then instructed to proceed with the required means, methods, techniques, sequences or procedures without acceptance

User Notes: (846491751)

of changes proposed by the Contractor, the Owner shall be solely responsible for any loss or damage arising solely from those Owner-required means, methods, techniques, sequences or procedures.

§ 3.3.1.1 No alleged verbal agreement or conversation with any officer, agent or employee of the Owner, Construction Manager or Architect, either before or after the execution of the Contract, shall affect or modify the terms or obligations herein contained. Failure to comply with any or all of the requirements of this Section 3.3 will not relieve the Contractor from the responsibility of properly estimating the difficulty or cost of successful completion of the Work, nor from the responsibility for the faithful performance of the provisions of this Contract. Modifications or changes may be made in writing only. This requirement may not be waived under any circumstances.

§ 3.3.1.2 When more than one major phase is being constructed at different locations of the Project site, supervision must be assigned to each phase when Work of that Agreement is being performed. When performing construction Work to maintain the progress schedule requires extended hours, multiple shifts, and/or additional workdays, adequate supervision shall be required during these times. The competence level and ability of supervisory personnel must be adequate to perform the construction activities involved.

§ 3.3.1.3 Although these various second level supervision personnel may be reassigned from time to time, the Contractor shall retain one superintendent with full responsibility while performing Work on the Project. Article 3.9 of these General Conditions contains the full requirements for Contractor's Superintendent and Project Manager.

§ 3.3.1.4 The Contractor, his employees or his subcontractors shall not install any product or equipment in a manner that is in direct conflict with the manufacturer's recommended requirements. If the manufacturer of the product or equipment has requirements that cannot be met by the specific application indicated, the Contractor shall bring this information to the attention of the Architect. Products or equipment that are installed contrary to their manufacturer's requirements shall be replaced at no additional cost to the Owner unless specifically authorized in writing by the Architect.

§ 3.3.1.5 The Project involves numerous complex plumbing, mechanical, electrical, and general construction installations, Contractor's representatives shall be sufficiently familiar with these trades to provide intelligent and efficient supervision, coordination and scheduling through all phases of work.

§ 3.3.2 The Contractor shall be responsible to the Owner for acts and omissions of the Contractor's employees, Subcontractors and their agents and employees, and other persons or entities performing portions of the Work for, or on behalf of, the Contractor or any of its Subcontractors.

§ 3.3.3 The Contractor shall not be relieved of obligations to perform the Work in accordance with the Contract Documents either by activities or duties of the Construction Manager or Architect in their administration of the Contract, or by tests, inspections or approvals required or performed by persons other than the Contractor.

§ 3.3.3.1 A Prime Contractor's failure to perform their Work or whose negligence in performing their Work impacts other Prime Contractors or Separate Contractors shall be responsible for costs or damages incurred by the other contractors that are necessary to maintain the Project Schedule. Prime Contractors shall be responsible for costs or damages incurred by Owner and the other Contractors, including but not limited to attorney fees and additional compensation of Construction Manager and Architect.

§ 3.3.3.2 The Contractor has reviewed the substantial completion dates and times for each milestone, phase and the entire Work of the Project set forth in the Contract Documents, agrees that such dates and times are reasonable and commits to achieve them. The Contract Sum includes costs associated with completion by those dates and times, including, but not limited to, costs associated with out-of-sequence work, come-back work, stand-by work, stacking of trades, coordination with the schedules and work of other Prime and separate contractors, allowing sufficient time, work and storage areas, and site access for other Prime and separate contractors to timely progress and complete their work, and overtime, expediting, and acceleration that may be required to complete the Work by those dates and times.

§ 3.3.4 The General Contractor is designated as the Project Coordinator for this Project. The Project Coordinator and other Prime Contractors are responsible for coordination of the Work. The Project Coordinator is responsible for making all coordination decisions not mutually agreed to by all affected Prime Contractors. Disputes between or among the Project Coordinator and one or more other Prime Contractors and disputes in connection with the

User Notes: (846491751)

construction schedule, the furnishing of additional resources to meet the project schedule, job coordination and all aspects of the means and methods of construction shall be submitted promptly to the Project Coordinator for a final construction decision. The Project Coordinator and the affected Prime Contractor or Contractors shall in connection with all submissions for a final construction decision provide actual written notice contemporaneously to the Construction Manager, Architect, and the Owner. The final construction decision of the Project Coordinator must, at all times, be consistent with content and intent of the Contract Documents and the latest accepted schedule and shall be subject to review and approval, rejection, or modification by the Construction Manager. The final construction decision of the Project Coordinator, as approved or modified by the Construction Manager, will be observed, accepted, and fully followed by all Prime Contractors and their Subcontractors on the project, subject only to the dispute resolution procedures set forth in Article 6 of these General Conditions. The progress of the Work in accordance with the final construction decision of the Project Coordinator, as approved or modified by the Construction Manager, shall not be delayed pending any such dispute resolution proceedings.

§ 3.3.5 The schedule of any Work affecting existing installations or facilities shall be coordinated with the other consultants, Owner and Construction Manager. At no time shall any of the Work or operations leading to Work defined in the Contract Documents interfere in any way with the Owner's day-to-day activities, service of power, light, heat, water, telephone, utilities, etc., which shall be maintained. Shutdown of utilities or equipment affecting existing operations will not be permitted except as provided below. Any premium time or additional cost to comply with these requirements shall be at the expense of the Contractor and shall be included in their bid. No shutdowns of existing installations and facilities, except by special permission, shall be scheduled between 5:00 a.m. and 6:00 p.m. All required shutdowns shall be during nights with the prior written approval of the Owner.

§ 3.3.6 Each Prime Contractor shall be responsible for the intermeshing of various other contracts and their own Work, so that no part will be left in an unfinished condition owing to disagreement among the various Prime Contractors as to where the Work of one begins and ends with reference to the Work of another. Prime Contractor shall deliver a fully completed Project to the Owner.

§ 3.3.7 Hierarchy of Coordination Authority.

Each Prime Contractor shall remain solely responsible for coordinating its own Work with the Work of other Prime Contractors, Separate Contractors, and the Owner's forces. Where a General Contractor is designated as the Project Coordinator, the Project Coordinator shall have authority to resolve coordination conflicts among Prime Contractors related to sequencing, interfacing, and logistical alignment of the Work.

The Construction Manager's involvement in coordination shall be limited to review of coordination decisions for consistency with the Project Schedule and the Contract Documents. Nothing herein shall be construed to assign responsibility to the Construction Manager or Architect for construction means, methods, techniques, sequences, procedures, or safety programs, nor to alter the allocation of responsibility otherwise established in the Contract Documents.

§ 3.4 Labor and Materials

§ 3.4.1 Unless otherwise provided in the Contract Documents, the Contractor shall provide and pay for labor, materials, equipment, tools, construction equipment and machinery, water, heat, utilities, transportation, and other facilities and services necessary for proper execution and completion of the Work, whether temporary or permanent and whether or not incorporated or to be incorporated in the Work.

§ 3.4.1.1 Not later than 10 days from the Contract Date, the Contractor shall provide a list of all products proposed for installation, including the name of the manufacturer of each for approval by the Owner and Architect. The list shall be tabulated by, and be complete for, each Specification Section. Where applicable, subcontractor's names shall be included in such list. Only those materials specified in the Contract Documents or approved by Addendum may be used in construction.

§ 3.4.1.2 Any material specified by reference to the number, symbol, or title of a specified standard, such as a Commercial Standard, a Federal Specification, a trade association standard, or other similar standard, shall comply with the requirements in the latest revision thereof, and any amendment or supplement thereto in effect on the date of submission of the Bid, except as limited to type, class or grade, or modified in such reference. The standards referred

User Notes: (846491751)

to, except as modified in the Specifications, shall have full force and effect as though printed in full in the Specification.

§ 3.4.1.3 The specific mention of a manufacturer's name, brand of material, equipment, etc., shall be considered as indicating a standard of quality, grade or type desired. Materials of manufacturers other than those mentioned throughout the specifications may be accepted if they are equal in quality and performance to those specified **and** written approval is given by the Architect prior to bid. Any other substitution request procedures are further defined in the Contract Documents.

§ 3.4.2 Except in the case of minor changes in the Work approved by the Architect in accordance with Section 3.12.8 or ordered by the Architect in accordance with Section 7.4, the Contractor may make substitutions only with the consent of the Owner, after evaluation by the Architect, in consultation with the Construction Manager, and in accordance with a Change Order or Construction Change Directive. After the Contract has been executed, the Owner and Architect will consider a formal request for the substitution of products in place of those specified only under the conditions set forth in Specification Section 01 60 00 Product Requirements.
(Paragraph deleted)

§ 3.4.2.1 If the Contractor makes a request for substitution, such request shall be deemed to be Contractor's:

- **.1** Representation that the Contractor has personally investigated the proposed substitute product and determined that it is equal or superior in all respects to the specified product.
- **.2** Representation that the Contractor will provide the same warranty for the substituted product that the Contractor would for the specified product.
- **.3** Certification that the cost data presented is complete and includes all related costs under this Agreement except the Architect's redesign costs and waives all claims for additional cost related to the substitution which subsequently become apparent.
- **.4** Representation that it will coordinate the installation of the accepted substitute product and make such changes as may be required for the Work to be complete in all respects without additional cost to the Owner.
- **.5** Representation that the use of the substituted product will not have an adverse effect on any other trade or the construction schedule. However, to the extent that the incorporation of a substituted item or assembly into the Work will require revisions or additions to the Work of other construction contracts, the Contractor proposing to use such substituted materials, products, or assembly represents that it will bear the cost of such revisions or additions for all applicable trades of Work at no change in the Contract Sum.

§ 3.4.3 Contract Sum Not Adjusted for Rising Costs: With the exception of price increases or rebates as set forth in Specification 01 29 01 related to asphalt paving costs and the Asphalt Cement Price Index for PennDOT Zone 1, District 6, the Bid (and hence the Contract Sum) for the Contract must be guaranteed for the duration of this Project and shall thereby have incorporated within it any or all escalation factors related to market conditions. Notwithstanding any other provision in the Contract Documents to the contrary, Contractor's Contract Sum is intended to include all increases in cost, foreseen or unforeseen, including, without limitation, increases in costs arising from supply shortages, unusual delay in deliveries, increases in market prices for materials, labor, taxes and/or other causes beyond the Owner's control, all of which are to be borne solely by the applicable Contractor supplying the materials and/or labor to the Project. All loss and/or damage arising from any of the Work performed under this Agreement through unforeseen or unusual obstructions, difficulties or delays which may be encountered in the prosecution of same shall be borne solely by the applicable Contractor prosecuting the Work.

§ 3.4.4 Overtime: Any work necessary to be performed after regular working hours, on Sunday or Legal Holidays, shall be performed without additional expense to the Owner.

§ 3.4.5 The Contractor shall enforce strict discipline and good order among the Contractor's employees and other persons carrying out the Work. The Contractor shall not permit employment of unfit persons or persons not properly skilled in tasks assigned to them. The Owner specifically reserves the right to reject any person the Owner deems unfit or unsuitable to be permitted on the Project Property. Upon written notice or verbal direction from the Owner or Construction Manager, the Contractor shall have all such persons removed from the Project. Obscene language, excessive noise, loitering, unauthorized use of kitchen facilities, smoking and possession, use or being under the influence of alcohol or a controlled substance, etc., will not be tolerated. The Contractor, its employees, subcontractors

and suppliers are required to act in a professional and orderly manner when on and around the District property. Owner's right to declare such person unfit shall not be limited to the required exclusion of persons from Project site as set forth in Section 1-111 of the Pennsylvania Public School Code and/or Subchapter C.2 of the Child Protective Services Law.

§ 3.4.5.1 Competent Workmen: No person shall be employed to do Work under the Contract except competent and first-class workmen and mechanics.

§ 3.4.5.2 Contractors' personnel shall not make any remarks to any students or Owner's personnel that violate decency or cause embarrassment to that individual or the Owner. Failure to comply will result in dismissal from the Project.

§ 3.4.5.3 The Contractor shall abide by the following requirements, which shall apply to all Contractors, all Subcontractors of any tier, and all employees of all Contractors and all Subcontractors of any tier:

.1 They shall not socialize with the students, faculty, visitors, or patrons.

.2 They are prohibited from smoking, vaping, and other use of tobacco in buildings and on the grounds owned by or under the control of the Owner. Workers shall not smoke or use vaping devices within the limits of the Owner's property boundaries or as otherwise required by Federal legislation, Title X, P.L. 103-227, Goal 2000, Educate America Act of 1994 as amended from time to time, including without limitation, 20 U.S.C.A. Section 6081, et seq., the Pro-Children Act of 1994. Workers shall not possess or consume alcoholic beverages when within the limits of the Owner's property boundaries. The Contractor shall require its employees and agents, and its Subcontractor's employees and agents to work diligently and behave in an orderly manner at all times when at or about the Project site and shall remove from the Project any employee whose conduct is deemed objectionable. Unless otherwise approved by the Owner, persons performing Work shall not use the Owner's building facilities, including, without limitation, restroom facilities.

.3 They are not allowed to use the existing facilities, i.e., lunchroom, toilets, etc., unless specifically stated otherwise in these Contract Documents.

.4 They are not allowed in the existing facility except in areas being renovated.

.5 They shall not use radios on the site for music or entertainment purposes.

.6 They shall not possess, or consume, or be under the influence of alcoholic beverages when on site.

.7 They shall not use, possess, or be under the influence of any illegal substances (i.e., drugs, etc.) while on site.

Failure to comply with the above requirements may result in the Owner requiring the offending party to be removed from the Project and not allowed to return.

§ 3.4.6 CRIMINAL HISTORY AND CHILD PROTECTIVE SERVICES INFORMATION

.1 Prior to commencing Work, the Contractor and each Subcontractor shall submit on the prescribed form for each employee or person performing work at the Project site on behalf on the Contractor and Subcontractor prior to such person performing any work, a complete:

a. Original Pennsylvania and federal criminal background checks in accordance with Section 111 of the Public School Code of 1949, Act 34 of March 10, 1949, P.L. 30, No. 14, as amended by from time to time including, without limitation, by Act 114 of July 11, 2006, P.L. 1092, and Act 24 of 2011 (P.L. 112, No. 24) (24 P.S. Section 1-111, et seq.), both dated no older than sixty (60) months prior to the date presented to the Owner.

b. Official clearance statement obtained from the Pennsylvania Department of Public Welfare pursuant to Act 151 of December 16, 1994 (P.L. 1292), subchapter C.2 of the Child Protective Services Law, as amended from time to time, dated no older than sixty (60) months prior to the date presented to the Owner.

.c The "Commonwealth of Pennsylvania Sexual Misconduct/Abuse Disclosure Release", that has been developed by the Pennsylvania Department of Education, pursuant to Act 168 of 2014, to be used by school entities and independent contractors of school entities and by applicants who would be employed by or in a school entity in a position involving direct contact with children to satisfy the Act's requirement of providing information related to abuse or sexual misconduct.

.d Properly completed and executed Form PDE-6004. The Contractor and its subcontractors shall refuse to employ any person as an independent contractor or employee whose Federal Criminal History record information indicates that such prospective employee has been convicted within

5 years immediately preceding the date of the report of any of the following offenses: (1) An offense under one (1) or more of the provisions of Title 18 of the Pennsylvania Consolidated Statutes, (2) An offense designated as a felony under the act of April 14, 1972 (P.L. 233, No. 64), known as "The Controlled Substance, Drug, Device and Cosmetic Act"; and (3) an out-of-State or Federal offense similar in nature to those crimes listed on Form PDE-6004; and

.e Any such other clearances as may be required by law.

.2 Owner shall review the submissions prior to each individual being permitted to come onto the Owner's property. The Owner reserves the right to reject any employee, agent, or subcontractor that the Owner determines in its sole discretion has an unsatisfactory criminal history or child abuse clearance. The Owner shall retain a copy of all such clearances in its file. Notwithstanding any other provision of this Contract, violation of this provision shall constitute grounds for immediate termination of the Contract by the Owner. Any individual rejected by the Owner shall not be permitted on the Owner's property. Owner's right to declare such person unfit shall not be limited to the required exclusion of persons from direct contact with children as set forth in Section 1-111 of the Pennsylvania Public School code and/or subchapter C.2 of the Child Protective Services Law.

.3 The Contractor shall notify the Owner in writing within seventy-two (72) hours if any person working on the Project under the Contractor's supervision (employee, agent, Subcontractor, Subcontractor's employee, etc.) is arrested or convicted of offense listed in 24 P.S. §1-111.1, or has an indicated or founded report of child abuse.. The Owner shall have the right to prohibit any such individual from coming onto its property.

§ 3.4.7 PUBLIC WORKS EMPLOYMENT VERIFICATION

Only individuals permitted to work in the United States of America, and the Commonwealth of Pennsylvania shall be employed, in any capacity, in the performance of any Work under the Contract. The Contractor shall comply with the provisions of the Public Works Employment Verification Act (the "Act"), including but not limited to, setting forth the following information regarding the Act's requirements in all contracts with Subcontractors:

.1 The Contractor and every Subcontractor performing work under the Contract shall utilize the E-Verify Program (EVP) operated by the United States Department of Homeland Security to electronically verify employment eligibility of each new employee hired after January 1, 2013. The Contractor and each of its Subcontractors shall submit to the Construction Manager a separate and complete Verification Form, executed by a representative who has sufficient knowledge and authority to make the representations and certifications contained in the Verification Form, as required by the Public Works Employment Verification Act, Act No. 141, January 3, 2023 (formerly Senate Bill 637 and Act 127), before performing any Work on the Project.

.2 The Contractor, as precondition of the Contract, shall submit the Public Works Employment Verification Form to the Owner along with its Payment Bond, Performance Bond, Certificates of Insurance and Form Contract.

.3 Every Subcontractor shall submit completed Public Works Employment Verification Form to the Owner prior to performing work on the Project.

.4 During term of the Contract, each new employee hired by the Contractor, regardless of whether employee will be working onsite or offsite of the Project, shall be verified within five (5) business days of his or her start date.

.5 During the Project, new employee hired by Subcontractor, regardless of whether employee will be working onsite or offsite of the Public Work or otherwise, shall be verified within five (5) business days of his or her start date.

.6 Subcontracts between the Contractor and its Subcontractors and between Subcontractors of any tier and their Subcontractors are required to contain notification of applicability of the Act, information regarding use of the EVP and reference to the Departments website at www.dgs.state.pa.us to obtain a copy of the Form.

.7 The Contractor and all Subcontractors shall cooperate with the Department during investigation or audit arising under the Act.

.8 The Contractor and every Subcontractor shall maintain documentation of continued compliance with the Act by utilizing the EVP for new employees hired throughout duration of the Public Work Contract.

§ 3.4.8 CONTRACTOR RESPONSIBILITY PROVISIONS

.1 The Contractor certifies, for itself and all its Subcontractors, that as of the date of its execution of its Bid and the Contract, that neither the Contractor, nor any Subcontractors, nor any suppliers, are under suspension or debarment by the Commonwealth of Pennsylvania or any governmental entity, instrumentality, or authority and, if the Contractor cannot so certify, then it agrees to submit, along with its Bid, a written explanation of why such certification cannot be made.

.2 The Contractor also certifies, that as of the date of its execution of its Bid and the Contract, it has no tax liabilities or Commonwealth of Pennsylvania obligations.

.3 The Contractor's obligations pursuant to these provisions are ongoing from and after the effective date of the Contract through the termination date thereof. Accordingly, the Contractor shall have an obligation to inform the Owner if, at any time during the term of the Contract, it becomes delinquent in the payment of taxes, or other Commonwealth of Pennsylvania obligations, or if it or any of its Subcontractors are suspended or debarred by the Commonwealth of Pennsylvania, the federal government, or any other state or governmental entity. Such notification shall be made within 7 days of the date of suspension or debarment.

.4 The failure of the Contractor to notify the Owner of its suspension or debarment by the Commonwealth of Pennsylvania, any other state, or the federal government shall constitute an event of default of the Contract with the Owner.

.5 The Contractor agrees to reimburse the Owner for the reasonable costs of investigation incurred by the Owner for investigations of the Contractor's compliance with the terms of this or any other agreement between the Contractor and the Owner. Such costs shall include, but shall not be limited to, salaries of investigators, including, without limitation, overtime, travel and lodging expenses, legal fees, professional fees, Architect fees, Construction Management fees, expert witness fees, documentary fees and all other costs and expenses related thereto.

.6 The Contractor may obtain a current list of suspended and debarred Commonwealth of Pennsylvania Contractors by either searching the internet at http://www.dgs.state.pa.us/ or contacting the:

Department of General Services
Office of Chief Counsel
603 North Office Building
Harrisburg, PA 17125
Telephone No.: 717-787-6472
FAX No.: 717-787-9138

.7 Without being limited by the specificity of any requirements in the Contract Documents, the Contractor shall strictly comply with all applicable laws, ordinances, rules, orders, mandatory guidance, and regulations of all authorities having jurisdiction over the Project.

§ 3.5 Warranty

§ 3.5.1 The Contractor warrants to the Owner, Construction Manager, and Architect that materials and equipment furnished under the Contract will be of good quality and new unless the Contract Documents require or permit otherwise. The Contractor further warrants that the Work will conform to the requirements of the Contract Documents and will be free from defects, except for those inherent in the quality of the Work the Contract Documents require or permit. Work, materials, or equipment not conforming to these requirements may be considered defective. The Contractor's warranty excludes remedy for damage or defect caused by abuse, alterations to the Work not executed by the Contractor, improper or insufficient maintenance, improper operation, or normal wear and tear and normal usage. If required by the Construction Manager or Architect, the Contractor shall furnish satisfactory evidence as to the kind and quality of materials and equipment. The warranty provided in this Section shall be in addition to and not in limitation of any other warranty required by the Contract Documents or otherwise prescribed by law.

§ 3.5.2 All material, equipment, or other special warranties required by the Contract Documents shall be issued in the name of the Owner, or shall be transferable to the Owner, and shall commence in accordance with Section 9.8.4.

§ 3.5.3 The Contractor hereby guarantees the Work to the full extent provided in the Drawings, Specifications, these General Conditions, and other Contract Documents. Materials and workmanship shall be guaranteed for a minimum of one (1) year from the date of Substantial Completion for the entire Project, except where a longer period is specified. The Contractor shall make good without cost to the Owner for any defective portion of the Work, including other Work damaged thereby, within seventy-two (72) hours of being notified of the defective work. Owner's rights

AIA Document A232 – 2019. Copyright © 1992, 2009, and 2019. All rights reserved. User Notes: (846491751)

and remedies hereunder shall be in addition to any other rights and remedies which the Owner may have pursuant to law, equity or other portions of the Contract Documents. Without limitation by the foregoing, the Contractor shall pay in addition for all damage to the Project resulting from defects in the Work and all costs and expenses necessary to correct, remove, replace and/or repair the Work and any other work or property which may be damaged in correcting, removing, replacing, or repairing the Work, as well as any consequential damages the Owner may suffer. If the Contractor fails to adhere to this provision, the Owner will be entitled to, in seeking to enforce its rights, recover, legal fees, consultant and expert witness fees, or any other expenses incurred by the Owner.

§ 3.5.4 The Contractor shall forward guarantee and warranty registration cards to the manufacturers in the name of the Owner showing the date of acceptable Substantial Completion of the Work as the beginning date for guarantee and warranty periods.

§ 3.6 Taxes

§ 3.6.1 The Contractor shall pay sales, consumer, use and similar taxes for the Work or portions thereof provided by the Contractor that are legally enacted when bids are received or negotiations concluded, whether or not yet effective or merely scheduled to go into effect. The Owner is exempt (excluded) from sales and/or use tax in Pennsylvania on certain transactions. Contractor and all subcontractors shall bid and shall purchase as exempt (excluded) from Pennsylvania sales and/or use tax all tangible personal property within the definition of 'building machinery and equipment' as that term is defined in Act No. 45-1998. No charges for tax shall be allowed for such exempt items. It shall be the Contractor's responsibility to determine those items for which an exemption will apply, and the Contractor shall obtain legal or other tax advice to determine how and to what extent an exemption form the taxes apply. In order to facilitate such purchase free of sales and/or use tax in Pennsylvania, and upon certification by Contractor that an item is, in fact, tax exempt, the Owner agrees to execute a tax exemption certificate prepared by Contractor or a subcontractor as may be required by the regulations of the Pennsylvania Department of Revenue.

§ 3.6.2 The Contractor hereby accepts and assumes full and exclusive liability for payment of all sales taxes, state and municipal taxes including, without limitation, business privilege taxes, use taxes, and all contributions and payroll taxes under the provisions of Federal law or the laws of the Commonwealth of Pennsylvania, including, but not limited to, Social Security Acts, as to all employees engaged in the performance of the Work subject to this Agreement, and further agrees to meet all requirements that may be specified under regulations of government officials having jurisdiction over the Work. All such taxes are expressly included within the compensation owed to the Contractor under the terms of this Agreement. It is further agreed that the Owner shall have the right to deduct the amount of any and all such taxes from the compensation owed to the Contractor under the terms of this Agreement at any time, in the Owner's sole discretion, as the Owner deems advisable, it being agreed that the Owner shall have the right to deduct any and all such moneys from the next payments due under the Agreement and from the retained percentages.

§ 3.6.3 The Contractor hereby accepts and assumes full and exclusive liability for and shall indemnify, defend, protect, and save harmless the Architect, Construction Manager and Owner from and against the payment of:

.1 All contributions, taxes or premiums (including, without limitation, interest and penalties thereon) which may be payable under any unemployment insurance laws of any state, the Older Workers Benefit Protection Act of 1990 (OWBPA) (P.L. 101-433, October 16, 1990, 104 Stat. 978), as amended from time to time, the Federal Social Security Act, as amended from time to time, Federal, State, County and/or Municipal tax withholding laws, or any other laws, measured upon the payroll of or required to be withheld from employees, by whomever employed, engaged in the Work.

.2 All sales, use, personal property and other taxes (including, without limitation, interest and penalties thereon) required by any Federal, State, County, Municipal or any other laws to be paid or collected by the Contractor or any of its Subcontractors or vendors or any other person acting for, through or under it or any of them by reason of the performance of the Work or the acquisition, ownership, furnishing or use of any materials, equipment, supplies, labor, services or other items for or in connection with the Work.

.3 All pension, welfare, vacation, annuity and other employee and union benefit contributions payable under or in connection with labor agreements with respect to all persons, by whomsoever employed, engaged in the Work.

.4 In the event that any law is or has been passed, or any rule or regulation pursuant thereof is enacted, which requires the Owner to pay, either directly or indirectly, the amount of any such sales, use, personal property and other taxes (including, without limitation, interest and penalties thereon) required by any Federal, State, County, Municipal or any other laws or should any such law, rule or

User Notes: (846491751)

regulation direct the Owner to collect the same, or make the Owner liable for the collection thereof, or make the Owner responsible therefor, it is covenanted and agreed that the Contractor shall fully and completely make all payments therefor, and shall fully and completely indemnify and save the Owner harmless from any and all such taxes.

§ 3.6.4 The Contractor shall base its Bid on the properly charged, collected, and remitted sales tax due on only those "construction activities" which are presumed to become a permanent part of the real estate in accordance with 61 Pa. Code Section 31.11, et seq., as amended from time to time. The Contractor has not included in its Bid any tax for "sales activities" which do not become a permanent part of the real estate in accordance with 61 Pa. Code Section 31.11, et seq., as amended from time to time.

§ 3.6.4.1 The Contractor shall preserve all such records for a period of three (3) years, or for such longer period as may be required by law, after final payment. To the extent requested by Owner, copies of such records will be provided by the Contractor, and the Contractor shall immediately transmit to the Owner copies of all invoices and receipts for materials, equipment, and labor furnished in connection with the Work by the Contractor and any other materials that reflect sales and use tax paid or not paid.

§ 3.6.4.2 The Contractor agrees to assign and transfer to the Owner all of its rights to sales and use tax which may be refunded as a result of a claim for refund for materials and/or equipment purchased for the Project. The Contractor further agrees that it will not file a claim for refund for any sales or use tax which is the subject of this assignment. This assignment will include, without limitation, any tax erroneously paid by the Contractor. Further, the Contractor agrees to execute all such documents as may be necessary to effectuate such an assignment.

§ 3.6.5 The Contractor shall keep detailed records of all materials, equipment, and labor furnished in connection with the Work and shall keep such full and detailed accounts as may be necessary for the proper financial management under this Agreement and the system utilized by the Contractor shall be satisfactory to the Owner. The Owner or its representative shall be afforded access to the Contractor's records, books, correspondence, instructions, drawings, receipts, vouchers, memoranda, certifications, and similar data relating to this Agreement. Further, the Contractor must provide the Owner with certified payroll records in compliance with Section 16.3 for the labor furnished by the Contractor in connection with the Work. Contractor shall, at no additional charge to Owner, provide all necessary information and participate in any audits conducted on the Project, both during and after its completion, at the request of the Owner.

§ 3.6.5.1 Contractor shall require all of its Subcontractors to preserve and make their records, books, correspondence, instructions, drawings, receipts, vouchers, memoranda, certifications, and similar data relating to the Work for a period of three (3) years, from the date of Final Completion or for such longer period as may be required by law, after final payment.

§ 3.7 Permits, Fees, Notices, and Compliance with Laws

§ 3.7.1 Unless otherwise provided in the Contract Documents, the Owner, assisted by the Construction Manager, shall assist with completion of application and payment of Building permit. The Contractor shall be responsible for final completion of the permit applications and coordinating the submission of the permit application. The Contractor shall secure and pay for all necessary administrative costs, insurances, business privilege licenses, certifications, or taxes to apply for the necessary permits required to perform the Work.

The Owner will pay any Sewer, Water, Gas and Electrical Utility Connection Charges.

§ 3.7.2 The Contractor shall comply with and give notices required by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities applicable to performance of the Work. . In any instance where requirements of the Contract Documents are in excess of but not in conflict with or violation of requirements of a public authority, the provisions of the Contract Document shall govern.

§ 3.7.2.1 It is the responsibility of the Contractor to determine what codes and local ordinances, if any, will affect its Work. The Contractor shall check for any County, City, Borough, or Township rules or regulations applicable to the area in which the Project is being constructed and, in addition, the Contractor shall check for any rules or regulations of other organizations having jurisdiction, including, without limitation, chambers-of-commerce, planning commission, railroads, industries, or utility companies who have jurisdiction over lands which the Contractor

User Notes: (846491751)

furnishes materials, equipment and labor in connection with the Work. Any costs of compliance with local controls shall be included in the Contract Sum, even though documents of such local controlling agencies are not listed herein.

§ 3.7.2.2 The Contractor shall comply with all aspects of the Federal Occupational Safety and Health Act of 1970 (O.S.H.A.) including specific responsibilities to perform reporting and recording requirements. The Contractor is responsible to obtain information regarding his responsibilities under the Act.

§ 3.7.2.3 The Contractor shall comply with all aspects of Pennsylvania Act 287 (December 10, 1974), requiring among other things that each Contractor who intends to perform excavation or demolition work in a site within a political subdivision, ascertain the location and type of utility lines and pipes at each site and notifies the utility company(s) three working days in advance of performing the excavation or demolition. Call Pennsylvania One Call System, Inc. (1-800-242-1776). The Contractor shall be responsible for timely notification to and coordination with all utility companies regarding the provision of services to the Project. The Contractor shall inform the Architect at once when the Owner's participation is required, and the Architect shall immediately notify the Owner. Connections for temporary and permanent utilities and payment for temporary utilities services required for the Work, whether the Work is new construction or renovation of an existing facility, are the responsibility of the Contractor unless otherwise agreed. If the Work is new construction, then payment for temporary and/or permanent utility services shall be the responsibility of the Contractor until Substantial Completion.

§ 3.7.2.4 The Contractor at all times shall observe and comply with all Federal and State Laws and local codes, ordinances and regulations in any manner affecting the conduct of work and all such orders or decrees as exist at present and those which may be enacted later by bodies or tribunals having jurisdiction or authority over the Work and shall indemnify, defend, and save harmless the Owner and all his officers, agents and servants against any claim or liability arising from or based on the violation of any such law, code, ordinance, regulations, order or decree, whether by himself or his employees.

§ 3.7.2.5 Each and every provision of law and clause required by law to be inserted in this Contract shall be deemed to be inserted herein and the Contract shall be read and enforced as though it were included herein, and if through mistake or otherwise such provision is not inserted, or is not correctly inserted, then upon the application of either party, the Contract shall forthwith be physically amended to make such insertion.

§ 3.7.2.6 The Contractor shall ensure that products incorporated into, and used to execute, the Work of the Project are free from asbestos and other hazardous materials. If any suspected asbestos-containing material is installed, the Owner has the right to have the material in question tested and if proven to contain asbestos, the Contractor shall remove all material in question and replace it with new acceptable material at no additional cost to the Owner and shall pay for costs associated with testing of the suspected material.

§ 3.7.2.7 Material Shipments: The Contractor in making or ordering shipments shall not consign or have consigned materials, equipment, or any other items in the name of the Construction Manager, Architect, or the Owner. Neither the Construction Manager, Architect or the Owner shall be under any obligation to make payment for charges on shipments made by or to the Contractor.

§ 3.7.3 It shall be the obligation of the Contractor to review the Contract Documents and to determine and to notify the Owner, the Architect, and the Construction Manager of any conflict, inconsistency, or discrepancy between standards, codes, laws, ordinances, building codes and regulations of which the Contractor has knowledge or should be reasonably able to determine. The Contractor shall not violate any zoning, setback or other requirements of applicable laws, codes, standards, regulations and/or ordinances, or of any recorded covenants of which the Contractor has knowledge. If the Contractor observes that portions of the Contract Documents are at variance with applicable laws, statutes, ordinances, building codes, standards, codes, rules or regulations, the Contractor shall notify the Architect and Construction Manager promptly in writing, and necessary changes shall be accomplished by appropriate modification.

§ 3.7.3.1 If the Contractor, any of its Subcontractors or any Sub-Subcontractors, performs Work contrary to laws, statutes, ordinances, building codes, and rules and regulations without such notice to the Construction Manager, Architect, and Owner, the Contractor shall assume full responsibility for such Work and shall bear the attributable costs, including but not limited, any fines or penalties from governmental authorities and the costs of corrective actions or replacement.

§ 3.7.4 Concealed or Unknown Conditions. If the Contractor encounters conditions at the site that are (1) subsurface or otherwise concealed physical conditions that differ materially from those indicated in the Contract Documents or (2) unknown physical conditions of an unusual nature that differ materially from those ordinarily found to exist and generally recognized as inherent in construction activities of the character provided for in the Contract Documents, the Contractor shall contemporaneously provide notice to the Owner, Construction Manager, and the Architect before conditions are disturbed and in no event later than 14 days after first observance of the conditions. The Architect and Construction Manager will promptly investigate such conditions and, if the Architect, in consultation with the Construction Manager, determines that the conditions differ materially and cause an increase or decrease in the Contractor's cost of, or time required for, performance of any part of the Work, will recommend that an equitable adjustment be made in the Contract Sum or Contract Time, or both. If the Architect, in consultation with the Construction Manager, determines that the conditions at the site are not materially different from those indicated in the Contract Documents and that no change in the terms of the Contract is justified, the Architect shall promptly notify the Owner, Construction Manager, and Contractor, stating the reasons. Claims by the Contractor in opposition to such determination must be made within 21 days after the Architect has given notice of the decision. If the Owner or Contractor disputes the Architect's determination or recommendation, either party may submit a Claim as provided in Article 15.

§ 3.7.5 If, in the course of the Work, the Contractor encounters human remains or recognizes the existence of burial markers, archaeological sites or wetlands not indicated in the Contract Documents, the Contractor shall immediately suspend any operations that would affect them and shall notify the Owner, Construction Manager, and Architect. Upon receipt of such notice, the Owner shall promptly take any action necessary to obtain governmental authorization required to resume the operations. The Contractor shall continue to suspend such operations until otherwise instructed by the Owner but shall continue with all other operations that do not affect those remains or features. Requests for adjustments in the Contract Time arising from the existence of such remains or features may be made as provided in Article 15. .If Contractor notifies the Owner, Construction Manager, and/or Architect of any of the conditions set forth in this Section, Owner shall have the right, in such event, to terminate the Agreement, and upon payment to Contractor of all sums due as of the date of termination, Owner shall have no further liability or responsibility to Contractor under the Contract Documents.

§ 3.8 Allowances

§ 3.8.1 The Contractor shall include in the Contract Sum all allowances stated in the Contract Documents. Items covered by allowances shall be supplied for such amounts and by such persons or entities as the Owner may direct, but the Contractor shall not be required to employ persons or entities to whom the Contractor has reasonable objection.

§ 3.8.2

(Paragraphs deleted)

NO CASH ALLOWANCES are included in the Contract Documents for any purpose.

(Paragraph deleted)

§ 3.9 Superintendent and Project Manager

§ 3.9.1 The Contractor shall employ a competent superintendent, Project Manager, and necessary assistants who shall be in attendance at the Project site during performance of the Work. The superintendent and Project Manager shall represent the Contractor, and communications given to the superintendent or Project Manager shall be as binding as if given to the Contractor. At the request of the Construction Manager, Architect or Owner, the Contractor's superintendent and Project Manager shall attend Project meetings, whether the Project meetings are prior to the start of the Contractor's work or subsequent to the completion of the Contractor's work. The Superintendent shall be on the Project site full time during the progress of the Work until the day of substantial completion and for such additional time thereafter as the Construction Manager may determine to be necessary for the expeditious completion of Work. Communications shall be promptly confirmed in writing.

§ 3.9.2 Each Contractor, within ten (10) business days following receipt of Notice to Proceed, shall furnish in writing the Owner and Architect, through the Construction Manager, of the name and qualifications of a proposed superintendent and Project Manager. The proposed personnel shall include at least 3 recent projects of similar contract size and scope, with the names and telephone numbers of Owner and Architect representatives. Within 14 days of receipt of the information, the Construction Manager may notify the Contractor, stating whether the Owner, the

User Notes: (846491751)

Construction Manager, or the Architect (1) has reasonable objection to the proposed superintendent or Project Manager, or (2) require additional time for review. Failure of the Construction Manager to provide notice within the 14-day period shall constitute notice of no reasonable objection.

§ 3.9.2.1 The Contractor is to appoint a single representative for both the Superintendent and Project Manager who will be assigned on-site and will designate the same in writing, who has the authority to act on behalf of the Contractor and its Subcontractors and suppliers. Contractor's supervision of Work shall include expediting and coordination of work of trades. Contractor shall perform all supervising and procuring required to ensure delivery of materials to maintain work schedules of sub-contractors and progress schedule of Project to ensure full completion of work, to supply equipment or instruments necessary to complete specified test, checks, balancing of system, to furnish operating instructions, etc.

§ 3.9.2.2 As a consideration of the Contract between the Owner and the Contractor, the Contractor shall retain the same Superintendent and Project Manager for its Work on the Project while on the Project. The Superintendent or Project Manager shall not be reassigned from this Project prior to completion, unless by termination of employment by the Superintendent, Project Manager, or the Contractor, or if required by the Construction Manager or by the Owner in accordance with Section 3.9.3.

§ 3.9.2.3 Contractor's supervision of Work shall include expediting and coordination of Work of trades. Contractor shall perform all supervising and procuring required to ensure delivery of materials to maintain Work schedules of Subcontractors and progress schedule of project to ensure full completion of Work, to supply equipment or instruments necessary to complete specified test, checks, balancing of system, to furnish operating instructions, etc. The outlined work is to be completed in the timeframe set forth in the original project schedule shared with the bidding contractors.

§ 3.9.2.4 Superintendent Timing.
Requirements for submission of superintendent and Project Manager information are administrative in nature. The requirement for on-site presence of the Superintendent and Project Manager shall apply from the commencement of the Work unless otherwise directed in writing by the Construction Manager.

§ 3.9.3 The Contractor shall not employ a proposed superintendent to whom the Owner, Construction Manager, or Architect has made reasonable and timely objection. The Superintendent shall be on site full-time from the initial date as directed by the Construction Manager, which can be reasonably considered the time that Work is commencing onsite. The Contractor shall not change the superintendent without the Owner's and Construction Manager's consent, unless the superintendent proves to be unsatisfactory to the Contractor and ceases to be in the Contractor's employ. If any Contractor should at any time fail to provide adequate supervision and superintendence, as may be evidenced by incomplete, delayed or non-conforming Work, the Owner may provide supervision and superintendence and the cost thereof, including, but not limited to, compensation for additional professional services, legal fees, or other costs or expenses incurred, shall be charged to the applicable Contractor in the form of a Change Order incorporating an appropriate reduction in the Contract Sum. If the payments due to the Contractor are not sufficient to cover such amount, the Contractor shall pay the difference to the Owner. The Owner and/or Construction Manager shall have the right to dismiss from the Project any superintendent whose performance is not satisfactory in the sole discretion of the Owner. If during the course of the Project it is evident that the Superintendent is not competent or is not managing the progress of the Project or is not coordinating the various trades, entities, and/or persons under his supervision, then the Construction Manager will document such findings to the Contractor. If within 10 days of receiving such notice, no substantial effort or correction of the finding is made known to the Construction Manager, then the Construction Manager, as requested by the Owner, may require the immediate replacement of the superintendent with an acceptable one at no additional cost to the Owner. The superintendent must be on site for the entire workday. If the superintendent arrives late, leaves early, or is otherwise not present on site for the workday, then the Owner reserves the right to deduct $800.00 per day from the Contract Sum, as liquidated damages and not as a penalty, for each such.

§ 3.9.4 At any time during the Project, the Owner, Architect, and Construction Manager shall have the right and authority, but not the duty, to require the replacement of the Contractor's Project Manager, Superintendent, or Foreman. The Construction Manager shall have the right and authority, but not the duty, to require the Contractor to assign additional supervisory personnel to the Project to ensure compliance with the schedule and quality requirements at no additional cost to the Owner and no increase in the Contract Sum. The Contractor shall not change or replace the assigned superintendent or Project Manager without the prior written consent of the Owner. The

proposed replacement superintendent or Project Manager is subject to review pursuant to the process outlined in § 3.9.2 prior to acceptance by the Owner and Architect.

§ 3.10 Contractor's Construction and Submittal Schedules

§ 3.10.1 The Contractor, promptly after being awarded the Contract, shall cooperate with the Project Coordinator and prepare and submit for the Architect's information, and the Owner's and Construction Manager's approval, a Contractor's construction schedule for the Work . The schedule shall contain detail appropriate for the Project, including (1) the date of commencement of the Work, interim schedule milestone dates, and the date of Substantial Completion; (2) an apportionment of the Work by construction activity; and (3) the time required for completion of each portion of the Work. The schedule shall provide for the orderly progression of the Work to completion and shall not exceed time limits current under the Contract Documents, shall be related to the entire Project to the extent required by the Contract Documents, and shall provide for expeditious and practicable execution of the Work. The schedule shall be revised monthly to reflect the conditions of the Work and Project. The Contractor shall cooperate with the Construction Manager and Project Coordinator in scheduling and performing the Contractor's Work to avoid conflict with, and as to cause no delay in, the work or activities of other Multiple Prime Contractors, or the construction or operations of the Owner's own forces or Separate Contractors.

.1 The Contractor's failure to cooperate and participate with the Owner, the Construction Manager, other Prime Contractors and Separate Contractors in the development and review of construction schedules as provided in this Section 3.10 and Specification Section 01 32 00, Construction Progress Documentation, shall be a material breach of its obligations, entitling the Owner to exercise all rights and remedies under the Contract Documents and applicable law. In no event shall any revision to any construction schedule constitute the basis for an adjustment in the Contract Time or the Contract Sum unless such adjustment is agreed to by the Owner and authorized pursuant to Change Order. **Failure of Contractor to fully comply with requirements of this Section 3.10, and the other Contract Documents regarding scheduling shall constitute default by Contractor of its obligations and be sufficient grounds for termination of the Contract**.

.2 The schedules prepared by the Contractor and by the Project Coordinator, if any, under this Article shall be in the form of a CPM arrow network diagram, preferably organized by predecessor and successors and shall include:

(a) A shop drawing and submittal schedule noting the relevant submittal, approval, order, fabrication and delivery durations.

(b) Integration of the shop drawing and submittal schedule with the installation activity logic in order to determine the effect of delivery on installation of any items of Work.

(c) The planned progressions of construction work showing the activities and duration of the Work of each contract phase and clearly noting any interim milestone dates.

(d) The appropriate restraints in order to clearly identify the interrelationships of work and crew and trade flow.

(e) Logic (CPM arrow network) diagrams summarized into a summary bar chart format that is capable of displaying current progress of all Work.

(f) A computerized mathematical analysis of the CPM logic with each monthly schedule responsibility, activity duration, early (target) start date, early (target) finish date, late start date, late finish date, work tasks critical to completion within the Contract Time, and any interim milestone dates.

(g) Crew sizes and planned labor hours for each activity shown on the schedule. Such schedules shall be produced using scheduling software or such other project management program. The Contractor shall deliver to the Owner, upon Owner's request and in the format requested by the Owner, copies of all electronic files (including all schedule logic, restraints and all other electronic data and information used to create and maintain the schedule that the Owner may request) that comprise or relate to such schedules, including the original Project schedule, all schedule updates, any recovery schedules, and any schedule revisions.

.3 The Project Schedule shall be submitted by the Contractor for all Work. All schedule and work items must be in conformance with the Project schedule requirements set forth in the Contract Documents including any phasing or other milestones provided. The Project Coordinator shall incorporate all Contractors' items of Work and issue the Project schedule. Upon written approval of the Project schedule by the Owner and Construction Manager, it shall with respect to time, become the essence of the Contract. The Project schedule may be changed or revised only with the written consent of the

User Notes: (846491751)

Construction Manager and Owner. No payment applications will be processed without an approved Project schedule accepted by all Prime Contractors.

.4 The Project Schedule is to be used by the Prime Contractors as a guide, and all Contractors and Sub-contractors shall be responsible to perform Work to ensure that the Project is completed by the Project Contract completion date(s), and all phasing and milestone dates established in the Contract Documents are met. Any claims for additional costs associated with completion of the Work within the required Contract time frames will not be considered. The Contractor and all Sub-contractors, who feel extra time, in any form such as shift work, overtime, and premium time, is necessary to meet Contract requirements regardless of trade, should include these costs in their Bids. All Prime Contractors must recognize that although their Work might not require shift, overtime, or premium timework for completion within the stipulated time frame, it may be required in order to allow other Contractors to complete within the time frame. Prime Contractors must allow for these overtime requirements and include the costs necessary to allow the other contractors to complete within the specified time. Failure to recognize the extra costs in his Bid shall not relieve the Prime Contractor from utilizing shift, overtime, or premium time work in performance of his Contract, and all costs associated with meeting the time frames indicated in the construction schedules shall be included in the Contract Sum. Construction Manager, Architect, and Owner reserve the right to withhold processing of any monthly payment applications from Prime Contractor if schedule compliance is not being strictly adhered to. Such payment may be withheld until the Prime Contractor makes corrective action to comply with Project schedule.

.5 Any preparation, review, enforcement, and updating of the Project schedule does not make Owner, Construction Manager or Architect liable to Contractor for time, cost overruns, or schedule changes which are required to maintain Project Contract completion date and all phasing and milestone dates established in the Contract Documents.

.6 General Scheduling Requirements: Any of the scheduling requirements, including the format, content, and complexity, can be waived, or modified by the sole discretion of the Construction Manager only. Any modification or waiver by the Construction Manager shall not be grounds for any claim by Contractor against Owner, Construction Manager, or Architect. Project Coordinator shall submit final construction schedule and all schedule updates in electronic format with no restrictions for viewing and analyzing using the same software with which the schedule was created. Electronic format shall be submitted to the Construction Manager and to any Contractor that Construction Manager may direct.

.7 The Work under the Contract Documents shall be planned, scheduled, executed, reported, and accomplished using the cost and resource loaded "Critical Path Method" schedule, in calendar days (excluding Saturdays, Sundays and legal holidays). The provisions of the Division 01 General Requirements, and the directions of the Project Coordinator are to be followed by the Contractor in scheduling and coordinating construction activities. The scheduling services of the Project Coordinator are part of its contract with the Owner, but nothing herein relieves the obligations of the Contractor to schedule their own construction activities, and nothing herein alters the obligation of the Contractor to resolve all supervision, coordination, and scheduling issues between and among the Sub-Contractors. In addition, the requirements for subordinate coordination responsibilities and scheduling per the Division 01 General Requirements must be followed by all Prime Contractors.

.8 Contractor is responsible for determining the sequence and logic of activities, the time estimates of the detailed construction activities and the means, methods, techniques, and procedures to be employed with regard to his portion of the Work. The construction schedule shall represent Contractor's best judgment of how he shall prosecute the Work in compliance with the requirements of the Contract Documents. Contractor shall ensure that the construction schedule is current and accurate and is properly and timely monitored, updated, and revised as Project conditions and the Contract Documents may require, and as may be directed by Project Coordinator.

.9 Contractor shall consult with his major Subcontractors relating to the preparation of his construction plan and construction schedule. Major Subcontractors shall receive copies of those portions of Contractor's construction schedule that relates to their Work and shall be continually advised of any updates or revisions to the construction schedule as the Work progresses. When Contractor submits his construction schedule to the Project Coordinator or makes any proposed updates or revisions to such schedule, it shall be concluded by Construction Manager, Owner, and Project Coordinator that Contractor has consulted with and has the concurrence of his major Subcontractors. Contractor shall be solely responsible for ensuring that all Subcontractors comply with the requirements of the construction schedule for their portions of the Work.

User Notes: (846491751)

.10 Contractor shall provide the basic data as required by Project Coordinator relating to activities, durations, costs, and sequences as part of Contractor's draft of the Construction Schedule. This data shall reflect Contractor's actual construction plan for the Project and shall fully comply with all requirements of the Contract Documents.

.11 Contractor acknowledges and agrees that his construction schedule must be flexible in order to accommodate and allow for his coordination with all the construction activities and Work of other Prime Contractors, Owner's own forces, and other Separate Contractors.

.12 Review of the Contractor's construction schedule or any other schedule or plan of construction by the Construction Manager, Owner, or Project Coordinator is solely for informational and coordination purposes. Such review shall not constitute approval of, or agreement to, any activity sequence, duration, start date, or finish date shown therein. Nothing in such review shall be deemed to modify the Contract Documents, relieve the Contractor of responsibility for planning and sequencing the Work, or excuse the Contractor from completing the Work in accordance with all milestone, phase, and completion dates set forth in the Contract Documents.

.13 The completion, phasing, and milestone dates set forth in the Contract Documents represent only the major items of Work and may include interface dates with the construction activities of others. Completion, phasing, and milestone dates are Contract requirements and are of the essence to the Contract Documents and to the coordination of the Work by the Contractor. Completion, phasing, and milestone dates represent the latest allowable completion time for those portions of the Work to which each date relates. The dates are not intended to be a complete listing of all Work under the Contract Documents or of all interfaces with Work performed by the Contractors or others. The Contractor shall determine the time requirements for all such interfaces and shall be responsible for planning, scheduling, and coordinating the Work in order to complete in accordance with those requirements.

.14 Review by the Project Coordinator or Construction Manager of Contractor's Construction Schedule, or any revisions or updates thereto, are advisory only and shall not relieve Contractor of the responsibility for accomplishing each portion of the Work within each and every applicable Completion Date. Omissions and errors in the approved or accepted Construction Schedule, or any revisions or updates shall not excuse performance, which is not in compliance with the Contract Documents. Review by the Project Coordinator does not make Owner, Project Coordinator, Construction Manager, or Architect liable to Contractor for time or cost overruns flowing from such omissions or errors.

.15 Should Contractor intend or plan to complete the Work, or any portion thereof, earlier than any applicable completion, phasing, or milestone date or the Contract Time, Contractor shall give timely and reasonable written notice of this fact to the other Prime Contractors, Project Coordinator, and Construction Manager. Project Coordinator shall have the discretion to agree to or reject such early completion plan by Contractor, subject to the rights of Contractor to dispute resolution under the provisions of Article 6 of these General Conditions. The Project Coordinator shall have no duty or obligation to agree to, or to cooperate with Contractor regarding any early completion plan or proposal by Contractor and shall not be liable for any damages of Contractor because of the rejection by Project Coordinator of said plan. Earlier completion of any portion of the Work shall be promoted wherever feasible, and all Contractors must cooperate and accelerate towards earlier completion of any portion of the Work unless such Work affects the quality of work as determined by the Construction Manager. No claims for acceleration to complete early or to meet Project schedule will be considered.

.16 In all respects, Project Coordinator shall cooperate with the Construction Manager in the performance of all duties described in the Contract Documents.

.17 At Construction Manager's sole discretion, if Contractor fails to fulfill their construction scheduling responsibilities in part or in whole, scheduling services may be provided by Construction Manager. Any scheduling services of the Construction Manager actually provided will result in deductions from the Contract Sum of the respective Prime Contractors by Change Order deduct so that the Construction Manager is fully reimbursed for this work, but nothing herein relieves the obligations of the Project Coordinator and other Prime Contractors to schedule and coordinate their own construction activities.

(1) The preliminary Project schedule must be completed within 10 days of Notice to Proceed.
(2) The final Project schedule must be completed within 20 days of approval of Preliminary Project schedule.
(3) Comply with requirements of Section 01 32 00 "Construction Progress Documentation".

.18 If the Contractor does not comply with all the scheduling requirements and timelines, the Owner, upon recommendation from the Construction Manager, reserves the right to deduct as liquidated damages,

AIA Document A232 – 2019. Copyright © 1992, 2009, and 2019. All rights reserved. User Notes: (846491751)

and not as a penalty, $800.00 from the Contract Sum for each day that Contractor does not comply. The Owner may also proceed with enforcing other requirements of the Contract Documents.

.19 Any measures so required or undertaken by the Contractor to maintain the Construction Schedule and to comply with related Section 01 32 00, "Construction Progress Documentation," shall be provided by the Contractor at no additional cost to the Owner.

§ 3.10.2 The Contractor, promptly after being awarded the Contract and thereafter as necessary to maintain a current submittal schedule, shall submit a submittal schedule for the Construction Manager's and Architect's review . The submittal schedule shall (1) be coordinated with the Contractor's construction schedule, and (2) allow the Construction Manager and Architect reasonable time to review submittals. If the Contractor fails to submit a submittal schedule, or fails to provide submittals in accordance with the approved submittal schedule, the Contractor shall not be entitled to any increase in Contract Sum or extension of Contract Time based on the time required for review of submittals.

§ 3.10.3 The Contractor shall cooperate, participate, and consult with other Prime Contractors during the Work of this Project. The Contractor shall make revisions to the construction schedule and submittal schedule as deemed necessary by the Construction Manager to conform to the Project schedule. The Contractor shall schedule and execute their Work to avoid delay to other Prime Contractors, the Owner's own forces, or other Separate Contractors. The Contractor shall be financially responsible for undue delay they cause to other Prime Contractors, Owner, and Separate Contractors on the Project. The Contractor shall defend and hold harmless the Owner, Construction Manager, and Architect for any claims, losses or delays of any kind whatsoever made by other Prime Contractors or Separate Contractors arising from delays caused by the Contractor.

§ 3.10.4 The Contractor shall promptly perform the Work in accordance with the most recent schedules submitted to the Owner, Construction Manager, and Architect, and incorporated into the approved Project schedule and in such sequence as to cause no delay in the Work or in the activities of other Contractors, Separate Contractors, or the Owner's own forces. The Contractor shall bear all costs and expenses for its delay in failing to meet schedules and milestones for the Project.

§ 3.10.5 The Owner shall have the right to direct a postponement or rescheduling of any date or time for the performance of any part of the Work that may interfere with the operations of other contractors or of the Owner's premises or any of the Owner's operations. The Contractor shall, upon the Owner's request, schedule any portion of the Work affecting other contractors or the operation of the premises during hours when the premises are not in operation. Any postponement, rescheduling, or performance of the Work under this Section 3.10.5 may be grounds for an extension of the Contract Time, if permitted under Section 8.3, but not an increase in the Contract Sum.

§ 3.10.6 Progress payments to the Contractor shall not occur until the Contractor has met the requirements of schedule information stated in this Section 3.10 and the Contract Documents.

§ 3.11 Documents and Samples at the Site

§ 3.11.1 The Contractor shall maintain and make available, at the Project site, one copy of the Contract Documents, including Drawings, Specifications, and Addenda, Change Orders, Construction Change Directives, and other Modifications, in good order and marked currently to indicate field changes and selections made during construction, and one copy of the approved Shop Drawings, Product Data, Samples, and similar required submittals. These shall be in electronic form or paper copy, available to the Construction Manager, Architect, and Owner, and delivered to the Construction Manager for submittal to the Owner upon completion of the Work as a record of the Work as constructed.

§ 3.11.2 The Contractor shall also update the Construction Manager's record set of drawings on a weekly basis, at a minimum, and more frequently as necessitated by the Work. Upon completion of the Work, Contractor shall certify that such record drawings accurately reflect all "as built" conditions for which the Contractor is responsible, after which the Construction Manager will deliver its record drawings to the Architect for submittal to the Owner.

§ 3.12 Shop Drawings, Product Data, and Samples

§ 3.12.1 Shop Drawings are drawings, diagrams, schedules, and other data specially prepared for the Work by the Contractor or a Subcontractor, Sub-subcontractor, manufacturer, supplier, or distributor to illustrate some portion of the Work.

User Notes: (846491751)

§ 3.12.2 Product Data are illustrations, standard schedules, performance charts, instructions, brochures, diagrams, and other information furnished by the Contractor to illustrate materials or equipment for some portion of the Work.

§ 3.12.3 Samples are physical examples that illustrate materials, equipment, or workmanship, and establish standards by which the Work will be judged.

§ 3.12.4 Shop Drawings, Product Data, Samples, and similar submittals are not Contract Documents. Their purpose is to demonstrate how the Contractor proposes to conform to the information given and the design concept expressed in the Contract Documents for those portions of the Work for which the Contract Documents require submittals. Review by the Architect and Construction Manager is subject to the limitations of Sections 4.2.10 through 4.2.12. Informational submittals upon which the Construction Manager and Architect are not expected to take responsive action may be so identified in the Contract Documents. Submittals that are not required by the Contract Documents may be returned by the Construction Manager or Architect without action. Shop drawings submitted prior to issuance of the building permit solely at the Contractor's risk.

§ 3.12.5 The Contractor shall review for compliance with the Contract Documents, approve, and submit to the Construction Manager, Shop Drawings, Product Data, Samples, and similar submittals required by the Contract Documents, in accordance with the Project submittal schedule approved by the Construction Manager and Architect or, in the absence of an approved Project submittal schedule, with reasonable promptness and in such sequence as to cause no delay in the Work or in the activities of other Contractors, Separate Contractors, or the Owner's own forces. The Contractor shall cooperate with the Construction Manager in the coordination of the Contractor's Shop Drawings, Product Data, Samples, and similar submittals with related documents submitted by other Prime Contractors.

§ 3.12.5.1 Except where otherwise specified or agreed by Architect, the Contractor shall submit all shop drawings, product data, samples, and similar submittals within ninety (90) days of the Notice to Proceed. When such initial submittals are rejected or otherwise required to be corrected and resubmitted, Contractor shall transmit complying submittals promptly so as to avoid delay in the Work, and in any case within thirty (30) days after return of the initial submittal, unless otherwise agreed by the Architect. Notwithstanding these time requirements for submittals, submittals that are required for work on the critical path of the construction schedule shall be submitted earlier and in a timely manner so as not to delay the Work.

§ 3.12.5.2 The Contractor agrees that the Owner will be damaged in an undeterminable amount if submission of shop drawings, product data, samples, and similar submittals is not made in compliance with Section 3.12.5.1.

§ 3.12.5.3 The Owner reserves the right to deduct $800 per day, as liquidated damages, and not as a penalty, until all such required submittals have been respectively and accordingly transmitted.

§ 3.12.6 By submitting Shop Drawings, Product Data, Samples, and similar submittals, the Contractor represents to the Owner, Construction Manager, and Architect, that the Contractor has (1) reviewed and approved them, (2) determined and verified materials, field measurements and field construction criteria related thereto, or will do so, and (3) checked and coordinated the information contained within such submittals with the requirements of the Work and of the Contract Documents.

§ 3.12.7 The Contractor shall perform no portion of the Work for which the Contract Documents require submittal and review of Shop Drawings, Product Data, Samples, or similar submittals, until the respective submittal has been reviewed and approved by the Architect. Further, Contractor shall not be entitled to additional costs or time in the event that Contractor orders products or materials prior to receipt of review and approval of the submittal therefor, and which submittal is subsequently rejected or modified by Architect.

§ 3.12.8 The Work shall be in accordance with reviewed/accepted submittals except that the Contractor shall not be relieved of responsibility for deviations from the requirements of the Contract Documents by the Architect's review/acceptance of Shop Drawings, Product Data, Samples, or similar submittals, unless the Contractor has specifically notified the Construction Manager and Architect of such deviation at the time of submittal and (1) the Architect has given written approval to the specific deviation as a minor change in the Work, or (2) a Change Order or Construction Change Directive has been issued authorizing the deviation. The Contractor shall not be relieved of

User Notes: (846491751)

responsibility for errors or omissions in Shop Drawings, Product Data, Samples, or similar submittals, by the Architect's reviewed/acceptance thereof.

§ 3.12.9 The Contractor shall direct specific attention, in writing or on resubmitted Shop Drawings, Product Data, Samples, or similar submittals, to revisions other than those requested by the Construction Manager and Architect on previous submittals. In the absence of such notice, the Architect's approval of a resubmission shall not apply to such revisions.

§ 3.12.10 The Contractor shall not be required to provide professional services that constitute the practice of architecture or engineering unless such services are specifically required by the Contract Documents for a portion of the Work or unless the Contractor needs to provide such services in order to carry out the Contractor's responsibilities for construction means, methods, techniques, sequences, and procedures. Where applicable law and/or the Contract Documents require that Contractor engage a licensed design professional to provide a service, Contractor shall employ a professional possessing the required license in order to perform the service required.

§ 3.12.10.1 If professional design services or certifications by a design professional related to systems, materials, or equipment are specifically required of the Contractor by the Contract Documents, the Owner and the Architect will specify all performance and design criteria that such services must satisfy. The Contractor shall be entitled to rely upon the adequacy and accuracy of the performance and design criteria provided in the Contract Documents. The Contractor shall cause such services or certifications to be provided by an appropriately licensed design professional, whose signature and seal shall appear on all drawings, calculations, specifications, certifications, Shop Drawings, and other submittals prepared by such professional. Shop Drawings, and other submittals related to the Work, designed or certified by such professional, if prepared by others, shall bear such professional's written approval when submitted to the Architect. The Owner, the Architect, and the Construction Manager shall be entitled to rely upon the adequacy and accuracy of the services, certifications, and approvals performed or provided by such design professionals, provided the Owner and Architect have specified to the Contractor the performance and design criteria that such services must satisfy. Pursuant to this Section 3.12.10, the Architect will review and accept or take other appropriate action on submittals only for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents.

§ 3.12.10.2 If the Contract Documents require the Contractor's design professional to certify that the Work has been performed in accordance with the design criteria, the Contractor shall furnish such certifications to the Construction Manager and Architect at the time and in the form specified by the Architect.

§ 3.12.11 Shop drawings, product data, and samples shall be submitted in quantity and procedures as directed by the Architect. It shall be the responsibility of each Prime Contractor to prepare and furnish to other Prime Contractors engaged on the Project, copies of shop drawings as may be required by such other Prime Contractors for the proper installation of their Work. Failure of the Contractor to furnish such information will make him responsible for any other expenses incurred in carrying out the provisions of such other Prime Contracts.

§ 3.12.12 Under no circumstances shall the Construction Manager, Architect, or Engineer's review of any shop drawing be construed as an approval of extra cost to the Owner for any work shown thereon. Any claim for extra cost shall be made as specified before the time of submitting shop drawings.

§ 3.12.13 All expenses incurred in delivering, transporting, packing, collecting, etc., of samples of materials or equipment shall be paid for by the Contractor, whether samples be delivered to the Project site, to the Architect, or to the laboratory. The cost of mill, fabrication, shop testing, or factory testing and inspection of all material required to be furnished under this Contract shall be borne by the Contractor. Any sample destroyed in the course of testing cannot be returned to the Contractor. Certain approved material, such as hardware, valves, fittings, fire alarm signals, in good condition and not subject to destructive tests, may be used in the Work by the Contractor. This material shall be the last of its particular kind to be incorporated in the building and may not be removed from the Architect's office until just previous to its use. Any material delivered to the job will be compared with the approved sample on file in the Architect's office and if necessary, an additional test shall be made on this material at the cost of the Contractor. Additionally, if a Contractor's shop drawing or other submittal requiring approval of the Architect requires review by the Architect more than three times, then the Contractor shall be responsible to the Owner and the Architect for any costs or expenses associated with reviews beyond the third review.

§ 3.12.14 To better facilitate the shop drawings process, copies of Floor Plan Backgrounds will be made available in electronic format to all Prime Contractors subject to the following provisions:

.1 The Contractor shall execute and submit the release and indemnification provided and requested by the Architect, Construction Manager, or Consultants. Form is included as Specification Section 01 31 26, Electronic Communication Protocols.

.2 The data contained in any and all electronic files is copyright protected by the Architect and shall be used solely for the facilitation of the shop drawing process on this Project only. Any other use that is not consistent with this intended use is strictly prohibited. Any misuse will be punishable to the fullest extent of the law.

.3 Electronic media will only be made available to Prime Contractors. Direct requests from Subcontractors will not be honored. Prime Contractors shall bear the responsibility of distribution to their Subcontractors, if desired. Requests shall be made in writing directly to the Architect and shall indicate the list of drawings requested (indicate by drawing number). Drawings will be provided in .dwg format and issued electronically.

.4 The Prime Contractor shall thoroughly check all information and details of the Drawings and be satisfied that all information and details are correct. Information concerning existing conditions, if applicable, shall be thoroughly field checked and verified. Incorrect information and details shall immediately be called to the attention of the Architect. **Please note that Addenda information will not be included on the electronic files.** The Prime Contractor shall be responsible for incorporating all pertinent Addenda information.

.5 The Owner, the Construction Manager, the Architect, and the Architect's Consultants shall not be held responsible for any costs or other liabilities resulting from the use of electronic files or the failure of the Prime Contractor to detect errors and omissions concerning matters within his contractual responsibility through the use of said electronic files. The Prime Contractor shall indemnify, defend, and hold harmless, to the fullest extent permitted by law, the Owner, the Construction Manager, the Architect, and the Architect's Consultants, their directors, officers, agents, and employees from and against any and all claims, damages, losses and expenses, including attorney's fees arising out of the modification, misinterpretation, misuse of the electronic files, and for any and all errors or omissions alleged to have arisen out of the use of any electronic files.

.6 Nothing herein contained shall be construed as constituting a guarantee, warranty, or assurance, either expressed or implied, by any party, that the electronic files will yield or accomplish the Prime Contractor's desired outcome.

§ 3.13 Use and Protection of Site

§ 3.13.1 The Contractor shall confine operations at the site to areas permitted by applicable laws, statutes, ordinances, codes, rules and regulations, lawful orders of public authorities, and the Contract Documents and shall not unreasonably encumber the site with materials or equipment.

§ 3.13.1.1 If requested by Owner or Construction Manager, Contractor shall move materials from one temporary location shown on the Contract Documents to another, at the sole expense of Contractor, except that expense shall be borne by Owner when Owner requires that materials be moved from a location on the Contract Documents previously assigned to Contractor by Owner. No advertising signs or flags of any nature shall be placed at or near the site, without the written consent of Owner. Owner may make use of any portions of the Work for which a Certificate of Substantial Completion has been accepted in writing by Owner and Contractor.

§ 3.13.2 The Contractor shall coordinate the Contractor's operations with, and secure the approval of, the Construction Manager before using any portion of the site. The Work shall be conducted so as not to impede traffic nor obstruct any thoroughfare or access to property, and so as not to interfere with the Work of other contractors or with the Owner's continued occupancy and operation of the property. All deliveries shall be coordinated around hours directed by the Owner.

§ 3.13.3 Only materials and equipment which are to be used directly in the Work may be brought to and stored on the Project site by the Contractor. Materials or equipment no longer required for the Work shall be promptly removed from the Project site. Protection of construction materials and equipment stored at the Project site from weather, theft, damage or all other adversity is solely the responsibility of the Contractor, and the Owner shall have no liability therefore.

§ 3.13.4 During the progress of the Work, the Contractor shall provide lights, barriers, warning signs or other prudent precautions as may be necessary to protect persons and property from the Work performed by the Contractor.

§ 3.13.5 The Contractor shall protect the Owner's property, all surrounding public and private properties, the Contractor's Work in place, and all the Work of Separate Contractors of other Prime Contractors against damage, injury or loss arising in connection with the Contractor's Work.

§ 3.13.6 The Contractor shall, at all times, provide adequate protection of the Work against all kinds of weather so as to maintain all Work, apparatus and fixtures free from injury or damage. At the end of each day's work, all new work subject to potential damage shall be completely covered.

§ 3.13.7 The Contractor shall maintain all passageways, guard fences, lights, fire watch, and other facilities for protection necessary for compliance with applicable laws or otherwise required by authorities have jurisdiction.

§ 3.13.8 To the extent the Contractor is responsible for damage to any existing improvements or vegetation, including, without limitation, curbs, sewers, utilities, sidewalks, drainpipes, structures, lawns, shrubbery, trees, landscaping, hardscaping or other improvements at the site, the Contractor shall repair, restore or replace such damaged improvements or vegetation to the Owner's reasonable satisfaction.

§ 3.13.9 In case any direct or indirect injury is done to existing street or underground structure, sewers, mains, or to public or private property of any kind, or to any materials or fixtures, by or because of the Work in consequence of any act or omission on the part of the Contractor, his employees, or agents, the Contractor, at his own cost and expense, except where, hereinafter specified otherwise, shall restore such structures, property, or materials to a condition equal to or similar to the existing before such damage or injury was done, by repairing, rebuilding, or otherwise as may be required by the Architect. To the extent that the Contractor fails or refuses to meet the requirements of this Section and such failure and/or refusal results in the Owner incurring additional attorney's fees, professional fees, other costs or expense, the Contractor shall be liable for the same.

§ 3.13.10 If the Contractor fails to restore such property or make good such damage, the Owner may, by contract or otherwise, proceed to repair, rebuild, or otherwise restore such property as may be necessary, and the cost thereof will be deducted from any money due, or to become due, the Contractor under this Contract; or the Owner may deduct from any money due the Contractor a sum sufficient to reimburse the Owner of property so damaged.

§ 3.13.11 When the Contractor is working within a fully enclosed building with either temporary or permanent doors, the Contractor shall suitably lock the building to prevent access of unauthorized persons.

§ 3.13.12 All temporary shoring, bracing and sheet piling necessary for the underpinning and for the installation of new Work are included in the Contract Sum and shall be used in accordance with industry standards.

§ 3.13.13 Employees of the Contractor and is Subcontractors shall not park automobiles on the Owner's property except as approved by the Owner in writing or otherwise designated in the Drawings. Contractor shall direct and require all its employees and Subcontractors' employees to park where required by the Contract Documents and the municipal authority.

§ 3.13.14 The Contractor's use of and operations on the site shall not interfere with the Owner's continued operation. The Contractors shall take care to exercise and use processes that avoid any impact on the Owner's ongoing operations.

§ 3.13.15 The equipment and procedures used on portions of the Work shall be such that no damage to adjacent property or roadways will result from their use. No work of any kind shall be installed or stored in a manner which will endanger the structure of the building.

§ 3.14 Cutting and Patching

§ 3.14.1 The Contractor shall be responsible for cutting, fitting, or patching required to complete the Work or to make its parts fit together properly. All areas requiring cutting, fitting, or patching shall be restored to the condition existing prior to the cutting, fitting, or patching, unless otherwise required by the Contract Documents.

User Notes: (846491751)

§ 3.14.2 The Contractor shall not damage or endanger a portion of the Work or fully or partially completed construction of the Owner, Separate Contractors, or of other Contractors by cutting, patching, or otherwise altering such construction, or by excavation. The Contractor shall not cut or otherwise alter construction by the Owner, Separate Contractors, or by other Contractors except with written consent of the Construction Manager, Owner, and such other Contractors or Prime Contractors. Consent shall not be unreasonably withheld. The Contractor shall not unreasonably withhold, from the Separate Contractors, other Prime Contractors, Construction Manager, or the Owner, its consent to cutting or otherwise altering the Work.

§ 3.14.3 The Contractor, Subcontractor or Sub-Subcontractor requiring the cutting of openings in new work installed by other contractors shall have such openings cut and patched by the trade which installed the Work and such cutting and patching shall be at the expense of the Contractor, Subcontractor or Sub-Subcontractor requiring the opening. Approval to do such cutting and patching shall be received from the Construction Manager and the Architect prior to proceeding with the Work and shall include installation of such reinforcement of the Work as the Architect and the Construction Manager may direct at no additional cost to the Owner. Blocking, bracing, reinforcement, or structural enhancement required, due to cutting and patching, shall be provided at no additional cost to the Owner. Patching work shall match adjacent existing work unless otherwise noted.

§ 3.15 Cleaning Up

§ 3.15.1 The Contractor shall keep the premises and surrounding area free from accumulation of waste materials and rubbish caused by operations under the Contract. At completion of the Work, the Contractor shall remove waste materials, rubbish, the Contractor's tools, construction equipment, machinery, and surplus materials from and about the Project. The Contractor shall clean the Work areas daily and should the occasion arise that the Construction Manager must direct the Contractor to clean an area, the Contractor shall do so within twenty-four (24) hours. In the event of a dispute between or among the Prime Contractors regarding responsibilities for cleaning up, the Construction Manager shall designate the relative responsibilities, and such designation shall be final and binding.

§ 3.15.2 If the Contractor fails to clean up as provided in the Contract Documents, the Owner, or Construction Manager with the Owner's approval, may do so and the Owner shall be entitled to reimbursement from the Contractor. The Owner reserves the right to deduct $800.00 per day from the Contract Sum, as liquidated damages and not as a penalty, for each day that Contractor fails to comply with Construction Manager's directions for required clean-up.

§ 3.16 Access to Work

§ 3.16.1 The Contractor shall provide the Owner, Construction Manager, and Architect with access to the Work in preparation and progress wherever located.

§ 3.16.2 The General Contractor shall perform snow plowing, cleanup, and provide all temporary facilities to keep the site accessible at all times and to permit the continuous progress of work by all Contractors.

§ 3.17 Royalties, Patents and Copyrights

The Contractor shall pay all royalties and license fees. The Contractor shall defend suits or claims for infringement of copyrights and patent rights and shall hold the Owner, Construction Manager, and Architect harmless from loss on account thereof, but shall not be responsible for defense or loss when a particular design, process, or product of a particular manufacturer or manufacturers is required by the Contract Documents, or where the copyright violations are contained in Drawings, Specifications, or other documents prepared by the Owner, Architect, or Construction Manager. However, if an infringement of a copyright or patent is discovered by, or made known to, the Contractor, the Contractor shall be responsible for the loss unless the information is promptly furnished to the Architect through the Construction Manager.

§ 3.18 Indemnification

§ 3.18.1 To the fullest extent permitted by law, the Contractor shall indemnify, defend and hold harmless the Owner, Construction Manager, Architect, and their officers, directors, consultants, agents, and employees (the "Indemnified Parties" from and against all claims, damages, losses, and expenses, including but not limited to injuries to the Contractor's employees, legal fees, and defense costs arising out of or resulting from the performance of the Work, to the extent caused, in whole or in part, by the negligent, intentional or wrongful acts or omissions of the Contractor, a Subcontractor, a sub-subcontractor or material provider, anyone directly or indirectly employed by them, or anyone for whose acts or omissions they may be liable, regardless of whether or not such claim, damage, loss, or expense is caused in part by the Indemnified Parties or any of them. Such obligation shall not be construed to negate, abridge, or

AIA Document A232 – 2019. Copyright © 1992, 2009, and 2019. All rights reserved. User Notes: (846491751)

reduce other rights or obligations of indemnity that would otherwise exist as to a party or person described in this Section 3.18. The Contractor agrees and does hereby assume on behalf of the Indemnified Parties the defense of any action, at law or in equity, which may be brought against the Indemnified Parties or any of them upon their demand and pay the amount of any judgment that may be entered against the Indemnified Parties in any such action. In the event that any such claim, loss, cost, expense, liability, damage or injury arises or is made, asserted or threatened against the Owner for which the Contractor or its insured does not admit coverage, or if the Owner reasonably determines such coverage to be inadequate, the Owner shall have the right to withhold from Contractor cost, expense, liability, damage or injury including, but limited to, legal fees and expenses reasonably necessary for the defense thereof. Contractor's obligations under this Section 3.18 shall survive the completion of the Work and Project.

(Paragraph deleted)

§ 3.18.2.1 In claims against any Indemnified Party under this Section 3.18 by an employee of the Contractor, a Subcontractor, anyone directly or indirectly employed by them, or anyone for whose acts they may be liable, the indemnification obligation under this Section 3.18 shall not be limited by a limitation on amount or type of damages, compensation, or benefits payable by or for the Contractor or a Subcontractor under workers' compensation acts, disability benefit acts, or other employee benefit acts or any immunity provided under any workers' compensation acts.

§ 3.18.2.2 The Contractor and each Subcontractor, of whatever tier, hereby certifies to the Owner that it complies with all employment related laws and regulations governing employment or collective bargaining agreements, if any. Nothing in this Agreement shall be construed as divesting any Contractor of Subcontractor of its sole and exclusive right to control the means, manner, or method of performance of the Work of any Contractor of their employees. Nothing in this Agreement shall be construed in a manner that would be violative of the legal or contractual rights of any employee. The Contractor, and each Subcontractor, regardless of tier, shall defend, hold harmless, and indemnify the Owner, Construction Manager, and Architect against and from any and all claims, demands, suits, actions, costs, and expenses including reasonable attorneys' fees, growing out of any claims by an employee or independent contractor of any Contractor or Subcontractor of any tier alleging the violation of any of the individuals' employment right, whether legal, constitutional or contractual in nature. This provision shall be accorded the broadest meaning permitted by law.

§ 3.18.3 Each Contractor shall indemnify, defend, and hold harmless the Owner against any assertion of claims and/or liens, including mechanic's liens by its Subcontractors, Sub-Subcontractors, or material suppliers and against any assertion of security interests by its suppliers of goods or materials. Each Contractor and each Subcontractor and supplier of any tier acknowledges that the Project is work for a purely public purpose; therefore, Pennsylvania law does not permit mechanics' liens to be filed against the Owner, the Property, the Project, or any portion thereof.

§ 3.18.4 No provision of Section 3.18 shall give rise to any duties on the part of the Architect, the Owner or the Construction Manager not otherwise provided for by law.

§ 3.18.5 In the event that Contractor or its insurer is requested but refuses to honor the defense and indemnity obligations hereunder, then the party refusing to honor such requests shall, in addition to all other obligations, pay the cost of bringing any such action, including, but not limited to, legal fees to the Indemnified Party, including, but not limited to, any legal, expert, or professional fees and costs incurred by the Indemnified Parties in enforcing the defense and indemnity obligations hereunder. Furthermore, the Contractor shall be solely responsible for all legal fees incurred by the Owner in responding to any claims or liens filed or asserted by a Subcontractor of any tier or a supplier of any tier.

§ 3.18.6 Any part of the Work which may cause contamination or pollution to the environment shall be performed by subcontractors who are properly certified to do such work and who normally carry contractually assumed indemnification insurance and public liability insurance to cover such Work in the amount required to be carried by Contractor for liability and contractually assumed liability coverage under this Contract.

§ 3.19 Representations and Warranties

§ 3.19.1 The Contractor represents and warrants the following to the Owner (in addition to the other representations and warranties contained in the Contract Documents), as an inducement to the Owner to execute the

User Notes: (846491751)

Owner-Contractor Agreement, which representations and warranties shall survive the execution and delivery of the Owner-Contractor Agreement and the Final Completion of the Work:

.1 that it is financially solvent, able to pay its debts as they mature and possesses sufficient working capital to complete the Work and perform its obligations under the Contract Documents.

.2 that it is able to furnish the personnel, tools, materials, supplies, equipment and labor required to complete the Work and perform its obligations hereunder and has sufficient experience and competence to do so.

.3 that it is authorized to do business in the Commonwealth of Pennsylvania and is properly licensed by all necessary governmental and public and quasi-public authorities having jurisdiction over it and over the Work for the Project.

.4 that its execution of the Owner-Contractor Agreement and its performance thereof is within its duly authorized powers.

.5 that it is familiar with all Federal, State, Municipal, and Department laws, codes, ordinances and regulations, which may in any way affect the Work of those employed herein, including, but not limited to, any special acts relating to the Work or to the Project of which it is a part.

.6 that it has determined what local ordinances, if any, will affect its Work. The Contractor has checked for any County, City, Borough, or Township rules or regulations applicable to the area in which the Project is being constructed and in addition, the Contractor has checked for any rules or regulations of other organizations having jurisdiction, including, but not limited to, chambers-of-commerce, planning commission, industries, or utility companies who have jurisdiction over lands which the Contractor occupies. Any costs of compliance with local controls are included in the Contract Sum, even though documents of such local controlling agencies are not listed herein.

.7 that such temporary and permanent Work required by the Contract Documents as is to be done by it, can be satisfactorily constructed and used for the purposes for which it is intended, and that such construction will not injure any person or damage any property.

.8 that it is familiar with local trade jurisdictional practices.

.9 that it has carefully examined the Plans and Specifications and that, from its own investigation, it has satisfied itself as to the nature and location of the Work, the character, quality and quantity of the surface and subsurface materials likely to be encountered, the character of equipment and other facilities needed for the performance of the Work, and the general local conditions, and all other materials which may in any way affect the Work or its performance.

.10 that it is insurable in the Commonwealth of Pennsylvania.

§ 3.20 The Contractor agrees (in addition to the representations and warranties contained in the Contract Documents), as an inducement to the Owner to execute the Contract, that the Contractor shall be restricted to the rights and remedies set forth in Article 15 of these General Conditions with respect to Claims between the Contractor and the Owner. However, the Owner's right to recover under the Contract Documents, at law or in equity shall not be restricted to the rights and remedies set forth in Article 15 of these General Conditions. This Section 3.20 shall survive the expiration or sooner termination of the Contract.

§ 3.21 Record Drawings

Contractor shall prepare and provide a set of reproducible record drawings showing significant changes in the Work made during construction based on marked-up prints, drawings and other data furnished by the Contractor to the Architect, including, but not limited to, the location of water, sewer, telephone, electric, gas and any other utility lines, and the Contractor shall certify these drawings as accurate. Said drawings shall be provided by the Contractor to the Architect.

§ 3.22 Owner's Manuals

Contractor shall turn over to Architect, for delivery to Owner, all operation manuals, maintenance instructions, and warranties for all equipment on or before the close of the Project.

ARTICLE 4 ARCHITECT AND CONSTRUCTION MANAGER

§ 4.1 General

§ 4.1.1 The Architect is the person or entity retained by the Owner pursuant to Section 2.3.2 and identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The term "Architect" shall mean the Architect/Engineer or the authorized representative thereof.

§ 4.1.2 The Construction Manager is the person or entity retained by the Owner pursuant to Section 2.3.3 and identified as such in the Agreement.

§ 4.1.3 Duties, responsibilities, and limitations of authority of the Construction Manager and Architect as set forth in the Contract Documents shall not be restricted, modified, or extended without written consent of the Owner, Construction Manager and Architect. Consent shall not be unreasonably withheld.

§ 4.2 Administration of the Contract

§ 4.2.1 The Construction Manager and Architect will provide administration of the Contract as described in the Contract Documents and will be the Owner's representatives during construction until the date the Architect issues the final Certificate for Payment and with the Owner's concurrence, from time-to-time during the warranty or correction period for correction of the Work described in Section 12.2. The Construction Manager and Architect will have authority to act on behalf of the Owner only to the extent provided in the Contract Documents. The Architect and Construction Manager will endeavor to guard the Owner against defects and deficiencies in the Work on the Project.

§ 4.2.2 The Architect will visit the site at intervals appropriate to the stage of construction, or as otherwise agreed with the Owner, to become generally familiar with and keep the Owner informed about the progress and quality of the portion of the Work completed, to guard the Owner against defects and deficiencies in the Work, and to determine in general if the Work observed is being performed in a manner indicating that the Work, when fully completed, will be in accordance with the Contract Documents. However, the Architect will not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the Work. On the basis of the site visits, the Architect will keep the Owner and the Construction Manager reasonably informed about the progress and quality of the portion of the Work completed and promptly report to the Owner and Construction Manager known deviations from the Contract Documents and defects and deficiencies observed in the Work.

§ 4.2.3 The Construction Manager shall provide one or more representatives who shall be in attendance at the Project site whenever the Work is being performed. The Construction Manager will determine in general if the Work observed is being performed in accordance with the Contract Documents, will keep the Owner and Architect reasonably informed of the progress of the Work, and will promptly report to the Owner and Architect known deviations from the Contract Documents and the most recent Project schedule, and defects and deficiencies observed in the Work.

§ 4.2.4 The Construction Manager will observe the activities of the Contractor and inform the Architect and Owner of any deviations from the latest approved construction schedule. and the Project Coordinators shall schedule and coordinate the activities of the Contractor and other Prime Contractors in accordance with the latest approved Project schedule.

§ 4.2.5 The Construction Manager, except to the extent required by Section 4.2.4, and Architect will not have control over, charge of, or responsibility for, the construction means, methods, techniques, sequences or procedures, or for the safety precautions and programs in connection with the Work, since these are solely the Contractor's rights and responsibilities under the Contract Documents, and neither will be responsible for the Contractor's failure to perform the Work in accordance with the requirements of the Contract Documents. Neither the Construction Manager nor the Architect will have control over or charge of, or be responsible for acts or omissions of, the Contractor, Subcontractors, or their agents or employees, or of any other persons or entities performing portions of the Work.

§ 4.2.6 Communications. Except as otherwise provided in the Contract Documents or when direct communications have been specially authorized, the Owner and Contractor shall communicate with each other through the Construction Manager's and shall contemporaneously provide the same communications to the Architect about matters arising out of or relating to the Contract Documents. The Owner shall promptly notify the Architect of the substance of any direct communications between the Owner and the Construction Manager otherwise relating to the Project. Communications by and with the Architect's consultants shall be through the Architect. Communications by and with Subcontractors and suppliers shall be through the Contractor. Communications by and with other Prime Contractors shall be through the Construction Manager and shall be contemporaneously provided to the Architect if those communications are about matters arising out of or related to the Contract Documents. Communications by and with the Owner's own forces and Separate Contractors shall be through the Owner.

§ 4.2.7 The Construction Manager and Architect will review and certify all Applications for Payment by the Contractor, in accordance with the provisions of Article 9.

User Notes: (846491751)

§ 4.2.8 The Owner, Architect and Construction Manager have the authority to reject Work that does not conform to the Contract Documents and will notify each other about the rejection. Whenever the Owner or Construction Manager considers it necessary or advisable, the Owner or Construction Manager will have authority to require inspection or testing of the Work in accordance with Sections 13.4.2 and 13.4.3, upon written authorization of the Owner, whether or not the Work is fabricated, installed or completed. The foregoing authority of the Owner and Construction Manager will be subject to the provisions of Sections 4.2.18 through 4.2.20 inclusive, with respect to interpretations and decisions of the Architect. However, neither the Architect's nor the Owner's or Construction Manager's authority to act under this Section 4.2.8 nor a decision made by any of them in good faith either to exercise or not to exercise such authority shall give rise to a duty or responsibility of the Architect, Owner or the Construction Manager to the Contractor, Subcontractors, suppliers, their agents or employees, or other persons performing any of the Work.

§ 4.2.9 Intentionally deleted.

§ 4.2.10 The Construction Manager shall coordinate with the Prime Contractors the distribution of the submittals required by the Contract Documents for review by the Architect. The Construction Manager will require that the Prime Contractors coordinate all submittals so as to integrate the Work of other Prime Contractors and Separate Contractors. All Prime Contractors must review the submittals of other Prime Contractors to determine how the Work affects the Contractors planned Work and also to coordinate and schedule all required Work. By submitting Shop Drawings, Product Data, Samples, and similar submittals, the Contractor represents to the Owner, Architect, and Construction Manager that the Contractor has reviewed and recommended them for approval. Actions will be taken in accordance with a Project submittal schedule approved by the Architect or, in the absence of an approved Project submittal schedule, with reasonable promptness while allowing sufficient time to permit adequate review by the Architect. The Construction Manager is not responsible for any design aspects of the Project, and therefore, the Construction Manager's submittal responsibility shall be limited to coordinating the procedure of submittal processing with the Architect and Prime Contractors.

§ 4.2.11 The Architect will review and provide one of the following actions upon the Contractor's submittals such as Shop Drawings, Product Data, and Samples, but only for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents. The Architect's action will be taken in accordance with the submittal schedule approved by the Architect or, in the absence of an approved submittal schedule, with reasonable promptness as to cause no delay in the Work or in the activities of the Owner, Contractor, other Prime Contractors, or other Separate Contractors while allowing sufficient time in the Architect's professional judgment to permit adequate review. Upon the Architect's completed review, the Architect shall transmit its submittal review to the Construction Manager.

§ 4.2.12 Review of the Contractor's submittals by the Construction Manager and Architect is not conducted for the purpose of determining the accuracy and completeness of other details such as dimensions and quantities, or for substantiating instructions for installation or performance of equipment or systems, all of which remain the responsibility of the Contractor as required by the Contract Documents. The Construction Manager and Architect's review of the Contractor's submittals shall not relieve the Contractor of the obligations under Sections 3.3, 3.5, and 3.12. The Construction Manager and Architect's review shall not constitute approval of safety precautions or of any construction means, methods, techniques, sequences, or procedures. The Architect's approval of a specific item shall not indicate approval of an assembly of which the item is a component.

§ 4.2.13 The Construction Manager will prepare Change Orders and Construction Change Directives.

§ 4.2.14 The Construction Manager and the Architect will take appropriate action on Change Orders or Construction Change Directives in accordance with Article 7, and the Architect will have authority to order minor changes in the Work as provided in Section 7.4. The Architect, in consultation with the Construction Manager, will investigate and make determinations and recommendations regarding concealed and unknown conditions as provided in Section 3.7.4.

§ 4.2.15 Utilizing the documents provided by the Contractor, the Construction Manager will maintain at the site for the Owner one copy of all Contract Documents, approved Shop Drawings, Product Data, Samples, and similar required submittals, in good order and marked currently to record all changes and selections made during construction. These

will be available to the Architect and the Contractor and will be delivered to the Owner upon completion of the Project.

§ 4.2.16 The Construction Manager will assist the Architect in conducting inspections to determine the date or dates of Substantial Completion and the date of final completion; issue Certificates of Substantial Completion in conjunction with the Architect pursuant to Section 9.8; and receive and forward to the Owner written warranties and related documents required by the Contract and assembled by the Contractor. The Construction Manager will forward to the Architect a final Application for Payment upon the Contractor's compliance with the requirements of the Contract Documents.

§ 4.2.17 If the Owner and Architect agree, the Architect will provide one or more Project representatives to assist in carrying out the Architect's responsibilities at the site. The Owner shall notify the Construction Manager of any change in the duties, responsibilities and limitations of authority of the Project representatives.

§ 4.2.18 All Requests for Information shall be submitted by the Contractor to the Construction Manager through the web-based project management system. The Architect will interpret and decide matters concerning performance under, and requirements of, the Contract Documents on written request of the Construction Manager, Owner, or Contractor through the Construction Manager. The Architect's response to such requests will be made in writing within any time limits agreed upon or otherwise with reasonable promptness. .However, the Architect shall not have the authority to bind the Owner to accept Work to which the Owner objects as being deficient or otherwise inconsistent with the Contract Documents. The Contractor shall be responsible for the Architect's fees and expenses in responding to Requests for Information where such information is available to the Contractor from a careful study and comparison of the Contract Documents, field conditions, other Owner provided information, Contractor provided coordination drawings, or prior Project correspondence or documentation.

§ 4.2.19 Interpretations and decisions of the Architect will be consistent with the intent of, and reasonably inferable from, the Contract Documents and will be in writing or in the form of drawings. When making such interpretations and decisions, the Architect will endeavor to secure faithful performance by both Owner and Contractor, will not show partiality to either, and in the absence of negligence, will not be liable for results of interpretations or decisions so rendered in good faith.

§ 4.2.20 The Architect's decisions on matters relating to aesthetic effect will be final if consistent with the intent expressed in the Contract Documents, and if approved by the Owner.

§ 4.2.21 The Construction Manager will receive and review requests for information from the Contractor, and forward each request for information to the Architect, with the Construction Manager's recommendation. The Architect will review and respond in writing, through the Construction Manager, to requests for information about the Contract Documents. The Architect's response to such requests will be made within 14 days unless the Architect determines additional time is required. If the Architect determines additional time is required, the Architect will inform the Owner and Contractor, in writing, of the additional time needed. The Construction Manager's recommendation and the Architect's response to each request will be made in writing within any time limits agreed upon or otherwise with reasonable promptness. If appropriate, the Architect will prepare and issue supplemental Drawings and Specifications in response to the request for information at no additional cost to the Owner.

ARTICLE 5 SUBCONTRACTORS

§ 5.1 Definitions

§ 5.1.1 A Subcontractor is a person or entity who has a direct contract with the Contractor to perform a portion of the Work at the site. The term "Subcontractor" is referred to throughout the Contract Documents as if singular in number and means a Subcontractor or an authorized representative of the Subcontractor. The term "Subcontractor" does not include other Prime Contractors or Separate Contractors or the subcontractors of other Prime Contractors or Separate Contractors.

§ 5.1.2 A Sub-subcontractor is a person or entity who has a direct or indirect contract with a Subcontractor or other Sub-subcontractor to perform a portion of the Work at the site. The term "Sub-subcontractor" is referred to throughout the Contract Documents as if singular in number and means a Sub-subcontractor or an authorized representative of the Sub-subcontractor.

§ 5.2 Award of Subcontracts and Other Contracts for Portions of the Work

(Paragraph deleted)

§ 5.2.1 The Contractor shall, as stated below, notify in writing to the Construction Manager, for review by the Owner, Construction Manager and Architect, the name, trade, and subcontract amount for each Subcontractor, persons or entities proposed for each principal portion of the Work, including those who are to furnish materials or equipment fabricated to a special design. In all cases, this notification shall be received in writing no less than thirty (30) days prior to a Subcontractor starting Work. The Contractor shall not contract with any Subcontractor or supplier to whom the Construction Manager, Owner or Architect has made reasonable written objection. Within 10 days of receipt of the information, the Construction Manager may notify the Contractor whether the Owner, the Construction Manager or the Architect (1) has reasonable objection to any such proposed person or entity or, (2) requires additional time for review. Failure of the Construction Manager to provide notice within the 10-day period shall constitute notice of no reasonable objection.

§ 5.2.1.1 Not later than 10 business days after the date of the Notice to Proceed, the Contractor shall furnish in writing to the Owner through the Construction Manager the names of persons or entities proposed as manufacturers, fabricators or material suppliers for the products, equipment and systems identified in the Project Specifications and Drawings and, where applicable, the name of the installing Subcontractor. The Construction Manager and Owner reserve the right to deduct $800.00 from the Contract Sum, as liquidated damages and not as a penalty, for each additional day that all information is not furnished in addition to all other remedies provided for herein.

§ 5.2.1.2 Not later than 30 days after the date of the Notice to Proceed, the Contractor shall furnish proof in writing (if requested) that all subcontracts and purchase orders for all work in the Project Specifications have been executed. The Construction Manager and Owner reserve the right to deduct $800.00 from the Contract Sum, as liquidated damages and not as a penalty, for each day that any portion of Work has not been contracted for in addition to all other remedies provided for herein.

§ 5.2.2 The Contractor shall not contract with a proposed person or entity to whom the Owner, Construction Manager or Architect has made reasonable and timely objection. The Contractor shall not be required to contract with anyone to whom the Contractor has made reasonable objection.

§ 5.2.3 If the Owner, Construction Manager or Architect has reasonable objection to a person or entity proposed by the Contractor, the Contractor shall propose another to whom the Owner, Construction Manager or Architect has no reasonable objection; however, no increase in the Contract Sum or Contract Time shall be allowed for any such substitution.

§ 5.2.4 The Contractor shall not substitute a Subcontractor, person, or entity for one previously selected if the Owner, Construction Manager or Architect makes reasonable objection to such substitution.

§ 5.2.5 Upon request, the Contractor shall furnish the Owner, Construction Manager and Architect with 1 electronic copy of any and all agreements by, between and among the Contractor and each Subcontractor along with all documentation related to such agreements. The Contractor shall name the Owner as a third-party beneficiary of each Subcontract and, whether written in such subcontract or not, each Subcontractor, having received and reviewed these General Conditions as evidenced by its execution of the subcontract, agrees that Owner shall be a third-party beneficiary of its subcontract.

§ 5.3 Subcontractual Relations

§ 5.3.1 By appropriate written agreement, the Contractor shall require each Subcontractor, to the extent of the Work to be performed by the Subcontractor, to be bound to the Contractor by terms of the Contract Documents, and to assume toward the Contractor all the obligations and responsibilities, including the responsibility for safety of the Subcontractor's Work, that the Contractor, by these Contract Documents, assumes toward the Owner, Construction Manager and Architect. Each subcontract agreement shall preserve and protect the rights of the Owner, Construction Manager and Architect under the Contract Documents with respect to the Work to be performed by the Subcontractor so that subcontracting thereof will not prejudice such rights, and shall allow to the Subcontractor, unless specifically provided otherwise in the subcontract agreement, the benefit of all rights, remedies, and redress against the Contractor that the Contractor, by the Contract Documents, has against the Owner. Where appropriate, the Contractor shall require each Subcontractor to enter into similar agreements with Sub-subcontractors. The Contractor shall make available to each proposed Subcontractor, prior to the execution of the subcontract agreement, copies of the Contract

AIA Document A232 – 2019. Copyright © 1992, 2009, and 2019. All rights reserved. User Notes: (846491751)

Documents to which the Subcontractor will be bound, and, upon written request of the Subcontractor, identify to the Subcontractor terms and conditions of the proposed subcontract agreement that may be at variance with the Contract Documents. Subcontractors will similarly make copies of applicable portions of such documents available to their respective proposed Sub-subcontractors.

§ 5.3.2 Where Contractor sublets portions of the Work, the entire responsibility for the subdividing of work rests with the Contractor. The Owner and the Architect are not responsible for the manner of the subdivision of the Work, and neither will enter into nor settle disagreements or disputes between Contractor and Subcontractors. The arrangement of Specifications and the manner of graphic illustration of Drawings are for convenience of reference and do not comprise any exacting method of subdividing work for purposes of subcontracting, except where the Contract Documents require an undivided responsibility for certain work.

§ 5.3.3 Contractor shall require each Subcontractor to: (1) inspect surfaces and job conditions before beginning Work at Site, (2) accept or cite necessary corrections in surfaces and job conditions before beginning work at Site, and (3) protect his own materials, equipment and Work from damage, injury or loss due to weather or due to Work of the Contractor, other Subcontractors, or other Contractors. The best means of protection shall be supplied and removed when no longer required.

§ 5.4 Contingent Assignment of Subcontracts

§ 5.4.1 Each subcontract agreement for a portion of the Work is assigned by the Contractor to the Owner, provided that

.1 assignment is effective only after termination of the Contract by the Owner for cause pursuant to Section 14.2 and only for those subcontract agreements that the Owner accepts by notifying the Subcontractor and Contractor in writing; and

.2 assignment is subject to the prior rights of the surety, if any, obligated under bond relating to the Contract.

Except as set forth in Section 5.4.3 hereof, when the Owner accepts the assignment of a subcontract agreement, the Owner assumes the Contractor's rights and obligations under the subcontract accruing on or after the date of assignment.

§ 5.4.2 The Contractor agrees, upon Owner's request, to execute whatever instruments Owner may require to confirm such assignment.

§ 5.4.3 Upon assignment to the Owner under this Section 5.4, the Owner may further assign the subcontract to a successor Contractor or other entity, and in such case, the successor contractor or other entity and not the Owner shall assume the Contractor's rights and obligations under the subcontract accruing on or after the date of assignment.

§ 5.5 Payments to Subcontractors or Material Supplier(s) by the Contractor

§ 5.5.1 The Contractor shall pay each Subcontractor, upon receipt of payment from the Owner, an amount equal to the percentage of completion allowed to the Contractor, on account of such Subcontractor's work, less the percentage retained from payments to the Contractor. The Contractor shall also require each Subcontractor to make similar payments to Sub-Subcontractors. All such payments shall be paid within the time limits required by the Pennsylvania Contractor and Subcontractor Payment Act, 73 P.S. Sec. 501, et seq., and all other applicable legal requirements. In the event a Subcontractor or material supplier alleges that the Contractor has failed to pay it in full, the Owner may, in addition to its other rights, set off said amounts from any amount due and owing to the Contractor.

§ 5.6 Payments to Subcontractors by the Owner

§ 5.6.1 If the Owner fails to approve an Application for Payment for a cause which the Owner and Architect determine is the fault of the Contractor, and not the fault of the particular Subcontractor, or if the Contractor fails to make payment which is properly due to a particular Subcontractor, the Owner may pay such Subcontractor directly, less the amount to be retained under its Subcontract. In such case, the amount(s) paid by the Owner to such Subcontractor shall be deducted by Change Order from the Contactor's Contract Sum.

§ 5.6.2 The Owner shall have no obligation to pay, or to see to the payment of, any monies to any Subcontractor or material supplier. Nothing contained in Section 5.6.1 shall be deemed to create any contractual duty of the Owner to any Subcontractor of any tier or Supplier of any tier or to create any rights in any Subcontractor of any tier or Supplier of any tier against the Owner.

§ 5.6.3 The Contractor shall promptly advise the Owner and the Architect of any claim or demand by a Subcontractor claiming that any amount is due to such Subcontractor claiming any default by the Contractor in any of its obligations to such Subcontractor.

ARTICLE 6 CONSTRUCTION BY OWNER OR BY SEPARATE CONTRACTORS

§ 6.1 Owner's Right to Perform Construction with Own Forces and to Award Other Contracts

§ 6.1.1 The Owner reserves the right to perform construction or operations related to the Project with the Owner's own forces, and to award separate contracts in connection with other portions of the Project or other construction or operations on the site under Conditions of the Contract identically or substantially similar to those of this Contract, including those provisions of the Conditions of the Contract related to insurance and waiver of subrogation. This Project will be performed with Multiple Prime Contractors as indicated in the Contract Documents. The Contractor shall be aware that schedule adjustments will be required to coordinate with the Work of their Contract with the Work of other Prime Contractors.

§ 6.1.2 When the Owner performs construction or operations with the Owner's own forces or Separate Contractors, the Owner shall provide for coordination of such forces and Separate Contractors with the Work of the Contractor, who shall cooperate with them. When the Owner performs construction or operations with the Owner's own forces including persons or entities under separate contracts administered by the Construction Manager, the Construction Manager shall provide for coordination of such forces with the Work of the Contractor, who shall cooperate with them.

§ 6.1.3 When separate prime contracts are awarded for different portions of the Project or other construction or operations on the site, the term "Contractor" in the Contract Documents in each case shall mean the Prime Contractor who executes each separate Owner-Contractor Agreement.

§ 6.2 Mutual Responsibility

§ 6.2.1 The Contractor shall afford the Owner's own forces, Separate Contractors, Construction Manager and other Contractors reasonable opportunity for introduction and storage of their materials and equipment and performance of their activities, and shall connect and coordinate the Contractor's construction and operations with theirs as required by the Contract Documents.

§ 6.2.2 If part of the Contractor's Work depends for proper execution or results upon construction or operations by the Owner's own forces, Separate Contractors or other Contractors, the Contractor shall, prior to proceeding with that portion of the Work, promptly notify the Construction Manager and Architect of apparent discrepancies or defects in the construction or operations by the Owner or Separate Contractor or other Contractors that would render it unsuitable for proper execution and results of the Contractor's Work. Failure of the Contractor to notify the Construction Manager and the Architect of apparent discrepancies or defects prior to proceeding with the Work shall constitute an acknowledgment that the Owner's or Separate Contractor's or other Contractors' completed or partially completed construction is fit and proper to receive the Contractor's Work.

§ 6.2.2.1 Neither the Owner, the Construction Manager nor the Architect nor their Consultants shall be responsible for the coordination of the Contractor's Work. Coordination of the Contractor's Work shall be governed by the Contract Documents.

§ 6.2.2.2 Each separate Prime Contractor shall be responsible for the coordination of their own Work with the other Prime Contractors, and for observing the requirements set forth in Division 01. The coordination of mechanical, electrical, and plumbing Work shall also be subject to the responsibility of the Project Coordinator in connection with the rendering of final construction decisions. Such responsibility shall however be invoked only after the provisions of Division 01 have been fully observed.

§ 6.2.3 Costs caused by delays, improperly timed activities or defective construction shall be borne by the parties responsible therefore, excepting, however, Owner, Architect and Construction Manager who shall not be liable to any Contractor or subcontractor for claims or damages of monetary or other nature caused by or arising out of delays of other contractors, contemplated or not contemplated. The sole remedy against the Owner, Architect, and Construction Manager for delays shall be the allowance to a successful claimant of additional time for completion of Work. If, notwithstanding the above, the Owner is required to reimburse a separate Contractor because of delays, lack of performance, improperly timed activities, or defective construction of the Contractor that failed to perform, then the

User Notes: (846491751)

Contractor responsible for the delay, lack of performance, improperly timed activities, or defective construction that Contractor shall then reimburse the Owner for the costs incurred by the Owner which are payable to the separate contractor because of delays, improperly timed activities, or defective construction of the Contractor. If the Contractor asserts a claim against the Owner, Architect, or Construction Manager in violation of the foregoing provisions, the Contractor shall, in addition to all other relief that is afforded, reimburse the Owner, Architect, and Construction Manager for its reasonable costs and fees of attorneys, architects, engineers, or other professionals, plus interest at the rate of ten (10%) percent per annum until such costs are paid. In the event that a separate contractor makes a claim or demand upon the Owner, the Architect and the Construction Manager, or any of them (notwithstanding that such claim or demand is in violation of such separate contractor's Contract for Construction with the Owner) for or on account of any actual or alleged act, omission, fault or breach of the Contract, by the Contractor, the Contractor shall indemnify and defend any and all of them from such claim or demand.

§ 6.2.4 The Contractor shall promptly remedy damage that the Contractor causes to completed or partially completed construction, or to property of the Owner, Separate Contractors, or other Prime Contractors as provided in Section 10.2.5. The Contractor agrees to defend, indemnify and hold harmless the Owner, Construction Manager and Architect and the consultants, agents and employees of any of them from and against any claims or damages brought by a Prime Contractor or other separate Contractor arising out of actions or omissions of the Contractor, or his Subcontractors, Sub-subcontractors, or suppliers in performing its Work under the Contract Documents. Should the Contractor wrongfully cause damage to the Work or property of any separate Contractor, the Contractor shall, upon due notice, promptly attempt to settle with the separate Contractor by agreement, or otherwise to resolve the dispute. Such dispute shall not delay the completion of the Work. The separate Contractor claiming damages at his expense subject to his right to recover damages shall continue Work. If such separate contractor sues the Owner, the Architect, or Construction Manager on account of any damage alleged to have been caused by another Contractor, the Owner, Architect or Construction Manager shall notify such other Contractor who shall defend such proceedings at the Contractor's expense, and if any judgment or award against the Owner, Construction Manager, or Architect arises therefrom the notified Contractor shall pay or satisfy it and shall reimburse the Owner, Construction Manager, or Architect for all attorneys' fees and court costs which the Owner, Construction Manager, or Architect has incurred.

§ 6.2.4.1 If any Prime contractor sues the Owner, Construction Manager, or Architect on account of any damage alleged to have been caused by another Contractor, the Owner, Construction Manager, or Architect, shall notify the Contractor that allegedly caused the damage. That Contractor shall defend such proceedings at the Contractor's expense, and if any judgment or award against the Owner, Construction Manager, or Architect arises therefrom the Contractor shall pay or satisfy it and shall reimburse the Owner, Construction Manager, or Architect for all attorneys' fees and court costs which the Owner, Construction Manager, or Architect has incurred.

§ 6.2.5 The Owner, Separate Contractors, Prime Contractors and other Contractors shall have the same responsibilities for cutting and patching as are described for the Contractor in Section 3.14.

§ 6.2.5.1 If the Contractor, or any of its Subcontractors or Sub-Subcontractors, or their respective agents, servants, or employees, causes damage to the Work or property, or by lack of due diligence delays or interferes with the Work of another Contractor, Subcontractor, or other Prime Contractor or their subcontractors, and such party incurs additional expense or damage as a result, any claim, dispute, or other matter arising therefrom shall be resolved exclusively by binding arbitration as provided in this Section 6.2.5. Such arbitration shall be conducted in accordance with the Construction Industry Arbitration Rules of the American Arbitration Association then in effect, unless the affected parties mutually agree otherwise in writing. Claims between or among Contractors, Subcontractors, other Prime Contractors, or their respective Sureties shall not delay or suspend the progress or completion of the Work, which shall continue pending final resolution of such claims.

§ 6.2.5.2 The Owner, Architect, and Construction Manager shall not be joined as parties to any arbitration or dispute arising under this Section 6.2.5, nor shall they be liable for damages arising out of disputes between or among Contractors, Subcontractors, other Prime Contractors, or their respective Sureties. The Contractor and its Subcontractors expressly waive any claims against the Owner, Architect, and Construction Manager for damages arising from the acts, omissions, delays, or interference of other Contractors, Subcontractors, other Prime Contractors, or their subcontractors, including, without limitation, claims for delay, acceleration, inefficiency, out-of-sequence work, stacking of trades, overtime, or disputes over scope of work.

User Notes: (846491751)

§ 6.2.5.3 A demand for arbitration shall be made in writing and filed with the American Arbitration Association and served upon the other affected Contractors or Subcontractors within thirty (30) days after the claimant knew or should have known of the claim. Copies of the arbitration demand shall be provided to the Owner, Architect, and Construction Manager for informational purposes only. While not parties to the arbitration, the Owner, Architect, and Construction Manager may, if requested, provide testimony or documentary evidence as witnesses. The Owner shall receive copies of documents submitted to the arbitrator at no cost. The arbitration award shall be final, and judgment upon the award may be entered in any court of competent jurisdiction.

§ 6.2.5.4 The Contractor and each of its Subcontractors agree that their sole and exclusive remedy for any injury, damage, loss, or expense arising out of disputes covered by this Section 6.2.5 shall be against the responsible Contractor, Subcontractor, other Prime Contractor, or their respective Sureties, and not against the Owner, Architect, or Construction Manager. This Section 6.2.5 is intended to benefit all Prime Contractors, Subcontractors, and their Sureties on the Project and shall confer limited third-party beneficiary status solely for the purpose of enforcing the arbitration and risk-allocation provisions contained herein. The Contractor shall require all Subcontracts and Sub-Subcontracts to include provisions substantially similar to this Section 6.2.5 as a condition of participation in the Project.

§ 6.2.5.5 The Contractor and each of its Subcontractors acknowledge that the restrictions contained in these General Conditions are reasonable and necessary in order to protect the legitimate interests of the Owner and that any violation of these General Conditions would result in irreparable injuries to the Owner and monetary damages would be inadequate to compensate the Owner for a violation of these General Conditions. Therefore, the Contractor and each of its Subcontractors hereby agree that if the Contractor or Subcontractor disregard any paragraph of these General Conditions, including, without limitation, any portion of this Article 6, and institutes or attempts to institute any proceeding (e.g., arbitration, litigation, mediation, etc.) against the Owner, Architect, or Construction Manager for including, without limitation, injuries, damages or expenses resulting from disputes between or among Contractor, Sureties, Subcontractors, other Prime Contractors or their Subcontractors, the Owner is entitled to obtain from any court of competent jurisdiction preliminary and permanent injunctive relief to prevent the Contractor or Subcontractor from pursuing any proceeding against the Owner, Architect, or Construction Manager, and the Owner is entitled to stay any such proceeding. In the event that the Owner pursues preliminary or permanent injunctive relief to prevent the Contractor from pursuing any proceeding against the Owner, Architect, or Construction Manager, or that the Owner attempts to stay any such proceeding, the Contractor and the Contractor's Surety shall be jointly and severally liable for reimbursing the Owner, immediately upon demand, for all of Owner's costs and expenses associated therewith, including, without limitation, all legal fees, professional fees, and all other costs associated therewith incurred by the Owner. In the event that the Owner pursues preliminary or permanent injunctive relief to prevent a Subcontractor from pursuing any proceeding against the Owner, Architect, or Construction Manager or that the Owner attempts to stay any such proceeding, the Subcontractor and the Subcontractor's Surety (if any) shall be jointly and severally liable for reimbursing the Owner, immediately upon demand, for all of Owner's costs and expenses associated therewith, including, without limitation, all legal fees, professional fees, and all other costs associated therewith incurred by the Owner. The Owner's rights set forth in this Section 6.2.5.5 shall be in addition to all other rights of the Owner granted in the Contract Documents, at law, or in equity.

§ 6.2.6 Dispute Routing. Claims, disputes, or matters exclusively between or among Prime Contractors, Subcontractors, or Sub-Subcontractors arising out of coordination, sequencing, delay, interference, or damage to the Work shall be resolved solely in accordance with Article 6 and shall not be asserted against the Owner, Architect, or Construction Manager.

Claims by a Contractor against the Owner shall be asserted only in accordance with Article 15. Resolution of a dispute under Article 6 shall not create, expand, or imply any duty, obligation, or liability of the Owner, Architect, or Construction Manager.

§ 6.3 Owner's Right to Clean Up

If a dispute arises among the Contractor, Separate Contractors, other Multiple Prime Contractors, and the Owner as to the responsibility under their respective contracts for maintaining the premises and surrounding area free from waste materials and rubbish, the Owner may clean up and the Construction Manager, with notice to the Architect, will allocate the cost among those responsible.

ARTICLE 7 CHANGES IN THE WORK

§ 7.1 General

§ 7.1.1 Changes in the Work may be accomplished after execution of the Contract, and without invalidating the Contract, by Change Order, Construction Change Directive or order for a minor change in the Work, subject to the limitations stated in this Article 7 and elsewhere in the Contract Documents.

§ 7.1.2 A Change Order shall be based upon agreement among the Owner, Construction Manager, Architect and Contractor. A Construction Change Directive requires agreement by the Owner, Construction Manager and Architect and may or may not be agreed to by the Contractor. An order for a minor change in the Work may be issued by the Architect alone.

§ 7.1.3 Changes in the Work shall be performed under applicable provisions of the Contract Documents. The Contractor shall proceed promptly with changes in the Work, after receipt of a letter to proceed issued by the Construction Manager or execution of the Change Order, Construction Change Directive, or order for a minor change in the Work, whichever occurs first.

§ 7.1.3.1 Notwithstanding anything contained in the Contract Documents to the contrary, a change in the Contract Sum, the Contract Time and/or any Milestone Date shall be accomplished only by Change Order or by a Construction Change Directive. No course of conduct or dealing between the parties, no express or implied acceptance of alterations or additions of the Work, and no claim that the Owner has been unjustly enriched by any alteration or addition to the Work shall be the basis of any claim or adjustment in compensation due under the Contract and/or time period provided for under the Contract.

§ 7.1.3.2 Agreement on any Change Order shall constitute a final settlement of all direct and indirect costs associated with such change and any and all adjustments to the Contract Sum and the Contract Time. In the event a Change Order increases the Contract Sum, the Contractor shall include the Work covered by such Change Order in Applications for Payment as if such Work were originally part of the Contract Documents. Present or future claims by the Owner relating to defective performance of the Work shall not be deemed settled through agreement on a Change Order unless so expressly agreed in writing.

§ 7.1.4 Matters involving extra Work and changes in the Work are subject to the following provisions:

§ 7.1.4.1 Owner reserves the right to accept or reject Contractor's price, and in instances of more than one price, to accept one or more prices, or reject one or more or all prices. Contractor may not make a charge of any kind regarding proposed extra Work or proposed changes in the Work that were not accepted.

§ 7.1.4.2 Contractor agrees that prices for changes in the Work and or extra Work will not include charges involving penalties or damages for assumed delays in the Work, charges for estimating, cancellation charges on prior rejected Work, and similar amounts which do not relate directly to costs of labor and material and equipment appurtenant to Work involved.

§ 7.1.4.3 A Change Order or Construction Change Directive will establish whether the Contractor is permitted extra time because of extra Work or changes in the Work and, if so, the amount of extra time permitted. Such determinations will be final and will not alter the fact that time is of the essence in the Contract.

§ 7.1.4.4 No charges by Contractor for extra Work or changes in the Work, nor claims on account thereof, shall be valid unless duly authorized pursuant to the procedure herein described. Written authority to perform extra Work or changes in the Work must be in possession of Contractor before such Work commences in order that Contractor's right to payment on account thereof may be valid.

§ 7.1.4.5 In order to facilitate checking of quotations for adjustments in the Contract Sum, all proposals, except those so minor that their propriety can be seen by inspection, shall be accompanied by a complete itemization of costs including, labor, materials, and subcontracts. Labor and materials shall be itemized in the manner prescribed herein. When major cost items are subcontracted, these costs shall be itemized also.

§ 7.1.4.6 All Change Orders shall be accompanied by detailed price breakdowns.

§ 7.2 Change Orders

§ 7.2.1 A Change Order is a written instrument prepared by the Construction Manager and signed by the Owner, Construction Manager, Architect, and Contractor, stating their agreement upon all of the following:

.1 The change in the Work;

.2 The amount of the adjustment, if any, in the Contract Sum; and

.3 The extent of the adjustment, if any, in the Contract Time.

§ 7.2.2 Methods used in determining adjustments to the Contract Sum may include those listed in Section 7.3.3.

§ 7.2.3 In the event that the Contractor makes change order requests that are not required due to unforeseen or changed conditions, errors or omissions in the Contract Documents, commercial unavailability of specified products/materials, or to achieve overall project cost savings for the Owner, the Owner shall have the authority in its sole discretion, to disregard any subsequent Change Order requests made by such Contractor on the same or similar scope of services and the Contractor's sole remedy against the Owner under this Agreement shall be pursuant to Article 15 of these General Conditions. Furthermore, to the extent the Owner incurs any legal fees, professional fees, expenses, or costs (including, but not limited to, employee costs), arising out of or resulting from the Contractor making an excessive number of Change Order requests, the Contractor shall be liable to the Owner for such legal fees, professional fees, expenses, and costs.

§ 7.2.4 Any action(s) by the Owner, Construction Manager, Architect and/or the Contractor other than actions taken pursuant to the procedures set forth in Section 7.2.1 shall not constitute the approval of a Change Order, including, without limitation, the Owner's, Construction Manager's and/or the Architect's execution of the Contractor's time sheets upon which the Contractor submits a Change Order request. Furthermore, to the extent the Owner incurs any legal fees, professional fees, expenses, or costs (including, but not limited to, employee costs), arising out of or resulting from the Contractor's failure to follow the proper procedures for approval of a Change Order, the Contractor shall be liable for such legal fees, professional fees, expenses and costs.

§ 7.2.5 At Owner's election, Change Order costs shall be calculated by the Contractor and each Subcontractor or Sub-sub-contractor as follows:

§ 7.2.5.1 Actual costs of labor, including social security and old age and unemployment insurance, fringe benefits and workers' compensation insurance associated with the Change in the Work (as calculated per Section 7.3.4).

§ 7.2.5.2 Actual costs of materials, supplies and equipment, including cost of transportation used in performing the Change in the Work.

§ 7.2.5.3 Actual rental costs of machinery and equipment rented from third parties, exclusive of hand tools required by the Change in the Work, whether incorporated or consumed.

§ 7.2.5.4 Actual costs of premiums for all bonds and insurance and permit fees and sales, use or similar taxes related to the Change in the Work.

§ 7.2.5.5 For any adjustments to the Contract Sum (other than those based upon unit prices which include overhead and profit), the Prime Contractor agrees to charge and accept, as payment for overhead and profit, the following percentages of costs attributable to the addition, deletion or change to the Work.

.1 For adjustments which total less than fifty thousand dollars ($50,000) exclusive of overhead and profit, a total of 10% for overhead and profit.

.2 For adjustments which total more fifty thousand dollars ($50,000) but less than two hundred fifty thousand dollars ($250,000), exclusive of overhead and profit a total of 8% for overhead and profit.

.3 For adjustments which total more than two hundred fifty thousand dollars ($250,000) exclusive of overhead and profit, a total of five percent (5%) for overhead and profit.

.4 When both additions and credits are involved in any one change, the allowance for overhead and profit shall be figured on the basis of the net increase, if any

.5 To the Contractor for work performed by other than its own forces (i.e. their subcontractors), the allowance for overhead and profit shall not exceed 5%.

.6 The charges for overhead and profit referred to herein shall include all indirect costs customarily recoverable as overhead, including home office overhead and field office overhead.

§ 7.2.6 Unit Prices and their use in Contract Adjustments

§ 7.2.6.1 If Unit Prices are stated in the Contract Documents or subsequently agreed upon, and if quantities originally contemplated are materially changed in a proposed Change Order or Construction Change Directive so that application of such Unit Prices to quantities of Work proposed will cause substantial inequity to the Owner or Contractor, the applicable Unit Prices shall be equitably adjusted.

§ 7.2.6.2 Approved Unit Prices, when accepted by the Construction Manager and Owner, shall be used where they apply to determine an equitable adjustment of the Contract Sum in connection with extra Work or changes ordered under the Contract. Approved Unit Prices shall apply to both additions to and deductions from the Contract Sum.

§ 7.2.6.3 Unit Prices submitted by a Contractor on the Bid Form for this Project shall include all profit, overhead, bonds, insurance, taxes, labor, materials, plant equipment and tools necessary and required to fully complete the Work item, as specified in detail for the Work item in the Contract Documents.

§ 7.3 Construction Change Directives

§ 7.3.1 A Construction Change Directive is a written order prepared by the Construction Manager and signed by the Owner, Construction Manager and Architect, directing a change in the Work prior to agreement on adjustment, if any, in the Contract Sum or Contract Time, or both. The Owner may by Construction Change Directive, without invalidating the Contract, order changes in the Work within the general scope of the Contract consisting of additions, deletions, or other revisions, the Contract Sum and Contract Time being adjusted accordingly.

§ 7.3.2 A Construction Change Directive shall be used in the absence of total agreement on the terms of a Change Order.

§ 7.3.3 If the Construction Change Directive provides for an adjustment to the Contract Sum, the adjustment shall be allocated based on the approved Schedule of Values based on one of the following methods:

.1 Mutual acceptance of a lump sum properly itemized and supported by sufficient substantiating data to permit evaluation;

.2 Unit prices stated in the Contract Documents or subsequently agreed upon;

.3 Cost to be determined in a manner agreed upon by the parties and a mutually acceptable fixed or percentage fee; or

.4 As provided in Section 7.3.4.

§ 7.3.4 If the Contractor does not respond promptly or disagrees with the method for adjustment in the Contract Sum, the Construction Manager shall determine the adjustment on the basis of reasonable expenditures and savings of those performing the Work attributable to the change, including, in case of an increase in the Contract Sum, an amount for overhead and profit as set forth in Section 7.2.5.5, and which includes, without limitation, Contractor's obligations under these General Conditions and Division 01 of the Specifications. In such case, and also under Section 7.3.3.3, the Contractor shall keep and present, in such form as the Construction Manager may prescribe, an itemized accounting together with appropriate supporting data. Unless otherwise provided in the Contract Documents, costs for the purposes of this Section 7.3.4 shall be limited to the following:

.1 Costs of labor, including applicable payroll taxes such as social security, old age and unemployment insurance, fringe benefits required by agreement or custom, workers' compensation insurance, (labor costs shall be the certified Base Prevailing Wage rate plus actual fringe benefits per the Prevailing Wage Determination Schedule included in the Project Manual plus FICA, SUTA, FUTA and Workmen's Compensation, and other employee costs approved by the Construction Manager and Architect;

.2 Costs of materials, supplies, and equipment, including cost of transportation, whether incorporated or consumed;

.3 Rental costs of machinery and equipment, exclusive of hand tools, whether rented from the Contractor or others;

.4 Additional costs of premiums for all bonds and insurance, permit fees, and sales, use, or similar taxes, directly related to the change; and all bonds and insurance, permit fees, and sales use, or similar taxes directly related to the change shall be submitted without markup;

.5 Costs of supervision and field office personnel directly attributable to the change.

User Notes: (846491751)

§ 7.3.5 If the Contractor disagrees with the adjustment in the Contract Time, the Contractor may make a Claim in accordance with applicable provisions of Article 15.

§ 7.3.6 Upon receipt of a Construction Change Directive, the Contractor shall promptly proceed with the change in the Work involved and advise the Owner, Architect, and Construction Manager of the Contractor's agreement or disagreement with the method, if any, provided in the Construction Change Directive for determining the proposed adjustment in the Contract Sum or Contract Time. Notwithstanding anything else to the contrary in the Contract Documents, when a Construction Change Directive is not agreed upon by the Contractor, the Contractor shall continue to perform the change in the Work involved so as not to delay the Project and the Contractor's sole remedy against the Owner under this Agreement shall be pursuant to Article 15 of these General Conditions.

§ 7.3.7 A Construction Change Directive signed by the Contractor indicates the Contractor's agreement therewith, including adjustment in Contract Sum and Contract Time or the method for determining them. Such agreement shall be effective immediately and shall be recorded as a Change Order.

§ 7.3.8 The amount of credit to be allowed by the Contractor to the Owner for a deletion or change that results in a net decrease in the Contract Sum shall be actual net cost plus overhead and profit as confirmed by the Construction Manager and Architect. When both additions and credits covering related Work or substitutions are involved in a change, the allowance for overhead and profit shall be figured on the basis of net increase, if any, with respect to that change.

§ 7.3.9 Pending final determination of the total cost of a Construction Change Directive to the Owner, amounts not in dispute for such changes in the Work shall be included in Applications for Payment to the extent that such Work was completed under the Construction Change Directive. For any portion of such cost that remains in dispute, the Construction Manager and Architect will make an interim determination for purposes of monthly certification for payment for those costs and certify for payment the amount that the Construction Manager and Architect determine to be reasonably justified. The interim determination of cost shall adjust the Contract Sum on the same basis as a Change Order, subject to the right of either party to disagree and assert a Claim in accordance with Article 15.

§ 7.3.10 When the Owner and Contractor agree with a determination made by the Construction Manager and Architect concerning the adjustments in the Contract Sum and Contract Time, or otherwise reach agreement upon the adjustments, such agreement shall be effective immediately and the Construction Manager shall prepare a Change Order. Change Orders may be issued for all or any part of a Construction Change Directive. The Contractor's agreement to a Change Order, or acceptance of payment therefore, or the Contractor's agreement to a Construction Change Directive, shall constitute a final settlement of all of the Contractor's rights, claims, and remedies relating to the change in the Work which is the subject matter thereof, including, without limitation, all direct and indirect costs, and all adjustments to the Contract Sum and the Contract Time or Project Construction Schedule. If the Owner and the Contractor do not agree with the Construction Manager's determination, then the parties shall resolve the dispute pursuant to the terms and conditions of Article 15.

§ 7.4 Minor Changes in the Work

§ 7.4.1 The Architect has the authority to order minor changes in the Work that are consistent with the intent of the Contract Documents and do not involve an adjustment in the Contract Sum or an extension of the Contract Time. The Architect's order for minor changes shall be issued in writing through the Construction Manager and shall be binding on the Owner and Contractor. The Contractor shall carry out such written orders promptly. If the Contractor believes that the proposed minor change in the Work will affect the Contract Sum or Contract Time, the Contractor shall notify the Construction Manager and shall not proceed to implement the change in the Work. If the Contractor performs the Work set forth in the Architect's order for a minor change without prior notice to the Construction Manager that such change will affect the Contract Sum or Contract Time, the Contractor waives any adjustment to the Contract Sum or extension of the Contract Time.

§ 7.4.2 The Architect from time to time, as deemed necessary or if requested by the Owner and Construction Manager, will furnish supplementary instructions to clarify or amplify the Drawings and Specifications (Contract Documents). The supplementary instructions may be by means of drawings, or otherwise as is most appropriate, which will be consistent with the Contract Documents and true developments thereof, or amplifications reasonably inferable therefrom. The supplementary instructions shall be considered minor clarifications in the Work and shall not be an authorization for the Contractor to incur additional cost.

§ 7.4.3 The Owner reserves the right to change the location of any piece of apparatus or equipment within five (5) feet of location shown, up to the time of rough-in, without additional expense to the Owner. The changes of the location shall be considered minor changes in the Work and shall not be an authorization for the Contractor to incur additional cost.

ARTICLE 8 TIME

§ 8.1 Definitions

§ 8.1.1 Unless otherwise provided, Contract Time is the period of time, including authorized adjustments, allotted in the Contract Documents for Substantial Completion of the Work.

§ 8.1.2 The date of commencement of the Work is the date established in the Notice to Proceed issued by the Owner or Construction Manager. The date shall not be postponed by the failure to act of the Contractor or of persons or entities for whom the Contractor is responsible.

§ 8.1.3 The date of Substantial Completion is the date certified by the Architect in accordance with Section 9.8.

§ 8.1.4 The term "day" as used in the Contract Documents shall mean calendar day unless otherwise specifically defined.

§ 8.2 Progress and Completion

§ 8.2.1 Time limits stated in the Contract Documents are of the essence of the Contract. By executing the Agreement, the Contractor confirms that the Contract Time, including the phasing schedule, and all activities, events, and milestones is a reasonable period for performing the Work. By bidding and by executing the Agreement, the Contractor confirms that the contract duration is a reasonable period for performing the work. Any preliminary construction schedule, if provided, is for information purposes only and constitutes a proposed sequence of events based on standard practices. Contractor shall independently analyze all required activities and durations necessary to perform their own work and shall not rely on dates or duration suggested by the preliminary construction schedule. The Contractor is responsible to provide the Construction Manager a detailed Construction Schedule of their work within ten (10) business days after the date of execution of the Contract and a Construction Progress Schedule that will be updated periodically to reflect progress. The dates listed in the construction schedule are of the essence and the Contractor agrees to schedule, coordinate, and staff in accordance therewith based on the actual progress of the Work as necessary to maintain the orderly progress of the Work in accordance with the construction schedule.

§ 8.2.2 The Contractor shall not knowingly, except by agreement or instruction of the Owner in writing, commence the Work prior to the effective date of insurance required by Article 11 to be furnished by the Contractor and Owner.

§ 8.2.3 The Contractor shall proceed expeditiously with adequate forces and shall achieve Substantial Completion within the Contract Time. The Contractor agrees to increase manpower, increase work hours, and to increase equipment, necessary to maintain projected progress schedule. Such measures undertaken by the Contractor will be at no additional cost to the Owner.

§ 8.2.4 The Notice to Proceed shall be given to the Contractors on all branches of Work concurrently and all Contractors shall be prepared to undertake their Work at such times as the progress of the Work permits them to do so.

§ 8.2.5 The Work shall reach Substantial Completion no later than the date(s) stated in the Contract Documents, and for each milestone and phase where applicable, subject to conditions stated therein, from the date of commencement of Work including authorized extensions of time approved in writing by the Owner. All Contractors shall cooperate with each other and shall coordinate their activities and Work so that the entire program of construction can be substantially complete on or before the completion dates for each milestone and phase.

§ 8.2.6 The Contractor shall complete the whole of the Work, and all milestones and phases as applicable, at or before the time or times stated. Contractor shall submit shop drawings and samples of material to be used, as required, and make delivery of material in accordance with the Project schedule. Contractor shall furnish, at all times, sufficient skilled workers, materials, and equipment to perform the Work to the entire satisfaction of the Construction Manager, Architect, and Owner and so as not to delay the completion of the whole or any part of the Project.

User Notes: (846491751)

§ 8.2.7 It is mutually agreed by and between the parties hereto that time is of the essence as to each part of the Contract and that in case of the failure on the part of the Contractor to complete any part of the Contract within the time specified and agreed upon, the Owner will be damaged thereby. If due to a Contractor's action or inaction, the Project fails to achieve any contractual milestone, including, but not limited to, Substantial Completion or Final Completion by the deadlines set forth in the Contract Documents, then the Contractor shall be responsible to the Owner for all damages, losses, and claims incurred by the Owner as a result of such delay, including, but not necessarily limited to: loss of grant or other funding, claims for delay damages from other prime contractors (to the extent asserted against the Owner in violation of Section 6.2), loss of revenue, costs of acceleration or resequencing of work, the cost extension of professional and other services on the Project, and attorney, expert, and consultant fees.

§ 8.2.8 Adherence to Schedule

§ 8.2.8.1 The Owner reserves the right to withhold monthly progress payments if the Contractor is behind schedule, unless the Contractor proves, in writing, that the delays are not the fault of the Contractor and to which the Construction Manager agrees.

§ 8.2.8.2 The monthly progress payments will only be released after the Contractor reaches the status of completion for that month comprehended by the Project construction schedule.

§ 8.2.8.3 In the event the Construction Manager determines that the performance of the Work has not progressed or reached the level of completion required by the Contract Documents and the Project construction schedule, the Owner or Construction Manager shall have the right to order the Contractor to take corrective measures necessary to expedite the progress of construction, including, but not limited to, working additional shifts or overtime; supplying additional manpower, equipment, and facilities; and other similar measures (referred to collectively as "Extraordinary Measures"). Such Extraordinary Measures shall continue until the progress of the Work complies with the stage of completion required by the Contract Documents. The Owner's right to require Extraordinary Measures is solely for the purpose of ensuring the Contractor's compliance with the Project construction schedule and failure to comply shall be considered as breach of the Contract Documents. The Contractor shall not, under any circumstances, be entitled to an adjustment in the Contract Sum in connection with Extraordinary Measures required by Owner under or pursuant to Section 8.2.8.

§ 8.2.8.4 The Owner may exercise its rights pursuant to Section 8.2.8.3 as frequently as the Owner deems necessary to ensure that the Contractor's performance of the Work will comply with any completion dates set forth in the Contract Documents.

§ 8.2.9 PROCUREMENT SCHEDULE

If requested by the Construction Manager, the Contractor shall provide a procurement schedule within a reasonable period of time which shows items to be purchased, date of purchase, quoted dates of delivery, current estimated date of delivery, and last date of contact with the vendor. The procurement schedule shall be updated as requested by the Construction Manager.

§ 8.3 Delays and Extensions of Time

§ 8.3.1 If the Contractor is delayed in the commencement or progress of the Work by any of the following clauses, the Contract Time shall be extended by Change Order for such reasonable period as determined by the Architect, based on the recommendation of the Construction Manager: (1) an act or omissions of the Owner, Owner's forces, Construction Manager, Architect, or any other Prime Contractors; (2) by changes ordered in the Work, (3) by, casualties, fire, flood, epidemic, pandemic, disease, declared state of emergency by local, state or federal government; (4) by delay authorized by the Owner pending mediation, arbitration, or by litigation, (5) or by other proven causes that the Architect determines may justify delay, No extension of Contract Time shall be granted for delays caused by rain, wind, flood, or any other natural phenomena of severity normally experienced at the Project location.

§ 8.3.1.1 After award of the Contract, no claims for additional compensation associated with completing the Work within the Contract Time shall be considered. The Contract Sum includes all costs associated with meeting the required schedule, including, without limitation, shift work, overtime, premium time, sequencing constraints, and coordination with other Prime Contractors. Failure of the Contractor to anticipate or include such costs shall not relieve the Contractor of its obligation to comply with the schedule nor entitle it to additional compensation.

User Notes: (846491751)

§ 8.3.1.2 No extension of Contract Time shall be granted for delays caused by the Contractor's failure to properly plan, staff, supervise, coordinate, procure materials, prepare shop drawings, or otherwise perform the Work using reasonable diligence. Delays resulting from such causes are solely the Contractor's responsibility.

§ 8.3.2 Except as expressly provided in Section 8.3.4, an extension of Contract Time shall be the Contractor's sole and exclusive remedy for all delays, disruptions, interferences, or hindrances to the Work, and shall not entitle the Contractor to recover damages or additional compensation from the Owner, Architect, or Construction Manager.

§ 8.3.3 All claims for extensions of Contract Time shall be made strictly in accordance with Article 15.

§ 8.3.4 Notwithstanding anything to the contrary in the Contract Documents, the Contractor agrees that unless there is active interference by the Owner, an extension of Contract Time shall be the sole remedy for any: delay in commencement, prosecution, or completion of the Work; hindrance or obstruction of performance; loss of productivity; acceleration, sequencing changes, or out-of-sequence work; or other similar impacts.

Active interference shall be construed to mean the Owner affirmatively acting or failing/refusing to act in a manner that prohibits the Contractor from achieving a contractual milestone, despite receipt of written notice from the Contractor of the affect of such action or failure/refusal to act. Delays caused by other Prime Contractors shall not be construed as active interference by the Owner as the Contractor has rights to claim directly against other Prime Contractors under Article 6. Differing site or unforeseen conditions and other events beyond the control of the Owner shall not constitute active interference.

In the event of active interference by the Owner, the Contractor will be entitled to recover damages if and to the extent that (1) the Contractor gives written notice to the Owner of the specific act or acts of active interference, (2) the Contractor provides detailed schedule information and supporting data demonstrating the direct and immediate impact of the active interference on the Contractor's critical path, (3) the Contractor demonstrates the damages are reasonably and necessarily incurred as an immediate result of such active interference, and (4) the Contractor demonstrates that it has made its best efforts to mitigate damages and to work with the Owner, the other Prime Contractors, the Construction Manager, and the Architect to alleviate the impact of the active interference on the schedule and the damages incurred.

Under no circumstances shall the contractor be entitled to recover against the Owner consequential damages, lost profits, impact damages, winter protection costs, or opportunity costs.

§ 8.3.5 The Contractor acknowledges that construction schedules will be updated as the Project progresses. No claim for additional compensation shall be permitted for acceleration, delay, or out-of-sequence work resulting from decisions made pursuant to this Section 8.3 or from reasonable schedule updates.

§ 8.3.6 No extension of Contract Time shall constitute a waiver of any rights of the Owner or relieve the Contractor of its obligation to complete the Work in accordance with the Contract Documents.

§ 8.3.7 If the Owner is prevented or enjoined from proceeding with the Project due to litigation or other causes beyond the Owner's control, the Contractor shall not be entitled to damages, acceleration costs, or out-of-sequence work costs. The Contract Time shall be extended by a reasonable period reflecting time lost, as determined by the Owner and Architect in writing.

§ 8.3.8 Delays attributable to lack of coordination or cooperation among the Contractor, its Subcontractors, Sub-Subcontractors, or other Prime Contractors shall not justify an increase in the Contract Sum or Contract Time and shall be resolved in accordance with Section 6.2.

§ 8.3.9 Delay Remedies Clarified.
Except as expressly stated in this Article, an extension of Contract Time shall be the Contractor's sole and exclusive remedy for delays, disruptions, interferences, or hindrances to the Work. Nothing in this Contract shall be construed as waiving claims expressly preserved under Section 8.3.4 or rights that are not legally waivable under applicable law.

ARTICLE 9 PAYMENTS AND COMPLETION

§ 9.1 Contract Sum

§ 9.1.1 The Contract Sum is stated in the Agreement and, including authorized adjustments, is the total amount payable by the Owner to the Contractor for performance of the Work under the Contract Documents.

§ 9.1.2 If unit prices are stated in the Contract Documents or subsequently agreed upon, and if quantities originally contemplated are materially changed so that application of such unit prices to the actual quantities causes substantial inequity to the Owner or Contractor, the applicable unit prices shall be equitably adjusted.

§ 9.2 Schedule of Values

Within 10 days of receipt of the Notice to Proceed, the Contractor shall submit a schedule of values to the Construction Manager and Architect, before the first Application for Payment, allocating the entire Contract Sum to the various portions of the Work. The schedule of values shall be prepared in the form, and supported by the data to substantiate its accuracy, required by the Construction Manager and the Architect. This schedule, unless objected to by the Construction Manager or Architect, shall be used as a basis for reviewing the Contractor's Applications for Payment..

§ 9.2.1 Projects with multiple sites or multiple phased projects, provided separate schedule of values for each building, phase or site.

§ 9.2.2 The schedule of values shall include the following line items with values calculated as follows:

Final Paperwork: 1% of Contract value.

§ 9.2.3 The Schedule of Values shall be broken down with separate line items for labor and materials corresponding to the Specification Sections.

§ 9.3 Applications for Payment

§ 9.3.1 At least ten days before the date established for each progress payment, the Contractor shall submit to the Construction Manager an itemized Application for Payment prepared in accordance with the schedule of values and Contract Documents, for completed portions of the Work. The application shall be notarized, if required, and supported by all data substantiating the Contractor's right to payment that the Owner, Construction Manager or Architect require, such as copies of requisitions, and releases of waivers of lien from Subcontractors and suppliers and shall reflect retainage if provided for in the Contract Documents. The form of Application for Payment shall be a template provided by the Construction Manager. Construction Manager will issue an Invitation to Bill monthly through the web-based Project Management system. By signing each Application for Payment, the Contractor stipulates and certifies to the following: that the information presented is true, correct, accurate and complete; that the Contractor has made the necessary detailed examinations, audits and arithmetic verifications; that the submitted Work has been completed to the extent represented in the Applications for Payment; that the materials and supplies identified in the Applications for Payment have been purchased, paid for and received; that the Subcontractors have been paid as identified in the Applications for Payment or that Contractor has been invoiced for same; that he has made the necessary on-site inspections to confirm the accuracy of the Applications for Payment; that there are no known mechanics' or materialmens' liens outstanding at the date of this requisition; all due and payable bills with respect to the Work have been paid to date or are included in the amount requested in the current application; that except for such bills not paid but so included, there is no known basis for the filing of any mechanics' or materialmens' liens on the Work; that the Payment Application includes only Work self-performed by Contractor or for which Contractor has been invoiced; and that releases from all Subcontractors and materialmen have been obtained in such form as to constitute an effective release of lien under the laws of the Commonwealth of Pennsylvania covering all Work performed and for which payment has been made by the Owner to the Contractor.

§ 9.3.1.1 As provided in Section 7.3.9, such applications may include requests for payment on account of changes in the Work that have been properly authorized by Construction Change Directives, or by interim determinations of the Construction Manager and Architect, but not yet included in Change Orders. Owner may withhold payment on disputed Construction Change Directive amounts.

§ 9.3.1.2 Applications for Payment shall not include requests for payment for portions of the Work for which the Contractor does not intend to pay a Subcontractor or supplier, unless such Work has been performed by others whom the Contractor intends to pay.

§ 9.3.1.3 Work applicable to the Contract Sum shall be kept separate from Work applicable to Change Orders. The Work of each shall contain a summary and a breakdown as stipulated by the Contract Documents.

§ 9.3.1.4 Contractor expressly waives any right to penalties, interest, and attorney's fees pursuant to the prompt payment provisions of the Pennsylvania Commonwealth Procurement Code, 62 Pa. C.S. § 3931 et seq.

§ 9.3.2 Stored Materials

§ 9.3.2.1 Unless otherwise provided in the Contract Documents, payments shall be made on account of materials and equipment delivered and suitably stored at the site for subsequent incorporation in the Work. If approved in advance by the Owner, payment may similarly be made for materials and equipment suitably stored off the site at a location agreed upon in writing. Payment for materials and equipment stored on or off the site shall be conditioned upon compliance by the Contractor with procedures satisfactory to the Owner to establish the Owner's title to such materials and equipment or otherwise protect the Owner's interest, and shall include the costs of applicable insurance, storage, and transportation to the site, for such materials and equipment stored off the site.

§ 9.3.2.2 Materials stored off the construction site shall not be included for payment in the Contractor's application for payment unless prior written approval of the Owner has been obtained. Payment for materials stored off the construction site shall be subject to the conditions in this Section 9.3.2 and the following additional conditions:

.1 Contractor shall provide property insurance for the full cost of the materials stored off the construction site.

.2 Contractor shall provide a bill of sale for the materials granting clear title to the materials to the Owner.

.3 Contractor shall provide waivers of liens, encumbrances or claims relating to the bailment of the materials stored off site or as otherwise required by Owner.

.4 Contractor shall provide Owner all information necessary for the filing of any notices under the Uniform Commercial Code relating to the materials stored off the construction site as may be required by Owner.

.5 The materials stored off the construction site shall be clearly and conspicuously labeled so as to identify Owner's title to the materials and shall be segregated and not commingled with other materials at the storage location.

.6 Contractor shall pay all storage costs, shall be responsible for any damage or deterioration of the materials while in storage or in transit to the construction site and shall pay the cost of inspection of the materials in storage by the Owner.

.7 Contractor shall be responsible for and shall pay all costs of transportation of the materials to the construction site.

.8 Neither Owner's payment for materials stored off the construction site nor the transfer of title to Owner shall in any way reduce Contractor's liability for the complete installation and construction relating to said materials or liability under any performance bond provided for the Project.

.9 Contractor agrees to make the materials available for inspection by the Owner or Owner's representative at any time upon Owner's request.

§ 9.3.2.3 Materials stored on or off site shall be covered at all times from the weather. Any material or equipment, including outdoor exposed equipment, shall be suitably covered and protected at all times until final installation.

§ 9.3.2.4 The Contractor in making or ordering material shipments shall not consign or have consigned materials, equipment or any other items in the name of the Owner. The Owner shall not be under any obligation to make payment for charges on shipments made by or to the Contractor but may, at its option, pay such charges in which case the Contractor shall reimburse the Owner for the amount of such payments plus a service charge of twenty-five percent (25%) of the amount so paid.

§ 9.3.2.5 Materials delivered and stored both on and offsite are the responsibility of the Contractor. The Contractor shall be solely responsible for their safekeeping and usability at the time they are to be incorporated in the Work, and shall, at their own expense, care for and protect the same, employ security as needed, and take out insurance against theft, loss from other cause, damage, destruction and/or such other risks as may be involved which would render the aforesaid materials unfit or unsuitable for use in the Project. Any lost, stolen, or damaged materials shall be replaced at Contractor's expense. Materials shall not be delivered earlier than reasonably necessary for proper progress of the Work unless prior approval is granted by the Owner.

§ 9.3.2.6 All material and work incorporated in the Work covered by partial payments made shall thereupon become the sole property of the Owner, but this provision shall not be construed as relieving the Contractor from the sole responsibility for the care and protection of materials and Work upon which payments have been made or the restoration of any damaged Work, or as a waiver of the right of the Owner to require the fulfillment of all the terms of the Contract.

§ 9.3.3 The Contractor warrants that title to all Work covered by an Application for Payment will pass to the Owner no later than the time of payment. The Contractor further warrants that upon submittal of an Application for Payment all Work for which Certificates for Payment have been previously issued and payments received from the Owner shall, to the best of the Contractor's knowledge, information, and belief, be free and clear of liens, claims, security interests, or encumbrances, in favor of the Contractor, Subcontractors, suppliers, or other persons or entities that provided labor, materials and equipment relating to the Work. Contractor shall indemnify, defend, and hold Owner harmless from any liens, claims, security interests or encumbrances filed by the Contractor, Subcontractors, or anyone claiming by, through or under the Contractor or Subcontractor for items covered or partially covered by payments made by the Owner to Contractor.

§ 9.3.4 Retainage

§ 9.3.4.1 In accordance with 62 Pa. C.S.A §3921, the Owner shall retain ten percent (10%) of all amounts due the Contractor until the Work is fifty percent (50%) completed. When the Work is fifty percent (50%) completed, one-half of the amount retained by the Owner may be returned to the Contractor, provided the Contractor provides written Consent of Surety to such reduction in retainage to the Construction Manager along with its Application for Payment, provided the Architect approved the Application and reduction of retainage, and further provided that the Contractor is making satisfactory progress and there is no specific cause for greater withholding. A specific cause for greater withholding shall include, without limitation, the following:

.1 The Contractor's inability to produce evidence satisfactory to the Construction Manager and/or the Owner evidencing payments for materials, labor and/or payments to Subcontractors, manufacturers or suppliers.

.2 The existence of a dispute between the Owner and the Contractor regarding increased costs claimed by such Contractor.

.3 Contractor's failure to complete the Work in accordance with the Contract Documents, including without limitation, the Drawings and Specifications.

.4 Defective Work or damaged Work identified subsequent to installation.

.5 Failure to comply with any of the Project requirements including, but not limited to, schedule, coordination, staffing, supervision, subcontractors, submittals, etc.

§ 9.3.4.2 In addition to the Owner's right to determine if a specific cause for greater withholding exists, the Architect and Construction Manager shall be entitled to determine if a specific cause for greater withholding exists under this Section. The Architect and Construction Manager may, with Owner's approval, reject the reduction in retainage if the Contractor is not making satisfactory progress in its Work or if the Architect and Construction Manager determine that there is a specific cause for greater withholding. The Architect and Construction Manager will consider the following items when reviewing a request for reduction in retainage and failure to meet any of the following requirements may be considered by the Architect and Construction Manager as sufficient grounds for rejecting a reduction of retainage.

.1 Satisfactory performance of the Work.

.2 Satisfactory maintenance of the Project schedule.

.3 Proper manning of the Project.

.4 Satisfactory completion of the Work.

.5 Satisfactory organization of the Project.

.6 Proper organization and coordination of Subcontractors.

.7 Proper coordination with other Prime Contractors, Owner's forces, and Separate Contractors.

.8 All defective Work has been remedied or is in the process of being remedied.

.9 Work completed is not in contention.

.10 Satisfactory follow-through of paperwork, certified payrolls, Change Order proposals, or Construction Change Directives.

.11 Satisfactory compliance with all government code statutes, regulations and laws including but not limited to local government ordinances and the rules and regulations promulgated for the PA Department of Environmental Protection and the County Conservation District.

User Notes: (846491751)

.12 The Architect's and Construction Manager's decision to reject a reduction of retainage shall be final and binding on the Prime Contractors.

§ 9.3.4.3 The Owner shall retain five percent (5%) of all amounts due the Contractor after the Work is fifty percent (50%) completed. In the event a dispute arises between the Owner and a Prime Contractor or separate contractor, which dispute is based upon increased costs claimed by the Prime Contractor or separate contractor occasioned by delays, or other actions of the Contractor, additional retainage in the sum of one and one-half times the amount of any possible liability may be withheld until such time as a final resolution is agreed to by all parties directly or indirectly involved, unless the Contractor furnishes a bond satisfactory to the Owner to indemnify the Owner against the full claim.

§ 9.3.4.4 The full Contract retainage may be reinstated if the manner of completion of the Work and its progress do not remain satisfactory to the Owner, Construction Manager and Architect, or if the Surety withholds its consent, or for other good and sufficient reasons.

§ 9.3.4.5 All monies retained by the Owner may be withheld from the Contractor until substantial completion of the Project. Upon substantial completion, the Owner shall retain 1.5 times the sum of the estimated cost to complete all incomplete work and the estimated cost to correct or replace any defective or nonconforming work.

§ 9.4 Certificates for Payment

§ 9.4.1 Intentionally deleted.

§ 9.4.2 The Construction Manager will, within seven days after the Construction Manager receives the Contractors' Applications for Payment: (1) review the Applications and certify the amount the Construction Manager determines is due to each of Prime Contractor; (2) prepare a Summary of Contractors' Applications for Payment by combining information from each Prime Contractor's application with information from similar applications for progress payments from the other Prime Contractors; (3) prepare a Project Application and Certificate for Payment; (4) certify the amount the Construction Manager determines is due to each Prime Contractor; and (5) forward the Summary of Contractors' Applications for Payment and Project Application and Certificate for Payment to the Architect.

§ 9.4.2.1 Within seven days after the Architect receives the Project Application and Project Certificate for Payment and the Summary of Contractors' Applications for Payment from the Construction Manager, the Architect will either (1) issue to the Owner a Project Certificate for Payment, with a copy to the Construction Manager; or (2) issue to the Owner a Project Certificate for Payment for such amount as the Architect determines is properly due, and notify the Construction Manager and Owner of the Architect's reasons for withholding certification in part as provided in Section 9.5.1 The Construction Manager will promptly forward the Architect's notice of withholding certification to the Contractors no later than the date established for such progress payment.

§ 9.4.3 The Construction Manager's certification a Project Application and Certificate for Payment, shall be based upon the Construction Manager's evaluation of the Work and the data in the Application or Applications for Payment. The Construction Manager's certification will constitute a representation that, to the best of the Construction Manager's knowledge, information, and belief, the Work has progressed to the point indicated, the quality of the Work is in accordance with the Contract Documents, and that the Contractor is, or Contractors are, entitled to payment in the amount certified.

§ 9.4.4 The Architect's issuance of a Certificate for Payment or, in the case of more than one Contractor, Project Application and Certificate for Payment, shall be based upon the Architect's evaluation of the Work, the recommendation of the Construction Manager, and data in the Application for Payment or Project Application for Payment. The Architect's certification will constitute a representation that, to the best of the Architect's knowledge, information, and belief, the Work has progressed to the point indicated, the quality of the Work is in accordance with the Contract Documents, and that the Contractor is, or Contractors are, entitled to payment in the amount certified.

§ 9.4.5 The representations made pursuant to Sections 9.4.3 and 9.4.4 are subject to continuing observations and ongoing evaluations of the Work for conformance with the Contract Documents upon Substantial Completion, to results of subsequent tests and inspections, to correction of minor deviations from the Contract Documents prior to completion, and to specific qualifications expressed by the Construction Manager or Architect.

User Notes: (846491751)

§ 9.4.6 The issuance of a Certificate for Payment or a Project Certificate for Payment will not be a representation that the Construction Manager or Architect has (1) made exhaustive or continuous on-site inspections to check the quality or quantity of the Work; (2) reviewed construction means, methods, techniques, sequences, or procedures; (3) reviewed copies of requisitions received from Subcontractors and suppliers and other data requested by the Owner to substantiate the Contractor's right to payment; or (4) made examination to ascertain how or for what purpose the Contractor has used money previously paid on account of the Contract Sum.

§ 9.5 Decisions to Withhold Certification

§ 9.5.1 The Construction Manager or Architect may withhold a Certificate for Payment or Project Certificate for payment, shall not certify payment, and will withhold a Certificate for Payment in whole or in part, to the extent reasonably necessary to protect the Owner, if in the Construction Manager's or Architect's option, the representations to the Owner required by Section 9.4.3 and 9.4.4 cannot be made. If the Construction Manager or Architect is unable to certify payment in the amount of the Application, the Construction Manager will notify the Contractor and Owner as provided in Section 9.4.2. If the Contractor, Construction Manager and Architect cannot agree on a revised amount, the Architect will promptly issue a Certificate for Payment or a Project Certificate for Payment for the amount for which the Architect is able to make such representations to the Owner. The Construction Manager or Architect may also withhold a Certificate for Payment or, because of subsequently discovered evidence, may nullify the whole or a part of a Certificate for Payment or Project Certificate for Payment previously issued, to such extent as may be necessary in the Construction Manager's or Architect's opinion to protect the Owner from loss for which the Contractor is responsible, including loss resulting from the acts and omissions described in Section 3.3.2 because of

.1 defective Work not remedied;
.2 third party claims filed or reasonable evidence indicating probable filing of such claims, unless security acceptable to the Owner is provided by the Contractor;
.3 failure of the Contractor to make payments properly to Subcontractors or suppliers for labor, materials or equipment;
.4 reasonable evidence that the Work cannot be completed for the unpaid balance of the Contract Sum;
.5 damage to the Owner or a Separate Contractor or
.6 failure to carry out the Work in accordance with the Contract Documents.
.7 reasonable evidence that the Work will not be completed within applicable Project milestones otherwise within the Contract Time, and that the unpaid balance would not be adequate to cover actual for the anticipated delay; or
.8 failure to comply with government statutes, regulations and laws;
.9 failure to submit Prevailing Wage Certifications as required.

§ 9.5.2 When either party disputes the Architect's decision regarding a Certificate for Payment under Section 9.5.1, in whole or in part, that party may submit a Claim in accordance with Article 15.

§ 9.5.2.1 If the Contractor disputes any determination by the Construction Manager or the Architect with regard to any Certificate of Payment, the Contractor nevertheless expeditiously shall continue to prosecute the Work.

§ 9.5.3 When the reasons for withholding certification are removed, certification will be made for amounts previously withheld.

§ 9.5.4 If the Architect or Construction Manager withholds certification for payment under Section 9.5.1, the Owner may, at its sole option, issue joint checks to the Contractor and to any Subcontractor or supplier to whom the Contractor failed to make payment for Work properly performed or material or equipment suitably delivered. If the Owner makes payments by joint check, the Owner shall notify the Architect and the Construction Manager, and both will reflect such payment on the next Certificate for Payment.

§ 9.6 Progress Payments

§ 9.6.1 After the Architect has issued a Certificate for Payment or Project Certificate for Payment, the Owner shall make payment in the manner and within the time provided in the Contract Documents and shall so notify the Construction Manager and Architect. Such payment by the Owner shall not constitute approval or acceptance of any item of cost in the Application for Payment. No partial payment made hereunder shall be or be deemed to be final acceptance or approval of that portion of the Work to which such partial payment relates or relieve the Contractor of any of its obligations hereunder with respect thereto.

User Notes: (846491751)

§ 9.6.2 The Contractor shall pay each Subcontractor and supplier, no later than 20 days after receipt of payment from the Owner, the amount to which the Subcontractor or supplier is entitled, reflecting percentages actually retained from payments to the Contractor on account of the Subcontractor's portion of the Work. The Contractor shall, by appropriate agreement with each Subcontractor, require each Subcontractor to make payments to Sub-subcontractors in a similar manner.. Each Contractor and each Subcontractor shall comply with the Pennsylvania Prompt Payment Act, 73 P.S. § 501 et seq., as applicable to public school construction projects. Nothing herein shall be deemed to waive or limit any rights or remedies available under applicable Pennsylvania law.

§ 9.6.2.1 The Contractor shall, at the request of the Owner, the Construction Manager, or the Architect, prior to the submission of an Application for Payment, submit an affidavit signed by the Contractor, Subcontractors', manufacturers and/or suppliers that they have been paid for their portion of the Work from previous Applications for Payment such Subcontractors, manufacturers and/or suppliers have performed Work.

§ 9.6.3 The Construction Manager may, on request, furnish to a Subcontractor or supplier, if practicable, information regarding percentages of completion or amounts applied for by the Contractor and action taken thereon by the Owner, Construction Manager and Architect on account of portions of the Work done by such Subcontractor or supplier.

§ 9.6.4 The Owner has the right to request written evidence from the Contractor that the Contractor has properly paid Subcontractors and suppliers' amounts paid by the Owner to the Contractor for subcontracted Work. If the Contractor fails to furnish such evidence within seven days, the Owner shall have the right to contact Subcontractors and suppliers to ascertain whether they have been properly paid. Neither the Owner, Construction Manager nor Architect shall have an obligation to pay, or to see to the payment of money to, a Subcontractor or supplier.

§ 9.6.5 The Contractor's payments to suppliers shall be treated in a manner similar to that provided in Sections 9.6.2, 9.6.3 and 9.6.4.

§ 9.6.6 A Certificate for Payment, a progress payment, or partial or entire use or occupancy of the Project by the Owner shall not constitute acceptance of Work not in accordance with the Contract Documents. Issuance of a Certificate for Payment by the Architect, payment on the Contract Sum or in reducing any retaining amount, or any use or occupancy of the Work shall not relieve the Contractor of its the obligations under the Contract Documents, including warranty of the Work. At any time, the surety shall have the right to examine the status of the Work, as well as any payments.

§ 9.6.7 Payments received by the Contractor for Work properly performed by Subcontractors or provided by suppliers shall be held by the Contractor for those Subcontractors or suppliers who performed Work or furnished materials, or both, under contract with the Contractor for which payment was made by the Owner. Nothing contained herein shall require money to be placed in a separate account and not commingled with money of the Contractor, create any fiduciary liability or tort liability on the part of the Contractor for breach of trust, or entitle any person or entity to an award of punitive damages against the Contractor for breach of the requirements of this provision.

§ 9.6.8 The Contractor shall defend and indemnify the Owner, Architect, and Construction Manager from all loss, liability, damage or expense, including reasonable attorney's fees and litigation expenses, arising out of any lien claim or other claim for payment by any Subcontractor or supplier of any tier. Upon receipt of notice of a lien claim or other claim for payment, the Owner shall notify the Contractor. If approved by the applicable court, when required, the Contractor may substitute a surety bond for the property against which the lien or other claim for payment has been asserted.

§ 9.7 Failure of Payment

If through no fault of the Contractor the Owner does not pay the Contractor the amount certified by the Construction Manager and Architect within 21 days after the date established in the Contract Documents then the Contractor may, upon 14 additional days' notice to the Owner, Construction Manager and Architect, stop the Work until payment of the undisputed amount owing has been received. The Contract Time shall be extended for the amount of time the Contractor stopped Work. Contractor shall not stop work or terminate this Agreement if the Architect or Construction Manager should refuse to issue a Certificate of Payment because the Application for Payment does not conform with the requirements of the Contract Documents.

§ 9.8 Substantial Completion

§ 9.8.1 Substantial Completion is the stage in the progress of the Work when the Work or designated portion thereof is sufficiently complete in accordance with the Contract Documents, and the local authorities having jurisdiction have issues a temporary or final Certificate of Occupancy, so the Owner can occupy or utilize the Work for its intended use. In general, the only remaining Work shall be minor in nature, so that the Owner can occupy the building or major area thereof on that date and the completion of the Work by the Contractor would not materially interfere with or hamper the Owner's normal operations. Contractor recognizes that 'normal operations' require the use and occupancy of the Work by the public, students, and Owner's staff without interruption and that any punchlist or corrective work shall be done at times when the Work is not so occupied unless otherwise permitted by Owner.

§ 9.8.1.1 The Date of Substantial Completion will be established after Substantial Completion inspection and the Architect's and Construction Manager's inspection and concurrence that the Work has achieved Substantial Completion.

§ 9.8.1.2 For Substantial Completion to occur for the Contractor, the following conditions shall be met:

.1 All of the Project parts and systems are accessible, operable and usable by the Owner, including the site work, HVAC systems, plumbing, electric, and Life Safety Systems, and commissioning of such systems has been successfully completed.

.2 The Project is clean, as defined elsewhere in the Contract Documents.

.3 Operation and maintenance manuals have been submitted to the Architect through the Construction Manager.

.4 Training of the Owner's personnel has taken place as required elsewhere in the Specifications.

.5 Annotated Record Drawings have been submitted to the Architect through the Construction Manager.

.6 All Federal, State and local authorities having jurisdiction over the Project have issued the requisite occupancy permits and/or approvals so that the Owner can occupy or utilize the Work for its intended purpose.

§ 9.8.1.3 There will be a phased completion date for each phase to account for and address retainage reduction for select phases of the Project agreed to by the Contractor with the Construction Manager and Architect in accordance with the specific milestone completion dates where Owner takes beneficial use of certain designated phases. The conditions of phased completion shall be similar to those stated for Substantial Completion of the entire Project except that the warranty will not begin. Warranties will begin only at Substantial Completion of the entire Project.

§ 9.8.2 When the Contractor considers that the Work, or a portion thereof which the Owner agrees to accept separately, is substantially complete, the Contractor shall notify the Construction Manager and the Contractor, Architect, and Construction Manager shall jointly prepare a comprehensive list of items (punchlist) to be completed or corrected to achieve Final Completion. The punchlist shall be assembled in the web-based project management software. Failure to include an item on such list does not alter the responsibility of the Contractor to complete all Work in accordance with the Contract Documents.

§ 9.8.3 Upon completion of the list, the Architect, assisted by the Construction Manager, will make an inspection to determine whether the Work or designated portion thereof is substantially complete. If the Architect's inspection discloses any item, whether or not included on the list, which is not sufficiently complete in accordance with the Contract Documents so that the Owner can occupy or utilize the Work or designated portion thereof for its intended use, the Contractor shall, before issuance of the Certificate of Substantial Completion, complete or correct such item upon notification by the Architect. In such case, the Contractor shall then submit a request for another inspection by the Architect, assisted by the Construction Manager, to determine Substantial Completion. If more than one inspection for Substantial Completion is required, the Contractor will be billed and responsible for the professional fees and services of the Architect and/or Construction Manager for performing all subsequent inspections.

§ 9.8.4 When the Architect, assisted by the Construction Manager, determines that the Work of all of the Contractors, or designated portion thereof, is substantially complete, the Construction Manager will prepare, and the Construction Manager and Architect shall execute, a Certificate of Substantial Completion that shall establish the date of Substantial Completion; establish responsibilities of the Owner and Contractor for security, maintenance, heat, utilities, damage to the Work and insurance; and fix the time within which the Contractor shall finish all items on the list accompanying the Certificate. Warranties required by the Contract Documents shall commence on the date of

User Notes: (846491751)

Substantial Completion of the Work or designated portion thereof unless otherwise provided in the Certificate of Substantial Completion.

§ 9.8.5 The Certificate of Substantial Completion shall be submitted to the Owner and Contractor for their written acceptance of responsibilities assigned to them in the Certificate. Upon such acceptance, and consent of surety if any, the Owner shall make payment of retainage applying to the Work or designated portion thereof upon certification by Architect that retainage is due to Contractor. Such payment shall be adjusted for Work that is incomplete or not in accordance with the requirements of the Contract Documents.

§ 9.8.5.1 Inspections for Substantial Completion will be conducted only at the completion of the Project or a scheduled phase of the Project. Such inspection will take place only when all Prime Contractors are complete with the Project or that scheduled phase of the Project. Any items to be completed or corrected that remain on the punchlist shall have a value of 150% of the cost affixed to them. Construction Manager, after consultation with the Architect, will provide the valuation. Such amount shall be retained from payments and held until the items are completed or corrected to the satisfaction of the Architect.

§ 9.8.5.2 In no event shall the Project or portion thereof be certified as substantially complete until at least 90% of the work on the Project, or portion thereof, is complete.

§ 9.8.5.3 Intentionally deleted.

§ 9.8.5.4 Minimum Completion Threshold.
The percentage-of-completion requirement stated in Section 9.8.5.2 establishes a minimum condition precedent to consideration of Substantial Completion and does not replace or supersede the functional and operational criteria set forth in Section 9.8.1, all of which must be satisfied for certification of Substantial Completion.

§ 9.8.6 In no case shall the time established for the completion and correction of items on the list extend beyond 30 days after certification of Substantial Completion, except for delay beyond the Contractor's control. The Contractor shall pay for all architectural and consultant services incurred thereafter due to the failure of Contractor to complete and/or correct Work on the list or to submit documentation and items required for Final Completion and Final Payment.

§ 9.8.7 If the Contractor fails to complete or correct the items within designated timeframe for completion, then the Owner may, in its sole discretion, (a) deduct 1.5 times the estimated cost to correct or complete one, some, or all of the incorrect and unsatisfactory items from the Contract Sum and remove those items from the Contractor's scope of work, or (b) assess liquidated damages in the amount of $500 per day against the Contractor.

§ 9.9 Partial Occupancy or Use

§ 9.9.1 The Owner may occupy or use any completed or partially completed portion of the Work at any stage when such portion is designated by separate agreement with the Contractor, provided such occupancy or use is consented to by public authorities having jurisdiction over the Project. Such partial occupancy or use may commence whether or not the portion is substantially complete, provided the Owner and Contractor have accepted in writing the responsibilities assigned to each of them for payments, retainage if any, security, maintenance, heat, utilities, damage to the Work and insurance, and have agreed in writing concerning the period for correction of the Work and commencement of warranties required by the Contract Documents. When the Contractor considers a portion substantially complete, the Contractor shall notify the Construction Manager as provided under Section 9.8.2. Consent of the Contractor to partial occupancy or use shall not be unreasonably withheld. The stage of the progress of the Work shall be determined by written agreement between the Owner and Contractor or, if no agreement is reached, by decision of the Architect after consultation with the Construction Manager. Contractor shall not withhold partial occupancy or use from Owner due to failure of the Contractor to complete the Work in accordance with the Contract Documents in the time stipulated in the Agreement and approved Change Orders, if any, for extension of time.

§ 9.9.2 Immediately prior to such partial occupancy or use, the Owner, Construction Manager, Contractor, and Architect shall jointly inspect the area to be occupied or portion of the Work to be used in order to determine and record the condition of the Work.

User Notes: (846491751)

§ 9.9.3 Unless otherwise agreed upon, partial occupancy or use of a portion or portions of the Work shall not constitute acceptance of Work not complying with the requirements of the Contract Documents.

§ 9.9.4 As Work is completed and occupied, the Contractor shall ensure the continuing construction activities will not unreasonably interfere with the use, occupancy and quiet enjoyment of the completed portions thereof.

§ 9.9.5 The Contractor agrees to coordinate the Work with the Construction Manager, the Architect, and the Owner in order to minimize disturbance to occupied portions of the structure. In the event performances or tests are conducted in close proximity to the Work in progress, the Contractor agrees to cease all Work which may disturb the Owner's occupants.

§ 9.9.6 The Owner shall have the right to occupy and erect or place any apparatus or equipment in any part of the Project without such installation being construed as an acceptance of any of the Contractor's workmanship or materials, or as affecting any terms in the Contract. Prior, however, to the Owner taking possession, an inspection will be made by the Construction Manager, Architect, and Owner of the area and any subsequent damage due to occupancy by the Owner will not be the responsibility of the Contractor.

§ 9.10 Final Completion and Final Payment

§ 9.10.1 Upon completion of the Work, the Contractor shall forward to the Construction Manager a notice that the Work is ready for final inspection and acceptance, and shall also forward to the Construction Manager a final Contractor's Application for Payment. Upon receipt, the Construction Manager shall perform an inspection to confirm the completion of Work of the Contractor. The Construction Manager shall make recommendations to the Architect when the Work of all of the Contractors is ready for final inspection, and shall then forward the Contractors' notices and Application for Payment or Project Application for Payment, to the Architect, who will promptly make such inspection. When the Architect finds the Work acceptable under the Contract Documents and the Contract fully performed ("Final Completion"), the Construction Manager and Architect will promptly issue a final Certificate for Payment or Project Certificate for Payment stating that to the best of their knowledge, information and belief, and on the basis of their on-site visits and inspections, the Work has been completed in accordance with the Contract Documents and that the entire balance found to be due the Contractor and noted in the final Certificate is due and payable. The Construction Manager's and Architect's final Certificate for Payment or Project Certificate for Payment will constitute a further representation that conditions listed in Section 9.10.2 as precedent to the Contractor's being entitled to final payment have been fulfilled.

§ 9.10.2 Neither final payment nor any remaining retained percentage shall become due until the Contractor submits to the Architect through the Construction Manager (1) an affidavit that payrolls, bills for materials and equipment, and other indebtedness connected with the Work for which the Owner or the Owner's property might be responsible or encumbered (less amounts withheld by Owner) have been paid or otherwise satisfied, (2) a certificate evidencing that insurance required by the Contract Documents to remain in force after final payment is currently in effect, (3) a written statement that the Contractor knows of no reason that the insurance will not be renewable to cover the period required by the Contract Documents, (4) consent of surety, if any, to final payment (5) documentation of any special warranties, such as manufacturers' warranties or specific Subcontractor warranties, (6) final "as-built" prints of record drawings marked by the Contractor with record information as set forth in the Contract Documents, (7) a final Contractor's sworn statement showing all Subcontractors and material and equipment suppliers to be fully paid and similar sworn statement from Subcontractors and Sub-Subcontractors confirming that they have been paid, and (8) other data establishing payment or satisfaction of obligations, such as receipts and releases and waivers of liens, claims, security interests, or encumbrances arising out of the Contract, to the extent and in such form as may be designated by the Owner. If a Subcontractor refuses to furnish a release or waiver required by the Owner, the Contractor may furnish a bond satisfactory to the Owner to indemnify the Owner against such lien, claim, security interest, or encumbrance. If a lien, claim, security interest, or encumbrance remains unsatisfied after payments are made, the Contractor shall refund to the Owner all money that the Owner may pay in discharging the lien, claim, security interest, or encumbrance, including all costs and reasonable attorneys' fees.

§ 9.10.3 If, after Substantial Completion of the Work, final completion thereof is materially delayed through no fault of the Contractor or by issuance of Change Orders affecting final completion, and the Construction Manager and Architect so confirm, the Owner shall, upon application by the Contractor and certification by the Construction Manager and Architect, and without terminating the Contract, make payment of the balance due for that portion of the Work fully completed, corrected, and accepted. If the remaining balance for Work not fully completed or corrected is less than

retainage stipulated in the Contract Documents, and if bonds have been furnished, the written consent of the surety to payment of the balance due for that portion of the Work fully completed and accepted shall be submitted by the Contractor to the Architect through the Construction Manager prior to certification of such payment. Such payment shall be made under terms and conditions governing final payment.

§ 9.10.3.1 If more than one inspection for Final Completion is required, the Contractor will be billed and responsible for the professional fees and services of the Architect and/or Construction Manager for performing all subsequent inspections. Following Substantial Completion, in the event the Contractor or Subcontractor fails to complete the list of items of the Work instructed by the Architect or Construction Manager to be corrected or completed within the time period set forth elsewhere in the Contract Documents or if no such time period is set forth elsewhere in the Contract Documents, then 30 days from Substantial Completion, the Owner may: (i) exercise any available remedies to correct or complete deficient Work or retain a third party to correct or complete such Work at the cost of the Contractor; (ii) retain and deduct from any payments or retention otherwise due to the Contractor any fees and expenses for services required to be provided by the Architect and/or Construction Manager; and/or (iii) recover against the Contractor and Surety under the Performance Bond, as part of its damages any and all legal fees and professional fees, jointly and severally, and all other costs and expenses incurred by the Owner in connection with the Owner's pursuit of its rights under the Contract and Performance Bond, including, but not limited to, any and all legal fees, professional fees, and all other costs and expenses related thereto. The Owner shall have the right to set off said amounts against any amount alleged to be due and owing to the Contractor under the Contract.

§ 9.10.4 The making of final payment shall not constitute a waiver of Claims by the
(Paragraphs deleted)
Owner.

§ 9.10.5 Acceptance of final payment by the Contractor, a Subcontractor, or a supplier, shall constitute a waiver of claims by that payee except those previously asserted in a timely manner and in accordance with the Contract Documents and specifically identified in writing as unsettled at the time of final Application for Payment.

§ 9.11 Liquidated Damages

§ 9.11.1 Liquidated damages as set forth in Article 3, Article 5, and Article 9, shall be assessed as they are incurred.

§ 9.11.2 In the event the Contractor or its Surety litigates the enforceability or imposition of liquidated damages as set forth in the Contract Documents and the Owner prevails in any part on such claim, the Contractor and its Surety shall be liable to the Owner for the Owner's costs incurred in defending the enforceability or imposition of liquidated damages, including, but not necessarily limited to, attorney's fees, expert witness fees, and consultants' fees.

ARTICLE 10 PROTECTION OF PERSONS AND PROPERTY

§ 10.1 Safety Precautions and Programs

The Contractor shall be responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the performance of the Contract. The Contractor shall submit the Contractor's safety program to the Construction Manager for verification that the Contractor has a safety program within 10 days after Notice to Proceed. The Construction Manager's responsibilities for verification of safety programs shall not extend to any review of the adequacy of the Contractor's safety program, or control over or charge of the acts or omissions of the Contractors, Subcontractors, agents or employees of the Contractors or Subcontractors, or any other persons performing portions of the Work.

§ 10.1.1 The Contractor's safety program shall reference Federal and State OSHA standards and other rules and regulations applicable to construction activities on the Project. The Contractor's Project Safety and Health Program shall include, without limitation, as a minimum, the following:

§ 10.1.1.1 New Hire Safety and Orientation Program: Each new or reassigned employee of the Contractor shall receive a thorough safety orientation including, without limitation, employer/employee responsibilities under Federal and State OSHA regulations, ear protection in high noise level areas, respiratory protection, Safety Data Sheets (SDS), fire protection, first aid facilities, and look-out procedures on electrical equipment.

User Notes: (846491751)

§ 10.1.1.2 The Contractor shall furnish Safety Data Sheets (SDS) to the Construction Manager for all materials used on the Project in accordance with governmental requirements. The Contractor shall maintain one complete set of SDS for all materials used on the Project site for periodic inspection by the Owner and the Construction Manager. The SDS may be in hardcopy or electronic format, provided electronic access to the SDS does not create a barrier to access the documents. The Contractor shall be responsible for continually updating their SDS information on site and provide the Construction Manager with any revisions to the SDS. The Contractor shall be responsible for compliance with OSHA and the Hazard Communications Standard.

§ 10.1.1.3 Weekly Toolbox Safety Meetings: The Contractor shall conduct Weekly Toolbox Safety Meetings to provide employees with current safety information. Attendance is required and records must be kept on file in the Contractor's office for review.

§10.1.2 Safety

§10.1.2.1 Without limiting any other provisions regarding safety in the Contract Documents or under law, the Contractor shall take reasonable precautions for the safety of, and shall provide reasonable protection to prevent damage, injury, or loss to employees on the Work and other persons who may be affected thereby, and the Work and materials and equipment to be incorporated therein, with respect to the Work. The Contractor shall comply with all applicable laws, ordinances, rules, regulations and lawful orders of public authorities bearing on safety of persons and property and their protection from damage, injury or loss, specifically including all measures necessary and as may be required to comply with the Guidance and Directives from the Commonwealth of Pennsylvania, the Centers for Disease Control and Prevention (CDC), and any other governmental agency, relating to and arising from the COVID-19 pandemic. The Contractor acknowledges and agrees that the Guidance and Guidelines referenced herein may be revised and updated from time to time, and Contractor agrees to comply with any such revisions and updates.

§10.1.2.2 If applicable and when requested by the Owner, Construction Manager, or Architect, the Contractor agrees to submit to Owner a copy of Contractor's written plan for complying with the Guidelines and Guidance Documents referenced herein, including safe-distancing measures and other mitigation measures to protect the health and safety of Contractor's employees and the general public, as well as the Directive(s) of the Pennsylvania Governor, as may be updated from time to time. Submission of the plan to Owner shall not impose upon or establish for Owner any responsibility or obligation for Contractor's work environment or work-site safety, as such responsibility and obligation is solely upon the Contractor.

§ 10.1.2.3 SAFETY AND HEALTH REGULATIONS FOR CONSTRUCTION

The Contractor shall be fully informed of and shall comply with all local, state, and federal regulations for construction as amended to date, as the rules and regulations in detail apply for the Work under the Contract. All applicable rules and regulations of governing bodies are hereby made a part of these General Conditions by reference, as if written out in full within.

§ 10.2 Safety of Persons and Property

§ 10.2.1 The Contractor shall take reasonable precautions for safety of, and shall provide reasonable protection to prevent damage, injury, or loss to

- **.1** employees on the Work, the Owner's employees, representative, and building occupants, and other persons who may be affected by the Work or the Contractor's operations;
- **.2** the Work and materials and equipment to be incorporated therein, whether in storage on or off the site, under care, custody, or control of the Contractor, a Subcontractor, or a Sub-subcontractor;
- **.3** other property at the site or adjacent thereto, such as trees, shrubs, lawns, walks, pavements, roadways, structures, and utilities not designated for removal, relocation, or replacement in the course of construction; and
- **.4** construction or operations by the Owner, Separate Contractors, or other Prime Contractors, Subcontractors, or Sub-subcontractors.

§ 10.2.2 The Contractor shall comply with, and give notices or reports required by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities, bearing on safety of persons or property or their protection from damage, injury, or loss. If the Contractor fails to give such notices, or fails to comply with such laws, statutes, ordinances, codes, rules, regulations, and lawful orders of public authorities, Contractor shall be liable for and shall indemnify, defend, and hold harmless Owner, Architect, and Construction Manager, and their

User Notes: (846491751)

respective employees, officers and agents, against any resulting fines, penalties, judgments, or damages, including reasonable attorney's fees imposed on or incurred by the parties indemnified hereunder.

§ 10.2.2.1 The Contractor shall comply with Pennsylvania Act 187 of 1996 to call Pennsylvania One Call System, Inc. (800) 242-1776 prior to digging, excavating, or moving earth on the Project. The Contractor shall contract for the services of a qualified agency to assist in locating utilities on site not covered under Pennsylvania One Call System, Inc.

§ 10.2.3 The Contractor shall implement, erect, and maintain, as required by existing conditions and performance of the Contract, reasonable safeguards for safety and protection, including posting danger signs and other warnings against hazards; promulgating safety regulations; and notifying the owners and users of adjacent sites and utilities of the safeguards. The Contractor shall also be responsible, at the Contractor's sole cost and expense, for all measures necessary to protect any property adjacent to the Project and improvements therein. Any damage to such property or improvements shall be promptly repaired by the Contractor.

§ 10.2.4 When use or storage of explosives or other hazardous materials or equipment or unusual methods are necessary for execution of the Work, the Contractor shall provide reasonable notice to the Owner and Construction Manager and exercise utmost care and carry on such activities under supervision of properly qualified personnel. Any Work approved must be in strict compliance with state and local regulations.

§ 10.2.5 The Contractor shall promptly remedy damage and loss (other than damage or loss insured under property insurance required by the Contract Documents) to property referred to in Sections 10.2.1.2, 10.2.1.3 and 10.2.1.4 caused in whole or in part by the Contractor, a Subcontractor, a Sub-subcontractor, or anyone directly or indirectly employed by any of them, or by anyone for whose acts they may be liable and for which the Contractor is responsible under Sections 10.2.1.2, 10.2.1.3 and 10.2.1.4. The Contractor may make a Claim for the cost to remedy the damage or loss to the extent such damage or loss is attributable to acts or omissions of the Owner, Construction Manager or Architect or anyone directly or indirectly employed by any of them, or by anyone for whose acts any of them may be liable, and not attributable to the fault, acts, omissions or negligence of the Contractor. The foregoing obligations of the Contractor are in addition to the Contractor's obligations under Section 3.18.

§ 10.2.6 The Contractor shall designate a responsible member of the Contractor's organization at the site whose duty shall be the prevention of accidents. This person shall be the Contractor's superintendent unless otherwise designated by the Contractor in writing to the Owner, Construction Manager and Architect.

§ 10.2.7 The Contractor shall not permit any part of the construction or site, or adjacent site, to be loaded so as to cause damage or create an unsafe condition.

§ 10.2.7.1 The Contractor shall provide and maintain in good operating condition suitable and adequate fire protection equipment and services and shall comply with all reasonable recommendations of the fire insurance company carrying insurance on the Work or by the local fire chief or fire marshal. The area within the site limits shall be kept orderly and clean, and all combustible rubbish shall be promptly removed from the site.

§ 10.2.7.2 The Contractor shall at all times protect excavations, trenches, buildings, and materials from rainwater, ground water, back up or leakage of sewers, drainage or other piping, and from water of any other origin, and shall remove promptly any accumulation of water from the Project site. Contractor shall provide and operate all pumps, piping and other equipment necessary to this end.

§ 10.2.7.3 The Contractor shall remove snow or ice from the Project site which may result in damage or delay.

§ 10.2.7.4 The Contractor shall take all precautions necessary to prevent loss or damage caused by vandalism, theft, burglary, pilferage, or unexplained disappearance of property of the Owner, whether forming part of the Work or located within those areas of the Project to which the Contractor has access. The Contractor shall have full responsibility for the security of such property of the Owner located in such areas and shall reimburse the Owner for any such loss, damage, or injury, except such as may be directly caused by agents or employees of the Owner.

User Notes: (846491751)

§ 10.2.8 Injury or Damage to Person or Property
If the Contractor suffers injury or damage to person or property because of an act or omission of another party, written notice of the injury or damage, whether or not insured, shall be given to the Owner and Construction Manager within a reasonable time not exceeding 21 days after first observance, otherwise, such claim shall be deemed waited by the Contractor. The notice shall provide sufficient detail to enable the other party to investigate the matter. The Owner shall not be responsible for actions or inactions of other Prime Contractors or their Subcontractors.

§ 10.3 Hazardous Materials
§ 10.3.1 The Contractor is responsible for compliance with any requirements included in the Contract Documents regarding hazardous materials or substances. If the Contractor encounters a hazardous material or substance not addressed in the Contract Documents and if reasonable precautions will be inadequate to prevent foreseeable bodily injury or death to persons resulting from a hazardous material or substance, including but not limited to asbestos or polychlorinated biphenyl (PCB), encountered on the site by the Contractor, the Contractor shall, upon recognizing the condition, immediately stop Work in the affected area and notify the Owner, Construction Manager and Architect of the condition.

§ 10.3.2 Upon receipt of the Contractor's notice, the Owner shall obtain the services of a licensed consultant to verify the presence or absence of the hazardous material or substance reported by the Contractor and, in the event such material or substance is found to be present, to cause it to be rendered harmless. When the hazardous material or substance has been rendered harmless, Work in the affected area shall resume upon written agreement of the Owner and Contractor. By Change Order, the Contract Time shall be extended appropriately.

§ 10.3.3 To the extent covered by the Owner's applicable insurance policies, the Owner shall indemnify, defend, and hold harmless the Contractor, Subcontractors, Construction Manager, Architect, their consultants, and agents and employees of any of them from and against claims, damages, losses, and expenses, including but not limited to attorneys' fees, arising out of or resulting from performance of the Work in the affected area if, and only if, in fact the hazardous material or substance presents the risk of bodily injury or death as described in Section 10.3.1 and has not been rendered harmless by the Owner after receipt of notice from Contractor of the same, provided that such claim, damage, loss, or expense is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than the Work itself), except to the extent that such damage, loss, or expense is not due to the fault or negligence of the party seeking indemnity or a party other than the Owner.

§ 10.3.4 The Owner shall not be responsible under this Section 10.3 for hazardous materials or substances the Contractor brings to the site unless such materials or substances are required by the Contract Documents.

§ 10.3.5 The Contractor shall reimburse the Owner for the cost and expense the Owner incurs (1) for remediation of hazardous materials or substances the Contractor brings to the site and negligently handles, or (2) where the Contractor fails to perform its obligations under Section 10.3.1, except to the extent that the cost and expense are due to the Owner's fault or negligence.

§ 10.3.6 Intentionally deleted.

§ 10.4 Emergencies
In an emergency affecting safety of persons or property, the Contractor shall act to prevent threatened damage, injury, or loss and shall immediately notify the Owner, Construction Manager, Architect, and appropriate public safety authorities (i.e., police, EMS, fire service, etc.). Extensions of time claimed by the Contractor on account of an emergency shall be determined as provided in Article 15 and Article 7.

ARTICLE 11 INSURANCE AND BONDS
§ 11.1 Contractor's Insurance
§ 11.1.1 The Contractor shall purchase and maintain insurance of the types and limits of liability, containing the endorsements, and subject to the terms and conditions, as described in the Agreement or elsewhere in the Contract Documents effective from the date of signing of the Agreement until 90 days after Final Payment except as otherwise provided below. The Contractor shall purchase and the required insurance from an insurance company or insurance companies lawfully authorized to issue insurance in the Commonwealth of Pennsylvania and have an A- or better, or financial rating of X or better with the A.M. Best's Company Key Rating, Guide - Latest Edition and being, satisfactory to Owner and Architect, and which are licensed to practice business in the Commonwealth of

Pennsylvania. The Contractor shall obtain insurance for protection from claims under workers' compensation acts and other employee benefits acts which are applicable, claims for damages because of bodily injury, including, without limitation, death, and claims for damages, other than to the Work itself, to property which may arise out of or result from the Contractor's operations or completed operations under the Contract, whether such operations be by the Contractor or by a Subcontractor or anyone directly or indirectly employed by any of them or by anyone for whose acts any of them may be liable. Contractor is responsible to pay any and all deductibles and/or self-insured retentions that may apply to the required insurance. The Contractor shall include the Owner, Construction Manager and Construction Manager's consultants, municipalities having jurisdiction, and the Architect and Architect's consultants, as additional insureds under the Contractor's insurance policies, except for workers' compensation, or as otherwise described in the Contract Documents. All of the Contractor's insurance policies and the Certificates of Insurance shall state that such insurance is primary and non-contributory with respect to any other valid and collectible insurance policies. The Owner and the Contractor each intend that the policies provided in response to this Section 11.1 shall protect all of the parties insured and provide primary and non-contributory coverage for losses and damages caused by the perils covered thereby. Accordingly, such policies shall state that in the event of payment of loss or damage, the insurer shall have no right of recovery against the parties named as insureds or additional insureds:

§ 11.1.1.1 Contractor shall submit to the Owner an appropriate Certificate of Insurance within the time required by the Instructions to Bidders which certifies that the Contractor is covered by insurance requirements of this Article 11. Further, Contractor fully understands that failure to timely submit the Certificate of Insurance shall give the Owner the option to withdraw the award and forfeit the Bidder's Bid Bond.

§ 11.1.1.2 The insurance required by this Section 11.1 shall be written for not less than limits of liability specified in the Contract Documents as set forth in Section 11.1.1.3 below or required by law, whichever coverage is greater. Coverages must be written on an occurrence basis with the exception of professional and environmental/pollution liability that may be written on a "claims made" basis, and shall be maintained without interruption from the date of signing of the Agreement until 90 days after the date of final payment and termination of any coverage required to be maintained after final payment and, with respect to the Contractor's products and completed operations, and any coverage written on a claims-made basis, until the expiration of the period for correction of Work or for such other period for maintenance of completed operations coverage as specified in the Contract Documents. If any such insurance is due to expire during the required coverage period, the Contractor shall not permit the coverage to lapse and shall furnish evidence of continued coverage to the Owner and the Architect for record. The minimum coverage limits set forth herein shall be subject to periodic review, and Owner reserves the right to require that the Contractor increase the minimum coverage limits if, in the reasonable opinion of Owner, the minimum coverage limits become inadequate.

§ 11.1.1.3 The Contractor shall provide Commercial General Liability including, without limitation, coverage for direct operations, sublet work, personal and advertising injury, bodily injury, property damage with explosion, collapse, and underground hazard coverage (X, C, U) contractual liability, products and completed operations with limits not less than those stated below.

.1	General Aggregate per Project (Other than Products and Completed Operations)	$2,000,000
.2	Products and Completed Operations Aggregate	$1,000,000
.3	Personal and Advertising Injury	$1,000,000
.4	Each Occurrence	$1,000,000

.5 Products and Completed Operations Insurance shall be maintained for a minimum period of two (2) years after final payment and the Contractor shall continue to provide evidence of such coverage to the Owner on an annual basis during the aforementioned period.

§ 11.1.1.4 The Contractor shall provide comprehensive automobile liability insurance including, without limitation, coverage for owned, non-owned, and hired vehicles with limits not less $1,000,000 for each occurrence, bodily injury and property damage combined.

§ 11.1.1.5 The Contractor shall provide an umbrella excess liability policy written on an excess basis with minimum coverage limits not less than $11,000,000 for each occurrence and $11,000,000 in the aggregate which provides excess coverage over all underlying insurance policies. The umbrella excess liability policy shall include, without limitation, a follow form aggregate provision.

User Notes: (846491751)

§ 11.1.1.6 The Contractor shall provide insurance covering losses caused by pollution incidents in limits not less than those listed below, that arise from the operations of the Contractor. Insurance shall apply to bodily injury, property damage, including loss of use of damaged property or of property that has not been physically injured; cleanup costs and defense, including costs and expenses incurred in the investigation, defense, or settlement of claims.

For General Contracts, Contractor's Pollution Liability:	$1,000,000 per claim $1,000,000 aggregate
For HVAC, Plumbing and Electrical Contracts, Contractor's Pollution Liability:	$100,000 per claim $100,000 aggregate

§ 11.1.1.7 The Contractor shall provide Workmen's Compensation in the amounts and coverage as required by Commonwealth of Pennsylvania Workmen's Compensation laws and Employers Liability with the following minimum limits:

.1	Each accident	$500,000
.2	Disease, each employee	$500,000
.3	Disease, policy limit	$500,000

§ 11.1.1.8 If the Contractor stores work offsite, the Contractor shall provide insurance coverage for portions of the Work stored off the site after written approval of the Owner at the value established in the approval, and also for portions of the Work in transit.

§ 11.1.1.9 None of the requirements contained herein as to the types, limits, or Owner's approval of insurance coverage to be maintained by Contractor are intended to and shall not in any manner, limit, qualify, or quantify the liabilities and obligations assumed by Contractor under the Contract Documents, any other agreement with the Owner, or otherwise provided by law.

§ 11.1.1.10 Failure of Contractor to provide insurance as herein required or failure of Owner to require evidence of insurance or to notify Contractor of any breach by Contractor of the requirements of this Section shall not be deemed to be a waiver of any of the terms of the Contract Documents, nor shall they be deemed to be a waiver of the obligation of the Contractor to defend, indemnify, and hold harmless the indemnified parties as required herein. The obligation to procure and maintain any insurance required is a separate responsibility of Contractor and independent of the duty to furnish a copy or certificate of such insurance policies.

§ 11.1.2 Contractor's Performance Bond and Payment Bond. The Contractor shall provide surety bonds of the types, for such penal sums, and subject to such terms and conditions as required by the Contract Documents covering the Contractor's faithful performance of the Contract and payment of obligations arising thereunder. The Contractor shall purchase and maintain the required bonds from a company or companies acceptable to the Owner and lawfully authorized to issued surety bonds in the Commonwealth of Pennsylvania, and the cost thereof shall be included in the Contract Sum The amount of each Performance and Payment bond shall be equal to 100 percent (100%) of the Contract Sum. The forms contained in the Bidding Documents must be used. Other forms of bonds will not be accepted. The carriers from whom the Contractor has purchased bonds must be listed in the most recent U.S. Treasury Department Circular and authorized to conduct business in the Commonwealth of Pennsylvania with an AM Best Rating or "A-" or better and financial rating of Class "X" or higher. The amount of said bonds in question must not exceed the acceptable limit in accordance with the ratings of the surety company. The Contractor shall provide bonds in accordance with the Public Works Contracts Bond Law of 1967, 8 P.S. Sec. 191, et seq. The bonds shall be solely for the protection of the Owner or its assignee. The Surety's liability under the bonds shall be the same as the Contractor's liability.

§ 11.1.2.1 The Contractor shall deliver the required Payment Bond and Performance Bond to the Owner not later than ten (10) days after receipt of Notice of Intent to Award.

§ 11.1.2.2 The Contractor shall require the attorney-in-fact who executes the required Payment Bond and Performance Bond on behalf of the surety to affix thereto the power of attorney that is certified to be in full force and effect as of the date of the Bonds.

§ 11.1.3 Upon the request of any person or entity appearing to be a potential beneficiary of bonds covering payment of obligations arising under the Contract, the Contractor shall promptly furnish a copy of the bonds or shall authorize a copy to be furnished.

§ 11.1.4 Notice of Cancellation or Expiration of Contractor's Required Insurance.
§ 11.1.4.1 Within three (3) business days of the date the Contractor becomes aware of an impending or actual cancellation or expiration of any insurance required by the Contract Documents, the Contractor shall provide notice directly to the Owner, **Construction Manager, and Architect** of such impending or actual cancellation or expiration. Upon receipt of notice from the Contractor, the Owner shall, unless the lapse in coverage arises from an act or omission of the Owner, have the right to stop the Work until the lapse in coverage has been cured by the procurement of replacement coverage by the Contractor. The furnishing of notice by the Contractor shall not relieve the Contractor of any contractual obligation to provide any required coverage.

§ 11.1.4.2 Certificates of insurance acceptable to the Owner shall be submitted to the Construction Manager for transmittal to the Owner with a copy to the Architect prior to commencement of the Work and thereafter upon renewal or replacement of each required policy of insurance. These certificates and the insurance policies required by this Section 11.1 shall contain a provision that coverages afforded under the policies will not be canceled or allowed to expire. Written notice shall be provided to the Owner in compliance with this Section 11.1.4 in the event the Contractor's insurance expires or is cancelled within the time specified in Section 11.1.1. An additional certificate evidencing continuation of liability coverage, including coverage for completed operations, shall be submitted with the final Application for Payment as required by Section 9.10.2 and thereafter upon renewal or replacement of such coverage until the expiration of the time required by this Section 11.1. Information concerning reduction of coverage shall be furnished by the Contractor with reasonable promptness. If this insurance is written on the Comprehensive General Liability policy form, the Certificates shall be AIA Document G705, Certificate of Insurance. If this insurance is written on a Commercial General Liability policy form, ACORD Form 25 will be acceptable. Language such as "will endeavor to mail..." or "...but failure to mail...shall impose no obligation or liability...upon the company, its agents or representatives..." is not acceptable within the Cancellation Clause and should be stricken therefrom.

§ 11.2 Owner's Insurance
§ 11.2.1 The Owner shall purchase and maintain property insurance of the types and limits of liability, containing the endorsements, and subject to the terms and conditions, as described in the Agreement or elsewhere in the Contract Documents. The Owner shall purchase and maintain the required insurance from an insurance company or insurance companies lawfully authorized to issue insurance in the jurisdiction where the Project is located.

§ 11.2.1.1 Unless otherwise provided, the Owner shall purchase and maintain, in a company or companies lawfully authorized to do business in the jurisdiction in which the Project is located, property insurance written on a builder's risk "all risk" or equivalent policy form in the amount of the initial Contract Sum, plus value of subsequent Contract modifications and cost of materials supplied or installed by others, comprising total value for the entire Project at the site on a replacement cost basis. Such property insurance shall be maintained, unless otherwise provided in the Contract Documents or otherwise agreed in writing by all persons and entities who are beneficiaries of such insurance, until final payment has been made as provided in Section 9.10 or until no person or entity other than the Owner has an insurable interest in the property required by this Section 11.2 to be covered, whichever is later. This insurance shall include interests of the Owner, the Contractor, Subcontractors and Sub-subcontractors in the Project. The Contractor shall be solely liable for paying the deductible on the Owner's builder's risk insurance for the Project for any claims relating to the Contractor's Work.

§ 11.2.1.2 Property insurance shall be on an "all-risk" or equivalent policy form and shall insure against the perils of fire (with extended coverage) and physical loss or damage including, without duplication of coverage, theft, vandalism, malicious mischief, collapse, earthquake, flood, windstorm, falsework, testing and startup, temporary buildings and debris removal including demolition occasioned by enforcement of any applicable legal requirements, and shall cover reasonable compensation for the Architect's, Contractor's, and Construction Manager's services and expenses required as a result of such insured loss. Coverage for other perils shall not be required unless otherwise specifically provided in the Contract Documents.

§ 11.2.2 Failure to Purchase Required Property Insurance. Intentionally deleted.

§ 11.2.3 Notice of Cancellation or Expiration of Owner's Required Property Insurance. Intentionally deleted.

§ 11.2.4 Partial occupancy or use in accordance with Section 9.9 shall not commence until the insurance company or companies providing property insurance have consented to such partial occupancy or use by endorsement or otherwise. The Owner and the Contractor shall take reasonable steps to obtain consent of the insurance company or companies and shall, without mutual written consent, take no action with respect to partial occupancy or use that would cause cancellation, lapse or reduction of insurance.

§ 11.2.5 The insurance required by this Section 11.2 is not intended to cover machinery, tools or equipment owned or rented by the Contractor which are utilized in the performance of the Work but not incorporated into the permanent improvements. The Contractor shall, at the Contractor's own expense, provide insurance coverage for owned or rented machinery, tools or equipment.

§ 11.3 Waivers of Subrogation
§ 11.3.1 Intentionally deleted.

§ 11.3.2 Intentionally deleted.

§ 11.4 Loss of Use, Business Interruption, and Delay in Completion Insurance
Intentionally deleted.

§ 11.5 Adjustment and Settlement of Insured Loss
§ 11.5.1 Intentionally deleted.

(Paragraph deleted)

ARTICLE 12 UNCOVERING AND CORRECTION OF WORK

§ 12.1 Uncovering of Work

§ 12.1.1 If a portion of the Work is covered contrary to the Construction Manager's or Architect's request or to requirements specifically expressed in the Contract Documents, it must, if requested in writing by either, be uncovered for their examination and be replaced at the Contractor's expense without change in the Contract Time.

§ 12.1.2 If a portion of the Work has been covered that the Construction Manager or Architect has not specifically requested to examine prior to its being covered, the Construction Manager or Architect may request to see such Work and it shall be uncovered by the Contractor. If such Work is in accordance with the Contract Documents, the Contractor shall be entitled to an equitable adjustment to the Contract Sum and Contract Time as may be appropriate. If such Work is not in accordance with the Contract Documents, the costs of uncovering the Work, and the cost of correction, shall be at the Contractor's expense unless the condition was caused by one of the other Prime Contractors in which event the other Prime Contractor shall be responsible for payment of such costs.

§ 12.2 Correction of Work

§ 12.2.1 Before Substantial Completion

In addition to the Contractor's obligations under Section 3.5, if, within one year, or such longer period of time as set forth in the Bid, after the date of Substantial Completion or designate portion thereof, the Contractor shall promptly perform all Work under the Agreement and shall promptly correct Work rejected by the Construction Manager, Owner, or Architect or failing to conform to the requirements of the Contract Documents, discovered before Substantial Completion, and whether or not fabricated, installed or completed. Costs of the Work not performed by Contractor, and costs of correcting rejected Work, including required and additional testing and inspections, the cost of uncovering and replacement, and compensation for the Construction Manager's and Architect's services and expenses made necessary thereby, shall be at the Contractor's expense.

§ 12.2.1.1 Work that is rejected or fails to conform to the requirements of the Contract Documents that requires any review, research, recommendation, meetings or direction by the Architect, any other consultants, or the Construction Manager, in order to substantiate the same or to approve remedies or alternate solutions will be subject to Section 12.2.1. The Architect, any consultants, and the Construction Manager, will be compensated for such additional Work at the prevailing rates by the Owner, who will be entitled to back charge the Contractor for such fees, as well as any legal fees, professional fees, other expenses or costs incurred. The Owner may deduct the same from any Application for Payment or any amount of retainage.

User Notes: (846491751)

§ 12.2.1.2 If prior to the date of Substantial Completion, the Contractor, a Subcontractor, or anyone for whom either is responsible uses or damages any portion of the Work, including, without limitation, mechanical, electrical, plumbing, and other building systems, machinery, equipment or other mechanical device, the Contractor shall cause such item to be restored to "like new" condition at no expense to the Owner.

§ 12.2.2 After Substantial Completion

§ 12.2.2.1 In addition to the Contractor's obligations under Section 3.5, if, within one year after the date of Substantial Completion of the Work or designated portion thereof, or after the date for commencement of warranties established under Section 9.9.1, or by terms of any applicable special warranty required by the Contract Documents, any of the Work is found to be not in accordance with the requirements of the Contract Documents, the Contractor shall correct it promptly after receipt of notice from the Owner or Architect to do so, unless the Owner or Architect has previously given the Contractor a written acceptance of such condition. The obligations under Section 12.2.2 shall survive acceptances of the Work under the Contract and termination or expiration of the Agreement. The Owner or Architect shall give such notice promptly after discovery of the condition. If the Contractor fails to correct nonconforming Work within a reasonable time during that period after receipt of notice from the Owner, Construction Manager or Architect, the Owner may correct it in accordance with Section 2.5. Nothing contained in Section 12.2.2 shall decrease the liability of the Contractor and its Surety as set for the in the Performance Bond and/or as required by law.

§ 12.2.2.2 The one-year period for correction of Work shall be extended with respect to portions of Work first performed after Substantial Completion by the period of time between Substantial Completion and the actual completion of that portion of the Work.

§ 12.2.2.3 The one-year period for correction of the work will run anew from the date upon which the Contractor's completion or correction of the work is confirmed by the Architect and Construction Manager.

§ 12.2.2.4 If the Contractor fails to correct nonconforming Work within a reasonable time, the Owner may correct it in accordance with Section 2.5. If the Contractor does not proceed with correction of such nonconforming Work within a reasonable time fixed by written notice from the Architect, the Owner may remove it and store the salvable materials or equipment at the Contractor's expense. If the Contractor does not pay costs of such removal and storage within 10 days after written notice, the Owner may, upon 10 additional days' written notice, sell such materials and equipment at auction or at private sale and shall account for the proceeds thereof, after deducting costs and damages that should have been borne by the Contractor, including compensation for the Architect's services and expenses made necessary thereby, and attorneys' and accountants' fees and expenses. If such proceeds of sale do not cover costs which the Contractor should have borne, the Contract Sum shall be reduced by the deficiency. If payments then or thereafter due the Contractor are not sufficient to cover such amount, the Contractor shall pay the difference to the Owner.

§ 12.2.3 The Contractor shall remove from the site portions of the Work that are not in accordance with the requirements of the Contract Documents and are neither corrected by the Contractor nor accepted by the Owner The Contractor shall bear the cost of any Work not performed or improperly performed by the Contractor.

§ 12.2.4 The Contractor shall bear the cost of correcting or addressing destroyed or damaged construction of the Owner, Separate Contractors, or other Contractors, whether completed or partially completed, caused by the Contractor's correction or removal of Work that is not in accordance with the requirements of the Contract Documents, or the Contractor's failure to properly perform the Work.

§ 12.2.5 Nothing contained in this Section 12.2 shall be construed to establish a period of limitation with respect to other obligations the Contractor has under the Contract Documents. Establishment of the one-year period for correction of Work as described in Section 12.2.2 relates only to the specific obligation of the Contractor to correct the Work, and has no relationship to the time within which the obligation to comply with the Contract Documents may be sought to be enforced, nor to the time within which proceedings may be commenced to establish the Contractor's liability with respect to the Contractor's obligations other than specifically to correct the Work.

§ 12.2.6 The obligations under Section 12.2 shall cover any repairs and replacement to any part of the Work or other property caused by the defective Work.

§ 12.2.7 The Contractor will be responsible for any expense of the Owner incurred by said uncovering or repair including, but not limited to, legal fees, professional fees, other expenses, or costs.

User Notes: (846491751)

§ 12.2.8 Upon request by the Owner and prior to the expiration of 1 year from the date of Substantial Completion, the Architect, Construction Manager, and Contractor shall schedule and attend a meeting with the Owner to review the facilities operations and performance.

§ 12.3 Acceptance of Nonconforming Work

If the Owner prefers to accept Work that is not in accordance with the requirements of the Contract Documents, the Owner may do so instead of requiring its removal and correction, in which case the Contract Sum will be reduced as appropriate and equitable. Such adjustment shall be effected whether or not final payment has been made.

ARTICLE 13 MISCELLANEOUS PROVISIONS

§ 13.1 Governing Law

The Contract shall be governed by the Commonwealth of Pennsylvania without regard to conflicts of law The Contractor's attention is directed to the fact that all applicable Federal and State laws, codes, local ordinances, and the rules and regulations of all authorities having jurisdiction over construction of the Project shall apply to the Agreement throughout, and they are deemed to be included in the Agreement the same as though herein written in full..

§ 13.1.1 The Contractor shall comply with all applicable laws of the Commonwealth of Pennsylvania, including the provisions of the Solid Waste Management Act (1980) and any amendments thereto and shall comply with applicable laws of the United States, along with all local laws and ordinances, and all environmental protection acts.

§ 13.1.2 Non-Discrimination Policies

.1 The provisions of the Pennsylvania Human Relations Act, Act 222 of October 27, 1955 (P.L. 744), as amended from time to time (43 P.S. Section 951, et. seq.) of the Commonwealth of Pennsylvania prohibits discrimination because of race, color, religious creed, ancestry, age, sex, hair, national origin, or non-job related handicap or disability or the use of a guide or support animal because of blindness, deafness, or physical handicap, by employers, employment agencies, labor organizations, contractors, and others. The Contractor shall agree to comply with the provisions of the Pennsylvania Human Relations Act, as amended from time to time, which are made part of these General Conditions as if included herein at length. The Contractor's attention is directed to the language of the Commonwealth of Pennsylvania's non-discrimination clause in 16 Pa. Code Section 49.101, et seq., as amended from time to time.

.2 By Submitting a bid and executing Contract Documents, the Contractor shall be deemed to agree as follows:

(a) In the hiring of any employee (s) for the manufacturer of supplies, performance of the Work, or any other activity required under the Contract or any subcontract, the Contractor, Subcontractor, or any person acting on behalf of the Contractor or Subcontractor shall not discriminate, by reason of gender, race, creed or color in violation of the Pennsylvania Human Relations Act (PHRA) and applicable federal laws against any citizen of the Commonwealth of Pennsylvania who is qualified and available to perform the Work to which the employment relates. (62 Pa. C.S.A. Section 3701).

(b) The Contractor, any Subcontractor, or any person on their behalf shall not in any manner discriminate by reason of gender, race, creed, color, sexual orientation, gender identity or expression, or in violation of the PHRA and applicable federal laws, against or intimidate any employee involved in the manufacturer of supplies, the performance of Work, or any other activity required under the Contract. (62 Pa. C.S.A. Section 3701).

(c) Neither the Contractor nor any subcontractor nor any person on their behalf shall in any manner discriminate against employees by reason of participation in or decision to refrain from participating in labor activities protected under the Public Employee Relations Act, Pennsylvania Labor Relations Act, or National Labor Relations Act, as applicable and to the extent determined by entities charged with such Acts' enforcement, and shall comply with any provision of law establishing organizations as employees' exclusive representatives.

(d) The Contractor and Subcontractors shall establish and maintain a written nondiscrimination and sexual harassment policy and shall inform their employees in writing of the policy. The policy must contain a notice that sexual harassment will not be tolerated and employees who practice it will be disciplined. Posting this Nondiscrimination/Sexual Harassment Clause conspicuously in easily accessible and well-lighted places customarily frequented by

employees and at or near where the grant services are performed shall satisfy this requirement for employees with an established work site.

(e) The Contractor shall not discriminate by reason of gender, race, creed, color, sexual orientation, gender identity or expression, or in violation of the PHRA and applicable federal laws, against any Subcontractor or supplier who is qualified to perform the Work to which the Contracts relates.

(f) The Contractor and each Subcontractor represents that it is presently in compliance with and will maintain compliance with all applicable federal, state, and local laws and regulations relating to nondiscrimination and sexual harassment. The Contractor and each Subcontractor further represents that it has filed a Standard Form 100 Employer Information Report ("EEO-1") with the U.S. Equal Employment Opportunity Commission ("EEOC") and shall file an annual EEO-1 report with the EEOC as required for employers' subject to Title VII of the Civil Rights Act of 1964, as amended, that have 100 or more employees and employers that have federal government contracts or first- tier subcontracts and have 50 or more employees. The Contractor or any subcontractor shall, upon request and within the time periods requested by the Commonwealth, furnish all necessary employment documents and records, including EEO-1 reports, and permit access to their books, records, and accounts by the granting agency and the Bureau of Diversity, Inclusion and Small Business Opportunities, for the purpose of ascertaining compliance with the provisions of this Section 13.1.2.

(g) The Contractor shall include, without limitation, the provisions of this Section 13.1.2 in every subcontract so that such provisions will be binding upon each Subcontractor.

(h) The Contractors' obligations pursuant to these provisions are ongoing from and after the effective date of this Contract through the termination date thereof. Accordingly, the Contractor and Subcontractors shall have an obligation to inform the Owner and Commonwealth if, at any time during the term of this Agreement, it becomes aware of any actions or occurrences that would result in violation of these provisions.

(i) The Owner, Commonwealth of Pennsylvania and its agencies may cancel or terminate the Contract for a violation of the terms and conditions of this Section 13.1.2, and all money due or to become due to the Owner under the Grant may be forfeited for a violation of the terms and conditions of this Section 13.1.2. In addition, the Commonwealth and its agencies may proceed with debarment or suspension and may place the Contractor and/or Subcontractor in the Contractor Responsibility File.

§ 13.1.3 Prevailing Wage Requirements

.1 The Pennsylvania Prevailing Wage Act (Act No. 442 of 1961, P.L. 987, amended by Act 342 of 1963, P.L. 653), and as amended from time to time (43 P.S. Section 165-1, et seq.), the regulations thereto, and the Prevailing Wage Determination Schedule included in the Contract Documents as Section 00 73 46, as determined by the Secretary of Labor and Industry (the "Secretary"), shall be paid for each craft or classification of all workers needed to perform the Contract during the anticipated term therefore in the locality in which the Work is performed, are expressly incorporated in these General Conditions by reference.

.2 The Contractor and Subcontractors shall pay no less than the wage rates (including contributions for employee benefits) as required by the Prevailing Wage Rate Requirements included in the Contract Documents as Section 00 73 43, to any person they respectively employ in the performance of the Work. Employers not parties to a contract requiring contributions for employee benefits which have been determined to be included in the general prevailing minimum wage rate shall pay the monetary equivalent thereof directly to the workers.

.3 The Contract provisions shall apply to all Work performed on the Contract by the Contractor and to all Work performed on the Contract by all Subcontractors. The Contractor shall insert into each subcontract all of the stipulations contained in these required provisions and such other stipulations as may be required.

.4 The Contractor and all Subcontractors shall keep an accurate record showing the time, craft and/or classification, number of hours worked per day, and the actual hourly rate of wage paid (including employee benefits) to each worker employed by them in connection with the Project and such record must include, without limitation, any deductions from each worker. The record shall be preserved for two (2) years from the date of payment, or as required by Section 3.6.5.1, and shall be open at all

reasonable hours to the inspection of the Owner and to the Secretary or the Secretary's duly authorized representatives.

.5 The Contractor and each of its Subcontractors shall comply with the requirements of Specification Section 00 73 43, Prevailing Wage Rate Requirements, for the submission of Prevailing Wage Certification Forms required for this Project.

§ 13.1.4 ALUMINUM AND STEEL PRODUCTS

.1 As this Project involves the construction, reconstruction, alteration, repair, improvement or maintenance of "public work", the Contractor shall strictly comply with all requirements of the Pennsylvania Steel Products Procurement Act, 73 P.S. Section 1881, et seq., as amended from time to time with respect to the Work, which shall include, without limitation, using steel, steel products (including machinery and equipment) or cast iron produced in the United States unless otherwise exempted therefrom in the performance of the Contract or any Subcontracts thereunder.

.2 "Steel products" are defined as products rolled, formed, shaped, drawn, extruded, forged, cast, fabricated or otherwise similarly processed, or processed by a combination of two (2) or more of such operations, from steel made in the United States by the open hearth, basic oxygen, electric furnace, Bessemer or other steel making process and shall include cast iron products, machinery and equipment listed in United States Department of Commerce Standard Industrial Classification 25 (furniture and fixture), 35 (machinery, except electrical) and 37 (transportation equipment) and made of, fabricated from, or containing steel components. If a product contains both foreign and United States steel, such product shall be determined to be a United States steel product only if at least seventy-five percent (75%) of the cost of the articles, materials and supplies have been mined, produced or manufactured, as the case may be, in the United States. Transportation equipment shall be determined to be a United States steel product if it complies with Section 165 of Public Law 97-424 (96 Stat. 2136).

.3 In accordance with Act 161 of 1982, cast iron products shall also be included and produced in the United States. Act 144 of 1984 (July 9, 1984 P.L. 674) further defines "steel products" to include machinery and equipment. Act 142 of 1980 (Oct. 5, 1980 P.L. 693), Act 161 of 1982 and Act 141 of 1984 provide clarifications and penalties and Contractor shall abide by these Acts, as amended from time to time.

.4 In addition to the requirements set forth in Section 13.1.5.1, the Contractor shall strictly comply with all requirements of the Trade Practices Act, 71 P.S. § 773.101 et seq., which shall include, without limitation, being prohibited from using any aluminum or steel products made in a foreign country which discriminates against aluminum or steel products manufactured in Pennsylvania. The countries of Brazil, South Korea, Spain, and Argentina have been found to discriminate against certain products manufactured in Pennsylvania. Therefore, the purchase or use of those countries' products, as listed herein, for the Project is strictly prohibited.

.5 BRAZIL: Welded carbon steel pipes and tubes; carbon steel wire rods; tool steel; certain stainless-steel products, including hot-rolled stainless-steel bar; stainless steel wire rod and cold-formed stainless-steel bar; pre-stressed concrete steel wire strand; hot-rolled carbon steel plate in coil; hot-rolled carbon steel sheet and cold-rolled carbon steel sheets.

.6 SPAIN: Certain stainless-steel products, including stainless steel wire rod, hot-rolled stainless-steel bars and cold-formed stainless-steel bars; pre-stressed concrete steel wire strands, and certain steel products, including hot-rolled steel plate, cold-rolled carbon steel plate, carbon steel structural shapes, galvanized carbon steel sheet, hot-rolled carbon steel bars and cold-formed carbon steel bars.

.7 SOUTH KOREA: Welded carbon steel pipes and tubes; hot-rolled carbon steel plate; hot-rolled carbon steel sheet and galvanized steel sheet.

.8 ARGENTINA: Carbon steel wire rod and cold-rolled carbon steel sheet.

.9 Penalties for violation of the above Sections may be found in the Trade Practices Act, which penalties include becoming ineligible for public works contracts for a period of three years.

.10 The provisions of Section 13.1.5 in no way relieves the Contractor of responsibility to comply with those provisions of this Contract which prohibit the use of foreign-made steel and cast-iron products.

§ 13.1.5 RIGHT-TO KNOW LAW

The Contractor shall comply with all terms and conditions of the Pennsylvania Right to Know Act,, 65 P.S. § 67.101, et seq. ("RTKL"), and as amended.

.1 Upon notice given by Owner to Contractor that the Owner is in receipt of a Right-to-Know Request (the Request) requesting access to documents related to the Work that are not within the possession of the

AIA Document A232 – 2019. Copyright © 1992, 2009, and 2019. All rights reserved. User Notes: (846491751)

Owner or Owner's representatives, the Contractor shall provide Owner all documents regarding the Work that are determined by the Owner to be responsive to the Request (the "Record"). The Owner shall determine whether the Record constitutes a Public Record subject to disclosure under the RTKL.

.2 Upon receipt of a Request as described under Section 13.1.5.1, Owner will send a copy of the Request to the Contractor within five (5) business days of receipt of the Request for the Record. The Contractor shall provide the Owner with the Record within five (5) business days. The Contractor shall provide such other assistance as the Owner may need in order to comply with the RTKL. The Owner shall deny the Request for the Record or release the Record within the time period allotted by the RTKL.

.3 If at any time the Contractor notifies the Owner in a written statement signed by a representative of the Contractor that a document provided by the Contractor to the Owner contains a trade secret or confidential proprietary information, the Owner shall notify the Contractor within five business (5) days of receipt of a Request requesting a Record of the Contractor that contains such information. The Contractor shall have five (5) business days from the receipt of the notice from the Owner to provide input on the release of the Record. Thereafter the Owner will either deny the Request or release the Record and shall notify the Contractor of its decision.

.4 The failure by the Contractor to provide to the Owner the Record under Section 13.1.5.2 or the input under Section 13.1.5.3 within the specified time periods will be grounds for termination under Section 14.2. If the Owner denies the Request for failure of Contractor to provide the Record, and an appeal is taken from the denial, the Contractor upon demand from the Owner shall indemnify, and hold the Owner harmless from and against any damages, penalties, expenses, legal costs and fees, or other detriment or harm that the Owner may incur in connection with defense of the appeal. If on appeal, a final determination is entered by the Office of Open Records that requires the Owner to provide access to the Record, Contractor shall provide the Owner the Record in accordance with the final determination. Failure to timely provide the Record shall subject the Contractor to the payment of liquidated damages of $800 per day for each calendar day beyond the date the Record was ordered to be released.

.5 The Owner will provide the Contractor with reimbursement for costs incurred by Contractor for which Owner is allowed to charge in accordance with and within the scope of permitted costs as set forth in the fee schedule established by the Office of Open Records or as otherwise allowed under the RTKL.

.6 The Owner's determination as to whether the Record is a Public Record is dispositive of the question as between the Owner and the Contractor. The Contractor agrees not to challenge the Owner's decision or in any way hold the Owner liable for its decision. Contractor waives all rights or remedies that may be available to Contractor as a result of the Owner's disclosure of Records in response to a RTK Request. The waiver of all rights or remedies shall survive the expiration of the Contract Documents.

§ 13.1.6 Pennsylvania Uniform Construction Code

The Contractor shall comply with all requirements of the Pennsylvania Uniform Construction Code, 35 P.S. § 7210.301 – 7210.304, as amended by S.B. 1139, Session of 2004, as further amended from time to time.

§ 13.1.7 ANTI-POLLUTION LEGISLATION AND EROSION CONTROL:

.1 62 Pa. C.S.A. Section 3301 requires that Bidders on construction contracts, for the Commonwealth of Pennsylvania be advised that there are provisions of Federal and State statutes, rules and regulations dealing with the prevention of environmental pollution and the preservation of public natural resources that affect the Project on which Bids are being received.

.2 The Bidder shall become thoroughly acquainted with the terms of the listed statutes, rules and regulations, including, but not limited to, Flood Plain Management Act (32 P.S. Section 679.101, et seq.), Water Well Drillers License Act (32 P.S. Section 645.1, et seq.), Pennsylvania Scenic Rivers Act (32 P.S. Section 820.21, et seq.), Dam Safety and Encroachment Act (32 P.S. Sec. 693.1, et seq.), Bluff Recession and Setback Act (32 P.S. Section 5201, et seq.), Storm Water Management Act (32 P.S. Section 680, et seq.), Pennsylvania Sewage Facilities Act (35 P.S. Section 750.1, et seq.), Pennsylvania Solid Waste Management Act (35 P.S. Section 6018.101, et seq.), Pennsylvania Safe Drinking Water Act (35 P.S. Section 721.1, et seq.), the Clean Streams Law (35 P.S. Section 691.901 et seq. and 35 P.S. Section 691.1 et. seq.), Air Pollution Control Act (35 P.S. Section 4001, et seq.), Pennsylvania Historic Preservation Act (37 Pa. C.S.A. Section 501, et seq.), Pennsylvania Hazardous Sites Clean Up Act (35 P.S. Section 6020.101, et seq.), Pennsylvania Storage Tank and Spill Prevention Act (35 P.S. Sec. 6021.101, et seq.), Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (42 U.S.C. Sections 9601-9675) as amended, including, but not limited to, the Superfund Amendments

Sections 6901-6991), Soil and Water Resources Conservation Act of 1977 (16 U.S.C. Sections 2001-2009), Water Resources Research Act of 1984 (42 U.S.C. Sections 10301-10309), Wood Residue Utilization Act of 1980 (16 U.S.C. Sections 1681-1687), Pennsylvania Worker and Community Right-to-Know Act (35 P.S. Section 7301, et seq.), Asbestos Hazard Emergency Response Act of 1986 (see Toxic Substances Control Act Sections 201-214) (15 U.S.C. Sections 2651-2654), Delaware River Basin Compact (32 P.S. Section 815.101, et seq.), Brandywine River Valley Compact (32 P.S. Section 818, et seq.), Wheeling Creek Watershed Protection and Flood Prevention District Compact (32 P.S. Section 819, et seq.), Susquehanna River Basin Compact (32 P.S. Section 820.1, et seq.), Chesapeake Bay Commission Agreement (32 P.S. Section 820.11, et seq.), Land and Water Conservation and Reclamation Act (32 P.S. Section 5101, et seq.), Wild Resource Conservation Act (32 P.S. Section 5301, et seq.), Cave Protection Act (32 P.S. Section 5601, et seq.), Rails to Trails Act (32 P.S. Section 5611, et seq.), Phosphate Detergent Act (35 P.S. Section 722.1, et seq.), Plumbing System Lead Ban and Notification Act (35 P.S. Section 723.1, et seq.), Publicly Owned Treatment Works Penalty Law (35 P.S. Section 752.1, et seq.), Pennsylvania Solid Waste-Resources Recovery Act (35 P.S. Section 755.1, et seq.), Sewage System Cleaner Control Act (35 P.S. Section 770.01, et seq.), Hazardous Material Emergency Planning and Response Act (35 P.S. Section 6022.101, et seq.), Oil Spill Responder Liability Act (35 P.S. Section 6023.1, et seq.), Land Recycling and Environmental Remediation Standards Act (35 P.S. Section 6026.101, et seq.), Radiation Protection Act (35 P.S. Section 7110.101, et seq.), Low-Level Radioactive Waste Disposal Act (35 P.S. Section 7130.101, et seq.), Pennsylvania Municipalities Planning Code (53 P.S. Section 10101, et seq.), regulations, ordinances, and other actions pursuant to the foregoing, regulations pertaining to Pennsylvania Erosion and Sediment Control, and so on. No separate or additional payment will be made for such compliance. In the event that the listed statutes, rules and regulations are amended, or if new statues, rules or regulations become effective, after date of receipt of Bids, upon receipt of documentation which causes the Contractor to perform additional Work, the Owner may issue a Change Order setting forth the additional Work that must be undertaken and such additional Work shall be undertaken at no additional cost to the Owner. It is also the responsibility of the Contractor to determine what local ordinances, if any, will affect their portion of the Work. The Contractor shall check for any County, City, Borough or Township rules or regulations applicable to the area in which the Project is being constructed and, in

addition, for any rules or regulations of other organizations having jurisdiction, including, without limitation, chambers of commerce, planning commissions, industries or utility companies who have jurisdiction over lands which the Contractor occupies. Any costs of compliance with local controls shall be included in the prices bid, even though documents of such local controlling agencies are not listed herein.

.3 Erosion Control

(a) To the extent the Contractor performs excavation Work, it shall comply with all rules and regulations of Chapter 102, Title 25 of Pennsylvania Soils Erosion and Sedimentation Control (25 Pa. Code Section 102.1, et seq.). Prior to any grading, the Contractor shall be responsible to obtain approval from the Department of Environmental Protection and local Conservation District having jurisdiction for an approved sedimentation and erosion control site plan for the Project site and shall perform all necessary site work in accordance with said plan. The applicable plan shall be available at the Project site at all times. If the Contractor performs excavation work, it shall maintain all devices as required to control erosion caused by storing water and preventing dust and particles from being distributed off site.

(b) Site Excavation: The Contractor shall:

1) request the location and type of facility owner lines at the Project site by notifying the facility owner through the One Call System as defined in 73 P.S. § 176. Notification shall be not less than three (3) business days nor more than ten (10) business days in advance of beginning excavation or demolition work. No work shall begin earlier than the scheduled excavation date which shall be on or after the third business day after notification. The scheduled excavation date shall exclude the date upon which notification was received by the One Call System and notification received on a Saturday, Sunday, or holiday, which shall be processed on the following business day. In the case of a complex project as defined in 73 P.S. § 176, notification shall not be less than ten (10) business days in advance of the beginning of excavation or demolition work.
2) provide the One Call System with specific information to identify the Project site so that facility owners might provide indications of their lines.
3) take reasonable steps to work with facility owners including, without limitation, scheduling and conducting a preconstruction meeting, so that the Contractor may locate the facilities at a time reasonably in advance of the actual start of excavation or demolition work for each phase of the Work if the Project is a complex project as defined in 73 P.S. § 176 or if an excavation Contractor intends to perform work at multiple sites or over a large area. After commencement of excavation or demolition work, the excavation Contractor shall be responsible for protecting and preserving the staking, marking or other designation until no longer required for proper and safe excavation or demolition work at or near the underground facility, or by contacting the One Call System to request that the facilities be marked again in the event that the previous markings have been compromised or eliminated.
4) comply with the requirements established by the One Call System as determined by the board of directors regarding the maximum area that a notification may cover.
5) inform each operator employed by the excavation Contractor at the Project site of the information received with respect to location and type of underground installations and any other information required by 73 P.S. § 176, et. seq.
6) report immediately to the Owner, Construction Manager, and the Architect, any break or leak on its lines or any dent, gouge, groove, or other damage to such lines, to their coating or cathodic protection, made or discovered in the course of the excavation or demolition work.
7) immediately notify 911 and the facility owner if the damage results in the escape of any flammable, toxic or corrosive gas or liquid which endangers life, health or property.
8) assist a facility owner in determining involvement of a facility owner's lines by disclosing additional available information requested by the facility owner, including, without limitation, dimensions, and the direction of proposed excavations.

User Notes: (846491751)

9) re-notify the One Call System unless other arrangements have been made directly with the facility owners involved at the Project site if the excavation Contractor removes its equipment and vacates the Project site for more than 2 business days.
10) submit an incident report to the Department of Labor and Industry of the Commonwealth of Pennsylvania not more than 10 business days after striking or otherwise damaging a facility owner's line during excavation or demolition activities that resulted in personal injury or property damage to parties other than the affected excavation Contractor or facility owner.
11) comply with all requests for information by the Department of Labor and Industry of the Commonwealth of Pennsylvania relating to such Department of Labor and Industry's enforcement authority under the 73 P.S. § 176, et. seq. within 30 days of the receipt of the request.
12) .ensure the accuracy of the information provided to the One Call System pursuant to 73 P.S. § 176, et. seq.
13) .become thoroughly acquainted with and comply with all other terms and conditions specified in 73 P.S. § 176, et. seq., as amended from time to time including, without limitation, the Contractor shall pay all applicable fees.
14) complete the site excavation in full compliance with all applicable standards, codes, laws, ordinances, regulations and/or requirements of any applicable State, Federal or governmental agency.

§ 13.2 Successors and Assigns

§ 13.2.1 The Owner and Contractor respectively bind themselves, their partners, successors, assigns, and legal representatives to covenants, agreements, and obligations contained in the Contract Documents. Except as provided in Section 13.2.2, neither party to the Contract shall assign the Contract as a whole without written consent of the other. If either party attempts to make an assignment without such consent, that party shall nevertheless remain legally responsible for all obligations under the Contract.

§ 13.2.2 The Owner may, without consent of the Contractor, assign the Contract to a lender providing construction financing for the Project, if the lender assumes the Owner's rights and obligations under the Contract Documents. The Contractor shall execute all consents reasonably required to facilitate the assignment.

§ 13.3 Rights and Remedies

§ 13.3.1 Duties and obligations imposed by the Contract Documents and rights and remedies available thereunder shall be in addition to and not a limitation of duties, obligations, rights, and remedies otherwise imposed or available by law.

§ 13.3.2 No action or failure to act by the Owner, Construction Manager, Architect, or Contractor shall constitute a waiver of a right or duty afforded them under the Contract, nor shall such action or failure to act constitute approval of or acquiescence in a breach thereunder, except as may be specifically agreed upon in writing.

§ 13.3.3 In the event the Contractor should breach any obligation imposed by the Contract Documents, in addition to all other damages, losses, costs and relief, whether in law or equity, which the Owner may recover, the Owner shall also be entitled to an award for any reasonable legal fees, expert witness fees, and consultant fees incurred in attempting to enforce or recover under the Contract Documents by reason of the Contractor's breach. The Owner's right to recover under the Contract Documents, at law or in equity, shall not be restricted to the rights and remedies set forth in Article 15 of these General Conditions. To the extent the Contractor pursues any claims against the Owner and the Owner substantially prevails on any of its claims or defenses, the Contractor shall pay the Owner all legal fees, professional fees, expert witness fees, and other costs incurred by the Owner in defending or bringing such claims. Nothing contained herein shall be construed to provide the Contractor or any other person or entity the right to claim such costs or expenses.

§ 13.3.4 In the event that the Owner declares the Contractor in default and the Contractor's Surety fails to adhere to its obligations under the Performance Bond or Payment Bond, the Surety shall be liable to the Owner for any and all damages that the Owner incurs including, but not limited to, any attorney's fees, professional fees, or other costs or expenses incurred by the Owner in connection with the Owner's pursuit of its rights under the Performance Bond, Payment Bond and/or applicable law, including the cost of all litigation, including but not limited to, attorney's fees, professional fees, and costs.

§ 13.3.5 To the extent any Contractor sues the Owner, and the Owner prevails in such litigation, the Contractor shall be responsible for all of the Owner's damages, costs and expenses including but not limited to, any and all professional fees or expert witness fees (e.g., Architectural fees, Construction Management fees, and legal fees).

§ 13.4 Tests and Inspections

§ 13.4.1 Tests, inspections, and approvals of portions of the Work shall be made as required by the Contract Documents and by applicable laws, statutes, ordinances, codes, rules, and regulations or lawful orders of public authorities. The Contractor shall make arrangements for and conduct or obtain such tests, inspections, and approvals with an independent testing laboratory or entity acceptable to the Owner, or with the appropriate public authority, and shall bear all related costs of tests, inspections, and approvals including, without limitation, the cost of retesting for verification of compliance if necessary, until the Architect or the Construction Manager certify(ies) that the Work in question does comply with the requirements of the Contract Documents, and all such costs shall be included in the Contract Sum. The Contractor shall give the Construction Manager and Architect timely notice of when and where tests and inspections are to be made so that the Construction Manager and Architect may be present for such procedures. The Owner shall bear costs of tests, inspections, or approvals that do not become requirements until the Agreement is executed. The Owner shall directly arrange and pay for tests, inspections, or approvals where building codes or applicable laws or regulations so require. At the Owner's option, the Owner may retain a field-testing agency or other testing agencies for this Project, as the Owner deems necessary, in its sole discretion.

§ 13.4.2 If the Construction Manager, Architect, Owner, or public authorities having jurisdiction determine that portions of the Work require additional testing, inspection, or approval not included under Section 13.4.1, the Construction Manager and Architect will, upon written authorization from the Owner, instruct the Contractor to make arrangements for such additional testing, inspection, or approval, by an entity acceptable to the Owner, and the Contractor shall give timely notice to the Construction Manager and Architect of when and where tests and inspections are to be made so that the Construction Manager and Architect may be present for such procedures. Such costs, except as provided in Section 13.4.3, shall be at the Owner's expense. At the Owner's option, the Owner may retain a separate entity to perform the additional testing, inspection, or approval not included under Section 13.4.1.

§ 13.4.3 If procedures for testing, inspection, or approval under Sections 13.4.1 and 13.4.2 reveal failure of the portions of the Work to comply with requirements established by the Contract Documents, all costs made necessary by such failure, including those of repeated procedures and compensation for the Construction Manager's and Architect's services and expenses, shall be at the Contractor's expense. Such amounts will be deducted, to the extent available, from any amount due the Contractor. If the amount due the Contractor is not sufficient to cover such amounts, the Contractor shall pay the difference to the Owner within 7 days of receipt of the Owner's invoice for such legal fees, professional fees or other cost or expenses.

§ 13.4.4 Required certificates of testing, inspection, or approval shall, unless otherwise required by the Contract Documents, be secured by the Contractor and promptly delivered to the Construction Manager for transmittal to the Architect.

§ 13.4.5 If the Construction Manager or Architect is to observe tests, inspections, or approvals required by the Contract Documents, the Construction Manager or Architect will do so promptly and, where practicable, at the normal place of testing.

§ 13.4.6 Tests or inspections conducted pursuant to the Contract Documents shall be made promptly to avoid unreasonable delay in the Work.

§ 13.5 Interest
Payments due and unpaid under the Contract Documents shall bear interest from the date payment is due at the rate of 3% simple interest per annum, as set for the in Article 5.3 of the AIA, A132-2019, Standard Form of Agreement between Owner and Contractor..

§ 13.6 Interpretations
§13.6.1 The captions and headings of various Articles and Section in the Contract Documents are for convenience only and are not to be construed as defining or limiting, in any way, the scope or intent of the provisions hereof.

§ 13.6.2 The invalidity of any covenant, restriction, condition, limitation or any other part or provision of the Contract Documents shall not impair or affect in any manner the validity, enforceability, or effect of the remainder of the Contract Documents.

§ 13.6.3 References to Sections or paragraphs shall also be deemed to include the respective Subparagraphs.

§ 13.6.4 The parties hereto expressly waive the defense of contra proferentem, i.e., that the Contract Documents or any portion of the Contract Documents may be construed against any party as the drafter thereof.

§ 13.7 Employment Policies
§ 13.7.1 The Contractor shall maintain policies of employment as follows:

§ 13.7.1.1 The Contractor and the Contractor's Subcontractors shall not discriminate against any employee or applicant for employment because of race, religion, color, sex or national origin. The Contractor shall take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, religion, color, sex, or national origin. Such action shall include, but not be limited to, the following: employment, upgrading, demotion or transfer, recruitment, or recruitment advertising; lay-off or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the policies of nondiscrimination.

§ 13.7.1.2 The Contractor and the Contractor's Subcontractors shall, in all solicitations or advertisements for employees placed by them or on their behalf, state that all qualified applicants will receive consideration for employment without regard to race, religion, color, sex or national origin.

§ 13.8 Owner's Right to Attorney's Fees and Costs
§ 13.8.1 Intentionally deleted.

ARTICLE 14 TERMINATION OR SUSPENSION OF THE CONTRACT

§ 14.1 Termination by the Contractor
§ 14.1.1
(Paragraphs deleted)
Intentionally deleted.

(Paragraphs deleted)
§ 14.2 Termination by the Owner for Cause
§ 14.2.1 The Owner may terminate the Contract if the Contractor

- **.1** refuses or fails to supply enough properly skilled workers or proper materials;
- **.2** fails to make payment to Subcontractors or suppliers in accordance with the respective agreements between the Contractor and the Subcontractors or suppliers;
- **.3** disregards applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders of a public authority;
- **.4** otherwise materially breaches of a provision of the Contract Documents;
- **.5** submits an Application for Payment, sworn statement, Waiver of Lien, Affidavit or document of any nature whatsoever which it intentionally falsified; or
- **.6** institutes proceedings or consent to proceedings requesting relief or arrangement under the Federal Bankruptcy Code or any similar or applicable federal or state law; or if a Petition under any federal or state Bankruptcy or Insolvency Law against the Contractor and such Petition is not dismissed

User Notes: (846491751)

within 60 days of the day of said filing; or if the Contractor admits, in writing, its inability to pay its debts generally if they become due, or if Contractor makes a general assignment for the benefit of the creditors, or if a Receiver, Liquidator, Trustee or Assignee is appointed on account of Contractor's bankruptcy or insolvency; or if the Receiver of all or any substantial portion of the Contractor's property is appointed.

§ 14.2.2 When any of the reasons described in Section 14.2.1 exist, after consultation with the Construction Manager, and upon certification by the Architect that sufficient cause exists to justify such action, the Owner may, without prejudice to any other rights or remedies of the Owner and after giving the Contractor and the Contractor's surety, if any, seven days' notice, the Contract and may, subject to any prior rights of the surety:

.1 Exclude the Contractor from the site and take possession of all materials, equipment, tools, and construction equipment and machinery thereon owned by the Contractor;

.2 Accept assignment of subcontracts pursuant to Section 5.4; and

.3 Finish the Work by whatever reasonable method the Owner may deem expedient.

§ 14.2.3 When the Owner terminates the Contract for one of the reasons stated in Section 14.2.1, the Contractor shall not be entitled to receive further payment, except as provided in Section 14.2.4.

§ 14.2.4 If the unpaid balance of the Contract Sum exceeds all costs to the Owner of completing the Work, including compensation for the Construction Manager's and Architect's services and expenses made necessary thereby, such excess shall be paid to the Contractor less Owner's costs for completing the Work as of the date of termination. If such costs and damages to the Owner of completing the Work exceed the unpaid balance of the Contract Sum, the Contractor shall pay the difference to the Owner immediately upon Owner's demand. The cost to the Owner of completing the Work shall include (but not be limited to) the cost of any additional architectural, construction management, managerial and administrative services required thereby, any costs incurred in retaining another Contractor or other Subcontractor to complete the Work, any additional interest or fees which the Owner may incur by reason of the delay in completion of the Work, attorney's fees and expenses incurred by the Owner, and any other damage, costs and expenses which Owner may incur by reason of completing the Work or any delay thereof. The amount, if any, to be paid to the Contractor shall be certified by the Initial Decision Maker after consultation with the Architect upon application, in the manner provided in Article 9.4 .

§ 14.2.5 Notwithstanding any other provision of the Contract Documents to the contrary, in the event that the Contractor abandons its Work on the Project, as determined by the Owner in its sole discretion, and the Contractor does not resume its Work after 72 hours prior written notice from the Owner, the Owner may terminate the Contractor for cause without such termination being subject to the Initial Decision Maker's certification required by Section 14.2.2. The Owner's rights set forth in this Section 14.2.5 shall be in addition to all other rights of the Owner granted in the Contract Documents, at law, or in equity.

§ 14.2.6 In the event the Owner elects to terminate the Contractor for cause, the Owner may recover against the Contractor and Surety as part of its damages any and all legal fees, professional fees, jointly and severally, including, but not limited to, Architectural fees, Construction Management fees, expert witness and consultant fees, legal fees, and all other costs and expenses related thereto. The Owner shall have the right to set off said amounts against any amount alleged to be due and owing to the Contractor on the base amount of the Contract. Further, should the Contractor fail to achieve Final Completion promptly, upon written recommendation by the Architect and upon notice to the Contractor and after reasonable opportunity to cure, the Owner may, for cause, terminate the Contractor, complete the Work, and recover against the Contractor or Surety, any and all amounts that the Owner incurs, including, but not limited to, any and all legal fees, professional fees and all other costs and expenses related thereto. This provision shall create no right to the Contractor or to any other person or entity for payment of such costs or expenses.

§ 14.2.7 In the event that the Owner declares the Contractor in default and the Contractor's Surety fails to adhere to its obligations under the Performance Bond and Payment Bond, the Surety shall be liable to the Owner for any and all damages that the Owner incurs including, but not limited to, any legal fees, professional fees, or other costs or expenses incurred by the Owner in connection with the Owner's pursuit of its rights under the Performance Bond and Payment Bond and/or applicable law, including, but not limited to, the cost of all litigation, legal fees, professional fees, and all other costs and expenses.

§ 14.2.8 In the event that the Owner terminates the Contract for cause pursuant to Section 14.2 and a court of competent jurisdiction determines that cause for termination did not exist, then the termination shall be treated as a termination for convenience pursuant to Section 14.4 and the Contractor shall be compensated in accordance with Section 14.4.3.

§ 14.3 Suspension by the Owner for Convenience

§ 14.3.1 The Owner may, without cause, order the Contractor in writing to suspend, delay or interrupt the Work, in whole or in part for such period of time as the Owner may determine.

§ 14.3.2 In such event, if applicable, the Contractors shall be entitled to an equitable extension of Contract Time pursuant to Section 8.3.1 caused by the suspension, delay, or interruption under Section 14.3.1.
(Paragraphs deleted)
The Contractor shall not be entitled to any adjustment in the Contract Sum.

§ 14.4 Termination by the Owner for Convenience

§ 14.4.1 The Owner may, at any time, terminate the Contract for the Owner's convenience and without cause.

§ 14.4.2 Upon receipt of notice from the Owner of such termination for the Owner's convenience, the Contractor shall

.1 cease operations as directed by the Owner in the notice;

.2 take actions necessary, or that the Owner may direct, for the protection and preservation of the Work; and

.3 except for Work directed to be performed prior to the effective date of termination stated in the notice, terminate all existing subcontracts and purchase orders and enter into no further subcontracts and purchase orders.

§ 14.4.3 In case of such termination for the Owner's convenience, the Owner shall pay the Contractor for Work completed by the Contractor in accordance with the Contract Documents. The Contractor shall not be entitled to receive more than $10,000 for compensation, including, without limitation, for field and office overhead or profit (e.g., expected or actual profit) for Work not executed, termination expenses, or damages. In case of such termination of the Contract for the Owner's convenience, Contractor shall be entitled to receive payment from the Owner only for Work which has been certified by the Architect as having been completed by the Contractor.

ARTICLE 15 CLAIMS AND DISPUTES

§ 15.1 Claims

§ 15.1.1 Definition. A Claim is a demand or assertion by one of the parties seeking, as a matter of right, payment of money, a change in the Contract Time, or other relief with respect to the terms of the Contract. The term "Claim" also includes other disputes and matters in question between the Owner and Contractor arising out of or relating to the Contract. The responsibility to substantiate Claims shall rest with the party making the Claim. This Section 15.1.1 does not require the Owner to file a Claim in order to impose liquidated damages in accordance with the Contract Documents.

§ 15.1.2 Time Limits on Claims

The Contractor shall commence all Claims and causes of action against the Owner related to the Contract Documents, whether in contract, tort, or otherwise, within six (6) months of Project completion unless a shorter time applies pursuant to the terms of this Agreement. The Contractor acknowledges that the Owner is a Pennsylvania Public School District and the doctrine of *nullum tempus occurrit regi* applies to its construction, maintenance and repair of school buildings.

§ 15.1.3 Notice of Claims

§ 15.1.3.1 Except as provided herein, claims by the Contractor, where the condition giving rise to the Claim is first discovered prior to expiration of the period for correction of the Work set forth in Section 12.2.2, shall be initiated by written notice to the Owner and to the Initial Decision Maker with a copy sent to the Architect. Claims by the Contractor under this Section 15.1.3.1 shall be initiated within 21 days after occurrence of the event giving rise to such Claim or within 21 days after the Contractor first recognizes the condition giving rise to the Claim, whichever is later. The Contractor shall provide written notice of the claim to the Owner in accordance with the requirements set forth herein. The words "written notice" shall be defined as a letter of claim with a title or a caption stating, "Notice of Claim" and shall provide a description of the claim, shall reference related correspondence and/or directives and/or

AIA Document A232 – 2019. Copyright © 1992, 2009, and 2019. All rights reserved. User Notes: (846491751)

other relevant documents, and the cost and/or time impact of the claim to the Contractor. Provided however, that Claims by the Owner or the Contractor arising from or relating to the Owner's termination of the Contractor's services under Article 14 of this Agreement shall neither be submitted to, nor shall be subject to initial review and decision by, the Initial Decision Maker. If not resolved by the parties, such Claims be subject to dispute resolution under the further provisions of this Article 15.

§ 15.1.3.2 Intentionally deleted.

§ 15.1.4 Continuing Contract Performance

§ 15.1.4.1 Pending final resolution of a Claim, except as otherwise agreed in writing or as provided in Section 9.7 and Article 14, the Contractor shall proceed diligently with performance of the Contract and the Owner shall continue to make payments for undisputed amounts in accordance with the Contract Documents.

§ 15.1.4.2 The Construction Manager or Architect will prepare Change Orders and the Construction Manager will issue a Certificate for Payment or Project Certificate for Payment in accordance with decisions of the Initial Decision Maker.

§ 15.1.5 Claims for Additional Cost. If the Contractor wishes to make a Claim for an increase in the Contract Sum, notice as provided in Section 15.1.3 shall be given before proceeding to execute the Work. No claims for additional costs will be considered for delays caused by the Contractor or other Contractors, coordination issues, project schedules, phasing sequence, or time extensions due to weather or other unforeseen circumstances. Claims for such delays shall be limited to claims for increase in the Contract Time.

§ 15.1.6 Claims for Additional Time

§ 15.1.6.1 If the Contractor wishes to make a Claim for an increase in the Contract Time, notice as provided in herein shall be given before proceeding to execute the Work. The Contractor's Claim shall include an estimate of probable effect of delay on progress of the Work. In the case of a continuing delay only one Claim is necessary. The Contractor's sole recourse for delays is included in Section 8.3 on these General Conditions.

§ 15.1.6.2 No extension of time shall be granted because of seasonal or abnormal variations in temperature, humidity or precipitation, which conditions shall be wholly at the risk of the Contractor, whether occurring within the time originally scheduled for completion or within the period of any extension granted. Any additional costs of operations or conditions shall be the responsibility of the Contractor.

§ 15.1.6.3 Claims for increase in the Contract Time shall set forth in detail the circumstances that form the basis for the Claim, the date upon which each cause of delay began to affect the progress of the Work, the date upon which each cause of delay ceased to affect the progress of the Work, and the number of days' increase in the Contract Time claimed as a consequence of each such cause of delay. The Contractor shall provide such supporting documentation as the Owner may require including, where appropriate, a revised construction schedule indicating all the activities affected by the circumstances forming the basis of the Claim.

§ 15.1.6.4 The Contractor shall not be entitled to a separate increase in the Contract Time for each one of the number of causes of delay which may have concurrent or interrelated effects on the progress of the Work, or for concurrent delays due to the fault of the Contractor.

§ 15.1.7 Claims for Consequential Damages and/or Incidental Damages. The Contractor waives all Claims against the Owner for consequential and/or incidental damages arising out of or relating to this Contract This waiver includes, but is not limited to:

- **.1** consequential damages incurred by the Contractor for office expenses, including without limitation, personnel stationed there, for rental expenses, for losses of use, income, profit, financing, business and reputation, and for loss of management or employee productivity or of the services of such persons; and for loss of actual and expected profit.
- **.2** incidental damages incurred by the Contractor for principal office expenses including, without limitation, costs resulting from stopping the Work, removing and transporting the Contractor's property (e.g., the Contractor's equipment, supplies and materials), and storing the Contractor's property (e.g., the Contractor's equipment, supplies and materials) at an alternate location.

User Notes: (846491751)

This waiver is applicable, without limitation, to all consequential damages and/or incidental damages due to either party's termination in accordance with Article 14. Nothing contained in this Section 15.1.7 shall be deemed to preclude assessment of liquidated damages, when applicable, in accordance with the requirements of the Contract Documents or the Owner's recovery of consequential or incidental damages permitted under applicable laws.

§ 15.1.8 Construction Acceleration Claims

No claim for an increase in the Contract Sum or change in the Contract Time shall be based on construction acceleration. Accordingly, no course of conduct or dealings between the parties, or any express or implied statements made by the parties, nor any express or implied acceptance of alterations to the Work, and no claim that the Owner has been unjustly enriched by any alteration or addition to the Work, whether or not there is in fact any such unjust enrichment, shall be the basis for any claim to an increase in the Contract Sum or change in the Contract Time.

§ 15.1.9 Claims for Economic Loss

The Contractor shall have no claim or right of recovery of damages against the Owner, the Architect and/or the Construction Manager for economic loss sustained, in whole or in part, by any act or omission of the Owner, the Architect and/or the Construction Manager to the extent that such act or omission constitutes a breach of contract. Specifically, and without limiting the generality of the foregoing, the Contractor shall have no claim against the Owner, the Architect and/or the Construction Manager for economic loss based upon any tort, including, without limitation, negligence, negligent misrepresentation, or any other tort-based theory of liability.

§ 15.2 Initial Decision

§ 15.2.1 Claims between the Owner and Contractor, shall be referred to the Initial Decision Maker for initial decision. The Architect will serve as the Initial Decision Maker. An initial decision shall be required as a condition precedent to dispute resolution proceedings related to that of any Claim arising prior to the date final payment is due, unless 30 days have passed after the Claim has been referred to the Initial Decision Maker with no decision having been rendered. Unless the Initial Decision Maker and all affected parties agree, the Initial Decision Maker will not decide disputes between the Contractor and persons or entities other than the Owner.

§ 15.2.2 The Initial Decision Maker will review Claims and within ten days of the receipt of a Claim take one or more of the following actions: (1) request additional supporting data from the claimant or a response with supporting data from the other party, (2) reject the Claim in whole or in part, (3) approve the Claim, (4) suggest a compromise, or (5) advise the parties that the Initial Decision Maker is unable to resolve the Claim if the Initial Decision Maker lacks sufficient information to evaluate the merits of the Claim or if the Initial Decision Maker concludes that, in the Initial Decision Maker's sole discretion, it would be inappropriate for the Initial Decision Maker to resolve the Claim.

§ 15.2.3 In evaluating Claims, the Initial Decision Maker may, but shall not be obligated to, consult with or seek information from either party or from persons with special knowledge or expertise who may assist the Initial Decision Maker in rendering a decision. The Initial Decision Maker may request the Owner to authorize retention of such persons and the Contractor and the Owner shall equally share the expense relating to the retention of such persons.

§ 15.2.4 If the Initial Decision Maker requests a party to provide a response to a Claim or to furnish additional supporting data, such party shall respond, within ten days after receipt of the request, and shall either (1) provide a response on the requested supporting data, (2) advise the Initial Decision Maker when the response or supporting data will be furnished, or (3) advise the Initial Decision Maker that no supporting data will be furnished. Upon receipt of the response or supporting data, if any, the Initial Decision Maker will either reject or approve the Claim in whole or in part.

§ 15.2.5 The Initial Decision Maker will render an initial decision approving or rejecting the Claim, or indicating that the Initial Decision Maker is unable to resolve the Claim. This initial decision shall (1) be in writing; (2) state the reasons therefor; and (3) notify the parties, the Construction Manager, and the Architect, if the Architect is not serving as the Initial Decision Maker, of any change in the Contract Sum or Contract Time or both. The initial decision shall be final and binding on the parties but subject the dispute resolution process set forth in the Contract Documents.

§ 15.2.6 When a written decision of the Architect states that (1) the decision is final but subject to litigation and (2) filing of a lawsuit or a claim covered by such decision must be made by the Contractor within 30 days after the date on which the Contractor receives the final written decision, then the Contractor's failure to file suit within said 30 days' period shall result in the Architect's decision becoming final and binding upon the Contractor. If the Architect renders

a decision after litigation proceedings have been initiated, such decision may be entered as evidence, but shall not supersede litigation proceedings unless the decision is acceptable to all parties concerned.

§ 15.2.6.1 Intentionally deleted.

§ 15.2.7 In the event of a Claim against the Contractor, the Owner may, but is not obligated to, notify the surety, if any, of the nature and amount of the Claim. If the Claim relates to a possibility of a Contractor's default, the Owner may, but is not obligated to, notify the surety and request the surety's assistance in resolving the controversy.

§ 15.2.8 Intentionally deleted.

§ 15.2.9 To the extent any Contractor asserts frivolous claims or asserts claims in bad faith, and the Owner incurs any legal fees, professional fees, expert witness fees, expenses, costs (including, but not limited to, employee cost), the Contractor shall be liable for such fees, expenses or costs, and the Contractor shall reimburse the Owner for such legal fees, professional fees, costs and expenses immediately upon demand by the Owner. This provision shall create no right to the Contractor of any other person or entity for payment of such costs or expenses.

§ 15.3 Mediation

§ 15.3.1 Any claims, disputes, or other matters in question arising out of or related to the Contract, shall be subject to non-binding mediation, but only upon mutual agreement of the Owner and Contractor.

§ 15.3.2 The Owner and Contractor mutually agree to proceed to non-binding mediation, they shall agree upon a forum for the mediation.

§ 15.3.3 Intentionally deleted.

§ 15.3.4 Intentionally deleted.

§ 15.4 Dispute Resolution

§ 15.4.1 If the Owner and Contractor do not mutually agree to proceed to non-binding mediation, or if the parties do not resolve their dispute in non-binding mediation, then the parties, including the Contractor's surety, agree to have any claims, disputes or other matters in question arising out of or relating to this Agreement, decided by the Court of Common Pleas of Montgomery County, Pennsylvania. The parties, including the Contractor's surety, hereby submit to the exclusive jurisdiction of said Court and further agree that the venue of said Court shall be proper in all respects.

SECTION 00 73 19 - SAFETY

PART 1 - GENERAL

1.01 OVERVIEW

A. The personal safety and health of all workers at the project site is of primary importance. The prevention of occupationally induced injuries/illnesses and the compliance with regulatory requirements will be given precedence over operating productivity whenever necessary.

1.02 RELATED SECTIONS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.
B. 00 72 00 General Conditions of the Contract.
C. 01 33 00 Submittal Procedures

1.03 SUBMITTALS

A. Submission of the following is required prior to commencement of work and per 01 33 00 Submittal Procedures.

1. Site Specific Safety Plan including process for weekly toolbox talks
2. Silica Plan (if your scope of work creates silica concerns, this must be included)
    a. Proper training documentation to be included.
3. Fall Protection Plan (if your work will require any activity above 6', lifts, roof work, etc.)
    a. A Competent Person must be identified along with proper training documentation.
4. Steel/Pre-cast Erection Plan (must be specific to this project)
5. Crane and pick plan if applicable (certification of crane operator & rigger)
6. Trench / Excavation Safety (if your scope will be trenching or have open excavations this is required)
    a. A Competent Person must be identified along with proper training documentation.
7. Confined Space Plan (if your scope requires work in a confined space, this is required)
    a. Proper training documentation to be included.

8. Hot Work Plan (if your scope requires hot work, this is required)
    a. Must also include training documentation and example of hot work permit.
9. COVID 19 Preparedness Plan
10. SDS Sheets
    a. Must be readily available (identify the process i.e., paper copies, smartphone, etc.)

1.04 OUTLINE OF RESPONSIBILITIES

A. Each Contractor is responsible for compliance with all applicable governmental safety regulations for their operations, and the coordination of safety precautions with other Contractors on-site.
B. Each Contractor shall appoint an on-site safety representative who is responsible for administering the Contractor's safety program and has the authority to act on behalf of the Contractor on safety issues.
C. The Contractor's on-site safety representative shall train and instruct their employees, attend project safety meetings, immediately supervise the correction of unsafe acts or conditions, investigate all accidents and injuries involving Contractor employees and conduct weekly safety meetings with their employees.
D. Each Contractor shall submit a written report of all accidents causing personal injury or property damage to Construction Manager's Project Manager within 24 hours of their occurrence. The report must include the date and time of the occurrence, damage to equipment or work, names of injured employees, nature of injury, description of the accident/incident and what will be done to prevent the accident/incident from happening again.
E. A Construction Manager representative or their 3rd party consultant will periodically evaluate contractor safety activities and performance in conjunction with each Contractor safety representative. Non- conforming activities or performance shall be corrected by the Contractor immediately."
F. The use of alcohol or drugs by workers on-site is strictly prohibited.
G. Each Contractor shall maintain the construction site and building premises in a clean and orderly manner, in conformity with all governmental regulations, OSHA standards and recommendations.
H. Reference Article 10 of the General Conditions of the contract for other Contractor safety responsibilities.

1.05 SAFE WORK PRACTICES

A. Any condition or practice that a worker observes that might cause personal injury or damage to equipment should be reported to his supervisor immediately.
B. Workers shall not operate any equipment that, in their opinion, is not in safe working condition.
C. Trade Contractors shall ensure that their employees who operate any equipment have been trained & authorized by Trade Contractor and supply this information to the CM upon request.

D. All prescribed safety and personal protective equipment must be used when warranted and said equipment shall be maintained in good working condition. Boots, hard hats and class 2 safety vests must be worn at all times. Eye protection and ear protection shall be available and ready to use when there is a hazard exposure i.e. cutting, grinding, etc.
E. Radios will be allowed at a reasonable level; however, earbuds will not be allowed.
F. Trade Contractors shall train their employees in proper lifting techniques.
G. Trade Contractors engaged in, but not limited to, excavation, scaffolding, fall protection, etc. shall identify their respective competent person (OSHA 1926.32(f) to Construction Manager prior to the commencement of their work.
H. Horseplay will not be permitted on the project.
I. Any Trade Contractor whose employees use powder actuated tools must train their employees in their safe operation, and each employee using such tools shall carry certification that they have been properly trained.
J. Trade Contractors shall not move or disable access/egress lighting. Each Trade Contractor shall provide his own task lighting.
K. Each Trade Contractor shall be responsible to install guardrails, toe boards, etc.
L. Shirts shall be worn at all times. Shirts with sleeves less than 4" or that do not fully cover the torso are not permitted. Tennis shoes (or soft soled shoes) shall not be worn on-site.
M. The use of all tobacco products on public property is prohibited and will be strictly enforced.
N. The use of alcohol or drugs by workers on site is absolutely prohibited. Any worker who violates this policy or is found to be impaired by alcohol or drugs shall be immediately removed from the site by his employer. The Owner or Construction Manager shall have the authority to direct a Trade Contractor to remove a worker from the site.

    1. Drug or alcohol "use" means consuming, possessing, distributing, concealing, buying, or selling, being under the influence, or reporting for duty while under the influence of alcohol or drugs to any degree.
    2. The term "alcohol or drugs" means any form of alcohol or other intoxicating beverage and every type of drug, narcotic plant, or similar narcotic substance, whether illegal or not. Workers who are taking prescription drugs in accordance with a valid prescription must advise their supervisor. The supervisor must determine whether any work restrictions are appropriate. The supervisor shall notify the Project Superintendent of any such work restrictions.

O. Each Trade Contractor shall ensure that their employees are trained and knowledgeable of the specifics of this Safety Policy and must attend safety orientation prior to them working.
P. Trade Contractors violating the Safety Policy will be issued via Procore a "Safety and Health Violation Observation" as warranted by the Project Superintendent. All violations must be corrected immediately and responded to in Procore.
Q. No tools or equipment will be allowed on-site if factory installed or supplied guards and safety devices have been removed, altered, or not used.
R. Warning signage applicable to operations being performed shall be posted prior to commencing work i.e., lasers in use, controlled access to roof, etc.

S. All contractors shall provide current OSHA approved asbestos awareness training to all of its employees prior to jobsite mobilization. Contractors shall include certification of this training in their jobsite specific Safety Manual.

T. Contractors are strongly encouraged to conduct daily pre-task plans to help identify potential safety risks and methods to mitigate them.

1.06 ENFORCEMENT

A. Contractors or employees failing to comply with safety requirements shall be subject to disciplinary action. Disciplinary action could include, but is not limited to the following:

1. Removal of a Contractor, Sub-Contractor, or employee from the site.
2. Reduction or withholding of progress payments until safety violations are corrected.
3. Payment of costs for correction of a safety hazard created by the Contractor when an imminent safety hazard exists, or when previous notices are not adequately responded to.
4. Termination of the contract.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 00 73 19

SECTION 00 73 43 - PREVAILING WAGE RATE REQUIREMENTS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Prevailing Wage Act.
2. Pennsylvania Department of Labor and Industry “Weekly Payroll Certification for Public Works Projects” Form LLC-25 follows as Section 00 73 44.
3. Pennsylvania Prevailing Wage Determination Schedule follows as Section 00 73 46.

1.03 Prevailing Wage Rates

A. The general provisions of the Pennsylvania Prevailing Wage Act, approved August 15, 1961, as amended are applicable to this project.
B. The general prevailing minimum wage rates including contributions for employee benefits as shall have been determined by the Secretary of Labor and Industry (hereinafter “Secretary”), which must be paid to the workmen, employed in the performance of the Contract.
C. The Contractor shall pay no less than the wage rates as determined in the decision of the Secretary and shall comply with the conditions of the Pennsylvania Prevailing Wage Act approved August 15, 1961 (Act No. 442), as amended August 9, 1963 (Act No. 342), and the Regulations issued pursuant thereto, to assure the full and proper payment of said rates. Contact PA Department of Labor and Industry for clarification of any classification of workers.
D. These Contract provisions shall apply to all work performed on the Contract by the Contractor and to all work performed on the Contract by all subcontractors.
E. The Contractor shall insert in each of his subcontracts all of the stipulations contained in these required provisions.
F. No workmen may be employed on the Work except in accordance with the classifications set forth in the decision of the Secretary. In the event that additional or different classifications are necessary, the procedure set forth in the Regulations shall be followed.

G. All workmen employed or working on the Work shall be paid unconditionally, regardless of whether any contractual relationship exists or the contractual relationship which may be alleged to exist between any contractor, subcontractor, and workmen, not less than once a week without deductions or rebate, on any account, either directly or indirectly, except authorized deductions, the full amount due at the time of payment, computed at the rates applicable to the time worked in the appropriate classification. Nothing in this Contract, the Act or the Regulations shall prohibit the payment of more than the general prevailing minimum wage rates as determined by the Secretary to the workmen on the Work.

H. The Contractor and each subcontractor shall post for the entire period of construction the wage determination decisions of the Secretary, including the effective date of any changes thereof, in a prominent and easily accessible place or places at the site of the work and at such place or places used by them to pay workmen their wages. The posted notice of wage rates must contain the following information:

1. Name of project.
2. Name of public body of which it is constructed.
3. The crafts and classifications of workmen listed in the Secretary's general prevailing minimum wage rate determination for the particular project.
4. The general prevailing minimum wage rates determined for each craft and classification and the effective date of any changes.
5. A statement advising workmen that if they have been paid less than the general prevailing minimum wage rate for their job classification or that the Contractor and/or subcontractor are not complying with the Act or the Regulations in any manner whatsoever, they may file a protest with the Secretary within three (3) months of the date of the occurrence, objecting to the payment to the Contractor to the extent of the amount or amounts due or to become due to them as wages for work performed on the Project. Any workmen paid less than the rate specified in the Contract shall have a civil right of action for the difference between the wage paid and wages stipulated in the Contract, which right of action must be exercised within six (6) months from the occurrence of the event creating such right.

I. The Contractor and all subcontractors shall keep an accurate record **showing the name, craft and/or classification, number of hours worked per day, and the actual hourly rate of wage paid (including employee benefits) to each workman employed by him in connection with the Work and such record must include any deductions from each workman.** The record shall be preserved for two (2) years from the date of payment and shall open at all reasonable hours to the inspection of the Owner and to the Secretary or his duly authorized representative.

1. Apprentices shall be limited to such numbers as shall be in accordance with a bona fide apprenticeship program registered with and approved by the Pennsylvania Apprenticeship and Training Council and only apprentices whose training and employment are in full compliance with the provisions of the Apprenticeship and Training Act approved July 14, 1961 (Act No. 304) and the Rules and Regulation issued pursuant thereto shall be employed on the Work. Any workmen using the tools of a craft that does not qualify as an apprentice within the provisions of this submission shall be paid the rate predetermined for journeyman in that particular craft and/or classification.

J. Wages shall be paid without any deductions except authorized deductions. Employers not party to a contract requiring contributions for employee benefits which the Secretary has determined to be included in the general prevailing minimum wage rate shall pay the monetary equivalent thereof directly to the workman.

K. Payment of compensation to workmen for work performed on public work on a lump sum basis, or apiece work system, or a price certain for the completion of a certain amount of work, or the production of a certain result shall be deemed a violation of the Act and the Regulations, regardless of the average hourly earnings resulting therefrom.

L. Each Contractor and each subcontractor shall file a statement each week and a final statement at the conclusion of the Work on the Contract with Owner, under oath, and in form satisfactory to the Secretary, certifying that all workmen have been paid wages in strict conformity with the provisions of the Contract as prescribed by the Regulations, or if any wages remain unpaid, to the amount of wages due and owing to each workman respectively.

M. The provision of the Act and the Regulations are incorporated by reference in the Contract.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

A. Prevailing wage certification forms are to be produced weekly and are to be submitted monthly. Prevailing wage certificates are to be sent to Architect and CM with a pencil copy of the Application for Payment. No Applications for Payment will be processed without the proper prevailing wage certificates. Contractor may be requested to submit the prevailing wage certification forms in any of the following manners:

1. If hard paper copies are submitted, Contractor shall submit two (2) copies of each prevailing wage certification form.
2. If digital copies are submitted, Contractor shall submit to Architect and CM in PDF form.
3. Redacted certified payroll:

    a. Prevailing wage certification forms submitted to the Owner may not be redacted by law; however, if there is a Project Right-to-Know request, the Contractor will be required to submit redacted prevailing wage certification forms **in addition** to the required unredacted forms. The following information may be redacted:

        1) Employee Name
        2) Employee Address
        3) Employee Social Security Number

B. Contractor shall use the Commonwealth of Pennsylvania Department of Labor and Industry Form LLC-25 (form can be accessed at: http://www.dli.pa.gov/Individuals/Labor-Management-Relations/Documents/llc-25.pdf), as revised from time to time, and ensure proper classification of workmen are assigned to each person. Certificates must be filled out in their entirety. Form is included as Specification Section 00 73 44. Certified Payroll submitted on U.S. Wage and Hour

Division forms are NOT accepted and will be returned to the Contractor.

C. Regardless of the submission type, the first and the final certification forms must be notarized, signed, and dated.

CERTIFIED STATEMENT OF COMPLIANCE

1. The undersigned, having executed a contract with _____
(AWARDING AGENCY, CONTRACTOR OR SUBCONTRACTOR)

_____ for the construction of the above-identified project, acknowledges that:

(a) The prevailing wage requirements and the predetermined rates are included in the aforesaid contract.

(b) Correction of any infractions of the aforesaid conditions is the contractor's or subcontractor's responsibility.

(c) It is the contractor's responsibility to include the Prevailing Wage requirements and the predetermined rates in any subcontract or lower tier subcontract for this project.

2. The undersigned certifies that:
   (a) Neither he nor his firm, nor any firm, corporation or partnership in which he or his firm has an interest is debarred by the Secretary of Labor and Industry pursuant to Section 11(e) of the PA Prevailing Wage Act, Act of August 15, 1961, P.L. 987 as amended, 43 P.S.§ 165-11(e).

   (b) No part of this contract has been or will be subcontracted to any subcontractor if such subcontractor or any firm, corporation or partnership in which such subcontractor has an interest is debarred pursuant to the aforementioned statute.

3. The undersigned certifies that:
   (a) the legal name and the business address of the contractor or subcontractor are: _____
   _____

   (b) The undersigned is: ☐ a single proprietorship ☐ a corporation organized in the state of _____
   ☐ a partnership ☐ other organization (describe) _____

   (c) The name, title and address of the owner, partners or officers of the contractor/subcontractor are:

NAME	TITLE	ADDRESS

The willful falsification of any of the above statements may subject the contractor to civil or criminal prosecution, provided in the PA Prevailing Wage Act of August 15, 1961, P.L. 987, as amended, August 9, 1963, 43 P.S. § 165.1 through 165.17.

SECTION 00 91 00 – ADDENDA

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. The Construction Manager may prepare and issue Addenda during the bidding period as necessary to interpret or clarify the bidding documents, to list approved substitutions of materials or systems, or to change the date and/or time for receipt of bids.
B. Addenda will refer bidders to the affected drawings or section of the project manual and describe the modification, clarification, or correction in writing or by means of supplemental drawings if necessary.
C. Addenda will be serially numbered and dated, identifying the Project, Owner, Construction Manager, and Engineer(s).
D. Addenda will be distributed electronically, by email, or mail to all known bidders at the address furnished by them when bidding documents were obtained. Copies of the Addenda will be distributed at the same time to all parties recorded as having bidding documents on file.
E. Bidders shall not rely on oral instructions made to bidders by any officer, agent, or employee of the Owner, Construction Manager, or Engineer(s).

PART 2 - PRODUCTS – NOT USED

PART 3 - EXECUTION – NOT USED

END OF SECTION 00 91 00

SECTION 01 11 00 - SUMMARY OF WORK

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Project information.
2. Work covered by the Contract Documents.
3. Work performed under Owner's separate contracts.
4. Owner-furnished products.
5. Construction schedule.
6. Responsibility of the Contractor.
7. Use of building by Owner.
8. Contractor's use of premises

B. Related Requirements:

1. Section 01 50 00 "Temporary Facilities and Controls" for limitations and procedures governing temporary use of Owner's facilities.
2. Section 01 73 00 "Execution" for coordination of Owner-installed products.

1.03 PROJECT INFORMATION

A. All work furnished under this Project Manual shall be installed at the following location in accordance with the Contract Documents:
B. Project Identification: New Jarrettown Elementary School

1. Project Location: 1520 Limekiln Pike Dresher, PA 19025
2. Applicable County: Montgomery County
3. Applicable Local Municipality: Upper Dublin Township

C. Owner: Upper Dublin School District, 1580 Fort Washington Ave., Maple Glen, PA 19002
D. The provisions of the General Conditions, and Divisions 00, Procurement and Contracting Requirements and Division 01, General Requirements, shall apply to all work of the Contracts.

E. The Scope of Work for the Prime Contractors includes all work required for complete construction of their Work Scope in accordance with the Contract Documents.

1.04 WORK COVERED BY THE CONTRACT DOCUMENTS

A. The Work of the Project is defined by the Contract Documents and includes, but is not limited to, the following:

1. New building construction
2. Environmental Abatement (to be completed under a separate prime contract)
3. Demolition
4. Associated site work

B. Project will be constructed under coordinated, concurrent multiple prime construction contracts. See Section 01 12 00, Multiple Work Scope Summary for list of multiple contracts requirements and coordination, including responsibilities of the Project Coordinator. See individual Work Scope Summary Sections for a description of Work included under each of the multiple contracts. A summary of Work Scope packages currently being bid are as follows:

1. Work Scope 1 –General Construction and related site work

a. Work Scope No. 1 includes all labor, materials, equipment, supervision, coordination, services, and incidental work required to provide the complete construction of the building and associated improvements as shown in the Contract Documents. The Specification Divisions specifically assigned to this Contract are Divisions 00 through 14 and 31, 32, and 33 except when specifically assigned to another Contract for construction. The General Construction Contract shall also perform all work shown, specified, indicated, scheduled, or reasonably inferable from the Contract Documents necessary for a complete and functional installation, regardless of the drawing discipline, specification section, drawing sheet designation, or detail in which the work is referenced, except where expressly assigned to another Contract. Work Scope No. 1 includes demolition, sitework, architectural, structural, food service, and all other activities customarily recognized as general construction.

2. Work Scope 2 –Electrical Construction

a. Work Scope No. 2 includes all labor, materials, equipment, supervision, coordination, services, and incidental work required to provide the complete construction of the building and associated improvements as shown in the Contract Documents. The Specification Divisions specifically assigned to this Contract are Divisions 00, 01, 02, 03, 04, 07, 08, 10, 11, 12, 14, 22, 23, 26, 27, 28, 31 and 33 except when specifically assigned to another Contract for construction. The Electrical Construction Contract shall also perform all work shown, specified, indicated, scheduled, or reasonably inferable from the Contract Documents necessary for a complete and functional installation, regardless of the drawing discipline, specification section, drawing sheet designation, or detail in which the work

is referenced, except where expressly assigned to another Contract. Work Scope No. 2 includes all construction and other activities customarily recognized as electrical construction.

3. Work Scope 3 –Mechanical Construction

   a. Work Scope No. 3 includes all labor, materials, equipment, supervision, coordination, services, and incidental work required to provide the complete construction of the building and associated improvements as shown in the Contract Documents. The Specification Divisions specifically assigned to this Contract are Divisions 00, 01, 02, 03, 04, 07, 11 and 23 except when specifically assigned to another Contract for construction. The Mechanical or HVAC Construction Contract shall also perform all work shown, specified, indicated, scheduled, or reasonably inferable from the Contract Documents necessary for a complete and functional installation, regardless of the drawing discipline, specification section, drawing sheet designation, or detail in which the work is referenced, except where expressly assigned to another Contract. Work Scope No. 3 includes all construction and other activities customarily recognized as mechanical or HVAC construction.

4. Work Scope 4 – Plumbing/Fire Protection Construction

   a. Work Scope No. 4 includes all labor, materials, equipment, supervision, coordination, services, and incidental work required to provide the complete construction of the building and associated improvements as shown in the Contract Documents. The Specification Divisions specifically assigned to this Contract are Divisions 00, 01, 02, 03, 04, 07, 11, 12, 21, 22, 31, and 33 except when specifically assigned to another Contract for construction. The Plumbing Construction Contract shall also perform all work shown, specified, indicated, scheduled, or reasonably inferable from the Contract Documents necessary for a complete and functional installation, regardless of the drawing discipline, specification section, drawing sheet designation, or detail in which the work is referenced, except where expressly assigned to another Contract. Work Scope No. 4 includes all construction and other activities customarily recognized as plumbing and fire protection construction.

1.05 WORK PERFORMED UNDER OWNER’S SEPARATE CONTRACTS

A. Cooperate fully with Owner and separate Owner-hired firms and/or agencies so work may be carried out smoothly, without interfering with or delaying Work under this Contract. Coordinate the Work of this Contract with work performed under Owner's separate contracts.

1. Construction Testing and Special Inspections:

   a. Conducted by a separate firm hired by the Owner and will require the participation and cooperation of all Contractors.

b. The Owner will procure and bear costs for only the following: field testing for earthwork, concrete, masonry, asphalt and concrete paving, fireproofing and firestopping, and structural steel.

2. Commissioning Verification Authority and HVAC Testing, Adjusting, and Balancing (CVA/TAB):

a. Conducted by a separate firm hired by the Owner and will require the participation and cooperation of all contractors.
b. The Mechanical Contractor is responsible for all pressure testing of any pipes, ductwork, or field systems and for coordinating and supporting all the testing and balancing.

3. Playground Equipment:

a. Conducted by a separate firm hired by the Owner and will require coordination with the Work Scope 1 General Construction Contractor
b. The General Construction Contractor is responsible for all playground base and site prep

4. Limekiln Road Improvements:

a. Conducted by a separate firm hired by the Owner and will require coordination with all contractors
b. See drawings for distinction of where the property sitework ends, and the Limekiln Road improvements begin.

5. Environmental Abatement:

a. Conducted by a separate firm hired by the Owner and will require coordination with all contractors

6. Other contracts are at the Owner’s sole discretion

1.06 OWNER-FURNISHED PRODUCTS

A. Owner will furnish products indicated. The Work includes receiving, unloading, handling, storing, protecting, and installing Owner-furnished products. The Work includes providing support systems to receive Owner's equipment and making plumbing, mechanical, and electrical connections. Owner furnished products also includes existing items to be relocated by the Contractor (OFCR).

1. Owner will arrange for and deliver Shop Drawings, Product Data, and Samples to Contractor.
2. Owner will arrange and pay for delivery of Owner-furnished items according to Contractor's Construction Schedule.
3. After delivery, Owner will inspect delivered items for damage. Contractor shall be present for and assist in Owner's inspection.
4. If Owner-furnished items are damaged, defective, or missing, Owner will arrange for replacement.
5. Owner will arrange for manufacturer's field services and for delivery of manufacturer's warranties to Contractor.

6. Owner will furnish Contractor with the earliest possible delivery date for Owner-furnished products. Using Owner-furnished earliest possible delivery dates, Contractor shall designate delivery dates of Owner-furnished items in Contractor's Construction Schedule.
7. Contractor shall review Shop Drawings, Product Data, and Samples and return them to Architect noting discrepancies or anticipated problems in use of product.
8. Contractor is responsible for receiving, unloading, and handling Owner-furnished items at Project site.
9. Contractor is responsible for protecting Owner-furnished items from damage during storage and handling, including damage from exposure to the elements.
10. If Owner-furnished items are damaged as a result of Contractor's operations, Contractor shall repair or replace them.
11. Contractor shall install and otherwise incorporate Owner-furnished items into the Work.

B. Owner-Furnished Products:

1. Security cameras and equipment provided by the Owner will be installed under Work Scope No. 2.
2. Residential/Kitchen Appliances
3. Kitchen Appliances as indicated on drawings to be provided by the Owner will be installed under Work Scope No. 1.
4. CCTV System
5. TV displays as indicated on the drawings to be installed under Work Scope No. 2.
6. Other items as noted in the drawings.

1.07 CONSTRUCTION SCHEDULE

A. Scheduling of Work and Time of Completion is an essential condition of this Contract. The entire Work shall be completed in compliance with the Project milestone completion dates listed. Any deviations from these requirements shall be subject to the approval of the Construction Manager.
B. The Notice to Proceed will be issued as noted on the Phasing Plan(s).
C. Completion for each phase and milestones are noted on the Phasing Plan and must be strictly complied with.
D. Completion of all contracts is as follows:

1. Building Substantial Completion: June 21st, 2029
2. Site Substantial Completion: February 27th, 2030
3. Project Final Completion: March 27th, 2030

E. See Phasing Plan(s) for milestone dates. The contractors' sequence and CPM schedule shall incorporate all milestone dates and comply with all dates noted therein for completing the Project. The dates provided are the milestone completion dates which will be enforced. All building systems are to be installed in compliance with the milestone dates identified on the Phasing Plans.

F. Construction work shall be performed in a sequence to ensure that all building systems are systematically installed in an efficient manner. The mechanical and electrical rooms shall be constructed in an early sequence to permit rough-in by the Mechanical, Electrical, and Plumbing trades and to ensure proper operation of life safety systems in occupied areas of the building in the timeframes identified on the Phasing Plans.

G. If the Notice to Proceed or a required permit or an approval from an approval agency that is required for Start of Work is delayed for any reason beyond the control of any Prime Contractor that prevents the Contractor from Performing Work, the Owner, in consultation with the Construction Manager, may adjust the applicable Milestone Completion Dates, Phased Completion Dates, and Contract Time as deemed appropriate to account for the delay. The Contractor is not entitled to damages for delay of any type on this contract. Contractor agrees that an extension of time is the only resource as a result of any delays that are beyond the Contractor's control.

H. If a specific milestone or phased completion date is delayed for any reason beyond the control of any Prime Contractor that prevents the Contractor from performing Work, and the delay impacts subsequent milestone and phased completion dates, remaining milestone and phased completion dates will be adjusted by the exact same number of days.

I. All Work must be completed in accordance with the Phasing Drawings, the Project NPDES permit requirements for stormwater discharges associated with construction activities issued under Chapter 102 by the Department of Environmental Protection (DEP) and authorized county conservation districts (CCDs), the approved Project schedule, and in a sequence approved by the Architect, Engineer, and Owner. Each prime contractor shall complete and submit required Visual Site Inspection Reports (VSIRs) and other DEP compliance documentation in compliance with the Owner's NPDES permit and DEP requirements and shall submit the appropriate application forms to the appropriate County Conservation District.

1.08 RESPONSIBILITY OF THE CONTRACTOR

A. The Contractor shall be responsible for the scheduling and general management of the work of the project and for the acts and omissions of all of their employees; all subcontractors, their agents and employees; and all other persons performing any of the work under a contract with the Contractor.

B. The Contractor will have supervision on site full-time during the duration of the project for their respective scope of work. The Supervisor must be on site while all work is in process.

C. The Contractor shall be responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the Work.

D. The Contractor shall supervise and direct the work, using their best skills and attention. They shall be solely responsible for all construction means, methods, techniques and procedures and for coordination of all portions of the work under this Contract.

E. The Contractor shall accept the project as it exists. All existing conditions, whether or not specifically noted on the Contract Documents, shall be verified by the Contractor in-person prior to the start of work.

F. The Contractor shall not proceed with any items of the work, which are reasonably questionable without consulting the Construction Manager.

G. Contractor's questions regarding this project must be directed to the Construction Manager. The Owner's employees are not authorized to make decisions or give direction regarding any aspect of this project. Consult CM employees involved in the project only. These employees will be identified in the Pre-Construction Meeting. Contact information can also be obtained on Procore in the directory

H. Construction Limits: Except as specifically indicated or as may be necessary to complete the work under the Contract, activities of the Contract shall be limited to within the limits designated on the drawings.

I. Testing:

1. Contractors are to perform all factory, Source Quality Control, or shop testing and any other testing required.
2. Contractors are to perform any field testing of electrical systems or data wiring systems.
3. Contractors are to perform testing of above or below ground pipes, ductwork, and mechanical systems including pressure, air, water, or vacuum testing required.
4. Contractors are to perform any other field testing that may be required by Specification Divisions 02-33 or not included by the Owner’s Testing Agent.
5. All contractor testing shall be performed in the presence of the Construction Manager and/or (if required) in the presence of the municipal agency having jurisdiction.

J. The Contractor responsible for installation of the systems and equipment is responsible for commissioning each system. The minimum commissioning requirements in accordance with specific project requirements, including coordination and verification, shall be the responsibility of the Contractor.

K. Construction Waste Management for all Project activities except demolition is by Construction Manager. Construction Waste Management for demolition work and any site features is by the Contractor performing the Work.

L. Local Municipal Approvals & Permits: The Contractor shall be responsible for the final completion of the permit applications and coordinating the submission of the permit application. The Owner will pay for the building permit. The Contractor shall secure and pay for all necessary administrative costs, insurances, business privilege licenses, certifications, or taxes to apply for the necessary permits required to perform the Work.

M. Contractors must obtain all necessary state, county, or local municipal approvals prior to substantial completion.

N. Prior to acceptance as substantially complete, all general construction, all mechanical, electrical, and plumbing systems shall be complete, fully operational, tested as required, inspected by approval authorities, and certified complete.

1.09 USE OF BUILDING BY OWNER

A. Owner reserves the right to let other contracts in connection with this Project or in connection with existing buildings. Contractor shall afford other contractors reasonable opportunity for the introduction and storage of their materials and execution of their work and shall properly connect and coordinate his work with theirs. Cooperate fully with Owner and separate Owner-hired firms and/or agencies so work may be carried out smoothly, without interfering with or delaying Work under this Contract.

B. The owner reserves the right to jointly occupy the premises with the Contractor in the performance of his duties and functions. The Owner also reserves the rights to: enter into the Project and premises at all times; make installations or removal of materials and equipment at appropriate times as the Work progresses; and install or remove equipment, furniture, and furnishings when spaces are at appropriate stages of completion. Contractor shall coordinate work with the Owner and cooperate with the Owner to minimize undue interferences.

C. If any part, unit, phase, or the entire Project is substantially complete or ready for occupancy, the Owner may, upon notice to the Contractor, enter into and make use of the Work that is substantially complete.

D. Obtain a Certificate of Occupancy from authorities having jurisdiction before limited Owner occupancy.

1. Before limited Owner occupancy, mechanical and electrical systems shall be fully operational, and required tests and inspections shall be successfully completed. On occupancy, Owner will operate and maintain mechanical and electrical systems serving occupied portions of Work.

1.10 CONTRACTOR'S USE OF PREMISES

A. General: During the construction period, the Contractor shall have limited use of the premises for construction operations as shown in the project plans. The Contractor's use of the premises is limited by the Owner's right to perform construction operations with its own forces or to employ separate contractors on portions of the project, and by the Owner’s right to continue daily school operations. The Contractor must coordinate activities and cooperate with adjacent uses including any of their construction activities. Contractor must also schedule, coordinate, and perform construction activities to avoid disruption of ongoing operations. Contractor must schedule and perform certain work on weekends and holidays to avoid disruptions. This may include street and utility work.

1. The site is currently occupied as an Elementary School, and such daily activities/functions revolving around the educational process, cannot be interrupted and must be considered in the scheduling of work for this project. The Contractor is responsible to make accommodations to not disrupt regular school activities/functions, such as: (arrival/dismissal, physical education, etc.). In addition, the Contractor is required to provide adequate safety measures and separation of any and all construction activities.
2. Construction deliveries are not permitted from 8:30-9:30am and 3:15-4:15pm Monday-Friday. Any deliveries arriving at these times will be turned away with all associated costs the responsibility of the contractor.
3. Confine operations to areas within Contract limits indicated. Portions of the site beyond areas in which construction operations are indicated are not to be disturbed.
4. Keep driveways, parking lots, and entrances serving the premises clear and available to the Owner at all times. Do not use these areas for parking or storage of materials. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on site.

5. Site Protection: Protect existing trees and other plantings which are not to be removed, and paved surfaces which are to remain and are susceptible to damage from ordinary operations of the Contractor, trucking or other activity. Provide appropriate safety signage and barricades to keep unauthorized person(s) out of the project area.

B. Restoration: All improvements on or about the site and adjacent property which are not shown to be altered, removed or otherwise changed, and which have been damaged or disturbed by any work or operations under this contract, shall be restored to the conditions which existed previous to starting work. All features labeled to remain shall be protected from damage by any operation in connection with the Project. The Contractor shall replace or repair, at their own expense (and to the satisfaction of the Owner), all damage to existing drives, lawns, plants, trees, shrubbery and other property resulting from work of this Contract, from whatever cause.

C. Interior Protection: Each contractor/ Work Scope is responsible for protecting their installed components/materials. Finished Flooring must be covered with poly and high traffic areas (corridors, lobbies, etc.) should be covered with poly and Masonite to protect the flooring by the General Contractor. The flooring protection must be monitored and corrected if showing signs of deterioration. If damage occurs, that contractor will be responsible to clean and if that is not sufficient it will be replaced by the contractor at their expense. Contractor is to cover owner items with poly while construction activity is taking place in that room, ie; bookshelves, desks, etc. When working in a clean room, ie; computer lab or data closet, contractor is to maintain cooling, and dust free environment as to not damage equipment, Temporary enclosures may be needed to protect equipment.

END OF SECTION 01 11 00

SECTION 01 12 00 – MULTIPLE WORK SCOPE SUMMARY

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes a summary of each contract, including responsibilities for coordination and temporary facilities and controls.
B. Specific requirements for Work of each contract are also indicated in individual Specification Sections and on Drawings.
C. Related Sections include the following:

1. Division 00 Section “Safety” for responsibilities of individual Prime Contractors’ Health and Safety Plans including disease communication protocols established by CDC and OSHA.
2. Division 01 Section 01 11 00 "Summary of Work" for the Work covered by Contract Documents and for overall work sequence and for work restrictions for use of the Project site and for requirements for continued Owner occupancy of premises.
3. Division 01 Section 01 31 00 "Project Management and Coordination" for general coordination requirements.
4. Division 01 Section 01 31 17 “Coordination Drawings” for specific drawing coordination requirements and responsibilities.
5. Division 01 Section 01 50 00 "Temporary Facilities and Controls" for specific requirements for temporary facilities and controls.

1.03 CONTRACT REQUIREMENTS APPLICABLE TO ALL WORK SCOPES

A. Comprehensive Scope of Work: Provide labor, material, and equipment necessary to properly execute the work of this Work Scope in accordance with Contract Documents and specifically the specifications sections listed herein.

1. Contract Documents are complimentary, and what is required by one shall be as binding as if required by all. i.e., daily site clean-up from all contractors of work areas.
2. Each contractor is responsible for the general, civil, structural, architectural, mechanical, and electrical notes as they relate to your Work.
3. It is the intent of this Work Scope and responsibility for this contractor to provide a complete operational assembly/system, unless specifically indicated below.
4. Review the entire project so that proceeding, concurrent, and succeeding work of

other contractors can proceed without harm to the Project as a whole.

5. Each contractor is required to coordinate their work with other contractors, as directed by the Construction Manager, without additional compensation.
6. By submitting your Proposal/Bid, each contractor acknowledges they have reviewed all appropriate contract documents, including previously issued documents and have anticipated, based on information provided or available, impact of future Work as it affects their Work Scope Category.
7. Construction Cleaning: Each Work Scope is responsible for clean-up of debris, rubbish and other similar items resulting from their operations on a daily basis.

B. Contract Scope and Assigned Responsibilities:

1. Anything contained in the Contract Documents designated as "by General Contractor", “Contractor”, or similar terms, shall be by the Contractor performing the same work as so designated by the work scope delineation.
2. Local Trade union jurisdictional settlements do not control the scope of work included in a Work Scope, and Work Scopes do not delineate jurisdictional portions of work. In case a jurisdictional dispute arises, the contractor shall be responsible for any associated cost of the “Claimed” work.
3. When a potential jurisdictional dispute or similar interruption of construction activities is identified, affected contractors shall promptly negotiate a reasonable settlement with the Construction Manager and affected parties to avoid or minimize interruption and delays.
4. Unless otherwise indicated, Work Scopes include a complete section of Work, including but not limited to labor, materials, equipment, scaffolding, hoisting, applicable permits and taxes as required by the Contract Documents.

C. Clarification: The Specifications are written in imperative and abbreviated form.

1. It shall be clearly understood that all imperative statements are directed at the subcontractor responsible for that portion of the Work, unless specifically indicated otherwise.
2. Incomplete sentences shall be completed by inserting “shall”, “contractor shall”, and similar mandatory phrases by inference in the same manner as they are applied to notes on Drawings.
3. The words “shall be” shall be supplied by inference where a colon is used within a sentence or phrase.
4. Where stated “Provide” in Work Scopes. Provide means furnish and install.
5. Each Contractor is responsible for the protection of their work.
6. Temporary Facilities and Controls: See specific responsibilities for temporary facilities and controls indicated in Division 01 Section "Temporary Facilities and Controls," and as noted on the Contract Documents.

    a. Temporary enclosures of window and door openings will be completed as outlined in Section 01 50 00.
    b. Fire Extinguishers and appropriate signage will be supplied as per Section 01 50 00.

D. Interpretations or Corrections of Contract Documents: Carefully study and compare Documents with each other and with other work being performed concurrently or

presently under construction to the extent that it relates to the Work for which this Contract is awarded. Contractor shall examine the site and local conditions and shall at once report to the Construction Manager inconsistencies or ambiguities discovered or requirements not understood.

1. Using Request for Information (RFI) on the web-based project management platform (Procore, as provided by ICS), contractors shall submit to ICS Request for Information prior to performing work in question.
2. The Contractor will forward Request for Information on form acceptable to Owner, Architect, and Construction Manager prior to performing work in question. All RFIs should be submitted through Procore.
3. Responses provided to an RFI by Owner, Architect or Construction Manger are intended to be clarifications only and are not an authorization for a Contract Time extension or an increase in the Contract Amount.
4. If the contractor believes the response is a change in either Contract Time or Contract Amount, the contractor shall comply with requirements of the Owner/Contractor Agreement.
5. Request for Information (RFI's) agreed to by Owner and ICS that change either the Contract Time or Contract Amount will be included in an appropriate Change Order prior to performing work in question.

E. Conflicts and Duplication in Work: In the case of a duplication of scope responsibility either on Drawings, Specification, or Work Scope Descriptions, Contractor is responsible to bid the work as called out regardless of potential oversight duplications.

1. In the case of duplication, the Construction Manager will make the final decision as to which Work Scope will do the work and the appropriate cost adjustment will be made. Duplicated scope shall be resolved as follows:

    a. Before work is performed, the Construction Manager will determine in writing which single Work Scope will perform the duplicated work. The Construction Manager will base this on the Contract Documents and the trade responsible for the work.
    b. The Contractor not assigned the work shall receive a deductive credit. The credit equals the cost for that work shown in its Bid, as supported by its schedule of values or bid breakdown. Credits shall be issued by Change Order.
    c. The assigned Contractor will perform the work for the amount included in its Bid. No additional compensation or time extension will be allowed for performing duplicated work.
    d. A Contractor who finds duplicated scope shall notify the Construction Manager in writing before performing the work. Work performed before the Construction Manager's written determination is at the Contractor's risk.

1.04 SCOPE CLARIFICATIONS APPLICABLE TO ALL WORK SCOPE CATEGORIES

A. Extent of Contract: Unless the Contract Documents contain a more specific description of the Work, names, and terminology on Drawings and Specification Sections determine which contract includes a specific element of Project.

1. Unless otherwise indicated, the Work described in this Section for each contract shall be complete systems and assemblies, including products, components, accessories, and installation required by the Contract Documents.
2. Local custom and trade-union jurisdictional settlements do not control the scope of the Work of each contract. When a potential jurisdictional dispute or similar interruption of work is first identified or threatened, affected contractors shall negotiate a reasonable settlement to avoid or minimize interruption and delays.
3. Trenches required for the Work of each contract shall be provided by each contract for its own Work unless noted otherwise.
4. Cutting and patching for the Work of each contract shall be provided by each contract for its own Work, except where indicated otherwise on the Drawings or Specifications. Refer to Section 01 73 29 Cutting and Patching.
5. Firestopping for the Work of each contract shall be provided by each contract for its own Work.
6. Submit schedules showing construction operations sequenced and coordinated with overall construction and provide all scheduling and coordination information required for the complete scope of work.

B. Special Coordination and Scheduling Required: Contractor acknowledges that the performance of this Work Scope must be closely interfaced with the performance of others and that multiple mobilizations will be required.

1. It is understood that punctuality and compliance with agreed-upon deliveries is of the essence on the Project.
2. Comply with Project Schedule and ensure preparatory work of other trades are erected first or carried forward simultaneously where installation sequence requires it.
3. Contractor shall provide reasonable notice of its intentions to those affected, and if other contractors, after such reasonable notice, fail to have their work in readiness, Construction Manager shall be consulted, and their directions followed.
4. Where indicated or required to maintain a Project Schedule or to accommodate Owner’s on-going operations, provide required “after-hours” shift work to maintain Project Schedule. It is the contractor’s responsibility to properly staff and accommodate where necessary to maintain the schedule. Overtime work by each contractor necessary to conform with these requirements shall be considered a normal practice under this contract. No claims for additional compensation will be accepted by the Owner.

1.05 COORDINATION

A. Project Coordinator shall be responsible for coordination between the General Construction Contract, Plumbing Contract (also referenced as PC), HVAC (also referenced as Mechanical and or MC) Contract, Electrical Contract (also referenced as EC), Environmental (Asbestos) Abatement Contract (also referenced as EAC) and Limekiln Road Improvements Contract.

1. General Construction Contractor shall act as and assume responsibilities of Project Coordinator which are designated throughout the Contract Documents.

B. All Prime Contractors shall cooperate and be responsible for preparation and compliance with coordination drawings per Specification 01 31 17.
C. Environmental Abatement Contractor (EAC) shall coordinate all work in accordance with project phasing requirements and scheduled activities of all other contractors.
D. The Limekiln Road Improvement Contractor shall coordinate all work in accordance with project phasing requirements and scheduled activities of all other contractors.
E. GC shall coordinate all work in accordance with project phasing requirements and scheduled activities of all other contractors.
F. GC shall perform cutting and patching of all roofing materials including metal deck. Any structural reinforcement required is by the General Contractor.
G. Refer to Article 1.07.I for roofing and watertightness responsibilities..

1.06 PROJECT COORDINATOR RESPONSIBILITIES

A. Project Coordinator: Full-time Project Coordinator shall be experienced in administration and supervision of building construction, including HVAC, plumbing, and electrical work.

1. Coordination activities of Project Coordinator include, but are not limited to, the following:

a. Provide overall coordination of the Work.
b. Coordinate shared access to workspaces.
c. Coordinate product selections for compatibility.
d. Provide overall coordination of temporary facilities and controls.
e. Coordinate, schedule, and approve interruptions of permanent and temporary utilities, including those necessary to make connections for temporary services.
f. Coordinate construction and operations of the Work with work performed by each Contract.
g. Prepare Coordination Drawings to coordinate work by more than one contract except for HVAC, electrical, and plumbing coordination drawings which are the responsibility of the respective Contractors and primarily the HVAC Contractor.
h. Coordinate sequencing and scheduling of the Work. Include the following:
i. Initial Coordination Meeting: At the earliest possible date, arrange and conduct a meeting with contractors for sequencing and coordinating the Work; negotiate reasonable adjustments to schedules.
j. Prepare a combined Contractor's Construction Schedule for entire Project. Base schedule on Preliminary Construction Schedule. Secure time commitments for performing critical construction activities from contractors. Show activities of each contract on a separate sheet. Prepare a summary sheet indicating combined construction activities of contracts.

1) Submit schedules for approval.
2) Distribute copies of approved schedules to Architect, Construction Manager, Owner, and contractors.

k. Provide quality-assurance and quality-control services specified in Section 01 40 00 "Quality Requirements."
l. Coordinate sequence of activities to accommodate tests and inspections and

coordinate schedule of tests and inspections.

m. Provide information necessary to adjust, move, or relocate existing utility structures affected by construction.
n. Perform field engineering, construction layout, and locate existing permanent benchmarks and control points. Provide similar reference points and establish permanent benchmarks, control points, and elevations on project site for use by other prime contractors and all trades.
o. Provide field surveys of in-progress construction and site work.
p. Provide progress cleaning of common areas and coordinate progress cleaning of areas or pieces of equipment where more than one contractor has worked. Progress cleaning of building and site shall be performed on a daily basis. Site cleaning shall include removal of mud and debris from all areas and in particular all sidewalks and streets. No center pile is permitted.
q. Provide final cleaning of the building and site.
r. Coordinate cutting and patching.
s. Coordinate protection of the Work.
t. Coordinate firestopping.
u. Coordinate completion of interrelated punch list items.
v. Coordinate preparation of Project Record Documents if information from more than one contractor is to be integrated with information from other contractors to form one combined record.
w. Collect Record Specification Sections from other contractors, collate Sections into numeric order, and submit a complete set.
x. Coordinate preparation of operation and maintenance manuals if information from more than one contractor is to be integrated with information from other contractors to form one combined record.

2. HVAC, Plumbing, and Electrical Coordinators: Full-time HVAC, Plumbing, and Electrical Coordinators shall be experienced in coordination of HVAC, plumbing, and electrical construction, including coordination of type of operations required for this Project.

a. Coordination activities of HVAC, Plumbing, and Electrical Coordinators include, but are not limited to, the following:
b. Schedule and sequence HVAC, plumbing, electrical, and general construction activities.
c. Coordinate sharing access to workspaces by HVAC, electrical, and plumbing contractors.
d. Coordinate integration of HVAC, electrical, and plumbing work into limited spaces.
e. Coordinate protection of HVAC, electrical, and plumbing contractors' work.
f. Coordinate cutting and patching for HVAC, electrical, and plumbing work.
g. Prepare HVAC, electrical, and plumbing Coordination Drawings.
h. Coordinate tests and inspections for HVAC, electrical, and plumbing work.
i. Coordinate HVAC, electrical, and plumbing temporary services and facilities.
j. Refer to Section 013117, Coordination Drawings for specific requirements.

3. EAC Coordinator: Full-time Environmental Remediation Coordinator shall be experienced in coordination of environmental remediation construction, including coordination of type of operations required for this Project.

a. Coordination activities of EAC Coordinator includes, but is not limited to, the following:
b. Schedule and sequence environmental remediation construction activities.
c. Coordinate sharing access to workspaces with other contractors.
d. Coordinate tests and inspections of environmental remediation work.
e. Coordinate environmental remediation construction temporary services and facilities.

B. Submittal and Fabrication Time Requirements: In accordance with Part 1 of individual specification sections requiring Submittals and Division 01 requirements: coordinate, prepare, and submit a complete package of design submittals in accordance with the Project Schedule and requirements of the Subcontract Agreement.

1. Schedule Requirements for Design Submittals: Durations will be mutually agreed between the Construction Manager, Architect, and this contractor for the task identified herein and will be specifically listed within the Agreement.

a. Preparation of Design Submittals.
b. Fabrication and Delivery Time.
c. Duration of On-Site Installation.

2. Deadline: Durations shall be agreed in writing within fourteen [14] calendar days after Notice to Proceed, or before the Contractor's first design submittal is due, whichever is earlier.
3. Default durations: If durations are not agreed by that date, the durations in the Project Schedule issued by the Construction Manager apply. The Contractor will have been given a reasonable opportunity to comment on them.
4. For items requiring “design submittals” prepare submittals for review and acceptance by the A/E to comply with the milestone dates outlined within the Project Schedule and Agreement.
5. For items NOT requiring “design submittals” and upon return of approved submittals for those items requiring submittals, fabricate and deliver items to Site to comply with Project Schedule and Agreement.

C. Document Management and Control Procedures: Ensure on-site contractor’s personnel have current contract documents, including, but not limited to: Specifications, Drawings and clarifications (RFI’s and ASI’s) and other modifications (PR’s and field orders) affecting the Work.

1. Contractor is responsible to copy and distribute (at their cost) sufficient copies of documents to contractor personnel, vendors, and suppliers.
2. Ensure field personnel are familiar with requirements of Contract Documents.
3. Contractor to have an established document control procedure to ensure compliance.

D. Coordinate Layout and Clearances: Coordinate space requirements and installation for items that are indicated diagrammatically on Documents.

1. Follow routing indicated for pipes, ducts and wiring, place runs parallel with line of building. In finished areas, unless expressly indicated otherwise, conceal pipes, ducts and wiring within construction. Coordinate locations of plumbing and

electrical fixtures and electrical outlets with finish elements.

2. Use space efficiently to maximize accessibility for other installations, maintenance, and repairs.
3. Installing entities shall modify their installations, if needed, to eliminate conflicts and achieve effective coordination of systems and work.
4. Contractor's failure to exercise coordination responsibilities constitutes a waiver of claims for an increase in Contract Sum if design modifications are required to resolve conflicts that might have been avoided by complying with requirements of this Section and the overall provided schedule.

E. Field Verification of Existing Conditions and Substrates: Inspect existing conditions and substrates to receive work prior to installation, field verify dimensions that will affect the layout or performance of your work, and confirm preparatory work is complete and acceptable to receive work of this Work Scope.

F. Professional Errors and Omission Insurance Requirements: Where Work Scope Categories included requirements for "Delegated Design", "third party engineering", "Signed Shop Drawings by licensed engineer", or "submission of design calculations" as part of the individual specification sections or structural notes, refer to Insurance Requirements in the General Conditions for additional requirements.

G. Substitutions: Each contractor shall cooperate with other contractors involved to coordinate approved substitutions with the remainder of the Work.

H. The Contractor responsible for installation of the systems and equipment is responsible for commissioning each system. The minimum commissioning requirements in accordance with specific project requirements, including coordination and verification, shall be the responsibility of the Contractor.

1.07 MULTIPLE PRIME COORDINATION CLARIFICATIONS

A. The disconnection and/or reconnection of existing equipment shall be by the Plumbing/ HVAC/ Electrical Contractor as applicable.

B. Interior concrete bases and pads required for plumbing, fire suppression, heating, ventilation, air conditioning, and electrical equipment shall be provided by the contractor installing the equipment unless noted otherwise.

C. General Contractor shall provide all exterior concrete pads and bases with exception of exterior light bases, generator pad, duct bank, cooling tower pad, and transformer pad. Exterior light pole bases, generator pads, transformer pads, and duct bank are by the Electrical Contractor. Cooling tower pad is by the Mechanical Contractor.

D. During placement of concrete slabs, each Prime Contractor that has rough-in requirements in the slab shall provide on-site personnel while slabs are being poured to direct, supervise, locate, mark, and configure rough-in requirements. Sleeves required for floor, wall, and roof penetrations shall be furnished and installed by the Prime Contractor(s) that require the sleeves. The Prime Contractor using the sleeves is responsible for installing sealant, fire-safing, and/or escutcheons necessary for a finished installation.

E. Each Prime Contractor is responsible for patching all their work penetrations made to the masonry system.

F. Plumbing, HVAC, and Electrical Contractors shall provide miscellaneous steel members for support of hanging systems installed under their contract and shall reinforce joists for non-panel point concentrated loads. When run parallel to joists, hanging systems shall

be supported from steel installed perpendicular to joists and spanning a minimum of three (3) joists. All miscellaneous steel required shall be provided by contractor installing the systems under their contract; do not use joists for support. Supporting from metal roof deck and deck systems is prohibited where indicated in the Contract Documents.

G. Each Prime Contractor is responsible for patching all their work penetrations made to the metal panel system.

H. All roofing work will be performed by GC:

1. GC shall coordinate all work in accordance with project phasing requirements and scheduled activities of all other contractors. GC shall perform cutting and patching of all roofing materials including metal deck. Any structural reinforcement required is by the General Contractor.
2. Roofing and Watertight Conditions: The General Contractor, through its Roofing Subcontractor, is responsible for all roofing, flashing and roof cutting and patching, including at roof curbs. Responsibilities for maintaining watertight conditions are as follows:
    a. Roof system and curb flashing: The GC is responsible for the permanent and temporary roofing and flashing up to and including the curb flashings. The HVAC Contractor lays out all openings and curbs and furnishes fully assembled roof curbs to the GC for installation. The GC provides and installs blocking and accessories for the curbs.
    b. Equipment openings: The HVAC Contractor is responsible for keeping any temporary or permanent equipment opening watertight, and for sealing it, until the new equipment is installed and sealed.
    c. Pipes, conduits and other penetrations: Each Prime Contractor is responsible for sealing its own pipes, conduits and roof penetrations. Each Prime provides watertight temporary enclosures for its openings until the GC's Roofing Subcontractor has installed the permanent flashing. The Roofing Subcontractor then installs the permanent flashing at those penetrations.
    d. Cutting and patching: The Roofing Subcontractor cuts and patches roof materials only after the Prime Contractor requiring the opening has located and marked it in writing. The Prime Contractor is responsible for water damage that results from penetrations it did not coordinate or mark.
3. Damage and back-charges: Water damage caused by a Contractor's opening, penetration or temporary enclosure is the responsibility of that Contractor. The GC will notify the responsible Contractor in writing and back-charge it for repair costs.
4. General Contractor shall apply sealant around wall mounted outside air intake louvers provided and installed by the HVAC Contractor.
5. Where fireproofing is indicated for the project, each Prime Contractor shall install clips, hangers, supports, sleeves, runners, and other items required prior to installation of fireproofing. Each Prime Contractor shall protect fireproofing material; damages to fireproofing shall be repaired by the General Contractor and charged to the Prime Contractor responsible for the damage; this includes items installed out of sequence.
6. General Contractor shall furnish and install all lintels and structural supports required for openings and recesses in new and existing construction to allow the passage of the Work of his Contract and the Work of the Plumbing/Fire Protection,

HVAC, and Electrical Prime Contracts.

7. General Contractor shall also provide chases and openings 12” x 12” or larger for equipment in new construction, including all roof areas, as directed, supervised, located, marked, and configured within the project structure, by the Plumbing, HVAC, and Electrical Prime Contractors' personnel on site. The openings shall be sealed by the prime contractor requiring the opening. All sleeves, conduits, and sealing of the same shall be furnished and installed by the prime contractor that requires access for installation of systems. Roofing Subcontractor to the GC shall perform cutting and patching of roof materials as directed by the other Prime Contractors for the implementation of their work.
8. Prime Contractors who fail to properly coordinate their work in new construction work and whose work requires an opening, or recess, in completed construction shall be responsible to provide that alteration; to furnish and install lintels and structural supports required; and to patch the construction to match the completed unaltered.
9. Plumbing, HVAC, and Electrical Prime Contracts shall furnish and install any access panels which are required for access to their work. Coordinate opening requirements with the General Contractor.
10. HVAC Contractor to furnish and install all exterior vents and louvers.
11. General, Plumbing, HVAC, and Electrical Contractors shall disconnect items of food service equipment scheduled for non-reuse, relocation, or reuse.
12. Food Service Equipment Interface Responsibilities: The General Contractor, including its Food Service Equipment and Roofing Subcontractors, shall furnish the items below, and each Contractor shall install or connect them as follows:

    a. Dry contacts (for interconnection with the building alarm):

        1. Furnished by the General Contractor.
        2. Installed and connected to the building alarm system by the Electrical Contractor.

    b. Mounting curbs and pipe portals:

        1. Furnished and installed by the General Contractor.

    c. Roof flashing at curbs and portals:

        1. Furnished and installed by the General Contractor's Roofing Subcontractor.

    d. Drain pan:

        1. Furnished by the General Contractor.
        2. Installed, with final connections, by the Plumbing Contractor

13. Electrical Contractor shall provide electrical service and connection of food service equipment, operable partitions, and auxiliary equipment.
14. Plumbing Contractor shall provide water and sewer connections to food service and auxiliary equipment.
15. Plumbing Contractor shall provide devices for food service equipment such as hose bibbs, washing machine outlet box, water conditioner, water filter, and pet cock for icemaker, hose reel with control units.
16. HVAC Contractor shall install ductwork extension from dryer and for dishwasher and make final connections. HVAC Contractor shall install ductwork extension from

fume hoods and make final connections.

17. Electrical Contractor shall provide devices, wiring within casework, and final connections for educational casework as provided for in the Contract Documents.
18. Plumbing, HVAC, and Electrical Contractors are responsible for sealing their penetrations in the elevator shaft
19. Elevator subcontractor is responsible for operating the elevator cart for Plumbing, HVAC, and Electrical contractor work in the shaft.
20. Plumbing Contractor to provide all fixtures, traps, etc. to provide all installation and final connections of sinks, faucets, and fittings. Coordinate this work with the General Contractor as provided in the Contract Documents.
21. Plumbing Contractor shall make all final connections and shall provide valved connections to make-up water feeders to loop water system and dual temperature system, as indicated.
22. Plumbing Contractor shall make final connections on gas-fired equipment as indicated including all kitchen equipment, water heaters, and emergency generator.
23. General Contractor shall provide domestic and fire suppression water supply system to a point five feet outside the perimeter of the building unless noted otherwise. Plumbing Contractor shall provide plumbing water supply system within building and underground from a point five feet outside the building perimeter and shall make final connection to water supply system. The Plumbing Contractor shall provide fire suppression system within building and underground to a point five feet outside the building perimeter, unless noted otherwise, and shall make final connection to water supply system.
24. All grease waste piping inside and outside of the building is by the Plumbing Contractor. The complete grease interceptor system shall be by the Plumbing Contractor, including site piping beyond 5'-0”.
25. HVAC and Plumbing Contractors shall provide control interlock wiring for their associated system equipment.
26. The HVAC Contractor is defined herein to include the work of the Mechanical Contractor, H.C., M.C., ATC Sub-Contractor, and/or BAS Contractor.
27. The HVAC Contractor shall provide wiring, fiber, and data cable between all Ethernet Network Controllers Standalone Digital Control Units, workstations, software, sensors, transducers, relays, valves, dampers, damper operators, control panels, and other accessory equipment, along with a complete system of electrical interlocking wiring to fill the intent of the specification and provide for a complete and operable system as specified in Division 23.
28. The Electrical Contractor shall provide electric power wiring to new plumbing and HVAC equipment. HVAC Contractor shall provide electric power wiring and control wiring for ATC equipment and devices.
29. The Electrical Contractor shall furnish duct smoke detectors. The Mechanical Contractor shall install duct detector in ducts. The Electrical Contractor shall wire the duct smoke detectors to the fire alarm system. The Electrical Contractor shall provide fire alarm relays adjacent to the mechanical equipment, and the Mechanical Contractor shall wire to the ATC/BAS system to de-energize the fan.
30. The Electrical Contractor shall provide the kW/KWH transducer specified at each secondary metering location. The HVAC contractor shall provide control wiring to the points specified.
31. The Electrical Contractor shall provide auxiliary contacts on generator/transfer switch as required in the points list in Division 23. The HVAC Contractor shall

provide control wiring to the points.

32. HVAC Contractor shall set controls, panelboards, and appurtenances installed in pipelines and ductwork and shall provide control wiring.
33. The Electrical Contractor shall lock out and tag circuit breakers and switches and shall check cables and wires to ensure they are de-energized to ground potential before Work begins.
34. Electrical Contractor shall provide disconnect switches for HVAC and Plumbing system equipment except where such items are factory installed as an integral part of the equipment.
35. Electrical Contractor shall provide manual motor starters, or magnetic motor starters, for HVAC and Plumbing equipment except where such equipment is provided with factory installed starters as an integral part of the equipment or equipment control panel. Variable frequency drives shall be an integral part of HVAC equipment and HVAC variable speed pumping package.
36. Electrical Contractor shall provide fuses for disconnects and disconnect/starter switches. HVAC and Plumbing Contractors shall furnish the Electrical Contractor with required motor data to properly size and select fuses and overload protection in accord with the National Electrical Code requirements. HVAC and Plumbing Contractors shall furnish to the Electrical Contractor the equipment manufacturers' circuit protection data.
37. Plumbing/Fire Protection Contractor to coordinate tie-in of sprinkler system to fire alarm system with Electrical Contractor. Plumbing Contractor to provide flow and tamper switches for connection to fire alarm system.
38. General Contractor shall provide sanitary and storm sewer system to a point five feet outside the perimeter of the building, unless noted otherwise. Plumbing Contractor shall provide sanitary and storm system within building, including open air enclosed courtyards, and underground from a point five feet outside the building perimeter, unless noted otherwise, and shall make final connection to storm and sanitary system. The Plumbing Contractor shall provide and install grease interceptor and make final connection to sanitary sewer piping outside the building and five feet beyond final connection with sanitary system.

    a. General Contractor shall provide gravity sewer line from 5' outside of the building to manhole or holding tanks as noted on civil drawings. General Contractor to provide and install all cleanouts and covers outside of the building. Plumbing Contractor to provide sewage ejector and piping to 5' outside of the building and final connection to the gravity sewer line.
    b. General Contractor shall provide exterior stormwater conveyance including exterior gutters, downspouts, and leaders to below grade, and tie-in to stormwater conveyance system including all required accessories including but not limited to cleanouts, boots, etc.
    c. For interior roof drainage, General Contractor to furnish and install roof drains and emergency roof drains. (Roof drains specified in Plumbing specifications and indicated on plumbing drawings.) Plumbing Contractor to connect to roof drain outlet and extend piping from roof drains to 5'-0" beyond building with final connection to site storm piping. Plumbing Contractor to connect to emergency roof drains and extend piping to termination location as indicated on plumbing plans with all required termination fittings.

39. If the Utility company is not responsible for providing the gas service installation

and connection to the building meter, then the General Contractor responsibilities for gas service shall be excavation/trenching, installation of screening bed for gas piping and backfill of any trenching or related excavation for the gas line installation to final connection point as indicated on the Contract Documents. All work to be in accordance with Utility specifications and requirements.

40. Plumbing Contractor shall provide all gas service piping throughout building and shall make final connections to equipment.
41. General Contractor is responsible for the final cleaning described in specification 01-74-00 Final Cleaning.

1.08 MATERIAL HANDLING AND STORAGE

A. Delivery and Receiving of Materials: Provide labor and equipment necessary to receive materials, unload, inspect, sort, and distribute materials to individual work areas. Store materials in an organized manner as not to obstruct other trades and the normal day-to-day operation of this project.

1. Coordinate storage areas with the Construction Manager.
2. Schedule deliveries to minimize onsite storage and coordinate with all trades.
3. Provide flagmen for operation in contact with public traffic for deliveries.
4. Moving material that is obstructing another contractor's scope is at the cost of the contractor storing the material.

B. Hoisting: Provide hoisting equipment, labor, means and operations to complete your Work Scope.

C. Scaffolding: Each Work Scope is responsible for your own working platforms, scaffolding, and equipment necessary to access Work. Coordinate scope and timing with all trades.

D. Protection of Adjacent Work: Each subcontractor shall provide necessary protection of roof, flooring and adjacent surfaces during the production of this work.

1. Interior scaffolding and carts must be utilized with rubber, locking wheels.

1.09 WORK RESTRICTIONS

A. Contractor's Field Offices: As directed by the Construction Manager and Owner and outlined in Section 01 50 00, Temporary Facilities and Controls.

B. Construction Staging Area: As directed by the Construction Manager and Owner.

C. Construction Parking: As directed by the Construction Manager and Owner.

D. Egress and Access Routes: Do not obstruct existing access and egress from adjacent Site areas or portions of existing facilities which remain operational throughout Construction Period.

1. Move stored products that interfere with operations of Owner.
2. Obtain and pay for use of additional storage or work areas needed for operations.
3. Keep a path for emergency services to access remaining operational facilities and the site.
4. Do not store materials on existing roof areas.

E. Limit activities to Construction Limits: Notify the Construction Manager if Work activities require work outside Construction Limits. Contactor will coordinate activities with the Construction Manager.
F. Work in Occupied Areas: Work in occupied areas of the facility must be coordinated with the Construction Manager and Owner.
G. Hot Work Permits: Work activities using and causing sparks and open flame must be coordinated with the Construction Manager and the Owner and special procedures shall be complied with as directed by the Construction Manager and Owner.
H. Working Hours: Conduct Work during normal working hours unless expressly agreed to by the Construction Manager and the Owner Representative.

Construction Times (Subject to Revision): It is understood that the project construction schedule will meet the following Owner schedules (i.e work can proceed during the following periods with prior approval by the District). Work may not negatively affect occupied spaces during school hours. Saturday work schedules are permitted with prior scheduling and approval with possible extra charges from the Owner. Sunday and Holiday times must be scheduled with the Owner by permission and will involve overtime charges for the Owner staff.

Summer Schedule: June 22nd through August 18th
Weekdays: Monday – Friday 7:00 a.m. – 7:00 p.m.

Project work hours permitted during School Year
Weekdays Monday – Friday 7:00 a.m. – 7:00 p.m.

Material deliveries are not permitted between 8:30am-9:30am, or 3:30pm-4:30pm during the school year. During the summer schedule deliveries are allowed during work hours only.

Material Deliveries are permitted only during project work hours as described above unless coordinated with and approved by the Construction Manager.

I. System shutdowns will be permitted during non-student periods only, and only with Owner approval and favorable weather conditions pertinent to the system.
J. Tobacco and Vape Free Site: Project Site is a “tobacco free” zone; there is absolutely no smoking, vaping, or use of tobacco products of any kind. Tobacco products are prohibited on the Owner’s Property as required by State Law.
K. Noise Restrictions: Maintain a level of conduct and decorum consistent with the environment in which the Work is being performed.

END OF SECTION 01 12 00

SECTION 01 22 00 – UNIT PRICES AND MATERIAL ALLOWANCES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section specifies administrative and procedural requirements for unit prices and allowances.

1. In the space indicated on the Bid Form, submit unit prices as required by this section and listed in the Unit Price Schedule. Only one value for each unit price will be allowed.
2. A unit price is a price per unit of measurement for materials or services that will be added to or deducted from the Contract Sum by Change Order in the event the quantities of Work required by the Contract Documents are increased, decreased, or exceeds the allowance.
3. Unit prices include all but not limited to necessary delivery, materials, labor, overhead, profit, insurance and applicable taxes.
4. Refer to individual Specification Sections for construction activities requiring the establishment of unit prices.

B. While unit prices are not to be used in the selection of the successful Bidder, they must be submitted and approved prior to execution of the Contract.

1. The Owner reserves the right to reject a unit price they deem unsatisfactory and to require a resubmittal.
2. The Owner reserves the right to reject the Contractor's measurement of quantities, and to have this Work measured by an independent surveyor or third party before accepting contract amount.

C. The Owner reserves the right to reject any bid that does not include a unit price or assign a unit price based on other bidders' unit prices.

D. Prior to utilizing any allowances, the Contractor will review the proposed utilization with the Construction Manager. If the utilization is approved of in writing, then the Contractor must coordinate all work for which it plans to utilize the allowance with the Construction Manager to ensure that the Construction Manager can observe and confirm the quantities utilized. Allowances include cost of all labor, equipment, material, receiving, handling, and installation as well as Contractor overhead and profit.

E. Certain materials and equipment including installation are specified in the Contract Documents by allowances. Allowances have been established in lieu of additional requirements and to defer selection of actual materials and equipment to a later date when additional information is available for evaluation. If necessary, additional requirements will be issued by Change Order. Allowances are considered part of the base bid contract and are in addition to amounts otherwise specified or stated in the Contract Documents or that are otherwise reasonably necessary to complete the Work.

F. Upon Substantial Completion, or earlier if it becomes clear than an allowance will not be utilized, the Contractor will execute a Change Order reducing the Contract Sum by the unused quantity allowance, multiplied by the applicable Unit Price.

G. NO CASH allowances for any purpose are included in the Project.

PART 2 - PRODUCTS – (Not Applicable).

PART 3 - EXECUTION – SCHEDULE OF QUANTITY / MATERIAL ALLOWANCES

3.01 WORK SCOPE 1: GENERAL CONTRACTOR/SITE WORK – SCHEDULE OF UNIT PRICES AND CORRESPONDING QUANTITY ALLOWANCES

A. Unit Price No. WS-1A: Rock Removal, Replace with 2A stone

1. Description: Provide Unit Price per CY to remove rock as defined by the Contract Specifications, geotechnical report, and verified by the 3rd party inspector at locations directed by Construction Manager or Architect. Unit price includes legal disposal off-site.
2. Unit of Measurement: **Per Cubic Yard**
3. Quantity Allowances: **Two Hundred (200) CY**

B. Unit Price No. WS-1B: Excavate & Export Unsuitable Soils and Replace with suitable soil

1. Description: Provide Unit Price per CY to excavate, export, legally dispose of, and replace unsuitable soils with 2A modified fill as directed by Construction Manager or Architect.
2. Unit of Measurement: **Per Cubic Yard**
3. Quantity Allowances: **One Hundred (100) CY**

C. Unit Price No. WS-1C: Removal and Disposal of waste liquids, sludge, and other wastes

1. Description: Provide a Unit Price per GAL of liquids that has been deemed unsuitable for soil contamination reasons, after testing by the Owner's representative, and legal disposal of that material under the guidance of PADEP.
2. Unit of Measurement: **Gallon**
3. Quantity Allowances: **Five Hundred (500) GAL**

D. Unit Price No. WS-1D: Provide Additional 8" water main

1. Description: Provide Unit Price per LF to furnish and install additional 8" water main pipe in accordance with the project specifications.
2. Unit of Measurement: **Linear Foot**
3. Quantity Allowances: **Fifty (50) LF**

E. Unit Price No. WS-1E: Provide Additional 6" water main

1. Description: Provide Unit Price per LF to furnish and install additional 6" water main pipe in accordance with the project specifications.
2. Unit of Measurement: **Linear Foot**
3. Quantity Allowances: **Fifty (50) LF**

F. Unit Price No. WS-1F: Provide Additional water main bends/fittings

1. Description: Provide Unit Price per EA to furnish and install additional water main pipe bends/fittings in accordance with the project specifications.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Nine (9) EA**

G. Unit Price No. WS-1G: Provide Additional 8" Sanitary main

1. Description: Provide Unit Price per LF to furnish and install additional 8" sanitary main pipe in accordance with the project specifications.
2. Unit of Measurement: **Linear Foot**
3. Quantity Allowances: **Seventy-Five (75) LF**

H. Unit Price No. WS-1H: Provide Additional Concrete Curb

1. Description: Provide Unit Price per LF to excavate, form, and install new concrete curb and associated asphalt repair at locations directed by Construction Manager or Architect.
2. Unit of Measurement: **Linear Foot**
3. Quantity Allowances: **Two Hundred Fifty (250) LF**

I. Unit Price No. WS-1I: Provide Additional Exterior Concrete Sidewalk

1. Description: Provide Unit Price per SF to excavate, form, and install new concrete sidewalk in accordance with the project specifications at locations directed by Construction Manager or Architect.
2. Unit of Measurement: **Square Foot**
3. Quantity Allowances: **Seven Hundred Fifty (750) SF**

J. Unit Price No. WS-1J: Provide Exploratory Test Pits

1. Description: Provide Unit Price per EA to provide exploratory test pits for utilities along with associated asphalt repair.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Fifteen (15) EA**

K. Unit Price No. WS-1K: Provide Additional Heavy Duty Asphalt Paving

1. Description: Provide Unit Price per SY to furnish and install full depth heavy-duty bituminous asphalt paving as described in the project specifications.
2. Unit of Measurement: **Square Yard**
3. Quantity Allowances: **Three Hundred (300) SY**

L. Unit Price No. WS-1L: Provide Additional Stone Base and Binder Course Existing Paving Repair

1. Description: Provide Unit Price per SY to furnish and install stone base and binder course repairing existing paving where cuts had to be made in accordance with typical sections on the contract documents.
2. Unit of Measurement: **Square Yard**
3. Quantity Allowances: **Seven Hundred Fifty (750) SY**

M. Unit Price No. WS-1M: Provide Utility Trenching and Asphalt Repairs

1. Description: Provide Unit Price per SY to trench and asphalt repairs including 4" PVC piping, 2" screening bed, backfill with 2A modified stone and overlay paving.
2. Unit of Measurement: **Linear Foot**
3. Quantity Allowances: **Three Hundred (300) LF**

N. Unit Price No. WS-1N: Provide Additional Roof Drains

1. Description: Provide Unit Price per EA to furnish and install additional roof and overflow drains as described in the project specifications.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Five (5) EA**

O. Unit Price No. WS-1O: Provide Additional Acoustic Ceiling Tile and Grid

1. Description: Provide Unit Price per SF to furnish and install additional ceiling tile as described in the project specifications as directed by the Construction Manager or Architect.
2. Unit of Measurement: **Square Foot**
3. Quantity Allowances: **Five Hundred (500) SF**

P. Unit Price No. WS-1P: Provide Additional Prep and Painting on Drywall

1. Description: Provide Unit Price per SF to prep and paint additional gyp board as described in the project specifications as directed by the Construction Manager or Architect.
2. Unit of Measurement: **Square Foot**
3. Quantity Allowances: **One Thousand (1000) SF**

Q. Unit Price No. WS-1Q: Remove and Replace Ceramic Tile

1. Description: Provide Unit Price per SF to remove and replace damaged ceramic wall tile in accordance with the project specifications as directed by the Construction Manager or Architect.
2. Unit of Measurement: **Square Foot**
3. Quantity Allowances: **Five Hundred (500) SF**

R. Unit Price No. WS-1R: Remove and Replace VCT Flooring

1. Description: Provide Unit Price per SF to remove and replace damaged VCT flooring in accordance with the project specifications as directed by the Construction Manager or Architect.
2. Unit of Measurement: **Square Foot**
3. Quantity Allowances: **Five Hundred (500) SF**

S. Unit Price No. WS-1S: Remove and Replace 5/8" GWB

1. Description: Provide Unit Price per SF to remove and replace damaged 5/8" GWB in accordance with the project specifications as directed by the Construction Manager or Architect.
2. Unit of Measurement: **Square Foot**
3. Quantity Allowances: **One Thousand (1000) SF**

T. Unit Price No. WS-1T: Remove and Replace Exterior Face Brick Masonry

1. Description: Provide Unit Price per SF to remove and replace damaged exterior face brick masonry in accordance with the project specifications as directed by the Construction Manager or Architect.
2. Unit of Measurement: **Square Foot**
3. Quantity Allowances: **Five Hundred (500) SF**

U. Unit Price No. WS-1U: General Laborer Hours

1. Description: Provide Unit Price per Hour for a fully burdened general laborer for the Owner's use for work as directed by the Construction Manager and at his discretion.
2. Unit of Measurement: **Per Hour**
3. Quantity Allowances: **One-Hundred Sixty (160) Hours**

V. Unit Price No. WS-1V: Journeyman Mason Hours

1. Description: Provide Unit Price per Hour for a fully burdened journeyman mason for the Owner's use for work as directed by the Construction Manager and at his discretion.
2. Unit of Measurement: **Per Hour**
3. Quantity Allowances: One-Hundred Sixty (160) Hours

W. Unit Price No. WS-1W: Journeyman Cement Finisher Hours

1. Description: Provide Unit Price per Hour for a fully burdened journeyman cement finisher for the Owner's use for work as directed by the Construction Manager and at his discretion.
2. Unit of Measurement: **Per Hour**
3. Quantity Allowances: **One-Hundred Sixty (160) Hours**

X. Unit Price No. WS-1X: Journeyman Roofer Hours

1. Description: Provide Unit Price per Hour for a fully burdened journeyman roofer for the Owner's use for work as directed by the Construction Manager and at his discretion.
2. Unit of Measurement: **Per Hour**
3. Quantity Allowances: **One-Hundred Sixty (160) Hours**

Y. Unit Price No. WS-1Y: Overtime General Laborer Hours

1. Description: Provide Unit Price per Hour for a fully burdened general laborer for the Owner's use for work during overtime hours as directed by the Construction Manager and at his discretion.
2. Unit of Measurement: **Per Hour**
3. Quantity Allowances: **One-Hundred Sixty (160) Hours**

Z. Unit Price No. WS-1Z: Soft Dig Excavation

1. Description: Employ a soft dig vacuum truck in lieu of conventional excavation for utility work where agreed by the owner and CM per week of use.
2. Unit of Measurement: **Week**
3. Quantity Allowances: **Two (2) Weeks**

3.02 WORK SCOPE 2: ELECTRICAL – SCHEDULE OF UNIT PRICES AND CORRESPONDING QUANTITY ALLOWANCES

A. Unit Price No. WS-2A: Provide New 4" Conduit

1. Description: Provide and install additional 4" conduit in accordance with the project specifications.
2. Unit of Measurement: **Linear Foot**
3. Quantity Allowances: **Three Hundred Fifty (350) LF**

B. Unit Price No. WS-2B: Provide 60 AMP, 3-pole Switch Assembly

1. Description: Provide and install 60 AMP, 3 pole electrical fused switch assembly in accordance with the project specifications.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Three (3) EA**

C. Unit Price No. WS-2C: Provide 100 AMP, 3-pole Switch Assembly

1. Description: Provide and install 100 AMP, 3 pole electrical fused switch assembly in accordance with the project specifications.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Three (3) EA**

D. Unit Price No. WS-2D: Duplex Receptacle & Wiring

1. Description: Provide additional duplex receptacle and 20A circuit, including 20A/1P circuit breaker, backbox, faceplate, and 100’ one-way circuit distance.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Five (5) EA**

E. Unit Price No. WS-2E: Data Outlets

1. Description: Provide additional computer data outlet in masonry or stud wall that includes up to 100' of armored plenum cable and all termination and accessories as specified in the project drawings and specifications.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Five (5) EA**

F. Unit Price No. WS-2F: Exit Device and Wiring

1. Description: Provide additional exit sign type ‘X’ including mounting equipment, up to 100’ of wiring with appropriate terminations and connections. Perform in accordance with applicable Specifications and Drawing requirements for similar work.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Five (5) EA**

G. Unit Price No. WS-2G: Fire Alarm Smoke Detector Device and Wiring

1. Description: Provide additional mounted fire alarm smoke detector device assembly that includes backbox, cabling, conduit, terminations, connections to fire alarm system, required programming, and 100’ of wiring. Perform in accordance with applicable Specifications and Drawing requirements for similar work.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Ten (10) EA**

H. Unit Price No. WS-2H: Fire Alarm Audio/Visual Device and Wiring

1. Description: Provide additional mounted audio/visual fire alarm device assembly that includes backbox, cabling, conduit, terminations, connections to fire alarm system, required programming, and 100’ of wiring. Perform in accordance with applicable Specifications and Drawing requirements for similar work.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Five (5) EA**

I. Unit Price No. WS-2I: Fire Alarm Pull Station Device and Wiring

1. Description: Provide additional mounted fire alarm pull station device assembly that includes backbox, cabling, conduit, terminations, connections to fire alarm system, required programming, and 100' of wiring. Perform in accordance with applicable Specifications and Drawing requirements for similar work.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Five (5) EA**

J. Unit Price No. WS-2J: Wireless Access Point Cabling

1. Description: Provide a Unit Price per assembly to furnish and install an additional Install 300' of wireless access point cabling plus two data drops per access point in accordance with the applicable Division 27 Sections and Drawing requirements for similar work.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Five (5) EA**

K. Unit Price No. WS-2K: Light Fixture A1

1. Description: Provide a Unit Price per assembly to furnish and install an additional video surveillance camera location consisting of backbox/junction box, mounting equipment, (2) data drops, and 200' of cabling, conduit and all terminations per drop and connections and programming to the video surveillance system. Perform in accordance with applicable Division 27 Sections and Drawing requirements for similar work.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Five (5) EA**

L. Unit Price No. WS-2L: Journeyman Electrician Labor

1. Description: Provide Unit Price per Hour for a fully burdened journeyman electrician labor for Owner's use for work as directed by the Construction Manager and at his discretion.
2. Unit of Measurement: **Per Man-hour**
3. Quantity Allowances: **Include 200 manhours**

M. Unit Price No. WS-2M: Journeyman Electrician Labor Overtime Rate

1. Description: Provide Unit Price per Hour for a fully burdened journeyman electrician labor at the overtime rate for Owner's use for work as directed by the Construction Manager and at his discretion.
2. Unit of Measurement: **Per Man-hour**
3. Quantity Allowances: **Include 100 manhours**

3.03 WORK SCOPE 3: MECHANICAL – SCHEDULE OF UNIT PRICES AND CORRESPONDING QUANTITY ALLOWANCES

A. Unit Price No. WS-3A: Additional Ductwork

1. Description: Provide insulated galvanized steel ductwork including hangers and accessories in accordance with the applicable Division 23 sections.
2. Unit of Measurement: **Per Pound**
3. Quantity Allowances: **One Thousand (1000) Lbs**

B. Unit Price No. WS-3B: Additional temperature/humidity device, include mounting of device, up to 100' of wiring with appropriate terminations, connections, and programming

1. Description: Provide Unit Price per Assembly to furnish and install an additional temperature/humidity device, include mounting of device, up to 100' of wiring with appropriate terminations, connections, and programming.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Thirty (30) EA**

C. Unit Price No. WS-3C: Provide additional ¾" insulated HVAC Piping

1. Description: Provide Unit Price per LF to furnish and install additional ¾" insulated HVAC piping, accessories and fittings in accordance with the applicable Division 23 sections.
2. Unit of Measurement: **Linear Feet**
3. Quantity Allowances: **Thirty (30) EA**

D. Unit Price No. WS-3D: Provide additional ¾" Isolation Valve

1. Description: Provide Unit Price per Assembly to furnish and install an additional ¾" isolation valve in HVAC piping.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Ten (10) EA**

E. Unit Price No. WS-3E: Provide additional 2" Isolation Valve

1. Description: Provide Unit Price per Assembly to furnish and install an additional 2" isolation valve in HVAC piping.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Ten (10) EA**

F. Unit Price No. WS-3F: Provide additional 6" Isolation Valve

1. Description: Provide Unit Price per Assembly to furnish and install an additional 6" isolation valve in HVAC piping.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Two (2) EA**

G. Unit Price No. WS-3G: Provide Additional Combination Temperature/Humidity Sensors

1. Description: Provide Unit Price per Assembly to furnish and install a combination temperature/humidity sensor.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Thirty (30) EA**

H. Unit Price No. WS-3H: Provide additional 2'x2' Fire Rated Access Door

1. Description: Provide Unit Price per 2'x2' 1 hour rated access panel.
2. Unit of Measurement: **Each**
3. Quantity Allowances: **Ten (10) EA**

I. Unit Price No. WS-3I: Journeyman Pipefitter Labor

1. Description: Provide Unit Price per Hour for a fully burdened journeyman pipefitter worker for Owner's use for work as directed by the Construction Manager and at his discretion.
2. Unit of Measurement: **Per man-hour**
3. Quantity Allowances: **Include 100 man hours**

J. Unit Price No. WS-3J: Journeyman Sheetmetal Labor

1. Description: Provide Unit Price per Hour for a fully burdened journeyman Sheetmetal worker for Owner's use for work as directed by the Construction Manager and at his discretion.
2. Unit of Measurement: **Per man-hour**
3. Quantity Allowances: **Include 150 man hours**

K. Unit Price No. WS-3K: Journeyman Pipefitter Overtime Labor

1. Description: Provide Unit Price per Hour for a fully burdened journeyman pipefitter worker at the overtime rate for Owner's use for work as directed by the Construction Manager and at his discretion.
2. Unit of Measurement: **Per man-hour**
3. Quantity Allowances: **Include 100 man hours**

3.04 WORK SCOPE 4: PLUMBING – SCHEDULE OF UNIT PRICES AND CORRESPONDING QUANTITY ALLOWANCES

A. Unit Price No. WS-4A: Additional 3/4" Domestic Water Piping

1. Description: Provide 3/4" insulated domestic water piping, hangers, accessories and fittings in accordance with the applicable Division 22 sections.
2. Unit of Measurement: **Per Lineal Foot**
3. Quantity Allowances: **Seventy-Five (75) LF**

B. Unit Price No. WS-4B: Additional 1" Domestic Water Piping

1. Description: Provide 1" insulated domestic water piping, hangers, accessories and fittings in accordance with the applicable Division 22 sections.
2. Unit of Measurement: **Per Lineal Foot**
3. Quantity Allowances: **Seventy-Five (75) LF**

C. Unit Price No. WS-4C: Additional 2" Domestic Water Piping

1. Description: Provide 2" insulated domestic water piping, hangers, accessories and fittings in accordance with the applicable Division 22 sections.
2. Unit of Measurement: **Per Lineal Foot**
3. Quantity Allowances: **Seventy-Five (75) LF**

D. Unit Price No. WS-4D: Additional Below Grade PVC Sanitary Piping

1. Description: Provide a Unit Price per Linear Foot to furnish and install additional below grade sanitary piping as detailed in Specifications and Drawings including excavation, connections, bedding, backfill, and compaction.
2. Unit of Measurement: **Per Linear Foot**
3. Quantity Allowances: **Forty (40) LF**

E. Unit Price No. WS-4E: Additional 2" Ball Valve

1. Description: Provide a Unit Price per Assembly to furnish and install 2" ball valve in 1" domestic water piping in accordance with the applicable Division 22 sections.
2. Unit of Measurement: **Per assembly**
3. Quantity Allowances: **Ten (10) EA**

F. Unit Price No. WS-4F: Additional 2" Domestic Water Piping Insulation

1. Description: Provide a unit price per LF to furnish and install 2" insulation in accordance with the applicable Division 22 sections.
2. Unit of Measurement: **Per Lineal Foot**
3. Quantity Allowances: **Thirty (30) LF**

G. Unit Price No. WS-4G: Additional Concealed Sprinkler Head

1. Description: Provide a Unit Price per Assembly to furnish and install new concealed sprinkler head in finished ceiling areas in accordance with the applicable Division 21 sections.
2. Unit of Measurement: **Per assembly**
3. Quantity Allowances: **Twenty (20) EA**

H. Unit Price No. WS-4H: Journeyman Plumber Labor

1. Description: Provide Unit Price per Hour for a fully burdened journeyman Plumber for Owner's use for work as directed by the Construction Manager and at his discretion.
2. Unit of Measurement: **Per Man hour**
3. Quantity Allowances: **Include 80 man-hours**

I. Unit Price No. WS-4I: Journeyman Plumber Labor Overtime Rate

1. Description: Provide Unit Price per Hour for a fully burdened journeyman Plumber at an overtime rate for Owner's use for work as directed by the Construction Manager and at his discretion.
2. Unit of Measurement: **Per Man hour**
3. Quantity Allowances: **Include 80 man-hours**

END OF SECTION 01 22 00

SECTION 01 23 00 – ALTERNATES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section describes the limits of the requested alternates to the Contract work. Refer to the Product/Execution Articles of the appropriate Specifications and the Drawings for information pertaining to the work of each alternate.
B. Each proposal under an alternate shall include all incidental work and all adjustments necessary to accommodate the changes. All work shall meet the requirements of the Drawings, Specifications and appropriate details.
C. Submit each alternate proposal as an individual cost for the particular alternate. The alternate shall be proposed under the premise that no other alternates have been accepted. Should the work of an alternate called for by the Bid Form not affect the cost of the work, state "No Change" in the space provided. If an alternate is left blank, the Owner reserves the right to throw out the entire bid or interpret the alternate as "No Change".
D. Include taxes which are applicable to work involved in alternates as well as costs, if any, for increased coverage of bonds and insurance.
E. Any of the alternates may be accepted by Owner and will be used in determining the low bidder.
F. Owner may, at their option, vary the scope of the work by authorizing alternates which will add to the work, deduct from the work or substitute materials, equipment or methods.
G. Each Bidder shall examine the Drawings and Specifications to determine the extent to which their work is affected by bid alternates. Include in the space provided on the bid form the cost of any added or deducted work resulting from each alternate.
H. Contractor is responsible for providing work if applicable to each alternate, whether or not an added or deducted cost is included on their bid form.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.01 IMPLEMENTATION

A. If the Owner elects to proceed on the basis of one or more of the alternates, make all modifications to the Work required in the furnishing and installation of the selected alternate or alternates subject to the approval of the Architect at no additional cost to the Owner except as proposed in the Bid.
B. Coordinate pertinent related work and modify surrounding work as required to properly integrate the work under each alternate, and to provide the complete construction required by Contract Documents.
C. If so stated in the Agreement, or modifications thereto, provide alternate materials, equipment and/or construction as specified.
D. Execute accepted alternates under the same conditions as other Work of the Contract including project schedule, milestones, and phases required for completion of the Work.

3.02 SCHEDULE OF ALTERNATES

A. Work Scope No. 1:

1. Alternate No. 1: Reduced Gym Size.

a. Base Bid: Gymnasium documented to size/layout in A1 – A8 series of drawings.
b. Alternate Bid: Gymnasium documented to size/layout in A9 series of drawings.
c. Scope: Storage and office are to the west of the gym with a 76’ court length in the base bid. Storage and office are to the south of the gym with a 68’ court length in the alternate bid.
d. Reference: A1.01-C and associated RCPs, finish plans, and details. A9.00 series for alternate.

2. Alternate No. 2: Reduction of Main Entry Canopy

a. Base Bid: Construct canopy in its’ entirety.
b. Alternate Bid: Construct reduced canopy size shown on A1.40. Reduce structural columns and downspouts associated with larger canopy only.
c. Reference: Drawing A1.40.

3. Alternate No. 3A: Install quartz tile in lieu of terrazzo throughout first and second floors.

a. Base Bid: Terrazzo where indicated
b. Alternate Bid: Quartz tile where terrazzo is indicated.
c. Reference: Design Selection Summary and finish plans.

4. Alternate No. 3B: Install quartz tile in lieu of terrazzo throughout the second floor only.
    a. Base Bid: Terrazzo where indicated
    b. Alternate Bid: Quartz tile where terrazzo is indicated on the second floor.
    c. Reference: Design Selection Summary and finish plans.

5. Alternate No. 3C: Install SVT in lieu of terrazzo throughout the second floor.
    a. Base Bid: Terrazzo where indicated
    b. Alternate Bid: SVT where terrazzo is indicated on the second floor.
    c. Reference: Design Selection Summary and finish plans.

6. Alternate No. 4: Remove upper cabinets in the classrooms where indicated.
    a. Base Bid: Provide all documented casework.
    b. Alternate Bid: Remove upper cabinets where indicated and provide finished wall construction to match surrounding finish.
    c. Reference: Interior elevations.

7. Alternate No. 5: Remove tack panels above marker board in classrooms where indicated.
    a. Base Bid: Provide all documented tack panels.
    b. Alternate Bid: Remove tack panels where indicated in classrooms and replace with tack strips.
    c. Reference: Interior elevations.

8. Alternate No. 6A: Add both sets of bleachers in gymnasium (base bid layout).
    a. Base Bid: No bleachers are provided in base bid.
    b. Alternate Bid: Add both sets of bleachers where indicated in drawing A1.01-C.
    c. Reference: Drawing A1.01-C..

9. Alternate No. 6B: Add 1 set of bleachers in gymnasium (base bid layout, southern bleacher).
    a. Base Bid: No bleachers are provided in base bid.
    b. Alternate Bid: Add 1 set of the bleachers indicated in drawing A1.01-C.
    c. Reference: Drawing A1.01-C..

10. Alternate No. 6C: Add both sets of bleachers in gymnasium (alternate layout).
    a. Base Bid: This alternate only applies if Alternate #1 is selected.
    b. Alternate Bid: Add bleachers where indicated in drawing A9.01.
    c. Reference: Drawing A9.01.

11. Alternate No. 6D: Add 1 set of bleachers in gymnasium (alternate layout, southern bleacher).
    a. Base Bid: This alternate only applies if Alternate #1 is selected.
    b. Alternate Bid: Add 1 set of the bleachers where indicated in drawing A9.01.
    c. Reference: Drawing A9.01.

12. Alternate No. 7: Mechanical Courtyard.
    a. Base Bid: Provide all site walls, gates, and concrete pad associated to mechanical courtyard as indicated in Area D.
    b. Alternate Bid: Remove all site walls, gates, and concrete pad associated to mechanical courtyard as indicated in Area D.
    c. Reference: Drawing A1.01-D.

13. Alternate No. 8: ADD – Unclassified Rock Excavation.
    a. Base Bid: Classified excavation. Contractor is to provide Unit Prices for excavation and include quantities of Unit Prices in the Allowance as part of the base bid. The cost for rock excavation will be paid by change order out of the Allowance.
    b. Alternate Bid: Unclassified excavation. Contractor is responsible for all excavation cost as part of the Contract. The quantities for Unit Price WS-1A are to be reduced to zero (0) and no rock removal unit price will be paid by owner.

14. Alternate No. 9: ADD – Provide engineered structural fill or 2A modified stone 24” deep in lieu of onsite materials for all building pad fills.
    a. Base Bid: Utilize the onsite materials for fill needed at the building pad.
    b. Alternate Bid: Provide engineered structural fill or 2A Modified stone (24" deep) in lieu of using onsite materials for all fills required below the bottom of slab subgrade stone for the entire new building pad and up to 5' outside the new building's exterior wall line. Under this Alternate, the resulting excess site soils are to be disposed of legally off-stie by the contractor.

15. Alternate No. 10: ADD – Provide sod up to 5’ outside of the building footprint.
    a. Base Bid: seed all areas as indicated in the construction drawings.
    b. Alternate Bid: Provide 5’ of sod around the perimeter of the building footprint where grass is indicated in the construction drawings.

16. Alternate No. 11: ADD – Replace the base bid mechanical system with a Geothermal well mechanical system as indicated in the project drawings.
    a. Base Bid: Sitework, trenching, and piping as indicated on the contract documents
    b. Alternate Bid: Sitework, trenching and piping as indicated on contract document C7.01

B. Work Scope No. 2:

1. Alternate No. 1: Reduced Gym Size.
    a. Base Bid: Gymnasium documented in drawings.
    b. Alternate Bid: Gymnasium alternate documented to size/layout in E6-E9 series of drawings. Scope: Storage and office are to the west of the gym with a 76’ court length in the base bid as shown on the draings. Storage and office are to the south of the gym with a 68’ court length in the alternate bid as shown on the drawings.

2. Alternate No. 2: ADD – Replace the base bid mechanical system with a Geothermal well mechanical system as indicated in the project drawings.
    a. Base Bid: Mechanical systems and power as indicated on contract document E6.0
    b. Alternate Bid: Mechanical systems and power as indicated on contract document E6.1

C. Work Scope No. 3:

1. Alternate No. 1: Reduced Gym Size.
    a. Base Bid: Gymnasium documented in drawings.
    b. Alternate Bid: Gymnasium alternate documented to size/layout in M1.01-C of drawings. Scope: Storage and office are to the west of the gym with a 76’ court length in the base bid as shown on the drawings. Storage and office are to the south of the gym with a 68’ court length in the alternate bid as shown on the drawings.

2. Alternate No. 2: ADD – Replace the base bid mechanical system with a Geothermal well mechanical system as indicated in the project drawings.
    a. Base Bid: Mechanical systems and piping as indicated on contract documents as base bid
    b. Alternate Bid: Mechanical systems and piping as indicated on contract documents as alternate

3. Alternate No. 3: Allow for HDPE, PVC, or CPVC in lieu of Copper/Steel
    a. Base Bid: Copper and steel piping as indicated in the contract drawings and specifications
    b. Alternate Bid: HDPE, PVC, or CPVC in lieu of copper/steel as indicated in the contract drawings and specifications

D. Work Scope No. 4:

1. Alternate No. 1: Reduced Gym Size.
    a. Base Bid: Gymnasium documented in drawings.
    b. Alternate Bid: Gymnasium alternate documented to size/layout in P1.01c of drawings. Scope: Storage and office are to the west of the gym with a 76’ court length in the base bid as shown on the drawings. Storage and office are to the south of the gym with a 68’ court length in the alternate bid as shown on the drawings.

2. Alternate No. 2: ADD – Replace the base bid mechanical system with a Geothermal well mechanical system as indicated in the project drawings.
    a. Base Bid: Piping as indicated on contract documents as base bid
    b. Alternate Bid: Piping as indicated on contract documents P2.01d as alternate

3. Alternate No. 3: Allow for HDPE, PVC, or CPVC in lieu of Copper/Steel
    a. Base Bid: Copper and steel piping as indicated in the contract drawings and specifications
    b. Alternate Bid: HDPE, PVC, or CPVC in lieu of copper/steel as indicated in the contract drawings and specifications

END OF SECTION 01 23 00

SECTION 01 26 00 – CONTRACT MODIFICATION PROCEDURES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section specifies administrative and procedural requirements for handling and processing Contract modifications. Changes in the Project scope of work affecting the project will be made through Procore.
B. See General Conditions of the Work for methods of determining cost or credit, mark-up and schedule for submitting claims.

1.03 MINOR CHANGES IN THE WORK

A. Construction Manager or Architect will issue Supplemental Instructions (SI) which are used to authorize minor changes in the Work not involving adjustment to Contract Sum or time.
B. This no cost change is to be carried out in accordance with the modifications to the Contract Documents described therein. If this change effects cost, do not proceed with this change. Notify the Construction Manager in writing within 10 days of receipt that an itemized quotation (per the requirements listed in 1.04) will be submitted within 21 days of initial receipt of this Supplemental Instruction. If a cost is not submitted within 21 days, this Supplemental Instruction will be accepted at no additional cost.

1.04 PROPOSAL REQUESTS

A. Owner-Initiated Proposal Requests: Construction Manager will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.

1. Proposal Requests issued by Construction Manager are for information only. Do not consider them instructions either to stop work in progress or to execute the proposed change.
2. Within 10 days of receipt of Proposal Request, Contractor submit an itemized quotation estimating cost adjustments to the Contract Sum and the Contract Time necessary to execute the change.

a. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
b. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
c. Include costs of labor and supervision directly attributable to the change.
d. Include contractor’s overhead and profit broken out.
e. Include an updated Contractor's Construction Schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
f. If a cost is not submitted within 10 days, this Proposal Request can be accepted at no additional cost. Written approval is required prior to proceeding with this change.

B. Contractor-Initiated Proposals: If latent or unforeseen conditions require modifications to the Contract, Contractor may propose changes by submitting a request for a change to Construction Manager.

1. Include a statement outlining reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.
2. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
3. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
4. Include costs of labor and supervision directly attributable to the change.
5. Include contractor’s overhead and profit broken out.
6. Include an updated Contractor's Construction Schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
7. Comply with requirements in Division 01 Section "Product Requirements" if the proposed change requires substitution of one product or system for product or system specified.

C. Proposal Request Form: For Change Order Proposals, use forms provided by the Construction Manager.

1.05 CHANGE ORDER PROCEDURES

A. The Construction Manager will review the Contractor’s labor and material itemized quotation and respond in writing whether it is acceptable, or needs revision. When all pricing is accepted by the Construction Manager and Owner, a Change Order will be processed. Change Orders will be processed at intervals determined by the Construction Manager throughout the construction schedule.

1.06 CONSTRUCTION CHANGE DIRECTIVE

A. Construction Change Directive (CCD): The Construction Manager may issue a Construction Change Directive to instruct the Contractor to proceed with a change in the Work for subsequent inclusion in a Change Order. The CCD contains a complete description of the change in the Work and designates a method to be followed to determine change in the Contract Sum or time.

1. Proceed immediately to carry out changes as directed in the issued CCD in the Contract Documents as described therein.
2. Maintain detailed records on a time and material basis of work required by the Construction Change Directive.
3. After completion of change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 26 00

SECTION 01 29 00 – PAYMENT PROCEDURES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section specifies administrative and procedural requirements necessary to prepare and process Applications for Payment. ICS utilizes Procore for the invoicing process.

B. Related Sections include the following:

1. Division 01 Section 01 22 00 "Unit Prices and Material Allowances" for administrative requirements governing the use of unit prices.
2. Division 01 Section 01 26 00 "Contract Modification Procedures" for administrative procedures for handling changes to the Contract.
3. Division 01 Section 01 32 00 "Construction Progress Documentation" for administrative requirements governing the preparation and submittal of the Contractor's construction schedule.

1.03 DEFINITIONS

A. Schedule of Values: A statement furnished by Contractor allocating the entire Contract Sum among the various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

1.04 SCHEDULE OF VALUES

A. Coordination: Coordinate preparation of the Schedule of Values with preparation of Contractor's Construction Schedule. The Schedule of Values are to provided by the Contractor for entry into Procore.

1. Correlate line items in the Schedule of Values with other required administrative forms and schedules, including the following:
   a. Application for Payment forms with Continuation Sheets.
   b. Submittals Schedule.

2. Provide the Schedule of Values information within template provided by the

Construction Manager at the earliest possible date, but no later than seven days before the date scheduled for submittal of initial Applications for Payment.

3. Sub-schedules: Where the Work is separated into phases requiring separately phased payments, provide sub-schedules showing values correlated with each phase of payment.

B. Format and Content: Use the Project Manual table of contents as a guide to establish line items for the Schedule of Values. Provide at least two line items (labor and material) for each Specification Section. If invoicing for shop drawings break that amount into a separate line item. Construction Manager will enter the Schedule of Value within the “Commitments” section of Procore for use with the Project.

1. Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Coordinate with the Project Manual table of contents. Provide several line items for principal subcontract amounts, where appropriate.
2. Round amounts to nearest whole dollar, total shall equal the Contract Sum.
3. Provide separate line items in the Schedule of Values for initial cost of materials, for each subsequent stage of completion, and for total installed value of that part of the Work.
4. Provide a separate line item in the Schedule of Values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored, but not yet installed. Differentiate between items stored on site and items stored off site.
5. Allowances: Provide a separate line item in the Schedule of Values for each allowance. Show line-item value of unit-cost allowances, as a product of the unit cost, multiplied by measured quantity. Use information indicated in the Contract Documents to determine quantities.
6. Each item in the Schedule of Values and Applications for Payment shall be complete. Include total cost and proportionate share of general overhead and profit for each item.
7. Temporary facilities and other major cost items that are not direct costs of actual work-in-place may be shown either as separate line items in the Schedule of Values or distributed as general overhead expense, at Contractor's option.
8. Schedule of Values Updating: Update and resubmit the Schedule of Values before the next Application for Payment when Change Orders or Construction Change Directives result in a change in the Contract Sum.
9. Project Schedule Updating: Update and resubmit the Project Milestone Schedule with each Application for Payment when approved schedule changes result in a change to the overall schedule.

1.05 APPLICATIONS FOR PAYMENT

A. Procore’s “Invoicing” tool to be utilized.

1. CM will issue an Invitation to Bill monthly.
2. Under the “Do you want to bill this period,” area, choose the following:

   a. If you want to submit the invoice, click Yes. Then click Post Response and

continue with step 3. OR

b. If you are not ready to submit the invoice, click No. Then click Post Response.

3. At the Create New Invoice page in Procore, the Period Start, Period End and Billing Date is pre-filled with what the CPM set. Enter the invoice number.
4. In the Detail section, enter either your percent complete or amount complete for each line item in your original Schedule of Values
5. Enter the materials presently stored amount. This will be added to the percent complete for each line item. Reference Stored Material requirements detailed in Article 9.3.2 of Section 00 72 00, General Conditions.
6. In the Approved Commitment Change Orders section, repeat the process for each change order's line items by entering the percent or amount complete for each line item. Any new approved change orders will automatically be added at this location.
7. Pencil copies shall be submitted through Procore's "Invoicing" tool for Construction Manager and/or Construction Manager review, no later than the 15th of each month forecast for work performed to the end of the month in accordance with Article 9.3.1 of Section 00 72 00, General Conditions.
8. Once pencil copies are approved, attach required backup documentation; at a minimum, a signed, notarized copy of the application. Contact the CPM to determine if additional documentation is required.

    a. How to export the Pay Application in Procore:

        1) Click Save
        2) Click Export and select PDF
        3) Sign the PDF
        4) Return to Procore and select the Summary Tab
        5) Click Edit
        6) Attach the signed PDF's

B. Each Application for Payment shall be consistent with previous applications and payments as certified by the Architect, Construction Manager and paid for by Owner.

1. Initial Application for Payment, Application for Payment at time of Substantial Completion, and final Application for Payment involve additional requirements.

C. Payment Application Times: The date for submission of each application for payment is the 25th day of each month. The period covered by each Application for Payment ends on the FINAL day of each month. All payment applications must comply with project scheduling requirements. These dates are subject to change for the duration of the Project by the Owner prior to the first application for payment. No faxed, emailed or mailed, Applications for Payment will be accepted. The period of Construction Work covered by each Application for Payment is the period indicated in the Agreement.

D. Accuracy – All Payment Applications must accurately reflect work completed through the end of the month. Any Payment Application deemed inaccurate by the Construction Manager will be rejected in its entirety.

E. Monthly payments will be made per Section 5.1 of the A132-2019. Retainage will be held in accordance with Article 9.3.4 of Section 00 72 00, General Conditions. Payment

will be made for material stored on the project site, and material stored off the project site with prior agreement.

F. Payment Application Forms: Procore's preset AIA form to be utilized.

G. Application Preparation: Complete every entry in Procore. Notarize and execute by a person authorized to sign legal documents on behalf of Contractor. Construction Manager will return incomplete applications without action.

1. Entries shall match data on the Schedule of Values and Contractor's Construction Schedule. Use updated schedules if revisions were made.
2. Include amounts for work completed following previous Application for Payment, whether or not payment has been received. Include only amounts for work completed at time of Application for Payment.
3. Include amounts of Change Orders and Construction Change Directives issued before last day of construction period covered by application.

H. Stored Materials: Include in Application for Payment amounts applied for materials or equipment purchased or fabricated and stored, but not yet installed. Differentiate between items stored on site and items stored off site. Reference Article 9.3.2 of Section 00 72 00, General Conditions, for complete requirements of Stored Materials.

1. Provide certificate of insurance, evidence of transfer of title to Owner, and consent of surety to payment for stored materials.
2. Provide supporting documentation that verifies amount requested, such as paid invoices. Match amount requested with amounts indicated on documentation; do not include overhead and profit on stored materials.
3. Provide summary documentation for stored materials indicating the following:
4. Value of materials previously stored and remaining stored as of date of previous Applications for Payment.
5. Value of previously stored materials put in place after date of previous Application for Payment and on or before date of current Application for Payment.
6. Value of materials stored since date of previous Application for Payment and remaining stored as of date of current Application for Payment.

I. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of first Application for Payment include the following:

1. List of subcontractors.
2. Schedule of Values.
3. Contractor's Construction Schedule (preliminary if not final).
4. Products list.
5. Schedule of unit prices.
6. Submittals Schedule (preliminary if not final).
7. List of Contractor's staff assignments.
8. List of Contractor's principal consultants
9. Copies of building permits.
10. Copies of authorizations and licenses from authorities having jurisdiction for performance of the Work.
11. Initial progress reports.
12. Report of pre-construction conferences.

13. Initial settlement survey and damage report if required.

J. The first payment application will not be processed unless these, and any other items required by the Construction Manager or Architect, are processed.

K. A separate Application(s) for Payment shall be submitted for when reduction in retainage is requested shall be submitted along with AIA Document G707A-1994, "Consent of Surety to Reduction or Partial Release of Retainage" and surety's executed appropriate Power of Attorney.

L. Application for Payment at Substantial Completion: Following issuance of the Certificate of Substantial Completion, submit an Application for Payment.

1. This Application shall reflect Certificates of Partial Substantial Completion issued previously for Owner occupancy of designated portions of the Work.

2. Administrative actions and submittals that shall precede this Application include:

a. Occupancy permits and similar approvals.
b. Warranties (guarantees) and maintenance agreements.
c. Test/adjust/balance records.
d. Maintenance instructions.
e. Meter readings.
f. Startup performance reports.
g. Changeover information related to Owner's occupancy, use, operation and maintenance.
h. Final clean
i. Application for reduction of retainage and consent of surety to reduction of retainage.
j. List of incomplete Work, recognized as exceptions to Construction Manager's Certificate of Substantial Completion.
k. Provide Operation and Maintenance (O+M) materials or supplies listed in all pertaining Specification Sections.

M. Final Payment Application: Submit final Application for Payment with releases and supporting documentation not previously submitted and accepted. Administrative actions and submittals that must precede the final Application for Payment include the following:

1. Evidence of completion of Project closeout requirement.
2. Certification of completion of final punch list items.
3. Updated final statement, accounting for final changes to the Contract Sum.
4. AIA Document G706-1994, "Contractor's Affidavit of Payment of Debts and Claims."
5. AIA Document G706A-1994, "Contractor's Affidavit of Release of Liens."
6. AIA Document G707-1994, "Consent of Surety to Final Payment."
7. Completion of items specified for completion after Substantial Completion
8. Evidence that claims have been settled.
9. Ensure that incomplete Work will be completed without undue delay.
10. Transmittal of required Project construction records to the Construction Manager, including As-Builts, warranty, O+M's.
11. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.

12. Removal of temporary facilities and services.
13. Removal of surplus materials, rubbish, and similar elements.
14. Final, liquidated damages settlement statement.
15. Any other waivers and releases as required.

Part 2 - PRODUCTS (Not Used)

Part 3 - EXECUTION (Not Used)

END OF SECTION 01 29 00

SECTION 01 29 01 – PAYMENT PROCEDURES FOR ASPHALT PAVING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.
B. Division 32 Specification Section 32 12 16 “Asphalt Paving”.

1.02 ASPHALT PAVING PRICING

A. The Base Bid contract sum shall be adjusted for asphalt paving based upon changes from the Pennsylvania Asphalt Paving Association (PAVA) Asphalt Cement Price Index for PennDOT Zone 1, District 6 that is in effect on a per ton basis on the date when the bids are due in accordance with the following formula:

1. Price Adjustment Criteria and Conditions: The following criteria and conditions will be considered in determining a price adjustment for bituminous materials:

a. No Price Adjustment: When the ratio IP/IB falls within the range of 0.90 to 1.10 no price adjustment will be made for any bituminous material placed during the relevant month.
b. Price Rebate: When the ratio IP/IB is calculated to be less than 0.90, the School District will receive an automatic price rebate determined according to the following formula:

P.R. = (0.90 – IP/IB) (Q) (IB); where:
P.R. = Price Rebate
IP = Price Index for the last Wednesday for the month preceding the month in which the material is placed (One-Month Price Adjustment Period)
IB = Price Index in effect when the bids are due
Q = Quantity in tons of Bitumen in Mixture placed

c. Price Increase: When the ratio IP/IB is calculated to be greater than 1.10, the Contractor will receive a price increase determined according to the following formula:

P.I. = (IP/IB – 1.10) (Q) (IB); where:
P.I. = Price Increase
IP = Price Index for the last Wednesday for the month preceding the month in which the material is placed (One-Month Price Adjustment Period)
IB = Price Index in effect when the bids are due
Q = Quantity in tons of Bitumen in Mixture placed

B. Contractor shall submit daily weight tickets to Construction Manager and shall submit plant material certificates identifying Bitumen in mixture placed.

C. Contractor shall submit monthly calculation to Construction Manager based on above formula for verification and final approval by Construction Manager.
D. Final price adjustment will be made by change order or allowance adjustment as determined by Owner based on the actual price adjustment verification by Construction Manager and Architect.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 29 01

SECTION 01 31 00 - PROJECT MANAGEMENT AND COORDINATION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes administrative provisions for coordinating construction operations on Project including, but not limited to, the following:

1. General project coordination procedures.
2. Submittals.
3. Administrative and supervisory personnel.
4. Project meetings.
5. Web Based Project Management System (Procore)

B. Each contractor shall participate in coordination requirements. Certain areas of responsibility are assigned to a specific contractor.

C. Related Sections: The following Sections contain requirements that relate to this Section:

1. Section 01 12 00 "Multiple Work Scope Summary" for a description of the division of work among separate contracts and responsibility for coordination activities not in this Section.
2. Section 01 32 00 "Construction Progress Documentation" for preparing and submitting Contractor's construction schedule.
3. Division 01 Section 01 31 17, “Coordination Drawings” for procedures and requirements of the coordination of installation of products and materials provided by separate primes.
4. Division 01 Section 01 73 00 "Execution" for procedures for coordinating general installation and field engineering services.
5. Division 01 Section 01 77 00 "Closeout Procedures" for coordinating Contract closeout.

1.03 GENERAL COORDINATION PROCEDURES

A. Coordination: Coordinate construction operations included in various Sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations, included in different Sections that depend on each other for proper installation, connection, and operation.

1. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
2. Coordinate installation of different components with other contractors to ensure maximum accessibility for required maintenance, service, and repair.
3. Make adequate provisions to accommodate items scheduled for later installation.

B. If necessary, prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings.

1. Prepare similar memoranda for Owner and separate contractors if coordination of their Work is required.

C. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities and activities of other contractors to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:

1. Preparation of Contractor's construction schedule
2. Preparation of the schedule of values.
3. Installation and removal of temporary facilities and controls.
4. Delivery and processing of submittals.
5. Progress meetings.
6. Pre-installation conferences.
7. Temporary Certificate of Occupancy activities.
8. Project closeout activities.

D. Conservation: Coordinate construction activities to ensure that operations are carried out with consideration given to conservation of energy, water, and materials.

1. Salvage materials and equipment involved in performance of, but not actually incorporated into, the Work.

E. Each Contractor shall:

1. Perform his Work as mandated by the project schedule to maintain the required sequence and the overall progress of the project.
2. Coordinate Work of his own employees and subcontractors.
3. Expedite his Work to assure compliance with approved schedules.
4. Coordinate his Work with that of other Prime Contractors and work by the Owner.

F. Modifications to the Work made necessary by a Contractor’s failure to properly coordinate the Work, shall be made by that Contractor, at no cost to the Owner.

G. Remove Work installed out of sequence that prohibits a separate Prime Contractor the ability to install Work that is dependent on their prior installation of materials or equipment. No additional compensation or time extension will be considered for the uncovering or removal of the out of sequence Work.

H. Each Prime Contractor shall coordinate space requirements and installation of mechanical and electrical work indicated diagrammatically on the Contract Drawings.

Follow routing shown for pipes, ducts and conduit as closely as practicable; place runs parallel with line of building. Utilize spaces efficiently to maximize accessibility for other installations, for maintenance and for repairs.

I. Where availability of space is limited, the Construction Manager and each Prime Contractor shall coordinate installation of different components with other Prime Contractors to assure maximum accessibility for required maintenance, service and repair and to meet governing code requirements.

J. Each Prime Contractor shall make adequate provisions to accommodate items scheduled for later installation.

K. Each Prime Contractor shall, in finished areas except as otherwise indicated, conceal pipes, ducts and wiring within the construction. Coordinate locations of fixtures and outlets with finish elements provided by other Contractors.

L. Each Prime Contractor shall verify utility requirement characteristics of operating equipment are compatible with building utilities. Coordinate work of various sections having interdependent responsibilities for installing, connecting to, and placing in service, such equipment.

M. Each Prime Contractor shall coordinate Testing and Inspection Services:

1. Verify required laboratory personnel are present.
2. Verify tests are made in accord with specified standards.
3. Review test reports for compliance with specified standards.
4. Recommend and administer any required retesting.
5. Submit copies to the Owner, Architect/Engineer, and Construction Manager.
6. Coordinate with Owner’s Geotechnical Engineer for compaction and moisture content testing. Notify Geotechnical Engineer in advance of need for testing in accord with Project Construction Schedule.
7. Coordinate with Owner’s Inspection Agency for concrete, masonry and steel testing and inspection. Notify agency in advance when testing and inspection is required.

N. Each Prime Contractor shall coordinate completion and clean-up of Work of separate sections in preparation for Substantial Completion, and for portions of Work designated for Owner’s partial occupancy.

O. Each Prime Contractor shall, after Owner occupancy of premises, coordinate access to site for correction of defective Work and Work not in accord with Contract Documents, to minimize disruption of Owner’s activities.

1.04 SUBMITTALS

A. Coordination Drawings: Prepare Coordination Drawings if limited space availability necessitates maximum utilization of space for efficient installation of different components or if coordination is required for installation of products and materials fabricated by separate entities.

1. Indicate relationship of components shown on separate Shop Drawings.
2. Indicate required installation sequences.
3. Refer to Division 23 Section "Basic Mechanical Materials and Methods" and Division 26 Section "Basic Electrical Materials and Methods" for specific Coordination Drawing requirements for mechanical and electrical installations.

B. Staff Names: Submit a list of principal staff assignments, including superintendent and other personnel in attendance at Project site in accordance with procedures outlined in Section 3.9 of Section 00 72 00, General Conditions.

1.05 ADMINISTRATIVE AND SUPERVISORY PERSONNEL

A. General: In addition to Project superintendent, provide other administrative and supervisory personnel as required for proper performance of the Work.

1. Include special personnel required for coordination of operations with other contractors.

1.06 PROJECT MEETINGS

A. Preconstruction Conference: The Construction Manager will schedule a preconstruction conference before starting construction, at a time convenient to Owner, Architect and Contractor(s) within 15 days after execution of the Agreement. The conference will be held at the Project site or another convenient location. The meeting will review responsibilities and personnel assignments and other pertinent issues to the project.

1. Attendees: Authorized representatives of Owner, Architect and their consultants; Prime Contractor(s) and their superintendent; major subcontractors and other Owner pre-approved parties shall attend the conference. All participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
2. Agenda: Discuss items of significance that could affect progress, including the following:

    a. Tentative construction schedule.
    b. Phasing.
    c. Critical work sequencing.
    d. Long Leadtime items.
    e. Designation of responsible personnel.
    f. Procedures for processing field decisions and Change Orders.
    g. Procedures for processing Applications for Payment.
    h. Distribution of the Contract Documents.
    i. Submittal procedures.
    j. Preparation of Record Documents.
    k. Use of the premises.
    l. Responsibility for temporary facilities and controls.
    m. Parking availability.
    n. Office, work, and storage areas.
    o. Equipment deliveries and priorities.
    p. First aid.
    q. Security.
    r. Progress cleaning.
    s. Working hours.
    t. Construction IAQ Management Plan activities.

B. Pre-installation Conferences: Prime Contractors and Construction Manager shall coordinate and conduct a pre-installation conference at Project site before each construction activity that requires coordination with other construction.

1. Attendees: Construction Manager, installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise the Architect and Owner of scheduled meeting dates.
2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:

    a. Contract Documents.
    b. Options.
    c. Related Change Orders.
    d. Purchases.
    e. Deliveries.
    f. Submittals.
    g. Review of mockups.
    h. Possible conflicts.
    i. Compatibility problems.
    j. Time schedules.
    k. Weather limitations.
    l. Manufacturer's written recommendations.
    m. Warranty requirements.
    n. Compatibility of materials.
    o. Acceptability of substrates.
    p. Temporary facilities and controls.
    q. Space and access limitations.
    r. Regulations of authorities having jurisdiction.
    s. Testing and inspecting requirements.
    t. Coordination with other work.
    u. Required performance results.
    v. Protection of construction and personnel.

3. Construction Manager to record significant conference discussions, agreements, and disagreements and issue meeting minutes to the group.
4. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.

C. Progress Meetings: Attend progress meetings as scheduled or when notified. Meetings will be generally held every other week unless progress or significant issues arise in the progress or lack thereof of the work.

1. Attendees: In addition to representatives of Owner, Architect and CM, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.

2. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.

    a. Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
    b. Review present and future needs of each entity present, including the following:

        1) Interface requirements.
        2) Sequence of operations.
        3) Resolution of BIM component conflicts.
        4) Status of submittals.
        5) Deliveries.
        6) Off-site fabrication.
        7) Access.
        8) Site utilization.
        9) Temporary facilities and controls.
        10) Work hours.
        11) Hazards and risks.
        12) Review of open RFI’s.
        13) Progress cleaning.
        14) Quality and work standards.
        15) Change Orders.
        16) Documentation of information for payment requests.
        17) Site security and safety issues.

3. Reporting: The Construction Manager will distribute minutes of the meeting to each party present and to parties who should have been present. Minutes will include a brief summary, in narrative form, of progress since the previous meeting and report.

    a. The Contractor shall revise the Construction Schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting. Contractor shall provide and include a two- week look ahead schedule.

D. Weekly Superintendent Meetings: Attend weekly superintendent meetings scheduled and chaired by the Construction Manager or General Contractor. Chair to be agreed upon by the Construction Manager..

1. Attendees: In addition to representatives of the Owner and Construction Manager, each contractor and subcontractor responsible for work in the upcoming two weeks to be represented.
2. Agenda: Review the work planned in the next four weeks and other items that may affect work in the short term including:

a. Deliveries.
b. Site traffic patterns.
c. Subcontractors working at the site.
d. Maintenance of erosion and sediment control features.
e. Site cleanliness.
f. Planned work hours.
g. Coordination items.

3. At each coordination meeting, the following shall occur:

   a. GC shall provide a four-week look ahead schedule from the current overall CPM schedule listing the tasks start, finish, and total float for the next two weeks.
   b. Each prime contractor superintendent shall be prepared to address the four-week list of tasks and provide their plan for executing each task as per the schedule.
   c. If any task is not going to be met, contractors shall then provide immediate recovery plan which will be incorporated into the overall schedule update.

4. At each coordination meeting, each Prime Contractor is to provide a written four-week look ahead schedule to the General Contractor and Construction Manager for review and comment.
5. The Construction Manager shall write meeting minutes for each coordination meeting and distribute them to each Prime Contractor and to the Architect for review within two days after the meeting.

1.07 WEB BASED PROJECT MANAGEMENT SYSTEM

A. The web-based Project Management System designated for use with this Project is Procore.

B. Prime Contractors shall use the Procore system to transmit documents, track, and otherwise manage this project. Use of the system will be mandatory by the Prime Contractors to send, retrieve, and respond to data.
C. Use of this project management software will not change any contractual responsibilities of the construction team members.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 31 00

SECTION 01 31 17 - COORDINATION DRAWINGS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section and each Division 01 Section applies to all separate Prime Contracts.
B. This Section includes requirements for preparation of Coordination Drawings for structural, mechanical, plumbing, fire protection, and electrical work.
C. Related Documents and Sections: The following documents and Sections contain requirements that relate to this Section:

1. Division 01 Section 01 33 00 “Submittal Procedures”.
2. Division 01 Section 01 31 00 “Project Management and Coordination” and Division 01 Section 01 12 00 “Multiple Work Scope Summary” specify requirements for coordinating construction operations by the Prime Contractors.

1.03 DEFINITIONS

A. Coordination Drawings: Scaled drawings and Building Information Modeling files (BIM) prepared by each Prime Contractor which superimpose work of several trades, intended for careful coordination of installation of products and materials provided by separate entities.
B. Key Drawings: Two dimensional drawings of each floor or area of the Project indicating proposed subdivision into ductwork layout shop drawings.
C. Layout Drawings: Two and three dimensional architectural and structural backgrounds to be used by all Prime Contractors for development of Coordination Drawings.
D. Electronic Documents: Electronic reproductions and photocopy reproductions of contract drawings will not be accepted for shop drawing and product submittals by contractors. Refer to procedures for obtaining contract drawings for background use only and BIM Model for coordination purposes only. The Construction Documents and any distributed BIM Models shall not be construed as dictating the ways and means of construction.

1.04 COORDINATION DIGITAL DATA FILES:

A. Prepare coordination digital data files according to the following requirements:

1. File Preparation Format: Same digital data software program, version, and operating system as original Drawings (Revit 2026) operating in Microsoft Windows operating system.
2. File Submittal Format: Submit or post coordination drawing files using Portable Data File (PDF) format and Navisworks File (NWC).
3. Architect and their consultants will furnish Contractor one set of Revit 2026 Building Information Modeling files (BIM) of Drawings for use in preparing coordination digital data files.

    a. Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings.
    b. Digital Data Software Program: Drawings are available in Revit 2026 digital data software working on the windows operating system. Sheet views will be deleted to protect Architect and consultants. Full model will be available for coordination.
    c. Contractor shall execute Specification Section 01 31 26, Electronic Communication Protocols, and additional releases that may be provided by the Architect prior to the transfer of files to the Contractor.

4. BIM File Incorporation: Develop and incorporate coordination drawing information into Building Information Model established for Project.

    a. Each of the Prime Contractors shall model their respective systems in the BIM Model that are part of their contract and provide updated files to the HVAC contractor.
    b. The HVAC Contractor (Prime Coordinator) shall perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts with each Prime prior to submittal. Indicate where conflict resolution requires modification of design requirements by Architect and obtain approval of Architect.
    c. HVAC contractor shall revise the BIM model as necessary to reflect the coordination changes. HVAC contractor shall pay for the cost of revisions to the BIM model. HVAC contractor shall include a separate minimum of 200 hours for specific changes to Architectural components of the BIM model provided by Architect as a result of supplemental instruction or other direction that is identified as a result of coordination. All modifications, enhancements, additions, and changes to structural, mechanical, electrical, plumbing, fire protection, or HVAC components shall be made by the respective Prime Contractors responsible for that system as part of their contract.

1.05 COORDINATION DRAWING PROCEDURES

A. General: Approval of Shop Drawings assumes satisfactory incorporation of coordination information.
B. Do not use Contract Drawings as Coordination Drawings.

C. Initial Submittal: Key Drawings & BIM layout drawings shall be submitted by HVAC Contractor within 60 calendar days of Contract Award.
D. Final Submittal: Submit final BIM layout drawings & Coordination Drawings 60 days after submission of Initial Submittal.
E. Provide Coordination Drawing initial submittals as follows:

1. Key Drawings: The HVAC Contractor shall prepare and submit Key Drawings consisting of scaled drawings in .pdf format of each floor or area of the Project indicating proposed subdivision into ductwork layout shop drawings, with applicable shop drawing numbers.
2. Review: The HVAC contractor shall conduct a Coordination Planning Meeting with all contractors and the Construction Manager to review the Key Drawings and determine adequacy of proposed layouts to cover the Project and the following:
    a. Sequencing and scheduling of Coordination Drawing production in relation to the Construction Schedule.
    b. Complex areas for which larger scale drawings and details will be required.
    c. Coordination Drawing format, text, title blocks, and Contractor coordination sign-off.
3. Layout Drawings: Upon acceptance of Key Drawings, HVAC Contractor shall prepare common BIM layout drawings of all architectural and structural backgrounds to be used by all Prime Contractors for development of Coordination Drawings. Include the following elements and information on Layout Drawings:
    a. Columns and beams.
    b. Ceiling heights.
    c. Ceiling dimensional layouts as shown on reflected ceiling plans.
    d. Acoustical ceiling grid.
    e. Wall-to-wall dimensions.
    f. Partition layouts.
    g. Windows, doors, and other openings.
    h. Other major architectural and structural features shown on General Construction Drawings.
    i. Indicate dimensions from column centerlines.
    j. Include space in title block for Contractor sign-off and shop drawing control number.
4. Drawing Format: Produce Layout Drawings in BIM format. The version of BIM software used to produce the layout drawings shall be at the discretion of the HVAC Contractor; however, any version used must be compatible with AutoCAD 2018 or later. The HVAC Contractor shall coordinate the modeling software he proposes to use with the other Prime Contractors. The HVAC Contractor shall distribute the layout drawings in BIM format to the following for their use:
    a. Architect.
    b. Construction Manager.
    c. General Contractor.
    d. HVAC Contractor.
    e. Plumbing Contractor/Fire Protection.
    f. Electrical Contractor.

g. Subcontractors as deemed appropriate by the Construction Manager or Architect.

F. Coordination Drawing Preparation: Upon receipt of BIM Layout files, each Prime Contractor shall proceed immediately and independently to indicate the work included in their Contract:

1. Circle, highlight, or otherwise clearly indicate deviations from Contract Documents and state reasons for deviation.
2. BIM Standards: Comply with the following:
   a. Indicate pipes, conduits, and pipes with a diameter of less than 6 inches with single lines.
   b. Indicate ducts and pipes with a diameter of 6 inches and greater with double lines showing width to scale.
   c. Indicate busways to scale.
   d. Use a competent BIM operator to develop Coordination Drawings in a clear, legible manner.
   e. The Owner, Construction Manager, and Architect shall have sole judgment as to acceptability of Coordination Drawings and adherence to expected standards.
3. Ductwork Drawings: Show all items included as part of ductwork system, including:
   a. Ductwork with insulation.
   b. Hangers.
   c. Equipment.
   d. Grilles, registers, and diffusers.
   e. Filters.
   f. Volume dampers.
   g. Fire dampers.
   h. Automatic control dampers.
   i. Duct smoke detectors.
   j. Access doors and other access requirements for maintenance.
   k. Location of ATC sensors and controllers.
4. Piping Drawings: Show all items included in piping systems, including:
   a. Piping runs with insulation.
   b. Hangers.
   c. Valves.
   d. Coils.
   e. Equipment.
   f. Sensors.
   g. Flow monitors.
   h. Access door locations and other access requirements for maintenance.

5. Plumbing and Fire Suppression Drawings: Show all items included for plumbing and fire suppression systems, including:
    a. All domestic water, fire suppression, rainwater, and sanitary piping including main and branch lines.
    b. Standpipes.
    c. Sprinkler heads.
    d. Valves.
    e. Fire hose cabinets.
    f. Inspector test assemblies.
    g. Drain outlets.
    h. Access door locations and other access requirements for maintenance.
    i. Flow and tamper valves.

6. Electrical Drawings: Show items included in lighting and electrical power systems, including:
    a. Equipment.
    b. Panels.
    c. Boxes.
    d. Conduit runs.
    e. Light fixture locations and depths.
    f. Devices.
    g. Access door locations and other access requirements for maintenance.
    h. Cable trays.

7. Structural Drawings – Show all foundation and structural systems, braces, hangars, and connections.
8. Kitchen Drawings – Show all kitchen equipment and required connections.
9. Other contractors required to participate in coordination drawing program shall indicate their work on the BIM Layout Drawings as directed.
10. Additional Drawings: Each contractor shall prepare additional BIM drawings as necessary to show the intended routing and layout of their work adequately and completely. Additional drawings may include riser diagrams, flow sheets, elevations, details, sections, isometric layouts, etc. as determined by the Construction Manager or HVAC Contractor.
11. Scheduling: Time allotted for each contractor to develop their Coordination Drawings and schedule of coordination meeting will be determined by the HVAC Contractor and Construction Manager during the initial coordination planning meeting.
    a. Each Contractor's initial planning shall include preparing and coordinating not less than four (4) drawing areas per week or a greater amount if required. Project management time required to accomplish this schedule shall be included in Bid.
    b. Each Prime Contractor shall be responsible to provide sufficient staff at appropriate times to avoid delays in the coordination process.
    c. Coordination Drawing preparation shall commence as soon as final BIM layout drawings are submitted.

12. Interim Submissions: Coordination Drawings and Building Information Modeling files (BIM) shall be developed and submitted in the sequence directed, in sufficient time to avoid delay in the construction schedule. Partially completed Coordination Drawing submissions may be accepted in cases where complete data is not available, pending receipt of shop drawings. Leave sufficient space to incorporate missing information in subsequent submission; note such omissions and state reason for vacant area.

    a. When final information is available, promptly insert in Coordination Drawings. Submit a complete set of Coordination Drawings covering all areas once final information is incorporated.

G. Coordination Process: Due to the complexity of the Project, coordination activities are anticipated to be a continuous daily operation. HVAC contractor and other prime contractors shall devote whatever is necessary to fulfill the requirements and to keep the process on schedule. HVAC contractor shall revise the BIM model as necessary to reflect the coordination of changes. HVAC contractors shall pay the cost of revisions to the BIM model.

1. Basis for Placement of Elements: Make every reasonable effort to retain the layouts, placements, and routings shown on the Contract Drawings. Deviations from Contract Drawings will be permitted only when no other resolution is deemed appropriate and only upon written approval of the Construction Manager and Architect.
2. Coordination Drawing Development: As Coordination Drawings are developed, each Prime Contractor shall check and adjust locations to avoid interferences. Highlight conflicts, particularly involving finish products, for discussion at coordination meeting. Minor variances from Contract Drawings in routing of ducts, pipes, and conduits may be made to avoid conflicts when mutually agreed, provided these variances do not alter the intended function or require an adjustment of the contract price.

    a. Do not change sizes, adjust location of exposed items, or expose items not shown exposed on Contract Drawings without approval of the Construction Manager or Architect.
    b. Do not revise any wall or chase locations, ceiling heights, door swings or locations, windows or other openings, or other features affecting the function or aesthetic effect of the building.
    c. Refer conflicts and interferences that cannot be satisfactorily resolved to the Architect for a determination through the use of an RFI.
    d. Coordination drawings shall follow the construction phasing drawing sequence.

3. Coordination Meetings: The HVAC Contractor and Construction Manager will schedule coordination meetings every two weeks, or as required, to review each contractor’s layout drawings. All Prime Contractors, major trade contractors, and subcontractors, as required by the HVAC Contractor and Construction Manager, shall be represented at the meetings to review, and resolve conflicts and interferences.

4. Coordination Sequence:

    a. Each Prime Contractor shall locate, measure, and document on the Coordination Drawings the location of existing system components related to their contract responsibility within the proposed work areas.
    b. The GC will remove the existing ceilings in the areas indicated on the Phasing drawings.
    c. The GC will provide the HVAC contractor with the structural steel detailed drawing to use for coordination in the proposed addition.
    d. Structural detailer to complete structural model. Upon completion, in whole or by phase or area determined at the coordination meetings, this model shall be shared with the HVAC Contractor.
    e. HVAC Contractor to model all HVAC systems. HVAC to perform clash detection between HVAC, electrical, plumbing, structural items, and all other major systems such as ceilings.
    f. HVAC to provide all other prime contractors the coordinated Structural and HVAC models.
    g. All prime contractors to complete their 3D Models for their systems. Upon completion, provide model to HVAC contractor with the proposed new components located.
    h. HVAC contractor to combine all models and run clash detection to report all interferences. HVAC contractor to host coordination meetings as required to resolve all interferences or conflicts with respective contractors.

5. Coordination Responsibility: **All Prime Contractors have collective responsibility to fulfill coordination requirements**. The HVAC Contractor and Construction Manager may require attendance at meetings on a daily or weekly basis, or as otherwise required, to maintain the Project schedule.

    a. If it becomes necessary to relocate any element due to failure of a Prime Contractor to coordinate the Work, the responsible Contractor shall bear the cost for such relocation, including costs for additional work performed by other Prime Contractors as a result of the responsible Prime Contractor's failure to properly coordinate.
    b. Responsibility for the costs for any such additional work shall be as determined by the Construction Manager. In the event an agreement as to responsibility cannot be reached, the determination by the Construction Manager shall be final and binding.

H. Final Coordination Drawings: Once all necessary information has been added to the BIM Layout Drawings, the HVAC Contractor shall prepare a conformed file and review for clashes to be resolved. All clashes shall be addressed to create the final layout drawings and BIM Model. The HVAC Contractor (Prime Coordinator) shall perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts with each Prime prior to submittal. Indicate where conflict resolution requires modification of design requirements by Architect. Each Prime Contractor required to produce Coordination Drawings shall sign off on each of the other

Coordination Drawings to indicate agreement and recognition of the indicated routing and layouts and the correlation with adjoining or contiguous work of all contracts.

1. After sign-off, no unauthorized deviations will be permitted. If deviations are made without consent of the Construction Manager or other affected Prime Contractors, the responsible Prime Contractor shall remove and correct the affected work at no additional cost to the Owner.
2. Final Submission: Following agreement and sign-off by all Prime Contractors, the HVAC Contractor shall submit the files of all the systems to the Architect for review as follows; one (1) electronic copy (.pdf) of all 2D drawings, one (1) Navisworks NWC file, and one (1) Navisworks NWF file of completed Coordination Drawings. Furnish one additional electronic copy (.pdf) to all other Prime Contractors and applicable subcontractors. Furnish one (1) electronic copy (.pdf), one (1) Navisworks NWC file, and one (1) Navisworks NWF file of completed Coordination Drawings to the Construction Manager. The files submitted shall note any conflicts or changes required that require further input or direction of Architect.
    a. Architect will review for resolution of conflicts and will process Coordination Drawings for general conformance with design only.

I. Shop Drawing Coordination: Shop Drawings produced separately from Coordination Drawings shall be reviewed by the submitting Prime Contractor in detail to assure conformance with coordination process. Included a statement and signature on shop drawings indicating contractor's review and conformance with Coordination Drawings.

1. Architect's or Construction Manager's review of shop drawings submitted during the coordination process will be considered independent of Coordination Drawing review and need not take into consideration information included on Coordination Drawings.
2. If changes resulting from shop drawing review affect work included in Coordination Drawings, the Prime Contractor submitting the shop drawing shall correct the Coordination Drawing, coordinate with affected Prime contractors, and resubmit for approval. Perform correction and coordination without delay or additional cost to avoid impacting the construction schedule.

J. Record Coordination Drawings: Each Prime contractor shall retain record copies of final Coordination Drawings and Building Information Modeling files (BIM) as a working reference. Any revision which may become necessary during the course of the Work shall be neatly and accurately recorded on the record copies by each Prime Contractor. Each Prime Contractor is responsible for maintaining record Coordination Drawings up to date.

1. Each Prime Contractor shall maintain one copy of record Coordination Drawings available at the site.
2. All changes in the Work of any Contract, whether or not associated with a change in cost, shall be recorded on the Coordination Drawings.

3. Coordination Drawings and any subsequent changes shall be incorporated into As-Built Drawings.
    a. Subject to approval of the Owner, Construction Manager, and Architect, final updated Coordination Drawings may be used for As-Built Drawings.
    b. As-Built Drawings shall also incorporate details of structural elements cut during construction and supplemental bracing or reinforcement.

K. Resolution of Conflicts: Where conflicts occur either on Coordination Drawings or during actual installation in the field, and they can be resolved by rerouting conflicting elements or installing risers, offsets, falls, curves, pull boxes, transitions, or other solutions, the affected Prime Contractor shall bear the expense of adjustments required, including costs for labor and material, and shall modify the Coordination Drawings to reflect the changes at no additional cost.

L. Managing as built and recording BIM Model: The HVAC Contractor shall periodically coordinate with each of the prime contractors the updates to the BIM Model and all the systems and components. The prime contractors are responsible for updating their model to reflect as-built information and provide this to the HVAC contractor for final model update. Any prime contractor who does not provide the revisions when requested will be subject to the assessment of costs to perform this work. The HVAC Contractor shall deliver a final and complete BIM model showing all as-built conditions at the completion of the project to the Architect and Construction Manager.

1.06 COORDINATION DRAWING CONTENT

A. The Prime Contractor responsible for Work in each of the following categories shall prepare or arrange for preparation of Coordination Drawings and 3D model for the following systems:

1. Kitchen equipment
2. Overhead coiling doors
3. Operable Partitions
4. Gymnasium equipment supports
5. HVAC systems
6. Electrical systems
7. Plumbing systems
8. Fire protection systems including sprinklers
9. Opening and sleeves in structural slabs and structural framing
10. Ceiling systems
11. Wall systems
12. Stage equipment

B. Include on Coordination Drawings and in 3D model the information listed below for each of the following categories of Work:

1. Food Service Equipment
    a. Locations and dimensions of food service equipment.
    b. Access panels and hatchway.
    c. Rough-in locations for mechanical and electrical services.

2. Overhead Coiling Doors
3. Operable Partitions
4. Gymnasium equipment supports
5. HVAC Systems:

    a. Sizes and bottom elevations of rectangular ductwork.
    b. Sizes and centerline elevations of round ductwork, piping, and conduit.
    c. Acoustical lining in ductwork.
    d. Identification of low, medium, and high-pressure ductwork.
    e. Locations of major components, including dampers, valves, diffusers, cleanouts, and electrical distribution equipment.
    f. HVAC and ATC Panels.

6. Electrical Systems: Equipment Control Panels

    a. Horizontal and vertical runs of conduit 1-1/4-inch diameter and larger.
    b. Light fixture location.
    c. Smoke detector locations.
    d. Speaker locations.
    e. Panel boards, switch boards, switch gear, transformers, busways, generator, and motor control center.
    f. System racks.
    g. Exit signs, strobe/horn, and emergency battery pack locations.
    h. Pull boxes dimensional from column centerlines.
    i. Cable tray pathways.

7. Electrical Systems: Other

    a. Lighting systems and fixtures.
    b. Power systems, conduit, and cable tray.
    c. Sound and other systems.

8. Plumbing and Fire Protection System:

    a. Sizes and centerline elevations of sprinkler piping.
    b. Sprinkler head locations with elevations reverenced to ceiling heights.
    c. Locations of major valves. Test and drain ports.
    d. All rainwater piping.
    e. All plumbing piping including domestic water, sanitary, vent piping, and clean out locations.

9. Structural Work:

    a. Openings and sleeve locations required in slabs, walls, beams, and other structural elements, including required openings not indicated on Contract Documents.
    b. Slab edge locations.
    c. Columns, beams, joists, hangars, connections, braces, and other structural systems.

10. Ceiling Systems:
    a. Locations in ceiling of mechanical, fire protection and electrical items, including grilles, registers, diffusers, light fixtures, smoke detectors, sprinkler heads, exit signs, speakers, and other items.
    b. Conform to locations indicated on Contract Drawings to the maximum extent possible.
    c. Indicate positions relative to acoustical ceiling grid where applicable.
11. Wall Systems: All walls, chases, and other components.
12. Stage Equipment.

1.07 STRICT COMPLIANCE WITH COORDINATION REQUIREMENTS

A. Each Prime Contractor recognizes that they must cooperate and coordinate all of their work. Any Prime Contractor that does not comply with the established timelines and requirements for coordination will have their payment request withheld until the necessary work is completed. In addition, the Prime Contractor may be charged the costs for doing any coordination drawing or BIM Modeling that is part of their contract responsibility.

PART 2 – PRODUCTS (Not Used)

PART 3 – PRODUCTS (Not Used)

END OF SECTION 01 31 17

SECTION 01 31 26 – ELECTRONIC COMMUNICATION PROTOCOLS

PART 1 - GENERAL

1.01 SUMMARY

A. The Architect will provide the Contractor with one (1) electronic copy of the background drawing at their request. Requested files will be provided via email to the Contractor in AutoDesk AutoCAD format.

B. The terms and conditions on the attached form “Attachment A – Alloy5 Electronic File Agreement" apply to all Electronic Documents issued by ICS-CMTA or its consultants for the project. Files will be furnished in their original software format and are not available in any other format. The Architect does not guarantee software/hardware compatibility.

1. Exceptions:
    a. For access to electronic documents by Structural Engineer, Barry Isett & Associates, the Contractor will need to sign an additional Agreement for Electronic File Transfer that can be made available upon request.
    b. For access to electronic documents by Mechanical/ Electrical Engineer, CMTA, Contractor will need to sign an additional Agreement for Electronic File Transfer that can be made available upon request.
    c. For access to electronic documents by other consultants on the project, the Contractor may need to sign an additional Agreement for Electronic File Transfer that can be made available upon request.

C. The documents provided were prepared by Architect or their consultants as instruments of service to the Owner for this Project. The Owner and the Architect do not endorse or warrant the documents as suitable for any other purpose. These documents are furnished without warranties or guarantees (express, implied, or statutory), for the accuracy, reliability, and completeness. These files may vary from the documents used during bidding and do not include modifications issued by addenda or bulletins. If there are conflicts between the electronic drawings and the bid set, the bid set shall govern.

D. In making this request for documents in electronic format, the Contractor hereby agrees to the following conditions:

1. To remove any and all identification of the Architect and consultants from title block prior to the use of the documents.
2. To add Contractor’s title block or the title block of Contractor’s supplier prior to reproducing the documents either electronically or in printed form.
3. Prior to reproducing any drawing, Contractor will verify the information and dimensions contained in the documents and assume the liability for the accuracy as if the drawings had been totally prepared by our own company.
4. Contractors agree that the use of these electronic files is specifically for this Project, these files will not be reproduced for any other project, and the Architect

has not waived the Architect's copyright or other reserved rights.

5. Contractors agree to release and indemnify the Owner, Architect, and Construction Manager and their consultants against any losses or claims as a result of any errors or omissions in the electronic data.
6. Electronic files are not construction documents. Differences may exist between the electronic files and corresponding hard-copy construction documents. The Architect and Owner make no representation regarding the accuracy or completeness of the electronic files. In the event that a conflict is discovered between the hard copy construction documents and the electronic files, hard-copy construction documents shall govern. The Contractor is responsible for determining if any conflict exists.
7. The use of the electronic files does not relieve the Contractor of fully complying with the Contract Documents or the need to check, confirm, and coordinate all dimensions and details, take field measurements, verify field conditions, and coordinate your work with that of other contractors for the Project.

E. See attached form "Attachment A – Electronic Media and 3D Computer Model Release & Terms of Use Agreement".

ELECTRONIC FILE AGREEMENT

PROJECT NAME / NUMBER:

RECIPIENT REQUESTING DOCUMENTS:

DATA / DOCUMENT REQUESTED:

The following **Alloy5 Architecture** ("A5") agreement to release certain Electronic Files/Documents ("ELECTRONIC Files"), the RECIPIENT agrees as follows:

I. A5 will provide to the RECIPIENT certain drawings, specifications, or other documents prepared by A5 or its sub consultants in electronic format and/or on electronic media. These documents are hereinafter collectively referred to as "ELECTRONIC Files". The ELECTRONIC Files are instruments of A5's services performed solely for the owner/Client's benefit and to be used solely for this Project. A5 does not represent that the information contained in the ELECTRONIC Files are suitable for use on any other project or for any other purpose. If the ELECTRONIC Files are used for any other project or purpose without A5's specific written permission, the risk of such use shall be assumed solely by RECIPIENT or other user. Prior to any reuse of the ELECTRONIC files for another purpose, A5 and the RECIPIENT shall agree on the amount and method of payment of additional compensation to which A5 shall be entitled.

II. The ELECTRONIC Files are provided merely as a convenience to the RECIPIENT. The ELECTRONIC Files do not replace or supplement the paper copies of any drawings, specifications, or other documents included in the Contract Drawings for use on the project.

III. A5 makes no representation, warranty or guarantee that ELECTRONIC Files: (1) are suitable for any other usage or purpose, or (2) have any particular, durability, or (3) will not damage or impair the Recipient's computer or software, or (4) contain no errors or mechanical flaws or other discrepancies that may render them unsuitable for the purpose intended by the RECIPIENT.

IV. Due to the unsecured nature of the ELECTRONIC Files and the inability of A5 or the RECIPIENT to establish controls over their use, A5 assumes no responsibility for any consequences arising out of the use of the data. It is the sole responsibility of the RECIPIENT to check the validity of all information contained herein. The RECIPIENT shall at all times refer to the signed and sealed drawings of the project during all phases of the project. The RECIPIENT shall assume all risks and liabilities resulting from the use of this data, and the RECIPIENT agree(s) to waive any and all claims and liability against A5 and its sub consultants resulting in any way from the use of the ELECTRONIC Files.

V. RECIPIENT also agree(s) to defend, indemnify and save harmless A5, its sub consultants, officers, agents, employees, and shareholders from and against any and all claims, damage, liability, costs, judgment, suit, or expense (including reasonable defense and attorney fees) arising in any manner from the use, reuse, or modification of the ELECTRONIC Files.

Please execute this Agreement in the space provided below to indicate your acceptance of the terms and conditions of the release itemized in this Agreement. Upon receipt of the executed Agreement, we will transfer

the CADD Files to the address or email provided below.

SECTION 01 32 00 – CONSTRUCTION PROGRESS DOCUMENTATION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes administrative and procedural requirements for documenting the progress of construction, including:

1. Preliminary Construction Schedule.
2. Contractor's Construction Schedule.
3. Submittals Schedule.
4. Daily construction reports.
5. Material location reports.
6. Field condition reports.
7. Special reports.

B. All Work under the Contract Documents shall be planned, scheduled, executed, and reported using a cost- and resource-loaded Critical Path Method (CPM) schedule expressed in calendar days, excluding Saturdays, Sundays, and legal holidays.

C. General Scheduling Authority: The General Contractor is designated as the Project Coordinator unless noted otherwise. The provisions of the General Requirements, Division 01, and the directions of the Project Coordinator are to be followed by the Contractor in scheduling and coordinating construction activities. The scheduling Services of the Project Coordinator are part of its contract with the Owner, but nothing herein relieves the obligations of each Contractor to schedule their own construction activities, and nothing herein alters the obligation of each Contractor to resolve all supervision, coordination, and scheduling issues between and among the Sub-Contractors. In addition, the requirements for subordinate coordination responsibilities and scheduling per the Division 01 General Requirements must be followed by all contractors. The Construction Manager and Owner, at their sole discretion, may waive or modify any scheduling requirement including format, content, and complexity. Any such waiver shall not be grounds for a claim by the Contractor against the Owner, Construction Manager, or Architect.

D. Electronic Submission Standard: All schedules and updates shall be submitted in electronic format with no restrictions for viewing and analyzing, using the same software with which the schedule was created. Electronic files shall be submitted to the Construction Manager and to any Contractor the Construction Manager directs.

1.03 RELATED SECTIONS

A. Coordinate with the following Division 01 Sections:

1. Section 01 11 00 “Summary of the Project” for a summary of Owner-furnished products.
2. Section 01 12 00 “Multiple Work Scope Summary” for preparing a combined Contractor’s Construction Schedule.
3. Section 01 29 00 “Payment Procedures” for the Schedule of Values procedures and submission.
4. Section 01 31 00 “Project Management and Coordination” for meeting minutes; Prescheduling Conference.
5. Section 01 33 00 “Submittal Procedures” for schedule and report submissions; submittal review times.
6. Section 01 40 00 “Quality Requirements” for submission of a schedule of tests and inspections.
7. Section 01 77 00 “Closeout Procedures” for required Project Record Documents at closeout.

1.04 DEFINITIONS

A. Activity: A discrete, schedulable part of the Work that consumes time and resources. Activities include shop drawing preparation, construction operations, equipment testing, training, and any other action required for prosecution of the Work.

1. Critical Activity: An activity on the critical path that must start and finish on its planned early start and finish dates.
2. Predecessor Activity: An activity that must be completed before a given activity can begin.
3. Successor Activity: An activity that follows another activity in the network.

B. Cost Loading: Allocation of a dollar value to each schedule activity. The sum of all activity costs must equal the total Contract Sum unless otherwise approved by the Architect.
C. CPM (Critical Path Method): A scheduling method in which activities are arranged based on their logical relationships. Network calculations determine when activities can be performed and identify the critical path.
D. Critical Path: The longest continuous chain of activities through the network schedule that establishes the minimum overall Project duration. Activities on the critical path have the lowest total float value.
E. Event: The starting or ending point of an activity.
F. Float**:** The measure of leeway in starting and completing an activity.

1. Float belongs to the Owner and may be assigned only with the Owner’s representative’s approval.
2. Free Float: The amount of time an activity can be delayed without adversely affecting the early start of the immediately following activity.
3. Total Float: The amount of time an activity can be delayed without adversely affecting the planned Project completion date.

G. Fragnet: A partial or fragmentary network used to break down activities into smaller activities for greater detail, or to analyze the impact of a change.
H. Major Area: A story of construction, a separate building, or a similar significant construction element.
I. Milestone: A key or critical point in time used for reference or measurement.
J. Network Diagram: A graphic diagram of a network schedule showing activities and their relationships.
K. Notice to Proceed (NTP): The written notice from the Owner or Construction Manager authorizing the Contractor to begin the Work and establishing the date from which Contract Time is measured.
L. Resource Loading: The allocation of manpower and equipment to each activity as required to complete it within its scheduled duration.
M. Schedule of Values: A statement furnished by the Contractor allocating the entire Contract Sum among the various portions of the Work, used as the basis for reviewing Applications for Payment.

1.05 SUBMITTALS

A. Qualification Data: Submit credentials for the scheduling firm or in-house scheduling personnel, demonstrating CPM experience. Reference Article 1.6 of this Section for complete qualification requirements. Include a list of completed projects with project names, addresses, Architect and Owner contacts, and other relevant information.
B. Submittals Schedule: Submit within twenty business (20) days in tabular format including the following for each submittal:

1. Scheduled date for first submittal.
2. Specification Section number and title.
3. Submittal category (action or informational).
4. Name of subcontractor.
5. Description of the Work covered.
6. Scheduled date for Architect's and all consultants' and agencies' final release or approval.

C. Preliminary Construction Schedule: Submit one (1) electronic copy within ten (10) business days of the Notice to Proceed. Approval of the cost-loaded preliminary schedule does not constitute approval of the Schedule of Values for cost-loaded activities.
D. Preliminary Construction Schedule Network Diagram: Submit one (1) electronic copy, at a scale large enough to show the entire network for the entire construction period. Show logic ties for all activities.
E. Final Construction Schedule: Submit one (1) electronic copy no later than twenty (20) business days of approval of the Preliminary Project Schedule. Label each submittal to identify the schedule type (initial or updated) and date.
F. Final Construction Schedule Reports: Submit one (1) copy of each of the following computer-generated reports with the Final Construction Schedule. Each activity entry shall include: activity number, description, cost and resource loading, original duration, remaining duration, early start, early finish, late start, late finish, and total float in calendar days.

1. Activity Report: All activities sorted by Project Phase, Project Area, Prime Contractor, then early start date. Include duration, cost, and total float for each activity.
2. Logic Report: Preceding and succeeding activities for all activities, sorted in ascending order by activity number, then early start or actual start date if known.

G. Field Reports — Submission Frequency:

1. Daily Construction Reports: Submit electronically via the Procore Daily Log tool on a daily basis. Incomplete or late reports may result in partial withholding of monthly payment applications.
2. Material Location Reports: Submit one (1) electronic copy at monthly intervals.
3. Field Condition Reports: Submit one (1) electronic copy immediately upon discovery of differing conditions.
4. Special Reports: Submit one (1) electronic copy within one (1) day of an unusual event.

1.06 QUALITY ASSURANCE

A. Scheduler's Qualifications: The Contractor shall engage a scheduling specialist with a minimum of five (5) years of experience in the design, preparation, publication, and revision of CPM network schedules, including experience on at least three (3) multi-prime and multi-phase construction projects. The specialist shall be capable of producing CPM reports and diagrams within 24 hours of the Construction Manager's request.

B. The Contractor shall submit the name, credentials, and experience of the proposed scheduling consultant to the Owner, Architect, and Construction Manager for approval within five (5) business days of Notice to Proceed. The Contractor may not terminate an approved scheduling consultant without at least thirty (30) days' prior written notice and concurrent approval of a replacement. If the Construction Manager makes reasonable objection to any scheduling consultant, the Contractor shall promptly replace that consultant.

C. Alternative Qualification: If the Contractor demonstrates to the Construction Manager's satisfaction that it employs in-house personnel with equivalent CPM qualifications, the Owner may grant written approval to use that employee as the scheduling consultant.

D. Prescheduling Conference: Before schedule preparation begins, conduct a conference at the Project site per Division 01 Section 01 31 00. Review methods and procedures related to the Preliminary Construction Schedule and Contractor's Construction Schedule. Agenda shall include, at minimum:

1. Software limitations; report content and format.
2. Availability of qualified scheduling personnel.
3. Project constraints: phasing, work stages, area separations, interim milestones, and partial Owner occupancy.
4. Owner-furnished product delivery dates.
5. Work of Owner's separate contracts.
6. Submittal and resubmittal review times per Section 01 33 00.
7. Test and inspection requirements.
8. Time required for completion and startup procedures.
9. Final list of construction activities to be included in the schedule.

10. BIM and 3D/4D schedule coordination requirements, if applicable per Article 2.5.
11. Schedule update procedures.

1.07 COORDINATION

A. Coordinate the preparation and processing of all schedules and reports with the performance of construction activities and with the scheduling and reporting obligations of separate contractors.
B. Coordinate the Contractor's Construction Schedule with the Schedule of Values, list of subcontracts, Submittals Schedule, progress reports, payment requests, and other required schedules and reports.
C. Secure time commitments for performing critical elements of the Work from all parties involved.
D. Coordinate each construction activity in the network with all other activities and schedule them in proper sequence.

PART 2 - PRODUCTS

2.01 SUBMITTALS SCHEDULE

A. Preparation: Submit a Submittals Schedule arranged in chronological order by dates required by the construction schedule. When establishing dates, include time required for review, resubmittal, ordering, manufacturing, fabrication, and delivery.
B. Coordinate the Submittals Schedule with the list of subcontracts, Schedule of Values, and Contractor's Construction Schedule.
C. Initial Submittal: Submit concurrently with the Preliminary Construction Schedule. Include all submittals required during the first ninety calendar (90) days of construction and those required early due to long lead times for manufacture or fabrication.
D. Final Submittal: Submit concurrently with the first complete submittal of the Contractor's Construction Schedule.

2.02 CONTRACTOR'S CONSTRUCTION SCHEDULE — GENERAL REQUIREMENTS

A. Procedures: Comply with the Associated General Contractors' publication "Construction Planning and Scheduling."
B. Time Frame: Extend the schedule from the date established for the Notice to Proceed to the date of Final Completion. Contract completion dates shall not be changed by submission of a schedule showing an early or late completion date unless specifically authorized by Change Order.
C. Computer Software: Prepare all schedules using Owner-approved CPM scheduling software. Submit the proposed software for approval at the Prescheduling Conference. The following Oracle Primavera products are pre-approved; other platforms require written Owner approval before use.

1. Oracle Primavera P6 Professional Project Management (P6 PPM).
2. Oracle Primavera P6 Enterprise Project Portfolio Management (P6 EPPM).

3. Oracle Primavera Cloud.

D. Activity Requirements: Each activity on the network shall include:

1. Duration: A single duration of no more than twenty (20) working days, representing the best estimate of elapsed time for the scope of work involved. Normal holidays and anticipated weather delays shall be incorporated. One critical path shall be shown for the schedule.
2. Identification Number: Assigned to each activity in a format acceptable to the Project Coordinator.
3. Description: A brief, definitive description of the activity. If not sufficiently definitive, a separate listing with a descriptive narrative shall be provided.
4. Cost Loading: Each activity shall be cost-loaded to show its total estimated budget. No single activity budget shall exceed the lesser of $50,000 or one-half of one percent (0.5%) of the total Contract Price, except for procurement and mobilization activities which may exceed this threshold with the Construction Manager's written approval. Material and equipment costs to be paid as stored materials shall be listed separately. Activities shall also be cost-loaded as directed by the Owner's representative for payment purposes.
5. Man-Hour Loading: Each activity (except procurement activities) shall be loaded with the estimated man-hours to be expended.
6. Procurement Activities: Long-lead and major procurement items requiring more than forty (40) calendar days shall be included as separate activities covering submittals, approvals, purchasing, fabrication, and delivery.
7. Submittal Review Time: Include review and resubmittal times per Division 01 Section 01 33 00. Coordinate with the Submittals Schedule.
8. Substantial Completion: Show completion in advance of the Substantial Completion date and include time for Architect's and Owner's administrative procedures required for certification.

E. Constraints: Include all constraints and work restrictions in the schedule and show how each affects the sequence of Work, including:

1. Phasing: Arrange activities by phase.
2. Multiple Contracts: Include separate activities for each prime contract and for each portion of Work performed by the Owner.
3. Products Ordered in Advance and Owner-Furnished Products: Include a separate activity for each product. Reference included Project Phasing Schedule Dates stipulate the earliest possible delivery.
4. Work Restrictions: Show the scheduling effect of coordination with existing construction, occupancy limitations, uninterruptible services, partial occupancy before Substantial Completion, use-of-premises restrictions, provisions for future construction, seasonal variations, and environmental controls.
5. Work Stages: For each Phase, indicate stages of construction including subcontract awards, submittals, purchases, mockups, fabrication, sample testing, deliveries, installation, shop and field tests and inspections, traffic pattern changes, moving and occupancy timeframes, adjusting, curing, startup and placement into final use and operation, and punchlist.
6. Area Separations: Identify each major area of construction per Phase and show where activities must be sequenced to meet the following milestone dates:

Foundation Completion, Structural Completion, Permanent Space Enclosure, Completion of Mechanical Installation, Completion of Electrical Installation, and Substantial Completion.

F. Milestones and Phases: Include all milestones and phases identified in the Contract Documents, including Notice to Proceed, Individual Phase Completions, Substantial Completion, Final Completion, and all interim milestones listed in the Contract Documents.

G. Cost Correlations for Progress Payments: Provide cost loading of both the Preliminary and Final schedule as follows:

1. Each activity shall be allocated a dollar value consistent with Article 2.2.D above. Each activity's cost shall consist of labor, equipment, and materials costs plus a pro-rata contribution of overhead and profit. The sum of all activity costs shall equal the total Contract Price. By submitting cost data, the Contractor certifies the costs are not unbalanced and that the value assigned to each activity represents Contractor's estimate of the actual costs of performing that activity.
2. The accepted schedule of values shall represent a fair, reasonable, and equitable cost allocation for each activity.
3. If the Owner's representative determines that cost data does not meet the requirements for a balanced-bid breakdown, the Contractor shall provide documentation substantiating the allocation. Cost allocations shall be considered unbalanced if any activity has been assigned a disproportionate share of direct costs, overhead, or profit.

H. Contract Modifications: For each proposed contract modification, prepare a time-impact analysis using fragnets concurrently with the modification submission to demonstrate the effect of the proposed change on the overall Project schedule.

2.03 PRELIMINARY CPM CONSTRUCTION SCHEDULE

A. Format: Submit a preliminary horizontal bar-chart schedule within ten (10) business days of the Notice to Proceed.

B. Content: Show each significant construction activity separately. Identify the first workday of each week with a continuous vertical line. Include construction activities for the first ninety (90) days and costs for each activity.

2.04 FINAL CPM CONSTRUCTION SCHEDULE

A. Format: Prepare the Contractor's Construction Schedule as a computerized, cost- and resource-loaded, time-scaled CPM network analysis diagram. Use "one workday" as the unit of time. Include a list of all non-working days and holidays.

1. The final Project schedule must be completed within 20 business days of approval of Preliminary Project schedule.
2. Train and inform key Project personnel, including each contractor's personnel, in proper methods of providing data and using CPM schedule information.

3. Establish procedures for monitoring and updating CPM schedule and for reporting progress. Coordinate procedures with progress meeting and payment request dates.

B. Preparation:

1. Prepare a complete list of activities required to complete the Work and develop a network diagram from the preliminary schedule to identify all critical paths.
2. For each activity, indicate estimated time duration, sequence requirements, and relationships to other activities. Include within each Phase: preparation and processing of submittals, mobilization and demobilization, purchase of materials, delivery, fabrication, utility interruptions, installation, Owner's Work, and testing and commissioning.
3. Identify critical path activities, including those for interim Phase completion dates. Scheduled start and completion dates shall be consistent with Contract milestone dates.
4. Process data to produce output on a computer-drawn, time-scaled network. Revise and reproduce as necessary to produce an acceptable schedule within Contract Time.
5. Format: Mark the critical path and locate it near the center of the network. Locate paths with the most float near the edges.

C. Network Diagram Requirements: The CPM schedule shall be in the form of a time-scaled precedence diagram, flowing continuously from left to right, and shall include:

1. A shop drawing and submittal schedule noting submittal, approval, order, fabrication, and delivery durations.
2. Integration of the submittal schedule with installation activity logic to show the effect of delivery on installation.
3. Planned progression of construction showing activities, durations, and interim milestone dates for each contract phase.
4. Logic restraints that clearly identify interrelationships of work, crew, and trade flow.
5. CPM logic diagrams summarized in a bar chart format capable of displaying current progress for all Work.
6. A computerized mathematical analysis of CPM logic showing activity duration, early and late start and finish dates, tasks critical to completion, and interim milestone dates on a monthly basis.
7. Crew sizes and planned labor hours for each activity.

D. Weather Calendar: The CPM schedule shall include a weather calendar showing non-working days beyond standard weekends and holidays to account for anticipated inclement weather for the project area.

E. Initial Schedule Issue: Prepare the initial network diagram from an early-start/total-float sort. Identify critical activities and prepare tabulated reports showing:

1. Contractor or subcontractor and the Work or activity.
2. Description of activity.
3. Principal events of activity.
4. Immediately preceding and succeeding activities.

5. Early and late start dates.
6. Early and late finish dates.
7. Activity duration in workdays.
8. Total float or slack time.
9. Dollar value of activity (coordinated with the Schedule of Values).

F. Schedule Updating — Monthly Tabulated Reports: Concurrently with each schedule revision, prepare tabulated reports and updated electronic files on a monthly basis showing:

1. Activities that have changed.
2. Original Duration
3. Predecessors/Predecessor Lag.
4. Successors/Successor Lag..
5. Calendars

2.05 FIELD REPORTS

A. Contractor is to submit Daily Construction Reports on a daily basis to the Owner's Representative using the Daily log tool in Procore. Failures to maintain timely or complete reports may result in partial withholding of monthly payment applications.

2.06 SPECIAL REPORTS

A. Submit special reports directly to the Owner within one (1) day of an occurrence. Distribute copies to all affected parties.

B. When an unusual or significant event occurs at the Project site, whether or not directly related to the Work, prepare and submit a special report documenting: the chain of events, persons involved, Contractor's response and personnel actions, evaluation of results or effects, and similar pertinent information. Advise the Owner in advance when such events are known or predictable.

PART 3 - EXECUTION

3.01 PROJECT COORDINATOR RESPONSIBILITIES

A. The General Contractor is designated as the Project Coordinator unless the Contract Documents state otherwise. The Project Coordinator is responsible for making all coordination decisions not mutually agreed to by all affected Prime Contractors.

B. Disputes between or among the Project Coordinator and one or more other Prime Contractors and disputes in connection with the construction schedule, the furnishing of additional resources to meet the Project schedule, job coordination, and all aspects of the means and methods shall be submitted promptly to the Project Coordinator for a final construction decision. The Project Coordinator and all affected Prime Contractor(s) shall, in connection with all submissions for a final construction decision, simultaneously

provide written notice to the Construction Manager of any such submissions. The final construction decision of the Project Coordinator must, at all times, be consistent with the content and intent of the Contract Documents and the latest accepted schedule.

C. If the Owner or Construction Manager determines that substantial interests are at risk due to the Project Coordinator's final construction decision, the Owner or Construction Manager reserves the right to overrule it. The exercise of discretion by the Owner or Construction Manager in this regard shall be unchallengeable except upon a finding of abuse of discretion. In all other instances, the Project Coordinator's final construction decision shall be observed and followed by all Prime Contractors and their Subcontractors, even pending any litigation between Prime Contractors.

D. The damage remedy available to the Project Coordinator or any other Prime Contractor shall be the exclusive remedy for disputes between contractors. No Contractor, including the Project Coordinator, shall have any right of action against the Owner, Architect, or Construction Manager in connection with such disputes.

E. As Project Coordinator, the General Construction Contractor shall:

1. Engage the approved scheduling consultant to carry out the Contractor's CPM scheduling duties. The consultant shall not be terminated without thirty (30) days' prior written notice.
2. Attend and chair meetings at least every two weeks during construction with all separate contractors, the Owner, the Architect, and Construction Manager to review progress and to plan and coordinate the activities of each separate contractor with the Work of the Contractor and of the Owner.
3. Ensure that reporting related to the Owner, Architect, and Construction Manager delays, or potential delays.
4. Formulate and recommend plans, including a revised Project schedule, to prevent, minimize, or recover from delays.
5. Make recommendations regarding requests for extensions of time and their effect on the Project schedule.
6. Revise the Project schedule to reflect Owner-granted time extensions.
7. Resolve objections from other contractors and make schedule adjustments mutually agreeable to all Prime Contractors and the Owner.
8. Prepare monthly schedule updates comparing actual progress to scheduled progress.

3.02 CONTRACTOR SCHEDULING OBLIGATIONS (ALL CONTRACTORS)

A. All Contractors other than the Project Coordinator shall:

1. Within ten (10) business days after the Notice to Proceed, submit a preliminary construction schedule to the Project Coordinator and Construction Manager in a form compatible with the requirements herein, showing the Contractor's Work and all activity interdependencies with other contractors. If not accepted, revise and resubmit promptly per the recommendations of the Owner, Architect, Construction Manager, and Project Coordinator.
2. Within twenty (20) business days of approval of Preliminary Project schedule, submit a final construction schedule to the Project Coordinator and Construction Manager for incorporation into the overall Project schedule.

3. Cooperate and participate with the Project Coordinator and other contractors in all activities described in this Section.
4. Notify the Project Coordinator, Owner, and Construction Manager in writing of any objection to the Project construction schedule or any revision within two (2) business days of receipt. Failure to provide timely written notice constitutes waiver of any objection, and the Contractor shall comply with the schedule. If a timely objection is made, the Contractor and Project Coordinator shall resolve it within ten (10) days. If unresolved, the Owner may appoint the Construction Manager or an independent scheduling consultant whose decision shall be final and binding. All costs of resolving the objection shall be borne equally by the Contractor, the Project Coordinator, and their respective Sureties.
5. Not claim damages against the Owner or any adjustment in Contract Time or Contract Sum arising from the Project construction schedule, any revision, or any resolution of a schedule objection.
6. Acknowledge that the Owner has no duty to cause the Project Coordinator to perform competently, and that any claim arising from the Project Coordinator's failure to perform shall be solely against the Project Coordinator.

B. Early Completion: If any Contractor intends to complete the Work, or any portion thereof, earlier than any applicable Completion Date, it shall provide timely written notice to all other Contractors, the Project Coordinator, and the Construction Manager. The Project Coordinator has discretion to accept or reject such a plan. Earlier completion shall be promoted wherever feasible without affecting Work quality as determined by the Construction Manager. All Contractors shall cooperate and accelerate work as determined by Project Coordinator unless quality of work is affected as determined by the Construction Manager. No claims for acceleration to complete early or to meet project schedule will be considered.

C. Schedule Compliance and Costs: All costs associated with completing the Work within the Contract Time — including shift work, overtime, and premium time — shall be included in each Contractor's bid. Failure to include such costs in the bid does not relieve the Contractor of the obligation to use whatever means are necessary to meet Contract schedules. The Construction Manager, Architect, and Owner reserve the right to withhold monthly payment applications until the Contractor achieves schedule compliance. No claims for additional costs associated with completing the Work within Contract time frames will be considered.

D. Contractor Approval and Certification: Approval by the Contractor of any schedule or schedule revision constitutes the Contractor's representation that the schedule is a true and accurate plan to complete the Work, that it includes all Change Orders in the Contractor's possession, that it fully complies with the Contract Documents, and that the Contractor has coordinated and obtained concurrence from all affected parties.

E. Failure to Cooperate: The Contractor's failure to cooperate and participate in the development and review of construction schedules and updates as required by this Section shall be a material breach of the Contract, entitling the Owner to exercise all rights and remedies under the Contract Documents and applicable law.

3.03 NETWORK REQUIREMENTS

A. The CPM Schedule shall show the order and interdependence of all activities and the sequence in which the Work is to be accomplished. The schedule shall follow a time-

scaled precedence format, with the network diagram flowing continuously from left to right.

B. Contractor's Responsibility: Failure to include in the CPM schedule any element of Work required under this Contract shall not excuse the Contractor from completing all Work within the applicable completion time, notwithstanding the Owner's network review.

C. Early Completion Float: A CPM schedule showing completion prior to the contractual completion date may be accepted, but shall not serve as a basis for any delay claim or cost reimbursement against the Owner. The period between the Contractor's baseline accepted CPM schedules projected completion date and the contractual completion date, if any, shall be treated as Project Float, available to the Owner to utilize as per Article 3.8.

D. Unacceptable Schedule: If a submitted CPM Schedule shows a work plan that will not complete the Work within the Contract Time, the Contractor shall revise and resubmit until an acceptable schedule is produced. Failure to submit an acceptable schedule may, at the Owner's sole discretion, justify withholding of partial payments.

E. Owner's Non-Representation: Acceptance of the schedule does not constitute the Owner's representation that the Work can be completed as shown on the schedule.

F. Project Schedule Submittal and Approval: The Contractor shall submit the Project Schedule for all Work in conformance with the project schedule requirements listed in the project manual, including all phasing and milestones provided. The Project Coordinator shall incorporate all contractors' Work items and issue the consolidated Project schedule. Upon written approval of the schedule by the Contractor and Construction Manager, and review by the Architect, the schedule shall become the essence of the Contract with respect to time. Non-compliance may constitute a violation of the General Conditions article governing Delays and Extension of Time. The Project schedule may be revised only with written consent of the Construction Manager, Owner, and Architect. Non-compliance with scheduling requirements may result in a deduction of $800.00 per day from the Contract amount as a schedule administration charge; this deduction is in addition to, and does not limit, any other rights or remedies of the Owner under the Contract Documents, including enforcement of the General Conditions article governing Termination or Suspension by the Owner. No payment applications will be processed without an approved Project schedule accepted by all contractors.

G. Owner's Liability: Preparation, review, enforcement, and updating of the Project schedule do not make the Owner, Construction Manager, or Architect liable to the Contractor for time overruns, cost overruns, or schedule changes required to maintain Contract completion and milestone dates.

H. Contractor's Responsibility for Schedule Logic: The Contractor is solely responsible for determining the sequence and logic of activities, time estimates, and means and methods for its portion of the Work. The Construction Schedule shall represent the Contractor's best judgment of how it will prosecute the Work in compliance with the Contract Documents. Contractor shall ensure that the Construction Schedule is current and accurate and is properly and timely monitored, updated, and revised as Project conditions and the Con-tract Documents may require, and as may be directed by Project Coordinator

I. Subcontractor Coordination: The Contractor shall consult with its major Subcontractors when preparing the Construction Schedule. Major Subcontractors shall receive copies of relevant schedule portions and shall be continuously advised of updates. Submission of the schedule by the Contractor to the Project Coordinator constitutes confirmation that the Contractor has coordinated with and received concurrence from its major Subcontractors.

J. Milestone Dates: Completion and Milestone Dates in the Contract Documents are Contract requirements and are of the essence to the Contract. They represent the latest allowable completion times for the respective portions of the Work, not a complete listing of all interfaces. The Contractor shall determine all interface time requirements and shall plan, schedule, and coordinate accordingly.

3.04 SCHEDULE UPDATES

A. Monthly Schedule Update Meeting: A Schedule Update Meeting shall be held one (1) week prior to each monthly progress meeting at the Project site. The Project Coordinator and all Contractors shall attend. Actual progress for the previous month shall be recorded, future activities reviewed, and activity durations and logic connections revised as needed. Decisions agreed to by all parties are binding; contractual completion dates may be modified only through formal written requests accepted per the Contract Documents. Each Contractor shall provide, at a minimum:

1. Actual start and finish dates for all completed activities.
2. Actual start dates and estimated remaining durations for all activities in progress.

B. Monthly Progress Status Report: Submit an electronic copy of each monthly schedule update to the Construction Manager at the end of each month. The report shall include:

1. Revisions to the Construction Schedule since the previous submittal.
2. Work completed during the reporting period.
3. A printed copy of the entire updated schedule showing early and late dates, activity durations, predecessors, successors, and a list of logic and duration changes.
4. Work anticipated to start in the next period, including activities already in progress.
5. Problem areas, anticipated delays, and their impact on the schedule.
6. Recommended corrective action and its effect.
7. Effect of changes on schedules of other Prime Contractors.
8. Updated tabulation of Contract Time and a printed copy of the project critical path.
9. Overall evaluation of Project schedule status.

C. Application for Payment: Submission and acceptance of progress updates and progress reports are a prerequisite to Applications for Payment. The Contractor shall not be entitled to any progress payment until it has fully complied with the requirements of this Section.

D. Schedule Distribution: Distribute approved copies of the schedule to the Architect, Construction Manager, Owner, separate contractors, testing and inspecting agencies, and all parties with schedule responsibility. Post copies in Project meeting rooms and field offices. Update distribution whenever the schedule is revised; remove parties once their Work is complete.

E. CPM Schedule as Payment Basis: The CPM schedule shall be used to monitor progress and as the basis for monthly payments. Each Contractor shall provide all sequencing, logic, and duration information and the initial logic network diagram. Once accepted, the Contractor shall provide monthly update information including logic, percent complete, actual start and finish dates, and duration changes. The Project Coordinator shall produce computerized schedule printouts using information provided by all Contractors, and distribute updated schedules at progress meetings.

F. Schedule Integrity: Each Contractor's initial schedule and all updates shall represent that Contractor's and its Subcontractors' best efforts as to how the Work will be accomplished. All progress information shall accurately reflect actual performance. Once accepted, adherence to the CPM schedule is obligatory.

G. Work Commencement and Execution: Work shall begin on the date in the Notice to Proceed and shall be executed with sufficient progress to prevent delay to other Contractors or to the Project's overall completion. Each Contractor shall at all times schedule and direct its Work to provide an orderly progression to completion within the Contract Time.

H. Items not ordered by the Contractor in a timely manner for incorporation into the Work will not be considered as grounds for claims for additional time or costs.

3.05 SCHEDULE REVISION PROCEDURE

A. When a formal schedule revision is required — whether directed by the Owner, Construction Manager, or Project Coordinator, or triggered by the recovery schedule process under Article 3.6 — the Contractor shall prepare and submit a revised schedule meeting all of the following requirements:

1. The revised schedule shall be prepared to the same level of detail, format, and software requirements as the accepted baseline CPM schedule per Article 2.4.
2. The Contractor shall submit a written narrative explaining the basis for each change in activity logic, duration, sequence, or resource allocation.
3. The revised schedule shall be submitted to the Project Coordinator by the Prime Contractor initialing the change within five (5) business days of the directive or triggering event for incorporation by the Project Coordinator into the overall Project Schedule. This shall be for all cases unless a different time is specified in writing by the Construction Manager.
4. The Project Coordinator shall review and incorporate all Prime Contractors' revised work items and issue a consolidated revised Project schedule within five (5) business days of receipt of all Contractor submissions.
5. The revised schedule shall be reviewed and accepted by the Construction Manager and Owner prior to use. Acceptance does not modify Contract Time or Contract Sum unless effected by Change Order.

B. No revision to the Project schedule shall constitute grounds for an adjustment in Contract Time or Contract Sum unless such adjustment is agreed to by the Owner and authorized by Change Order.

3.06 RECOVERY SCHEDULES

A. Trigger: If the updated Construction Schedule shows, in the Construction Manager's sole opinion, that any Contractor is ten (10) or more calendar days behind schedule for any Completion Date, that Contractor shall, within five business (5) days of written notice from the Construction Manager, prepare and submit a recovery schedule at no cost to the Owner explaining and displaying how Contractor intends to reschedule his Work in order to regain compliance with the Construction Schedule during the immediate

subsequent pay period. The Contractor shall also coordinate required schedule changes with the Project Coordinator for incorporation into the overall schedule.

B. Recovery Period: If the Contractor believes all lost time can be recovered within one pay period, it shall prepare a limited-duration recovery schedule as set forth herein. If recovery will require more than thirty (30) days, the Contractor shall instead prepare and submit a formal schedule revision per Article 3.5.

C. Recovery Schedule Content: The recovery schedule shall be prepared to the same level of detail as the Construction Schedule, for a maximum duration of one month, incorporating the best available information from Subcontractors and others. It shall be prepared in coordination with all other Prime Contractors.

D. Review Conference: Within two business (2) days after submission of a recovery schedule, the Contractor shall participate in a conference with the Project Coordinator and Construction Manager to review and evaluate it. Within two business (2) days of that conference, the Contractor shall submit any required revisions for acceptance. The Contractor shall then execute the Work per the accepted recovery schedule.

E. Ongoing Assessment: Each Contractor shall confer continuously with the Project Coordinator to assess recovery effectiveness. If the Construction Manager determines the Contractor remains behind schedule, the Project Coordinator shall direct preparation of a formal schedule revision per Article 3.5. If the Project Coordinator determines the Contractor has successfully complied with the recovery schedule, it shall direct the Contractor to return to the accepted Construction Schedule.

F. Nothing in this Article alters the Project Coordinator’s obligation to resolve coordination and scheduling disputes among Prime Contractors.

3.07 CAUSES FOR EXTENSIONS OF TIME

A. General: Contract Times will be adjusted only for causes specified in this Contract. Any Contractor requesting an extension of Contract Time shall provide justification and supporting evidence as required elsewhere in the Contract Documents. Delays to activities that do not affect any Contract completion date shown on the critical path shall not be the basis for a change in Contract Time.

B. Weather Delay Extensions: Extensions for weather delays shall be granted only upon satisfaction of all of the conditions listed in Section 15.1.6.2 of the General Conditions.

3.08 OWNER-INITIATED SCHEDULE ADJUSTMENTS

A. The Owner may direct schedule adjustments due to job conditions, acts or omissions of other contractors, acts of God, technical difficulties, unavoidable Owner delays, or other unforeseeable conditions. Under such conditions, Owner shall direct Contractor to reschedule the Work to reflect the changed conditions, and the Contractor shall revise its schedule accordingly per Article 3.5. Only the Owner, in writing, may grant schedule extensions that affect Contract Time. No additional compensation shall be paid for such adjustments except for unavoidable overall Contract delays, in which case the Contractor shall take all possible action to minimize the time extension. Available Project Total or Free Float may be applied by the Owner to accommodate adjustments without requiring a formal time extension.

B. Owner’s Corrective Measures: If the Owner determines that the Work has not progressed to the required level of completion, the Owner may order the Contractor to

take corrective measures including: working additional shifts or overtime; supplying additional manpower, equipment, and facilities; engagement of a scheduling consultant (cost to be allocated among responsible parties by the Architect and Construction Manager in their sole discretion); and other similar measures. Such measures shall continue until progress complies with the required level of completion. The Owner's right to require these measures shall not impose any duty or obligation to the Contractor or its Surety.

1. If the Contractor has not caused or contributed to the failure to progress, it shall be entitled to a Change Order for the reasonable additional labor cost of Owner-directed overtime or shift work.
2. If the Contractor has caused or contributed to the failure to progress, the Contractor and its Surety shall be liable for all costs incurred by the Owner, including the cost of any overtime or shift work by the Owner or separate contractors.
3. If the Contractor fails to perform as Project Coordinator adequately or to the Owner's satisfaction, the Owner may appoint a substitute Project Coordinator chosen from the separate contractors or an independent consultant. The cost of the substitute Project Coordinator shall be charged to and borne by the Contractor and its Surety.

3.09 FLOAT TIME

A. Float belongs to the Owner. The Owner may initiate changes that absorb available float without any obligation to extend overall or intermediate completion dates. Owner-initiated changes that affect the critical path on the CPM network shall be the sole grounds for extending or shortening those dates.
B. Contractor-initiated changes that encroach on total float may be accomplished with the Owner's concurrence but shall give way to any competing Owner-initiated change requiring the same float.

END OF SECTION 01 32 00

SECTION 01 33 00 – SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Related Sections include the following:

1. Division 01 Section "Payment Procedures" for submitting Applications for Payment.
2. Division 01 Section "Closeout Procedures" for submitting warranties and Project Record Documents.

1.03 DEFINITIONS

A. Action Submittals: Written and graphic information that requires Engineer's responsive action.
B. Informational Submittals: Written information that does not require Architect's approval. Submittals may be rejected for not complying with requirements.

1.04 SUBMITTAL PROCEDURES

A. General: Prepare and submit Action Submittals required by individual Specification Sections.
B. Submit each submittal online, via Procore, where the Construction Manager, and/or Engineer will review and return electronically to the contractor. Mark up and retain one (1) returned copy as a Project Record Document.
C. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.

1. Coordinate each submittal via Procore with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
2. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of a need to review submittals concurrently for coordination.

a. Construction Manager/Engineer or Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

D. Submittals Schedule: Comply with requirements in Division 01 for list of submittals and time requirements for scheduled performance of related construction activities. The Construction Manager will coordinate the initial submittal schedule between the Primes and the Architect/Engineer. The Construction Manager will then post all submittals from the final submittal schedule and set up the workflow in Procore.

E. Processing Time: Allow enough time for submittal review, including time for resubmittals. Construction Manager / Engineer shall have 3 weeks collectively to return submittal reviews.

F. Identification: Place a permanent label or title block on each submittal for identification.

1. Indicate name of firm or entity that prepared each submittal on label or title block.
2. Provide a space approximately 4 by 5 inches (100 by 125 mm) on label or beside title block to record Contractor's review and approval markings and action taken by Engineer.
3. Include the following information on label for processing and recording action taken:

    a. Project name.
    b. Date.
    c. Name and address of Engineer.
    d. Name and address of Contractor.
    e. Name and address of subcontractor.
    f. Name and address of supplier.
    g. Name of manufacturer.
    h. Unique identifier, including revision number.
    i. Number and title of appropriate Specification Section and paragraphs.
    j. Drawing number and detail references, as appropriate.
    k. Other necessary identification.

G. Deviations: Highlight, encircle, or otherwise identify deviations from the Contract Documents on submittals. No substitutions will be accepted without approval by addendum prior to bid.

H. Additional Copies: Unless additional copies are required for final submittal, and unless Engineer observes noncompliance with provisions of the Contract Documents, initial submittal may serve as final submittal.

1. Submit one copy of submittal to concurrent reviewer in addition to specified number of copies (if applicable) via Procore.
2. Additional copies submitted for maintenance manuals will not be marked with action taken and will be returned.

I. Transmittal: Package each submittal individually and appropriately for transmittal and handling via the required submittal log within Procore. Construction Manager/Engineer will return submittals, without review, that are received from sources other than assigned Contractor.

1. On an attached separate sheet, prepared on Contractor's letterhead, record relevant information, requests for data, revisions other than those requested by Construction Manager/Engineer on previous submittals, and deviations from

requirements of the Contract Documents, including minor variations and limitations. Include the same label information as the related submittal.

2. Include Contractor's certification stating that information submitted complies with requirements of the Contract Documents.

J. Distribution: Furnish copies (if required) of final submittals to manufacturers, subcontractors, suppliers, fabricators, and installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.

K. Use for Construction: Use only final submittals with mark indicating action taken by Construction Manager/Engineer in connection with construction.

PART 2 - PRODUCTS

2.01 ACTION SUBMITTALS

A. General: Prepare and submit Action Submittals required by individual Specification Sections.

1. Submit each submittal online with cover sheet as indicated above, via Procore, where the Construction Manager and/or Engineer will review and return electronically to the contractor. Mark up and retain one (1) returned copy as a Project Record Document.

B. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment. Submit individually as identified with Procore.

1. If information must be specially prepared for submittal because standard printed data are not suitable for use, submit as Shop Drawings, not as Product Data.
2. Mark each copy of each submittal to show which products and options are applicable.
3. Include the following information, as applicable:

a. Manufacturer’s written recommendations.
b. Manufacturer's product specifications
c. Manufacturer’s installation instructions.
d. Standard color charts.
e. Manufacturer’s catalog cuts.
f. Wiring diagrams showing factory-installed wiring.
g. Printed performance curves.
h. Operational range diagrams.
i. Mill reports.
j. Standard product operating and maintenance manuals.
k. Compliance with recognized trade association standards.
l. Compliance with recognized testing agency standards.
m. Application of testing agency labels and seals.
n. Notation of coordination requirements.

C. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data.

1. Preparation: Include the following information, as applicable:

a. Dimensions.
b. Identification of products.
c. Fabrication and installation drawings.
d. Roughing-in and setting diagrams
e. Wiring diagrams showing field-installed wiring, including power, signal, and control wiring.
f. Shopwork manufacturing instructions.
g. Templates and patterns.
h. Schedules.
i. Design calculations.
j. Compliance with specified standards.
k. Notation of coordination requirements.
l. Notation of dimensions established by field measurement.

2. Wiring Diagrams: Differentiate between manufacturer-installed and field-installed wiring.
3. Submit electronic copies of each submittal and cover sheet, unless prints are required for operation and maintenance manuals. Submit four (4) prints where prints are required for operation and maintenance manuals. Construction Manager/Engineer and CM will each retain one (1) print; remainder will be returned. Mark up and retain one (1) returned print as a Project Record Drawing.

D. Samples: Prepare physical units of materials or products, including the following:

1. Comply with requirements in Division 01 Section "Quality Requirements" for mockups.
2. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.
3. Submit Samples for review of kind, color, pattern, and texture for a final check of these characteristics with other elements and for a comparison of these characteristics between final submittal and actual component as delivered and installed.

a. If variation in color, pattern, texture, or other characteristic is inherent in the product represented by a Sample, submit at least three sets of paired units that show approximate limits of the variations.

1. Provide sample substitutions where applicable if samples do not meet standards or are not approved due to an issue with quality, quantity, etc.

b. Refer to individual Specification Sections for requirements for Samples that illustrate workmanship, fabrication techniques, and details of assembly, connections, operation, and similar construction

characteristics.

4. Number of Samples for Initial Selection: Submit one (1) full set of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Engineer will return submittal with options selected.
5. Disposition: Maintain sets of approved Samples at Project site, available for quality- control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.
    a. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Contractor.

PART 3 – EXECUTION

3.01 CONTRACTOR'S REVIEW

A. Review each submittal and check for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Engineer.
B. Approval Stamp: Stamp each submittal with a uniform approval stamp. Include Project name and location, submittal number, Specification Section title and number, name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

3.2 CONSTRUCTION MANAGER’S/ENGINEER'S ACTION

A. General: Construction Manager/Engineer will not review submittals that do not bear Contractor's approval stamp and will return them without action.
B. Action Submittals: Construction Manager/Engineer will review each submittal, make marks to indicate corrections or modifications required, and return it within 3 weeks. Engineer will stamp each submittal with an action stamp and will mark stamp appropriately to indicate action taken.
C. Submittals not required by the Contract Documents will not be reviewed and may be discarded.

END OF SECTION 01 33 00

SECTION 01 40 00 – QUALITY REQUIREMENTS

PART 1 – GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and Division 01 Specification Sections apply to this Section.

1.02 SUMMARY

A. This Section includes administrative and procedural requirements for quality assurance and quality control.
B. This Section specifies the general requirements for testing and inspection services. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.

1. Specific quality-control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.
2. Specified tests, inspections, and related actions do not limit Contractor's quality-control procedures that facilitate compliance with the Contract Document requirements.
3. Requirements for Contractor to provide quality-control services required by Architect, Owner, or authorities having jurisdiction are not limited by provisions of this Section.

C. Cooperate with Owner's testing laboratory and all others responsible for testing and inspecting the Work.
D. Provide other testing and inspecting as specified to be furnished by the Contractor in this Section and/or elsewhere in these Specifications.
E. Provide quality control by the observation and acceptance of work by others being built upon.
F. Related work described elsewhere:

1. See Individual Specification Sections or Construction Drawings for specific test and inspection requirements.
2. Where no testing requirements are described, but the Engineer/Architect and/or Construction Manager decides that testing is required, they may direct that such testing be performed under current standards for testing and the General Conditions.

G. Selection of testing laboratory: The Owner shall hire and pay for an independent testing laboratory.

1.03 DEFINITIONS

A. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and ensure that proposed construction complies with requirements.
B. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that completed construction complies with requirements. Services do not include contract enforcement activities performed by Architect.
C. Testing Agency: An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.

1.04 SUBMITTALS

A. Qualification Data: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.
B. Delegated-Design Submittal: In addition to Shop Drawings, Product Data, and other required submittals, submit a statement, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional, indicating that the products and systems are in compliance with performance and design criteria indicated. Include list of codes, loads, and other factors used in performing these services.
C. Schedule of Tests and Inspections: Prepare in tabular form and include the following:

1. Specification Section number and title.
2. Description of test and inspection.
3. Identification of applicable standards.
4. Identification of test and inspection methods.
5. Number of tests and inspections required.
6. Time schedule or time span for tests and inspections.
7. Entity responsible for performing tests and inspections.
8. Requirements for obtaining samples.
9. Unique characteristics of each quality-control service.

D. Reports: Prepare and submit certified written reports that include the following:

1. Date of issue.
2. Project title and number.
3. Name, address, and telephone number of testing agency.
4. Dates and locations of samples and tests or inspections.
5. Names of individuals making tests and inspections.
6. Description of the Work and test and inspection method.
7. Identification of product and Specification Section.
8. Complete test or inspection data.
9. Test and inspection results and an interpretation of test results.
10. Ambient conditions at time of sample taking and testing and inspecting.
11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.

12. Name and signature of laboratory inspector.
13. Recommendations on retesting and re-inspecting.

E. Permits, Licenses, and Certificates: For Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

1.05 QUALITY ASSURANCE

A. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
B. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
C. Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.
D. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance.
E. Registered Engineer Qualifications: A registered Engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing Engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or products that are similar to those indicated for this Project in material, design, and extent.
F. Specialists: Certain sections of the Specifications require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.

    1. Requirement for specialists shall not supersede building codes and similar regulations governing the Work, nor interfere with local trade-union jurisdictional settlements and similar conventions.

G. Testing Agency Qualifications: An agency with the experience and capability to conduct testing and inspecting indicated, as documented by ASTM E 548, and that specializes in types of tests and inspections to be performed.

H. Preconstruction Testing: Testing agency shall perform preconstruction testing for compliance with specified requirements for performance and test methods.

    1. Contractor responsibilities include the following:

        a. Provide test specimens and assemblies representative of proposed materials and construction. Provide sizes and configurations of assemblies

to adequately demonstrate capability of product to comply with performance requirements.

b. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
c. Fabricate and install test assemblies using installers who will perform the same tasks for Project.
d. When testing is complete, remove assemblies; do not reuse materials on Project.

2. Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to Architect, with copy to Contractor and Construction Manager. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.

1.06 QUALITY CONTROL

A. Contractor Responsibilities: Unless otherwise indicated, provide quality-control services specified and required by authorities having jurisdiction.

1. Where services are indicated as Contractor's responsibility, engage a qualified testing agency to perform these quality-control services.

a. Contractor shall not employ the same entity engaged by Owner, unless agreed to in writing by Owner.

2. Notify testing agencies at least 72 hours in advance of time when Work that requires testing or inspecting will be performed.
3. Where quality-control services are indicated as Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
4. Testing and inspecting requested by Contractor and not required by the Contract Documents are Contractor's responsibility.
5. Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.

B. Special Tests and Inspections: Owner will engage a testing agency to conduct special tests and inspections required by authorities having jurisdiction as the responsibility of Owner.

1. Testing agency will notify Architect and Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
2. Testing agency will submit a certified written report of each test, inspection, and similar quality-control service to Architect with copy to Contractor and to authorities having jurisdiction.
3. Testing agency will submit a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.
4. Testing agency will interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.

5. Testing agency will retest and reinspect corrected work at the expense of the Contractor.

C. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing.

D. Retesting/Re-inspecting: Regardless of whether original tests or inspections were Contractor's responsibility, provide quality-control services, including retesting and reinspecting, for construction that revised or replaced Work that failed to comply with requirements established by the Contract Documents.

E. Testing Agency Responsibilities: Cooperate with Architect and Contractor in performance of duties. Provide qualified personnel to perform required tests and inspections.

1. Notify Architect and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
2. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from requirements.
3. Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor.
4. Do not release, revoke, alter, or increase requirements of the Contract Documents or approve or accept any portion of the Work.
5. Do not perform any duties of Contractor.

F. Associated Services: Cooperate with agencies performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:

1. Access to the Work.
2. Incidental labor and facilities necessary to facilitate tests and inspections.
3. Adequate quantities of representative samples of materials that require testing and inspecting. Assist agency in obtaining samples.
4. Facilities for storage and field-curing of test samples.
5. Delivery of samples to testing agencies.
6. Preliminary design mix proposed for use for material mixes that require control by testing agency.
7. Security and protection for samples and for testing and inspecting equipment at Project site.

G. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and quality-control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.

1. Schedule times for tests, inspections, obtaining samples, and similar activities.

H. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents. Submit schedule within 30 days of date established for the Notice to Proceed.

1. Distribution: Distribute schedule to Owner, Architect, testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.

1.07 CODES AND STANDARDS

A. Testing, when required, will be in accordance with pertinent codes and regulations and with selected standards of the American Society for Testing and Materials (ASTM).

1.08 REVIEW OF THE CONTRACT DOCUMENTS

A. On all Project Drawings, figures take precedence over measurement by scale, and any scaling is done at the Contractor's own risk. Before ordering any materials or performing any Work, the Contractor shall verify all measurements at the project site and be responsible for the correctness of same.
B. Promptly respond to test reports and related instructions to ensure necessary retesting and replacement of materials with the least possible delay in progress of the Work.

1.09 FIELD CONDITIONS

A. The Contractor shall take field measurements and verify field conditions and shall carefully compare such field measurements and conditions with the Contract Documents and any shop drawings and product data before commencing any related work. Errors, inconsistencies, or omissions shall be reported to the Engineer/Architect and/or the Construction Manager at once.

1.10 PAYMENT FOR TESTING

A. Initial Services: The Owner's Testing Laboratory shall be responsible for initial testing services as outlined in various sections and the General Conditions.
B. Re-Testing Services: When initial tests indicate non-compliance with the Contract Documents, all subsequent retesting occasioned by the non-compliance shall be performed by the same testing agency and the costs thereof will be borne by the Contractor responsible for the work that is non- compliant.

1.11 TESTING

A. Code Compliance Testing: Inspections and tests required by codes or ordinances, or by a plan approval authority, and which are made by a legally constituted authority, shall be the responsibility of and shall be paid for by the Contractor, unless otherwise provided in the Contract Documents.
B. Contractor's Convenience Testing: Inspecting and testing performed exclusively for the Contractor's convenience shall be the sole responsibility of the Contractor.

1.12 INSPECTION

A. Inspection by Owner's Personnel: From time to time, personnel in the employ of the Owner may inspect the Work where the Work is in progress, but shall have no authority to direct the Contractor or request changes in the Work except through the Engineer/Architect and/or the Construction Manager.
B. Inspection of Work by Others: Each Contractor shall inspect Work of others which will receive or is adjacent to his Work before commencing his Work. Do not proceed until conditions which would result in a less than first class installation are satisfactorily corrected. Commencing Work shall be construed as acceptance of the Work of others, by the Contractor, as satisfactory to receive his Work. The Contractor shall bear all costs to correct the unsatisfactory Work.

1.13 COOPERATION WITH TESTING LABORATORY

A. Representatives of the testing laboratory shall have access to the Work at all times. Provide facilities for such access in order that the laboratory may properly perform its function.
B. Specimens and samples for testing, unless otherwise provided in the Contract Documents, will be taken by the testing personnel. Sampling equipment and personnel will be provided by the testing laboratory. Deliveries of specimens and samples to the testing laboratory will be performed by the testing laboratory.
C. Test results and reports shall be furnished simultaneously to the Engineer/Architect and the Owner/Construction Manager through Procore within one (1) week of testing.

1.14 TESTING SCHEDULE

A. The Owner shall pre-qualify and identify qualified independent inspection agencies in a timely manner, allowing Engineer/Architect adequate time for review and approval.
B. Special Structural Testing Schedule to be implemented per specifications.
C. When changes to construction schedule are necessary during construction, the Contractor shall coordinate such changes of schedule with the testing laboratory as required.
D. When the testing laboratory is ready to test according to the established schedule, but is prevented from testing or taking specimens due to incompleteness of the Work, all extra charges for testing attributable to the delay may be back charged to the Contractor and shall not be borne by the Owner.

PART 2 – PRODUCTS (Not Used)

PART 3 – EXECUTION

3.01 ACCEPTABLE TESTING AGENCIES

A. Recognized and/or licensed firms qualified to conduct the required testing.

3.02 REPAIR AND PROTECTION

A. General: On completion of testing, inspecting, sample taking, and similar services, repair damaged construction and restore substrates and finishes.

1. Provide materials and comply with installation requirements specified in other Sections of these Specifications. Restore patched areas and extend restoration into adjoining areas in a manner that eliminates evidence of patching.
2. Comply with the Contract Document requirements for Division 01 Section 01 73 29 "Cutting and Patching."

B. Protect construction exposed by or for quality-control service activities.
C. Repair and protection are Contractor's responsibility, regardless of the assignment of responsibility for quality-control services.

END OF SECTION 01 40 00

SECTION 01 50 00 - TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes requirements for temporary facilities and controls, including temporary utilities, support facilities, and security and protection facilities.

B. Temporary utilities include, but are not limited to, the following:

1. Sewers and drainage.
2. Water service and distribution.
3. Sanitary facilities, including toilets, wash facilities, and drinking-water facilities.
4. Heating, ventilation and cooling facilities including humidification or dehumidification.
5. Electric power service.
6. Lighting.
7. Internet service.

C. Support facilities include, but are not limited to, the following:

1. Project identification and temporary signs.
2. Waste disposal facilities.
3. Field offices.
4. Storage and fabrication sheds.
5. Lifts and hoists.
6. Construction aids and miscellaneous services and facilities.
7. Dewatering facilities and drains.
8. Snow removal of construction site.
9. Weed trimming and grass cutting of construction site.

D. Security and protection facilities include, but are not limited to, the following:

1. Environmental protection.
2. Stormwater control.
3. Tree and plant protection.
4. Pest control.
5. Site enclosure fence.
6. Security enclosure and lockup.
7. Barricades, warning signs, and lights.

8. Temporary enclosures.
9. Temporary partitions.
10. Fire protection.
11. Site security lighting.

E. Related Sections include the following:

1. Section 00 73 19, “Safety.”
2. Section 01 11 00 "Summary of Work" for use of Project premises, limits of use, and limitations on utility interruptions.
3. Section 01 12 00 "Multiple Work Scope Summary".
4. Section 01 33 00 "Submittal Procedures" for procedures for submitting copies of implementation and termination schedule and utility reports.
5. Section 01 73 00 "Execution" for progress cleaning requirements.
6. Divisions 23 through 28 for temporary heat, ventilation, and humidity requirements for products in those Sections.
7. Division 32 Sections for construction and maintenance of asphalt paving and cement concrete pavement for temporary roads and paved areas.

1.03 DEFINITIONS

A. Permanent Enclosure: As determined by Architect and Construction Manager, permanent or temporary roofing is complete, insulated, and weathertight; exterior walls are insulated and weathertight; and all openings are closed with permanent construction or substantial temporary closures.

1.04 DIVISION OF RESPONSIBILITIES

A. Assignment Control: Contractor assignments in Article 1.05 and Parts 2 and 3 are stated at the point of requirement for convenience and are intended to be consistent with this Article. If assignments appear to conflict, the more specific assignment governs

B. General: Each Prime Contractor is assigned specific responsibilities for temporary services and facilities, including some used by other Prime Contractors and other entities at the site. The Contractor for General Construction is responsible for temporary services and facilities that are not normal construction activities of other Prime Contractors, are not assigned to the Construction Manager, and are not specifically assigned otherwise in this Article. Responsibilities expressly assigned to the Construction Manager or to another Prime Contractor govern over this general division. All Contractors shall review this Section for requirements applicable to their Contracts.

C. CONSTRUCTION MANAGER (CM) is responsible for and shall provide:

1. One (1) construction trailer for Construction Manager, Owner, AHJ, and project meeting use.
2. Waste Disposal Facilities and Dumpsters: The Construction Manager shall furnish, maintain, relocate as necessary, haul, and pay disposal fees for common construction dumpsters required for construction operations. Common construction dumpsters shall be available for use by all Prime Contractors for ordinary construction waste generated by their Work.

3. The Construction Manager's dumpster responsibility does not include dumpsters required specifically for demolition of the existing building included in the General Contractor's Contract, hazardous or regulated materials, or materials prohibited from disposal in the common construction dumpsters.
4. Construction Manager shall provide the dumpsters for all on-site construction activities with the exception of demolition. Demolition waste is the responsibility of each Prime Contractor under Paragraph D.14.
5. Provide and maintain temporary toilets per 2.03.B and 3.03.D.

D. Each Prime Contractor is responsible for:

1. Installation, operation, maintenance and removal of each temporary service or facility usually considered at its own normal construction activity, as well as the costs and use charges associated with each such service or facility, except those costs and use charges that Article 1.05 assigns to the Owner.
2. Plug-in electric power cords and extension cords, and supplementary plug-in task lighting and special lighting necessary exclusively for its own activities.
3. Its own field office (job trailer), complete with necessary furniture, utilities and internet service, and water/sewer service within the job trailer..
4. Its own storage and fabrication sheds.
5. Supplemental heat, ventilation, humidity control and enclosure where these utilities are necessary exclusively for its own activities and are not provided by the General Contractor under Paragraph E.
6. Supplemental temporary heat required above the 60-degree-F minimum provided by the General Contractor, exclusively for its own Work.
7. Each Prime Contractor shall provide all hoisting, lifting, rigging, cranes, forklifts, material-handling equipment, operators, permits, engineering, inspections, and related services required for its Work. No shared hoisting facility is provided unless expressly stated elsewhere in the Contract Documents. Each Prime Contractor shall coordinate hoisting operations, access, staging, and scheduling with the Construction Manager.
8. Collection and disposal of its own hazardous, dangerous, unsanitary or other harmful waste material.
9. Secure lockup of its own tools, materials and equipment.
10. Construction aids and miscellaneous services and facilities necessary exclusively for its own construction activities.
11. Collection and disposal of fluid wastes, including any water containing effluents with or without solids until permanent sewer systems are functional and if permanent systems are equipped and/or permitted to accept such effluents.
12. Separation and disposal of solids prior to release into permanent sewer system.
13. Cleanup and Waste Handling:

    14. Each Prime Contractor shall continuously collect, sort, and transport ordinary construction waste generated by its Work to the common construction dumpsters provided by the Construction Manager. Prime Contractors other than the General Contractor are not required to furnish dumpsters for ordinary construction waste.

15. Each Prime Contractor shall comply with dumpster-use requirements and shall not place hazardous, regulated, liquid, prohibited, or otherwise unacceptable materials in common construction dumpsters.
16. Remove and lawfully dispose of water entering or accumulating in its trenches, excavations, pits, penetrations, equipment pads, work areas, and temporary enclosures, regardless of source, when removal is necessary to perform, protect, or complete its Work.

E. The Contractor for General Construction is responsible for:

17. Temporary facilities and controls not expressly assigned to the Construction Manager or to the Plumbing/Fire Protection, HVAC, or Electrical Contractors.
18. Un-piped sewers and drainage, including drainage ditches, dry wells, stabilization ponds, and containers.
19. Stormwater control.
20. Temporary roads and paving.
21. Temporary enclosure of the building.
22. Temporary partitions.
23. Temporary fire protection and temporary fire extinguishers.
24. Temporary utility service and connections required for temporary HVAC equipment provided by the GC Contract.
25. Temporary heating, ventilation and air conditioning (HVAC) and humidity control from the Notice to Proceed date to when permanent HVAC Systems are to be complete and functioning in accordance with the Project Milestone Schedule for all active phases and areas of the Project.
26. Rodent and pest control.
27. Barricades, warning signs and lights.
28. Site enclosure fences (chain link fence).
29. Site security.
30. Temporary sidewalks and fencing.
31. Security enclosure and lockup.
32. Environmental protection.
33. Site temporary water service, water trucks, and site water systems until new water service is available at the building, as specified in Article 3.03.C.2..
34. Dewatering facilities and drains for all site and building areas until permanent systems are installed, except dewatering for the Work of each Prime Contractor as assigned in Paragraphs D, F, G and H and Article 3.04.C.5.
35. Temporary stairs for construction worker access.
36. Traffic controls.
37. Weekly and as-needed street sweeping as directed by CM due to the accumulation of dirt and debris.
38. Maintenance of all erosion and sediment controls per the erosion and sediment drawings. The County Conservation District has final decision in all related E&S requirements and maintenance needs.
39. Project identification and temporary signs.
40. Control and coordination of fire watch activities.
41. Protection of existing finishes to remain.
42. Snow removal and clearing of the project site to provide access to all construction work areas, construction parking, and staging areas at all times.

43. Snow removal of the temporary lot while construction activities are underway; this item is part of, and does not add to, the snow removal and clearing in Item 26
44. Trimming and clearing of all weeds and grass cutting in the construction site to maintain a clean, organized site at all times.
45. Existing Building Demolition Waste:

    46. The General Contractor shall furnish, maintain, relocate as necessary, haul, and pay all disposal fees for dumpsters and containers required for demolition of the existing building included in the General Contractor's Contract.

47. Existing-building demolition debris shall not be placed in common construction dumpsters provided by the Construction Manager unless specifically authorized by the Construction Manager.
48. Provide Tire wash facilities for use of all prime contractors including all water required.

F. The Plumbing/Fire Protection Contractor is responsible for:

49. Piped temporary water service distribution from the new water service when it is within 5 feet of building.
50. Provide temporary building sewer and stormwater piping within the building footprint and five feet beyond it, including temporary roof-drainage piping from completed roof drains or rainwater leaders to an approved discharge point.3.
51. Temporary fire hoses and signs.
52. Security enclosure and lockup of its own Work areas, in coordination with the General Contractor, who provides project-wide security enclosure and lockup under Paragraph E and Article 3.05.
53. Piped storm water from roof sections as schedule dictates.
54. Plumbing connections to existing systems and temporary facilities and controls furnished by the General Construction, Plumbing/Fire Protection, Mechanical, and Electrical Contracts.

G. The Mechanical Contractor is responsible for:

55. Permanent heating, ventilation and air conditioning (HVAC) from when permanent HVAC Systems are to be complete and functioning in accordance with the Project Milestone Schedule, for each area until after Owner occupancy, including any necessary temporary utility service and connections.
56. Coordination and integration of all new HVAC equipment, components, controls, and associated systems with the existing HVAC infrastructure as required to maintain heating, cooling, ventilation, and occupant comfort in all occupied building spaces throughout the Project. Any HVAC outages or disruptions required to facilitate this Work shall be coordinated with and approved by the Owner and Construction Manager in advance.
57. All labor, materials, equipment, controls, testing, balancing, and commissioning activities necessary to maintain fully operational HVAC service in occupied building areas during all phases of construction.
58. Security enclosure and lockup of its own Work areas, in coordination with the General Contractor, who provides project-wide security enclosure and lockup under Paragraph E and Article 3.05.

E. H. The Electrical Contractor is responsible for:

1. Temporary electric power service and distribution, and temporary service requirements as required with the Construction Manager and the Energy Company.
2. Temporary lighting for building and site.
3. Security enclosure and lockup of its own Work areas, in coordination with the General Contractor, who provides project-wide security enclosure and lockup under Paragraph E and Article 3.05.5. Dewatering and drainage for work under scope.
4. Electrical connections to existing systems and temporary facilities and controls furnished by the General Construction, Plumbing/Fire Protection, Mechanical, and Electrical Contracts.
5. Temporary power distribution and connections specified in Articles 3.03.H.2.e, 3.03.I and 3.03.K, including power for temporary HVAC and dehumidification units and for elevators.
6. Provide and remove temporary power conduit and wire and connections to the CM trailer from the Electrical Contractor's temporary power panel.

1.05 USE CHARGES AND OUTLINE REQUIREMENTS

A. General: Cost or use charges for required temporary facilities shall be included in the total Contract Sum are not chargeable to Owner, Construction Manager, or Architect as extra costs. Allow other entities to use temporary services and facilities without cost, including, but not limited to, the following:

1. Owner's construction forces.
2. Occupants of Project.
3. Architect and Construction Manager (CM).
4. Testing agencies.
5. Personnel of authorities having jurisdiction.

B. Water Service: General Contractor shall be responsible for all water needs on project, from a water truck, temporary service as shown on the Phasing Drawings, or from new water service, from Notice to Proceed and until new permanent water service is installed and metered to building site. Temporary water distribution after new water service is available at the building is provided by the Plumbing Contractor as specified in Article 3.03.C.3. Owner will pay for metered use charges for the Project once the permanent system is installed, tested and accepted by Water Authority.

C. Sewer Service: Each individual Contractor shall be responsible for collecting and disposing of any water containing solids or other effluents with or without solids that are to be disposed of as a function of their work until the permanent septic or sewer system is fully functional and operational. Any effluents not permitted to be discharged into sewer or septic system shall be collected and disposed of by each Contractor responsible for generating the discharge.

D. Electric Service: Electrical Contractor shall furnish and install temporary power service for construction activities. Owner shall pay for all metered use charges from temporary service. Once permanent service is active, Owner will pay for use charges for permanent service.

E. HVAC System:

7. Until the date identified in the Project Milestone Schedule for the permanent HVAC systems to be complete and functioning, the General Contractor shall furnish, install, operate, maintain, fuel, and remove all temporary HVAC, heating, cooling, ventilation, humidification, and dehumidification equipment required for the Work, except supplemental equipment required exclusively for the Work of another Prime Contractor. All such costs shall be included in the General Contractor's Contract Sum.
8. Beginning on the date identified in the Project Milestone Schedule for the permanent HVAC systems to be complete and functioning, the Mechanical Contractor shall operate and maintain the permanent HVAC systems as required for construction and until turnover to the Owner. The Owner shall pay utility-company metered consumption for approved operation of the permanent HVAC systems.
9. The Mechanical Contractor shall remain responsible for all labor, temporary controls, filters, and Filter media at exterior intakes associated with the construction-period use of the current building’s HVAC systems.
10. General Contractor is responsible to provide any supplemental HVAC equipment, including humidification and/or dehumidification equipment, that is necessary for the installation of new construction and finishes and maintaining equipment in place until Substantial Completion.
11. If the permanent HVAC system is not complete and functioning by the applicable Project Milestone Schedule date due to the failure or delay of a Prime Contractor, costs resulting from continued temporary HVAC beyond that milestone shall be the responsibility of the Prime Contractor responsible for the delay, subject to the Contract Documents.
12. Mechanical Contractor shall comply with all the requirements of Article 3.03.G.
13. Mechanical Contractor shall provide all controls and safety devices required to operate the permanent HVAC systems during construction, including required fire/smoke monitoring and shutdown functions.

F. Clarification of Utility Use Charges:

1. The Owner will pay for utility company metered electrical usage for construction activities and for one job trailer for each prime contractor.
2. Each Prime Contractor shall pay for their communication usage.

1.06 SUBMITTALS

A. Implementation and Termination Schedule: Within 15 days of date established for commencement of the Work, submit schedule indicating implementation and termination dates of each temporary utility.
B. Fire-Safety Program: Show compliance with requirements of NFPA 241 and authorities having jurisdiction. Indicate Contractor personnel responsible for management of fire-prevention program.
C. Temporary Utility Reports: Submit reports of tests, inspections, meter readings, and similar procedures performed on temporary utilities.

1.07 QUALITY ASSURANCE

A. Standards: Comply with ANSI A10.6, NECA's "Temporary Electrical Facilities," and NFPA 241.

1. Trade Jurisdictions: Assigned responsibilities for installation and operation of temporary utilities are not intended to interfere with trade regulations and union jurisdictions.
2. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.

B. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.

1.08 PROJECT CONDITIONS AND OPERATION

A. Temporary Utilities: At earliest feasible time, when acceptable to Owner, change over from use of temporary service to use of permanent service.

1. Temporary Use of Permanent Facilities: Installer of each permanent system and service shall assume responsibility for operation, maintenance, and protection of each permanent system and service during its use as a construction facility before Owner’s acceptance, regardless of previously assigned responsibilities, except that this subparagraph does not change the cost and use-charge assignments in Article 1.05 or the restrictions on use of permanent HVAC systems in Article 3.03.G.

B. Conditions of Use: The following conditions apply to use of temporary services and facilities by all parties engaged in the Work:

1. Keep temporary services and facilities clean and neat.
2. Relocate temporary services and facilities as required by progress of the Work.

PART 2 - PRODUCTS

2.01 MATERIALS

A. General: Undamaged, previously used materials in serviceable condition may be used if approved by Construction Manager. Provide materials suitable for use intended.
B. Portable Chain-Link Fencing: The General Contractor shall provide temporary, post-driven galvanized steel chain link fence, 6’-0” high, 11-gauge wire in a 2” (50-mm) mesh with top and bottom selvages knuckled with movable supported ballast systems. At select locations where approved by CM, provide driven posts.
C. Tarpaulins: Fire-resistive labeled with flame-spread rating of 15 or less.
D. Water: Potable.

E. Pavement and Concrete: Comply with requirements of Division 03 and 32 Sections.
F. Lumber and Plywood: Comply with requirements of Division 06 Section “Rough Carpentry”.

2.02 TEMPORARY FACILITIES

A. General: Provide equipment suitable for use intended.
B. Field Offices:

1. Mobile units with lockable entrances, operable windows, and serviceable finishes; heated and air-conditioned; on foundations adequate for normal loading.
2. Each Prime Contractor shall provide an insulated, weathertight temporary office of sufficient size to accommodate their required office personnel at the Project site. Wood clad exteriors shall not be permitted.

C. Storage and Fabrication Sheds: Provide sheds sized, furnished, and equipped to accommodate materials and equipment for construction operations.

1. Store combustible materials apart from building.

2.03 EQUIPMENT

A. Fire Extinguishers: Hand carried, portable, UL rated. Provide class and extinguishing agent as indicated or a combination of extinguishers of NFPA-recommended classes for exposures.

1. Comply with NFPA 10 and NFPA 241 for classification, extinguishing agent, and size required by location and class of fire exposure.
2. Extinguisher shall have a valid inspection tag.

B. Self-Contained Toilet Units to be provided by the CM: Single-occupant units of chemical, aerated recirculation, or combustion type; vented; fully enclosed with a glass-fiber-reinforced polyester shell or similar nonabsorbent material. Toilet units are to be serviced weekly.
C. Temporary HVAC Equipment: Unless Owner authorizes use of permanent heating system, provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control.

1. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
2. Heating, Cooling, and Dehumidifying Units: Listed and labeled for type of fuel being consumed, by a qualified testing agency acceptable to authorities having jurisdiction and marked for intended location and application.
3. Temporary Dehumidifying Equipment: Provide system engineered by temporary equipment supplier for expected conditions and interior environment requirements specified. Provide self-contained, recirculating refrigeration units with water collection and filtration capabilities.

a. Equipment shall be sized with sufficient moisture extraction capabilities to maintain ambient interior air within specified relative humidity range.
b. Provide collection and/or drainage capabilities to prevent condensate from re-evaporating in conditioned space or from spilling on floors.

D. Generators: The Electrical Contractor shall verify available utility service before mobilization. If the specified temporary electrical service is unavailable, delayed, or insufficient, the Electrical Contractor shall furnish, install, operate, maintain, fuel, and remove generator capacity and temporary distribution sufficient to meet the requirements of this Section, unless the Contract Documents expressly assign temporary generator service to another entity.
E. Electrical Outlets: Properly configured, NEMA-polarized outlets to prevent insertion of 110- to 120-V plugs into higher-voltage outlets; equipped with ground-fault circuit interrupters, reset button, and pilot light.
F. Power Distribution System Circuits: Where permitted and overhead and exposed for surveillance, wiring circuits, not exceeding 125-V ac, 20-A rating, and lighting circuits may be nonmetallic sheathed cable.
G. Air-Filtration Units: Primary and secondary HEPA-filter-equipped portable units with four-stage filtration. Provide single switch for emergency shutoff. Configure to run continuously.

PART 3 - EXECUTION

3.01 TEMPORARY FACILITIES, GENERAL

A. Conservation: Coordinate construction and use of temporary facilities with consideration given to conservation of energy, water, and materials. Coordinate use of temporary utilities to minimize waste.

1. Salvage materials and equipment involved in performance of, but not actually incorporated into, the Work. See other Sections for disposition of salvaged materials.

3.02 INSTALLATION, GENERAL

A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required.
B. Provide each facility ready for use when needed to avoid delay. Maintain and modify as required. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

3.03 TEMPORARY UTILITY INSTALLATION AND REQUIREMENTS

A. General: Engage appropriate local utility company to install temporary service or connect to existing service. Where utility company provides only part of the service, provide the

remainder with matching, compatible materials and equipment. Comply with utility company recommendations.

1. Arrange with utility company, Owner, and existing users for time when service can be interrupted, if necessary, to make connections for temporary services.
2. Provide adequate capacity at each stage of construction. Before temporary utility is available, provide trucked-in services.
3. Obtain easements to bring temporary utilities to Project site where Owner's easements cannot be used for that purpose.

B. Sitework Sewers and Drainage by General Contractor: If sewers are available, provide temporary connections to remove effluent that can be discharged lawfully. If sewers are not available or cannot be used, provide drainage ditches, dry wells, stabilization ponds, and similar facilities. If neither sewers nor drainage facilities can be lawfully used for discharge of effluent, provide containers to remove and dispose of effluent off-site in a lawful manner. This Article applies to sitework sewers and drainage only. Building sewers and drainage, which include the building footprint and the area extending 5 feet beyond it, are provided by the Plumbing/Fire Protection Contractor as stated in Article 1.04.F, except that piping connected to a roof downspout through a rain boot to the sewer pipe is sitework.

1. Filter out excessive soil, construction debris, chemicals, oils, and similar contaminants that might clog sewers or pollute waterways before discharge.
2. Connect temporary sewers to municipal system as directed by sewer department officials.
3. Maintain temporary sewers and drainage facilities in a clean, sanitary condition. After heavy use, restore normal conditions promptly.
4. Provide temporary filter beds, settlement tanks, separators, and similar devices to purify effluent to levels acceptable to authorities having jurisdiction.

C. Water Service:

1. General: Install water service and distribution piping in sizes and pressures adequate for construction.
2. General Contractor is responsible for all water needs on Project using water trucks until new water service is available at the building.
3. After new water service is available at the building, Plumbing Contractor shall provide the following:
    a. Water Service: Use of Owner's new water service facilities will be permitted, as long as facilities are cleaned and maintained in a condition acceptable to Owner. At Substantial Completion, restore these facilities to like-new condition.
    b. Provide rubber hoses as necessary to serve Project site.
    c. As soon as water is required at each level, extend service to form a temporary water- and fire-protection standpipe. Provide distribution piping. Space outlets so water can be reached with a 100-foot (30-m) hose. Provide one hose at each outlet.

d. Where installations below an outlet might be damaged by spillage or leakage, provide a drip pan of suitable size to minimize water damage. Drain accumulated water promptly from pans.
e. Provide a minimum of 30-psi (200-kPa) static pressure at highest point.

D. Sanitary Facilities: CM will provide temporary toilets and hand/wash facilities. Facilities shall comply with regulations and health codes for type, number, location, operation, and maintenance of fixtures and facilities.

1. Disposable Supplies: CM to provide toilet tissue, paper towels, hand sanitizer, and similar disposable materials including covered waste containers for disposal of used material.
2. Toilets: Use of Owner's existing toilet facilities will not be permitted. Contractors shall use CM-provided self-contained toilet units.
3. Each Prime Contractor shall provide safety showers, eyewash fountains, and similar facilities for convenience, safety, and sanitation of its personnel..

E. Chain Link Fence:

1. The General Contractor shall secure the site and furnish gates as shown on Phasing Plan(s) or as required for project and directed by Construction Manager. The fencing and gates shall be relocated and adjusted during the Project as required, as noted on the Phasing Plans(s) and/or as directed by Construction Manager.

F. Temporary HVAC and Humidity Control: The General Contractor shall provide temporary HVAC and humidity control required by construction activities, for curing or drying of completed installations, or protection of installed construction from adverse effects of low temperatures or high humidity, for each new and renovation building area until permanent HVAC Systems are complete and functioning in accordance with the Project Milestone Schedule. Temporary HVAC and humidity control shall also be provided in all new building areas scheduled for work in order to maintain productivity of all trade contractors and personnel. Comply with the following:

1. Select safe equipment that will not have a harmful effect on completed installations or elements being installed.
2. Coordinate ventilation requirements to produce the ambient condition required and minimize consumption of energy.
3. Maintain the temporary heat to a minimum of 60 degrees F for construction areas, as stated in Paragraph F.3, and at 70 degrees F for all occupied areas.4. The General Contractor shall provide all other Prime Contractors with the Project Schedule and the minimum heating requirements to protect the Work as scheduled. If through no fault of any other Prime Contractor, the General Contractor does not maintain the original approved schedule, the General Contractor shall continue to provide temporary heat and humidity control to other Prime Contractors when required.
5. The General Contractor shall not be responsible for providing temporary heat and humidity control in permanently unconditioned areas or in areas not scheduled for work, unless the approved construction schedule is modified and accepted by the Owner and all Prime Contractors.

6. Prime Contractors are responsible for protecting their work in unconditioned or unscheduled work areas at no additional expense to the Owner.
7. The Mechanical Contractor shall provide all controls and safety devices required to operate the permanent HVAC systems during construction, including required fire/smoke monitoring and shutdown functions.

G. Existing and Permanent HVAC Systems: Comply with the following:

1. The General Contractor shall provide, maintain and operate sufficient temporary heating/cooling.
2. If the new permanent heating or cooling system is used during the construction period, the Mechanical Contractor shall be responsible to professionally clean all HVAC systems prior to turnover of the building to the Owner.
3. The Mechanical Contractor shall properly protect all existing / permanent HVAC equipment / systems from construction air dust and debris beginning from initial installation.
4. Select safe equipment that will not have a harmful effect on completed installations or elements being installed, and coordinate ventilation requirements to produce the ambient condition required and minimize consumption of energy, as required by Paragraphs F.1 and F.2.
14. 5. Maintain the temporary heat to a minimum of 60 degrees F for construction areas and at 70 degrees F for all occupied areas.
6. Utility costs associated with operation of permanent HVAC systems during construction shall be paid in accordance with Article 1.05.E. Construction-period operation of permanent systems shall not relieve the Mechanical Contractor of its responsibility for operation, maintenance, protection, filters, cleaning, servicing, controls, testing, adjustments, or warranty requirements.
7. Portable heaters will not be acceptable during final finishing operations.
8. The existing or new heating and exhaust system or any portion thereof may NOT be used by the General Contractor to provide temporary heat and exhaust.
9. The Mechanical Contractor shall be permitted to use the permanent HVAC system when it is complete and functioning in accordance with the Project Milestone Schedule and as required for the proper prosecution of the work as long as all the necessary protection and cleanup required by the Specifications and recommended by the manufacturer are strictly followed, and only when outside air is supplied directly to the burners. The Mechanical Contractor shall, when operating the permanent system complete all required servicing and adjusting to maintain the system in proper running order to prevent damage to the building or its equipment during the construction period. Units placed in permanent operation must be fully controlled using the final control system operational sequence.
10. When the Mechanical Contractor performs startup and begins using the permanent HVAC systems, the Contractor must provide pre-filters, return air filters, plenum filters and or other modifications to the systems necessary to prevent dirt, dust and other contaminants from entering the system. If measures implemented do not prevent dust from entering the systems, the Mechanical Contractor shall perform cleaning of duct, coil and other HVAC components necessary to provide clean HVAC systems at Substantial Completion of the Project.
11. Prior to turning over the new permanent heating and ventilating system to the Owner, the Mechanical Contractor shall thoroughly clean the system, provide new filters, make re-adjustments as required and bear all cost to place the system in

first-class operating condition. Contractor shall follow all recommended requirements for cleaning and media as provided in compliance with manufacturer recommendations.

12. The warranty period of individual pieces of equipment of the permanent system used during the construction period shall be extended during the temporary use period and the starting date used for determination of expiration for such warranties shall begin upon final acceptance of the project by the Owner.
13. Work which is damaged as a result of improper or insufficient climate control shall be removed and replaced.

H. Ventilation and Humidity Control by General Contractor:

1. Provide temporary ventilation required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of high humidity. Select equipment from that specified that will not have a harmful effect on completed installations or elements being installed. Coordinate ventilation requirements to produce ambient condition required and minimize energy consumption.
2. Temporary Humidity Control:

    a. General: Where control of ambient humidity is required for proper performance of the work, or for curing/drying of installed work, or for protection of installed work from deterioration due to variations in ambient conditions and/or adverse effects of high humidity, the General Contractor shall provide temporary humidification or dehumidification equipment to maintain the required conditions. This equipment may require air conditioning to achieve the desired results and maintain the Project schedule. Determination of the required equipment is the responsibility of the General Contractor. Coordinate the use of the equipment with temporary heating to produce the required conditions with a minimum overall use of energy.
    b. Construction Dehumidification (ongoing): The General Contractor shall provide portable dehumidification units for use during construction. Units shall be provided as required to maintain optimal building moisture conditions required for the proper performance of the Work. Moisture levels shall be maintained throughout both occupied and unoccupied areas of the facilities.
    c. Units shall be refrigeration-based and shall include standard 115V power cord, humidistat, integral condensate pump, wheels and handle. Units shall be as manufactured by Ebac or approved equal. Dehumidifier capacities and quantities shall be as follows:

        1) Quantity 15 - Minimum 25 gallons/day capacity (Ebac BD150CR or equal).
        2) Locations shall be as agreed upon in the field with the Architect and Construction Manager.

    d. General Contractor shall furnish and install drainage hoses and connections to discharge condensate to exterior of building at locations acceptable to the Construction Manager and Architect.
    e. The Electrical Contractor shall be responsible to distribute power sources throughout each area of the building dedicated for the purpose of power for

the humidification and/or dehumidification units. This power shall be in addition to power required by the trades for performance of their Work.

I. Electric Power Service by Electrical Contractor: Provide weatherproof, grounded electric power service and distribution system of sufficient size, capacity, and power characteristics during construction period. Include meters, transformers, overload-protected disconnecting means, and automatic ground-fault interrupters.

1. Install power distribution wiring overhead or underground and rise vertically where least exposed to damage.
2. Electric power service including all necessary poles and accessories shall be extended from off-site available sources after coordination with local electric utility company.
3. Provide or extend the following temporary construction electric services to the various building areas within forty (40) days of Notice to Proceed unless noted otherwise:

   a. 120/208-volt, three phase, four-wire wye with a solid neutral service.
   b. Transformation and power distribution as shown as required for temporary needs specified unless noted otherwise on Construction Documents.
   c. Power receptacles distributed across the building as the Project develops. Minimum requirements for the building are as follows:

      1) Twenty-five (25) 120-volt receptacles
      2) Twenty (20) 240-volt receptacles

   d. Temporary power for construction area.
   e. Ten (10) temporary connections to HVAC temporary heating units when directed by CM.
   f. Temporary site lighting as specified in Article 3.03.L and indicated on the Phasing and/or Site Logistics Plans.

4. All extensions from the temporary power receptacles shall be provided by the parties requiring power.

J. Electric Power Service: Use of Owner's new electric power service will be permitted, as long as equipment is maintained in a condition acceptable to Owner.

K. Electric Distribution by Electrical Contractor: Provide receptacle outlets adequate for connection of power tools and equipment in new and existing building areas.

1. Provide waterproof connectors to connect separate lengths of electrical power cords if single lengths will not reach areas where construction activities are in progress. Do not exceed safe length-voltage ratio.
2. Provide warning signs at power outlets other than 110 to 120 V.
3. Provide metal conduit, tubing, or metallic cable for wiring exposed to possible damage. Provide rigid steel conduits for wiring exposed on grades, floors, decks, or other traffic areas.
4. Provide metal conduit enclosures or boxes for wiring devices.
5. Provide 4-gang outlets, spaced so 100-foot (30-m) extension cord can reach each area for power hand tools and task lighting. Provide a separate 125-V ac, 20-A circuit for each outlet.

6. At earliest feasible time, but no later than 60 days prior to Substantial Completion of each Phase, provide permanent electric distribution systems.
7. Provide 150A, 208V, 3-phase power distribution for temporary connections of terrazzo grinders during floor terrazzo installation. Provide power distribution at multiple locations as required to ensure the grinders can cover the entire terrazzo floor area using a 100’ cord. Power distribution may be provided from temporary source or permanent power distribution where available. Remove all temporary power distribution when it is no longer required.
8. Provide temporary or permanent power for elevator as follows:
    a. 208/220v 20-amp power at lower lever (pit)
    b. 480V/60A/3 Phase at disconnects at top of elevator shaft

L. Lighting by Electrical Contractor: Provide and maintain temporary lighting with local switching that provides adequate illumination for construction operations and traffic conditions. Wherever overhead floor or roof deck has been installed, the Electrical Contractor shall provide temporary lighting with local switching.

1. For new construction and existing buildings where all systems are removed:
    a. Install and operate temporary lighting that fulfills security and protection requirements without operating entire system.
    b. Provide LED temporary lighting. Unless noted otherwise, each “lamp” shall be a minimum of 1600 lumens, either screw-in type or native LED type Where higher lumens are specified, lighting shall be native LED, not screw-in type. Lamps shall be uniformly distributed in all areas requiring temporary lighting to meet the minimum illumination intensity noted for the area or operation as outlined by the Occupational Safety and Health Administration (OSHA) standard for minimum illumination requirements at construction sites (OSHA 29 CFR 1926.56).
    c. Exterior Site Lighting: Provide, install, maintain, relocate as required by construction phasing, and remove temporary exterior site lighting indicated on the Phasing and/or Site Logistics Plans. Provide illumination required for construction operations, security, construction traffic, pedestrian access, and signage visibility.

15. d. Temporary exterior site lights shall be pole mounted, approximately 20 feet high, provide a minimum of 10,000 lumens per fixture, and be controlled by photocells unless indicated otherwise. Locations shown on the Phasing and/or Site Logistics Plans shall be included in the Electrical Contractor's Contract Sum.2. At earliest feasible time, but no later than 60 days prior to Substantial Completion of each Phase, provide permanent lighting systems both inside the building and on the site for use in completing construction and lighting the project site. Contractor must operate, maintain and protect the permanent systems through final completion of the project and provide full project warranty from the contract completion date of the project.

F. 3.04 SUPPORT FACILITIES INSTALLATION

A. General: Comply with the following:

1. Locate field offices, storage sheds, sanitary facilities, and other temporary construction and support facilities for easy access.
2. Provide incombustible construction for offices, shops, and sheds located within construction area or within 30 feet (9 m) of building lines in accordance with ASTM E136. Comply with NFPA 241.
3. Maintain support facilities as long as the facilities are needed. Remove no later than Substantial Completion, as provided in Article 3.06.E. Personnel remaining after Substantial Completion will not be permitted to use permanent facilities.

B. Temporary Roads and Paved Areas by General Contractor: Construct and maintain temporary roads and paved areas adequate to support loads and to withstand exposure to traffic during construction period. Locate temporary roads and paved areas in same location as permanent roads and paved areas and in compliance with the Phasing Plan(s). Extend temporary roads and paved areas, within construction limits indicated, as necessary for construction operations.

1. Coordinate elevations of temporary roads and paved areas with permanent roads and paved areas.
2. Prepare subgrade and install subbase and base for temporary roads and paved areas according to Section 31 20 00 "Earth Moving."
3. Recondition base after temporary use, including removing contaminated material, regrading, proof rolling, compacting, and testing.
4. Delay installation of final course of permanent hot-mix asphalt pavement until immediately before Substantial Completion. Repair hot-mix asphalt base-course pavement before installation of final course according to Division 32 Section “Hot-Mix Asphalt Paving”.
5. Provide dust-control treatment that is non-polluting and non-tracking. Re-apply treatment as required to minimize dust.
6. Cooperate with Work by others on the adjoining property construction.

C. Dewatering Facilities and Drains: Comply with requirements in applicable Division 31 Sections for temporary drainage and dewatering facilities and operations not directly associated with construction activities included in individual Sections. Where feasible, use same facilities. Maintain Project site, excavations, and all construction areas free of water.

1. General Contractor shall dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining property nor endanger permanent Work or temporary facilities.
2. Plumbing Contractor to provide temporary roof-drainage piping after roofing or waterproof deck construction is complete and until the permanent storm-drainage system is connected and operational.
1. 3. General Contractor shall remove snow and ice as required to minimize accumulations.
4.. Remove water from trenches, excavations or other work of each contract by individual Prime Contractors.

D. Waste Disposal Facilities and Cleanup

G. The Construction Manager shall provide common construction dumpsters for ordinary construction waste generated by all Prime Contractors, except for existing-building demolition waste specifically assigned to the General Contractor.
1. Each Prime Contractor shall regularly collect waste generated by its Work and transport such waste to the appropriate common construction dumpster. Each Prime Contractor shall keep its work areas clean and free of accumulated debris.
2. The General Contractor shall provide separate dumpsters and containers required for demolition of the existing building included in the General Contractor's Contract, including hauling and lawful disposal of such demolition debris.
3. Prime Contractors other than the General Contractor are not required to furnish dumpsters for ordinary construction waste generated by their Work.
4. Hazardous, regulated, liquid, prohibited, or other materials not permitted in the common construction dumpsters shall be handled and lawfully disposed of by the Prime Contractor generating or disturbing such material, as required by the Contract Documents.
5. Do not overfill dumpsters or place materials in containers not designated for such materials. The Prime Contractor responsible for improper disposal shall be responsible for resulting sorting, removal, additional hauling, disposal fees, fines, or other associated costs.

H. Coordinate dumpster and container locations, relocation, access, and removal with the Construction Manager.

E. Prime Contractor Field Offices:

1. Locate facility where it will serve the project adequately and result in minimum interference with the performance of the work. Relocate and modify facilities as required. Furnish facility prior to start of work and remove facility at final completion of project. Provide all utilities to service facility, including electric service, lighting, and other facilities as required.

F. Temporary Elevator Use:

1. See Section 14 24 00, Elevators, for temporary use of new elevators.
2. Use of Owner's elevators will be permitted, provided elevators are cleaned and maintained in a condition acceptable to Owner. At Substantial Completion, restore elevators to condition existing before initial use, including replacing worn cables, guide shoes, and similar items of limited life.
    a. Do not load elevators beyond their rated weight capacity.
    b. Provide protective coverings, barriers, devices, signs, or other procedures to protect elevator car and entrance doors and frame. If, despite such protection, elevators become damaged, engage elevator Installer to restore damaged work, so no evidence remains of correction work. Return items that cannot be refinished in field to the shop, make required repairs and refinish entire unit, or provide new units as required.

G. Temporary Stairs by General Contractor: Until permanent stairs are available, provide temporary stairs where ladders are not adequate. Cover finished, permanent stairs with protective covering of plywood or similar material so finishes will be undamaged at time

of acceptance. At Substantial Completion, restore stairs to condition existing before initial use.

1. Provide protective coverings, barriers, devices, signs or other procedures to protect stairs and to maintain means of egress. If, despite such protection, stairs become damaged, restore damaged areas so no evidence remains of correction work.

H. Traffic Controls by General Contractor: Provide temporary traffic controls at junction of temporary roads with public roads. Include warning signs for public traffic and "STOP" signs for entrance onto public roads. Provide construction site signage on adjacent roads and site to direct public and construction traffic (both vehicular and pedestrian), comply with CM and Owner's request for all site and road signage. Comply with requirements of authorities having jurisdiction.

1. Protect existing site improvements to remain, including curbs, pavement, and utilities.
2. Maintain access for fire-fighting equipment and access to fire hydrants.

I. Project Identification and Temporary Signs by General Contractor:

1. Prepare and install one 4' x 8' Project identification sign as indicated on the drawings or directed by Construction Manager and Architect. Do not permit installation of unauthorized signs.
2. Prepare and install up to 10 signs 4' x 3' with information to direct and control traffic on site and in building. Apply graphics and text as directed by Construction Manager. Install where directed.
3. Engage an experienced sign painter to apply graphics for Project identification signs. Comply with details provided by the Architect.
4. Construct signs of exterior-type Grade B-B high-density concrete form overlay plywood in sizes and thicknesses indicated. Support on posts or framing of preservative-treated wood or steel.
5. Paint sign panel and applied graphics with exterior-grade alkyd gloss enamel over exterior primer. Architect will provide digital file for graphics. Adhere custom vinyl graphics after paint has cured. Edge seal vinyl graphics using a fine-tip brush, painting the edges of the film with a commercial grade edge sealer.

3.05 SECURITY AND PROTECTION FACILITIES INSTALLATION - BY GENERAL CONTRACTOR

A. Protection of Existing Facilities: Protect existing vegetation, equipment, structures, utilities, and other improvements at Project site and on adjacent properties, except those indicated to be removed or altered. Repair damage to existing facilities.

B. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction in ways and by methods that comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects. Avoid using tools and equipment that produce harmful noise. Restrict use of noisemaking tools and equipment to hours that will minimize complaints from persons or firms near Project site.

C. Stormwater Control: Provide silt barriers in and around excavations and subgrade construction, sufficient to prevent flooding by runoff of stormwater from heavy rains.
D. Tree and Plant Protection: Install temporary fencing located as indicated or outside the drip line of trees to protect vegetation from construction damage. Protect tree root systems from damage, flooding, and erosion.
E. Site Enclosure Fence: Before construction operations begin, install chain-link enclosure fence with lockable entrance gates. Locate where indicated or enclose entire Project site or portion determined sufficient to accommodate construction operations. Install in a manner that will prevent people, dogs, and other animals from easily entering site except by entrance gates.

1. Set fence posts below grade a minimum of 3 feet.
2. Provide gate in sizes and at locations necessary to accommodate delivery vehicles and other construction operations.
3. Maintain security by limiting number of keys and restricting distribution to authorized personnel. Provide CM and Owner with one set of keys and/or access code(s).
4. Provide plywood on fencing adjacent to existing windows and doors.

F. Security Enclosure and Lockup: Install substantial temporary enclosure around partially completed areas of construction. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft and similar violations of security. Lock entrances at end of each workday.
G. Site Security: Ensure all windows, doors and gates are closed and secured at the conclusion of each day in scheduled work areas.
H. Barricades, Warning Signs, and Lights: Comply with standards and code requirements for erecting structurally adequate barricades. Paint with appropriate colors, graphics, and warning signs to inform personnel and public of possible hazard. Where appropriate and needed, provide lighting, including flashing red or amber lights.

1. For safety barriers, sidewalk bridges, and similar uses, provide minimum 5/8-inch thick exterior plywood.
2. Where indicated on phasing plan provide concrete ‘Jersey’ barriers.

I. Temporary Enclosures: Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations and similar activities. Provide temporary weathertight enclosure for building exterior.

1. Where heating or cooling is needed and permanent enclosure is not complete, provide insulated temporary enclosures. Coordinate enclosure with ventilating and material drying or curing requirements to avoid dangerous conditions and effects.
2. Vertical Openings: Close openings of 25 sq. ft. or less with plywood or similar materials.
3. Horizontal Openings: Close openings in floor or roof decks and horizontal surfaces with load-bearing, wood-framed construction.
4. Install tarpaulins securely using fire-retardant-treated wood framing and other materials.
5. Where temporary wood or plywood enclosure exceeds 100 sq. ft. in area, use fire-retardant-treated material for framing and main sheathing.

6. Provide temporary enclosures as required to meet criteria for permanent enclosure no later than the beginning of any of the following Work:

    a. Spray fireproofing.
    b. Interior finishes, including gypsum wallboard finishing, painting and wall coverings.
    c. Architectural woodwork.
    d. Institutional casework.
    e. Install temporary enclosures before time frames stated above when necessary to maintain interior relative humidity levels and temperatures as required to promote drying of concrete and concrete masonry substrates so that they achieve low enough moisture content and vapor emission levels to permit timely installation of finishes.

J. Temporary Partitions: Erect and maintain dustproof partitions and temporary enclosures to limit dust and dirt migration and to separate areas from fumes and noise.

1. Construction dustproof partitions of not less than nominal 4-inch studs, 5/8-inch gypsum wallboard with joints taped on occupied side, and 1/2-inch fire retardant plywood on construction side.
2. Construct dustproof, floor-to-ceiling partitions of not less than nominal 4-inch studs, 2 layers of 3-mil polyethylene sheets, inside and outside temporary enclosure. Cover floor with 2 layers of 3-mil polyethylene sheets, extending sheets 18 inches up the side walls. Overlap and tape full length of joints. Cover floor with 3/4-inch fire-retardant plywood.
3. Seal joints and perimeter. Equip partitions with dustproof doors and security locks.
4. Protect air-handling equipment.
5. Weatherstrip openings.

K. Exterior Surface Protection:

1. Where sequence of operations exposes exterior finished materials including, but not limited to factory finished metal, anodized metal, glass and the like, to mortars, grouts, alkalis, acids, strong detergents or other materials that may cause damage to adjacent finishes, provide surface protection materials completely over surface to be protected.
2. Comply with surface protection material manufacturer’s recommendations. Do not leave materials in place beyond maximum time limit.
3. Remove protection materials completely when at-risk work is complete.

L. Traffic Surface Protection:

1. New Finished Traffic Surfaces: From the time of installation to just before inspection for Substantial Completion, overlay traffic surfaces with traffic protection products as recommended by manufacturer for substrates to be protected. Replace traffic protection products when damaged. Where specified products do not meet construction traffic demands or when required by Architect or Construction Manager, provide more substantial protection as specified below for existing traffic surfaces to remain.

2. Existing Finished Traffic Surfaces to Remain: From the time of one week before the commencement of any work of a phase of any prime contractor in area or areas immediately adjacent to floors to be protected, overlay traffic surfaces with one layer of craft paper and follow with one layer of plywood. Secure plywood with heavy adhesive tape. Maintain protection for duration of work in area and remove just before inspection for Substantial Completion.

M. Temporary Fire Protection: Until fire-protection needs are supplied by permanent facilities, install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241.

1. Provide fire extinguishers, installed on walls on mounting brackets, visible and accessible from space being served, with sign mounted above.
2. Develop and supervise an overall fire-prevention and first-aid fire-protection program for personnel at Project site. Review needs with local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.
3. Provide temporary standpipes and hoses for fire protection of sufficient length to reach construction areas. Hang hoses with a warning sign stating that hoses are for fire-protection purposes only and are not to be removed. Match hose size with outlet size and equip with suitable nozzles.
4. Prohibit smoking and vaping in construction areas.
5. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition according to requirements of authorities having jurisdiction.
6. Coordinate activities with Fire Watch. Notify Fire Watch of hours of operation and planned fire-risk activities such as welding within construction areas.

N. Fire Watch: Provide adequate number of and properly trained personnel to provide fire watch in accordance with NFPA 51B “Standard for Fire Protection During Welding, Cutting and Other Hot Work 1999 Edition, NFPA 101 “Life Safety Code”, Articles 9.6.1.8 and 9.7.6.1 (including appendix) and as follows:

1. Fire Watch personnel shall be trained and provide services in compliance with NFPA 601 “Standard for Security Services in Fire Loss Prevention” and shall be acceptable to the Authorities Having Jurisdiction.
2. The responsible party for Fire Watch Services as defined in Division 01 Section “Multiple Work Scope Summary” shall be considered “Management” for the purposes of complying with the referenced standards.
3. Fire Watch personnel shall be provided with portable communications to permit immediate communication with school authorities, contractors and public emergency services.
4. Conduct a coordination meeting in advance of the earliest requirement for Fire Watch with the Owner, respective Project Coordinators, Construction Manager, Authorities Having Jurisdiction and Architect.
    a. Develop an emergency response plan for risks associated with construction. Coordinate with Owner’s existing security and emergency response plan.

b. Establish the lines of and order of communications based on each anticipated risk type.
c. Project Coordinators shall record and transmit minutes of the meeting to attendees and to Fire Watch personnel.

5. Fire Watch shall be provided at the Work by respective responsible entity as defined in Division 01 Section “Multiple Work Scope Summary.”

a. When hot work is being conducted.
b. When fire alarm is not in operation in occupied areas for time greater than 4 hours.
c. When fire suppression system is not in operation in occupied areas for time greater than 4 hours.

6. For the entire duration of time from the blocking of existing stair towers.
7. For the entire duration of time from the disturbance of the egress route.

O. Fire Extinguishers: Class A stored-pressure water-type extinguishers. Other Locations: Class ABC dry-chemical extinguishers or a combination of extinguishers of NFPA-recommended classes for exposures.

1. Locate fire extinguishers where convenient and effective for their intended purpose; provide not less than one extinguisher on each floor at or near each usable stairwell.
2. Store combustible materials in containers in fire-safe locations.
3. Maintain unobstructed access to fire extinguishers, fire hydrants, temporary fire-protection facilities, stairways, and other access routes for firefighting. Prohibit smoking/vaping on the Project site and within all building areas.
4. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition.

P. Permanent Fire Protection: At earliest feasible date in each area of Project, complete installation of permanent fire-protection in facility, including connected services, and place into operation and use. Instruct key personnel on use of facilities.

3.06 OPERATION, TERMINATION, AND REMOVAL

A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.
B. Maintenance: Maintain facilities in good operating condition until removal. Protect from damage caused by freezing temperatures and similar elements.

1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.
2. Prevent water-filled piping from freezing. Maintain markers for underground lines. Protect from damage during excavation operations.

C. Operate Project-identification-sign lighting daily from dusk until 12:00 midnight.

D. Temporary Facility Changeover for Security and Protection: Except for using permanent fire protection as soon as available, do not change over from using temporary security and protection facilities to permanent facilities until Substantial Completion.

E. Termination, Removal and Temporary Facility Changeover: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.

1. Materials and facilities that constitute temporary facilities are the property of Contractor that furnished them; facilities furnished by the Construction Manager remain the property of the Construction Manager. Owner reserves right to take possession of Project identification signs.
2. Remove temporary paving not intended for or acceptable for integration into permanent paving. Where area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil. Remove materials contaminated with road oil, asphalt and other petrochemical compounds, and other substances that might impair growth of plant materials or lawns and dispose of in a legal manner. Repair or replace street paving, curbs, and sidewalks at temporary entrances, as required by authorities having jurisdiction.
3. At Substantial Completion, clean and renovate permanent facilities used during construction period. Comply with final cleaning requirements in Section 017400 "Closeout Procedures."
4. Replace significantly worn parts and parts that have been subject to unusual operating conditions.
5. Replace lamps that are burned out or noticeably dimmed by substantial hours of use.

3.07 NO SMOKING

A. Smoking or vaping is not permitted on the entire Project site.

3.08 IDENTIFICATION OR SIGNS

A. Only one project sign will be permitted for the site, provided by the General Contractor and listing all contractors. Individual contractor signs, other advertisements, or flags will not be permitted.

3.09 COMPLIANCE WITH TEMPORARY FACILITIES AND CONTROLS

A. If contractor does not comply with any of the requirements of this Section, CM reserves the right to recommend to Owner to withhold adequate funds from payment applications to pay for completing the Work as required.

END OF SECTION 01 50 00

SECTION 01 56 39 - TEMPORARY TREE AND PLANT PROTECTION

PART 1 -GENERAL

1.1 SUMMARY

A. The Work of this Section Includes: General protection and pruning of existing trees and plants that are affected by execution of the Work, whether temporary or permanent construction.
B. Related Requirements:

1. Section 311000 "Site Clearing" for removing existing trees and shrubs and for temporary erosion- and sedimentation-control measures if not specified in Section 015000 "Temporary Facilities and Controls".
2. Section 329600 "Transplanting" for relocating existing trees and plants.

1.2 DEFINITIONS

A. Caliper (DBH): Diameter breast height; diameter of a trunk as measured by a diameter tape at a height 54 inches above the ground line .
B. Plant-Protection Zone: Area surrounding individual trees, groups of trees, shrubs, or other vegetation to be protected during construction and indicated on Drawings.
C. Tree-Protection Zone: Area surrounding individual trees or groups of trees to be protected during construction and defined by a circle concentric with each tree with a radius 12 times the tree's caliper size and with a minimum radius of 96 inches unless otherwise indicated.
D. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

1.3 FIELD CONDITIONS

A. The following practices are prohibited within protection zones:

1. Storage of construction materials, debris, or excavated material.
2. Moving or parking vehicles or equipment.
3. Erection of sheds or structures.
4. Impoundment of water.
5. Excavation or other digging unless otherwise indicated.
6. Attachment of signs to or wrapping materials around trees or plants unless otherwise indicated.

B. Do not direct vehicle or equipment exhaust toward protection zones.

C. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones and organic mulch.
D. Take precautions to protect plants from airborne contaminants, such as paint or fireproofing overspray.

PART 2 -PRODUCTS

2.1 MATERIALS

A. Protection-Zone Fencing: Fencing fixed in position and meeting the following requirements:

1. Plastic Protection-Zone Fencing: Plastic construction fencing constructed of high-density extruded and stretched polyethylene fabric with 2-inch maximum opening in pattern and weighing a minimum of 0.4 lb/ft.; remaining flexible from minus 60 to plus 200 deg F; inert to most chemicals and acids; minimum tensile yield strength of 2000 psi and ultimate tensile strength of 2680 psi; secured with plastic bands or galvanized-steel or stainless steel wire ties; and supported by U-shape galvanized-steel posts spaced not more than 96 inches apart.

    a. Height: 48 inches.
    b. Color: High-visibility orange, nonfading.

PART 3 -EXECUTION

3.1 EXAMINATION

A. Erosion and Sedimentation Control: Examine the site to verify that temporary erosion- and sedimentation-control measures are in place. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross protection zones.
B. Prepare written report, endorsed by arborist, listing conditions detrimental to tree and plant protection.

3.2 PREPARATION

A. Locate and clearly identify trees, shrubs, and other vegetation to remain. Tie a 1-inch blue vinyl tape around each tree trunk at 54 inches above the ground.
B. Protect tree root systems from damage caused by runoff or spillage of noxious materials while mixing, placing, or storing construction materials. Protect root systems from ponding, eroding, or excessive wetting caused by dewatering

operations.

3.3 PROTECTION ZONES

A. Protection-Zone Fencing: Install protection-zone fencing along edges of protection zones before materials or equipment are brought on the site and construction operations begin in a manner that will prevent people from easily entering protected areas except by entrance gates. Construct fencing so as not to obstruct safe passage or visibility at vehicle intersections where fencing is located adjacent to pedestrian walkways or in close proximity to street intersections, drives, or other vehicular circulation.

   1. Posts: Set or drive posts eighteen (18) inches into ground. Where a post is located on existing paving or concrete to remain, provide appropriate means of post support acceptable to Architect.
   2. Plastic Fencing: Stretch fabric taut and secure to posts without bows or sags.

B. Maintain protection zones free of weeds and trash.
C. Maintain hydration of plants to assure plant survival.
D. Maintain protection-zone fencing in good condition as acceptable to Architect and remove when construction operations are complete and equipment has been removed from the site.

   1. Do not remove protection-zone fencing, even temporarily, to allow deliveries or equipment access through the protection zone.
   2. Temporary access is permitted subject to preapproval in writing by arborist if a root buffer effective against soil compaction is constructed as directed by arborist. Maintain root buffer so long as access is permitted.

3.4 EXCAVATION

A. General: Excavate at edge of protection zones and for trenches indicated within protection zones in accordance with requirements in Section 312000 "Earth Moving" unless otherwise indicated.
B. Trenching within Protection Zones: Where utility trenches are required within protection zones, excavate under or around tree roots by hand or with air spade, or tunnel under the roots by drilling, auger boring, or pipe jacking. Do not cut main lateral tree roots or taproots; cut only smaller roots that interfere with installation of utilities. Cut roots as required for root pruning. If excavating by hand, use narrow-tine spading forks to comb soil and expose roots.

3.5 ROOT PRUNING

A. Prune tree roots that are affected by temporary and permanent construction. Prune roots as indicated on Drawings.
B. Root Pruning at Edge of Protection Zone: Prune tree roots 12 inches outside of the protection zone by cleanly cutting all roots to the depth of the required excavation.

3.6 CROWN PRUNING

A. Prune branches that are affected by temporary and permanent construction. Prune branches as directed by arborist.

    1. Prune to remove only broken, dying, or dead branches unless otherwise indicated. Do not prune for shape unless otherwise indicated.
    2. Do not remove or reduce living branches to compensate for root loss caused by damaging or cutting root system.
    3. Pruning Standards: Prune trees in accordance with ANSI A300 (Part 1) .

B. Unless otherwise directed by arborist and acceptable to Architect, do not cut tree leaders.
C. Cut branches with sharp pruning instruments; do not break or chop.
D. Do not paint or apply sealants to wounds.
E. Provide subsequent maintenance pruning during Contract period as recommended by arborist.
F. Chip removed branches and dispose of off-site.

3.7 REGRADING

A. Lowering Grade: Where new finish grade is indicated below existing grade around trees, slope grade beyond the protection zone. Maintain existing grades within the protection zone.

3.8 FIELD QUALITY CONTROL

A. Inspections: Engage a qualified arborist to direct plant-protection measures in the vicinity of trees, shrubs, and other vegetation indicated to remain and to prepare inspection reports.

3.9 REPAIR AND REPLACEMENT

A. General: Repair or replace trees, shrubs, and other vegetation indicated to remain or to be relocated that are damaged by construction operations, in a

manner approved by Architect.

1. Submit details of proposed pruning and repairs.
2. Perform repairs of damaged trunks, branches, and roots within 24 hours in accordance with arborist's written instructions.
3. Replace trees and other plants that cannot be repaired and restored to full-growth status, as determined by Architect.

B. Trees: Remove and replace trees indicated to remain within the limits of disturbance that are more than 25 percent dead or in an unhealthy condition before the end of the corrections period . Remove and replace trees damaged during construction operations, at no cost to the owner, that Architect and/or Arborist determines are incapable of restoring to normal growth pattern.

1. Small Trees: Provide new trees of same size and species as those being replaced for each tree that measures 4 inches or smaller in caliper size.
2. Large Trees: Provide two new tree(s) of 4-inch caliper size for each tree being replaced that measures more than 6 inches in caliper size.

    a. Species: As selected by Architect.

3. Plant and maintain new trees as specified in Section 329300 "Plants."

END OF SECTION 01 56 39

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 57 23 - TEMPORARY STORM WATER POLLUTION CONTROL

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Temporary stormwater pollution controls.

1.2 STORMWATER POLLUTION PREVENTION PLAN

A. The approved NPDES Permit and associated Plans are part of the Contract Documents.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Architect, Construction Manager, Engineer, Township Engineer, County Conservation District, and earthwork subcontractor.
2. Review requirements of the NPDES Permit, including permitting process, worker training, and inspection and maintenance requirements.

PART 2 - PRODUCTS

2.1 TEMPORARY STORMWATER POLLUTION CONTROLS

A. Provide temporary stormwater pollution controls as required by the approved NPDES Permit and associated plans.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with all best management practices, general requirements, performance requirements, reporting requirements, and all other requirements included in the approved NPDES Permit.
B. Locate stormwater pollution controls in accordance with the approved NPDES Permit.
C. Conduct construction as required to comply with the approved NPDES Permit and that minimize possible contamination or pollution or other undesirable effects.

1. Inspect, repair, and maintain Erosion & Sedimentation (SWPPP) controls during construction.

    a. Inspect all Erosion & Sedimentation (SWPPP) controls not less than every seven days, and after each occurrence of a storm event, as outlined in the approved NPDES Permit.

D. Remove Erosion & Sedimentation (SWPPP) controls at completion of construction and restore and stabilize areas disturbed during construction.

END OF SECTION 01 57 23

SECTION 01 60 00 – PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes administrative and procedural requirements for selecting products for use in the Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; product substitutions; and comparable products.
B. See Division 01 Section "Closeout Procedures" for submitting warranties for contract closeout.
C. See Individual Specification Sections or Construction Drawings for specific requirements for warranties on products and installations specified to be warranted.

1.03 DEFINITIONS

A. Products: Items purchased for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.

    1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation, shown or listed in manufacturer's published product literature, which is current as of date of the Contract Documents.
    2. New Products: Items that have not previously been incorporated into another project or facility. Products salvaged or recycled from other projects are not considered new products.
    3. Comparable Product: Product that is demonstrated and approved through submittal process, or where indicated as a product substitution, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

B. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.
C. Basis-of-Design Product Specification: Where a specific manufacturer's product is named and accompanied by the words "basis of design," including make or model number or other designation, to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other

characteristics for purposes of evaluating comparable products of other named manufacturers.

D. Manufacturer's Warranty: Preprinted written warranty published by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.

E. Special Warranty: Written warranty required by or incorporated into the Contract Documents, either to extend time limit provided by manufacturer's warranty or to provide more rights for Owner.

1.04 SUBMITTALS

A. Product List: Submit a list, in tabular from, showing specified products. Include generic names of products required. Include manufacturer's name and proprietary product names for each product.

1. Coordinate product list with Contractor's Construction Schedule and the Submittals Schedule.
2. Form: Tabulate information for each product under the following column headings:

    a. Specification Section number and title.
    b. Generic name used in the Contract Documents.
    c. Proprietary name, model number, and similar designations.
    d. Manufacturer's name and address.
    e. Supplier's name and address.
    f. Installer's name and address.
    g. Projected delivery date or time span of delivery period.
    h. Identification of items that require early submittal approval for scheduled delivery date.

3. Initial Submittal: Within 30 days after date of commencement of the Work, submit (1) copy of initial product list. Include a written explanation for omissions of data and for variations from Contract requirements.

    a. At Contractor's option, initial submittal may be limited to product selections and designations that must be established early in Contract period.

4. Completed List: Within 60 days after date of commencement of the Work, submit (1) copy of completed product list. Include a written explanation for omissions of data and for variations from Contract requirements.
5. Architect/Engineer and/or Construction Manager Action: If necessary, Architect/Engineer and/or Construction Manager will request additional information or documentation for evaluation within one week of receipt of a request for substitution. Architect/Engineer and/or Construction Manager will notify Contractor of acceptance or rejection of proposed substitution within 15 days of receipt of request, or 7 days of receipt of additional information or documentation, whichever is later. Architect's response, or lack of response, does not constitute a waiver of requirement that products comply with the Contract Documents.

B. Pre-bid Substitution Requests: Submit one copy of each Pre-bid Substitution Request not later than 10 days prior to receipt of Bids for consideration. Identify product or

fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.

1. Substitution Request Form: Refer to Specification Section 00 43 25, Substitution Request Form.
2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:
    a. Statement indicating why specified material or product cannot be provided.
    b. Coordination information, including a list of changes or modifications needed to other parts of the Work and to construction performed by Owner and separate contractors that will be necessary to accommodate proposed substitution.
    c. Detailed comparison of significant qualities of proposed substitution with those of the Work specified. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
    d. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
    e. Samples, where applicable or requested.
    f. List of similar installations for completed projects with project names and addresses and names and addresses of Architects and owners.
    g. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
    h. Research/evaluation reports evidencing compliance with building code in effect for Project, from a model code organization acceptable to authorities having jurisdiction.
    i. Detailed comparison of Contractor's Construction Schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating lack of availability or delays in delivery.
    j. Cost information, including a proposal of change, if any, in the Contract Sum.
    k. Bidder’s certification that proposed substitution complies with requirements in the Contract Documents and is appropriate for applications indicated.
    l. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.

3. Architect's Action: If necessary, Architect will request additional information or documentation for evaluation within one week of receipt of a request for substitution. Architect will notify Contractor of acceptance or rejection of proposed substitution within 15 days of receipt of request, or 7 days of receipt of additional information or documentation, whichever is later.
    a. Form of Acceptance: Addendum.
    b. Use product specified if Architect cannot make a decision on use of a proposed substitution within time allocated from the information provided it will be rejected.

C. Basis-of-Design Product Specification Submittal: Comply with requirements in Division 01 Section 01 33 00 "Submittal Procedures." Show compliance with requirements.

1.05 QUALITY ASSURANCE

A. Compatibility of Options: If Contractor is given option of selecting between two or more products for use on Project; product selected shall be compatible with products previously selected, even if previously selected products were also options.

1. Each Contractor is responsible for providing products and construction methods compatible with products and construction methods of other contractors.
2. If a dispute arises between contractors over concurrently selectable but incompatible products, Architect and Owner will determine which products shall be used.
3. The material selected by the Architect shall be provided at no additional cost to the Owner.

1.06 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft. Comply with manufacturer's written instructions. Deliveries addressed to the project, in general, the Owner, Architect/Engineer, or Construction Manager, will be refused and returned to shipper.

1. Notify Construction Manager and Owner 48 hours in advance of major deliveries.
2. Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
3. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
4. Deliver products to Project site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
5. Inspect products on delivery to ensure compliance with the Contract Documents and to ensure that products are undamaged and properly protected.
6. Store products to allow for inspection and measurement of quantity or counting of units.
7. Store materials in a manner that will not endanger Project structure.
8. Store products that are subject to damage by the elements, under cover in a weather tight enclosure above ground, with ventilation adequate to prevent condensation.
9. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.
10. Protect stored products from damage.

1.07 PRODUCT WARRANTIES

A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.
B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution. Submit a draft for approval before final execution.

    1. Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.
    2. Specified Form: Forms are included with the Specifications. Prepare a written document using appropriate form properly executed.
    3. Refer to Individual Specification Sections or Construction Drawings for specific content requirements and particular requirements for submitting special warranties.

C. Submittal Time: Comply with requirements in Division 01 Section "Closeout Procedures."

PART 2 - PRODUCTS

2.01 PRODUCT OPTIONS

A. General Product Requirements: Provide products that comply with the Contract Documents, that are undamaged and, unless otherwise indicated, that are new at time of installation.

    1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
    2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
    3. Owner reserves the right to limit selection to products with warranties not in conflict with requirements of the Contract Documents.
    4. Where products are accompanied by the term "as selected," Project Engineer will make selection.
    5. Where products are accompanied by the term "match sample," sample to be matched is provided by Architect/Engineer and/or Program Manager.
    6. Descriptive, performance, and reference standard requirements in the Specifications establish "salient characteristics" of products.
    7. Or Equal: Where products are specified by name and accompanied by the term "or equal" or "or approved equal" or "or approved," comply with provisions in "Comparable Products" Article to obtain approval for use of an unnamed product.

B. Product Selection Procedures: Procedures for product selection include the following:

    1. Product: Where Specification paragraphs or subparagraphs titled "Product" name a single product and manufacturer, provide the product named.
    2. Manufacturer/Source: Where Specification paragraphs or subparagraphs titled "Manufacturer" or "Source" name single manufacturers or sources, provide a

product by the manufacturer or from the source named that complies with requirements.

3. Products: Where Specification paragraphs or subparagraphs titled "Products" introduce a list of names of both products and manufacturers, provide one of the products listed that complies with requirements.
4. Manufacturers: Where Specification paragraphs or subparagraphs titled "Manufacturers" introduce a list of manufacturers' names, provide a product by one of the manufacturers listed that complies with requirements.
5. Available Products: Where Specification paragraphs or subparagraphs titled "Available Products" introduce a list of names of both products and manufacturers, provide one of the products listed or another product that complies with requirements. Comply with provisions in "Comparable Products" Article to obtain approval for use of an unnamed product.
6. Available Manufacturers: Where Specification paragraphs or subparagraphs titled "Available Manufacturers" introduce a list of manufacturers' names, provide a product by one of the manufacturers listed or another manufacturer that complies with requirements. Comply with provisions in "Comparable Products" Article to obtain approval for use of an unnamed product.
7. Product Options: Where Specification paragraphs titled "Product Options" indicate that size, profiles, and dimensional requirements on Drawings are based on a specific product or system, provide either the specific product or system indicated or a comparable product or system by another manufacturer. Comply with provisions in "Product Substitutions" Article.
8. Basis-of-Design Products: Where Specification paragraphs or subparagraphs titled "Basis-of-Design Product(s)" are included and also introduce or refer to a list of manufacturers' names, provide either the specified product or a comparable product by one of the other named manufacturers. Drawings and Specifications indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with provisions in "Comparable Products" Article to obtain approval for use of an unnamed product.
9. Visual Matching Specification: Where Specifications require matching an established Sample, select a product (and manufacturer) that complies with requirements and matches Project Engineer's sample. Project Engineer's decision will be final on whether a proposed product matches satisfactorily.
    a. If no product available within specified category matches satisfactorily and complies with other specified requirements, comply with provisions of the Contract Documents on "substitutions" for selection of a matching product.
10. Visual Selection Specification: Where Specifications include the phrase "as selected from manufacturer's colors, patterns, textures" or a similar phrase, select a product (and manufacturer) that complies with other specified requirements.
    a. Standard Range: Where Specifications include the phrase "standard range of colors, patterns, textures" or similar phrase, Architect and Owner will select color, pattern, or texture from manufacturer's product line that does not include premium items.
    b. Full Range: Where Specifications include the phrase "full range of colors, patterns, textures" or similar phrase, Architect and Owner will select color, pattern, or texture from manufacturer's product line that includes both standard and premium items.

2.02 COLOR SELECTION

A. Pre-Selected Colors:

1. Where colors have been specifically identified in the Contract Documents, the products provided by the Contractor shall match the selected color to the satisfaction of the Architect or the product will be rejected as non-conforming materials.
2. Manufacturers listed in the specification sections are capable of manufacturing the product specified but may not manufacture the specific selected color identified in the Contract Documents as part of their running line.

B. If additional up-charges are associated with providing the colors identified in the Contract Documents, the Contractor shall be responsible for all such costs and no additional cost to the Owner above the Contract Sum will be considered.

C. Colors Selected During Construction:

1. Products will be selected by the Architect from the standard colors of any of the listed or approved manufacturers, unless a specific color or color price range has been identified prior to bidding.

D. Location of Selected Colors: In general, preselected colors are identified in the following locations:

1. Exposed Interior Finishes: Room Finish Schedule - Color Legend.
2. Other Materials: Individual Specification Sections or notes to the Drawings.

2.03 SUBSTITUTIONS AFTER EXECUTION OF THE AGREEMENT

A. Substitution of Materials: No substitutions of materials will be considered after the Execution of the Contract without a Credit to the Owner unless a Product becomes unavailable through no fault of the Contractor.

B. NO ACTION TO REVIEW THE PROPOSED SUBSTITUTION WILL BE TAKEN BY THE ARCHITECT OR ENGINEER UNTIL THE CONTRACTOR HAS SUBMITTED THE FOLLOWING:

1. A letter itemizing the proposed credit to Owner.
2. A copy of the warranty.
3. A summary of the schedule impact.
4. Properly executed Document 00 43 25, Substitution Request Form.

C. Substitutions will not be considered when they are indicated or implied on shop drawing or product data submittals, without separate written request as included above, or when acceptance will require revision to the Contract Documents.

D. In submitting a substitution request the Contractor acknowledges that:

1. The Contractor shall coordinate installation of the substitution including modifications to other Work.

2. The use of this Substitution will not adversely affect the Project Schedule.
3. If modifications to the work of this contract or another contract are required because of the substitution these modifications shall be made at no additional cost to Owner.
4. The Contractor waives all rights to claims for additional costs or time extension which may subsequently become apparent.

2.04 COMPARABLE PRODUCTS

A. Where products or manufacturers are specified by name, submit the following, in addition to other required submittals, to obtain approval of an unnamed product:

1. Evidence that the proposed product does not require extensive revisions to the Contract Documents, that it is consistent with the Contract Documents and will produce the indicated results, and that it is compatible with other portions of the Work.
2. Detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
3. Evidence that proposed product provides specified warranty.
4. List of similar installations for completed projects with project names and addresses and names and addresses of Project Engineers and owners, if requested.
5. Samples, if requested.

2.05 USE OF NON-HAZARDOUS MATERIALS:

A. Materials used in this Project shall have no detectable levels of the following hazardous materials.

1. Asbestos of any form or type.
2. Lead in water supply line solder.
3. Lead in paint coatings and finishes.
4. Polychlorinated Biphenyls (PCBs).

B. Upon substantial completion, the Contractor shall submit, on its company letterhead, a signed statement certifying that the products supplied under its Contract had no detectable levels of the hazardous materials listed above in Paragraph 2.5.A. Final payment will not become due until a copy of this letter is submitted.

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 60 00

SECTION 01 73 00 - EXECUTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes general procedural requirements governing execution of the Work including, but not limited to, the following:

1. Construction layout.
2. General installation of products.
3. Progress cleaning.
4. Starting and adjusting.
5. Protection of installed construction.
6. Correction of the Work.

B. Related Sections include the following:

1. Division 01 Section 01 31 00 "Project Management and Coordination" for procedures for coordinating field engineering with other construction activities.
2. Division 01 Section 01 73 29 "Cutting and Patching" for procedural requirements for cutting and patching necessary for the installation or performance of other components of the Work.
3. Division 01 Section 01 77 00 "Closeout Procedures".

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.01 EXAMINATION

A. Existing Conditions: The existence and location of site improvements, utilities, and other construction indicated as existing are not guaranteed. Before beginning work, investigate and verify the existence and location of mechanical and electrical systems and other construction affecting the Work.

1. Before construction, verify the location and points of connection of utility services.

2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.

B. Existing Utilities: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning site work, investigate and verify the existence and location of underground utilities and other construction affecting the Work.

1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, water-service piping, and underground electrical services.
2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.

C. Acceptance of Conditions: Examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.

1. Written Report: Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:

   a. Description of the Work.
   b. List of detrimental conditions, including substrates.
   c. List of unacceptable installation tolerances.
   d. Recommended corrections.

2. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
3. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
4. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
5. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.02 PREPARATION

A. Existing Utility Information: Furnish information to Owner that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction.

B. Existing Utility Interruptions: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:

1. Notify Owner not less than 30 days in advance of proposed utility interruptions.
2. Do not proceed with utility interruptions without Owner’s written permission.
3. All utility interruptions shall be scheduled for weekends or holidays.

C. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
D. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.
E. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents, submit a request for information to Architect. Include a detailed description of problem encountered, together with recommendations for changing the Contract Documents.

3.03 CONSTRUCTION LAYOUT

A. Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks. If discrepancies are discovered, notify Architect promptly.

1. Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.
2. Inform installers of lines and levels to which they must comply.
3. Check the location, level and plumb, of every major element as the Work progresses.
4. Notify Architect when deviations from required lines and levels exceed allowable tolerances.

3.04 INSTALLATION

A. General: Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.

1. Make vertical work plumb and make horizontal work level.
2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
3. Conceal pipes, ducts, and wiring in finished areas, unless otherwise indicated.

B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.
C. Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Substantial Completion.
D. Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.
E. Tools and Equipment: Do not use tools or equipment that produce harmful noise levels exceeding 80 dBA.
F. Templates: Obtain and distribute to the parties involved templates for Work specified to be factory prepared and field installed. Check Shop Drawings of other portions of the

Work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.

G. Anchors and Fasteners: Provide anchors and fasteners as required to anchor each component securely in place, accurately located and aligned with other portions of the Work.

1. Mounting Heights: Where mounting heights are not indicated, mount components at heights directed by Architect.
2. Allow for building movement, including thermal expansion and contraction.

H. Joints: Make joints of uniform width. Where joint locations in exposed Work are not indicated, arrange joints for the best visual effect. Fit exposed connections together to form hairline joints.

I. Hazardous Materials: Use products, cleaners, and installation materials that are not considered hazardous.

3.05 PROGRESS CLEANING

A. Each Prime Contractor is responsible to comply with progress cleaning. The General Contractor shall be responsible for overall progress cleaning. If in the opinion of the Construction Manager, any contractor fails to comply with progress cleaning, and upon written request by the Construction Manager to the affected contractor, the Construction Manager shall direct the Architect to prepare a deduct change order. The Owner also reserves the right to perform progress cleaning and deduct the cost from the contractor or contractors responsible. If multiple contractors are at fault, the costs may be apportioned solely in the judgment of the Construction Manager. The Construction Manager may also withhold processing of contractor's payment until cleanup duties are resumed to Construction Manager's satisfaction.

B. General: Clean Project site and work areas daily, including common areas. Coordinate progress cleaning for joint-use areas where more than one installer has worked. Enforce requirements strictly. Dispose of materials lawfully.

1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
2. Do not hold materials more than 7 days during normal weather or 3 days if the temperature is expected to rise above 80 deg F (27 deg C).
3. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.

C. Site: Maintain Project site free of waste materials and debris.

D. Work Areas: Clean areas where Work is in progress to the level of cleanliness necessary for proper execution of the Work.

1. Remove liquid spills promptly.
2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.

E. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.
F. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.
G. Exposed Surfaces: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.
H. Cutting and Patching: Clean areas and spaces where cutting and patching are performed. Completely remove paint, mortar, oils, putty, and similar materials.

1. Thoroughly clean piping, conduit, and similar features before applying paint or other finishing materials. Restore damaged pipe covering to its original condition.

I. Waste Disposal: Burying or burning waste materials on site will not be permitted. Washing waste materials down sewers or into waterways will not be permitted.

J. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.
K. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.
L. Limiting Exposures: Supervise construction operations to assure that no part of the construction, completed or in progress is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

3.06 STARTING AND ADJUSTING

A. Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.
B. Adjust operating components for proper operation without binding. Adjust equipment for proper operation.
C. Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
D. Manufacturer's Field Service: If a factory-authorized service representative is required to inspect field-assembled components and equipment installation, comply with qualification requirements in Division 01 Section "Quality Requirements."

3.07 PROTECTION OF INSTALLED CONSTRUCTION

A. When finished work is installed, such as, but not limited to, flooring materials, toilet fixtures, roofing, doors, casework, countertops, finished wall surfaces or other materials that can be damaged during construction, provide appropriate protection immediately after installation to prevent damage.
B. Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.
C. Comply with manufacturer's written instructions for temperature and relative humidity.

D. Contractors shall not use finished materials and surfaces as ladders, platforms or storage shelves. Tools and toolboxes shall not be placed on finished surfaces without adequate protection.

3.08 CORRECTION OF THE WORK

A. Repair or remove and replace defective construction. Restore damaged substrates and finishes. Comply with requirements in Division 01 Section 01 73 29 "Cutting and Patching."

1. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment.

B. Restore permanent facilities used during construction to their specified condition.
C. Remove and replace damaged surfaces that are exposed to view if surfaces cannot be repaired without visible evidence of repair.
D. Repair components that do not operate properly. Remove and replace operating components that cannot be repaired.

END OF SECTION 01 73 00

SECTION 01 73 29 - CUTTING AND PATCHING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes general administrative and procedural requirements governing execution of the Work.
B. Requirements and limitations for cutting and patching of Work.

1. A Contractor, subcontractor, or sub-subcontractor requiring the cutting of openings in new Work installed by others shall have such openings cut and patched by the trade which installed the work, and such cutting and patching shall be at the expense of the Contractor, subcontractor, or sub-subcontractor requiring the opening.
2. A Contractor, subcontractor, or sub-subcontractor requiring the cutting of openings or patching of existing materials shall be performed by a sub-contractor with experience in cutting and patching of material being modified and shall be at the expense of the Contractor, subcontractor, or sub-subcontractor requiring the opening.
3. Approval to do such cutting and patching shall be received from the Architect prior to proceeding with the work and shall include installation of such reinforcement of the work as the Architect may direct.
4. All blocking, bracing, reinforcement, or structural enhancement required due to cutting and patching shall be provided at no additional cost to Owner. All patching work shall match adjacent existing Work unless otherwise noted.
5. Contractor, subcontractors, and sub-sub-contractors shall conduct Work in accordance with the Occupational Safety and Health Act of 1970 (OSHA) and all additions, amendments, and revisions thereto.

C. Related Sections include the following:

1. Division 01 Section 01 73 00 “Execution" for additional general administrative and procedural requirements governing execution of the Work.
2. See Individual Specification Sections or Construction Drawings for specific requirements and limitations applicable to cutting and patching individual parts of the Work.

    a. Requirements in this Section apply to plumbing, mechanical, and electrical installations. Refer to Individual Specification Sections for other

requirements and limitations applicable to cutting and patching plumbing, mechanical, and electrical installations.

1.03 DEFINITIONS

A. Cutting: Removal of existing or in-place construction necessary to permit installation or performance of other Work.
B. Patching: Fitting and repair work required to restore surfaces to original conditions after installation of other Work.

1.04 PREINSTALLATION MEETINGS

A. Cutting and Patching Conferences: Prior to commencing Work requiring cutting and patching, meet at Project site with parties involved in cutting and patching to review extent of cutting and patching anticipated and examine procedures for ensuring satisfactory result from cutting and patching Work. Inform Architect and Construction Manager of scheduled meeting. Require representatives of each Prime Contract directly concerned or affected by the cutting and patching to attend, including the following:

1. Contractor's superintendent.
2. Trade supervisor responsible for cutting operations.
3. Trade supervisor(s) responsible for patching of each type of substrate.
4. Mechanical, electrical, and utilities subcontractors' supervisors, to the extent each trade is affected by cutting and patching operations.

B. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.

1.05 SUBMITTALS

A. Cutting and Patching Proposal: Submit a proposal describing procedures at least 10 days before the time cutting and patching will be performed, requesting approval to proceed. Include the following information:

1. Extent: Describe cutting and patching, show how they will be performed, and indicate why they cannot be avoided.
2. Changes to Existing Construction: Describe anticipated results. Include changes to structural elements and operating components as well as changes in building's appearance and other significant visual elements.
3. Products: List products to be used and firms or entities that will perform the Work.
4. Dates: Indicate when cutting and patching will be performed.
5. Utilities and Mechanical and Electrical Systems: List services and systems that cutting and patching procedures will disturb or affect. List services and systems that will be relocated and those that will be temporarily out of service. Indicate length of time permanent services and systems will be disrupted.

    a. Include description of provisions for temporary services and systems during interruption of permanent services and systems

6. Structural Elements: Where cutting and patching involve adding reinforcement to structural elements, submit details and structural calculations showing integration of reinforcement with original structure.
7. Architect's Approval: Obtain approval of cutting and patching proposal before cutting and patching. Approval does not waive right to later require removal and replacement of unsatisfactory work.

1.06 QUALITY ASSURANCE

A. Structural Elements: Do not cut and patch structural elements in a manner that could change their load-carrying capacity or load-deflection ratio.

B. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety.

1. Primary operational systems and equipment.
2. Fire separation assemblies.
3. Air or smoke barriers.
4. Fire-protection systems.
5. Plumbing piping systems.
6. Mechanical systems piping and ducts.
7. Control systems.
8. Communication systems.
9. Fire-detection and -alarm systems.
10. Conveying systems.
11. Electrical wiring systems.
12. Operating systems of special construction.

C. Miscellaneous Elements: Do not cut and patch the following elements or related components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety.

1. Water, moisture, or vapor barriers.
2. Membranes and flashings.
3. Exterior curtain-wall construction.
4. Sprayed fire-resistive material.
5. Equipment supports.
6. Piping, ductwork, vessels, and equipment.
7. Noise- and vibration-control elements and systems.

D. Visual Elements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch construction in a manner that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.

1. If possible, retain original Installer or fabricator to cut and patch exposed Work listed below. If it is impossible to engage original Installer or fabricator, engage another recognized, experienced, and specialized firm.

a. Processed concrete finishes.
b. Stonework and stone masonry.
c. Ornamental metal.
d. Preformed metal panels.
e. Roofing.
f. Firestopping.
g. Window wall system.
h. Stucco and ornamental plaster.
i. Terrazzo.
j. Finished wood flooring.
k. Wall covering.
l. HVAC enclosures, cabinets, or covers.

1.07 WARRANTY

A. Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during cutting and patching operations, by methods and with materials so as not to void warranties.

PART 2 - PRODUCTS

2.01 MATERIALS

A. General: Comply with requirements specified in other Sections of these Specifications.
B. Existing Materials: Use materials identical to existing materials. For exposed surfaces, use materials that visually match existing adjacent surfaces to the fullest extent possible.

1. If identical materials are unavailable or cannot be used, use materials that, when installed, will match the visual and functional performance of existing materials. Use materials that are not considered hazardous.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine surfaces to be cut and patched and conditions under which cutting and patching are to be performed.

1. Compatibility: Before patching, verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
2. Proceed with installation only after unsafe or unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Temporary Support: Provide temporary support of Work to be cut.
B. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.
C. Adjoining Areas: Avoid interference with use of adjoining areas or interruption of free passage to adjoining areas.
D. Existing Utility Services and Mechanical/Electrical Systems: Where existing services/systems are required to be removed, relocated, or abandoned, bypass such services/systems before cutting to prevent interruption to occupied areas.

3.03 PERFORMANCE

A. General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.

1. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently, patch as required to restore surfaces to their original condition.

B. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations. Cutting tools or saws shall be equipped with bays or containers, or connected to vacuum systems, to minimize dust.

1. In general, use hand or small power tools designed for sawing and grinding, not hammering, and chopping. Cut holes and slots neatly to minimum size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
2. Finished Surfaces: To avoid marring existing finished surfaces, cut or drill from the exposed or finished side into concealed surfaces.
3. Concrete and Masonry: Cut using a cutting machine, such as a carborundum saw or a diamond-core drill.
4. Excavating and Backfilling: Comply with requirements in applicable Sections where required by cutting and patching operations.
5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.
6. Proceed with patching after construction operations requiring cutting are complete.

C. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other Work. Patch with durable seams that are as invisible as possible. Provide materials and comply with installation requirements specified in other Sections, where applicable.

1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate physical integrity of installation.

2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.

    a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
    b. Restore damaged pipe covering to its original condition.

3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove existing floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.

    a. Where patching occurs in a painted surface, apply primer and intermediate paint coats over the patch and apply final paint coat over entire unbroken surface containing the patch. Provide additional coats until patch blends with adjacent surfaces.

4. Ceilings: Patch, repair, or rehang existing ceilings as necessary to provide an even-plane surface of uniform appearance.
5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition.

D. Each Prime Contractor shall do cutting and patching in existing work or work already constructed required for the work involved in their Contract. Patch holes or openings left by him to match the unaltered existing construction:

1. In Work already constructed, lintels and structural supports required to maintain structural integrity shall be provided by the Contractor whose work requires the opening.
2. Cutting of holes, installation of curbs, and temporary, weatherproof, and secured enclosures for penetrations through the existing Work shall be the responsibility of the Prime Contractor whose work requires the penetration. Actual roof flashing and associated work must be executed by a subcontractor, hired by the Prime Contractor, who is acceptable to the manufacturer of the existing roof which shall be certified, in writing, to the Owner and Architect/Engineer by the manufacturer. Existing warranty/guarantee shall be certified as remaining valid.
3. For penetrations through new work, the Prime Contractor whose work requires the penetration shall be responsible to provide the General Contractor of location, size, and configuration required for the penetration well in advance of the scheduled work. Prime Contractor who requires penetrations through the new roof construction shall provide the prefabricated roof curb and temporary, weatherproof, and secured enclosure on top of curb.

E. Each Prime Contractor shall employ skilled and experienced installer to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time and complete without delay.

F. Each Prime Contractor shall submit written request in advance of cutting or altering elements affecting:

1. Structural integrity of element.
2. Integrity of weather-exposed or moisture-resistant elements.
3. Efficiency, maintenance, or safety of element.
4. Visual qualities of sight-exposed elements.
5. Work of Owner or separate contractor.

G. Should conditions of work or the schedule indicate a change of products from original installation, each Prime Contractor shall submit request for substitution as specified in Section 01 60 00 “Product Requirements”.

1. Inspect existing conditions of project, including elements subject to damage or to movement during cutting and patching.
2. After uncovering work, inspect conditions affecting installation of products or performance of work.
3. Report unsatisfactory or questionable conditions to Construction Manager and Architect/Engineer, in writing; do not proceed with Work until Architect/Engineer has provided further instructions.

H. Each Prime Contractor shall submit written notice to Construction Manager designating the date and time the work will be uncovered.

1. Provide adequate temporary support as necessary to assure structural value or integrity of affected portion of work.
2. Provide devices and methods to protect other portions of project from damage.
3. Provide protection from elements for that portion of the project exposed by cutting and patching work and maintain excavations free from water.

I. Each Prime Contractor shall execute cutting, fitting, and patching including excavation and fill, to complete Work and to:

1. Make its several parts fit together properly.
2. Uncover portions of the work to provide for installation of ill-timed work.
3. Remove and replace defective work.
4. Remove and replace work not conforming to requirements of the Contract Documents.
5. Remove samples of installed work as specified for testing.
6. Provide routine penetrations of non-structural surfaces for installation of piping and electrical conduit.

J. Each Prime Contractor shall execute Work by avoiding damage to other work and providing proper surfaces to receive patching and finishing.

K. Each Prime Contractor shall execute fitting and adjustment of products to provide a finished installation to comply with specified products, functions, tolerances, and finishes.

L. Each Prime Contractor shall restore Work with new products in accord with requirements of Contract Documents.

M. Each Prime Contractor shall fit Work airtight to pipes, sleeves, ducts, conduit, and other penetrations through surfaces.

N. Each Prime Contractor shall maintain integrity of wall, ceiling, or floor construction, and completely seal voids.

O. Each Prime Contractor shall refinish surfaces to match adjacent finishes. For continuous surfaces, refinish to nearest intersection; for an assembly, refinish entire unit.

P. Each Prime Contractor shall identify hazardous substance or condition exposed during the Work and report to the Construction Manager for decision or remedy.

3.04 HAZARDOUS MATERIAL PROVISIONS

A. Potential for Hazardous Materials that may affect the Work: Certain environmental conditions or hazardous materials may exist or be encountered during the Work. Each Prime Contractor shall follow the guidelines listed below for the environmental conditions listed that may exist or be encountered during the Work.

B. The Contractor is responsible for compliance with any requirements included in the Contract Documents regarding hazardous materials or substances. If the Contractor encounters a hazardous material or substance not addressed in the Contract Documents and if reasonable precautions will be inadequate to prevent foreseeable bodily injury or death to persons resulting from a hazardous material or substance, including but not limited to asbestos, mercury, or polychlorinated biphenyl (PCB), encountered on the site by the Contractor, the Contractor shall, upon recognizing the condition, immediately stop Work in the affected area and notify the Owner, Construction Manager, and Architect of the condition.

1. Lead-Based Paint: Painted and varnished surfaces in buildings built prior to 1978 must be assumed to be coated with lead-based paint. Contractors shall immediately report to Construction Manager any areas suspected to be lead paint for decision or remedy. Contractor shall be responsible for all costs related to removal of lead-based paint items in areas affected by their Work as noted below. All required testing shall be performed in accordance with applicable EPA and HUD standards and guidelines pertaining to lead-based paint inspections.

    a. Lead-Based Paint Disturbance. Each Prime Contractor shall be responsible for lead-based paint disturbance precautions.

        i. For buildings defined as a Child-Occupied Facility (children under the age of 6). When these surfaces are disturbed, that disturbance shall be conducted in accord with the Environmental Protection Agency (EPA) 40 CFR, Part 745 “Lead, Renovation, Repair and Painting Program”. Compliance is to include using EPA licenses and certified trained renovators, Owner and occupant notifications, work area containment, dust minimization, and clean-up certification. Architect/Engineer shall be copied on the Owner and occupant notifications.

        ii. For buildings that are not defined as a Child-Occupied Facility (children under the age of 6), all renovation or new construction work that impacts painted components containing lead shall be performed in accordance with the OSHA Lead-in Construction Standard (29 CFR 1926.62), as applicable to the work being performed; and a proper waste management plan shall be utilized to certify that the waste is tested for hazardous waste classification, as applicable, and properly disposed or recycled. Contractors working on the project are responsible for fulfilling all applicable OSHA requirements pertaining

to lead, as well as all other applicable federal, state, or local requirements or regulations pertaining to lead-in construction.

b. Lead-Based Paint: Demolition and Handling

i. Contractor shall handle, contain, store, test, transport, and dispose of demolition debris with lead-containing surface coating in accordance with applicable local, state, and federal regulations. Most painted architectural components in fair condition (not blistering, peeling, etc.), by law, may be disposed of as Construction and Demolition (C&D) debris. If deemed necessary for disposal, Contractor shall be responsible for collecting and having analyzed representative samples of the waste. If necessary, samples shall be tested for toxicity using the Toxicity Characteristics Leaching Procedure (TCLP) for lead sufficient to determine whether the debris is a hazardous waste as defined in 40 CFR 261.3, or a residual waste, as defined in 25 PA Code 287.1, and shall include such analysis as required by the disposal facility. A qualified environmental laboratory acceptable to the Architect and Construction Manager shall conduct tests. A copy of all testing shall be forwarded to the Architect, Construction Manager and Owner.

ii. The Contractor shall be responsible for the costs of sample collection and laboratory analysis. Alternately, Contractor can assume lead waste generated is a hazardous waste and TCLP testing is not required, but the waste must then be disposed of and transported as hazardous waste.

iii. If, based on testing, there is any hazardous waste generated and transferred to a hazardous waste disposal facility, Contractor shall provide, within 45 days from the time the material is transferred to the disposal facility, a waste manifest to the Owner that identifies the disposal facility name and address, EPA Identification Number, the identity of the waste material, and a statement certifying that the waste was disposed at that facility, including the date. Forward original document to Owner with a copy to the Architect and Construction Manager.

2. Polychlorinated Biphenyl (PCB) Light Ballasts and Mercury-Containing Fluorescent Light Fixture Recycling and Disposal

a. PCB Light ballasts:

i. Ballasts demarcated as non-PCB containing may be recycled as non-PCB ballasts in accordance with applicable industry standards for those types of ballasts.

ii. Ballast that do not carry a demarcation of non-PCB should be assumed to contain PCB’s and recycled as PCB ballasts in a facility that accepts PCB ballasts as universal waste unless they are electronic (no suspect oil). Leaking PCB light ballasts shall be disposed of as hazardous waste unless testing is performed to classify the waste for PCB’s.

b. Fluorescent light tubes should be assumed to contain mercury at levels that could deem them “hazardous waste” for disposal purposes. All fluorescent light

tubes impacted by renovation or new construction work shall be sent for recycling as universal waste to a facility that accepts mercury-containing light tubes as part of their universal waste program.

END OF SECTION 01 73 29

SECTION 01 74 00 – FINAL CLEANING

PART 1 – GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes final cleaning requirements for the Project.
B. Final cleaning shall be scheduled and completed prior to Owner occupancy for each phase per the Phasing Plan(s).
C. Related Sections include the following:

1. Cleaning Requirements specific to work specified in individual specification sections pertaining to that work.

2. Section 01 12 00 Multiple Work Scope Summary
3. Section 01 50 00 Temporary Facilities and Controls

1.03 QUALIFICATIONS

A. Provide qualified and sufficient personnel responsible for final cleaning of all areas (interior and exterior) impacted by new construction and/or renovation.

PART 2 - PRODUCTS

2.01 CLEANING MATERIALS AND EQUIPMENT

A. Only utilize cleaning materials recommended by manufacturers of product surface to be cleaned.
B. Only utilize cleaning materials on surfaces recommended by the cleaning product material manufacturer.
C. Mico-fiber Towels: New clean microfiber cleaning cloths for damp wiping on all surfaces.

1. Cloths containing cotton or other non-microfiber blends will not be acceptable.

D. Water: Clean, potable water is to be used.
E. Vacuums: All vacuums utilized in final cleaning efforts must be HEPA rated.

1. Vacuums shall be rated as a HEPA unit by the manufacturer and must carry a silver, gold or platinum rating as defined by the Carpet and Rug Institute.

a. Vacuum must be rated at a minimum of 100 inches of water lift.
b. HEPA filters shall be on the vacuum to maintain HEPA rating during use.
c. HEPA filters shall be manufactured for the vacuum being used
d. Conventional vacuum equipment retrofitted with HEPA filters will not be acceptable.
e. Filters shall be maintained and replaced when more than 2/3 full to maintain the vacuum's rated suction lift and dust capture.

PART 3 - EXECUTION

3.01 GENERAL

A. Employ experienced workers or professional cleaners for final cleaning that are trained and qualified in the requirements for the final cleaning.
B. If the personnel employed by the Contractor cannot meet the schedule and cleaning standards established in the Drawings and Specifications, in all or part, the Owner has the right to self-perform and/or hire cleaning crews as required to complete the work. All costs incurred by the Owner will be back-charged to the Contractor.
C. Review requirements for completing final cleaning efforts and conditions that will affect the work.
D. The General Contractor is to provide final cleaning for entire Project except in regards to HVAC equipment and associated ductwork. The Mechanical Contractor is responsible for final cleaning of their equipment and associated filters.
E. The General Contractor shall coordinate cleaning efforts with the work of other Prime Contractors, subcontractors and the Owner.
F. Final Cleaning Coordination Meeting:

1. The General Contractor shall coordinate a final cleaning coordination meeting with the Prime Contractors, Construction Manager, Owner and Owner's other contractors two weeks prior to being on site.

    a. The purpose of this meeting is to establish the phasing of areas to be final cleaned by the General Contractor and review the requirements for the final cleaning and move-in.

2. Contractor shall provide a detailed schedule, including a work plan, respective dates for area and task, quantity of personnel and tasks for the work.

G. At completion of construction and renovation work, and just prior to acceptance or occupancy, conduct a final inspection of exposed interior and exterior surfaces.

1. Perform adjustments and additional cleaning to meet Contract Document requirements.

3.02 EXTERIOR GROUNDS

A. Rake clean grass, gardens, landscaping and other non-pavement surfaces of grounds around the building contaminated by project work or activities.

1. Utilize magnets to remove all screws, nails and other metallic waste debris.
2. Perform a visual survey to remove all non-metallic debris.

B. All bituminous and exterior concrete pavement surfaces and curb and gutter systems shall be broom swept and pressure washed to remove all visible construction-related materials.

1. All driving surfaces must be cleaned by a professional street sweeping company utilizing equipment intended for this type of work. This includes at a minimum bus loops, parking lots and driveways to streets.
2. Remove and dispose of material prior to its discharge into the storm sewer.
3. Once cleaning of all paved areas and curb, gutter systems is complete, and perminate stabilization in accordance with Pa Code 102.22 remove all Storm Water Pollution Prevention Plan (SWPPP) measures to ensure that the site drainage systems function properly.

3.03 BUILDING EXTERIOR

A. Exterior Surfaces

1. Remove grease, dust, dirt, stains, labels, fingerprints and other foreign materials from all exterior surfaces including, but not limited to, window and curtainwall framing/glazing, door systems, metal panel systems, light fixtures and other exposed items.
2. Repair, patch and touch up or replace marred surfaces to match adjacent finishes. Refer to material's corresponding Specification Section for additional information on repair measures.

B. Roof Systems

1. Pick up and remove all visible debris from construction activities including fasteners, insulation, pallets, paper, excess roofing materials and other items from the work.
2. Clean roof drain screens and roof drain bowl assembly to ensure that all debris have been removed and no obstructions exist in the drain assembly.

3.04 BUILDING INTERIOR

A. Clean all rooms from the bottom of the ceiling, or roof deck in areas with exposed ceilings, to the floors and wall surfaces involved in the construction area including:

1. HEPA Vac and wipe down all
    a. Exposed Structures
    b. Mechanical: exposed fire protection piping, hydronic and domestic piping; and ductwork
    c. Electrical: light fixtures
    d. Ceilings: lay-in ceiling grid and tiles; gypsum board soffits and clouds
    e. Wall Surfaces: ceramic or porcelain tile, vinyl wallcovering, painted surfaces

f. Floor Surfaces: terrazzo, VCT, LVT, ceramic or porcelain tile, carpet

B. Clean all exposed interior brick with clean potable water and/or cleaning agent approved for use on brick and interior applications utilizing a scrub brush and changing water every five linear feet of wall to prevent re-contamination of cleaned surfaces.

1. Rinse and remove contaminants
2. Utilize exhaust and ventilation to ensure that areas are dry within 24 hours
3. Utilize procedures to prevent water/cleaning agent damage to all adjacent surfaces

C. Clean all terrazzo with soap clean water and scrubber machine.

1. Clean terrazzo to remove all dirt or cleaning material residue
2. Rinse with clean water until surfaces have no dust or chemical residue and final rinse water is clear.

D. Remove all paint overspray, adhesives, dust contaminants and marks off flooring materials.

1. Double rinse with clan water to remove dust and chemical residue.
2. See each specification section corresponding to flooring materials for specific cleaning and finishing requirements.

E. Completely scrub down all tiled surfaces (i.e. toilet rooms) using clean soapy water and rinse all surfaces with clean water until dust and chemical residue is removed.

1. Prevent water or moisture related damage to the wall systems.

F. HEPA vacuum all floors after all other cleaning activities are complete.

1. Coordinate the work to limit the need for access to the spaces being cleaned.
2. Thoroughly HEPA vacuum carpeting that has been contaminated with dust or debris to remove all those materials from the carpet profile, including the carpet backing surface.
3. If carpet has been stained, the Contractor may try to re-clean the carpet prior to proceeding with removal and replacement. Re-clean carpet that has become stained utilizing techniques recommended by the carpet manufacturer that are gold or platinum rated by the Carpet and Rug institute and that are approved by the Architect/Engineer and that will remove stain and leave the carpet free of chemical residue of contaminants and free of any visible stains or other signs of degradation compared to new condition.
4. Carpet installed in this project needs to be provided and retained in a new condition at the time of project completion.

    a. Remove and replace carpet that is microbial contaminated, is soiled, is visibly stained, is contaminated or otherwise damaged by work or the carpet extraction process or that does not comply with the requirements of the Contract Documents as compared to the carpet in new condition.

G. Replace all damaged, dirty, stained or marred ceiling tile.

H. As applicable, the interiors of all HVAC units shall be completely HEPA vacuumed cleaned and wiped clean with clean micro-fiber cloths to remove all dust residue and other contaminants prior to operation.

1. If HVAC coil surfaces are contaminated with dust, or microbial contaminants, clean to remove the contamination.
2. If liquids or water are utilized to assist with the cleaning, inspect to ensure that the unit surfaces are dry within 24 hours after wetting.
3. Cleaning work shall be performed with utility procedures and materials that will prevent the release or disbursal of any dust or contaminates onto other surfaces in the HVAC system or in the building.

I. The Owner may randomly check interior of air-handling equipment and ductwork.

1. If any visible dust or dirt exists within ductwork, the Contractor shall hire, at their expense, a professional duct cleaning company to clean all affected ducts to remove visible contamination.
2. Cleaning shall occur with 10 days of notification
3. If the required cleaning does not occur, the Owner will have the identified equipment and/or ductwork cleaned and the cost will be deducted from the Contractor’s contract.

J. All mechanical units requiring filters shall have new filters installed after the cleaning process.

1. Filters shall be the type (meeting with depth, size and filter efficiency requirements) specified.

K. Clean all chases in Custodial Rooms, Mechanical Rooms and Toilet Rooms in the area of work.

1. Remove/scrape clean all mortar (without use of acids)/concrete debris, dust and general construction debris.
2. HEPA vacuum clean to remove all dust.

L. HEPA vacuum all the surfaces after all construction is complete.

END OF SECTION 01 74 00

SECTION 01 77 00 – CLOSEOUT PROCEDURES

PART 1 – GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY OF SECTION

A. This Section specifies administrative and procedural requirements for the following, but not limited to:

1. Operation, Maintenance and Emergency Manuals
2. Project Record Procedures
3. Closeout procedures

B. Closeout requirements for specific construction activities are included in the appropriate Sections in included Divisions.

1.03 OPERATION AND MAINTENANCE MANUAL CLOSEOUT SUBMITTALS

A. Manual Content: Operations and maintenance manual content is specified in individual specification sections to be reviewed at the time of respective Section submittals. Submit reviewed manual content formatted and organized as required by this Section.

1. Where applicable, clarify and update reviewed manual content to correspond to modifications and field conditions.

B. Format: Submit operations and maintenance manuals in the following format:

1. PDF electronic file. Assemble each manual into a composite electronically-indexed file. Submit on digital media acceptable to Architect.

a. Name each indexed document file in composite electronic index with applicable item name. Include a complete electronically-linked operation and maintenance directory.
b. Enable inserted reviewer comments on draft submittals.

C. Initial Manual Submittal: Submit a draft copy of each manual at least 30 days before commencing demonstration and training. Architect and Commissioning Agent will comment on whether general scope and content of manual are acceptable.

D. Final Manual Submittal: Submit each manual in final form prior to requesting inspection for Substantial Completion and at least 15 days before commencing demonstration and training. Architect and Commissioning Agent will return copy with comments.

1.04 PREPARATION AND MAINTENANCE DOCUMENTATION DIRECTORY

A. Organization: Include a section in the directory for each of the following:

1. List of documents.
2. List of systems.
3. List of equipment including serial numbers.
4. Table of contents.

B. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.
C. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of a system, list alphabetically in separate list.
D. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.
E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with same designation used in the Contract Documents. If no designation exists, assign a designation according to ASHRAE Guideline 4, "Preparation of Operating and Maintenance Documentation for Building Systems."

1.05 REQUIREMENTS FOR EMERGENCY, OPERATION, AND MAINTENANCE MANUALS

A. Organization: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:

1. Title page.
2. Table of contents.
3. Manual contents.

B. Title Page: Include the following information:

1 Subject matter included in manual.
2. Name and address of Project.
3. Name and address of Owner.
4. Date of submittal.
5. Name and contact information for Contractor.
6. Name and contact information for Architect.
7. Cross-reference to related systems in other operation and maintenance manuals.

C Table of Contents: List each product included in the manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.

1. If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.

D. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.

E. Manuals, Electronic Files: Submit manuals in the form of a multiple file composite electronic PDF file for each manual type required.

1. Electronic Files: Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.
2. File Names and Bookmarks: Enable bookmarking of individual documents based upon file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a readily navigated file tree. Configure electronic manual to display bookmark panel upon opening file.

1.06 EMERGENCY MANUALS

A. Content: Organize manual into a separate section for each of the following:

1. Type of emergency.
2. Emergency instructions.
3. Emergency procedures.

B. Type of Emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:

1. Fire.
2. Flood.
3. Gas leak.
4. Water leak.
5. Power failure.
6. Water outage.
7. System, subsystem, or equipment failure.
8. Chemical release or spill.

C. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Owner's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.

D. Emergency Procedures: Include the following, as applicable:

1. Instructions on stopping.
2. Shutdown instructions for each type of emergency.

3. Operating instructions for conditions outside normal operating limits.
4. Required sequences for electric or electronic systems.
5. Special operating instructions and procedures.

1.07 OPERATION MANUALS

A. Content: In addition to requirements in this Section, include operation data required in individual Specification Sections and the following information:

1 System, subsystem, and equipment descriptions. Use designations for systems and equipment indicated on Contract Documents.
2 Performance and design criteria if Contractor has been delegated design responsibility.
3 Operating standards.
4 Operating procedures.
5 Operating logs.
6 Wiring diagrams.
7 Control diagrams.
8 Piped system diagrams.
9 Precautions against improper use.
10 License requirements including inspection and renewal dates.

B. Descriptions: Include the following:

1. Product name and model number. Use designations for products indicated on Contract Documents.
2. Manufacturer's name.
3. Equipment identification with serial number of each component.
4. Equipment function.
5. Operating characteristics.
6. Limiting conditions.
7. Performance curves.
8. Engineering data and tests.
9 Complete nomenclature and number of replacement parts.

C. Operating Procedures: Include the following, as applicable:

1. Startup procedures.
2. Equipment or system break-in procedures.
3. Routine and normal operating instructions.
4. Regulation and control procedures.
5. Instructions on stopping.
6. Normal shutdown instructions.
7. Seasonal and weekend operating instructions.
8. Required sequences for electric or electronic systems.
9. Special operating instructions and procedures.

D. Systems and Equipment Controls: Describe the sequence of operation, and diagram controls as installed.

E. Piped Systems: Diagram piping as installed and identify color-coding where required for identification.

1.08 PRODUCT MAINTENANCE MANUALS

A. Content: Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.

B. Source Information: List each product included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.

C. Product Information: Include the following, as applicable:

1. Product name and model number.
2. Manufacturer's name.
3. Color, pattern, and texture.
4. Material and chemical composition.
5. Reordering information for specially manufactured products.

D. Maintenance Procedures: Include manufacturer's written recommendations and the following:

1. Inspection procedures.
2. Types of cleaning agents to be used and methods of cleaning.
3. List of cleaning agents and methods of cleaning detrimental to product.
4. Schedule for routine cleaning and maintenance.
5. Repair instructions.

E. Repair Materials and Sources: Include lists of materials and local sources of materials and related services.

F. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1. Include procedures to follow and required notifications for warranty claims.

1.09 SYSTEMS AND EQUIPMENT MAINTENANCE MANUALS

A. Content: For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranty and bond information, as described below.

B. Source Information: List each system, subsystem, and piece of equipment included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title

in Project Manual and drawing or schedule designation or identifier where applicable.

C Manufacturers' Maintenance Documentation: Include the following information for each component part or piece of equipment:

1. Standard maintenance instructions and bulletins.
2. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
3. Identification and nomenclature of parts and components.
4. List of items recommended to be stocked as spare parts.

D Maintenance Procedures: Include the following information and items:

1. Test and inspection instructions.
2. Troubleshooting guide.
3. Precautions against improper maintenance.
4. Disassembly; component removal, repair, and replacement; and reassembly instructions.
5. Aligning, adjusting, and checking instructions.
6. training

E Maintenance and Service Schedules: Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.

1. Scheduled Maintenance and Service: Tabulate actions for daily, weekly, monthly, quarterly, semiannual, and annual frequencies.
2. Maintenance and Service Record: Include manufacturers' forms for recording maintenance.

F Spare Parts List and Source Information: Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.

G Maintenance Service Contracts: Include copies of maintenance agreements with name and telephone number of service agent.

H Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1 Include procedures to follow and required notifications for warranty claims.

1.10 MANUAL PREPARATION

A. Operation and Maintenance Documentation Directory: Prepare a separate manual that provides an organized reference to emergency, operation, and maintenance manuals.

B. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.

C. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.

D Operation and Maintenance Manuals: Assemble a complete set of operation and maintenance data indicating operation and maintenance of each system, subsystem, and piece of equipment not part of a system.

1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.

E Manufacturers' Data: Where manuals contain manufacturers' standard printed data, include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.

1. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.

F. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in record Drawings to ensure correct illustration of completed installation.

1. Do not use original project record documents as part of operation and maintenance manuals.
2. Comply with requirements of Owner for newly prepared record Drawings for "Project Record Documents."

G. Comply with Division 01 Section "Closeout Procedures" for schedule for submitting operation and maintenance documentation.

PART 2 – PROJECT RECORDS

2.01 ADMINISTRATIVE AND PROCEDURAL REQUIREMENTS

A. Administrative and procedural requirements for Project Record Documents.

1. Project Record Documents required include:

a. Marked-up copies of Contract Drawings.
b. Marked-up copies of Shop Drawings.
c. Newly prepared Drawings.
d. Marked-up copies of Specifications, addenda and Change Orders.

e. Marked-up Product Data submittals.
f. Record Samples.
g. Field records for variable and concealed conditions.
h. Record information on Work that is recorded only schematically.

2. Maintenance of Documents and Samples: Store record documents and Samples in the field office apart from Contract Documents used for construction. Do not permit Project Record Documents to be used for construction purposes. Maintain record documents in good order, and in a clean, dry, legible condition. Always make documents and Samples available for inspection by the Architect.

2.02 RECORD DRAWINGS

A. Mark-up Procedure: During the construction period, maintain a set of blue-line or black-line white-prints of Contract Drawings and Shop Drawings for Project Record documentation purposes.

1. Mark these Drawings to indicate the actual installation where the installation varies appreciably from the installation shown originally. Give particular attention to information on concealed elements which would be difficult to identify or measure and record later. Items required to be marked include but are not limited to:

a. Dimensional changes to the Drawings.
b. Revisions to details shown on the Drawings.
c. Changes made by Change Order.
d. Details not on original Contract Drawings.

2. Mark completely and accurately record on prints of Contract Drawings or Shop Drawings, whichever is most capable of showing actual physical conditions. Where Shop Drawings are marked, show cross-reference on Contract Drawings location.
3. Mark record sets with red erasable colored pencil; use other colors to distinguish between changes for different categories of the Work at the same location.
4. Mark important additional information which was either shown schematically or omitted from original Drawings.
5. Note construction change directive numbers, alternate numbers, Change Order numbers and similar identification.
6. Responsibility for Markup: Where feasible, the individual or entity who obtained record data, whether the individual or entity is the installer, subcontractor, or similar entity, is required to prepare the mark-up on record Drawings.

a. Accurately record information in an understandable Drawing technique.
b. Record data as soon as possible after it has been obtained. In the case of concealed installations, record and check the mark-up prior to concealment.
c. At time of Substantial Completion, submit record Drawings to Engineer/Architect or Construction Manager for the Engineer/Architect's approval. Upon Engineer/Architect's approval, the Drawings will then become the Owner's records. Organize into sets, bind and label sets for Owner's continued use.

7. Preparation of Transparencies: Immediately prior to inspection for Certification of Substantial Completion, review completed marked-up record Drawings with the

Architect. When authorized, prepare a full set of corrected transparencies of Contract Drawings and Shop Drawings.

a. Incorporate changes and additional information previously marked on print sets. Erase, redraw, and add details and notations where applicable. Identify and date each Drawing; include the printed designation "PROJECT RECORD DRAWINGS" in a prominent location on each Drawing.
b. Refer instances of uncertainty to the Architect for resolution before submitting.
c. One set of original Contract Drawings will be furnished to the Contractor by the Owner for use in recording changes and additional information. Other printing as required is the Contractor's responsibility.
d. The Contractor is responsible for printing original Contract Drawings and other Drawings as required to produce transparencies. The Engineer/Architect will make original Contract Drawings available to the Contractor's print shop.
e. Copies and Distribution: After completing the preparation of transparency record drawings, print two (2) blue-line or black-line prints of each Drawing, whether or not changes and additional information were recorded. Organize the copies into manageable sets. Bind each set with durable paper cover sheets, with appropriate identification, including titles, dates and other information on cover sheets.

    1) Organize and bind original marked-up set of prints that were maintained during the construction period in the same manner.
    2) Organize record transparencies into sets matching the print sets. Place these sets in durable tube-type Drawing containers with end caps. Mark the end cap of each container with suitable identification.
    3) Submit the marked-up record set, transparencies, and two (2) copy sets to the Architect for Owner's records; the Architect will retain one copy set.

2.03 RECORD SPECIFICATIONS

A. During the construction period, maintain one (1) copy of the Project Specifications, including addenda and modifications issued, for Project Record Document purposes.

1. Mark the Specifications to indicate the actual installation where the installation varies substantially from that indicated in Specifications and modifications issued. Note related Project Record Drawing information, where applicable. Give particular attention to substitutions, selection of product options, and information on concealed installations that would be difficult to identify or measure and record later.

    a. In each Specification Section where products, materials or units of equipment are specified or scheduled, mark the copy with the proprietary name and model number of the product furnished.

2. Upon completion of mark-up, submit record Specifications to the Architect for Owner's records.

2.04 RECORD PRODUCT DATA

A. During the construction period, maintain one (1) copy of each Product Data submittal for Project Record Document purposes.

1. Mark Product Data to indicate the actual product installation where the installation varies substantially from that indicated in Product Data submitted. Include significant changes in the product delivered to the site, and changes in manufacturer's instructions and recommendations for installation.
2. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
3. Note related Change Orders and mark-up of record Drawings, where applicable.
4. Upon completion of mark-up, submit a complete set of record Product Data to the Architect for the Owner's records.
5. Where record Product Data is required as part of maintenance manuals, submit marked-up Product Data as an insert in the manual, instead of submittal as record Product Data.
6. Each Contractor is responsible for mark-up and submittal of record Product Data for its own Work.

2.05 RECORD DOCUMENT SUBMITTALS

A. General: Do not use record documents for construction purposes; protect from deterioration and loss in a secure, fire-resistive location; provide access to record documents for the Engineer/Architect's reference during normal working hours.

B. Record Drawings: Maintain a clean, undamaged set of blue or black-line white-prints of Contract Drawings and Shop Drawings. Mark the set to show the actual installation where the installation varies substantially from the Work as originally shown. Mark whichever drawing is most capable of showing conditions fully and accurately; where Shop Drawings are used, record a cross-reference at the corresponding location on the Contract Drawings. Give particular attention to concealed elements that would be difficult to measure and record at a later date. See Section 01 30 00 Administrative Requirements for additional information on Record Drawings.

1. Mark record sets with red erasable pencil; use other colors to distinguish between variations in separate categories of the Work.
2. Mark new information that is important to the Owner but was not shown on Contract Drawings or Shop Drawings.
3. Note related Change Order numbers where applicable.
4. Organize record drawing sheets into manageable sets, bind with durable paper cover sheets, and print suitable titles, dates and other identification on the cover of each set.

C. Record Specifications: Maintain one complete copy of the Project Manual, including addenda, and one copy of other written construction documents such as Change Orders and modifications issued in printed form during construction. Mark these documents to show substantial variations in actual Work performed in comparison with the test of the Specifications and modifications. Give particular attention to substitutions, selection of options and similar information on elements that are concealed or cannot otherwise be

readily discerned later by direct observations. Note related record drawing information and Product Data.

1. Upon completion of the Work, submit record Specifications to the Architect for the Owner's records. See Section 01 30 00 Administrative Requirements for additional information on Record Drawings.

D. Miscellaneous Record Submittals: Refer to other Specification Sections for requirements of miscellaneous record-keeping and submittals in connection with actual performance of the Work. Immediately prior to the date or dates of Substantial Completion, complete miscellaneous records and place in good order, properly identified and bound or filed, ready for continued use and reference. Submit to the Engineer/Architect and/or Construction Manager for the Owner's records. See Section 01 30 00 Administrative Requirements for additional information on Record Drawings.

2.06 2.06MISCELLANEOUS RECORD SUBMITTALS

A. Refer to other Specification Sections for miscellaneous record-keeping requirements and submittals in connection with various construction activities. Immediately prior to Substantial Completion, complete miscellaneous records and place in good order, properly identified, and bound or filed, ready for use and reference. Submit to the Engineer/Architect or Construction Manager for the Owner's records.

1. Categories of requirements resulting in miscellaneous records include, but are not limited to the following:

   a. Field records on excavations and foundations.
   b. Field records on underground construction and similar Work.
   c. Survey showing locations and elevations of underground lines. Invert elevations of drainage piping.
   d. Surveys establishing building lines and levels.
   e. Authorized measurements utilizing unit prices or allowances. Records of plant treatment.
   f. Ambient and substrate condition tests.
   g. Certifications received in lieu of Labels on bulk products. Batch mixing and bulk delivery records.
   h. Testing and qualification of tradesmen.
   i. Documented qualification of installation firms.
   j. Load and performance testing.
   k. Inspections and certifications by governing authorities.
   l. Leakage and water-penetration tests.
   m. Fire resistance and flame spread test results.
   n. Final inspection and correction procedures.

2.07 RECORDING

A. Post changes and modifications to the Documents as they occur. Do not wait until the end of the Project. The Engineer/Architect and/or Construction Manager will periodically review record documents to assure compliance with this requirement.

PART 3 – COMPLETION AND FINAL CLEANING

3.01 SUBSTANTIAL COMPLETION

A. Preliminary Procedures: Before requesting inspection for certification of Substantial Completion, complete the following: List exceptions in the request.

1. In the Application for Payment that coincides with, or first follows, the date Substantial Completion is claimed, show 100 percent completion for the portion of the Work claimed as substantially complete. Include supporting documentation for completion as indicated in these Contract Documents and a statement showing an accounting of changes to the Contract Sum.
    a. If 100 percent completion cannot be shown, include a list of incomplete items, the value of incomplete construction, and reasons the Work is not complete.
2. Advise Owner of pending insurance change-over requirements.
3. Submit specific warranties, workmanship bonds, maintenance agreements, final certifications and similar documents.
4. Remove temporary facilities from the site, along with construction tools, mock-ups, and similar elements.

B. Inspection Procedures: On receipt of a request for inspection, the Engineer/Architect will either proceed with inspection or advise the Contractor of unfilled requirements. The Engineer/Architect will prepare the Certificate of Substantial Completion following inspection or advise the Contractor of construction that must be completed or corrected before the certificate will be issued.

1. The Engineer/Architect will repeat inspection when requested and assured that the Work has been substantially completed.
2. Results of the completed inspection will form the basis of requirements for final acceptance.

3.02 FINAL ACCEPTANCE

A. Preliminary Procedures: Before requesting final inspection for certification of final acceptance and final payment, complete the following. List exceptions in the request.

1. Submit the final payment request with releases and supporting documentation not previously submitted and accepted. Include certificates of insurance for products and completed operations where required. Conform to the requirements of Section 01 29 00 - Payment Procedures.
2. Submit an updated final statement, accounting for final additional changes to the Contract Sum.
3. Submit a certified copy of the Engineer/Architect's final inspection list of items to be completed or corrected, stating that each item has been completed or otherwise resolved for acceptance, and the list has been endorsed and dated by the Engineer/Architect.

4. Submit final meter readings for utilities, a measured record of stored fuel, and similar data as of the date of Substantial Completion, or when the Owner took possession of and responsibility for corresponding elements of the Work.
5. Submit consent of surety to final payment.
6. Submit evidence of final, continuing insurance coverage complying with insurance requirements.

B. Re-inspection Procedure: The Engineer/Architect will re-inspect the Work upon receipt of notice that the Work, including inspection list items from earlier inspections, has been completed, except items whose completion has been delayed because of circumstances acceptable to the Engineer/Architect.

1. Upon completion of re-inspection, the Engineer/Architect will prepare a certificate of final acceptance or advise the Contractor of Work that is incomplete or of obligations that have not been fulfilled but are required for final acceptance.
2. If necessary, re-inspection will be repeated.

3.03 CLOSEOUT SUBMITTALS

A. When the Owner has determined that the Work is acceptable under the Contract Documents and the Contract fully performed, Contractor shall prepare and submit final Application for Payment to the Engineer/Architect together with, but not limited to, the following:

1. Contractor's Affidavit of Payment of Debts and Claims, AIA Document G706 (most recent edition of form).
2. Contractor's Affidavit of Release of Liens, AIA Document G706A (most recent edition of form).
3. Contractor's Lien waiver in the full amount of the Contract Sum.
4. Lien waivers from all subcontractors, sub-subcontractors and major material suppliers who have furnished material for the work under the contract with the Trade Contractor or a subcontractor. The lien waivers shall be in the full amount of the contract involved.
5. Consent of Surety Company to Final Payment, AIA Document G707, (most recent edition of form).
6. Evidence of Compliance with requirements of governing authorities:
a. Certificate of Inspection from all required agencies and departments.
b. Certificate of Occupancy.

7. Project Record Documents.
8. Operating and Maintenance Data, Instructions to Owner's Personnel.
9. Warranties and Bonds.
10. Special tools required for Owner maintenance.

3.04 FINAL CLEANING

A. The Contractors shall furnish all labor, materials, tools, equipment, and perform all work and services necessary for cleaning up required in conjunction with work performed, as shown on drawings and as specified, in accordance with provisions of the Contract Documents and completely coordinated with work of all other trades.
B. Although such work is not specifically indicated, furnish and install all supplementary or miscellaneous items, appurtenances and devices incidental to or necessary for a sound, secure and complete installation.
C. Administrative and procedural requirements for final cleaning at Substantial Completion:

1. Special cleaning requirements for specific elements of the Work are included in appropriate Sections of included Divisions.
2. Multiple Prime Contracts: Except as otherwise indicated, each Prime Contractor is responsible for coordination of final cleaning where more than one Prime Contractor is involved in final cleaning a single area or piece of equipment.
3. Environmental Requirements: Conduct cleaning and waste disposal operations in compliance with local laws and ordinances. Comply fully with federal and local environmental and anti-pollution regulations.

    a. Do not dispose of volatile wastes such as mineral spirits, oil or paint thinner in storm or sanitary drains.
    b. Burning or burying of debris, rubbish or other waste material on the premises is not permitted.
    c. Cleaning Agents: Use cleaning materials and agents recommended by the manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property, or that might damage finished surfaces.

END OF SECTION 01 77 00

SECTION 01 79 00 – DEMONSTRATION AND TRAINING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes administrative and procedural requirements for instructing Owner's personnel, including the following:

1. Demonstration of operation of all installed systems, subsystems, and equipment.
2. Training in operation and maintenance of all installed systems, subsystems, and equipment.
3. Demonstration and training video recordings.

1.03 INFORMATIONAL SUBMITTALS

A. Instruction Program: Submit outline of instructional program for demonstration and training, including a list of training modules and a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.

1. Alternatively, indicate proposed training modules using manufacturer-produced demonstration and training video recordings for systems, equipment, and products in lieu of video recording of live instructional module.

B. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names, and addresses of architects and owners, and other information specified.
C. Attendance Record: For each training module, submit list of participants, length of instruction time, and instruction date.
D. Evaluations: For each participant and for each training module, submit results and documentation of performance-based test.
E. Provide approved final Operations and Maintenance manuals for use during the training sessions.

1.04 CLOSEOUT SUBMITTALS

A. Transcript: Prepared and bound in format matching operation and maintenance manuals. Mark appropriate identification on front and spine of each binder. Include a cover sheet with same label information as the corresponding video recording. Include name of Project and date of video recording on each page.
B. Transcript: Prepared in PDF electronic format. Include a cover sheet with same label information as the corresponding video recording and a table of contents with links to corresponding training components. Include name of Project and date of video recording on each page.
C. At completion of training, submit complete training manual(s) for Owner's use prepared and bound in format matching operation and maintenance manuals AND/OR in PDF electronic file format on a USB flash drive, however Owner prefers

1.05 QUALITY ASSURANCE

A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.
B. Instructor Qualifications: A factory-authorized service representative, experienced in operation and maintenance procedures and training. Contractor to:

1. Inspect and discuss locations and other facilities required for instruction.
2. Review and finalize instruction schedule and verify availability of educational materials, instructors' personnel, audiovisual equipment, and facilities needed to avoid delays.
3. Review required content of instruction.
4. For instructions that must occur outside, review weather and forecasted weather conditions and procedures to follow if conditions are unfavorable.

C. Schedule training only after all systems have been tested and are fully operational.

1.06 COORDINATION

A. Coordinate instruction schedule with Owner and Construction Manager. Adjust schedule as required to minimize disruption of Owner's operations and to ensure availability of Owner's personnel.
B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.
C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data has been reviewed and approved by Architect or Construction Manager.

1.07 INSTRUCTION PROGRAM

A. Program Structure: Develop an instruction program that includes individual training modules for each system and for equipment not part of a system, as required by individual Specification Sections including but not limited to the following:

1. HVAC systems, including air-handling equipment, air distribution systems and terminal equipment and devices.
2. HVAC instrumentation and controls.
3. Electrical service and distribution system.
4. Packaged engine generators, including transfer switches.
5. Lighting equipment and controls.
6. Communication systems, including equipment. Inter-communication, clocks and programming voice and data and television.
7. Food Service Equipment.
8. Fire suppression system.
9. Plumbing systems.
10. Equipment.

B. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following as applicable to the system, equipment, or component:

1. Basis of System Design, Operational Requirements, and Criteria; Include the following:

    a. System, subsystem, and equipment descriptions.
    b. Performance and design criteria if Contractor is delegated design responsibility.
    c. Operating standards.
    d. Regulatory requirements.
    e. Equipment function.
    f. Operating characteristics.
    g. Limiting conditions.
    h. Performance curves.

2. Documentation: Review the following items in detail:

    a. Emergency manuals.
    b. Operations manuals.
    c. Maintenance manuals.
    d. Project record documents.
    e. Identification systems.
    f. Warranties and bonds.
    g. Maintenance service agreements and similar continuing commitments.

3. Emergencies: Include the following, as applicable:
    a. Instructions on meaning of warnings, trouble indications, and error messages.
    b. Instructions on stopping.
    c. Shutdown instructions for each type of emergency.
    d. Operating instructions for conditions outside of normal operating limits.
    e. Sequences for electric or electronic systems.
    f. Special operating instructions and procedures.

4. Operations: Include the following, as applicable:
    a. Startup procedures.
    b. Equipment or system break-in procedures.
    c. Routine and normal operating instructions.
    d. Regulation and control procedures.
    e. Control sequences.
    f. Safety procedures.
    g. Instructions on stopping.
    h. Normal shutdown instructions.
    i. Operating procedures for emergencies.
    j. Operating procedures for system, subsystem, or equipment failure.
    k. Seasonal and weekend operating instructions.
    l. Required sequences for electric or electronic systems.
    m. Special operating instructions and procedures.

5. Adjustments: Include the following:
    a. Alignments.
    b. Checking adjustments.
    c. Noise and vibration adjustments.
    d. Economy and efficiency adjustments.

6. Troubleshooting: Include the following:
    a. Diagnostic instructions.
    b. Test and inspection procedures.

7. Maintenance: Include the following:
    a. Inspection procedures.
    b. Types of cleaning agents to be used and methods of cleaning.
    c. List of cleaning agents and methods of cleaning detrimental to product.
    d. Procedures for routine cleaning.
    e. Procedures for preventive maintenance.
    f. Procedures for routine maintenance.
    g. Instruction on use of special tools.

8. Repairs: Include the following:
    a. Diagnosis instructions.
    b. Repair instructions.
    c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
    d. Instructions for identifying parts and components.
    e. Review of spare parts needed for operation and maintenance.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.01 PREPARATION

A. Assemble educational materials necessary for instruction, including documentation and training module(s). Assemble training modules into a training manual organized in coordination with requirements in Section 01 77 00 - "Closeout Procedures"
B. Set up instructional equipment at instruction location.
C. Provide the final training manual, a site-specific agenda, and the resume of the training instructor to the Construction Manager two weeks prior to the scheduled training session.

3.02 INSTRUCTION

A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Contractor and Owner for number of participants, instruction times, and location.
B. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.
C. Owner or Construction Manager will furnish Contractor with names and positions of participants.
D. Scheduling:

    1. Schedule training with Owner, through Construction Manager with at least [seven] (7) days' advance notice, but only after system has been tested and is fully operational.
    2. Provide instruction at mutually agreed on times. For equipment that requires seasonal operation, provide similar instruction at start of each season. The Contractor shall include one initial training and schedule training with Owner, through Architect or CM, with at least fourteen days’ advance notice. Start up and commissioning of systems must be completed before scheduling initial instructional session.
    3. For major systems equipment, the Contractor shall include one (1) follow-up training to address questions or concerns from the Owner after the equipment has been in service for a period of six (6) to twelve (12) months.

E. Training Location and Reference Material: Conduct training on-site in the completed and fully operational facility using the actual equipment in-place. Conduct training using final operation and maintenance data submittals.

F. Review all valve tags, labeling and access locations and provide summary or plans of all valves, shutoffs, and maintenance access locations.

G. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of a demonstration performance-based test.

H. Cleanup: Collect used and leftover educational materials and remove from Project site. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

3.03 DEMONSTRATION AND TRAINING VIDEO RECORDINGS

A. General: Record each training module separately. Include classroom instructions and demonstrations, board diagrams, and other visual aids, but not student practice.

1. At beginning of each training module, record each chart containing learning objective and lesson outline.

B. Video: Provide minimum 640 x 480 video resolution of training session in digital format on electronic media provided on a thumb drive.

1. Electronic Media: Read-only digital format in thumb or USB drive format, with commercial-grade graphic label.
2. File Hierarchy: Organize folder structure and file locations according to project manual table of contents. Provide complete screen-based menu.
3. File Names: Utilize file names based upon name of equipment generally described in video segment, as identified in Project specifications.
4. Contractor and Installer Contact File: Using appropriate software, create a file for inclusion on the Equipment Demonstration and Training media that describes the following for each Contractor involved on the Project, arranged according to Project table of contents:

    a. Name of Contractor/Installer.
    b. Business address.
    c. Business phone number.
    d. Point of contact.
    e. E-mail address.

C. Recording: Mount camera on tripod before starting recording, unless otherwise necessary to adequately cover area of demonstration and training. Display continuous running time.

1. Film training session(s) in segments not to exceed 15 minutes.

    a. Produce segments to present a single significant piece of equipment per segment.
    b. Organize segments with multiple pieces of equipment to follow order of Project Manual table of contents.

c. Where a training session on a particular piece of equipment exceeds 15 minutes, stop filming, and pause training session. Begin training session again upon commencement of new filming segment.
d. Light Levels: Verify light levels are adequate to properly light equipment. Verify equipment markings are clearly visible prior to recording.
e. Narration: Describe scenes on video recording by audio narration by microphone or dubbing audio narration off-site after video recording is recorded. Include description of items being viewed.
f. Transcript: Provide a transcript of the narration. Display images and running time captured from videotape opposite the corresponding narration segment.
g. Pre-produced Video Recordings: Provide video recordings used as a component of training modules in same format as recordings of live training.

END OF SECTION 01 79 00

SECTION 02 41 16 - STRUCTURE DEMOLITION

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes the following:

1. Demolition and removal of buildings and structures.
2. Demolition and removal of site improvements adjacent to a building or structure to be demolished.
3. Removing below-grade construction.
4. Disconnecting, capping or sealing, and removing site utilities.

B. Related Sections include the following:

1. Division 01 Section "Summary": Site restrictions.
2. Division 01 Section "Temporary Facilities and Controls": Temporary construction, protection facilities, and environmental-protection measures for building demolition operations.
3. Division 31 Section "Site Clearing": Site clearing and removal of above-grade improvements not part of building demolition.
4. Division 31 Section "Site Clearing": Site stripping, removal of plants and trees, and protection of plants and trees indicated to remain
5. Division 22 and 23 Sections: Demolishing or relocating site plumbing and HVAC items.
6. Division 26 Sections: Demolishing or relocating site electrical items.

1.02 DEFINITIONS

A. Remove: Detach items from existing construction and legally dispose of them off-site unless indicated to be removed and salvaged or recycled.
B. Remove and Salvage: Detach items from existing construction and deliver them to Owner ready for reuse.
C. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or recycled.

1.03 PERFORMANCE REQUIREMENTS

A. General: Use all reasonable means to divert construction and demolition waste from landfills and incinerators. Facilitate recycling and salvage of materials, including but not limited to the following:

1. Demolition Waste:

a. Concrete.
b. Concrete reinforcing steel.
c. Brick.
d. Building stone.
e. Concrete masonry units.
f. Structural and miscellaneous steel.
g. Rough hardware.
h. Aluminum windows.
i. Metal studs.
j. Copper and iron piping.
k. Steel supports and hangers.
l. Copper and iron valves.
m. Refrigerants.
n. Electrical conduit.
o. Copper wiring.

1.04 MATERIALS OWNERSHIP

A. Historic items, relics, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, antiques, and other items of interest or value to Owner that may be encountered during building demolition remain Owner's property. Carefully remove and salvage each item or object in a manner to prevent damage and deliver promptly to Owner.
B. Before building demolition, Contractor shall remove and salvage the following items for reinstallation in locations indicated in Drawings:

1. Dedication plaque.

1.05 SUBMITTALS

A. Qualification Data: For demolition firm and refrigerant recovery technician.
B. Proposed Environmental-Protection, Dust-Control, and Noise-Control Measures: Submit statement or drawing that indicates the measures proposed for use, proposed locations, and proposed time frame for their operation. Identify options if proposed measures are later determined to be inadequate.
C. Engineering Survey: Submit engineering survey of condition of building.
D. Schedule of Building Demolition Activities: Indicate the following:

1. Detailed sequence of demolition and removal work, with starting and ending dates for each activity.
2. Interruption of utility services.
3. Coordination for shutoff, capping, and continuation of utility services.
4. Locations of temporary protection and means of egress.
5. Coordination of Owner's continuing occupancy of adjacent buildings and partial use of premises.

E. Inventory: After building demolition is complete, submit a list of items that have been removed and salvaged.

F. Predemolition Photographs or Videotape: Show existing conditions of adjoining construction and site improvements, including finish surfaces, that might be misconstrued as damage caused by building demolition operations. Submit before Work begins.
G. Landfill Records: Indicate receipt and acceptance of hazardous wastes by a landfill facility licensed to accept hazardous wastes.
H. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.

1.06 QUALITY ASSURANCE

A. Demolition Firm Qualifications: An experienced firm that has specialized in demolition work similar in material and extent to that indicated for this Project.
B. Regulatory Requirements: Comply with governing EPA notification regulations before beginning demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
C. Standards: Comply with ANSI A10.6 and NFPA 241.
D. Predemolition Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination." Review methods and procedures related to building demolition including, but not limited to, the following:

1. Inspect and discuss condition of construction to be demolished.
2. Review structural load limitations of existing structures.
3. Review and finalize building demolition schedule and verify availability of demolition personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review and finalize protection requirements.

1.07 PROJECT CONDITIONS

A. Buildings to be demolished will be vacated and their use discontinued before start of Work.
B. Owner will occupy another building immediately adjacent to demolition area. Conduct building demolition so Owner's operations will not be disrupted.

1. Provide not less than 3 days notice to Owner of activities that will affect Owner's operations.
2. Maintain access to existing walkways, exits, and other adjacent occupied or used facilities.

    a. Do not close or obstruct walkways, exits, or other occupied or used facilities without written permission from authorities having jurisdiction.

C. Owner assumes no responsibility for buildings and structures to be demolished.

1. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.

D. Hazardous Materials: It is not expected that hazardous materials will be encountered in the Work.

1. Hazardous materials will be removed by Owner before start of the Work. Information regarding hazardous materials abatement work performed by Owner under separate contract is provided for reference only as part of Division 00.
2. If materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify Architect and Owner. Hazardous materials will be removed by Owner under a separate contract.

E. Storage or sale of removed items or materials on-site is not permitted.

1.08 COORDINATION

A. Arrange demolition schedule so as not to interfere with Owner's on-site operations.

PART 2 - PRODUCTS

2.01 SOIL MATERIALS

A. Satisfactory Soils: Comply with requirements in Division 31 Section "Earth Moving."

PART 3 - EXECUTION

3.01 EXAMINATION

A. Survey existing conditions and correlate with requirements indicated to determine extent of building demolition required.
B. Review Project Record Documents of existing construction and hazardous material information provided by Owner. Owner does not guarantee that existing conditions are same as those indicated in Project Record Documents. Available Project Record Documents are available for reference only in Division 00 Section “Existing Conditions Documentation”.
C. Inventory and record the condition of items to be removed and salvaged. Provide photographs or video of conditions that might be misconstrued as damage caused by salvage operations. Comply with Division 01 Section "Photographic Documentation”.
D. Engage a professional engineer to perform an engineering survey of condition of building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during building demolition operations.
E. Verify that utilities have been disconnected and capped before starting demolition operations.

F. When unanticipated mechanical, electrical, or structural elements are encountered, investigate and measure the nature and extent of the element. Promptly submit a written report to Architect.
G. Verify that hazardous materials have been remediated before proceeding with building demolition operations.

3.02 PREPARATION

A. Existing Utilities: Locate, identify, disconnect, and seal or cap off indicated utilities serving buildings and structures to be demolished.

1. Refer to Division 21, 22, 23 and 26 Sections for shutting off, disconnecting, removing, and sealing or capping utilities. Do not start demolition work until utility disconnecting and sealing have been completed and verified in writing.
2. Arrange to shut off indicated utilities with utility companies.
3. If utility services are required to be removed, relocated, or abandoned, before proceeding with building demolition provide temporary utilities that bypass buildings and structures to be demolished and that maintain continuity of service to other buildings and structures.
4. Cut off pipe or conduit a minimum of 24 inches below grade. Cap, valve, or plug and seal remaining portion of pipe or conduit after bypassing.
5. Remove refrigerant from air-conditioning equipment before starting demolition.

B. Temporary Shoring: Provide and maintain interior and exterior shoring, bracing, or structural support to preserve stability and prevent unexpected movement or collapse of construction being demolished.

1. Strengthen or add new supports when required during progress of demolition.

C. Removed and Salvaged Items: Comply with the following:

1. Clean salvaged items of dirt and demolition debris.
2. Pack or crate items after cleaning. Identify contents of containers.
3. Store items in a secure area until delivery to Owner.
4. Transport items to storage area designated by Owner.
5. Protect items from damage during transport and storage.

3.03 PROTECTION

A. Existing Facilities: Protect adjacent walkways, loading docks, building entries, and other building facilities during demolition operations.
B. Existing Items to Remain: Protect construction indicated to remain against damage and soiling during demolition. When permitted by Architect, items may be removed to a suitable, protected storage location during demolition and cleaned and reinstalled in their original locations after demolition operations are complete.
C. Existing Utilities: Maintain utility services indicated to remain and protect them against damage during demolition operations.

1. Do not interrupt existing utilities serving adjacent occupied or operating facilities unless authorized in writing by Owner and authorities having jurisdiction.
2. Provide temporary services during interruptions to existing utilities, as acceptable to Owner and to authorities having jurisdiction.
    a. Provide at least 3 days notice to Owner if shutdown of service is required during changeover.

D. Temporary Protection: Erect temporary protection, such as walks, fences, railings, canopies, and covered passageways, where required by authorities having jurisdiction and as indicated. Comply with requirements in Division 1 Section "Temporary Facilities and Controls."

1. Protect existing site improvements, appurtenances, and landscaping to remain.
2. Erect a plainly visible fence around drip line of individual trees or around perimeter drip line of groups of trees to remain.
3. Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.
4. Provide protection to ensure safe passage of people around building demolition area and to and from occupied portions of adjacent buildings and structures.
5. Protect walls, windows, roofs, and other adjacent exterior construction that are to remain and that are exposed to building demolition operations.
6. Erect and maintain dustproof partitions and temporary enclosures to limit dust and dirt migration and to separate areas from fumes and noise from occupied portions of adjacent buildings.

3.04 DEMOLITION, GENERAL

A. General: Demolish indicated existing buildings, structures and site improvements completely. Use methods required to complete the Work within limitations of governing regulations and as follows:

1. Do not use cutting torches until work area is cleared of flammable materials. Maintain fire watch and portable fire-suppression devices during flame-cutting operations.
2. Maintain adequate ventilation when using cutting torches.
3. Locate building demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.

B. Engineering Surveys: Perform surveys as the Work progresses to detect hazards that may result from building demolition activities.

C. Site Access and Temporary Controls: Conduct building demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

1. Do not close or obstruct streets, walks, walkways, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.

2. Use water mist and other suitable methods to limit spread of dust and dirt. Comply with governing environmental-protection regulations. Do not use water when it may damage adjacent construction or create hazardous or objectionable conditions, such as ice, flooding, and pollution.

3.05 DEMOLITION BY MECHANICAL MEANS

A. Remove buildings, structures and site improvements intact when permitted by authorities having jurisdiction.
B. Proceed with demolition of structural framing members systematically, from higher to lower level. Complete building demolition operations above each floor or tier before disturbing supporting members on the next lower level.
C. Remove debris from elevated portions by chute, hoist, or other device that will convey debris to grade level in a controlled descent.

1. Remove structural framing members and lower to ground by method suitable to minimize ground impact or dust generation.

D. Below-Grade Construction: Demolish foundation walls and other below-grade construction unless otherwise indicated Abandon below-grade construction only where indicated on Drawings

1. Remove below-grade construction, including basements, foundation walls, and footings, completely unless otherwise indicated.

E. Existing Utilities: Demolish existing utilities and below-grade utility structures unless otherwise indicated.. Abandon utilities only where indicated on Drawings.

1. Fill abandoned utility structures with satisfactory soil materials according to backfill requirements in Division 2 Section "Earthwork."

3.06 EXPLOSIVE DEMOLITION

A. Explosives: Use of explosives is not permitted.
B. Explosives: Perform explosive demolition according to governing regulations.

1. Obtain written permission from authorities having jurisdiction before bringing explosives to, or using explosives on, Project site.
2. Do not damage adjacent structures, property, or site improvements when using explosives.

C. Comply with recommendation in Explosives Consultant's report.

3.07 SITE RESTORATION

A. Below-Grade Areas: Rough grade below-grade areas ready for further excavation or new construction.

B. Below-Grade Areas: Completely fill below-grade areas and voids resulting from building demolition operations with satisfactory soil materials according to backfill requirements in Division 2 Section "Earthwork."
C. Site Grading: Uniformly rough grade area of demolished construction to a smooth surface, free from irregular surface changes. Provide a smooth transition between adjacent existing grades and new grades.

3.08 REPAIRS

A. General: Promptly repair damage to adjacent construction caused by building demolition operations.
B. Where repairs to existing surfaces are required, patch to produce surfaces suitable for new materials.
C. Restore exposed finishes of patched areas and extend restoration into adjoining construction in a manner that eliminates evidence of patching and refinishing.

3.09 DISPOSAL OF DEMOLISHED MATERIALS

A. General: Except for items or materials indicated to be reused, salvaged, reinstalled, or otherwise indicated to remain Owner's property, remove demolished materials from Project site and legally dispose of them in an EPA-approved landfill.

    1. Do not allow demolished materials to accumulate on-site.
    2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.

B. Burning: Do not burn demolished materials.
C. Disposal: Transport demolished materials off Owner's property and legally dispose of them.

3.10 CLEANING

A. Clean adjacent structures and improvements of dust, dirt, and debris caused by building demolition operations. Return adjacent areas to condition existing before building demolition operations began.

END OF SECTION 02 41 16

SECTION 03 30 00 - CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes cast-in-place concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, and finishes.
B. Related Requirements:

1. Section 312000 "Earth Moving" for drainage fill under slabs-on-grade.
2. Section 321313 "Concrete Paving" for concrete pavement and walks.

1.3 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash, slag cement, other pozzolans, and silica fume; materials subject to compliance with requirements.
B. W/C Ratio: The ratio by weight of water to cementitious materials.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:

a. Contractor's superintendent.
b. Independent testing agency responsible for concrete design mixtures.
c. Ready-mix concrete manufacturer.
d. Concrete Subcontractor.

2. Review special inspection and testing and inspecting agency procedures for field quality control, concrete finishes and finishing, cold- and hot-weather concreting procedures, curing procedures, construction contraction and isolation joints, and joint-filler strips, semirigid joint fillers, forms and form removal limitations, vapor-retarder installation, anchor rod and anchorage device installation tolerances, steel reinforcement installation, methods for achieving specified floor and slab flatness

and levelness; floor and slab flatness and levelness measurement, concrete repair procedures, and concrete protection.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.
B. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.
C. Steel Reinforcement Shop Drawings: Placing Drawings that detail fabrication, bending, and placement. Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement.
D. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.

    1. Location of construction joints is subject to approval of the Architect.

E. Contraction Joint Layout: Indicate proposed contraction joint locations.

    1. Location of contraction joints is subject to approval of the Architect.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer; manufacturer; testing agency.
B. Welding certificates.
C. Material Certificates: For each of the following, signed by manufacturers:

    1. Cementitious materials.
    2. Admixtures.
    3. Form materials and form-release agents.
    4. Steel reinforcement and accessories.
    5. Waterstops.
    6. Curing compounds.
    7. Bonding agents.
    8. Adhesives.
    9. Vapor retarders.
    10. Semirigid joint filler.
    11. Joint-filler strips.
    12. Repair materials.

D. Floor surface flatness and levelness measurements indicating compliance with specified tolerances.
E. Field quality-control reports.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.

B. Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

C. Testing Agency Qualifications: An independent agency, acceptable to authorities having jurisdiction, qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.

1. Personnel performing laboratory tests shall be ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician, Grade I. Testing agency laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician, Grade II.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

1.9 FIELD CONDITIONS

A. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.

1. When average high and low temperature is expected to fall below 40 deg F for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.

B. Hot-Weather Placement: Comply with ACI 301 and as follows:

1. Maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:

1. ACI 301.
2. ACI 117.

2.2 FORM-FACING MATERIALS

A. Smooth-Formed Finished Concrete: Form-facing panels that provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.

1. Plywood, metal, or other approved panel materials.

B. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.

C. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4 by 3/4 inch, or as detailed.

D. Rustication Strips: Wood, metal, PVC, or rubber strips, kerfed for ease of form removal.

E. Form-Release Agent: Commercially formulated form-release agent that does not bond with, stain, or adversely affect concrete surfaces and does not impair subsequent treatments of concrete surfaces.

1. Formulate form-release agent with rust inhibitor for steel form-facing materials.

F. Form Ties: Factory-fabricated, removable or snap-off glass-fiber-reinforced plastic or metal form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

1. Furnish units that leave no corrodible metal closer than 1 inch to the plane of exposed concrete surface.
2. Furnish ties that, when removed, leave holes no larger than 1 inch in diameter in concrete surface.
3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

2.3 STEEL REINFORCEMENT

A. Reinforcing Bars: ASTM A 615/A 615M, Grade 60, deformed.

B. Plain-Steel Welded-Wire Reinforcement: ASTM A 1064/A 1064M, plain, fabricated from as-drawn steel wire into flat sheets.

2.4 REINFORCEMENT ACCESSORIES

A. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire reinforcement in place. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete and as follows:

1. For concrete surfaces exposed to view, where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.
2. For epoxy-coated reinforcement, use epoxy-coated or other dielectric-polymer-coated wire bar supports.

2.5 CONCRETE MATERIALS

A. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.

B. Cementitious Materials:

1. Portland Cement: ASTM C 150/C 150M, Type I
2. Fly Ash: ASTM C 618, Class F.
3. Ground Ganulated Blast-Furnace Slag, ASTM C989, Grade 100 or 120.

C. Normal-Weight Aggregates: ASTM C 33/C 33M, Class 3S coarse aggregate or better, graded. Provide aggregates from a single source. Aggregate for door sills and steel pan stairs shall not exceed 1/2inch.

1. Maximum Coarse-Aggregate Size: 1 inch nominal.
2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

D. Air-Entraining Admixture: ASTM C 260/C 260M.

E. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and that do not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.

1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
2. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
3. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.

F. Water: ASTM C 94/C 94M and potable.

2.6 WATERSTOPS

A. Self-Expanding Butyl Strip Waterstops: Manufactured rectangular or trapezoidal strip, butyl rubber with sodium bentonite or other hydrophilic polymers, for adhesive bonding to concrete, 3/4 by 1 inch.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

    a. Carlisle Coatings & Waterproofing, Inc.; MiraSTOP.
    b. CETCO; Volclay Waterstop-RX.
    c. Concrete Sealants Inc.; Conseal CS-231.
    d. Greenstreak; Swellstop.
    e. Henry Company, Sealants Division; Hydro-Flex.
    f. JP Specialties, Inc.; Earth Shield Type 20.

2.7 VAPOR RETARDERS

A. Sheet Vapor Retarder: ASTM E 1745, Class A, except with maximum water-vapor permeance of not more than 0.01 gr/sq.ft. complying with ASTM E 1745. Include manufacturer's recommended adhesive or pressure-sensitive tape.

1. Stego Industries LLC.; Stego Wrap Vapor Barrier, 15 mil.
2. WR Meadows, Inc.; Perminator HP, 15 mil
3. Insulation Solutions, Inc.; Viper Vaporcheck II, 15 mil.

2.8 CURING MATERIALS

A. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.
B. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.
C. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.
D. Water: Potable.
E. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class A, certified by curing compound manufacturer to not interfere with bonding of floor covering.

2.9 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber.
B. Bonding Agent: ASTM C 1059/C 1059M, Type II, nonredispersible, acrylic emulsion or styrene butadiene.
C. Epoxy Bonding Adhesive: ASTM C 881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements, and as follows:

    1. Types I and II, nonload bearing, for bonding hardened or freshly mixed concrete to hardened concrete.

D. Reglets: Fabricate reglets of not less than 0.022-inch- thick, galvanized-steel sheet. Temporarily fill or cover face opening of reglet to prevent intrusion of concrete or debris.

E. Dovetail Anchor Slots: Hot-dip galvanized-steel sheet, not less than 0.034 inch thick, with bent tab anchors. Temporarily fill or cover face opening of slots to prevent intrusion of concrete or debris.

2.10 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.

1. Use a qualified independent testing agency for preparing and reporting proposed mixture designs based on laboratory trial mixtures.

B. Cementitious Materials, Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:

1. Fly Ash: 25 percent.
2. Combined Fly Ash and Ground Granulated Blast Furnace Slag: 25 percent.
3. Granulated Blast Furnace Slag: 25 percent.

C. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

D. Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing or high-range water-reducing admixture in concrete, as required, for placement and workability.
2. Use water-reducing and -retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.
3. Use water-reducing admixture in pumped concrete, concrete for heavy-use industrial slabs and parking structure slabs, concrete required to be watertight, and concrete with a w/c ratio below 0.50.

2.11 CONCRETE MIXTURES FOR BUILDING ELEMENTS

A. Footings, Foundation Walls and Pit Bottoms: Normal-weight concrete.

1. Minimum Compressive Strength: 3000 psi at 28 days.
2. Maximum W/C Ratio: 0.50.
3. Slump Limit: 4 inches.
4. Air Content: **6** percent, plus or minus 1.0 percent at point of delivery.

B. Concrete Slabs: Normal-weight concrete:

1. Minimum Compressive Strength: 4000 psi at 28 days.
2. Maximum W/C Ratio: 0.50, except 0.45 for concrete exposed to deicers or subject to freezing and thawing while moist.
3. Minimum Cementitious Materials Content: 520 lb/cu. yd.
4. Slump Limit: 4 inches.
5. Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.

2.12 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

2.13 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M, and furnish batch ticket information.

1. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1 FORMWORK INSTALLATION

A. Design, erect, shore, brace, and maintain formwork, according to ACI 301, to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads.
B. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117.
C. Limit concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:

1. Class A, 1/8 inch for smooth-formed finished surfaces.
2. Class C, 1/2 inch for rough-formed finished surfaces.

D. Construct forms tight enough to prevent loss of concrete mortar.
E. Construct forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast-concrete surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.

1. Install keyways, reglets, recesses, and the like, for easy removal.
2. Do not use rust-stained steel form-facing material.

F. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces. Provide and secure units to support screed strips; use strike-off templates or compacting-type screeds.
G. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.
H. Chamfer exterior corners and edges of permanently exposed concrete.
I. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.
J. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

K. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.
L. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.

3.2 EMBEDDED ITEM INSTALLATION

A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

1. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC 303.
2. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.
3. Install dovetail anchor slots in concrete structures as indicated.

3.3 REMOVING AND REUSING FORMS

A. General: Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F for 24 hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations, and curing and protection operations need to be maintained.

1. Leave formwork for beam soffits, joists, slabs, and other structural elements that support weight of concrete in place until concrete has achieved at least 70 percent of its 28-day design compressive strength.
2. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.

B. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise damaged form-facing material are not acceptable for exposed surfaces. Apply new form-release agent.
C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

3.4 SHORING AND RESHORING INSTALLATION

A. Comply with ACI 318 and ACI 301 for design, installation, and removal of shoring and reshoring.

1. Do not remove shoring or reshoring until measurement of slab tolerances is complete.

B. Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.

3.5 VAPOR-RETARDER INSTALLATION

A. Sheet Vapor Retarders: Place, protect, and repair sheet vapor retarder according to ASTM E 1643 and manufacturer's written instructions.

1. Lap joints 6 inches and seal with manufacturer's recommended tape.

3.6 STEEL REINFORCEMENT INSTALLATION

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

1. Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder before placing concrete.

B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that reduce bond to concrete.
C. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcement with bar supports to maintain minimum concrete cover. Do not tack weld crossing reinforcing bars.
D. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.
E. Install welded-wire reinforcement in longest practicable lengths on bar supports spaced to minimize sagging. Lap edges and ends of adjoining sheets at least one mesh spacing. Offset laps of adjoining sheet widths to prevent continuous laps in either direction. Lace overlaps with wire.

3.7 JOINTS

A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.
B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.

1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.
2. Form keyed joints as indicated. Embed keys at least 1-1/2 inches into concrete.
3. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
4. Space vertical joints in walls as indicated. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.

C. Contraction Joints in Slabs-on-Grade: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of concrete thickness as follows:

1. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- wide joints into concrete when cutting action does not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks.

D. If joint pattern is not shown, provide joints not exceeding 15’ in either direction and located to conform to bay spacing wherever possible (at column centerlines, half bays, third bays) and as approved by the Architect. Consult with Architect prior to locating joints.

E. Isolation Joints in Slabs-on-Grade: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.

1. Extend joint-filler strips full width and depth of joint, terminating flush with finished concrete surface unless otherwise indicated.
2. Terminate full-width joint-filler strips not less than 1/2 inch or more than 1 inch below finished concrete surface where joint sealants, specified in Section 079200 "Joint Sealants," are indicated.
3. Install joint-filler strips in lengths as long as practicable. Where more than one length is required, lace or clip sections together.

3.8 WATERSTOP INSTALLATION

A. Flexible Waterstops: Install in construction joints and at other joints indicated to form a continuous diaphragm. Install in longest lengths practicable. Support and protect exposed waterstops during progress of the Work. Field fabricate joints in waterstops according to manufacturer's written instructions.

B. Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated, according to manufacturer's written instructions, adhesive bonding, mechanically fastening, and firmly pressing into place. Install in longest lengths practicable.

3.9 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections are completed.

B. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Architect.

C. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete is placed on concrete that has hardened enough to cause seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as indicated. Deposit concrete to avoid segregation.

1. Deposit concrete in horizontal layers of depth not to exceed formwork design pressures and in a manner to avoid inclined construction joints.
2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 301.
3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

D. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.

1. Consolidate concrete during placement operations, so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
2. Maintain reinforcement in position on chairs during concrete placement.
3. Screed slab surfaces with a straightedge and strike off to correct elevations.
4. Slope surfaces uniformly to drains where required.
5. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.

3.10 FINISHING FORMED SURFACES

A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces not exposed to public view.

B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces exposed to public view, to receive a rubbed finish or to be covered with a coating or covering material applied directly to concrete.

C. Rubbed Finish: Apply the following to smooth-formed-finished as-cast concrete where indicated:

1. Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.
2. Grout-Cleaned Finish: Wet concrete surfaces and apply grout of a consistency of thick paint to coat surfaces and fill small holes. Mix 1 part portland cement to 1-1/2

parts fine sand with a 1:1 mixture of bonding admixture and water. Add white portland cement in amounts determined by trial patches, so color of dry grout matches adjacent surfaces. Scrub grout into voids and remove excess grout. When grout whitens, rub surface with clean burlap and keep surface damp by fog spray for at least 36 hours.

D. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.11 FINISHING FLOORS AND SLABS

A. General: Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Scratch Finish: While still plastic, texture concrete surface that has been screeded and bull-floated or darbied. Use stiff brushes, brooms, or rakes to produce a profile amplitude of 1/4 inch in one direction.

1. Apply scratch finish to surfaces indicated, and to receive concrete floor toppings, and if scheduled to receive mortar setting beds for bonded cementitious floor finishes.

C. Float Finish: Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power-driven floats. Restraighten, cut down high spots, and fill low spots.

1. Apply float finish to surfaces indicated to receive trowel finish and to be covered with fluid-applied or sheet waterproofing, built-up or membrane roofing.

D. Trowel Finish: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.

1. Apply a trowel finish to surfaces indicated and exposed to view or to be covered with resilient flooring, carpet, ceramic or quarry tile set over a cleavage membrane, paint, or another thin-film-finish coating system.
2. Finish surfaces to the following tolerances, according to ASTM E 1155, for a randomly trafficked floor surface:
    a. Specified overall values of flatness, F(F) 35; and of levelness, F(L) 25; with minimum local values of flatness, F(F) 24; and of levelness, F(L) 17; for slabs-on-grade.

E. Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces where ceramic or quarry tile is to be installed by either thickset or thinset method. While concrete is still plastic, slightly scarify surface with a fine broom.

1. Comply with flatness and levelness tolerances for trowel-finished floor surfaces.

F. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, ramps, and elsewhere as indicated.

1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Architect before application.

3.12 MISCELLANEOUS CONCRETE ITEM INSTALLATION

A. Filling In: Fill in holes and openings left in concrete structures after work of other trades is in place unless otherwise indicated. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.
B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.
C. Equipment Bases and Foundations: Provide machine and equipment bases and foundations as shown on Drawings. Set anchor bolts for machines and equipment at correct elevations, complying with diagrams or templates of manufacturer furnishing machines and equipment.
D. Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel finish concrete surfaces.

3.13 CONCRETE PROTECTING AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 301 for hot-weather protection during curing.
B. Evaporation Retarder: Apply evaporation retarder to unformed concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.
C. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for remainder of curing period.
D. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.
E. Cure concrete according to ACI 308.1, by one or a combination of the following methods:

1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:

a. Water.
b. Continuous water-fog spray.
c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.

2. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

    a. Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound does not interfere with bonding of floor covering used on Project.

3. Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.

3.14 CONCRETE SURFACE REPAIRS

A. Defective Concrete: Repair and patch defective areas when approved by Architect. Remove and replace concrete that cannot be repaired and patched to Architect's approval.

B. Patching Mortar: Mix dry-pack patching mortar, consisting of 1 part portland cement to 2-1/2 parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing

C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.

    1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2 inch in any dimension to solid concrete. Limit cut depth to 3/4 inch. Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
    2. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement so that, when dry, patching mortar matches surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.
    3. Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by Architect.

D. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.

    1. Repair finished surfaces containing defects. Surface defects include spalls, popouts, honeycombs, rock pockets, crazing and cracks in excess of 0.01 inch

wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.

2. After concrete has cured at least 14 days, correct high areas by grinding.
3. Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired areas to blend into adjacent concrete.
4. Correct other low areas scheduled to receive floor coverings with a repair underlayment. Prepare, mix, and apply repair underlayment and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface. Feather edges to match adjacent floor elevations.
5. Correct other low areas scheduled to remain exposed with a repair topping. Cut out low areas to ensure a minimum repair topping depth of 1/4 inch to match adjacent floor elevations. Prepare, mix, and apply repair topping and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.
6. Repair defective areas, except random cracks and single holes 1 inch or less in diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4-inch clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete, except without coarse aggregate. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.
7. Repair random cracks and single holes 1 inch or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.

E. Perform structural repairs of concrete, subject to Architect's approval, using epoxy adhesive and patching mortar.
F. Repair materials and installation not specified above may be used, subject to Architect's approval.

3.15 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.
B. Inspections:

1. Steel reinforcement placement.
2. Headed bolts and studs.
3. Verification of use of required design mixture.
4. Concrete placement, including conveying and depositing.
5. Curing procedures and maintenance of curing temperature.
6. Verification of concrete strength before removal of shores and forms from beams and slabs.

C. Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C 172/C 172M shall be performed according to the following requirements:

1. Testing Frequency: Obtain one composite sample for each day's pour of each concrete mixture exceeding 5 cu. yd., but less than 25 cu. yd., plus one set for each additional 50 cu. yd. or fraction thereof.
    a. When frequency of testing provides fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
2. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C 231/C 231M, pressure method, for normal-weight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
4. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F and below or 80 deg F and above, and one test for each composite sample.
5. Compression Test Specimens: ASTM C 31/C 31M.
    a. Cast and laboratory cure one set of five standard cylinder specimens for each composite sample.
    b. Cast and field cure one set of five standard cylinder specimens for each composite sample.
6. Compressive-Strength Tests: ASTM C 39/C 39M; test two specimens (one field and one lab) at 7 days, test six specimens (three field and three lab) at 28 days and two specimens retained in reserve for later testing if required.
    a. Test two field-cured specimens at 7 days and two specimens at 28 days.
    b. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.
7. When strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, Contractor shall evaluate operations and provide corrective procedures for protecting and curing in-place concrete.
8. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.
9. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.

10. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
11. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42/C 42M or by other methods as directed by Architect.
12. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
13. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.

D. Measure floor and slab flatness and levelness according to ASTM E 1155 within 24 to 36 hours of finishing.

END OF SECTION 03 30 00

SECTION 04 20 00 –UNIT MASONRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Concrete masonry units.
2. Face brick.
3. Mortar and grout.
4. Steel reinforcing bars.
5. Masonry joint reinforcement.
6. Ties and anchors.
7. Embedded flashing.
8. Miscellaneous masonry accessories.
9. Cavity-wall insulation.

B. Related Sections:

1. Section 051200 "Structural Steel Framing" for installing anchor sections of adjustable masonry anchors for connecting to structural steel frame.
2. Section 055000 "Metal Fabrications" for furnishing steel lintels and shelf angles for unit masonry.
3. Section 076200 "Sheet Metal Flashing and Trim" for exposed sheet metal flashing and for furnishing manufactured reglets installed in masonry joints.

1.3 DEFINITIONS

A. CMU(s): Concrete masonry unit(s).
B. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.
C. Exposed: Weather-exposed side of a constructed wall.

1.4 PERFORMANCE REQUIREMENTS

A. Provide structural unit masonry that develops indicated net-area compressive strengths at 28 days.

1. Determine net-area compressive strength of masonry by testing masonry prisms according to ASTM C 1314.

1.5 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Owner will engage a qualified independent testing agency to perform preconstruction testing indicated below. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.

1. Clay Masonry Unit Test: For each type of unit required, according to ASTM C 67 for compressive strength.
2. Concrete Masonry Unit Test: For each type of unit required, according to ASTM C 140 for compressive strength.
3. Mortar Test (Property Specification): For each mix required, according to ASTM C 109/C 109M for compressive strength**,** ASTM C 1506 for water retention, and ASTM C 91 for air content.
4. Mortar Test (Property Specification): For each mix required, according to ASTM C 780 for compressive strength.
5. Grout Test (Compressive Strength): For each mix required, according to ASTM C 1019.
6. Prism Test: For each type of construction required, according to ASTM C 1314.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.
B. Shop Drawings: For the following:

1. Masonry Units: Show sizes, profiles, coursing, and locations of special shapes.
2. Reinforcing Steel: Detail bending and placement of unit masonry reinforcing bars. Comply with ACI 315, "Details and Detailing of Concrete Reinforcement." Show elevations of reinforced walls**.**
3. Fabricated Flashing: Detail corner units, end-dam units, and other special applications.

C. Samples for Initial Selection:

1. Face brick, in the form of straps of five or more bricks.
2. Colored mortar.
3. Weep holes/vents.

D. Samples for Verification: For each type and color of the following:

1. Exposed CMUs.
2. Face brick, in the form of straps of five or more bricks.
3. Special brick shapes.
4. Pigmented and colored-aggregate mortar. Make Samples using same sand and mortar ingredients to be used on Project.
5. Weep holes and vents.
6. Accessories embedded in masonry.

1.7 INFORMATIONAL SUBMITTALS

A. List of Materials Used in Constructing Mockups: List generic product names together with manufacturers, manufacturers' product names, model numbers, lot numbers, batch numbers, source of supply, and other information as required to identify materials used. Include mix proportions for mortar and grout and source of aggregates.

1. Submittal is for information only. Neither receipt of list nor approval of mockup constitutes approval of deviations from the Contract Documents unless such deviations are specifically brought to the attention of Architect and approved in writing.

B. Qualification Data: For testing agency.

C. Material Certificates: For each type and size of the following:

1. Masonry units.

a. Include material test reports substantiating compliance with requirements.
b. For brick, include size-variation data verifying that actual range of sizes falls within specified tolerances.
c. For exposed brick, include test report for efflorescence according to ASTM C 67.
d. For masonry units used in structural masonry, include data and calculations establishing average net-area compressive strength of units.

2. Integral water repellent used in CMUs, if not surface treated.
3. Cementitious materials. Include brand, type, and name of manufacturer.
4. Mortar Admixtures.
5. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.
6. Grout mixes. Include description of type and proportions of ingredients.
7. Reinforcing bars.
8. Joint reinforcement.
9. Anchors, ties, and metal accessories.

D. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.

1. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C 109/C 109M for compressive strength, ASTM C 1506 for water retention, and ASTM C 91 for air content.
2. Include test reports, according to ASTM C 1019, for grout mixes required to comply with compressive strength requirement.

E. Statement of Compressive Strength of Masonry: For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined according to Tables 1 and 2 in TMS 602.

F. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.

1.8 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM C 1093 for testing indicated.
B. Project team craftworkers of the Masonry Contractor assigned to Project will be required to have the International Masonry Institute - Flashing Training or equal and to provide evidence of certificate or a letter of the firm's commitment to enroll key project personnel in the training program prior to the start of Project.
C. Project team craftworkers of the Masonry Contractor assigned to Project will be required to have the International Masonry Institute - Grouting and Reinforcing Training or equal and to provide evidence of certificate or a letter of the firm's commitment to enroll key project personnel in the training program prior to the start of Project.
D. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.
E. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.
F. Masonry Standard: Comply with TMS 602 unless modified by requirements in the Contract Documents.
G. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

    1. Build mockups for each type of exposed unit masonry construction in sizes approximately 72 inches long by 60 inches high by full thickness, including face and backup wythes and accessories. Build mock-up in location as approved by Architect for each type of exposed masonry construction.

        a. Include a sealant-filled joint at least 16 inches long in each exterior wall mockup.
        b. Include lower corner of window opening framed with limestone sill at upper corner of exterior wall mockup. Make opening approximately 12 inches wide by 16 inches high.
        c. Include through-wall flashing installed for a 24-inch length in corner of exterior wall mockup approximately 16 inches down from top of mockup, with a 12-inch length of flashing left exposed to view (omit masonry above half of flashing).
        d. Include metal studs, sheathing, air barrier, insulation, veneer anchors, flashing, cavity drainage material, and weep holes in exterior masonry-veneer wall mockup.
        e. The upper one-third of the mockup shall be metal wall panel wall construction. The mockup shall include the transition between masonry and metal wall panel construction.

    2. Clean exposed faces of mockups with masonry cleaner as indicated.
    3. Protect accepted mockups from the elements with weather-resistant membrane.
    4. Approval of mockups is for color, texture, and blending of masonry units; relationship of mortar and sealant colors to masonry unit colors; tooling of joints; and aesthetic qualities of workmanship.

        a. Approval of mockups is also for other material and construction qualities specifically approved by Architect in writing.

b. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless such deviations are specifically approved by Architect in writing.

H. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination."

1.9 DELIVERY, STORAGE, AND HANDLING

A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install them until they are dry.
B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
D. Deliver preblended, dry mortar mix in moisture-resistant containers designed for use with dispensing silos. Store preblended, dry mortar mix in delivery containers on elevated platforms, under cover, and in a dry location or in covered weatherproof dispensing silos.
E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.10 PROJECT CONDITIONS

A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

1. Extend cover a minimum of 24 inches down both sides of walls and hold cover securely in place.
2. Where one wythe of multi-wythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24 inches down face next to unconstructed wythe and hold cover in place.

B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.
C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.

1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
2. Protect sills, ledges, and projections from mortar droppings.
3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

D. Cold Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in TMS 602.

1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.

E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602.

PART 2 - PRODUCTS

2.1 MASONRY UNITS, GENERAL

A. Masonry Standard: Comply with TMS 402/602 except as modified by requirements in the Contract Documents.
B. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated in the standard. Do not use units where such defects will be exposed in the completed Work.
C. Fire-Resistance Ratings: Where indicated, provide units that comply with requirements for fire-resistance ratings indicated as determined by testing according to ASTM E 119, by equivalent masonry thickness, or by other means, as acceptable to authorities having jurisdiction.

2.2 CONCRETE MASONRY UNITS

A. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.

1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
2. Provide bullnose units for outside corners unless otherwise indicated.

B. Pattern: Refer to Drawings for stacking pattern.
C. CMUs: ASTM C 90.

1. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 2800 psi.
2. Density Classification: Normal weight unless otherwise indicated.
3. Size (Width): Manufactured to dimensions 3/8 inch less than nominal dimensions.

2.3 CONCRETE AND MASONRY LINTELS

A. General: Provide one of the following as indicated in lintel schedule.

B. Concrete Lintels: ASTM C 1623, matching CMUs in color, texture, and density classification; and with reinforcing bars indicated. Provide lintels with net-area compressive strength not less than CMUs.

C. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMUs with reinforcing bars placed as indicated and filled with coarse grout. Cure precast lintels before handling and installing. Temporarily support built-in-place lintels until cured.

2.4 BRICK

A. General: Provide shapes indicated and as follows, with exposed surfaces matching finish and color of exposed faces of adjacent units:

1. For ends of sills and caps and for similar applications that would otherwise expose unfinished brick surfaces, provide units without cores or frogs and with exposed surfaces finished.
2. Provide special shapes for applications where stretcher units cannot accommodate special conditions, including those at corners, movement joints, bond beams, sashes, and lintels.
3. Provide special shapes for applications requiring brick of size, form, color, and texture on exposed surfaces that cannot be produced by sawing.
4. Provide special shapes for applications where shapes produced by sawing would result in sawed surfaces being exposed to view.

B. Face Brick: Facing brick complying with ASTM C 216 (BASIS OF DESIGN).

1. Products:

   a. Brick Types BR-01 and BR-02 – reference Exterior Legend on Exterior Elevations

2. Grade:

   a. Exterior – SW
   b. Interior – Grade MW or SW may be used.

3. Type: FBS.
4. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 3350 psi.
5. Initial Rate of Absorption: Less than 30 g/30 sq. in. per minute when tested per ASTM C 67.
6. Efflorescence: Provide brick that has been tested according to ASTM C 67 and is rated "not effloresced."
7. Size (Actual Dimensions): 3-5/8 inches wide by 2-1/4 inches high by 7-5/8 inches long.
8. Application: Use where brick is exposed unless otherwise indicated.

2.5 STONE TRIM AND WALL CAP UNITS

A. Limestone: Indiana oolitic limestone as quarried in Lawrence, Monroe, and Owen counties, Indiana; complying with ASTM C 568, Category II (medium density); and

matching standards of the Indiana Limestone Institute of America's "Indiana Limestone Handbook" for the following:

1. Grade: Select.
2. Color: Standard Gray
3. Finish: Smooth.

B. Cut stone accurately to shape and dimensions indicated, with exposed faces dressed true, and with beds and joints at right angles to face; comply with fabricating tolerances specified by the Indiana Limestone Institute of America.

1. Stone Masonry Veneer: Provide stone of thickness indicated, but not less than 3-inches plus or minus ¼-inch.

2.6 MORTAR AND GROUT MATERIALS

A. Portland Cement: ASTM C 150, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.
B. Hydrated Lime: ASTM C 207, Type S.
C. Portland Cement-Lime Mix: Packaged blend of portland cement complying with ASTM C 150, Type I or Type III, and hydrated lime complying with ASTM C 207.

1. For pigmented mortar, use a colored cement formulation as required to produce the color indicated or, if not indicated, as selected from manufacturer's standard formulations.

   a. Pigments shall not exceed 10 percent of portland cement by weight for mineral oxides nor 2 percent for carbon black.

2. Basis-of-Design Product: Lehigh Custom Colored Mortar, Light Beige or matching comparable product by one of the following:

   a. Color Mortar Blend; Glen-Gery Corporation.
   b. Rainbow Mortamix Custom Color Cement/Lime; Holcin.
   c. Centurion Colorbond PL; Lafarge Corporation.

D. Aggregate for Mortar: ASTM C 144.

1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
2. For joints less than 1/4 inch thick, use aggregate graded with 100 percent passing the No. 16 sieve.
3. White-Mortar Aggregates: Natural white sand or crushed white stone.
4. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.

E. Aggregate for Grout: ASTM C 404.

F. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes. Use only pigments with a record of satisfactory performance in masonry mortar.

1. Products: Subject to compliance with requirements, provide one of the following:

a. True Tone Mortar Colors; Davis Colors.
b. Centurion Pigments; Lafarge Corporation.
c. SGS Mortar Colors; Solomon Grind-Chem Services, Inc.

G. Cold-Weather Admixture: Nonchloride, noncorrosive, accelerating admixture complying with ASTM C 494/C 494M, Type C, and recommended by manufacturer for use in masonry mortar of composition indicated.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Euclid Chemical Company (The); Accelguard 80.
b. Grace Construction Products, W. R. Grace & Co. - Conn.; Morset.
c. Sonneborn Products, BASF Aktiengesellschaft; Trimix-NCA.

H. Water-Repellent Admixture: Liquid water-repellent mortar admixture intended for use with concrete masonry units containing integral water repellent. Provide water-repellent by the same manufacturer.

1. Applications: Provide water repellent admixture for mortar in single-wythe exterior concrete masonry walls, in locations where concrete masonry is exposed to weather above grade, and in other locations where masonry units are specified with integral water-repellent.

I. Water: Potable.

2.7 REINFORCEMENT

A. Uncoated Steel Reinforcing Bars: ASTM A 615/A 615M or ASTM A 996/A 996M, Grade 60.
B. Masonry Joint Reinforcement, General: ASTM A 951/A 951M.

1. Interior Walls: Mill- galvanized, carbon steel.
2. Exterior Walls: Hot-dip galvanized, carbon steel.
3. Wire Size for Side Rods: 0.148-inch diameter.
4. Wire Size for Cross Rods: 0.148-inch.
5. Wire Size for Veneer Ties: 0.187-inch diameter.
6. Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 16 inches o.c.
7. Provide in lengths of not less than 10 feet, with prefabricated corner and tee units.

C. Masonry Joint Reinforcement for Single-Wythe Masonry: Either ladder or truss type with single pair of side rods.
D. Masonry Joint Reinforcement for Multi-wythe Masonry:

1. Adjustable(two piece) type, either ladder or truss design, with one side rod at each face shell of backing wythe and with separate adjustable ties with pintle-and-eye connections having a maximum horizontal play of 1/16 inch (1.5mm) and maximum vertical adjustment of 1-1/4 inches . Size ties to extend at least halfway through facing wythe but at least 5/8-inc cover on outside face,
2. Basis of Design Product: Subject to compliance with requirements, provide Hohmann & Barnard Inc Model #270-2X Ladder-eye Lox-All adjustable Joint Reinforcement with 2X Hook, or Equal as approved by Architect in Writing before bid.
    a. Where Discrepancies occur between the information contained in contract drawings and specification, submit discrepancies to the Architect in writing before the Bid.

2.8 TIES AND ANCHORS

A. Materials: Provide ties and anchors specified in this article that are made from materials that comply with the following unless otherwise indicated.

1. Hot-Dip Galvanized, Carbon-Steel Wire: ASTM A 82/A 82M; with ASTM A 153/A 153M, Class B-2 coating.

B. Wire Ties, General: Unless otherwise indicated, size wire ties to extend at least halfway through veneer but with at least 5/8-inch cover on outside face. Outer ends of wires are bent 90 degrees and extend 2 inches parallel to face of veneer.

C. Brick Veneer Anchor for Stud Back Up – Adjustable

1. Basis of Design Product: Subject to compliance with requirements, provide Hohmann & Barnard, Inc. Model HB-213-2X Adjustable Veneer Anchor with 2X HOOK, or equal as approved by the Architect in writing before the Bid.
    a. Where discrepancies occur between the information contained in the Contract Documents and the Specification, submit discrepancies to the Architect in writing for clarification before the Bid.
2. Backplate: 14 ga.
3. Pintle: Length as desired.
4. Finish: Hot-Dipped Galvanized.

D. Individual Wire Ties: Rectangular units with closed ends and not less than 4 inches wide.

1. Z-shaped ties with ends bent 90 degrees to provide hooks not less than 2 inches long may be used for masonry constructed from solid units.
2. Where wythes do not align, use adjustable ties with pintle-and-eye connections having a maximum adjustment of 1-1/4 inches.
3. Wire: Fabricate from 3/16-inch- diameter, hot-dip galvanized steel wire.

E. Adjustable Anchors for Connecting to Structural Steel Framing: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.

1. Tie Section: Triangular-shaped wire tie, sized to extend within 1 inch of masonry face, made from 0.25-inch- diameter, hot-dip galvanized steel wire.

F. Adjustable Anchors for Connecting to Concrete: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.

1. Tie Section: Triangular-shaped wire tie, sized to extend within 1 inch of masonry face, made from 0.25-inch- diameter, hot-dip galvanized steel wire.

G. Partition Top anchors: 0.105-inch- thick metal plate with 3/8-inch- diameter metal rod 6 inches long welded to plate and with closed-end plastic tube fitted over rod that allows rod to move in and out of tube. Fabricate from steel, hot-dip galvanized after fabrication.

H. Rigid Anchors: Fabricate from steel bars 1-1/2 inches wide by 1/4 inch thick by 24 inches long, with ends turned up 2 inches or with cross pins unless otherwise indicated.

1. Corrosion Protection: Hot-dip galvanized to comply with ASTM A 153/A 153M.

2.9 MISCELLANEOUS ANCHORS

A. Unit Type Inserts in Concrete: Cast-iron or malleable-iron wedge-type inserts.

B. Dovetail Slots in Concrete: Furnish dovetail slots with filler strips, of slot size indicated, fabricated from 0.034-inch, galvanized steel sheet.

C. Anchor Bolts: Headed steel bolts complying with ASTM A 307, Grade A; with ASTM A 563 hex nuts and, where indicated, flat washers; hot-dip galvanized to comply with ASTM A 153/A 153M, Class C; of dimensions indicated.

D. Post-installed Anchors: Torque-controlled expansion anchors or chemical anchors.

1. Load Capacity: Capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.
2. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5 unless otherwise indicated.
3. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 2 stainless-steel bolts, ASTM F 593, and nuts, ASTM F 594.

2.10 EMBEDDED THRU WALL FLASHING MATERIALS

A. Flexible Flashing: Use the following unless otherwise indicated:

1. Product standard of quality:

a. York Manufacturing, Inc.; Multi-Flash SS
b. Illinois Products, Inc.; IPCO Stainless Steel Fabric Flashing
c. Prosoco, Inc.; R-Guard SS ThruWall
d. STS Coatings, Inc.; Wall Guardian Stainless Steel TWF
e. TK Products, Inc.; TK TWF

B. Characteristics:

1. Type: Stainless steel core with polymer fabric laminated to the bottom stainless steel face with non-asphalt adhesive. The top face (exposed side) must not be covered with a polymer fabric.
2. Stainless steel: type 304, ASTM A240. Domestically sourced per DFARS 252.225-7008 and/or DFARS 252.225-7009.
3. Fabric: polymer fabric; laminated back face (non-exposed side) of stainless steel core.
4. Size: Manufacturer's standard width rolls.

C. Accessories:

1. Mastic/sealant: Product standard of quality is York Manufacturing, Inc.; UniverSeal US100.
    a. Characteristics:
        1) Type: One part 100% solids, solvent-free formulated silyl-terminated polyether (STPE), ASTM C920-11, Type S, Grade NS, Class 50.
2. Outside corner and inside corner material; manufacturer’s standard available units using:
    a. Stainless steel: 26 gauge stainless steel.
3. End dam: Product may be folded in line with the flashing material or utilize preformed end dams by manufacturer using:
    a. Stainless steel: 26 gauge stainless steel.
4. Splice material: Product standard of quality is York304 SS by York. Manufacturer’s standard self-adhered metal material; material matching system material or use Multi-Flash Stainless Steel 6” lap piece and polyether sealant as a splice.
5. Termination bar: Product standard of quality is York T-96 termination bar. Manufacturer's standard 1" composite material bar or a 1” 26 gauge stainless steel termination bar with sealant lip.
6. Weep vent protection: Product standard of quality is York’s Weep Armor. Geotextile drainage fabric at least 12” in height.
7. Repair and other materials/accessories: Manufacturer’s standard.
8. Fasteners: Domestic manufactured fastener types and sizes recommended by flashing manufacturer for intended use.

D. Application: Unless otherwise indicated, use the following:

1. Where flashing is indicated to receive counterflashing, use metal flashing.
2. Where flashing is indicated to be turned down at or beyond the wall face, use metal flashing.
3. Where flashing is partly exposed and is indicated to terminate at the wall face, use metal flashing with a drip edge.
4. Where flashing is fully concealed, use flexible flashing.

E. Adhesives, Primers, and Seam Tapes for Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates.

2.11 MISCELLANEOUS MASONRY ACCESSORIES

A. Compressible Filler: Compressible 3/8-inch thick closed cell neoprene material conforming to ASTM D1056 Grade 2A1, “NS – Closed Cell Neoprene Sponge” as manufactured by Hohmann & Barnard, Inc.; or approved equal approved by Architect.

B. Preformed Control-Joint Gaskets: Factory-manufactured styrene-butadiene rubber (SBR) control-joint gaskets complying with ASTM D2000, Designation M2AA-805, designed to fit standard sash block and maintain lateral stability of the masonry wall.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Hohmann & Barnard, Inc.; RS Series Rubber Control Joint (RS-STD, RS-TEE, RS-8, or RS-12 as required).
b. Wire-Bond.
c. Approved equal.

C. Bond-Breaker Strips: Asphalt-saturated, organic roofing felt complying with ASTM D 226, Type I (No. 15 asphalt felt). Use as indicated on the Drawings.

D. Weep/Vent Products: Use the following unless otherwise indicated:

1. Mesh Weep/Vent: “CavClear” non-woven recycled polymer mesh flame-retardant binder and “M” notched bottom as manufactured by Archovations, Inc., Hudson, WI, or equal product of other manufacturer approved in advance by Architect. Color as selected from the full range of manufacturer’s colors.

E. Cavity Drainage Material: Free-draining mesh, made from polymer strands that will not degrade within the wall cavity.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Mortar Trap by Hohmann Barnard.
b. Mortar Net USA, Ltd.; Mortar Net.

2. Provide one of the following configurations:

a. Strips, full-depth of cavity and 10 inches high, with dovetail shaped notches 7 inches deep that prevent clogging with mortar droppings.

F. Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells and hold reinforcing bars in center of cells. Units are formed from 0.148-inch steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Heckmann Building Products Inc.; No. 376 Rebar Positioner.

b. Hohmann & Barnard, Inc.; #RB or #RB-Twin Rebar Positioner.
c. Wire-Bond; O-Ring or Double O-Ring Rebar Positioner.

G. Premolded Joint Fillers: Closed-cell neoprene or EPDM joint filler complying with ASTM D1056, Grade 2A1, sized as indicated for bond beam control joints.

2.12 MASONRY CLEANERS

A. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following

a. Diedrich Technologies, Inc.
b. EaCo Chem, Inc.
c. Prosoco, Inc.

2.13 MORTAR AND GROUT MIXES

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures, unless otherwise indicated.

1. Do not use calcium chloride in mortar or grout.
2. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.

B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions and thoroughly blend ingredients before delivering to Project site.

C. Mortar for Unit Masonry: Comply with ASTM C 270, Property Specification. Provide the following types of mortar for applications stated unless another type is indicated or needed to provide required compressive strength of masonry.

1. For masonry below grade or in contact with earth, use Type S.
2. For reinforced masonry, use Type S.
3. For exterior, above-grade, load-bearing and non-load-bearing walls and parapet walls; for interior load-bearing walls; for interior non-load-bearing partitions; and for other applications where another type is not indicated, use Type N.
4. For interior non-load-bearing partitions, Type O may be used instead of Type N.

D. Pigmented Mortar: Use colored cement product**.** Do not add pigments to colored cement products.

1. Pigments shall not exceed 10 percent of Portland cement by weight.
2. Mix to match Architect's selection from manufacturer’s range.
3. Application: Use pigmented mortar for exposed mortar joints with the following units:

    a. Face brick.
    b. Limestone trim units.

E. Colored-Aggregate Mortar: Produce required mortar color by using colored aggregates and natural color or white cement as necessary to produce required mortar color.

1. Mix to match Architect's selection from manufacturer’s range..
2. Application: Use colored aggregate mortar for exposed mortar joints with the following units:

    a. Face brick.
    b. Limestone trim units.

F. Grout for Unit Masonry: Comply with ASTM C 476.

1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with Table 1.15.1 in TMS 402 for dimensions of grout spaces and pour height.
2. Proportion grout in accordance with ASTM C 476, Table 1 or paragraph 4.2.2 for specified 28-day compressive strength indicated, but not less than 3000 psi.
3. Provide grout with a slump of 10 to 11 inches as measured according to ASTM C 143/C 143M.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.
2. Verify that foundations are within tolerances specified.
3. Verify that reinforcing dowels are properly placed.

B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping connections.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Thickness: Build cavity and composite walls and other masonry construction to full thickness shown. Build single-wythe walls to actual widths of masonry units, using units of widths indicated.
B. Build chases and recesses to accommodate items specified in this and other Sections.
C. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match the construction immediately adjacent to opening.
D. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.
E. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures.

    1. Mix units from several pallets or cubes as they are placed.

F. Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds 30 g/30 sq. in. per minute when tested per ASTM C 67. Allow units to absorb water so they are damp but not wet at time of laying.

3.3 TOLERANCES

A. Dimensions and Locations of Elements:

    1. For dimensions in cross section or elevation do not vary by more than plus 1/2 inch or minus 1/4 inch.
    2. For location of elements in plan do not vary from that indicated by more than plus or minus 1/2 inch.
    3. For location of elements in elevation do not vary from that indicated by more than plus or minus 1/4 inch in a story height or 1/2 inch total.

B. Lines and Levels:

    1. For bed joints and top surfaces of bearing walls do not vary from level by more than 1/4 inch in 10 feet, or 1/2 inch maximum.
    2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2 inch maximum.
    3. For vertical lines and surfaces do not vary from plumb by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2 inch maximum.
    4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2 inch maximum.
    5. For lines and surfaces do not vary from straight by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2 inch maximum.
    6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 feet, or 1/2 inch maximum.

7. For faces of adjacent exposed masonry units, do not vary from flush alignment by more than 1/16 inch except due to warpage of masonry units within tolerances specified for warpage of units.

C. Joints:

1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch, with a maximum thickness limited to 1/2 inch.
2. For exposed bed joints, do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch.
3. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch or minus 1/4 inch.
4. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch. Do not vary from adjacent bed-joint and head-joint thicknesses by more than 1/8 inch. For exposed bed joints and head joints of stacked bond, do not vary from a straight line by more than 1/16 inch from one masonry unit to the next.

3.4 LAYING MASONRY WALLS

A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.
B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in bond pattern indicated on Drawings; do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.
C. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than 4-inches. Bond and interlock each course of each wythe at corners. Do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.
D. Stopping and Resuming Work: Stop work by racking back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.
E. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.
F. Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.
G. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below and rod mortar or grout into core.
H. Fill cores in hollow CMUs with grout 24 inches under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.
I. Build non-load-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.

1. Install compressible filler in joint between top of partition and underside of structure above.
2. Fasten partition top anchors to structure above and build into top of partition. Grout cells of CMUs solidly around plastic tubes of anchors and push tubes down into

grout to provide 1/2-inch clearance between end of anchor rod and end of tube. Space anchors 48 inches o.c. unless otherwise indicated.

3. Wedge non-load-bearing partitions against structure above with small pieces of tile, slate, or metal. Fill joint with mortar after dead-load deflection of structure above approaches final position.
4. At fire-rated partitions, treat joint between top of partition and underside of structure above to comply with Section 078446 "Fire-Resistive Joint Systems."

3.5 MORTAR BEDDING AND JOINTING

A. Lay hollow brick and CMUs as follows:

1. With face shells fully bedded in mortar and with head joints of depth equal to bed joints.
2. With webs fully bedded in mortar in all courses of piers, columns, and pilasters.
3. With webs fully bedded in mortar in grouted masonry, including starting course on footings.
4. With entire units, including areas under cells, fully bedded in mortar at starting course on footings where cells are not grouted.

B. Lay solid masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.

C. Set limestone trim units in full bed of mortar with full vertical joints. Fill dowel, anchor, and similar holes.

1. Clean soiled surfaces with fiber brush and soap powder and rinse thoroughly with clear water.
2. Allow cleaned surfaces to dry before setting.
3. Wet joint surfaces thoroughly before applying mortar.

D. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.

E. Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated.

3.6 COMPOSITE MASONRY

A. Bond wythes of composite masonry together using one of the following methods:

1. Individual Metal Ties: Provide ties as shown installed in horizontal joints, but not less than one metal tie for 2.67 sq. ft. of wall area spaced not to exceed 24 inches o.c. horizontally and 16 inches o.c. vertically. Stagger ties in alternate courses. Provide additional ties within 12 inches of openings and space not more than 36 inches apart around perimeter of openings. At intersecting and abutting walls, provide ties at no more than 24 inches o.c. vertically.

   a. Where bed joints of wythes do not align, use adjustable (two-piece) type ties.

2. Masonry Joint Reinforcement: Installed in horizontal mortar joints.
    a. Where bed joints of both wythes align, use ladder-type reinforcement extending across both wythes.
    b. Where bed joints of wythes do not align, use adjustable (two-piece) type reinforcement with continuous horizontal wire in facing wythe attached to ties.

3. Header Bonding: Provide masonry unit headers extending not less than 3 inches into each wythe. Space headers not over 8 inches clear horizontally and 16 inches clear vertically.

B. Bond wythes of composite masonry together using bonding system indicated on Drawings.
C. Collar Joints: Solidly fill collar joints by parging face of first wythe that is laid and shoving units of other wythe into place.
D. Corners: Provide interlocking masonry unit bond in each wythe and course at corners unless otherwise indicated.

1. Provide continuity with masonry joint reinforcement at corners by using prefabricated L-shaped units as well as masonry bonding.

E. Intersecting and Abutting Walls: Unless vertical expansion or control joints are shown at juncture, bond walls together as follows:

1. Provide individual metal ties not more than 16 inches o.c.
2. Provide continuity with masonry joint reinforcement by using prefabricated T-shaped units.
3. Provide rigid metal anchors not more than 24 inches o.c. If used with hollow masonry units, embed ends in mortar-filled cores.

3.7 CAVITY WALLS

A. Bond wythes of cavity walls together using one of the following methods:

1. Individual Metal Ties: Provide ties as shown installed in horizontal joints, but not less than one metal tie for 2.67 sq. ft. of wall area spaced not to exceed 24 inches o.c. horizontally and 16 inches o.c. vertically. Stagger ties in alternate courses. Provide additional ties within 12 inches of openings and space not more than 36 inches apart around perimeter of openings. At intersecting and abutting walls, provide ties at no more than 24 inches o.c. vertically.
    a. Where bed joints of wythes do not align, use adjustable (two-piece) type ties.
    b. Where one wythe is of clay masonry and the other of concrete masonry, use adjustable (two-piece) type ties to allow for differential movement regardless of whether bed joints align.

2. Masonry Joint Reinforcement: Installed in horizontal mortar joints.
    a. Where bed joints of both wythes align, use ladder-type reinforcement extending across both wythes.

b. Where bed joints of wythes do not align, use adjustable (two-piece) type reinforcement with continuous horizontal wire in facing wythe attached to ties].
c. Where one wythe is of clay masonry and the other of concrete masonry, use adjustable (two-piece) type reinforcement with continuous horizontal wire in facing wythe attached to ties to allow for differential movement regardless of whether bed joints align.

3. Header Bonding: Provide masonry unit headers extending not less than 3 inches into each wythe. Space headers not over 8 inches clear horizontally and 16 inches clear vertically.
4. Masonry Veneer Anchors: Comply with requirements for anchoring masonry veneers.

B. Bond wythes of cavity walls together using bonding system indicated on Drawings.
C. Keep cavities clean of mortar droppings and other materials during construction. Bevel beds away from cavity, to minimize mortar protrusions into cavity. Do not attempt to trowel or remove mortar fins protruding into cavity.
D. Parge cavity face of backup wythe in a single coat approximately 3/8 inch thick. Trowel face of parge coat smooth.
E. Coat cavity face of backup wythe to comply with Section 071113 "Bituminous Dampproofing."
F. Installing Cavity-Wall Insulation: Place small dabs of adhesive, spaced approximately 12 inches o.c. both ways, on inside face of insulation boards, or attach with plastic fasteners designed for this purpose. Fit courses of insulation between wall ties and other confining obstructions in cavity, with edges butted tightly both ways. Press units firmly against inside wythe of masonry or other construction as shown.

1. Fill cracks and open gaps in insulation with crack sealer compatible with insulation and masonry.

3.8 MASONRY JOINT REINFORCEMENT

A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch on exterior side of walls, 1/2 inch elsewhere. Lap reinforcement a minimum of 6 inches.

1. Space reinforcement not more than 16 inches o.c.
2. Space reinforcement not more than 8 inches o.c. in foundation walls and parapet walls.
3. Provide reinforcement not more than 8 inches above and below wall openings and extending 12 inches beyond openings in addition to continuous reinforcement.

B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.
C. Provide continuity at wall intersections by using prefabricated T-shaped units.
D. Provide continuity at corners by using prefabricated L-shaped units.
E. Cut and bend reinforcing units as directed by manufacturer for continuity at corners, returns, offsets, column fireproofing, pipe enclosures, and other special conditions.

3.9 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

A. Anchor masonry to structural steel and concrete where masonry abuts or faces structural steel or concrete to comply with the following:

1. Provide an open space not less than 1 inch wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials.
2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
3. Space anchors as indicated, but not more than 24 inches o.c. vertically and 36 inches o.c. horizontally.

3.10 ANCHORING MASONRY VENEERS

A. Anchor masonry veneers to concrete and masonry backup with seismic masonry-veneer anchors to comply with the following requirements:
1. Embed connector sections and continuous wire in masonry joints. Provide not less than 2 inches of air space between back of masonry veneer and face of sheathing.
2. Locate anchor sections to allow maximum vertical differential movement of ties up and down.
3. Space anchors as indicated, but not more than 18 inches o.c. vertically and 24 inches o.c. horizontally, with not less than 1 anchor for each 2 sq. ft. of wall area. Install additional anchors within 12 inches of openings and at intervals, not exceeding 8 inches, around perimeter.
4. Space anchors as indicated, but not more than 16 inches o.c. vertically and 24 inches o.c. horizontally with not less than 1 anchor for each 2.67 sq. ft. of wall area. Install additional anchors within 12 inches of openings and at intervals, not exceeding 36 inches, around perimeter.

3.11 CONTROL AND EXPANSION JOINTS

A. General: Install control and expansion joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.
1. Form control joints in concrete masonry using the preformed control-joint gasket specified in Part 2. Install in accordance with the manufacturer's written instructions.

B. Form expansion joints in brick as follows:

1. Build flanges of metal expansion strips into masonry. Lap each joint 4 inches in direction of water flow. Seal joints below grade and at junctures with horizontal expansion joints if any.
2. Build flanges of factory-fabricated, expansion-joint units into masonry.
3. Build in compressible joint fillers where indicated.

4. Form open joint full depth of brick wythe and of width indicated, but not less than 1/2 inch for installation of sealant and backer rod specified in Section 079200 "Joint Sealants."

C. Provide horizontal, pressure-relieving joints by either leaving an air space or inserting a compressible filler of width required for installing sealant and backer rod specified in Section 079200 "Joint Sealants," but not less than 3/8 inch >.

1. Locate horizontal, pressure-relieving joints beneath shelf angles supporting masonry.

3.12 LINTELS

A. Install steel lintels where indicated.
B. Provide concrete lintels where shown and where openings of more than 12 inches for brick-size units and 24 inches for block-size units are shown without structural steel or other supporting lintels.
C. Provide minimum bearing of 8 inches at each jamb unless otherwise indicated.

3.13 FLASHING, WEEP HOLES, CAVITY DRAINAGE, AND VENTS

A. General: Install embedded flashing and weep holes in masonry at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated. Install vents at shelf angles, ledges, and other obstructions to provide upward air flow in cavities, and where indicated.
B. Install flashing as per Drawings.
C. Install weep holes in head joints in exterior wythes of first course of masonry immediately above embedded flashing and as follows:

1. Use specified weep/vent products to form weep holes.
2. Space weep holes 24 inches o.c. unless otherwise indicated.

3.14 REINFORCED UNIT MASONRY INSTALLATION

A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.

1. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and other loads that may be placed on them during construction.

B. Placing Reinforcement: Comply with requirements in TMS 402.

C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.

1. Comply with requirements in TMS 402 for cleanouts and for grout placement, including minimum grout space and maximum pour height.
2. Limit height of vertical grout pours to not more than 60 inches

3.15 FIELD QUALITY CONTROL

A. Testing and Inspecting: Owner will engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas, as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.
B. Inspections: Level 1 special inspections according to the "International Building Code."

1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.
2. Place grout only after inspectors have verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.
3. Place grout only after inspectors have verified proportions of site-prepared grout.

C. Testing Prior to Construction: One set of tests.
D. Testing Frequency: One set of tests for each 5000 sq. ft. of wall area or portion thereof.
E. Clay Masonry Unit Test: For each type of unit provided, according to ASTM C 67 for compressive strength.
F. Concrete Masonry Unit Test: For each type of unit provided, according to ASTM C 140 for compressive strength.
G. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, according to ASTM C 780.
H. Mortar Test (Property Specification): For each mix provided, according to ASTM C 780. Test mortar for mortar air content and compressive strength.
I. Grout Test (Compressive Strength): For each mix provided, according to ASTM C 1019.
J. Prism Test: For each type of construction provided, according to ASTM C 1314 at 7 days and at 28 days.

3.16 PARGING

A. Parge exterior faces of below-grade masonry walls, where indicated, in 2 uniform coats to a total thickness of 3/4 inch. Dampen wall before applying first coat and scarify first coat to ensure full bond to subsequent coat.
B. Use a steel-trowel finish to produce a smooth, flat, dense surface with a maximum surface variation of 1/8 inch per foot. Form a wash at top of parging and a cove at bottom.
C. Damp-cure parging for at least 24 hours and protect parging until cured.

3.17 REPAIRING, POINTING, AND CLEANING

A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.
B. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.
C. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.
D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:

1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
3. Protect adjacent stone and non-masonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
5. Clean brick by bucket-and-brush hand-cleaning method described in BIA Technical Notes 20.
6. Clean masonry with a proprietary acidic cleaner applied according to manufacturer's written instructions.
7. Clean concrete masonry by cleaning method indicated in NCMA TEK 8-2A applicable to type of stain on exposed surfaces.
8. Clean stone trim to comply with stone supplier's written instructions.
9. Clean limestone units to comply with recommendations in ILI's "Indiana Limestone Handbook."

3.18 MASONRY WASTE DISPOSAL

A. Salvageable Materials: Unless otherwise indicated, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.
B. Waste Disposal as Fill Material: Dispose of clean masonry waste, including excess or soil-contaminated sand, waste mortar, and broken masonry units, by crushing and mixing with fill material as fill is placed.

1. Crush masonry waste to less than 4 inches in each dimension.
2. Mix masonry waste with at least two parts of specified fill material for each part of masonry waste. Fill material is specified in Section 312000 "Earth Moving."
3. Do not dispose of masonry waste as fill within 18 inches of finished grade.

C. Excess Masonry Waste: Remove excess clean masonry waste that cannot be used as fill, as described above, and other masonry waste, and legally dispose of off Owner's property.

END OF SECTION 04 20 00

SECTION 05 12 00 - STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Structural-steel materials.
2. Shrinkage-resistant grout.

B. Related Requirements:

1. Section 05.3100 "Steel Decking" for field installation of shear stud connectors through deck.
2. Section 05.5000 "Metal Fabrications" for steel lintels and shelf angles not attached to structural-steel frame and other steel items not defined as structural steel.
3. Section 09.9113 "Painting" for painting requirements.

1.2 DEFINITIONS

A. Structural Steel: Elements of the structural frame indicated on Drawings and as described in ANSI/AISC 303.
B. Seismic-Load-Resisting System: Elements of structural-steel frame designated as "SLRS" or along grid lines designated as "SLRS" on Drawings, including columns, beams, and braces and their connections.
C. Protected Zone: Structural members or portions of structural members indicated as "protected zone" on Drawings. Connections of structural and nonstructural elements to protected zones are limited.
D. Demand-Critical Welds: Those welds, the failure of which would result in significant degradation of the strength and stiffness of the seismic-load-resisting system and which are indicated as "demand critical" or "seismic critical" on Drawings.

1.3 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Product Data:

1. Structural-steel materials.
2. High-strength, bolt-nut-washer assemblies.
3. Anchor rods.
4. Threaded rods.
5. Slide bearings.
6. Shop primer.
7. Galvanized-steel primer.
8. Etching cleaner.
9. Galvanized repair paint.
10. Shrinkage-resistant grout.

B. Shop Drawings: Show fabrication of structural-steel components.

1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
2. Include embedment Drawings.
3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections.
5. Identify members and connections of the seismic-load-resisting system.
6. Indicate locations and dimensions of protected zones.
7. Identify demand-critical welds.
8. Identify members not to be shop primed.

C. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide in accordance with AWS D1.1/D1.1M for each welded joint whether prequalified or qualified by testing, including the following:

1. Power source (constant current or constant voltage).
2. Electrode manufacturer and trade name, for demand-critical welds.

D. Delegated Design Submittal: For structural-steel connections indicated on Drawings to comply with design loads, include analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer, fabricator, shop-painting applicators, professional engineer and testing agency.
B. Welding certificates.
C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.
D. Mill test reports for structural-steel materials, including chemical and physical properties.

E. Product Test Reports: For the following:

1. Bolts, nuts, and washers, including mechanical properties and chemical analysis.
2. Direct-tension indicators.
3. Tension-control, high-strength, bolt-nut-washer assemblies.

F. Survey of existing conditions.
G. Source quality-control reports.
H. Field quality-control reports.

1.7 QUALITY ASSURANCE

A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category BU or is accredited by the IAS Fabricator Inspection Program for Structural Steel (Acceptance Criteria 172).
B. Installer Qualifications: A qualified Installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category ACSE.
C. Shop-Painting Applicator Qualifications: Qualified in accordance with AISC's Sophisticated Paint Endorsement P1 or to SSPC-QP 3.
D. Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M.

1. Welders and welding operators performing work on bottom-flange, demand-critical welds are to pass the supplemental welder qualification testing, as required by AWS D1.8/D1.8M. FCAW-S and FCAW-G are to be considered separate processes for welding personnel qualification.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

B. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.

1. Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.
2. Clean and relubricate bolts and nuts that become dry or rusty before use.
3. Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F3125/F3125M, Grade F1852 bolt assemblies and for retesting bolt assemblies after lubrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Comply with applicable provisions of the following specifications and documents:

1. ANSI/AISC 303.
2. ANSI/AISC 341.
3. ANSI/AISC 360.
4. RCSC's "Specification for Structural Joints Using High-Strength Bolts."

B. Connection Design Information:

1. Option 3 and 3B: Design connections and final configuration of member reinforcement at connections in accordance with ANSI/AISC 303 by fabricator's qualified professional engineer.

a. Use Allowable Stress Design; data are given at service-load level.

C. Moment Connections: Type PR, partially restrained.

D. Construction: Combined system of moment frame and shear walls.

2.2 STRUCTURAL-STEEL MATERIALS

A. W-Shapes: ASTM A992/A992M.
B. Channels, Angles, M-Shapes: ASTM A36/A36M.
C. Channels, Angles, S-Shapes: ASTM A36/A36M.
D. Plate and Bar: ASTM A36/A36M.
E. Cold-Formed Hollow Structural Sections: ASTM A500/A500M, Grade B structural tubing.
F. Welding Electrodes: Comply with AWS requirements.

2.3 BOLTS AND CONNECTORS

A. High-Strength A325 Bolts, Nuts, and Washers: ASTM F3125/F3125M, Grade A325, Type 1, heavy-hex steel structural bolts; ASTM A563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers; all with plain finish.

1. Direct-Tension Indicators: ASTM F959/F959M, Type 325-1, compressible-washer type with plain finish.

B. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F3125/F3125M, Grade F1852, Type 1, heavy-hex head assemblies, consisting of steel structural bolts with splined ends; ASTM A563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers.

1. Finish: Plain.

2.4 RODS

A. Headed Anchor Rods: ASTM F1554, Grade 36, straight.

1. Nuts: ASTM A563 heavy-hex carbon steel.
2. Plate Washers: ASTM A36/A36M carbon steel.
3. Washers: ASTM F436, Type 1, hardened carbon steel.
4. Finish: Plain.

B. Threaded Rods: ASTM A36/A36M.

1. Nuts: ASTM A63 heavy-hex carbon steel.
2. Washers: ASTM F436, Type 1, hardened carbon steel.
3. Finish: Plain.

2.5 SLIDE BEARINGS

A. Structural Slide Bearings: Low-friction assemblies, of configuration indicated, that provide vertical transfer of loads and allow horizontal movement perpendicular to plane of expansion joint while resisting movement within plane of expansion joint.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Amscot Structural Products Corp.
b. Fluorocarbon Company Limited.
c. GRM Custom Products.

2. Mating Surfaces: PTFE and PTFE.
3. Coefficient of Friction: Not more than 0.03.
4. Design Load: Not less than 5,000 psi.
5. Total Movement Capability: 2 inches.

2.6 PRIMER

A. Steel Primer:

1. Comply with Section 09.9113 "Painting."
2. SSPC-Paint 23, latex primer.
3. Fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.

2.7 SHRINKAGE-RESISTANT GROUT

A. Metallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, metallic aggregate grout, mixed with water to consistency suitable for application and a 30-minute working time.
B. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, nonmetallic aggregate grout, noncorrosive and nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

2.8 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate in accordance with ANSI/AISC 303 and to ANSI/AISC 360.

    1. Camber structural-steel members where indicated.
    2. Fabricate beams with rolling camber up.
    3. Identify high-strength structural steel in accordance with ASTM A6/A6M and maintain markings until structural-steel framing has been erected.
    4. Mark and match-mark materials for field assembly.
    5. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.

B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.

    1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1/D1.1M.

C. Bolt Holes: Cut, drill,or punch standard bolt holes perpendicular to metal surfaces.
D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.
E. Cleaning: Clean and prepare steel surfaces that are to remain unpainted in accordance with SSPC-SP 1.
F. Steel Wall-Opening Framing: Select true and straight members for fabricating steel wall-opening framing to be attached to structural-steel frame. Straighten as required to provide uniform, square, and true members in completed wall framing. Build up welded framing, weld exposed joints continuously, and grind smooth.
G. Welded-Steel Door Frames: Build up welded-steel doorframes attached to structural-steel frame. Weld exposed joints continuously and grind smooth. Plug-weld fixed steel bar stops to frames. Secure removable stops to frames with countersunk machine screws, uniformly spaced not more than 10 inches o.c. unless otherwise indicated on Drawings.
H. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.

    1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
    2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.

3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.9 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts in accordance with RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.

1. Joint Type: Pretensioned.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in ANSI/AISC 303 for mill material.

2.10 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel in accordance with ASTM A123/A123M.

1. Fill vent and drain holes that are exposed in the finished Work unless they function as weep holes, by plugging with zinc solder and filing off smooth.
2. Galvanize lintels, shelf angles and welded door frames attached to structural-steel frame and located in exterior walls.

2.11 SHOP PRIMING

A. Shop prime steel surfaces, except the following:

1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
2. Surfaces to be field welded.
3. Surfaces of high-strength bolted, slip-critical connections.
4. Surfaces to receive sprayed fire-resistive materials (applied fireproofing).
5. Galvanized surfaces.
6. Corrosion-resisting (weathering) steel surfaces.
7. Surfaces enclosed in interior construction.

B. Surface Preparation of Steel: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces in accordance with the following specifications and standards:

1. SSPC-SP 2.

C. Surface Preparation of Galvanized Steel: Prepare galvanized-steel surfaces for shop priming by thoroughly cleaning steel of grease, dirt, oil, flux, and other foreign matter, and treating with etching cleaner.

D. Priming: Immediately after surface preparation, apply primer in accordance with manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 1.5 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

2.12 SOURCE QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform shop tests and inspections.

1. Allow testing agency access to places where structural-steel work is being fabricated or produced to perform tests and inspections.
2. Bolted Connections: Inspect shop-bolted connections in accordance with RCSC's "Specification for Structural Joints Using High-Strength Bolts."
3. Welded Connections: Visually inspect shop-welded connections in accordance with AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:

    a. Liquid Penetrant Inspection: ASTM E165/E165M.
    b. Magnetic Particle Inspection: ASTM E709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
    c. Ultrasonic Inspection: ASTM E164.
    d. Radiographic Inspection: ASTM E94/E94M.

4. In addition to visual inspection, test and inspect shop-welded shear stud connectors in accordance with requirements in AWS D1.1/D1.1M for stud welding and as follows:

    a. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear stud connector.
    b. Conduct tests in accordance with requirements in AWS D1.1/D1.1M on additional shear stud connectors if weld fracture occurs on shear stud connectors already tested.

5. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, with certified steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.

1. Prepare a certified survey of existing conditions. Include bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated on Drawings.

1. Do not remove temporary shoring supporting composite deck construction and structural-steel framing until cast-in-place concrete has attained its design compressive strength.

3.3 ERECTION

A. Set structural steel accurately in locations and to elevations indicated and in accordance with ANSI/AISC 303 and ANSI/AISC 360.
B. Baseplates, Bearing Plates, and Leveling Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.

1. Set plates for structural members on wedges, shims, or setting nuts as required.
2. Weld plate washers to top of baseplate.
3. Pretension anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
4. Promptly pack shrinkage-resistant grout solidly between bearing surfaces and plates, so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for grouting.

C. Maintain erection tolerances of structural steel within ANSI/AISC 303.
D. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that

are in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure. Slope roof framing members to slopes indicated on Drawings.
2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.

E. Splice members only where indicated.
F. Do not use thermal cutting during erection.
G. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts in accordance with RCSC's "Specification for Structural Joints Using High-Strength Bolts" for bolt and joint type specified.

1. Joint Type: Pretensioned.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Comply with ANSI/AISC 303 and ANSI/AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
2. Remove backing bars or runoff tabs, back gouge, and grind steel smooth.
3. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in ANSI/AISC 303 for mill material.

3.5 REPAIR

A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing, and repair galvanizing to comply with ASTM A780/A780M.
B. Touchup Painting:

1. Immediately after erection, clean exposed areas where primer is damaged or missing, and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

a. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

2. Cleaning and touchup painting are specified in Section 09.9113 "Painting."

3.6 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector to perform the following special inspections:

1. Verify structural-steel materials and inspect steel frame joint details.
2. Verify weld materials and inspect welds.
3. Verify connection materials and inspect high-strength bolted connections.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

1. Bolted Connections: Inspect bolted connections in accordance with RCSC's "Specification for Structural Joints Using High-Strength Bolts."
2. Welded Connections: Visually inspect field welds in accordance with AWS D1.1/D1.1M.

    a. In addition to visual inspection, test and inspect field welds in accordance with AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:

        1) Liquid Penetrant Inspection: ASTM E165/E165M.
        2) Magnetic Particle Inspection: ASTM E709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
        3) Ultrasonic Inspection: ASTM E164.
        4) Radiographic Inspection: ASTM E94/E94M.

END OF SECTION 05 12 00

SECTION 05 21 00 - STEEL JOIST FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. K-series steel joists.
2. KCS-type K-series steel joists.
3. K-series steel joist substitutes.
4. LH-series long-span steel joists.

B. Related Requirements:

1. Section 03.3000 "Cast-in-Place Concrete" for installing bearing plates in concrete.
2. Section 04.2000 "Unit Masonry" for installing bearing plates in unit masonry.
3. Section 05.1200 "Structural Steel Framing" for field-welded shear connectors.

1.2 DEFINITIONS

A. SJI's "Specifications": Steel Joist Institute's "Standard Specifications, Load Tables and Weight Tables for Steel Joists and Joist Girders."
B. Special Joists: Steel joists or joist girders requiring modification by manufacturer to support nonuniform, unequal, or special loading conditions that invalidate load tables in SJI's "Specifications."

1.3 ACTION SUBMITTALS

A. Product Data: For each type of joist, accessory, and product.
B. Shop Drawings:

1. Include layout, designation, number, type, location, and spacing of joists.
2. Include joining and anchorage details; bracing, bridging, and joist accessories; splice and connection locations and details; and attachments to other construction.
3. Indicate locations and details of bearing plates to be embedded in other construction.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer amd professional engineer.
B. Welding certificates.
C. Manufacturer certificates.
D. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

E. Mill Certificates: For each type of bolt.
F. Comprehensive engineering analysis of special joists signed and sealed by the qualified professional engineer responsible for its preparation.
G. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: A manufacturer certified by SJI to manufacture joists complying with applicable standard specifications and load tables in SJI's "Specifications."

1. Manufacturer's responsibilities include providing professional engineering services for designing special joists to comply with performance requirements.

B. Welding Qualifications: Qualify field-welding procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle joists as recommended in SJI's "Specifications."
B. Protect joists from corrosion, deformation, and other damage during delivery, storage, and handling.

1.7 SEQUENCING

A. Deliver steel bearing plates to be built into cast-in-place concrete and masonry construction.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Canam Buildings US Inc.; Canam Group Inc.
2. New Millennium Building Systems, LLC.
3. Vulcraft/Verco Group; a division of Nucor Corp.

2.2 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide special joists and connections capable of withstanding design loads indicated on Drawings.

1. Use ASD; data are given at service-load level.

2. Design special joists to withstand design loads with live-load deflections no greater than the following:

    a. Floor Joists: Vertical deflection of 1/360 of the span.
    b. Roof Joists: Vertical deflection of 1/360 of the span.

2.3 STEEL JOISTS

A. K-Series Steel Joist: Manufactured steel joists of type indicated according to "Standard Specification for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members, underslung ends, and parallel top chord.

1. Joist Type: K-series steel joists and KCS-type K-series steel joists.
2. K-Series Steel Joist Substitutes: Manufacture according to "Standard Specifications for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle or -channel members.
3. Provide holes in chord members for connecting and securing other construction to joists.
4. Top-Chord Extensions: Extend top chords of joists with SJI's Type S top-chord extensions where indicated on Drawings, complying with SJI's "Specifications."
5. Extended Ends: Extend bearing ends of joists with SJI's Type R extended ends where indicated on Drawings, complying with SJI's "Specifications."
6. Camber joists according to SJI's "Specifications."
7. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches.

B. Long-Span Steel Joist: Manufactured steel joists according to "Standard Specification for Longspan Steel Joists, LH-Series and Deep Longspan Steel Joists, DLH-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members; of joist type and end and top-chord arrangements as follows:

1. Joist Type: LH-series long-span steel joists.
2. End Arrangement: Underslung.
3. Top-Chord Arrangement: Parallel.
4. Provide holes in chord members for connecting and securing other construction to joists.
5. Camber long-span steel joists according to SJI's "Specifications.".
6. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches.

2.4 PRIMERS

A. Primer:

1. SSPC-Paint 15, or manufacturer's standard shop primer complying with performance requirements in SSPC-Paint 15.
2. Provide shop primer that complies with Section 09.9113 "Painting."

2.5 STEEL JOIST ACCESSORIES

A. Bridging:

1. Provide bridging anchors and number of rows of horizontal or diagonal bridging of material, size, and type required by SJI's "Specifications" for type of joist, chord size, spacing, and span. Furnish additional erection bridging if required for stability.

B. Fabricate steel bearing plates from ASTM A36/A36M steel with integral anchorages of sizes and thicknesses indicated on Drawings. Shop prime paint.
C. Steel bearing plates with integral anchorages are specified in Section 05.5000 "Metal Fabrications."
D. Furnish ceiling extensions, either extended bottom-chord elements or a separate extension unit of enough strength to support ceiling construction.

1. Extend ends to within 1/2 inch of finished wall surface unless otherwise indicated on Drawings.
2. Finish: Plain, uncoated.

E. High-Strength Bolts, Nuts, and Washers: ASTM F3125/F3125M, Grade A325, Type 1, heavy-hex steel structural bolts; ASTM A563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers.

1. Finish: Plain.

F. Welding Electrodes: Comply with AWS standards.
G. Galvanizing Repair Paint: MPI#18, MPI#19, or SSPC-Paint 20.
H. Furnish miscellaneous accessories including splice plates and bolts required by joist manufacturer to complete joist assembly.

2.6 CLEANING AND SHOP PAINTING

A. Clean and remove loose scale, heavy rust, and other foreign materials from fabricated joists and accessories by hand-tool cleaning, SSPC-SP 2 or power-tool cleaning, SSPC-SP 3.
B. Do not prime paint joists and accessories to receive sprayed fire-resistive materials.
C. Apply one coat of shop primer to joists and joist accessories to be primed to provide a continuous, dry paint film not less than 1 mil thick.
D. Shop priming of joists and joist accessories is specified in Section 09.9113 "Painting."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting substrates, embedded bearing plates, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Do not install joists until supporting construction is in place and secured.
B. Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Specifications," joist manufacturer's written instructions, and requirements in this Section.

1. Before installation, splice joists delivered to Project site in more than one piece.
2. Space, adjust, and align joists accurately in location before permanently fastening.
3. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.
4. Delay rigidly connecting bottom-chord extensions to columns or supports until dead loads are applied.

C. Field weld joists to supporting steel bearing plates and framework. Coordinate welding sequence and procedure with placement of joists. Comply with AWS requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
D. Bolt joists to supporting steel framework using carbon-steel bolts.
E. Bolt joists to supporting steel framework using high-strength structural bolts. Comply with RCSC's "Specification for Structural Joints Using High-Strength Bolts" for high-strength structural bolt installation and tightening requirements.
F. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.

3.3 REPAIRS

A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.
B. Touchup Painting:

1. Immediately after installation, clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted joists abutting structural steel, and accessories.

    a. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.
    b. Apply a compatible primer of same type as primer used on adjacent surfaces.

2. Cleaning and touchup painting are specified in Section 09.9113 "Painting."

3.4 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
B. Visually inspect field welds according to AWS D1.1/D1.1M.
C. Visually inspect bolted connections.
D. Prepare test and inspection reports.

END OF SECTION 05 21 00

SECTION 05 31 00 - STEEL DECKING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Roof deck.
2. Acoustical roof deck.
3. Composite floor deck.

B. Related Requirements:

1. Section 03.3000 "Cast-in-Place Concrete" for normal-weight and lightweight structural concrete fill over steel deck.
2. Section 05.1200 "Structural Steel Framing" for shop- and field-welded shear connectors.
3. Section 05.5000 "Metal Fabrications" for framing deck openings with miscellaneous steel shapes.

1.2 ACTION SUBMITTALS

A. Product Data:

1. Roof deck.
2. Acoustical roof deck.
3. Composite floor deck.

B. Shop Drawings:

1. Include layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction.

1.3 INFORMATIONAL SUBMITTALS

A. Welding certificates.
B. Product Certificates: For each type of steel deck.
C. Test and Evaluation Reports:

1. Product Test Reports: For tests performed by a qualified testing agency, indicating that each of the following complies with requirements:

a. Power-actuated mechanical fasteners.
b. Acoustical roof deck.

2. Research Reports: For steel deck, from ICC-ES showing compliance with the building code.

D. Field Quality-Control Submittals:

1. Field quality-control reports.

E. Qualification Statements: For welding personnel and testing agency.

1.4 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel in accordance with SDI QA/QC and the following welding codes:

1. AWS D1.1/D1.1M.
2. AWS D1.3/D1.3M.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.
B. Store products in accordance with SDI MOC3. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.

1. Protect and ventilate acoustical cellular roof deck with factory-installed insulation to maintain insulation free of moisture.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. AISI Specifications: Comply with calculated structural characteristics of steel deck in accordance with AISI S100.
B. Fire-Resistance Ratings: Comply with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from listings of another qualified testing agency.

2.2 ROOF DECK

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Canam Buildings US Inc.; Canam Group Inc.
2. Epic Metals Corporation.
3. New Millennium Building Systems, LLC.
4. Vulcraft Group; Division of Nucor Corp.

B. Fabrication of Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with SDI RD and with the following:

1. Galvanized-Steel Sheet: ASTM A653/A653M, Structural Steel (SS), Grade 40, G60 zinc coating.
2. Deck Profile: As indicated.
3. Profile Depth: As indicated.
4. Design Uncoated-Steel Thickness: As indicated.
5. Span Condition: Triple span or more.
6. Side Laps: Overlapped or interlocking seam at Contractor's option.

2.3 ACOUSTICAL ROOF DECK

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Canam Buildings US Inc.; Canam Group Inc.
2. Epic Metals Corporation.
3. Vulcraft Group; Division of Nucor Corp.

B. Fabrication of Acoustical Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with SDI RD and with the following:

1. Galvanized-Steel Sheet: ASTM A653/A653M, Structural Steel (SS), Grade 40, G60 zinc coating.
2. Deck Profile: As indicated.
3. Profile Depth: As indicated.
4. Design Uncoated-Steel Thickness: As indicated.
5. Span Condition: Triple span or more.
6. Side Laps: Overlapped or interlocking seam at Contractor's option.
7. Acoustical Perforations: Deck units with manufacturer's standard perforated vertical webs.
8. Sound-Absorbing Insulation: Manufacturer's standard premolded roll or strip of glass or mineral fiber..

    a. Factory install sound-absorbing insulation into cells of cellular deck.

9. Acoustical Performance: NRC 0.65, tested in accordance with ASTM C423.

2.4 COMPOSITE FLOOR DECK

1. Canam Buildings US Inc.; Canam Group Inc.

2. Epic Metals Corporation.
3. New Millennium Building Systems, LLC.
4. Vulcraft Group; Division of Nucor Corp.

B. Fabrication of Composite Floor Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with SDI C, with the minimum section properties indicated, and with the following:

1. Galvanized-Steel Sheet: ASTM A653/A653M, Structural Steel (SS), Grade 33, G60 zinc coating.
2. Profile Depth: As indicated.
3. Design Uncoated-Steel Thickness: As indicated .
4. Span Condition: Triple span or more.

2.5 ACCESSORIES

A. Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.
B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.
C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 minimum diameter.
D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.
E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi, not less than 0.0359-inch design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.
F. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 33,000 psi, of same material and finish as deck, and of thickness and profile recommended by SDI standards for overhang and slab depth.
G. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck unless otherwise indicated.
H. Piercing Hanger Tabs: Piercing steel sheet hanger attachment devices for use with floor deck.
I. Weld Washers: Uncoated steel sheet, shaped to fit deck rib, 0.0598 inch thick, with factory-punched hole of 3/8-inch minimum diameter.
J. Flat Sump Plates: Single-piece steel sheet, 0.0747 inch thick, of same material and finish as deck. For drains, cut holes in the field.
K. Recessed Sump Pans: Single-piece steel sheet, 0.0747 inch thick, of same material and finish as deck, with 3-inch-wide flanges and sloped recessed pans of 1-1/2-inch minimum depth. For drains, cut holes in the field.
L. Galvanizing Repair Paint: ASTM A780/A780M.
M. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Install deck panels and accessories in accordance with SDI C, SDI NC, and SDI RD, as applicable; manufacturer's written instructions; and requirements in this Section.
B. Install temporary shoring before placing deck panels if required to meet deflection limitations.
C. Locate deck bundles to prevent overloading of supporting members.
D. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.

    1. Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.

E. Place deck panels flat and square and fasten to supporting frame without warp or deflection.
F. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.
G. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work.
H. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.
I. Mechanical fasteners may be used in lieu of welding to fasten deck. Locate mechanical fasteners and install in accordance with deck manufacturer's written instructions.
J. Shear Stud Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Weld using end welding of headed-stud shear connectors in accordance with AWS D1.1/D1.1M and manufacturer's written instructions.

3.3 INSTALLATION OF ROOF DECK

A. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1-1/2 inches long, and as follows:

    1. Weld Diameter: 5/8 inch, nominal.
    2. Weld Spacing: Weld edge and interior ribs of deck units with a minimum of two welds per deck unit at each support. Space welds as indicated.
    3. Weld Washers: Install weld washers at each weld location.

B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of one-half of the span or 18 inches, and as follows:

1. Mechanically fasten with self-drilling, No. 10 diameter or larger, carbon-steel screws.
2. Mechanically clinch or button punch.
3. Fasten with a minimum of 1-1/2-inch-long welds.

C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches, with end joints as follows:

1. End Joints: Lapped 2 inches minimum or butted at Contractor's option.

D. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and mechanically fasten flanges to top of deck. Space mechanical fasteners not more than 12 inches apart with at least one fastener at each corner.

1. Install reinforcing channels or zees in ribs to span between supports and mechanically fasten.

E. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels in accordance with deck manufacturer's written instructions. mechanically fasten to substrate to provide a complete deck installation.

1. Weld cover plates at changes in direction of roof-deck panels unless otherwise indicated.

F. Flexible Closure Strips: Install flexible closure strips over partitions, walls, and where indicated. Install with adhesive in accordance with manufacturer's written instructions to ensure complete closure.

3.4 INSTALLATION OF FLOOR DECK

A. Fasten floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:

1. Weld Diameter: 5/8 inch, nominal.
2. Weld Spacing:

   a. Weld edge ribs of panels at each support. Space additional welds an average of 16 inches apart, but not more than 18 inches apart.
   b. Space and locate welds as indicated.

3. Weld Washers: Install weld washers at each weld location.

B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of one-half of the span or 36 inches, and as follows:

1. Mechanically fasten with self-drilling, No. 10 diameter or larger, carbon-steel screws.
2. Mechanically clinch or button punch.
3. Fasten with a minimum of 1-1/2-inch-long welds.

C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches, with end joints as follows:

1. End Joints: Lapped or butted at Contractor's option.

D. Pour Stops and Girder Fillers: Weld steel sheet pour stops and girder fillers to supporting structure in accordance with SDI recommendations unless otherwise indicated.

E. Floor-Deck Closures: Weld steel sheet column closures, cell closures, and Z-closures to deck, in accordance with SDI recommendations, to provide tight-fitting closures at open ends of ribs and sides of deck.

F. Install piercing hanger tabs at 14 inches apart in both directions, within 9 inches of walls at ends, and not more than 12 inches from walls at sides unless otherwise indicated.

3.5 REPAIR

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint in accordance with ASTM A780/A780M and manufacturer's written instructions.

B. Repair Painting:

1. Wire brush and clean rust spots, welds, and abraded areas on both surfaces of prime-painted deck immediately after installation, and apply repair paint.
2. Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.
3. Wire brushing, cleaning, and repair painting of bottom deck surfaces are included in Section 09.9113 "Painting."
4. Wire brushing, cleaning, and repair painting of rust spots, welds, and abraded areas of both deck surfaces are included in Section 09.9113 "Painting."

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Tests and Inspections:

1. Special inspections and qualification of welding special inspectors for cold-formed steel floor and roof deck in accordance with quality-assurance inspection requirements of SDI QA/QC.

a. Field welds will be subject to inspection.

2. Steel decking will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 05 31 00

SECTION 05 40 00 - COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Exterior non-load-bearing wall framing.
2. Interior non-load-bearing wall framing.
3. Ceiling joist framing.
4. Soffit framing.

B. Related Requirements:

1. Section 05.5000 "Metal Fabrications" for miscellaneous steel shapes, masonry shelf angles, and connections used with cold-formed metal framing.
2. Section 09.2116 "Gypsum Board Systems" for interior non-load-bearing, metal-stud-framed, shaft-wall assemblies, with height limitations.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For the following:

1. Cold-formed steel framing materials.
2. Exterior non-load-bearing wall framing.
3. Interior non-load-bearing wall framing.
4. Vertical deflection clips.
5. Single deflection track.
6. Drift clips.
7. Ceiling joist framing.
8. Soffit framing.
9. Post-installed anchors.
10. Power-actuated anchors.
11. Sill sealer gasket.
12. Sill sealer gasket/termite barrier.

B. Shop Drawings:

1. Include layout, spacings, sizes, thicknesses, and types of cold-formed steel framing; fabrication; and fastening and anchorage details, including mechanical fasteners.

2. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.

C. Delegated Design Submittal: For cold-formed steel framing.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.
B. Welding certificates.
C. Product Certificates: For each type of code-compliance certification for studs and tracks.
D. Product Test Reports: For each listed product, for tests performed by a qualified testing agency.

1. Steel sheet.
2. Expansion anchors.
3. Power-actuated anchors.
4. Mechanical fasteners.
5. Vertical deflection clips.
6. Horizontal drift deflection clips
7. Miscellaneous structural clips and accessories.

E. Research Reports:

1. For nonstandard cold-formed steel framing post-installed anchors and power-actuated fasteners, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.
2. For sill sealer gasket/termite barrier, showing compliance with ICC-ES AC380.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.
B. Product Tests: Mill certificates or data from a qualified independent testing agency indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.
C. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Steel Stud Manufacturers Association.
D. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

E. Comply with AISI S230 "Standard for Cold-Formed Steel Framing - Prescriptive Method for One and Two Family Dwellings."

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect and store cold-formed steel framing from corrosion, moisture staining, deformation, and other damage during delivery, storage, and handling as required in AISI S202.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. AllSteel & Gypsum Products, Inc.
2. ClarkDietrich.
3. Marino\WARE.
4. Steel Network, Inc. (The).

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01.4000 "Quality Requirements," to design cold-formed steel framing.
B. Structural Performance: Provide cold-formed steel framing capable of withstanding design loads within limits and under conditions indicated.

1. Design Loads: As indicated on Drawings.
2. Deflection Limits: Design framing systems to withstand design loads without deflections greater than the following:
   a. Exterior Non-Load-Bearing Framing: Horizontal deflection of 1/600 of the wall height.
   b. Interior Non-Load-Bearing Framing: Horizontal deflection of 1/240 of the wall height under a horizontal load of 5 lbf/sq. ft..
   c. Ceiling Joist Framing: Vertical deflection of 1/240 of the span for live loads and 1/240 for total loads of the span.
3. Design framing systems to provide for movement of framing members located outside the insulated building envelope without damage or overstressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 deg F.
4. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:
   a. Upward and downward movement of 3/4 inch.

5. Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.

C. Cold-Formed Steel Framing Standards: Unless more stringent requirements are indicated, framing complies with AISI S100 and ASTM C955.
D. Fire-Resistance Ratings: Comply with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency acceptable to authorities having jurisdiction.

2.3 COLD-FORMED STEEL FRAMING MATERIALS

A. Framing Members, General: Comply with ASTM C955 for conditions indicated.
B. Steel Sheet: ASTM A1003/A1003M, Structural Grade, Type H, metallic coated, of grade and coating designation as follows:

1. Grade: As required by structural performance.
2. Coating: G90 or equivalent.

C. Steel Sheet for Vertical Deflection Clips: ASTM A653/A653M, structural steel, zinc coated, of grade and coating as follows:

1. Grade: As required by structural performance.
2. Coating: G90.

2.4 EXTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0428 inch.
2. Flange Width: 1-3/8 inches.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0428 inch and matching steel studs.
2. Flange Width: 1-1/4 inches.

C. Vertical Deflection Clips, Exterior: Manufacturer's standard bypass or head clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. AllSteel & Gypsum Products, Inc.
b. ClarkDietrich.
c. Marino\WARE.
d. Simpson Strong-Tie Co., Inc.
e. Steel Network, Inc. (The).

D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:

1. Minimum Base-Metal Thickness: 0.0428 inch.
2. Flange Width: 1 inch plus the design gap for one-story structures and 1 inch plus twice the design gap for other applications.

E. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure through positive mechanical attachment to stud web and structure.

2.5 INTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0329 inch.
2. Flange Width: 1-3/8 inches.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0329 inch and matching steel studs.
2. Flange Width: 1-1/4 inches.

C. Vertical Deflection Clips, Interior: Manufacturer's standard bypass or head clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. AllSteel & Gypsum Products, Inc.
b. ClarkDietrich.
c. Marino\WARE.
d. Simpson Strong-Tie Co., Inc.

D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free

vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:

1. Minimum Base-Metal Thickness: 0.0428 inch.
2. Flange Width: 1 inch plus the design gap for one-story structures and 1 inch plus twice the design gap for other applications.

E. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure through positive mechanical attachment to stud web and structure.

2.6 CEILING JOIST FRAMING

A. Steel Ceiling Joists: Manufacturer's standard C-shaped steel sections, of web depths indicated, punched with standard holes, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0329 inch.
2. Flange Width: 1-5/8 inches, minimum.

2.7 SOFFIT FRAMING

A. Exterior Soffit Frame: Manufacturer's standard C-shaped steel sections, of web depths indicated, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0329 inch.
2. Flange Width: 1-5/8 inches, minimum.

2.8 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories from ASTM A1003/A1003M, Structural Grade, Type H, metallic coated steel sheet, of same grade and coating designation used for framing members.

B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:

1. Supplementary framing.
2. Bracing, bridging, and solid blocking.
3. Web stiffeners.
4. Anchor clips.
5. End clips.
6. Foundation clips.
7. Gusset plates.
8. Stud kickers and knee braces.
9. Joist hangers and end closures.
10. Hole-reinforcing plates.
11. Backer plates.

2.9 ANCHORS, CLIPS, AND FASTENERS

A. Steel Shapes and Clips: ASTM A36/A36M, zinc coated by hot-dip process according to ASTM A123/A123M.
B. Anchor Bolts: ASTM F1554, Grade 36, threaded carbon-steel hex-headed bolts, carbon-steel nuts, and flat, hardened-steel washers; zinc coated by hot-dip process according to ASTM A153/A153M, Class C.
C. Post-Installed Anchors: Fastener systems with bolts of same basic metal as fastened metal, if visible, unless otherwise indicated; with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01 ICC-ES AC193 ICC-ES AC58 or ICC-ES AC308 as appropriate for the substrate.

    1. Uses: Securing cold-formed steel framing to structure.
    2. Type: Torque-controlled adhesive anchor or adhesive anchor.
    3. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941, Class Fe/Zn 5, unless otherwise indicated.
    4. Material for Exterior or Interior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 stainless steel bolts, ASTM F593, and nuts, ASTM F594.

D. Power-Actuated Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
E. Mechanical Fasteners: ASTM C1513, corrosion-resistant-coated, self-drilling, self-tapping, steel drill screws.

    1. Head Type: Low-profile head beneath sheathing; manufacturer's standard elsewhere.

F. Welding Electrodes: Comply with AWS standards.

2.10 MISCELLANEOUS MATERIALS

A. Galvanizing Repair Paint: ASTM A780/A780M.
B. Cement Grout: Portland cement, ASTM C150/C150M, Type I; and clean, natural sand, ASTM C404. Mix at ratio of 1 part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.

C. Nonmetallic, Nonshrink Grout: Factory-packaged, nonmetallic, noncorrosive, nonstaining grout, complying with ASTM C1107/C1107M, and with a fluid consistency and 30-minute working time.

D. Shims: Load-bearing, high-density, multimonomer, nonleaching plastic; or cold-formed steel of same grade and metallic coating as framing members supported by shims.
E. Sill Sealer Gasket: Closed-cell neoprene foam, 1/4 inch thick, selected from manufacturer's standard widths to match width of bottom track or rim track members as required.

2.11 FABRICATION

A. Fabricate cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section.

1. Fabricate framing assemblies using jigs or templates.
2. Cut framing members by sawing or shearing; do not torch cut.
3. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, pneumatic pin fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.

    a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
    b. Locate mechanical fasteners and install according to Shop Drawings, with screws penetrating joined members by no fewer than three exposed screw threads.

4. Fasten other materials to cold-formed steel framing by welding, bolting, pneumatic pin fastening, or screw fastening, according to Shop Drawings.

B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies by means that prevent damage or permanent distortion.
C. Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable variation of 1/8 inch in 10 feet and as follows:

1. Spacing: Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error are not to exceed minimum fastening requirements of sheathing or other finishing materials.
2. Squareness: Fabricate each cold-formed steel framing assembly to a maximum out-of-square tolerance of 1/8 inch.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, conditions, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Before sprayed fire-resistive materials are applied, attach continuous angles, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.
B. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that required to obtain fire-resistance ratings indicated. Protect remaining fire-resistive materials from damage.
C. Install load-bearing shims or grout between the underside of load-bearing wall bottom track and the top of foundation wall or slab at locations with a gap larger than 1/4 inch to ensure a uniform bearing surface on supporting concrete or masonry construction.
D. Install sill sealer gasket at the underside of wall bottom track or rim track and at the top of foundation wall or slab at stud or joist locations.
E. Install sill sealer gasket/termite barrier in accordance with manufacturer's written instructions at the underside of wall bottom track or rim track and at the top of foundation wall or slab at stud or joist locations.

3.3 INSTALLATION, GENERAL

A. Cold-formed steel framing may be shop or field fabricated for installation, or it may be field assembled.
B. Install cold-formed steel framing according to AISI S200, AISI S202, and manufacturer's written instructions unless more stringent requirements are indicated.
C. Install shop- or field-fabricated, cold-formed framing and securely anchor to supporting structure.

    1. Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch.

D. Install cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened.

    1. Cut framing members by sawing or shearing; do not torch cut.
    2. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.

        a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
        b. Locate mechanical fasteners, install according to Shop Drawings, and comply with requirements for spacing, edge distances, and screw penetration.

E. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.
F. Install temporary bracing and supports to secure framing and support loads equal to those for which structure was designed. Maintain braces and supports in place,

undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.

G. Do not bridge building expansion joints with cold-formed steel framing. Independently frame both sides of joints.

H. Install insulation, specified in Section 07.2100 "Thermal Insulation," in framing-assembly members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.

I. Fasten hole-reinforcing plate over web penetrations that exceed size of manufacturer's approved or standard punched openings.

3.4 INSTALLATION OF EXTERIOR NONLOADBEARING WALL FRAMING

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.

B. Fasten both flanges of studs to top and bottom track unless otherwise indicated. Space studs as follows:

1. Stud Spacing: As indicated on Drawings.

C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.

1. Install single deep-leg deflection tracks and anchor to building structure.
2. Install double deep-leg deflection tracks and anchor outer track to building structure.
3. Connect vertical deflection clips to bypassing or infill studs and anchor to building structure.
4. Connect drift clips to cold-formed steel framing and anchor to building structure.

E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.

1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs.
2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.

F. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 18 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.

1. Install solid blocking at centers indicated on Shop Drawings.

G. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.5 INSTALLATION OF INTERIOR NONLOADBEARING WALL FRAMING

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.
B. Fasten both flanges of studs to top and bottom track unless otherwise indicated. Space studs as follows:

1. Stud Spacing: As indicated on Drawings.

C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.
D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.

1. Install single deep-leg deflection tracks and anchor to building structure.
2. Install double deep-leg deflection tracks and anchor outer track to building structure.
3. Connect vertical deflection clips to studs and anchor to building structure.
4. Connect drift clips to cold-formed steel metal framing and anchor to building structure.

E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.

1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs.
2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.

F. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 18 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.

1. Install solid blocking at centers indicated on Shop Drawings.

G. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.6 INSTALLATION TOLERANCES

A. Install cold-formed steel framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:

1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error are not to exceed minimum fastening requirements of sheathing or other finishing materials.

3.7 REPAIR

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed steel framing with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.

3.8 FIELD QUALITY CONTROL

A. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
B. Field and shop welds will be subject to testing and inspecting.
C. Testing agency will report test results promptly and in writing to Contractor and Architect.
D. Cold-formed steel framing will be considered defective if it does not pass tests and inspections.
E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.9 PROTECTION

A. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that cold-formed steel framing is without damage or deterioration at time of Substantial Completion.

END OF SECTION 05 40 00

SECTION 05 50 00 - METAL FABRICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes, but is not limited to, the following:

1. Loose steel lintels.
2. Manufactured downspout boots.
3. Miscellaneous steel trim.
4. Steel framing and supports for applications where framing and supports are not specified in other Sections.

B. Related Sections include the following:

1. Division 3 Section "Cast-in-Place Concrete" for concrete fill.
2. Division 4 Section "Unit Masonry Assemblies" for installing loose lintels, anchor bolts, and other items indicated to be built into unit masonry.
3. Division 5 Section "Structural Steel" for structural-steel framing system components.
4. Division 5 Section "Metal Railings" for metal handrails and railings.
5. Division 6 Section "Rough Carpentry" plywood backing panels for sheet metal fabrications.
6. Division 9 Section "Painting and Finishing" painting requirements for exposed metal fabrications.
7. Divisions 15 and 16 for miscellaneous supports of hangers for equipment, pipes, etc.

1.3 SUBMITTALS

A. Comply with pertinent provisions of Division 1 Section "Submittals."
B. Shop Drawings: Detail fabrication and erection of each metal fabrication indicated. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.

1. Provide erection plan for loose steel lintels, separate from structural steel submittals, and submit before structural steel shop drawings.

2. Provide templates for anchors and bolts specified for installation under other sections.

C. Mill Certificates: Signed by manufacturers of stainless-steel sheet certifying that products furnished comply with requirements.
D. Welding Certificates: Copies of certificates for welding procedures and personnel.
E. Qualification Data: For firms and persons specified in “Quality Assurance” Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1.4 QUALITY ASSURANCE

A. Fabricator Qualifications: A firm experienced in producing metal fabrications similar to those indicated for this Project and with record of successful in-service performance, as well as sufficient production capacity to produce required units.
B. Welding: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code--Steel."
2. AWS D1.2, "Structural Welding Code--Aluminum."
3. AWS D1.3, "Structural Welding Code—Sheet Metal."
4. AWS D1.6, "Structural Welding Code—Stainless Steel."
5. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.

1.5 PROJECT CONDITIONS

A. Field Measurements: Where metal fabrications are indicated to fit walls and other construction, verify dimensions by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.6 COORDINATION

A. Coordinate installation of anchorages for metal fabrications. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

PART 2 - PRODUCTS

2.1 METALS, GENERAL

A. Metal Surfaces, General: For metal fabrications exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.

2.2 FERROUS METALS

A. Steel Plates, Shapes, and Bars: ASTM A 36.
B. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, Type 304.
C. Steel Tubing: Cold-formed steel tubing complying with ASTM A 500.
D.. Steel Pipe: ASTM A 53, standard weight (Schedule 40), unless another weight is indicated or required by structural loads.
E. Malleable-Iron Castings: ASTM A 47, Grade 32510 (ASTM A 47M, Grade 22010).
F. Cast-in-Place Anchors in Concrete: Anchors of type indicated below, fabricated from corrosion-resistant materials capable of sustaining, without failure, the load imposed within a safety factor of 4, as determined by testing per ASTM E 488, conducted by a qualified independent testing agency.

1. Threaded or wedge type; galvanized ferrous castings, either ASTM A 47 malleable iron or ASTM A 27 cast steel. Provide bolts, washers, and shims as needed, hot-dip galvanized per ASTM A 153.

G. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

2.3 PAINT

A. Shop Primer for Ferrous Metal: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with performance requirements in FS TT-P-664: selected for good resistance to normal atmospheric corrosion, compatibility with finish paint systems indicated, and capability to provide a sound foundation for field-applied topcoats despite prolonged exposure.
B. Galvanizing Repair Paint: High-zinc-dust-content paint for re-galvanizing welds in steel, complying with SSPC-Paint 20.
C. Bituminous Paint: Cold-applied asphalt mastic complying with SSPC-Paint 12, except containing no asbestos fibers, or cold-applied asphalt emulsion complying with ASTM D 1187.

2.4 FASTENERS

A. General: Provide Type 304 or 316 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633, Class Fe/Zn 5, where built into exterior walls. Select fasteners for type, grade, and class required.
B. Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A, Property Class 4.6; with hex nuts, ASTM A 563; and, where indicated, flat washers.
C. Anchor Bolts: ASTM F 1554, Grade 36.

1. Anchor Bolts in Concrete and Masonry: Steel bolts complying with ASTM A 307, Grade A; with ASTM A 563 hex nuts and, where indicated, flat washers; hot-dip galvanized to comply with ASTM A153, Class C; of diameter and length indicated.

    a. Where in contact with ACQ preservation-treated wood, provide stainless steel bolts and washers complying with ASTM A 276 or ASTM A 666, Type 304; and stainless steel nuts complying with ASTM F 594, Alloy Group 1, CW.

D. Machine Screws: ASME B18.6.3.
E. Lag Bolts: ASME B18.2.1.
F. Wood Screws: Flat head, carbon steel, ASME B18.6.1.
G. Plain Washers: Round, carbon steel, ASME B18.22.1.
H. Lock Washers: Helical, spring type, carbon steel, ASME B18.21.1.
I. Expansion Anchors: Anchor bolt and sleeve assembly of material indicated below with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and equal to four times the load imposed when installed in concrete, as determined by testing per ASTM E 488, conducted by a qualified independent testing agency.

    1. Material: Carbon-steel components zinc-plated to comply with ASTM B 633, Class Fe/Zn 5.

J. Toggle Bolts: FS FF-B-588, tumble-wing type, class and style as needed.

2.5 GROUT

A. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

2.6 CONCRETE FILL

A. Concrete Materials and Properties: Comply with requirements in Division 3 Section "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with a minimum 28-day compressive strength of 3000 psi, unless otherwise indicated.

2.7 FABRICATION, GENERAL

A. Shop Assembly: Preassemble items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
B. Shear and punch metals cleanly and accurately. Remove burrs.
C. Ease exposed edges to a radius of approximately 1/32 inch, unless otherwise indicated. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
D. Weld corners and seams continuously to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

E. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.
F. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.
G. Fabricate joints that will be exposed to weather in a manner to exclude water, or provide weep holes where water may accumulate.
H. Allow for thermal movement resulting from change in ambient and surface temperatures by preventing buckling, opening up of joints, overstressing of components, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
I. Form exposed work true to line and level with accurate angles and surfaces and straight sharp edges.
J. Remove sharp or rough areas on exposed traffic surfaces.
K. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Use exposed fasteners of type indicated or, if not indicated, Phillips flat-head (countersunk) screws or bolts. Locate joints where least conspicuous.

2.8 LOOSE STEEL LINTELS

A. Fabricate loose structural-steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated.
B. Weld adjoining members together to form a single unit where indicated.
C. Size loose lintels to provide bearing length at each side of openings equal to one-twelfth of clear span, but not less than 8 inches, unless otherwise indicated.
D. Galvanize loose steel lintels located in exterior walls.
C. Galvanize miscellaneous framing and supports where indicated.

2.9 MANUFACTURED DOWNSPOUT BOOTS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Piedmont Pipe Manufacturing, Model B1 Downspout Boot or comparable product by another manufacturer.
B. Boots:

1. Material: ASTM A240 Type 304 stainless steel, 0.1094 inch thick.
2. Finish: Manufacturer’s standard UV resistant powder coat.
3. Color: As selected by Architect from manufacturer’s full range.

2.10 MISCELLANEOUS STEEL TRIM

A. Unless otherwise indicated, fabricate units from structural-steel shapes, plates, and bars of profiles shown with continuously welded joints, and smooth exposed edges. Miter corners and use concealed field splices where possible.

B. Provide cutouts, fittings, and anchorages as needed to coordinate assembly and installation with other work. Provide anchors, welded to trim, for embedding in concrete or masonry construction, spaced not more than 6 inches from each end, 6 inches from corners, and 24 inches on center, unless otherwise indicated.

C. Galvanize exterior use miscellaneous steel trim as noted in Construction Documents.

2.11 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Finish metal fabrications after assembly.

PART 3 - EXECUTION

3.1 COORDINATION

A. This fabricator shall secure and be responsible for all field measurements required for the proper and accurate fabrication and installation of the items included in this Section. Field alterations will not be permitted, except upon specific authorization of the Architect.

B. Coordinate with other trades to assure proper and adequate provision in the work of those trades for interface with the work of this Section.

3.2 INSTALLATION, GENERAL

A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal fabrications to in-place construction. Include threaded fasteners for concrete and masonry inserts, toggle bolts, through-bolts, lag bolts, wood screws, and other connectors.

B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

C. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

D. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

E. Field Welding: Comply with the following requirements:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

F. Corrosion Protection: Coat concealed surfaces of aluminum that will come into contact with grout, concrete, masonry, wood, or dissimilar metals with a heavy coat of bituminous paint.

3.3 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings, if any.

3.4 ADJUSTING AND CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.
C. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units.
D. Protect factory-applied finishes from damage during construction period. Remove temporary protective coverings at time of Substantial Completion.

END OF SECTION 05 50 00

SECTION 05 51 00 – METAL PAN STAIRS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Preassembled metal pan stairs with concrete-filled treads.

B. Related Sections include the following:

1. Division 3 Section “Cast-In-Place Concrete” for concrete fill for stair treads and platform.
2. Division 5 Section “Metal Fabrications” for pipe and tube railings.
3. Division 9 Section “Painting.”

1.3 PERFORMANCE REQUIREMENTS

A. Structural performance: Provide metal stairs capable of withstanding the following structural loads without exceeding the allowable design working stress of the materials involved, including anchors and connections. Apply each load to produce the maximum stress in each component of metal stairs.

1. Treads and Platforms of Metal Stairs: Capable of withstanding a uniform load of 100 pound foot per square foot, or a concentrated load of 300 pound foot on an area of 4 square inches, whichever produces the greater stress.
2. Stair Framing: Capable of withstanding stresses resulting from loads specified above in addition to stresses resulting from railing system loads.
3. Limit deflection of treads, platforms, and framing members to L/360 or ¼-inch.
4. Handrails and Toprails: Concentrated load of 200 pounds applied at any point in any direction or a uniform load of 50 pounds per linear foot applied simultaneously in both vertical and horizontal directions.

1.4 SUBMITTALS

A. Product data:

1. Materials list of items proposed to be provided under this Section;
2. Manufacturer's catalog cuts or other data needed to prove compliance with stair nosing;
3. Shop primer paint.

B. Shop Drawings in sufficient detail to show fabrication, installation, anchorage, and interface of the work of this Section with the work of adjacent trades.

1. For installed products indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

C. Delegated – Design Submittal: For stairs, railings, and guards, including analysis data signed and sealed by the qualified professional engineer responsible for the preparation.

1.5 QUALITY ASSURANCE

A. Perform shop and/or field welding required in connection with the work of this Section in strict accordance with pertinent recommendations of the American Welding Society.
B. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," for class of stair designated, unless more stringent requirements are indicated.

2.1 COORDINATION

A. Coordinate installation of anchorages for metal stairs. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
B. Coordinate locations of hanger rods and struts with other work so that they will not encroach on required stair width and will be within the fire-resistance-rated stair enclosure.

PART 2 - PRODUCTS

2.1 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces, unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

2.2 MATERIALS

A. Except as otherwise indicated on the Drawings, provide materials as required for the Work and complying with the following minimum standards.

1. Rolled steel shapes, wide flanges and channels: Comply with ASTM A 992 (Fy = 50 ksi.)
2. Rolled angles, plates and bars: Comply with ASTM A 36.
3. Metal pans: Form risers and subtreads from 12 gage hot-rolled steel complying with ASTM A 569 or ASTM A 570;

4. Sheet steel: Comply with following as appropriate:

    a. Galvanized: ASTM A 653, coating G90;
    b. Landings: Cold-rolled 12 gage steel complying with ASTM A 366;

5. Steel plate:

    a. Except for plates to be bent or cold-formed, comply with ASTM A 36;
    b. For plates to be bent or cold-formed, comply with ASTM A 283, Grade C;

6. Newel posts: Use steel tube complying with ASTM A 500;
7. Steel pipes: Comply with ASTM A 53, Type E or S, Grade B; Schedule 40;
8. Bolts and nuts for anchoring to structural steel: High strength bolts complying with ASTM A 325, Type F;
9. Machine bolts, nuts, and washers: Comply with ASTM A 307, Grade A;

10. Steel bars and bar-size shapes:

    a. Hot-rolled carbon steel bars and bar-size shapes, comply with ASTM A 575 in grade as selected by the fabricator;
    b. For other steel bars and bar-size shapes, comply with ASTM A 663 or ASTM A 36;

11. Wire fabric (reinforcing):

    a. Comply with ASTM A 185, plain cold-drawn steel welded wire mesh size 2 inches by 2 inches by 12 gage wires in both directions;
    b. Tack weld to inside of steel pan treads and landing;

12. Arc-welding electrodes: Comply with AWS A5.1, using E60XX or E70XX series as required for the intended use;
13. Shop primer: Use "10-99 Tnemec Primer" by Tnemec Company, Inc., Kansas City, MO; or "1069 Primer" by Rust-Oleum Corporation, Vernon Hills, IL; or equal product of alternatives of the quality necessary to meet the specifications.

2.3 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation.

2.4 FABRICATION, GENERAL

A. Provide complete stair assemblies, including metal framing, hangers, struts, railings, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.

1. Join components by welding, unless otherwise indicated.
2. Use connections that maintain structural value of joined pieces.

B. Preassembled Stairs: Assemble stairs in shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch, unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

E. Form exposed work true to line and level with accurate angles and surfaces and straight edges.

F. Weld connections to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. Weld exposed corners and seams continuously, unless otherwise indicated.
5. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated. Locate joints where least conspicuous.

H. Fabricate joints that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

I. Structural performance: Provide assemblies capable of withstanding loadings for treads and platforms for steel stairs with a uniform live load of 100 pounds per square foot on the entire tread and platform area, in accordance with all state and local codes.

J. Priming:

1. Clean surfaces in accordance with Steel Structures Painting Council SP-3, "Power Tool Cleaning;"
2. After surfaces are properly cleaned, apply the primer to a uniform 2.0 mils dry film thickness.

2.5 STEEL-FRAMED STAIRS

A. Stair Framing:

1. Fabricate stringers of steel channels.
    a. Provide closures for exposed ends of channel stringers.
2. Construct platforms of steel channel headers and miscellaneous framing members as needed to comply with performance requirements.
3. Weld stringers to headers; weld framing members to stringers and headers.
4. Where stairs are enclosed by gypsum board assemblies, provide hanger rods or struts to support landings from floor construction above or below. Locate hanger rods and struts where they will not encroach on required stair width and will be within the fire-resistance-rated stair enclosure.
5. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.

B. Metal-Pan Stairs: Form risers, sub-tread pans, and sub-platforms to configurations shown from steel sheet of thickness needed to comply with performance requirements but not less than 0.0677 inch.

1. Steel Sheet: Uncoated cold-rolled steel sheet, unless otherwise indicated.
2. Directly weld metal pans to stringers; locate welds on top of sub-treads where they will be concealed by concrete fill. Do not weld risers to stringers.
3. Shape metal pans to include nosing integral with riser.
4. At Contractor's option, provide stair assemblies with metal-pan sub-treads filled with reinforced concrete during fabrication.
5. Provide sub-platforms of configuration indicated or, if not indicated, the same as sub-treads. Weld sub-platforms to platform framing.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine the areas and conditions under which work of this Section will be performed. Correct unsatisfactory conditions prior to proceeding.

B. Site Verification of Conditions: Secure and be responsible for all field measurements required for the proper and accurate fabrication and installation of the items included in this Section. Field alterations permitted only upon specific authorization of the Architect.

3.2 INSTALLATION, GENERAL

A. Coordinate with other trades to assure proper and adequate provision in the work of those trades and for interface with the work of this Section.

B. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
C. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
D. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete, unless otherwise indicated.
E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
F. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.
H. Field Welding: Comply with the following requirements:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

I. Fill pans with fine-aggregate concrete fill, screeded and trowelled to required depth to allow for tread finish material and nosing.

3.3 ADJUSTING AND CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

END OF SECTION 05 51 00

SECTION 05 52 13 - METAL RAILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Galvanized steel handrails for exterior applications.
2. Detailing and engineering metal railings to fulfill performance requirements and to conform to design intent indicated of the Drawings.

B. Related Sections include the following:

1. Division 3 Section “Cast-in-Place Concrete” Construction of exterior stairs with metal railings.
2. Division 9 Section “Painting and Finishing” Field painting shop primed railings

1.3 PERFORMANCE REQUIREMENTS

A. General: In engineering railings to withstand structural loads indicated, determine allowable design working stresses of railing materials based on the following:

1. Aluminum: The lesser of minimum yield strength divided by 1.65 or minimum ultimate tensile strength divided by 1.95.
2. Stainless Steel: 60 percent of minimum yield strength.
3. Steel: 72 percent of minimum yield strength

B. Structural Performance: Provide railings capable of withstanding the effects of gravity loads and the following loads and stresses within the limits and under conditions indicated:

1. Handrails and Top Rails of Guards:
   a. Uniform load of 50 lbf/ft. applied in any direction.
   b. Concentrated load of 200 lbf applied in any direction.
   c. Uniform and concentrated loads need not be assumed to act concurrently.

2. Infill of Guards:
   a. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft.
   b. Infill load and other loads need not be assumed to act concurrently.

C. Thermal Movements: Provide exterior railings that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects. Base engineering calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 def F, ambient, 180 def F, material surfaces.

D. Control of Corrosion : Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

1.4 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
C. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not satisfy structural performance requirements.

1.5 SUBMITTALS

A. Product Data: For the following:

1. Railing brackets.
2. Grout, anchoring cement, and paint products.

B. Shop Drawings: Show fabrication and installation of handrails and railings. Include plans, elevations, sections, component details, and attachments to other Work.

1. Include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Storage: Store handrails and railings in a dry, well-ventilated, weathertight place.

C. Field Measurements: Verify handrail and railing dimensions by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
D. Coordination: Coordinate installation of anchorages for handrails and railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
E. Scheduling: Schedule installation so handrails and railings are mounted only on completed walls. Do not support temporarily by any means that does not satisfy structural performance requirements.

1.7 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 METALS

A. General: Provide metal free from pitting, seam marks, roller marks, stains, discolorations, and other imperfections where exposed to view on finished units.
B. Steel and Iron: Provide steel and iron in the form indicated, complying with the following requirements:

1. Pipe: ASTM A 53/A 53M, Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
2. Steel Tubing: Cold-formed steel tubing, ASTM A 500, Grade A, unless another grade is required by structural loads.
3. Steel Plates, Shapes, and Bars: ASTM A 36.
4. Iron Castings: Malleable iron complying with ASTM A 47, Grade 32510; or gray iron complying with ASTM A 48, Class 30.

C. Brackets, Flanges, and Anchors: Cast or formed metal of same type of material and finish as supported rails, unless otherwise indicated.
D. Handrail Brackets: Stainless steel units of size or with extenders to provide required clearance between handrail and wall or post and other obstructions; and with exposed square edges machine ground to produce eased edges.

1. Brackets for Wall-Mounted Handrails: With round flange with tapped hole for concealed mounting.
   a. Product: Julius Blum & Company; Model No. 223.
2. Brackets for Post-Mounted Handrails: With threaded stud with tapped hole for concealed mounting.
   a. Product: Julius Blum & Company; Model No. 222.

2.2 WELDING MATERIALS, FASTENERS, AND ANCHORS

A. Welding Electrodes and Filler Metal: Provide type and alloy of filler metal and electrodes as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.

B. Fasteners for Anchoring Handrails and Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring handrails and railings to other types of construction indicated and capable of withstanding design loads.

1. For steel handrails, railings, and fittings, use plated fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating.

C. Fasteners for Interconnecting Handrail and Railing Components: Use fasteners fabricated from same basic metal as fastened metal, unless otherwise indicated. Do not use metals that are corrosive or incompatible with materials joined.

1. Provide concealed fasteners for interconnecting handrail and railing components and for attaching them to other work, unless otherwise indicated.

D. Cast-in-Place and Post installed Anchors: Anchors of type indicated below, fabricated from corrosion-resistant materials with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and equal to four times the load imposed when installed in concrete, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.

1. Cast-in-place anchors.
2. Epoxy adhesive anchors.
   a. Products: Subject to compliance with requirements, provide Hilti HVA System; or comparable product by Rawl.

2.3 PAINT

A. Shop Primers: Provide primers that are compatible with coatings specified in Division 09 Section "Painting and Coating."

B. Shop Primer for Ferrous Metal: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with performance requirements in FS TT-P-664; selected for good resistance to normal atmospheric corrosion, compatibility with finish paint systems indicated, and capability to provide a sound foundation for field-applied topcoats despite prolonged exposure.

C. Bituminous Paint: Cold-applied asphalt mastic complying with SSPC-Paint 12, except containing no asbestos fibers, or cold-applied asphalt emulsion complying with ASTM D 1187.

2.4 GROUT AND ANCHORING CEMENT

A. No shrink, Nonmetallic Grout: Premixed, factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

B. Erosion-Resistant Anchoring Cement: Factory-packaged, no shrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound. Provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.5 FABRICATION

A. General: Fabricate handrails and railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.
B. Assemble handrails and railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
C. Form changes in direction of members as detailed, or if not detailed, by radius bends, by mitering at elbow bends, or by insertion of prefabricated flush elbow fittings.
D. Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain cylindrical cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of handrail and railing components.
E. Welded Connections: Fabricate handrails for connecting members by welding, unless otherwise indicated. Cope components at perpendicular and skew connections to provide close fit, or use fittings designed for this purpose. Weld connections continuously to comply with the following:

    1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
    2. Obtain fusion without undercut or overlap.
    3. Remove flux immediately.
    4. At exposed connections, finish exposed surfaces smooth and blended so no roughness shows after finishing and welded surface matches contours of adjoining surfaces.
    5. Welded Joints; All welding shall comply with the National Ornamental and Miscellaneous Metals Association for Finish No. 2.

F. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect handrail and railing members to other work, unless otherwise indicated.
G. Provide inserts and other anchorage devices for connecting handrails and railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by handrails and railings. Coordinate anchorage devices with supporting structure.
H. Shear and punch metals cleanly and accurately. Remove burrs from exposed cut edges.
I. Ease exposed edges to a radius of approximately 1/32 inch, unless otherwise indicated. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing the Work.
J. Cut, reinforce, drill, and tap components, as indicated, to receive finish hardware, screws, and similar items.

K. Provide weep holes or another means to drain entrapped water in hollow sections of handrail and railing members that are exposed to exterior or to moisture from condensation or other sources.
L. Fabricate joints that will be exposed to weather in a watertight manner.
M. Close exposed ends of handrail and railing members with prefabricated end fittings.
N. Provide wall returns at ends of wall-mounted handrails, unless otherwise indicated. Close ends of returns, unless clearance between end of railing and wall is 1/4 inch or less.

2.6 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
D. Provide exposed fasteners with finish matching appearance of handrails and railings.

2.7 STEEL FINISHES

A. Fill vent and drain holes that will be exposed in finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
B. For galvanized handrails and railings, provide galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.
C. Preparation for Shop Priming: After galvanizing, thoroughly clean handrails and railings of grease, dirt, oil, flux, and other foreign matter, and treat with metallic-phosphate process.
D. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with minimum requirements indicated below for SSPC surface-preparation specifications and environmental exposure conditions of installed handrails and railings:

    1. Interiors (SSPC Zone 1A): SSPC-SP 7, "Brush-off Blast Cleaning."

E. Apply shop primer to prepared surfaces of handrail and railing components, unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1," for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.

    1. Do not apply primer to galvanized surfaces.
    2. Stripe paint edges, corners, crevices, bolts, and welds.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements have been clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.2 INSTALLATION, GENERAL

A. Fit exposed connections together to form tight, hairline joints.
B. Perform cutting, drilling, and fitting required to install handrails and railings. Set handrails and railings accurately in location, alignment, and elevation; measured from established lines and levels and free from rack.

1. Do not weld, cut, or abrade surfaces of handrail and railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
2. Set posts plumb within a tolerance of 1/16 inch in 3 feet.
3. Align rails so variations from level for horizontal members and from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet.

C. Corrosion Protection: Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, or dissimilar metals with a heavy coat of bituminous paint.
D. Adjust handrails and railings before anchoring to ensure matching alignment at abutting joints. Space posts at interval indicated, but not less than that required by structural loads.
E. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing handrails and railings and for properly transferring loads to in-place construction.

3.3 RAILING CONNECTIONS

A. Welded Connections: Use fully welded joints for permanently connecting railing components, unless otherwise indicated. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field.

3.4 ANCHORING POSTS

A. Form or core-drill holes not less than 5 inches deep and 3/4 inch larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with the following anchoring material, mixed and placed to comply with anchoring material manufacturer's written instructions:

1. Nonshrink, nonmetallic grout or anchoring cement.

B. Leave anchorage joint exposed, wipe off surplus anchoring material, and leave 1/8-inch buildup, sloped away from post.

C. Anchor posts to metal surfaces with oval flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting members as follows:

1. For stainless-steel railings, weld flanges to post and bolt to metal supporting surfaces.
2. For steel railings, weld flanges to post and bolt to metal supporting surfaces.

D. Install removable railing sections, where indicated, in slip-fit metal sockets cast in concrete.

3.5 ATTACHING HANDRAILS TO WALLS

A. Attach handrails to wall with wall brackets. Provide bracket with 1-1/2-inch clearance from inside face of handrail and finished wall surface, post or other obstruction.
B. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads but not less than 48 inches o.c.
C. Secure wall brackets to building construction as follows:

1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
2. For hollow masonry anchorage, use adhesive epoxy anchors.
3. For steel-framed gypsum board assemblies, use hanger or lag bolts set into wood backing between studs. Coordinate with stud installation to locate backing members.

3.6 ADJUSTING

A. Clean aluminum and stainless steel by washing thoroughly with clean water and soap and rinsing with clean water.
B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material.
C. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.
D. Protect finishes of handrails and railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at the time of Substantial Completion.
E. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION 05 52 13

SECTION 06 10 00- ROUGH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Framing with dimension lumber.
2. Framing with engineered wood products.
3. Wood blocking and nailers.
4. Wood furring.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product.

1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements
2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements.

1.3 INFORMATIONAL SUBMITTALS

A. Manufacturer's Certification: Documentation provided by Manufacturer, certifying that the iron and steel products, Manufactured Products, and Construction Materials provided meet the domestic preference requirements of the Build America, Buy America Act (BABAA) mandated by Title IX of the Infrastructure Investment and Jobs Act ("IIJA"), Pub. L. 177-58.
B. Material Certificates: For dimension lumber specified to comply with minimum allowable unit stresses. Indicate species and grade selected for each use and design values approved by the ALSC Board of Review.
C. Evaluation Reports: For the following, from ICC-ES:

1. Wood-preservative-treated wood.
2. Engineered wood products.
3. Power-driven fasteners.
4. Powder-actuated fasteners.
5. Expansion anchors.
6. Metal framing anchors.

PART 2 - PRODUCTS

2.1 WOOD PRODUCTS, GENERAL

A. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, provide lumber that complies with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Provide lumber graded by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.

1. Factory mark each piece of lumber with grade stamp of grading agency.
2. For exposed lumber indicated to receive a stained or natural finish, mark grade stamp on end or back of each piece

B. Maximum Moisture Content of Lumber: 19 percent unless otherwise indicated.

C. Engineered Wood Products: Provide engineered wood products acceptable to authorities having jurisdiction and for which current model code research or evaluation reports exist that show compliance with building code in effect for Project.

1. Allowable Design Stresses: Provide engineered wood products with allowable design stresses, as published by manufacturer, that meet or exceed those indicated. Manufacturer's published values shall be determined from empirical data or by rational engineering analysis and demonstrated by comprehensive testing performed by a qualified independent testing agency.

2.2 WOOD-PRESERVATIVE-TREATED LUMBER

A. Preservative Treatment by Pressure Process: AWPA U1; Use Category UC2 for interior construction not in contact with the ground, Use Category UC3b for exterior construction not in contact with the ground, and Use Category UC4a for items in contact with the ground.

1. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium. Do not use inorganic boron (SBX) for sill plates.

B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or that does not comply with requirements for untreated material.

C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.

D. Application: Treat items indicated on Drawings, and the following:

1. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
2. Wood sills, blocking, and similar concealed members in contact with masonry or concrete.

3. Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
4. Wood framing members that are less than 18 inches (460 mm) above the ground in crawlspaces or unexcavated areas.
5. Wood floor plates that are installed over concrete slabs-on-grade.

2.3 DIMENSION LUMBER FRAMING

A. Non-Load-Bearing Interior Partitions: Construction or No. 2 grade.

1. Application: as indicated on drawings.
2. Species:

    a. Mixed southern pine; SPIB.
    b. Northern species; NLGA.
    c. Eastern softwoods; NeLMA.

B. Framing Other Than Non-Load-Bearing Interior Partitions: No. 2 grade.

1. Application: Framing other than interior partitions.
2. Species:

    a. Hem-fir (north); NLGA.
    b. Southern pine; SPIB.
    c. Douglas fir-larch; WCLIB or WWPA.
    d. Spruce-pine-fir; NLGA.

2.4 ENGINEERED WOOD PRODUCTS

A. Engineered Wood Products, General: Products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

B. Laminated-Veneer Lumber: Structural composite lumber made from wood veneers with grain primarily parallel to member lengths, evaluated and monitored according to ASTM D 5456 and manufactured with an exterior-type adhesive complying with ASTM D 2559.

1. Extreme Fiber Stress in Bending, Edgewise: As indicated on the Drawings.
2. Modulus of Elasticity, Edgewise: As indicated on the Drawings.

2.5 MISCELLANEOUS LUMBER

A. General: Provide miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:

1. Blocking.

2. Nailers.
3. Cants.
4. Furring.
5. Grounds.

B. For items of dimension lumber size, provide Construction or No. 2 grade lumber of any species.

C. For concealed boards, provide lumber with 19 percent maximum moisture content and any of the following species and grades:

1. Mixed southern pine; No.2 grade; SPIB.
2. Eastern softwoods; No. 2 Common grade; NeLMA.
3. Northern species; No. 2 Common grade; NLGA.
4. Western woods; Construction or No. 2 Common grade; WCLIB or WWPA.

2.6 FASTENERS

A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.

1. Where rough carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners with hot-dip zinc coating complying with ASTM A 153/A 153M.

B. Power-Driven Fasteners: NES NER-272.

C. Bolts: Steel bolts complying with ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6); with ASTM A 563 (ASTM A 563M) hex nuts and, where indicated, flat washers.

2.7 METAL FRAMING ANCHORS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Basis-of-Design Product: Subject to compliance with requirements, provide or comparable product by one of the following:

1. Cleveland Steel Specialty Co.
2. KC Metals Products, Inc.
3. Phoenix Metal Products, Inc.
4. Simpson Strong-Tie Co., Inc.
5. USP Structural Connectors.

C. Allowable Design Loads: Provide products with allowable design loads, as published by manufacturer, that meet or exceed those of basis-of-design products. Manufacturer's published values shall be determined from empirical data or by rational engineering analysis and demonstrated by comprehensive testing performed by a qualified independent testing agency.

D. Hot-Dip, Heavy-Galvanized Steel Sheet: ASTM A 653/A 653M; structural steel (SS), high-strength low-alloy steel Type A (HSLAS Type A), or high-strength low-alloy steel Type B (HSLAS Type B); G185 (Z550) coating designation; and not less than 0.036 inch (0.9 mm) thick.

1. Use for wood-preservative-treated lumber and where indicated.

2.8 MISCELLANEOUS MATERIALS

A. Sill-Sealer Gaskets: Glass-fiber-resilient insulation, fabricated in strip form, for use as a sill sealer; 1-inch (25-mm) nominal thickness, compressible to 1/32 inch (0.8 mm); selected from manufacturer's standard widths to suit width of sill members indicated.
B. Sill-Sealer Gaskets: Closed-cell neoprene foam, 1/4 inch (6.4 mm) thick, selected from manufacturer's standard widths to suit width of sill members indicated.
C. Flexible Flashing: Composite, self-adhesive, flashing product consisting of a pliable, rubberized-asphalt compound, bonded to a high-density polyethylene film, aluminum foil, or spunbonded polyolefin to produce an overall thickness of not less than 0.025 inch (0.6 mm).

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Set rough carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit rough carpentry to other construction; scribe and cope as needed for accurate fit. Locate furring, nailers, blocking, and similar supports to comply with requirements for attaching other construction.
B. Framing Standard: Comply with AF&PA's WCD 1, "Details for Conventional Wood Frame Construction," unless otherwise indicated.
C. Framing with Engineered Wood Products: Install engineered wood products to comply with manufacturer's written instructions.
D. Metal Framing Anchors: Install metal framing anchors to comply with manufacturer's written instructions. Install fasteners through each fastener hole.
E. Do not splice structural members between supports unless otherwise indicated.
F. Comply with AWPA M4 for applying field treatment to cut surfaces of preservative-treated lumber.
G. Where wood-preservative-treated lumber is installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.
H. Securely attach rough carpentry work to substrate by anchoring and fastening as indicated, complying with the following:

1. NES NER-272 for power-driven fasteners.
2. Table 2304.9.1, "Fastening Schedule," in ICC's International Building Code.
3. Table R602.3(1), "Fastener Schedule for Structural Members," and Table R602.3(2), "Alternate Attachments," in ICC's International Residential Code for One- and Two-Family Dwellings.

3.2 PROTECTION

A. Protect wood that has been treated with inorganic boron (SBX) from weather. If, despite protection, inorganic boron-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.
B. Protect rough carpentry from weather. If, despite protection, rough carpentry becomes sufficiently wet that moisture content exceeds that specified, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

3.3 TOLERANCES

A. Framing Members: 1/4 inch from true position, maximum.
B. Variation from Plane (Other than Floors): 1/4 inch in 10 feet maximum, and 1/4 inch in 30 feet maximum.

END OF SECTION 06 10 00

SECTION 06 16 00 - SHEATHING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Roof sheathing.
2. Sheathing as part of a composite wall panel system as noted in drawings.

B. Related Requirements:

1. Division 06 "Rough Carpentry" for plywood backing panels.
2. Division 07 "Fluid-Applied Air Barrier Membrane" for air barriers applied to wall sheathing.

1.2 SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

1.3 DELIVERY, STORAGE, AND HANDLING

A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 WOOD PANEL PRODUCTS, GENERAL

A. Plywood: DOC PS 1.
B. Oriented Strand Board: DOC PS 2.
C. Thickness: As needed to comply with requirements specified, but not less than thickness indicated.
D. Factory mark panels to indicate compliance with applicable standard.

2.2 WALL SHEATHING

A. Glass-Mat Gypsum Sheathing: ASTM C1177/C1177M.

1. Product: Subject to compliance with requirements, provide products by one of the following:

    a. Dens-Glass Gold by G-P Gypsum Corporation.
    b. SECUROCK Brand Glass Mat Sheathing by United States Gypsum Company.
    c. Weather Defense Platinum by LaFarge North America.
    d. GlasRoc by Certainteed.

2. Type and Thickness: As indicated, but not less than Type X, 5/8 inch thick.

B. Cementitious Backer Units: ASTM C1325, Type A.

1. Products: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

    a. Custom Building Products.
    b. USG Corporation.

2. Thickness: As indicated, but not less than 5/8 inch.

C. Fire-Retardant-Treated Exterior Grade Plywood Wall Sheathing.

    a. Not less than 5/8” thickness.
    b. Span rating: Not less than 16/0

2. General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article that are acceptable to authorities have jurisdiction and with fire-test response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
3. Fire-Retardant-Treated Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested according to ASTM E84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test.\

    a. Use treatment that does not promote corrosion of metal fasteners.
    b. Exterior Type: Treated materials shall comply with requirements specified above for fire-retardant-treated plywood by pressure process after being subjected to accelerated weathering according to ASTM D 2898. Use for exterior locations and where indicated.

4. Design Value Adjustment Factors: Treated lumber plywood shall be tested according to ASTM D5516 and design value adjustment factors shall be calculated according to ASTM D6305.

    a. Span ratings after treatment shall be not less than span ratings specified.

2.3 FASTENERS

A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.

1. For roof, parapet, and wall sheathing, provide fasteners with hot-dip zinc coating complying with ASTM A153/A153M .

B. Nails, Brads, and Staples: ASTM F1667.

C. Power-Driven Fasteners: NES NER-272.
D. Wood Screws: ASE B18.6.1.
E. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117.

1. For steel framing less than 0.0329 inch thick, use screws that comply with ASTM C 1002.
2. For steel framing from 0.033 to 0.112 inch thick, use screws that comply with ASTM C 954.

F. Screws for Fastening Oriented-Strand-Board-Surfaced, Polyisocyanurate-Foam Sheathing to Metal Roof Deck: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117. Provide washers or plates if recommended by sheathing manufacturer.

2.4 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS

A. Sealant for Glass-Mat Gypsum Sheathing Board: Elastomeric, medium-modulus, neutral-curing silicone joint sealant compatible with joint substrates formed by gypsum sheathing and other materials, recommended by sheathing manufacturer for application indicated, and complying with requirements for elastomeric sealants specified in Division 07 Section “Joint Sealants”.

2.5 MISCELLANEOUS MATERIALS

A. Flexible Flashing: Composite, self-adhesive, flashing product consisting of a pliable, rubberized-asphalt compound, bonded to a high-density, cross-laminated polyethylene film to produce an overall thickness of not less than 0.030 inch.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Carlisle Coats & Waterproofing; CCW-705-TWF Thru-Wall Flashing.
b. Grace Construction Products, a unit of W.R. Grace & Co. – Conn; Vycor V40 Weather Barrier Strips
c. Polyguard Products, Inc; Polyguard 300

B. Primer for Flexible Flashing: Product recommended by manufacturer of flexible flashing for substrate.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement.

B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.

C. Securely attach to substrate by fastening as indicated, complying with the following:

1. NES NER-272 for power driven fasteners.
2. Table 2304.9.1, "Fastening Schedule," in the ICC's International Building Code.

D. Coordinate wall, parapet, and roof sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.

E. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.

F. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast. For composite deck products that are not immediately shingled, provided an underlayment that will prevent moisture penetration into panels.

3.2 GYPSUM SHEATHING INSTALLATION

A. Comply with GA-253 and with manufacturer's written instructions.

1. Fasten gypsum sheathing to cold-formed metal framing with screws.
2. Install panels with a 3/8-inch gap where non-load-bearing construction abuts structural elements.
3. Install panels with a 1/4-inch gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.

B. Apply fasteners so heads bear tightly against face of sheathing, but do not cut into facing.

C. Vertical Installation: Install vertical edges centered over studs. Abut ends and edges with those of adjacent panels. Attach at perimeter and within field of panel to each stud.

1. Space fasteners approximately 8 inches o.c. and set back a minimum of 3/8 inch from edges and ends of panels.
2. For sheathing under stucco cladding, panels may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.

3.3 CEMENTITIOUS BACKER UNIT INSTALLATION

A. Install panels and treat joints according to ANSI A108.11 and manufacturer's written instructions for type of application indicated.

3.4 FLEXIBLE FLASHING INSTALLATION

A. Apply flexible flashing where recommended by manufacturer or where indicated to comply with manufacturers' written instructions.

1. Prime substrates as recommended by flashing manufacturer.
2. Laps seams and junctures with other materials at least 4 inches, except that at flashings flanges of other construction, laps need to exceed flange width.
3. After flashing has been applied, roll surfaces with a hard rubber or metal roller to ensure that flashing is completely adhered to substrates.

END OF SECTION 06 16 00

SECTION 06 40 23 - INTERIOR ARCHITECTURAL WOODWORK

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Interior wood standing and running trim and other woodwork for transparent finish, including:
    a. Built-in wood benches.
    b. Wood nosings and trim for stage platform and steps.
2. Custom architectural casework not specified in other Sections, fabricated from wood components and plastic laminate, including but not limited to:
    a. Reception desks.
    b. Circulation desks.
3. Custom recessed display cases with glass doors, glass shelves, and shelf standards.
4. Flush wood veneer panels for room signage
5. Shop finishing interior woodwork.
6. Solid surface window sills, and stools.

B. Related Sections include the following:

1. Division 05 Section "Metal Fabrications": Requirements for steel supports for architectural woodwork.
2. Division 06 Section "Rough Carpentry": Furring, blocking, shims, and hanging strips for installing interior woodwork
3. Division 08 Section "Glazing": Requirements for glass and glazing for architectural woodwork.
4. Division 09 Section "Painting and Coating": Field finishing of architectural woodwork not indicated for shop finish.
5. Division 12 Section "Manufactured Laminate-Clad Casework":
6. Division 26 Sections: Electrical work, display case lighting fixtures.

1.2 DEFINITIONS

A. Architectural woodwork includes wood furring, blocking, shims, and hanging strips for installing woodwork items, unless concealed within other construction before woodwork installation.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated, including:

1. Substrate and core materials.
2. Wood fiberboard tackboard material.
3. Laminates and adhesives.
4. Finishing materials and processes.

B. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.

1. Show details full size.
2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
3. Show locations and sizes of cutouts and holes for plumbing fixtures, faucets, soap dispensers, and other items installed in architectural woodwork.
4. Show proposed method for fabricating curved veneered panels.
5. Show coordination with electrical work[and video monitors].

C. Samples for Verification: As follows:

1. Wood-Veneer-Faced Panel Products for Transparent Finish: 8 by 10 inches, finished on one side and one edge.
2. Lumber for Transparent Finish: 50 sq. inches, finished on 1 side and 1 edge.
3. Fabric and core material for tackboard panels.
4. Exposed Metal: Representative samples of specified metal and finish as requested by Architect.

D. Product Certificates: Signed by manufacturers of woodwork certifying that products furnished comply with requirements.

E. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1.4 QUALITY ASSURANCE

A. Fabricator Qualifications: A firm experienced in producing architectural woodwork similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

B. Installer Qualifications: An experienced installer who has completed architectural woodwork similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

C. Quality Standard: Unless otherwise indicated, comply with AWI's "Architectural Woodwork Quality Standards" for grades of architectural woodwork, construction, finishes, and other requirements.

1. The Contract Documents may contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with such selections and requirements in addition to the quality standard.

D. Fire-Test-Response Characteristics: Provide FRP column covers that comply with the following:

1. Surface-Burning Characteristics: Class 1 per ASTM E 84, Flame Spread less than 25 unfilled, without use of fillers or antimony trioxide.
2. Smoke Density: Under 450.

E. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.

1.5 PRODUCT HANDLING

A. Do not deliver woodwork until painting and similar operations that could damage woodwork have been completed in installation areas. If woodwork must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Project Conditions" Article.

1.6 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.
B. Field Measurements: Where woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being enclosed and indicate measurements on Shop Drawings.

1.7 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that architectural woodwork can be supported and installed as indicated.
B. Coordination with Related Items: Coordinate architectural woodwork with sizes, locations and access required for items incorporated into woodwork assemblies, including mechanical and electrical components.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Provide materials that comply with requirements of the AWI quality standard for each type of woodwork and quality grade specified, unless otherwise indicated.
B. Wood for Transparent Finish: Do not use 2 adjacent exposed faces that are noticeably dissimilar in color, grain, figure, or natural character markings.

1. Wood Species and Cut, Typical Locations: Select white birch plain sawn or sliced.

C. Wood Species for Opaque Finish: Yellow poplar or closed-grain white hardwoods.
D. Wood Products: Comply with the following:

1. Medium-Density Fiberboard: ANSI A208.2, Grade MD; Exterior Grade where indicated.
2. Particleboard: ANSI A208.1, Grade M-2; M-2-Exterior Glue for laminate clad aprons and access panels at lavatory counters and where indicated.
3. Softwood Plywood: DOC PS 1, Exterior.
4. Hardwood Plywood and Face Veneers: HPVA HP-1.

E. Thermoset Decorative Overlay (Melamine): Particleboard complying with ANSI A208.1, Grade M-2, or medium-density fiberboard complying with ANSI A208.2, Grade MD, with surface of thermally fused, melamine-impregnated decorative paper complying with LMA SAT-1.
F. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated, or if not indicated, as required by woodwork quality standard.

1. Manufacturer: As indicated in Finish Legend on the Drawings.

G. Adhesive for Bonding Plastic Laminate: Urea-formaldehyde or Resorcinol.

1. Adhesive for Bonding Edges: Hot-melt adhesive or adhesive specified above for faces.

H. Solid-Surfacing Material: Homogeneous solid sheets of filled plastic resin complying with material and performance requirements in ANSI Z124.3, for Type 5 or Type 6, without a precoated finish.
I. Clear Tempered Glass: ASTM C 1048, Kind FT, Condition A, Type I, Class 1, Quality q3; manufactured by horizontal (roller hearth) process, with exposed edges seamed before tempering.

1. Applications: Display case doors and shelves, sliding glass pass windows, and glass panels inset in countertops.

J. Stainless Steel:

1. Tubing: ASTM A 554, Grade MT 304.

2. Plate: ASTM A 167, Type 304.
3. Bar Stock: ASTM A 276, Type 304.
4. Finish: AISI No. 4 finish unless otherwise indicated.

K. Aluminum:

1. Extruded Bars and Shapes: ASTM B 221,6063-T6.
2. Extruded Pipe and Tubes: ASTM B 429, 6063-T6.
3. Drawn Seamless Tubes: ASTM B 4836063-T832.
4. Plate and Sheet: ASTM B 2096061-T6.
5. Aluminum Finish: Clear anodized unless otherwise indicated.

2.2 INSTALLATION MATERIALS

A. Furring, Blocking, Shims, Nailers, and Hanging Strips: Softwood or hardwood lumber, kiln-dried to less than 15 percent moisture content.
B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

2.3 FABRICATION, GENERAL

A. Interior Woodwork Grade: Provide Premium grade interior woodwork complying with the referenced quality standard.
B. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.
C. Fabricate woodwork to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:

1. Corners of Cabinets and Edges of Solid-Wood (Lumber) Members and Rails: 1/16 inch.

D. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

1. Notify Architect seven days in advance of the dates and times woodwork fabrication will be complete.
2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements indicated on Shop Drawings before disassembling for shipment.

E. Shop cut openings, to maximum extent possible, to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and

use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

1. Seal edges of openings in countertops with a coat of varnish.

F. Install glass to comply with applicable requirements in Division 08 Section "Glazing" and in GANA's "Glazing Manual." For glass in wood frames, secure glass with removable stops.

2.4 INTERIOR WOOD TRIM AND WOODWORK FOR TRANSPARENT FINISH

A. Quality Standard: Comply with AWI Section 300 for standing and running trim.
B. In locations indicated, use veneered construction or hardwood plywood. Provide face veneers of type and species indicated for transparent finished woodwork, with hardwood edge banding on exposed edges.
C. Backout or groove backs of flat trim members and kerf backs of other wide, flat members, except for members with ends exposed in finished work.

2.5 DISPLAY CASES

A. Quality Standard: Comply with AWI Section 300.
B. Wood Frames and Trim: Solid lumber or veneered construction, as indicated.

1. Backout or groove backs of flat trim members and kerf backs of other wide, flat members, except for members with ends exposed in finished work.

C. Glass Doors: Clear tempered glass, 6 mm (1/4 inch) thick, with flat polished edge.

1. Provide ground finger pulls in glass doors.

D. Glass Shelves: Clear tempered glass, 6 mm (1/4 inch) thick, with flat polished edge.

1. Provide three full depth glass shelves the full length of each display case, unless otherwise indicated, in sections not less than 24 inches nor more than 36 inches long.

E. Wall Panels and Shelf Standards: Provide complete integrated system of wall furring, extruded vertical standards, shelf brackets, tackable fabric-wrapped panels, panel support clips, top and bottom channels, and end supports and custom fasteners.

1. Vertical Standard Spacing: 16 inches o.c.
2. Brackets: Manufacturer's standard, of type to suit type of standards, glass shelves, and conditions of installation. Provide not less than two brackets per shelf.
    a. Product: Paz Systems Inc.; No. 2085 Straightout Faceouts.
    b. Finish: [White powder coat.] [Polished chrome finish.]

F. Accessories: Provide the following:

1. Slides and Locks for Sliding Glass Doors: Aluminum, ASTM B 221, 6063-T6 with clear anodized finish.

    a. Product: Stylmark Track Assembly Model No. 610185[, with lock assembly #510808 master keyed to building locks].

2. Surface Mounted Fluorescent Light Fixtures: Single lamp channel fixtures, white painted steel sheet metal enclosure for surface mounting, length(s) as indicated. Refer to Electrical Plans for fixture type, size and quantities.

2.6 FLUSH WOOD PANELING

A. Quality Standard: Comply with AWI Section 500 requirements for flush wood paneling.
B. Lumber Trim and Edges: Solid wood compatible with grain and color of veneered panels.
C. Exposed Wood Veneers: Comply with the following:

    1. Matching of Adjacent Veneer Leaves: Book match.
    2. Vertical Matching of Adjacent Veneer Leaves: End match.
    3. Veneer Matching within Panel Face: Balance match.

D. Hardwood Veneer Plywood Option: At Contractor's option, flush wood paneling may be fabricated with hardwood veneer plywood, using matched sets complying with specified veneer matching and other requirements indicated for wood paneling.

2.7 SOLID SURFACE WINDOW STOOLS

A. Quality Standard: Comply with AWI Section 400 requirements for high-pressure decorative laminate countertops.
B. High-Pressure Decorative Laminate Grade: HGS; 0.048 inch minimum thickness.
C. Colors, Patterns, and Finishes: As indicated in Finish Legend on the Drawings, or if not indicated, as selected by Architect from manufacturer's full range.
D. Edge Treatment: Same as solid surface cladding on horizontal surfaces.
E. Core Material: Medium-density fiberboard, exterior grade.

2.8 SHOP FINISHING ARCHITECTURAL WOODWORK

A. Quality Standard: Comply with AWI Section 1500, unless otherwise indicated.

    1. Grade: Premium.

B. General: Shop finish casework and panels at fabrication shop as specified in this Section.

    1. Refer to Division 09 Section "Painting and Coating" for finishing architectural woodwork not specified for shop finish, including standing and running wood trim.

C. Preparations for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing architectural woodwork, as applicable to each unit of work.

1. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of woodwork. Apply two coats to back of paneling and to end-grain surfaces. Apply three coats to backs and concealed edges and ends of window sills.

D. Transparent Finish: Comply with requirements indicated below for grade, finish system, staining, and sheen, with sheen measured on 60-degree gloss meter per ASTM D 523:

1. AWI Finish System TR-6: Catalyzed polyurethane.
2. Staining: None required.
3. Staining: Match approved sample for color.
4. Sheen: Satin, 30-50 gloss units.
5. Number of Coats: As required by referenced standard unless otherwise indicated.

PART 3 - EXECUTION

3.1 PREPARATION

A. Condition woodwork to average prevailing humidity conditions in installation areas before installation.
B. Before installing architectural woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.2 INSTALLATION

A. Quality Standard: Install woodwork to comply with AWI Section 1700 for the same grade specified in Part 2 of this Section for type of woodwork involved.
B. Install woodwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb (including tops) to a tolerance of 1/8 inch in 96 inches.
C. Scribe and cut woodwork to fit adjoining work, and refinish cut surfaces and repair damaged finish at cuts.
D. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing as required for complete installation. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork and matching final finish if transparent finish is indicated.
E. Wood Trim and other Woodwork: Install with minimum number of joints possible, using full-length pieces (from maximum length of lumber available) to greatest extent possible. Do not use pieces less than 96 inches long, except where shorter single-length pieces are necessary. Scarf running joints and stagger in adjacent and related members.

1. Fill gaps, if any, between top of base and wall with plastic wood filler, sand smooth, and finish same as wood base, if finished.

2. Install wood trim with no more variation from a straight line than 1/8 inch in 96 inches.

F. Flush Wood Paneling: Anchor panels to supporting substrate with panel adhesive and finish screws.

1. Conceal fasteners to greatest practical extent by locating fasteners where they will be covered by trim. Fill fasteners in exposed locations.
2. Install panels with no more than 1/16 inch in 96-inch vertical cup or bow and 1/8 inch in 96-inch horizontal variation from a true plane.

G. Window Stools: Install without joints, using full-size pieces for each window stool.

1. Install window stools with no more variation from a straight line than 1/8 inch in 96 inches.

H. Complete the finishing work specified in this Section to extent not completed at shop or before installation of woodwork. Fill fastener holes with matching filler where exposed. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats were applied in shop.

3.3 ADJUSTING AND CLEANING

A. Repair damaged and defective woodwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.
B. Clean, lubricate, and adjust hardware.
C. Clean woodwork on exposed and semi exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

END OF SECTION 06 40 23

SECTION 07 10 00 – DAMPPROOFING AND WATERPROOFING

PART 1– GENERAL

1.1 SECTION INCLUDES

A. Fluid-applied dampproofing.
B. Fluid-applied waterproofing.

1.2 RELATED SECTIONS

A. Section 03 30 00 - Cast-in-Place Concrete
B. Section 04 20 00 - Unit Masonry.

1.3 REFERENCES

A. ASTM International (ASTM):

1. ASTM C836 - Standard Specification for High Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane for Use with Separate Wearing Course.
2. ASTM D412 - Tests for Rubber Properties in Tension
3. ASTM D1187 - Standard Specification for Asphalt-Base Emulsions for Use as Protective Coatings for Metal.
4. ASTM D1227 - Standard Specification for Emulsified Asphalt Used as a Protective Coating for Roofing.
5. ASTM D4479 - Standard Specification for Asphalt Roof Coatings - Asbestos-Free.
6. ASTM D4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free.
7. ASTM E96 - Water Vapor Transmission of Materials.

B. Federal Specifications:

1. MIL-R-3472 Roof Coating, Asphalt Base Emulsion.
2. SS-A-694 Asphalt Roof Coating (Brushing & Spraying Consist).
3. SS-C-153 - Cement, Bituminous, Plastic.
4. SS-R-1781 - Roof-Coating, Asphalt-Base Emulsion.
5. SS-W-110 - Water-Repellent Colorless, Silicone Resin Base.

C. National Standard of Canada 37.58 - M86.

1.4 SUBMITTALS

A. Submit under provisions of Section 01 30 00
B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Warranty: Submit a sample warranty identifying the terms and conditions stated in Warranty article.

1.5 QUALITY ASSURANCE

A. Applicator Qualifications: Applicator shall be experienced in applying the same or similar materials.
B. Regulatory Requirements: Comply with applicable codes, regulations, ordinances, and laws regarding use and application of products that contain volatile organic compounds (VOC).

1.6 PRE-INSTALLATION MEETINGS

A. Pre-Installation Conference: Prior to beginning work, convene a conference to review conditions, installation procedures, schedules and coordination with other work.
B. Convene minimum two weeks prior to starting work of this section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site in original, factory-sealed, unopened containers bearing manufacturer's name and label intact and legible with following information.

1. Name of material.
2. Manufacturer's stock number and date of manufacture.

B. Store materials in protected and well ventilated area. Handle materials to avoid damage.

1.8 PROJECT CONDITIONS

A. Do not apply when surface temperature or weather conditions conflict with manufacturer's published requirements.
B. Coordinate waterproofing work with other trades.
C. Keep flammable products away from spark or flame. Do not allow the use of spark producing equipment during application and until all vapors have dissipated. Post "NO SMOKING" signs.

D. Maintain work area in a neat and orderly condition, removing empty containers, rags, and rubbish daily from the site.

1.9 SEQUENCING

A. Ensure that products of this section are supplied to affected trades in time to prevent interruption of construction progress.

1.10 WARRANTY

A. Warranty: Provide manufacturer's standard limited material warranty.

PART 2– PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. KARNAK Corporation.
2. BASF Corporation; Construction Systems.
3. W. R. Meadows, Inc.
4. Grace Construction Products.
5. Carlisle Coatings & Waterproofing, Inc.
6. Henry Company.
7. Tamko Building Products, Inc.

B. Requests for substitutions will be considered in accordance with Division 01 provisions as established by Construction Manager.

2.2 DAMPPROOFING

A. Non-Fibered Emulsion Dampproofing: Brush or spray applied, general purpose coating. Manufactured with refined asphalt, emulsifiers and selected clay fillers.

1. Dries to a tough, flexible, durable finish and will resist extreme variations in temperature and weather.
2. Low odor coating.
3. May be applied to damp surfaces.
4. ASTM D1227, Type III.
5. ASTM D1187, Type II.
6. SS-R-1781.
7. MIL-R-3472A.
8. Coverage Rate: 2 to 3 gallons per 100 square feet.
9. Solids by Weight: 54 to 58 percent, nominal.
10. Solids by Volume: 56 to 60 percent, nominal.

11. Color: Black.
12. Permeance: 0.5 perms.
13. Cure Time: 24 to 48 hours at 77 degrees F and 50 percent Relative Humidity.
14. Service Temperature (Cured Film): -40 to 180 degrees F.
15. Reference: 100AF by KARNAK Corporation.
16. Fabric Reinforcing: Reference: Karnak #31 Fiber Glass Membrane.

2.3 WATERPROOFING

A. Single component, elastomeric waterproofing membrane, polyurethane with bitumen modifiers.

1. Single Layer Dry Film Thickness: 60 mils.
2. Prime Coat as recommended by Manufacturer.
3. ASTM C836.
4. Complies with National Standard of Canada 37.58 - M86.
5. Coverage Rate: 4 gallons per 100 square feet.
6. Shore Hardness, ASTM C836: 85.
7. Elongation, ASTM D412: 600 percent.
8. Tensile Strength, ASTM D412: 50 PSI.
9. Water Vapor Permeance, ASTM E96: 0.1 perm.
10. Heat Aging, ASTM C836: No Cracking.
11. Crack Bridging, ASTM C836: Pass (10 cycles).
12. Adhesion, ASTM C836: 5 lbs/in.
13. Solids: Minimum 90 percent.
14. Color: Black.
15. Reference: 192 One-Kote by KARNAK Corporation.

PART 3– EXECUTION

3.1 EXAMINATION

A. Before work is started, applicator shall thoroughly examine all surfaces for any deficiencies.
B. Notify Architect in writing of any defects.

3.2 SURFACE PREPARATION

A. Surface should be free of oil, grease, dirt, laitance and loose material.
B. Repair all cracks and holes as recommended by Manufacturer, before applying surface coating.

3.3 APPLICATION

A. Comply with manufacturer recommendations and approved submittals. Mix as recommended by manufacturer.
B. For fabric reinforced applications, apply first coat. Apply reinforcing fabric over the wet coating, overlapping all edges. Smooth out all wrinkles, to ensure there is no trapped air beneath fabric. Apply second coat.

END OF SECTION 07 10 00

SECTION 07 21 00 - THERMAL INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Perimeter insulation under slabs-on-grade.
2. Perimeter wall insulation (supporting backfill).
3. Concealed building insulation.
4. Spray foam insulation for cavities of exterior walls.
5. Sound attenuation insulation.
6. Closed-cell spray polyurethane foam
7. Glass-faced polyiso insulation behind metal panels

B. Related Sections include the following:

1. Division 04 Section "Unit Masonry": Insulation installed in cavity walls.
2. Division 05 Section "Cold-Formed Metal Framing": Metal studs for exterior walls, to receive insulation.
3. Division 06 Section "Sheathing": Nailable composite insulation panels.
4. Division 07 Section "Fluid-Applied Membrane Air Barriers": Air barrier at composite metal panels.
5. Division 07 Section "Metal Wall Panels": Structural metal wall panels siding applied with metal building type insulation.
6. Division 09 Section "Gypsum Board Assemblies": Sound attenuation insulation installed as part of metal-framed wall and partition assemblies.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.
B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency for insulation products.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of building insulation through one source from a single manufacturer.

B. Spray foam Insulation Installer Qualifications: Engage an experienced dealer/applicator who has been trained and licensed by the product manufacturer, and who has at least three years experience in the installation of product used.
C. Foam Sealant Installer Qualifications: Engage an Installer for infiltration control sealing who has successfully completed 5 installations of scope similar to this Project.
D. Fire-Test-Response Characteristics: Provide insulation and related materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency.

1. Surface-Burning Characteristics: ASTM E 84.
2. Fire-Resistance Ratings: ASTM E 119.
3. Combustion Characteristics: ASTM E 136.
4. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect insulation materials from physical damage and from deterioration by moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

B. Protect plastic insulation as follows:

1. Do not expose to sunlight, except to extent necessary for period of installation and concealment.
2. Protect against ignition at all times. Do not deliver plastic insulating materials to Project site before installation time.
3. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

1.6 PROJECT CONDITIONS

A. Sequencing and scheduling: Inspect for infiltration paths and install expanding foam sealant for infiltration control at the intervals indicated below. Do not enclose building envelope construction before inspecting and sealing infiltration paths.
1. Before installing veneer.
2. Before installing doors and windows.
3. Before installing interior wall finishes.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Extruded-Polystyrene Board Insulation:

a. DiversiFoam Products.
b. Dow Chemical Company.
c. Owens Corning.
d. Pactiv Building Products.

2. Glass-Fiber Insulation:

a. CertainTeed Corporation.
b. Johns Manville Corporation.
c. Knauf Fiber Glass.
d. Owens Corning.

3. Spray Polyurethane Foam Insulation:

a. BASF Corporation.
b. Dow Chemical Company.
c. Henry Company.

4. Expanding Foam Sealant:

a. Dow Chemical Company.
b. Geocel Corporation.
c. Macklanburg-Duncan; GE Sealants & Adhesives.
d. Tytan Products.

5. Glass-Faced Polyiso Insulation:

a. Henry Company
b. Siplast
c. Atlas

2.2 INSULATING MATERIALS

A. General: Provide insulating materials that comply with requirements and with referenced standards.

1. Preformed Units: Sizes to fit applications indicated; selected from manufacturer's standard thicknesses, widths, and lengths.

B. Sustainability Requirements: Provide glass-fiber board insulation as follows:

1. Low Emitting: Insulation tested according to ASTM D 5116 and shown to emit less than 0.05-ppm formaldehyde.

C. Extruded-Polystyrene Board Insulation: ASTM C 578, of type and density indicated below, with maximum flame-spread and smoke-developed indices of 75 and 450, respectively:

1. Type IV, 25 psi.
    a. Applications: Use for foundation walls, under-slab conditions, and with Z-furring at perimeter walls.

D. Extruded-Polystyrene Board Insulation: Provide coated glass faced polyiso foam plastic insulation boards 2 ½" thickness;

1. R Value – 15.3
2. ASTM C 1289 Type II, Class 2
    a. Applications: Behind exterior metal wall panel system.

2.3 SPRAY FOAM INSULATION

A. Closed-Cell Polyurethane Foam Insulation: ASTM C 1029, Type II, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.

1. Minimum density of 1.5 lb/cu. ft. (24 kg/cu. m), thermal resistivity of 6.2 deg F x h x sq. ft./Btu x in. at 75 deg F (43 K x m/W at 24 deg C).

2.4 AUXILIARY INSULATING MATERIALS

A. Expanding Foam Sealant: Non shrinking, non drying, one-component expanding polyurethane foam sealant suitable for sealing infiltration pathways in building construction; VOC-compliant, with no CFC's or HCFC's; UL Listed, with Flame Spread of 25 or less and Smoke Density of 20 or less.

1. Products: Subject to compliance with requirements, provide one of the following:
    a. Dow Chemical Company; Great Stuff Pro.
    b. Geocel Corporation; Expanding Foam Sealant
    c. Macklanburg-Duncan; Polycel Expanding Foam Sealant.
    d. Selena USA Inc., Tytan Products; One-Component Pro, Expanding Polyurethane Gun Foam Sealant.

B. Adhesive for Bonding Insulation: Product with demonstrated capability to bond insulation securely to substrates indicated without damaging insulation and substrates.

2.5 INSULATION FASTENERS

A. Products: Subject to compliance with requirements, provide one of the following:

1. Adhesively Attached, Spindle-Type Anchors:
    a. AGM Industries, Inc.; Series T TACTOO Insul-Hangers.
    b. Gemco; Spindle Type.

2. Insulation-Retaining Washers:
    a. AGM Industries, Inc.; RC150.
    b. AGM Industries, Inc.; SC150.
    c. Gemco; Dome-Cap.
    d. Gemco; R-150.
    e. Gemco; S-150.

3. Anchor Adhesives:
    a. AGM Industries, Inc.; TACTOO Adhesive.
    b. Gemco; Tuff Bond Hanger Adhesive.

B. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of thickness indicated securely in position indicated with self-locking washer in place; and complying with the following requirements:

1. Plate: Perforated galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
2. Spindle: Copper-coated, low carbon steel, fully annealed, 0.105 inch in diameter, length to suit depth of insulation indicated.

C. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick galvanized steel sheet, with beveled edge for increased stiffness, sized as required to hold insulation securely in place, but not less than 1-1/2 inches square or in diameter.

D. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates indicated without damaging insulation, fasteners, and substrates.

E. Steel Sheet Closure and Attachment Components: Metal complying with ASTM C 645 requirements.

1. Protective Coating: ASTM A 653/A 653M, G40, hot-dip galvanized.
2. Thickness: Minimum base metal thickness as follows for gages indicated:
    a. 20 gage: 0.0329 inches.
    b. 16 gage: 0.0583 inches.

3. Break-form to profiles shown.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements of Sections in which substrates and related work are specified and for other conditions affecting performance.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrates of substances harmful to insulation or vapor retarders, including removing projections capable of puncturing vapor retarders or of interfering with insulation attachment.

3.3 INSTALLATION, GENERAL

A. Comply with insulation manufacturer's written instructions applicable to products and application indicated.
B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed at any time to ice, rain, and snow.
C. Extend insulation in thickness indicated to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
D. Water-Piping Coordination: If water piping is located within insulated exterior walls, coordinate location of piping to ensure that it is placed on warm side of insulation and insulation encapsulates piping.
E. Apply single layer of insulation to produce thickness indicated, unless multiple layers are otherwise shown or required to make up total thickness.

3.4 INSTALLATION OF PERIMETER AND UNDER-SLAB INSULATION

A. Apply insulation units to substrates by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.
B. Set vapor-retarder-faced units with vapor retarder to warm side of construction, unless otherwise indicated. Do not obstruct ventilation spaces, except for firestopping.

1. Tape joints and ruptures in vapor retarder, and seal each continuous area of insulation to surrounding construction to ensure airtight installation.

C. Install blanket insulation in cavities formed by framing members according to the following requirements:

1. Use blanket widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill cavity, provide lengths that will produce a snug fit between ends.
2. Place blankets in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
3. For metal-framed wall cavities where cavity heights exceed 96 inches, support unfaced blankets mechanically and support faced blankets by taping stapling flanges to flanges of metal studs.

D. Install board insulation on sheet steel substrates by adhesively attached, spindle-type insulation anchors as follows:

1. Slip board into "Z" retainer at bottom, ensuring that free clearance is maintained at bottom of board.
2. Fasten insulation anchors to sheet steel substrates with insulation anchor adhesive according to anchor manufacturer's written instructions. Space anchors according to insulation manufacturer's written instructions for insulation type, thickness, and application indicated.
3. After adhesive has dried, install board insulation by pressing insulation into position over spindles and securing it tightly in place with insulation-retaining washers, taking care not to compress insulation beyond indicated thickness.
4. Seal joints in vapor barrier with tape.

3.5 INSTALLATION OF SPRAY FOAM INSULATION

A. Spray-Applied Insulation: Apply spray-applied insulation according to manufacturer's written instructions. Do not apply insulation until installation of stud reinforcing, pipes, ducts, conduits, wiring, and electrical outlets in walls is completed and windows, electrical boxes, and other items not indicated to receive insulation are masked. After insulation is applied, make flush with face of studs by using method recommended by insulation manufacturer.

3.6 INSTALLATION OF INFILTRATION CONTROL SEALANT

A. General: Install expanding foam sealant at all infiltration pathways not blocked by other construction. Install at locations including, but not limited to, door frames, plumbing penetrations, tops and bottoms of frame walls, tops of masonry partitions, at flutes of steel decking, at steel beam cantilevers, wiring penetrations, and similar conditions.

1. Prepare and install materials according to manufacturer's recommendations.
2. Do not use expanding foam sealant for conditions where firestopping is indicated or required.

3.7 PROTECTION AND CLEANING

A. Protect installed insulation and vapor retarders from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or

enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

3.8 FIELD QUALITY CONTROL

A. Field Inspection for Foamed-in-Place Insulation: Break exterior face shells out of concrete masonry units at locations as directed by Architect, but not less than one location for each 50 sq. feet of wall with foamed insulation.

1. Provide access for observation by Architect.
2. Where inspection reveals inadequately filled masonry cells, drill additional holes and repeat application procedure.
3. Patch inspection holes so that no evidence of inspection procedures is visible in the completed work.
4. Perform additional inspections when results indicate requirements have not been met, as directed by Architect, without cost to Owner.

END OF SECTION 07 21 00

SECTION 07 27 26 - FLUID-APPLIED MEMBRANE AIR BARRIERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Fluid-applied membrane air barrier, vapor permeable applied to sheathing over metal studs.

B. Related Sections include the following:

1. Division 07 Section “Composite Wall Panels.”
2. Division 07 Section "Joint Sealants" for joint-sealant materials and installation.

1.3 DEFINITIONS

A. Air Barrier Assembly: The collection of air barrier materials and auxiliary materials applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.4 PERFORMANCE REQUIREMENTS

A. General: Air barrier shall be capable of performing as a continuous vapor permeable air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

1.5 SUBMITTALS

A. Product Data: Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of air barrier.

B. Product Certificates: For air barriers, certifying compatibility of air barrier and accessory materials with Project materials that connect to or that come in contact with the barrier; signed by product manufacturer.
C. Qualification Data: For Applicator.
D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for air barriers.

1.6 QUALITY ASSURANCE

A. Applicator Qualifications: A firm experienced in applying air barrier materials similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
B. Mockups: Before beginning installation of air barrier, build mockups of exterior wall assembly, 150 sq. ft., incorporating backup wall construction, external cladding, window, door frame and sill, insulation, and flashing to demonstrate surface preparation, crack and joint treatment, and sealing of gaps, terminations, and penetrations of air barrier membrane.

    1. Coordinate construction of mockup to permit inspection by Owner's testing agency of air barrier before external insulation and cladding is installed.
    2. Include junction with roofing membrane.
    3. If Architect determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.
    4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

C. Preinstallation Conference: Conduct conference at Project site.

    1. Include installers of other construction connecting to air barrier, including roofing, waterproofing, architectural precast concrete, masonry, sealants, windows, glazed curtain walls, and door frames.
    2. Review air barrier requirements including surface preparation, substrate condition and pretreatment, minimum substrate curing period, forecasted weather conditions, special details and sheet flashings, mockups, installation procedures, sequence of installation, testing and inspecting procedures, and protection and repairs.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store liquid materials in their original undamaged packages in a clean, dry, protected location and within temperature range required by air barrier manufacturer.
B. Remove and replace liquid materials that cannot be applied within their stated shelf life.
C. Store rolls according to manufacturer's written instructions.
D. Protect stored materials from direct sunlight.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended by air barrier manufacturer. Protect substrates from environmental conditions that affect performance of air barrier. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

PART 2 - PRODUCTS

2.1 FLUID-APPLIED MEMBRANE AIR BARRIER

A. Fluid-Applied, Vapor-Permeable Membrane Air Barrier: Synthetic polymer membrane.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Synthetic Polymer Membrane:

1) Henry Company; Air-Bloc 31 or 33.
2) Sto Corp.
3) Prosoco R

2. Physical and Performance Properties:

a. Membrane Air Permeance: Not to exceed 0.004 cfm/ sq. ft. of surface area at 1.57-lbf/sq. ft. pressure difference; ASTM E 2178.
b. Membrane Vapor Permeance: Not less than 21 perms; ASTM E 96.

2.2 AUXILIARY MATERIALS

A. General: Auxiliary materials recommended by air barrier manufacturer for intended use and compatible with air barrier membrane. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
B. Primer: Liquid waterborne primer recommended for substrate by manufacturer of air barrier material.
C. Counterflashing Strip: Modified bituminous, 40-mil- thick, self-adhering sheet consisting of 32 mils of rubberized asphalt laminated to an 8-mil- thick, crosslaminated polyethylene film with release liner backing for use with metal flashings.
D. Butyl Strip: Vapor-retarding, 30- to 40-mil- thick, self-adhering; polyethylene-film-reinforced top surface laminated to layer of butyl adhesive with release liner backing for use with EPDM or TPO membranes.
E. Modified Bituminous Strip: Vapor-retarding, 40-mil- thick, smooth-surfaced, self-adhering; consisting of 36 mils of rubberized asphalt laminated to a 4-mil- thick polyethylene film with release liner backing for use with compatible roofing membranes.
F. Joint Reinforcing Strip: Air barrier manufacturer's glass-fiber-mesh tape.
G. Substrate Patching Membrane: Manufacturer's standard trowel-grade substrate filler.
H. Adhesive and Tape: Air barrier manufacturer's standard adhesive and pressure-sensitive adhesive tape.

I. Sprayed Polyurethane Foam Sealant: 1- or 2-component, foamed-in-place, polyurethane foam sealant, 1.5 to 2.0 lb/cu. ft density; flame spread index of 25 or less according to ASTM E 162; with primer and noncorrosive substrate cleaner recommended by foam sealant manufacturer.

J. Modified Bituminous Transition Strip: Vapor-retarding, 40-mil- thick, smooth-surfaced, self-adhering; consisting of 36 mils of rubberized asphalt laminated to a 4-mil- thick polyethylene film with release liner backing.

K. Adhesive-Coated Transition Strip: Vapor-permeable, 17-mil- thick, self-adhering strip consisting of an adhesive coating over a permeable laminate with a permeance of 37 perms.

L. Joint Sealant and Mastic: Provide sealant type specified below or another type compatible with and recommended by membrane manufacturer for type of exposure. Mastics shall be compatible with membrane and be recommended by membrane manufacturer.

1. Joint Sealant: ASTM C 920, single-component, neutral-curing silicone; Class 100/50 (low-modulus), Grade NS, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O. Comply with Division 07 Section "Joint Sealants."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance.

1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
2. Verify that concrete has cured and aged for minimum time period recommended by air barrier manufacturer.
3. Verify that concrete is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
4. Verify that masonry joints are flush and completely filled with mortar.
5. Verify that masonry veneer anchor installation is complete and all blocking is in place.
6. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

A. Clean, prepare, treat, and seal substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air barrier application.

B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.

C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate patching membrane.
E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.
F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.
G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

3.3 JOINT TREATMENT

A. Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 1193 and air barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks complying with ASTM D 4258 before coating surfaces.

1. Prime substrate and apply a single thickness of preparation coat strip extending a minimum of 3 inches along each side of joints and cracks. Apply a double thickness of air barrier membrane and embed a joint reinforcing strip in preparation coat.

B. Gypsum Sheathing: Fill joints greater than 1/4 inch with sealant according to ASTM C 1193 and with air barrier manufacturer's written instructions. Apply first layer of fluid air barrier membrane at joints. Tape joints with joint reinforcing strip after first layer is dry. Apply a second layer of fluid air barrier membrane over joint reinforcing strip.

3.4 TRANSITION STRIP INSTALLATION

A. Install strips, transition strips, and auxiliary materials according to air barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.

1. Coordinate the installation of air barrier with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
2. Install butyl or modified bituminous strip as appropriate, on roofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over both substrates.

B. Apply primer to substrates at required rate and allow to dry. Limit priming to areas that will be covered by air barrier sheet in same day. Reprime areas exposed for more than 24 hours.

1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.

C. Connect and seal exterior wall air barrier membrane continuously to roofing membrane air barrier, concrete below-grade structures, floor-to floor construction, exterior glazing

and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials as indicated.

D. At end of each working day, seal top edge of strips and transition strips to substrate with termination mastic.
E. Apply joint sealants forming part of air barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.
F. Wall Openings: Prime concealed perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply modified bituminous transition strip or adhesive-coated transition strip so that a minimum of 3 inches of coverage is achieved over both substrates. Maintain 3 inches of full contact over firm bearing to perimeter frames with not less than 1 inch of full contact.

    1. Modified Bituminous and Adhesive-Coated Transition Strip: Roll firmly to enhance adhesion.

G. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air barrier membrane with foam sealant.
H. Seal strips and transition strips around masonry reinforcing or ties and penetrations with termination mastic.
I. Seal top of through-wall flashings to air barrier with an additional 6-inch- wide, modified bituminous strip.
J. Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.
K. Repair punctures, voids, and deficient lapped seams in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches beyond repaired areas in strip direction.

3.5 AIR BARRIER MEMBRANE INSTALLATION

A. Apply air barrier membrane to form a seal with strips and transition strips and to achieve a continuous air barrier according to air barrier manufacturer's written instructions.
B. Apply air barrier membrane within manufacturer's recommended application temperature ranges.
C. Apply primer to substrates at required rate and allow to dry. Limit priming to areas that will be covered by air barrier sheet in same day. Reprime areas exposed for more than 24 hours or not covered in the same day.

    1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.

D. Apply a continuous unbroken air barrier to substrates to achieve the manufacturer’s recommended minimum dry film thickness. Apply membrane in full contact around protrusions such as masonry ties.
E. Apply strip and transition strip over cured air membrane overlapping 3 inches onto each surface according to air barrier manufacturer's written instructions.

F. Do not cover air barrier until it has been inspected by Owner's Representative or Architect.
G. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air barrier components.
H. When required by manufacturer, immediately install insulation over membrane air barrier according to manufacturer’s instructions.

3.6 CLEANING AND PROTECTION

A. Protect air barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.

1. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. Remove and replace air barrier exposed for more than 30 days.
2. Protect air barrier from contact with creosote, uncured coal-tar products, TPO, EPDM, flexible PVC membranes, and sealants not approved by air barrier manufacturer.

B. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended by manufacturer of affected construction.
C. Remove masking materials after installation.

END OF SECTION 07 27 26

SECTION 07 41 13 - METAL ROOF PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Field-assembled, standing-seam metal roof panels for straight application and field seamed joints.
2. Flashing and sheet metal fabrications incidental to roof panel systems, including gutters and downspouts.
3. Seam-mounted, continuous snow guard systems.

B. Related Sections include the following:

1. Division 05 Section "Steel Decking": Steel roof deck supporting metal roof panels.
2. Division 05 Section "Metal Fabrications": Metal downspout boots.
3. Division 06 Section "Sheathing": Roof nailable composite insulation panels for roof deck.
4. Division 07 Section "Metal Flashing and Trim": Flashings and other sheet metal work not part of metal roof panel assemblies.
5. Division 07 Section "Roof Specialties": Copings, gutters, downspouts and counterflashings not part of metal roof panel assemblies.
6. Division 07 Section "Joint Sealants": Field-applied sealants not otherwise specified in this Section.

1.2 DEFINITIONS

A. Metal Roof Panel Assembly: Metal roof panels, attachment system components, and accessories necessary for a complete weathertight roofing system.

1.3 PERFORMANCE REQUIREMENTS

A. General: Provide metal roof panel assemblies that comply with performance requirements specified as determined by testing manufacturers' standard assemblies similar to those indicated for this Project, by a qualified testing and inspecting agency.
B. Air Infiltration: Air leakage through assembly of not more than 0.06 cfm/sq. ft. of roof area when tested according to ASTM E 283 at the test-pressure difference of 1.57 lbf/sq. ft.
C. Water Penetration: No water penetration when tested according to ASTM E 331 at test-pressure difference of 2.86 lbf/sq. ft.

D. FM Global Listing: Provide metal roof panels and component materials that comply with requirements in FM Global 4471 as part of a panel roofing system and that are listed in

FM Global's "Approval Guide" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Global markings.

1. Fire/Windstorm Classification: Class 1A-90.
2. Hail Resistance: MH.

E. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with UL 580 for wind-uplift resistance Class 90.

F. Structural Performance: Provide metal roof panel assemblies capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated, based on testing according to ASTM E 330 for straight roofs. [ASTM E 1592 for curved roofs and ASTM E 330 for straight roofs] <330 is typical; 1592 w/ Zip-Rib >

1. Loads: Determine wind loads and snow loads by calculations based on load criteria indicated on Drawings.

G. Thermal Movements: Provide metal roof panel assemblies that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

1.4 SUBMITTALS

A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal roof panel, insulation and accessory.

B. Shop Drawings: Show fabrication and installation layouts of insulation and metal roof panels; method of installation and attachment of insulation; details of edge conditions, joints, panel profiles, corners, anchorages, trim, flashings, closures, and accessories; and special details. Distinguish between factory- and field-assembled work. Shop drawings shall show layout of snow guards as approved by snow guard manufacturer.

1. Insulation Attachment: Show compliance with requirements.
2. Accessories: Include details of the following items, at a scale of not less than 1-1/2 inches per 12 inches:
    a. Flashing and trim.
    b. Curved rake trim.
    c. Gutters.
    d. Downspouts.
    e. Snow guards.

C. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.

1. Metal Roof Panels: 12 inches long by actual panel width. Include fasteners, clips, seam caps, closures, and other metal roof panel accessories.
2. Accessories: 12-inch-long Samples for each type of accessory.

D. Qualification Data: For Installer.
E. Field quality-control inspection reports.
F. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for the following:

1. Metal Roof Panels: Include reports for air infiltration, water penetration, and structural performance.

G. Maintenance Data: For metal roof panels to include in maintenance manuals.
H. Warranties: Special warranties specified in this Section.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers trained and approved by manufacturer.

1. Installer's responsibilities include fabricating and installing metal roof panel assemblies.

B. Source Limitations: Obtain each type of metal roof panels through one source from a single manufacturer.
C. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination." Review methods and procedures related to metal roof panel assemblies including, but not limited to, the following:

1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, metal roof panel Installer, metal roof panel manufacturer's representative, deck Installer, and installers whose work interfaces with or affects metal roof panels including installers of roof accessories and roof-mounted equipment.
2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
3. Review methods and procedures related to metal roof panel installation, including manufacturer's written instructions.
4. Examine deck substrate conditions for compliance with requirements, including flatness and attachment to structural members.
5. Review structural loading limitations of deck during and after roofing.
6. Review requirements for roof insulation.
7. Review flashings, special roof details, roof drainage, roof penetrations, equipment supports, snow guard installation and condition of other construction that will affect metal roof panels.
8. Review governing regulations and requirements for insurance, certificates, and testing and inspecting if applicable.

9. Review temporary protection requirements for metal roof panel assembly during and after installation.

D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build mockups for typical roof area only, including accessories.

a. Size: 12 feet long by 6 feet.
b. Each type of exposed seam and seam termination.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 PRODUCT HANDLING

A. Deliver components, sheets, metal roof panels, insulation panels, and other manufactured items so as not to be damaged or deformed. Package metal roof panels for protection during transportation and handling.
B. Unload, store, and erect metal roof panels in a manner to prevent bending, warping, twisting, and surface damage.
C. Stack metal roof panels on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal roof panels to ensure dryness. Do not store metal roof panels in contact with other materials that might cause staining, denting, or other surface damage.
D. Protect strippable protective covering on metal roof panels from exposure to sunlight and high humidity, except to extent necessary for period of metal roof panel installation.

1.7 PROJECT CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal roof panels to be performed according to manufacturers' written instructions and warranty requirements.

1.8 COORDINATION

A. Coordinate metal panel roof assemblies with rain drainage work, flashing, trim, and construction of decks, parapets, walls, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.9 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal roof panel assemblies that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures, including rupturing, cracking, or puncturing.
b. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

2. Warranty Period: Two years from date of Substantial Completion.

B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal roof panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

C. Special Weathertightness Warranty for Standing-Seam Metal Roof Panels: Manufacturer's standard form in which manufacturer agrees to repair or replace standing-seam metal roof panel assemblies that fail to remain weathertight, including leaks, within specified warranty period.

1. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: The design for non-structural metal roof panels is based on FIELD-LOK Standing Seam Panel, Model1-1/2” FLM-165; ATAS International Inc., Allentown PA, (610-395-8445, www.atas.com). Subject to compliance with requirements, provide the basis-of-design product or comparable product by one of the following:

1. Berridge Manufacturing Company.
2. Innovative Metals Company, Inc. (IMETCO).
3. Petersen Aluminum Corporation.

2.2 PANEL MATERIALS

A. Aluminum Sheet: Coil-coated sheet, ASTM B 209, alclad alloy 3003, 3004, or 3105, with temper as required to suit forming operations and structural performance required.

1. Surface: Smooth, flat
2. Exposed Finish: High-performance organic finish; AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
    a. Fluoropolymer Two-Coat System: Manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605.
3. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil.

B. Panel Sealants:

1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.
2. Joint Sealant for Exposed Joints: ASTM C 920; silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
3. Sealant for Concealed Joints: Butyl-rubber-based, solvent-release sealant; ASTM C 1311.
4. All standing seams to be sealed with facorty sealant.

2.3 INSULATION FOR METAL ROOF PANELS

A. Refer to Section 061600 "Sheathing."

2.4 UNDERLAYMENT MATERIALS

A. General: Provide underlayment materials recommended by metal roof panel manufacturer for conditions of installation, selected from those specified in this Article.
B. Self-Adhering, High-Temperature Sheet: 30 to 40 mils (0.76 to 1.0 mm) thick minimum, consisting of slip-resisting, polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.

1. Thermal Stability: Stable after testing at 240 deg F (116 deg C); ASTM D 1970.

2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F (29 deg C); ASTM D 1970.
3. Subject to compliance with requirements, provide one of the following:
4. .; CCW WIP 300HT.
5. .; Ultra.
6. ; Blueskin PE200 HT.
7. ; MetShield.
8. ; WeatherLock Metal High Temperature Underlayment.

C. Slip Sheet: Building paper, minimum 5 lb/100 sq. ft., rosin sized; unless otherwise recommended by roof panel manufacturer.

2.5 MISCELLANEOUS MATERIALS

A. Fasteners: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. Provide exposed fasteners with heads matching color of metal roof panels by means of plastic caps or factory-applied coating.

1. Fasteners for Roof Panels: Self-drilling or self-tapping, zinc-plated, hex-head carbon-steel screws, with a stainless-steel cap or zinc-aluminum-alloy head and EPDM or neoprene sealing washer.
2. Fasteners for Flashing and Trim: Blind fasteners or self-drilling screws with hex washer head.
3. Blind Fasteners: High-strength stainless-steel rivets.

B. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.6 STANDING-SEAM METAL ROOF PANELS

A. General: Provide factory-formed metal roof panels designed to be field assembled by lapping and interconnecting raised side edges of adjacent panels with joint type indicated and mechanically attaching panels to supports using concealed clips in side laps. Include clips, cleats, pressure plates, and accessories required for weathertight installation.

1. Field-Formed Panels: Panel lengths that exceed maximum shipping lengths may be field rolled on equipment furnished by panel manufacturer that will produce panels identical to factory manufactured products.

   a. Provide equipment with no fewer than 12 rolling stations.
   b. Operate equipment by factory trained full time experienced technician.

B. Vertical-Rib, Seamed-Joint, Standing-Seam Metal Roof Panels: Formed with vertical ribs at panel edges and; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels and engaging

opposite edge of adjacent panels, and mechanically seaming panels together. Provide factory-applied sealant in all seams.

1. Material: Aluminum Sheet: .040.
    a. Exterior Finish: Fluoropolymer.
    b. Color: As selected by Architect from manufacturer's full range
2. Clips: Floating to accommodate thermal movement.
    a. Material: 0.0250-inch-thick, stainless-steel sheet.
3. Nominal Panel Coverage16 1/2 inches.
4. Nominal Seam Height for Straight Roof: 1-1/2 inches

2.7 ACCESSORIES

A. Roof Panel Accessories: Provide components required for a complete metal roof panel assembly including trim, copings, fasciae, corner units, ridge closures, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal roof panels, unless otherwise indicated.

1. Closures: Provide closures at eaves and ridges, fabricated of same metal as metal roof panels.
2. Clips: Minimum 0.0625-inch-thick, stainless-steel panel clips designed to withstand negative-load requirements.
3. Cleats: Mechanically seamed cleats formed from minimum 0.0250-inch-thick, stainless-steel sheet.
4. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.

B. Flashing and Trim: Formed from same material and thickness as roof panels. Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers. Finish flashing and trim with same finish system as adjacent metal roof panels.

1. Curved Rake Trim: Factory formed from sheet metal to curvature of radius roof, lengths subject to approval of Architect.
    a. Provide continuous neoprene foam closure to produce a compression seal at flashing.

C. Gutters and Downspouts: Provide gutters and downspouts in shapes and sizes indicated, and with expansion joints in locations indicated.

1. Fabricate gutters and downspouts with mitered and welded corners. Do not use exposed rivets.
2. Include concealed brackets, hangers or other attachment devices; end plates; and trim and other accessories indicated or required for complete installation.

a. Furnish gutter supports spaced no more than 32 inches o.c., fabricated from same metal as gutters. Align strap anchors with standing seam of metal roof.

3. Expansion Joints: Butt type, with concealed splice plates.

a. Cover splice plates at interior of gutters with self adhesive EPDM tape, completely covering joint. Seal edges of tape with compatible sealer.

4. Valley Baffles: Provide sheet metal baffles, 6 inches high with 18 inch long legs, located at outside edge of gutter at bottom of roof valleys, to keep water from overshooting gutter during heavy rains.
5. Fabricate gutters and downspouts in minimum 96-inch-long sections, of the following metal:

a. Aluminum; 0.050 inch thick.
b. Prepainted, Metallic-Coated Steel; 0.0336 inch thick (20 gage).

6. Finish gutters and downspouts to match metal roof panels, unless otherwise indicated.

D. Splash Blocks: Precast concrete, 2500 psi minimum, with smooth finish; style as selected by Architect from standard patterns available.

1. Provide splash block at grade discharge of each downspout.

E. Snow Guards: Prefabricated, noncorrosive units designed to be installed without penetrating metal roof panels, and complete with predrilled holes, clamps, or hooks for anchoring.

1. Seam-Mounted, Continuous Snow Guards: Aluminum snow fence held in place by aluminum clamps attached to vertical ribs of standing-seam metal roof panels, with color insert using metal roof panel material.

a. Basis of Design Product: S-5! ColorGard.
b. Aluminum Finish: Powder Coat Enamel.

2.8 FABRICATION

A. General: Fabricate and finish metal roof panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
B. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
C. Sheet Metal Accessories: Fabricate flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to the design, dimensions, metal, and other characteristics of item indicated.

1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
2. Seams: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
3. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA standards.
4. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
5. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended by metal roof panel manufacturer.

    a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal roof panel manufacturer for application but not less than thickness of metal being secured.

2.9 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal roof panel supports, and other conditions affecting performance of work.

    1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.

B. Examine roughing-in for components and systems penetrating metal roof panels to verify actual locations of penetrations relative to seam locations of metal roof panels before metal roof panel installation.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrates of substances harmful to insulation, including removing projections capable of interfering with insulation attachment.
B. Install flashings and other sheet metal to comply with requirements specified in Division 07 Section "Metal Flashing and Trim."

3.3 INSULATION INSTALLATION

A. Board Insulation: Extend insulation in thickness indicated to cover entire roof. Comply with installation requirements in Division 07 Section "Thermal Insulation."

    1. Use multiple layers of insulation as necessary to conform to roof curve.

3.4 UNDERLAYMENT INSTALLATION

A. Self-Adhering Sheet Underlayment; Full Cover: Install self-adhering sheet underlayment, wrinkle free, on roof sheathingunder metal roof panels. Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation; use primer rather than nails for installing underlayment at low temperatures. Apply at entire area indicated for metal roof panels and as indicated below, in shingle fashion to shed water, with end laps of not less than 6 inches staggered 24 inches between courses. Overlap side edges not less than 3-1/2 inches. Extend underlayment into gutter trough. Roll laps with roller. Cover underlayment within 14 days.

    1. Roof to wall intersections for a distance from wall of 18 inches.
    2. Around penetrating elements for a distance from element of 18 inches.

B. In windy conditions or where underlayment does not properly adhere to nailable substrate, nail perimeter of underlayment membrane with roofing or cap nails at intervals of 12 inches o.c. Do not use staples.

    1. In moderate or high wind conditions, provide additional nailing in field of membrane.
    2. As an alternative to nailing, apply surface conditioner to roof deck at coverage rate recommended by underlayment manufacturer. Allow surface conditioner to dry thoroughly before walking on substrate, since it is slippery when wet.
    3. Cover underlayment with exposed roofing material as soon as possible.

C. Install flashings to cover underlayment to comply with requirements specified in Division 07 Section "Metal Flashing and Trim."
D. Apply slip sheet over underlayment before installing metal roof panels.

3.5 METAL ROOF PANEL INSTALLATION, GENERAL

A. General: Provide metal roof panels of full length from eave to ridge, unless otherwise indicated or restricted by shipping limitations. Anchor metal roof panels and other

components of the Work securely in place, with provisions for thermal and structural movement.

1. Field cutting of metal roof panels by torch is not permitted.
2. Rigidly fasten eave end of metal roof panels and allow free movement of panels due to thermal expansion and contraction. Predrill panels.
3. Provide metal closures at perimeter conditions.
4. Flash and seal metal roof panels with weather closures at eaves, rakes, and at perimeter of all openings. Fasten with self-tapping screws.
5. Locate and space fastenings in uniform vertical and horizontal alignment.
6. Lap metal flashing over metal roof panels to allow moisture to run over and off the material.

B. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by metal roof panel manufacturer.

1. Coat back side of roof panels with bituminous coating where roof panels will contact wood, ferrous metal, or cementitious construction.

C. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weatherproof performance of metal roof panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by metal roof panel manufacturer.

1. Seal metal roof panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal roof panel manufacturer.
2. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants."

3.6 FIELD-ASSEMBLED METAL ROOF PANEL INSTALLATION

A. Standing-Seam Metal Roof Panels: Fasten metal roof panels to supports with concealed clips at each standing-seam joint at location, spacing, and with fasteners recommended by manufacturer.

1. Install clips to substrate with fasteners recommended by roof panel manufacturer, and at recommended spacing but not less than 24 inches o.c.
2. Install pressure plates at locations indicated in manufacturer's written installation instructions.
3. Snap Joint: Nest standing seams and fasten together by interlocking and completely engaging factory-applied sealant.
4. Seamed Joint: Crimp standing seams with manufacturer-approved motorized seamer tool so clip, metal roof panel, and factory-applied sealant are completely engaged.

3.7 ACCESSORY INSTALLATION

A. General: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal roof panel assembly including trim, closures, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.

B. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.

1. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).

C. Gutters: Join sections with riveted and soldered or lapped and sealed joints. Attach gutters to eave with gutter hangers spaced not more than 32 inches o.c. aligned with standing seams using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.

D. Downspouts: Join sections with 1-1/2-inch telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch away from walls; locate fasteners at top and bottom and at approximately 60 inches o.c. in between.

1. Provide elbows at base of downspouts to direct water away from building, unless otherwise indicated.
2. Tie downspouts to underground drainage system where downspouts terminate at grade.

E. Continuous Snow Guards: Attach bar supports to vertical ribs of standing-seam metal roof panels with set screws. Do not use fasteners that will penetrate metal roof panels.

1. Provide snow guards at not less than the locations indicated on Drawings. Provide additional snow guards as recommended by manufacturer and applicable industry standards, in quantities and locations to prevent snow and ice from sliding off roof, as approved by Architect. Obtain snow guard manufacturer’s approval of snow guard layout and include on shop drawings.

3.8 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align metal roof panel units within installed tolerance of 1/4 inch in 20 feet on slope and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.9 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as metal roof panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal roof panel installation, clean finished surfaces as recommended by metal roof panel manufacturer. Maintain in a clean condition during construction.
B. Replace metal roof panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 4113

SECTION 07 42 43 - COMPOSITE METAL PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Metal-faced composite material panels for walls, soffits, fascia, and other applications indicated.
2. Supplemental framing and furring supporting metal panels.
3. Concealed fasteners and anchorage hardware for composite metal panels.

B. Related Sections include the following:

1. Division 04 Section “Unit Masonry”: Exterior wall assembly mock-up requirements.
2. Division 05 Section "Cold-Formed Metal Framing": Framing supporting metal panels.
3. Division 07 Section “Self-Adhering Sheet Waterproofing”: Weather barrier behind metal composite material panels at vented soffit/fascia conditions.
4. Division 07 Section "Metal Wall Panels": Concealed fastener, lap seam metal wall panels.
5. Division 07 Section "Metal Flashing and Trim": Flashings and other sheet metal work not part of metal panel assemblies.
6. Division 07 Section "Joint Sealants": Field-applied sealants not otherwise specified in this Section.

1.2 DEFINITION

A. Metal Panel Assembly: Metal panels, attachment system components, miscellaneous metal framing and furring, and accessories necessary for a complete weathertight system.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site

1.4 PERFORMANCE REQUIREMENTS

A. General: Provide metal panel assemblies that comply with performance requirements specified as determined by testing manufacturers' standard assemblies similar to those indicated for this Project, by a qualified testing and inspecting agency.

B. Air Infiltration: Air leakage through assembly of not more than 0.06 cfm/sq. ft. of wall area when tested according to ASTM E 283 at a static-air-pressure difference of 6.24 lbf/sq. ft.
C. Water Penetration: No water penetration when tested according to ASTM E 331 at a minimum differential pressure of 20 percent of inward-acting, wind-load design pressure of not less than 6.24 lbf/sq. ft. and not more than 12 lbf/sq. ft.
D. Structural Performance: Provide metal panel assemblies capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated, based on testing according to ASTM E 330:

1. Loads: Determine wind loads and snow loads by calculations based on load criteria indicated on Drawings.
2. Deflection Limits: Engineer metal panel assemblies to withstand test pressures with deflection no greater than 1/180 of the span and no evidence of material failure, structural distress, or permanent deformation exceeding 0.2 percent of the clear span.

    a. Test Pressure: Wind-load design pressure as indicated on Drawings.

E. Thermal Movements: Provide metal panel assemblies that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

F. Fire Propagation Characteristics: Composite metal panel system passes NFPA 285 testing.

1.5 SUBMITTALS

A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal panel and accessory.
B. Shop Drawings: Show fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details. Distinguish between factory- and field-assembled work.

1. Accessories: Include details of flashing and trim items, at a scale of not less than 1-1/2 inches per 12 inches.

C. Samples for Initial Selection: For each type of metal panel indicated with factory-applied color finishes and for sealant.
D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.

1. Metal Panels: 12 inches long by actual panel width. Include fasteners, closures, and other metal panel accessories.
2. Sealant: Sealant applied to panels of each color selected.

E. Qualification Data: For Installer.
F. Product Test Reports: For each product, tests performed by a qualified testing agency demonstrating metal composite material panel assembly passes NFPA 285 Intermediate-Scale Multistory Fire Test.
G. Maintenance Data: For metal panels to include in maintenance manuals.
H. Warranties: Special warranties specified in this Section.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers trained and approved by manufacturer.
B. Source Limitations: Obtain each type of metal panel through one source from a single manufacturer.
C. Mockups: Build mockups of exterior wall assemblies as specified in Division 04 Section “Unit Masonry”.

1.7 PRODUCT HANDLING

A. Deliver components, sheets, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.
C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.
D. Protect strippable protective covering on metal panels from exposure to sunlight and high humidity, except to extent necessary for period of metal panel installation.

1.8 PROJECT CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.9 COORDINATION

A. Coordinate metal panel assemblies with rain drainage work, flashing, trim, and construction of adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel assemblies that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures, including rupturing, cracking, or puncturing.
b. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

2. Warranty Period: Two years from date of Substantial Completion.

B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Products: Subject to compliance with requirements, provide the following:

1. Metal-Faced Composite Panels: "Omega Lite" composite panels with "1-Piece, Tight-Fit Molding" installation accessories; Laminators Inc., Hatfield, PA.

B. Comparable Manufacturers: Subject to compliance with requirements, provide the basis-of-design product or comparable product by one of the following:

1. ATAS international Inc.

2.2 PANEL MATERIALS

A. Aluminum Sheet: Coil-coated sheet, ASTM B 209, alloy 3003, 3004, or 3105 for painted**]** finishes, with temper as required to suit forming operations and structural performance required.

1. Surface: Smooth, flat finish.

2. Exposed Finishes: Apply the following coating, as specified or indicated on Drawings.

   a. High-Performance Organic Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

      1) Fluoropolymer Two-Coat System: Manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605.

3. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil.

B. Thickness: 0.236 inch (6mm)
C. Aluminum Extrusions: ASTM B 221, alloy and temper recommended by manufacturer for type of use and finish indicated.
D. Panel Sealants:

1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.
2. Joint Sealant: ASTM C 920; elastomeric polyurethane, or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.

2.3 MISCELLANEOUS METAL FRAMING

A. Steel Sheet Components, General: Complying with ASTM C 645 requirements for metal and with ASTM A 653, G60, hot-dip galvanized zinc coating.
B. Cold-Rolled Furring Channels: 0.0538-inch bare steel thickness, with minimum 1/2-inch-wide flange.
C. Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

2.4 MISCELLANEOUS MATERIALS

A. Fasteners: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. Provide concealed fasteners unless otherwise indicated.

1. Fasteners for Metal Panels: Stainless steel screws and aluminum wire clips specifically designed for concealed connection of composite panels to substrate, and to be concealed within panel joint by trim or sealant; as detailed in approved shop drawings.

2. Fasteners for Flashing and Trim: Blind fasteners or self-drilling screws with hex washer head.
3. Blind Fasteners: High-strength aluminum or stainless-steel rivets.

B. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.5 METAL PANELS

A. Metal Composite Material Panels (MP-01): Factory-formed panels with core material, metal face sheet and metal backing.

1. Panel Facing: Prefinished aluminum sheet, not less than 0.032 inch thick.
2. Panel Backing Sheet: Aluminum, 0.001 inch thick; mill finish.
3. Core Material: Corrugated polyallomer plastic engineered by manufacturer to meet performance requirements when laminated with specified face material.
4. Overall Composite Panel Thickness: 1/4 inch.
5. Dimensional tolerance: Plus or minus 1/16 inch in all directions, including diagonally.
6. Exterior Finish: Fluoropolymer.
    a. Color: As selected by Architect from manufacturer's full range.

2.6 ACCESSORIES

A. Wall Panel Accessories: Provide components required for a complete metal panel assembly including trim, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels, unless otherwise indicated.

1. Closures: Provide closures at eaves and rakes, fabricated of same metal as metal panels.
2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
3. Molding Intersection: Vertical Pass-Through Joint with H-Molding

B. Flashing and Trim: Formed from metal of type and finish matching adjacent metal panels, not less than 0.0179-inch-thick. Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.

C. Aluminum Trim Accessories: Manufactured from extruded aluminum with factory-applied colored coating or clear anodized finish, as indicated.

1. Reveal Moldings: Extruded aluminum moldings of types indicated.
    a. Soffit Vent: 3-inch wide by 3/4 inch deep vented soffit; Fry Reglet Vented Soffit Molding No. SV-75-V-300.

2. Finish: High-Performance Organic Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

    a. Fluoropolymer Two-Coat System: Manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605.
    b. Color: Custom color to match adjacent metal composite material soffit panels.

2.7 FABRICATION

A. Field measurements of site conditions shall be coordinated with approved Shop Drawings prior to beginning installation of the BD&V sub-framing for locations of intermediate adhesive supports, joints, and edge locations.
B. Install BD&V sub-framing according to written instructions and drawings supplied by the ACM Panel System Manufacturer. Field-coordinate placement of BD&V sub-framing relative to substrate prior to placement of joints.
C. Field-coordinate placement of joints relative to BD&V sub-framing prior to field-fabrication of panels.
D. Field-fabricate panels to sizes and joint configurations indicated on approved Shop Drawings.
E. Fabricate panels with sharply cut edges and no displacement of face or backer sheets or protrusion of core. Form panel angles, breaks, corners, lines, and returns to be sharp, true, and free of buckle and/or warp.
F. Fabrication Tolerances:

    1. Width: +/- 1/16 inch
    2. Length: +/- 1/16 inch
    3. Squareness: +/- 1/16 inch

G. Panel Installation:

    1. Install the BD&V ACM Panel System plumb, level, and true in compliance with Manufacturer’s recommendations and approved Shop Drawings.
    2. Comply with the BD&V ACM Panel System Manufacturer’s instructions for installation of concealed fasteners; provisions of Section 079200; and manufacturer’s recommendations for installation of joint sealants.
    3. Installation Tolerances:

        a. Adjacent vertical or horizontal panel out-of-plane offset: +/- 1/16 inch
        b. Panel edge shall not be exposed short of the finished face of molding.
        c. Adjacent vertical or horizontal panel edge alignment: +/- 1/16 inch
        d. Adjacent vertical or horizontal joint intersection deviation: +/- 1/16 inch
        e. Maximum vertical or horizontal joint intersection deviation: 1/4 inch in any 20 feet

    4. Do not cut, trim, weld, or braze BD&V ACM Panel System-specific components during installation in a manner which would damage the finish, decrease strength, or result in visual imperfection or a failure in performance.

5. Separate contact of dissimilar metals with approved methods as defined by the Manufacturer in order to eliminate the possibility of corrosive or electrolytic action between metals.

2.8 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of work.

1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal composite material panel manufacturer.
2. Examine solid wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal panel manufacturer.
3. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.

B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before metal panel installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrates of substances harmful to metal panels, including removing projections capable of interfering with attachment.
B. Miscellaneous Framing: Install furring and other miscellaneous wall panel support members and anchorage according to ASTM C 754 and metal panel manufacturer's written recommendations.

1. Soffit Framing: Wire-tie or clip furring channels to supports, as required to comply with requirements for assemblies indicated.

3.3 METAL PANEL INSTALLATION

A. General: Install metal composite material panels in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts and subgirts, unless otherwise indicated. Anchor metal composite material panels and other components of the Work securely in place, with provisions for thermal and structural movement.

1. Field cutting of metal panels by torch is not permitted.
2. Shim or otherwise plumb substrates receiving metal panels.
3. Flash and seal metal panels with weather closures at eaves, rakes, and at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until weather barrier and flashings that will be concealed by metal panels are installed.
4. Install screw fasteners in predrilled holes.
5. Install flashing and trim as metal panel work proceeds.
6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
7. Provide weatherproof escutcheons for pipe and conduit penetrating exterior walls.

B. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by metal panel manufacturer.

1. Coat back side of wall panels with bituminous coating where wall panels will contact wood, ferrous metal, or cementitious construction.

C. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weatherproof performance of metal panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by metal panel manufacturer.

1. Seal metal panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal panel manufacturer.
2. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants."

D. Attachment Assembly, General: Install attachment assembly required to support metal composite material wall panels and to provide a complete weathertight wall system, including subgirts, perimeter extrusions, tracks, drainage channels, panel clips, and anchor channels.

1. Include attachment to supports, panel-to-panel joinery, panel-to-dissimilar-material joinery, and panel-system joint seals.

E. Installation: Attach 1-Piece, Tigh-Fit Molding System of metal composite material wall panels to supports at locations, spacings, and with fasteners per manufacturer's written instructions to achieve performance requirements specified.

3.4 ACCESSORY INSTALLATION

A. General: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.

B. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.

1. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).

3.5 ERECTION TOLERANCES

A. Installation Tolerances, Composite Metal Panels: Shim and align metal panel units within installed tolerance of 1/16 inch in 10 feet, nonaccumulative, on level, plumb, and location lines as indicated and within 1/16-inch offset of adjoining faces and of alignment of matching profiles.

3.6 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.
B. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 42 43

SECTION 07 53 23 - EPDM ROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Fully adhered ethylene-propylene-diene-monomer (EPDM) membrane roofing system.
2. Roof insulation.
3. Pipe flashings and other roof penetrations flashings.

B. Related Sections include the following:

1. Division 06 Section "Rough Carpentry": Wood nailers, curbs, and blocking; and plywood roof deck panels.
2. Division 07 Section "Metal Flashing and Trim": Metal roof penetration flashings and base flashings.
3. Division 07 Section “Preparation for Reroofing” removing existing roofing and preparing substrates for new roofing.
4. Division 07 Section "Metal Flashing and Trim": Metal roof penetration flashings and base flashings.
5. Division 07 Section "Manufactured Roof Specialties": Manufactured reglets and counterflashing.
6. Division 22 and 23 Sections: Roof drains and equipment curbs.

1.2 DEFINITIONS

A. Roofing Terminology: Refer to ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" for definition of terms related to roofing work in this Section.

1.3 PERFORMANCE REQUIREMENTS

A. General: Provide installed roofing membrane and base flashings that remain watertight; do not permit the passage of water; and resist specified uplift pressures, thermally induced movement, and exposure to weather without failure.
B. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by roofing membrane manufacturer based on testing and field experience.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other Work.

1. Base flashings and membrane terminations.
2. Tapered insulation, including slopes.
3. Insulation fastening patterns.

C. Samples for Verification: For the following products:

1. Roofing Membrane: 12-by-12-inch square of sheet in color specified, including T-shaped side and end lap seam.
2. Insulation: 12-by-12-inch square.

D. Installer Certificates: Signed by roofing system manufacturer certifying that Installer is approved, authorized, or licensed by manufacturer to install roofing system.

E. Manufacturer Certificates: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.

1. Submit evidence of meeting performance requirements.

F. Qualification Data: For Installer and manufacturer.

G. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for components of roofing system.

H. Research/Evaluation Reports: For components of membrane roofing system.

I. Maintenance Data: For roofing system to include in maintenance manuals.

J. Warranties: Special warranties specified in this Section.

K. Inspection Report: Copy of roofing system manufacturer's inspection report of completed roofing installation.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's warranty.

B. Manufacturer Qualifications: A qualified manufacturer that has FMG approval for membrane roofing system identical to that used for this Project.

C. Testing Agency Qualifications: An independent testing agency with the experience and capability to conduct the testing indicated, as documented according to ASTM E 548.

1. For roof moisture testing, operator of roof moisture test apparatus shall have not less than 3 years experience performing the type of inspections indicated.

D. Source Limitations: Obtain components for membrane roofing system approved by roofing membrane manufacturer.

E. Fire-Test-Response Characteristics: Provide membrane roofing materials with the fire-test-response characteristics indicated as determined by testing identical products per test method below by UL, FMG, or another testing and inspecting agency acceptable to authorities having jurisdiction. Materials shall be identified with appropriate markings of applicable testing and inspecting agency.

1. For roof-expansion joints, provide fire-barrier assemblies with fire-test-response characteristics not less than that of adjacent construction, as determined by testing identical products per UL 2079 and ASTM E 119, by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Assemblies shall be capable of anticipated movement while maintaining fire rating. Identify assemblies with appropriate markings of applicable testing and inspecting agency.

F. Preinstallation Conference: Conduct conference at Project site. Comply with requirements in Division 1 Section "Project Management and Coordination." Review methods and procedures related to roofing system including, but not limited to, the following:

1. Meet with Owner; Architect; Owner's insurer if applicable; testing and inspecting agency representative; roofing Installer; roofing system manufacturer's representative; deck Installer; and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

G. Roof Installation Monitoring: Arrange for roofing system manufacturer's technical representative or qualified independent inspection agency acceptable to Owner to monitor roofing installation.

1. Manufacturer's representative shall monitor roofing installation no fewer than 2 days for every 5 days of roofing activity, for not less than 2 hours per day.
2. Manufacturer's representative shall submit report to Architect noting any deviations from project requirements or manufacturer's installation standards.

1.6 PRODUCT HANDLING

A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, and directions for storing and mixing with other components.
B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.

    1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
D. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

1.7 PROJECT CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.8 WARRANTY

A. Special Warranty: Manufacturer's standard form, without monetary limitation, in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials or workmanship within specified warranty period. Failure includes roof leaks.

    1. Special warranty includes roofing system from roof edge to edge including roof terminations and coping; roofing membrane, base flashings, roofing membrane accessories, roof insulation, fasteners, cover boards, substrate board, expansion assemblies, roof penetrations, walkway products, and other components of membrane roofing system.
    2. Warranty Period: 20 years from date of Substantial Completion.

B. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering Work of this Section, including all components of membrane roofing system such as roofing membrane, base flashing, roof terminations and coping, roof insulation, fasteners, cover boards, substrate boards, and walkway products, for the following warranty period:

    1. Warranty Period: 2 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 EPDM ROOFING MEMBRANE

A. EPDM Roofing Membrane: ASTM D 4637, Type II, scrim or fabric internally reinforced uniform, flexible sheet made from EPDM, and as follows:

1. Basis-of-Design Product: The design for EPDM membrane roofing is based on Sure-Tough EPDM Reinforced Membranes by Carlisle Syntec Systems. Subject to compliance with requirements, provide the named product or comparable product by one of the following:

a. Firestone Building Products Company.
b. GenFlex Roofing Systems.
c. Johns Manville International, Inc.

2. Thickness: 60 mils nominal.
3. Exposed Face Color: Black.

2.2 AUXILIARY MATERIALS

A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with membrane roofing.

1. Liquid-type auxiliary materials shall meet VOC limits of authorities having jurisdiction.

B. Sheet Flashing: 60-mil-thick EPDM, partially cured or cured, according to application.
C. Supplemental Membrane for Overlay: Manufacturer's standard unreinforced EPDM sheet flashing, 60 mils thick, of same color as primary membrane and without fleece backing.
D. Bonding Adhesive: Manufacturer's standard bonding adhesive.
E. Cold Fluid-Applied Membrane Adhesive: Manufacturer's standard cold fluid-applied bonding adhesive formulated to adhere fleece-backed roofing membrane to substrate.
F. Seaming Material: Manufacturer's standard primer and 6-inch-wide minimum, splice tape with release film.
G. Lap Sealant: Manufacturer's standard single-component sealant, color to match roofing membrane.
H. Water Cutoff Mastic: Manufacturer's standard butyl mastic sealant.
I. Metal Termination Bars: Manufacturer's standard predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch thick; with anchors.
J. Pipe Penetration Seals: Preformed, self-flashing pipe seals for roof penetrations, consisting of membrane compatible with roofing and flashing materials, with stainless steel compression clamps.
K. Fasteners: Factory-coated steel fasteners and metal or plastic plates meeting corrosion-resistance provisions in FMG 4470, designed for fastening membrane to substrate, and acceptable to membrane roofing system manufacturer.

L. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, in-seam sealants, termination reglets, cover strips, and other accessories.

2.3 ROOF INSULATION

A. General: Preformed roof insulation boards manufactured or approved by roofing manufacturer, selected from insulation manufacturer's standard sizes, suitable for application, and of thicknesses indicated.

1. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48) unless otherwise indicated.
2. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated, not less than two times the roof slope.

B. Roof Insulation: Provide roof insulation product in thicknesses indicated in Part 3 as follows:

1. Board Insulation, Polyisocyanurate: CFC- and HCFC- free, with recycled content glass-fiber mat facer on both major surfaces, ASTM C1289 Type II Class 1.

a. Basis of design product: Carlise, InsulBase Insulation.
b. Compressive Strength, ASTM D1621: Grade 2: 20 psi (138 kPa).
c. Conditioned Thermal Resistance at 75 deg. F (24 deg. C): 14.4 at 2.5 inches (50.8 mm) thick.

2.4 ROOF INSULATION ACCESSORIES

A. Cover Board:

1. Gypsum panel, glass-mat-faced, ASTM C1177/C1177M.

a. Basis of design product: Carlisle, SecurShield HD Polyiso Insulation.
b. Thickness: 1/4 inch (6 mm).

B. Tapered Edge Strips: ASTM C 208, Type II, Grade 1, cellulosic-fiber insulation board.
C. Insulation Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation and cover boards to substrate, and acceptable to roofing system manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with the following requirements and other conditions affecting performance of roofing system:

1. Verify that roof openings and penetrations are in place and set and braced and that roof drains are securely clamped in place.
2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Division 05 Section "Steel Deck."
4. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
C. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
D. Install acoustical roof deck rib insulation strips, specified in Division 5 Section "Steel Deck," according to acoustical roof deck manufacturer's written instructions.

3.3 INSULATION INSTALLATION

A. Coordinate installing membrane roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.
B. Comply with membrane roofing system manufacturer's written instructions for installing roof insulation.
C. Install tapered insulation under area of roofing to conform to slopes indicated and to provide positive slope to drain.
D. Install one or more layers of insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2 inches or greater, install 2 or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches in each direction.
E. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.
F. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch with insulation.

1. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.

G. Adhered Insulation: Install each layer of insulation and adhere to substrate as follows:

1. Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. and allow primer to dry.
2. Set each layer of insulation in a cold fluid-applied adhesive.

H. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Loosely butt cover boards together and fasten to roof deck.

1. Fasten insulation according to requirements in FMG's "Approval Guide" for specified Windstorm Resistance Classification.

3.4 ADHERED ROOFING MEMBRANE INSTALLATION

A. Install roofing membrane over area to receive roofing according to membrane roofing system manufacturer's written instructions. Unroll roofing membrane and allow to relax before installing.
B. Start installation of roofing membrane in presence of membrane roofing system manufacturer's technical personnel.
C. Accurately align roofing membrane and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
D. Bonding Adhesive: Apply bonding adhesive to substrate and underside of roofing membrane at rate required by manufacturer and allow to partially dry before installing roofing membrane. Do not apply bonding adhesive to splice area of roofing membrane.
E. Mechanically or adhesively fasten roofing membrane securely at terminations, penetrations, and perimeter of roofing.
F. Apply roofing membrane with side laps shingled with slope of roof deck where possible.
G. Tape Seam Installation: Clean and prime both faces of splice areas, apply splice tape, and firmly roll side and end laps of overlapping roofing membranes according to manufacturer's written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of roofing membrane terminations.
H. Repair tears, voids, and lapped seams in roofing that does not meet requirements.
I. Spread sealant or mastic bed over deck drain flange at deck drains and securely seal roofing membrane in place with clamping ring.
J. Install roofing membrane and auxiliary materials to tie in to existing roofing.

3.5 BASE FLASHING INSTALLATION

A. Install sheet flashings and preformed flashing accessories and adhere to substrates according to membrane roofing system manufacturer's written instructions.
B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate and allow to partially dry. Do not apply bonding adhesive to seam area of flashing.
C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.

D. Clean splice areas, apply splicing cement, and firmly roll side and end laps of overlapping sheets to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of sheet flashing terminations.
E. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars.

3.6 MANUFACTURED ROOF SPECIALTY INSTALLATION

A. General: Comply with manufacturer's written installation instructions and in accordance with Section 07 7100.

3.7 FIELD QUALITY CONTROL

A. Roof Moisture Testing: Owner will engage a qualified independent testing and inspecting agency to perform roof moisture tests and to mark areas of completed roofing where moisture is indicated by testing.

1. Moisture Survey: Testing and inspecting agency will perform an infrared video inspection of entire roof area to identify moist areas.

B. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.

1. Repair components of roofing system damaged by testing and inspection procedures. Comply with requirements of roofing system manufacturer for cutting and patching roofing, and the following:

a. Coordinate repair work with activities of testing and inspection agency so repairs are performed on same day that roof probes or test cuts are made.
b. Apply supplemental roofing membrane sheet to cover area of repairs and test probes, using sheet not less than 8 inches wider than area of repair, with rounded corner.

C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
D. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing systems after completion of installation and repairs, and submit report to Architect.

1. Notify Architect or Owner 3 days in advance of date and time of inspection.

3.8 PROTECTING AND CLEANING

A. Protect membrane roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.

B. Correct deficiencies in or remove membrane roofing system that does not comply with requirements, repair substrates and repair or reinstall membrane roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.9 ROOFING INSTALLER'S WARRANTY

A. WHEREAS <Insert name> of <Insert address>, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:

1. Owner: <Insert name of Owner.>
2. Address: <Insert address.>
3. Building Name/Type: <Insert information.>
4. Address: <Insert address.>
5. Area of Work: <Insert information.>
6. Acceptance Date: <Insert date.>
7. Warranty Period: <Insert time.>
8. Expiration Date: <Insert date.>

B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,

C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period he will, at his own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.

D. This Warranty is made subject to the following terms and conditions:
1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:
    a. lightning;
    b. peak gust wind speed exceeding 55 mph;
    c. fire;
    d. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
    e. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
    f. vapor condensation on bottom of roofing; and
    g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.

2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost

and expense thereof have been paid by Owner or by another responsible party so designated.

3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.
5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.
7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this <Insert day> day of <Insert month>, <Insert year>.

1. Authorized Signature: <Insert signature.>
2. Name: <Insert name.>
3. Title: <Insert title.>

END OF SECTION 07 53 23

SECTION 07 62 00 - METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes sheet metal flashing and trim in the following categories:

1. Formed roof drainage systems including scuppers, conductor heads, gutters and downspouts.
2. Sheet metal cladding applied over plywood substrate for fascia and other conditions indicated.
3. Formed metal base flashing, roof flashing, and counterflashing.
4. Copper date stone box liner.
5. Miscellaneous sheet metal trim and brake metal not specified as part of other assemblies.

B. Related Sections include the following:

1. Division 03 Section "Cast-in-Place Concrete": Installing reglets in concrete.
2. Division 04 Section "Unit Masonry": Through-wall flashing and other integral masonry flashings specified as part of masonry work; and brick surround for circular openings, where custom-formed radiused flashings are required.
3. Division 05 Section "Metal Fabrications": Metal downspout boots.
4. Division 06 Section "Rough Carpentry": Wood nailers, curbs, and blocking; and plywood backing for sheet metal cladding.
5. Division 07 Section "Metal Roof Panels": Factory-formed metal roof panels and flashing and trim not part of sheet metal flashing and trim.
6. Division 07 Section "Metal Wall Panels": Factory-formed metal wall panels and flashing and trim not part of sheet metal flashing and trim.
7. Division 07 Section "EPDM Roofing": Installing sheet metal flashing and trim integral with roofing membrane.
8. Division 07 Section "Roof Specialties": Manufactured sheet metal components including Copings, fascia, roof edges, gutters, downspouts, reglets and counterflashings.
9. Division 07 Section "Roof Accessories": .
10. Division 07 Section "Joint Sealants": Elastomeric sealants.
11. Division 07 Section "Expansion Control": Manufactured metal expansion-joint covers.

1.2 PERFORMANCE REQUIREMENTS

A. General: Install sheet metal flashing and trim to withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failing, rattling, leaking, and fastener disengagement.

B. Thermal Movements: Provide sheet metal flashing and trim that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Provide clips that resist rotation and avoid shear stress as a result of sheet metal and trim thermal movements. Based engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

C. Water Infiltration: Provide sheet metal flashing and trim that do not allow water infiltration to building interior.

1.3 SUBMITTALS

A. Product Data: Include manufacturer's material and finish data, installation instructions, and general recommendations for each specified flashing material and fabricated product.

B. Shop Drawings: Show layouts of sheet metal flashing and trim, including plans and elevations. Distinguish between shop- and field-assembled work. Include the following:

1. Identify material, thickness, weight, and finish for each item and location in Project.
2. Details for forming sheet metal flashing and trim, including profiles, shapes, seams, and dimensions.
3. Details for fastening, joining, supporting, and anchoring sheet metal flashing and trim, including fasteners, clips, cleats, and attachments to adjoining work.
4. Details of expansion-joint covers, including showing direction of expansion and contraction.

C. Samples: For sheet metal flashing, trim, and accessory items, in the specified finish. Include Sample sets composed of 2 or more units showing the full range of variations expected.

1. Sheet Metal: 8-inch-square Samples of specified sheet materials to be exposed as finished surfaces.
2. Trim and Accessories: 12-inch-long Samples of factory-fabricated products exposed as finished Work. Provide complete with specified factory finish.

D. Qualification Data: For firms and persons specified in the "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1.4 QUALITY ASSURANCE

A. Sheet Metal Flashing and Trim Standard: Comply with SMACNA's "Architectural Sheet Metal Manual." Conform to dimensions and profiles shown unless more stringent requirements are indicated.

1. Copper Standard: Comply with CDA's "Copper in Architecture Handbook."

B. Installer Qualifications: Engage an experience Installer who has completed sheet metal flashing and trim work similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.

1.5 PRODUCT HANDLING

A. Deliver sheet metal flashing materials and fabrications undamaged. Protect sheet metal flashing and trim materials and fabrications during transportation and handling.
B. Unload, store, and install sheet metal flashing materials and fabrications in a manner to prevent bending, warping, twisting, and surface damage.
C. Stack materials on platforms or pallets, covered with suitable weathertight and ventilated covering. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage.

1.6 COORDINATION

A. Coordinate installation of sheet metal flashing and trim with interfacing and adjoining construction to provide a leakproof, secure, and noncorrosive installation.

PART 2 - PRODUCTS

2.1 SHEET METALS

A. Aluminum Sheet: ASTM B 209, Alloy 3003, 3004, 3105, or 5005, Temper suitable for forming and structural performance required, but not less than H14, finished as follows:

1. High-Performance Organic Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

    a. Fluoropolymer 2-Coat System: Manufacturer's standard 2-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605.
    b. Colors: As indicated on Drawings, or if not indicated, as selected by Architect from manufacturer’s full range.
    c. Applications: Sheet metal fabrications exposed to view in the completed work, in locations adjacent to metal products with a factory-painted finish.

2. Anodized Finish: Apply the following coil-anodized finish:

    a. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.

b. Applications: As follows:

1) Aluminum flashing and trim in locations adjacent to metal products with a clear anodized finish.

B. Stainless-Steel Sheet: ASTM A 240, Type 304; No. 2D (dull, cold rolled) finish.
C. Copper Sheet: ASTM B 370, Temper H00 or H01, cold-rolled copper sheet.
D. Lead Sheet: ASTM B 749, Type L51121, copper-bearing lead sheet.

2.2 UNDERLAYMENT MATERIALS

A. Polyethylene Sheet: 6-mil-thick polyethylene sheet complying with ASTM D 4397.
B. Felts: ASTM D 226, Type II (No. 30), asphalt-saturated organic felt, nonperforated.
C. Slip Sheet: Rosin-sized paper, minimum 3 lb/100 sq. ft.

2.3 MISCELLANEOUS MATERIALS

A. General: Provide materials and types of fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation.
B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads.

1. Exposed Fasteners: Heads matching color of sheet metal by means of plastic caps or factory-applied coating.
2. Fasteners for Flashing and Trim: Blind fasteners or self-drilling screws, gasketed, with hex washer head.
3. Blind Fasteners: High-strength aluminum or stainless-steel rivets.

C. Solder for Stainless Steel: ASTM B 32, Grade Sn60, with acid flux of type recommended by stainless-steel sheet manufacturer.
D. Solder for Copper: ASTM B 32, Grade Sn50, 50 percent tin and 50 percent lead.
E. Solder for Lead: ASTM B 32, Grade Sn50, 50 percent tin and 50 percent lead.
F. Sealing Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealing tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape.
G. Elastomeric Sealant: ASTM C 920, elastomeric silicone polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
H. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant, polyisobutylene plasticized, heavy bodied for hooked-type expansion joints with limited movement.
I. Epoxy Seam Sealer: Two-part, noncorrosive, aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.
J. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

K. Asphalt Roofing Cement: ASTM D 4586, asbestos free, of consistency required for application.

1. Provide splash block at discharge of each downspout Where indicated on Drawings.

2.4 FABRICATION, GENERAL

A. General: Custom fabricate sheet metal flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated. Shop fabricate items where practicable. Obtain field measurements for accurate fit before shop fabrication.
B. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
C. Fabricate sheet metal flashing and trim without excessive oil canning, buckling, and tool marks and true to line and levels indicated, with exposed edges folded back to form hems.

1. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
2. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.

D. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA recommendations.
E. Expansion Provisions: Where lapped or bayonet-type expansion provisions in the Work cannot be used, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with butyl sealant concealed within joints.
F. Conceal fasteners and expansion provisions where possible on exposed-to-view sheet metal flashing and trim, unless otherwise indicated.
G. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.

1. Thickness: As recommended by SMACNA's "Architectural Sheet Metal Manual" and FMG Loss Prevention Data Sheet 1-49 for application but not less than thickness of metal being secured.

2.5 SHEET METAL FABRICATIONS

A. General: Fabricate sheet metal items in thickness or weight needed to comply with performance requirements but not less than that listed below for each application and metal.

B. Parapet Scuppers: Fabricate scuppers of dimensions required with closure flange trim to exterior, 4-inch-wide wall flanges to interior, and base extending 4 inches beyond cant or tapered strip into field of roof.

1. Material: Stainless Steel; 0.0250 inch thick.

C. Flashing and Trim Material: Aluminum; 0.050 inch thick.

1. Applications: Step flashing, drip edges, base flashing and counterflashing; and cladding applied over plywood substrate for fascia and other applications indicated.
2. Finish for Flashing and Trim Exposed to View: Factory-applied colored coating, high-performance organic finish.
3. Finish for Concealed Flashing: Clear anodized.

D. Opening Flashing in Frame Construction: Fabricate head, sill, jamb, and similar flashings to extend 4 inches beyond wall openings. Form head and sill flashing with 2-inch-high end dams.

1. Material: Aluminum; 0.050 inch thick.

E. Drip Edges: Aluminum; 0.050 inch thick.
F. Eave and Rake Flashing: Aluminum; 0.050 inch thick.

G. Step Flashing: Stainless Steel; 0.0250 inch thick.

1. Finish: Prepared and field painted as specified in Division 09 Section "Painting and Coating."

H. Base Flashing: As follows:

1. Stainless steel, 0.0250 inch thick; for flashing in contact with concrete or masonry.
2. Aluminum, 0.050 inch thick; for flashing not in contact with concrete or masonry.

I. Flashing Receivers: As follows:

1. Stainless steel, 0.0250 inch thick; for flashing receivers in contact with concrete or masonry.
2. Aluminum, 0.050 inch thick; for flashing receivers not in contact with concrete or masonry.

J. Roof-Drain Flashing: Lead; 4.0 lb/sq. ft., hard tempered.
K. Equipment Support Flashing: Stainless Steel; 0.0250 inch thick.
L. Roof-Penetration Flashing: Stainless Steel; 0.0250 inch thick.
M. Date Stone Box Liner: Copper; 16 oz./sq. ft.

2.6 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions and other conditions affecting performance of work.

1. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.

1. Torch cutting of sheet metal flashing and trim is not permitted.

B. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by fabricator or manufacturers of dissimilar metals.

1. Coat side of uncoated aluminum, stainless-steel and lead sheet metal flashing and trim with bituminous coating where flashing and trim will contact wood, ferrous metal, or cementitious construction.
2. Underlayment: Where installing metal flashing directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip sheet or install a course of polyethylene underlayment.
3. Bed flanges in thick coat of asphalt roofing cement where required for waterproof performance.

C. Install exposed sheet metal flashing and trim without excessive oil canning, buckling, and tool marks.
D. Install sheet metal flashing and trim true to line and levels indicated. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant.
E. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.

1. Space cleats not more than 12 inches apart. Anchor each cleat with two fasteners. Bend tabs over fasteners.

F. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently watertight, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with butyl sealant concealed within joints.

G. Fasteners: Use fasteners of sizes that will penetrate substrate not less than 1-1/4 inches for nails and not less than 3/4 inch for wood screws.

1. Aluminum: Use aluminum or stainless-steel fasteners.
2. Copper: Use copper or stainless-steel fasteners.
3. Stainless Steel: Use stainless-steel fasteners.

H. Seal joints with butyl sealant as required for watertight construction.

1. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1 inch into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is moderate, between 40 and 70 deg F, set joint members for 50 percent movement either way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F.
2. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants."

I. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pretin edges of sheets to be soldered to a width of 1-1/2 inches except where pretinned surface would show in finished Work.

1. Do not solder aluminum sheet.
2. Pretinning is not required for lead sheet.
3. Stainless-Steel Soldering: Pretin edges of uncoated sheets to be soldered using solder recommended for stainless steel and phosphoric acid flux. Promptly wash off acid flux residue from metal after soldering.
4. Copper Soldering: Tin uncoated copper surfaces at edges of sheets using solder recommended for copper work.
5. Do not use open-flame torches for soldering. Heat surfaces to receive solder and flow solder into joints. Fill joints completely. Completely remove flux and spatter from exposed surfaces.

J. Aluminum Flashing: Rivet or weld joints in uncoated aluminum where necessary for strength.

K. Roof Drainage System Installation: Install sheet metal roof drainage items to produce complete roof drainage system according to SMACNA recommendations and as indicated. Coordinate installation of roof perimeter flashing with installation of roof drainage system.

1. Parapet Scuppers: Install scuppers where indicated through parapet. Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.

L. Roof Flashing Installation: Install sheet metal roof flashing and trim to comply with performance requirements, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, set units true to line, and level as indicated. Install work with laps, joints, and seams that will be permanently watertight.

1. Counterflashing: Coordinate installation of counterflashing with installation of base flashing. Insert counterflashing in reglets or receivers and fit tightly to base flashing. Extend counterflashing 4 inches over base flashing. Lap counterflashing joints a minimum of 4 inches and bed with butyl sealant.
    a. Secure in a waterproof manner by means of anchor and washer at 36-inch centers.

2. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Install flashing as follows:
    a. Turn lead flashing down inside vent piping, being careful not to block vent piping with flashing.
    b. Seal with butyl sealant and clamp flashing to pipes penetrating roof except for lead flashing on vent piping.

M. Wall Flashing Installation: Install sheet metal wall flashing to intercept and exclude penetrating moisture according to SMACNA recommendations and as indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.

1. Through-Wall Flashing: Installation of through-wall flashing is specified in Division 04 Section "Unit Masonry."
2. Reglets: Installation of reglets is specified in Division 03 Section "Cast-in-Place Concrete." / 04 Section "Unit Masonry."
3. Openings Flashing in Frame Construction: Install continuous head, sill, jamb, and similar flashings to extend 4 inches beyond wall openings.

3.3 CLEANING AND PROTECTION

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
B. Clean and neutralize flux materials. Clean off excess solder and sealants.

C. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed. On completion of installation, clean finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain in a clean condition during construction.
D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 6200

SECTION 07 71 00 - MANUFACTURED ROOF SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Gravel stops.
2. Gutters and downspouts other than those specified as part of metal roof panel systems.
3. Manufactured reglets and counterflashing.

B. Related Sections include the following:

1. Division 05 Section "Metal Fabrications": Metal downspout boots.
2. Division 06 Section "Rough Carpentry": Wood plates and nailers.
3. Division 07 Section "Metal Roof Panels": Gutters and downspouts incidental to roof panel systems.
4. Division 07 Section "Joint Sealants": Requirements for field-applied joint sealants.

1.2 SUBMITTALS

A. Product Data: For each type of product specified. Include details of construction relative to materials, dimensions of individual components, profiles, and finishes.
B. Shop Drawings: Indicate layout, joining, profiles, accessories, anchorage, flashing connections, and relationship to supporting structure and to adjoining roof and wall construction.
C. Samples for Verification: Samples of actual products not less than 12 inches long showing factory-applied color finishes.

1.3 PERFORMANCE REQUIREMENTS

A. General: Provide manufactured roof specialties capable of withstanding wind loads, structural movement, thermally induced movement, and exposure to weather without failing.
B. Provide manufactured roofing specialties, incorporating roof edge treatment that complies with recommendations of FM Loss Prevention Data Sheet 1-49 for the following Wind Zone:

1. Wind Zone 1: Wind pressures of 21 to 30 lbf/sq. ft.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of manufactured roof specialty from one source and by a single manufacturer.

1.5 PROJECT CONDITIONS

A. Coordinate work of this Section with adjoining work for proper sequencing of each installation to ensure best-possible weather resistance and protection of materials and finishes against damage.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Formed-Aluminum Fascia and Gravel Stops:
    a. Architectural Products Co.
    b. ATAS International, Inc.
    c. W.P. Hickman Co.
    d. Metal-Era, Inc.
    e. MM Systems Corp.
    f. Southern Aluminum Finishing Co.

2. Formed-Aluminum Gutters and Downspouts:
    a. Architectural Products Co.
    b. ATAS International, Inc.
    c. W.P. Hickman Co.
    d. Southern Aluminum Finishing Co.

3. Reglets and Counterflashing:
    a. Cheney Flashing Company.
    b. Fry Reglet Corporation.
    c. Keystone Flashing Company.

2.2 METALS

A. Aluminum Extrusions: ASTM B 221, 6063-T5 alloy and temper, or as recommended by manufacturer for use intended and as required for proper application of finish indicated.
B. Aluminum Sheet: ASTM B 209, alloy and temper recommended by aluminum producer and finisher for use intended and finish indicated, and with not less than the strength and durability of alloy and temper designated below:

1. Alloy 3003-H14, with a minimum thickness of 0.050 inch, unless otherwise indicated, for aluminum sheet with mill finish.
2. Alloy 5005-H14, with a minimum thickness of 0.050 inch, for aluminum sheet with other than mill finish.

C. Galvanized Steel Sheets: ASTM A 653, G90 coating designation; commercial quality; at least 0.034 inch thick, unless otherwise indicated.
D. Coil-Coated Galvanized Steel Sheet: Galvanized steel sheet prepainted by coil-coating process with indicated coating complying with ASTM A 755.
E. Stainless-Steel Sheet: ASTM A 666, Type 304, soft annealed, with No. 2D finish, unless harder temper is required for forming or performance; at least 0.0187 inch thick, unless otherwise indicated.

2.3 FASCIA AND GRAVEL STOPS

A. Provide gravel stops and fascia assemblies in shapes and sizes indicated, with shop-mitered and -welded corners. Include water dams formed from at least 0.028-inch-thick, galvanized steel sheet; anchor plates; cleats or other attachment devices; concealed splice plates; and trim and other accessories indicated or required for complete installation, with no exposed fasteners.
B. Provide exposed gravel stop components fabricated from the following metal:

1. Formed-aluminum sheet in thickness indicated, but not less than 0.050 inch.

2.4 GUTTERS AND DOWNSPOUTS

A. Provide gutters and downspouts in shapes and sizes indicated, and with expansion joints in locations indicated.

1. Fabricate gutters and downspouts with mitered and welded corners. Do not use exposed rivets.
2. Include concealed brackets, hangers or other attachment devices; end plates; and trim and other accessories indicated or required for complete installation.
3. Valley Baffles: Provide sheet metal baffles, 6 inches high with 18 inch long legs, located at outside edge of gutter at bottom of roof valleys, to keep water from overshooting gutter during heavy rains.
4. Expansion Joints: Butt type, with concealed splice plates.
    a. Cover splice plates at interior of gutters with self adhesive EPDM tape, completely covering joint. Seal edges of tape with compatible sealer.

B. Additional Features: Provide items below fabricated from the same metal as gutters and downspouts.

1. Downspout starters (fascia sump) with downspout starter hole.
2. Flow-through gravel stop with perforated vertical leg.
3. Downspout elbows, preformed and welded, size and configuration to suit conditions.

C. Provide gutters and downspouts fabricated from formed-aluminum sheet not less than 0.050 inch thick.

2.5 REGLETS

A. General: Provide reglets of type, material, and profile indicated, compatible with flashing. Form to securely interlock with counterflashing.
B. Concrete Type: Provide temporary closure tape to keep reglet free of concrete materials; special fasteners for attaching reglet to concrete forms; and guides to ensure alignment of reglet section ends.
C. Masonry Type: Provide with offset top flange for embedment in masonry mortar joint.
D. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of the counterflashing's lower edge.
E. Material: Fabricate reglets from the following metal in thickness indicated:

1. Stainless-steel sheet, 0.0187 inch thick; for reglets and receivers in contact with concrete or masonry.
2. Aluminum sheet, 0.024 inch thick; for reglets not in contact with concrete or masonry.

2.6 COUNTERFLASHING

A. Provide counterflashing fabricated from the following metal in thickness indicated:

1. Stainless steel; 0.0187 inch thick.

2.7 ACCESSORIES

A. General: Provide manufacturer's standard accessories designed and manufactured to match and fit roof edge treatment system indicated.
B. Exposed Fasteners: Stainless steel, nonmagnetic, of manufacturer's standard type and size for product and application indicated. Match finish of exposed heads with material being fastened.
C. Concealed Fasteners: Same metal as item fastened or other noncorrosive metal as recommended by manufacturer.
D. Galvanizing Repair Paint: High-zinc-dust-content paint for regalvanizing welds in steel, complying with SSPC-Paint 20.
E. Asphalt Mastic: SSPC-Paint 12, solvent-type asphalt mastic, nominally free of sulfur and containing no asbestos fibers, compounded for 15-mil dry film thickness per coat.
F. Joint Sealant: Clear silicone sealant complying with Division 7 Section "Joint Sealants."
G. Mastic Sealant: Polyisobutylene; nonhardening, nonskinning, nondrying, nonmigrating sealant.
H. Adhesives: Type recommended by manufacturer for substrate and project conditions, and formulated to withstand minimum 60-lbf/sq. ft. wind-uplift force.

2.8 ALUMINUM FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations relative to applying and designating finishes.
B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.
C. Finish manufactured roof specialties after fabrication and assembly if products are not fabricated from prefinished metals.
D. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are unacceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
E. Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes.
F. High-Performance Organic Coating Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating or resin manufacturer's written instructions.

    1. Fluoropolymer 2-Coat Coating System: Manufacturer's standard 2-coat, thermocured system composed of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 1402, Test Method 7.
        a. Color and Gloss: As selected by Architect from manufacturer's full range of colors and glosses.

2.9 COIL-COATED GALVANIZED STEEL SHEET FINISHES

A. General: Apply high-performance fluoropolymer coating, complying with ASTM A 755 process, in thickness indicated, on galvanized steel sheet as recommended by coating manufacturer and applicator. Furnish appropriate air-drying spray finish in matching color for touchup.
B. Fluoropolymer 2-Coat Coating System: Manufacturer's standard 2-coat, thermocured system composed of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; with a total minimum dry film thickness of 0.9 mil and 30 percent reflective gloss when tested according to ASTM D 523.

    1. Durability: Provide coating field tested under normal range of weather conditions for a minimum of 20 years without significant peel, blister, flake, chip, crack, or check in finish; without chalking in excess of a chalk rating of 8 according to ASTM D 4214; and without fading in excess of 5 Hunter units.
    2. Color and Gloss: As selected by Architect from manufacturer's full range of colors and glosses.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine walls, roof edges, and parapets for suitable conditions for roof edge system installation. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Promptly remove protective film, if any, from exposed surfaces of finished metals. Strip with care to avoid damage to finish.
B. Prepare concrete, concrete masonry, and similar surfaces to receive roof edge system specified. Install blocking, cleats, water dams, and other anchoring and attachment accessories and devices required.

3.3 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Coordinate with installation of roof deck and other substrates to receive work of this Section and with vapor retarders, roofing insulation, roofing membrane, flashing, and wall construction, as required to ensure that each element of the Work performs properly and that combined elements are waterproof and weathertight. Anchor products securely to structural substrates to withstand lateral and thermal stresses and inward and outward loading pressures.
B. Isolation: Where metal surfaces of units contact dissimilar metal or corrosive substrates, including wood, apply bituminous coating on concealed metal surfaces or provide other permanent separation as recommended by aluminum producer.
C. Expansion Provisions: Install running lengths to allow controlled expansion for movement of metal components in relation to one another and to adjoining dissimilar materials, including flashing and roofing membrane materials, in a manner sufficient to prevent water leakage, deformation, or damage.

    1. Space movement joints at not more than 10 feet apart, with no joints located within 24 inches of corner or intersection. Provide expansion joints with concealed, self-draining splice plate.

D. Roof Edge Flashing Installation

    1. Install cleats, cants, and other anchoring and attachment accessories and devices with concealed fasteners.
    2. Anchor roof edgings with manufacturer's required devices, fasteners, and fastener spacing to meet performance requirements.

E. Gutters: Join sections with riveted and soldered or lapped and sealed joints. Attach gutters to eave with gutter hangers spaced not more than 4 feet o.c. using manufacturer's

standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.

F. Downspouts: Join sections with 1-1/2-inch telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch away from walls; locate fasteners at top and bottom and at approximately 60 inches o.c. in between.

1. Provide elbows at base of downspouts to direct water away from building, unless otherwise indicated.
2. Tie downspouts to underground drainage system where downspouts terminate at grade.

3.4 CLEANING AND PROTECTING

A. Clean exposed metal surfaces according to manufacturer's written instructions. Touch up damaged metal coatings.

B. Protection: Provide protective measures as required to ensure work of this Section will be without damage or deterioration at the time of Substantial Completion.

END OF SECTION 07 71 00

SECTION 07 84 13 - PENETRATION FIRESTOPPING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes through-penetration firestopping systems for all interruptions and penetrations through the following fire-resistance-rated assemblies, including both empty openings and openings containing penetrating items:

1. Walls and partitions.

B. This Section includes fire blocking for all interruptions and penetrations through non-fire-resistance-rated floor assemblies.

C. Related Sections include the following:

1. Division 07 Section "Fire-Resistive Joint Systems."
2. Division 22 and 23 Sections: Duct and piping penetrations.
3. Division 25-28 Sections: Cable and conduit penetrations.

1.2 PERFORMANCE REQUIREMENTS

A. General: Provide firestopping that is produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assembly penetrated.

B. F-Rated Systems: Provide firestopping with F-ratings indicated, as determined per ASTM E 814, but not less than that equaling or exceeding fire-resistance rating of constructions penetrated.

C. T-Rated Systems: For the following conditions, provide firestopping with T-ratings indicated, as well as F-ratings, as determined per ASTM E 814, where systems protect penetrating items exposed to potential contact with adjacent materials in occupiable floor areas:

1. Penetrations located outside wall cavities.
2. Penetrations located outside fire-resistive shaft aenclosures.
3. Penetrations located in construction containing fire-protection-rated openings.
4. Penetrating items larger than 4-inch-diameter nominal pipe or 16 sq. in. in overall cross-sectional area.

D. Fire Blocking: Fill penetrations in non-fire-resistance-rated floor construction with non-combustible material tested for resistance to passage of fire, smoke and heat, as acceptable to authorities having jurisdiction and complying with 2009 IBC, Section 717.1 et.al.

1. Provide fire blocking using systems rated for not less than 1 hour fire-resistance rating.

E. For firestopping exposed to view, traffic, moisture, and physical damage, provide products that after curing do not deteriorate when exposed to these conditions both during and after construction.

1. For piping penetrations for plumbing and wet-pipe sprinkler systems, provide moisture-resistant firestopping.
2. For floor penetrations with annular spaces exceeding 4 inches in width and exposed to possible loading and traffic, provide firestop systems capable of supporting floor loads involved either by installing floor plates or by other means.
3. For penetrations involving insulated piping, provide firestopping not requiring removal of insulation.

F. For firestopping exposed to view, provide products with flame-spread ratings of less than 25 and smoke-developed ratings of less than 450, as determined per ASTM E 84.

1.3 SUBMITTALS

A. Product Data: For each type of through-penetration firestop system product indicated.
B. Shop Drawings: For each through-penetration firestop system, show each kind of construction condition penetrated, relationships to adjoining construction, and kind of penetrating item. Include firestop design designation of testing and inspecting agency acceptable to authorities having jurisdiction that evidences compliance with requirements for each condition indicated.

1. Submit documentation, including illustrations, from a qualified testing and inspecting agency that is applicable to each through-penetration firestop system configuration for construction and penetrating items.
2. Engineering Judgement: Where Project conditions require modification of qualified testing and inspecting agency's illustration to suit a particular through-penetration firestop condition, submit illustration, with modifications marked, approved by through-penetration firestop system manufacturer's fire-protection engineer.

C. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.
D. Product Certificates: Signed by manufacturers of through-penetration firestop system products certifying that products furnished comply with requirements.
E. Product Test Reports: From a qualified testing agency indicating through-penetration firestop system complies with requirements, based on comprehensive testing of current products.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed firestopping similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Source Limitations: Obtain firestopping, for each kind of penetration and construction condition indicated, from a single manufacturer, and from the same manufacturer as for fire-resistive joint systems specified in Division 07 Section "Fire-Resistive Joint Systems."

1. Manufacturer selection is the responsibility of the Fire Protection Contractor as determined in the Summary of Work. Other Contractors shall comply with specified requirements using products of manufacturer selected.

C. Fire-Test-Response Characteristics: Provide firestopping that comply with the following requirements and those specified in "Performance Requirements" Article:

1. Firestopping tests are performed by a qualified testing and inspecting agency. A qualified testing and inspecting agency is UL, or another agency performing testing and follow-up inspection services for firestop systems acceptable to authorities having jurisdiction.
2. Firestopping systems are identical to those tested per ASTM E 814. Provide rated systems complying with the following requirements:
    a. Firestopping products bear classification marking of qualified testing and inspecting agency.
    b. Firestopping products correspond to those indicated by reference to through-penetration firestop system designations listed by UL in "Fire Resistance Directory."

D. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.

1.5 PRODUCT HANDLING

A. Deliver through-penetration firestop system products to Project site in original, unopened containers or packages with intact and legible manufacturers' labels identifying product and manufacturer; date of manufacture; lot number; shelf life, if applicable; qualified testing and inspecting agency's classification marking applicable to Project; curing time; and mixing instructions for multicomponent materials.
B. Store and handle materials for firestopping to prevent their deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

1.6 PROJECT CONDITIONS

A. Environmental Limitations: Do not install firestopping when ambient or substrate temperatures are outside limits permitted by through-penetration firestop system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.
B. Ventilate firestopping per manufacturer's written instructions by natural means or, where this is inadequate, forced-air circulation.

1.7 COORDINATION

A. Coordinate construction of openings and penetrating items to ensure that firestopping is installed according to specified requirements.
B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate firestopping.
C. Do not cover up through-penetration firestop system installations that will become concealed behind other construction until building inspector, if required by authorities having jurisdiction, have examined each installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. 3M Fire Protection Products.
2. Hilti, Inc.
3. Nelson Firestop Products.

2.2 FIRESTOPPING, GENERAL

A. Compatibility: Provide firestopping that is compatible with one another, with the substrates forming openings, and with the items, if any, penetrating firestopping, under conditions of service and application, as demonstrated by through-penetration firestop system manufacturer based on testing and field experience.
B. Accessories: Provide components for each through-penetration firestop system that are needed to install fill materials and to comply with "Performance Requirements" Article. Use only components specified by through-penetration firestop system manufacturer and approved by the qualified testing and inspecting agency for firestop systems indicated. Accessories include, but are not limited to, the following items:

1. Permanent forming/damming/backing materials, including the following:

a. Slag-/rock-wool-fiber insulation.
b. Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state.
c. Fire-rated form board.
d. Fillers for sealants.

2. Temporary forming materials.
3. Substrate primers.
4. Collars.
5. Steel sleeves.

2.3 FILL MATERIALS FOR FIRESTOPPING SYSTEMS

A. General: Provide firestopping containing the types of fill materials indicated in the Through-Penetration Firestop System Schedule at the end of Part 3 by reference to the types of materials described in this Article. Fill materials are those referred to in directories of the referenced testing and inspecting agencies as fill, void, or cavity materials.

B. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer metallic sleeve lined with an intumescent strip, a radial extended flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.

C. Latex Sealants: Single-component latex formulations that after cure do not re-emulsify during exposure to moisture.

D. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.

E. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced elastomeric sheet bonded to galvanized steel sheet.

F. Intumescent Putties: Nonhardening dielectric, water-resistant putties containing no solvents, inorganic fibers, or silicone compounds.

G. Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.

H. Mortars: Prepackaged, dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.

I. Pillows/Bags: Reusable, heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents and fire-retardant additives.

J. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

K. Silicone Sealants: Moisture-curing, single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below:

   1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces and nonsag formulation for openings in vertical and other surfaces requiring a nonslumping, gunnable sealant, unless indicated firestop system limits use to nonsag grade for both opening conditions.
   2. Grade for Horizontal Surfaces: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces.
   3. Grade for Vertical Surfaces: Nonsag formulation for openings in vertical and other surfaces.

2.4 MIXING

A. For those products requiring mixing before application, comply with through-penetration firestop system manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning: Clean out openings immediately before installing firestopping to comply with written recommendations of firestop system manufacturer and the following requirements:

1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of firestopping.
2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with firestopping. Remove loose particles remaining from cleaning operation.
3. Remove laitance and form-release agents from concrete.

B. Priming: Prime substrates where recommended in writing by through-penetration firestop system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.
C. Masking Tape: Use masking tape to prevent firestopping from contacting adjoining surfaces that will remain exposed on completion of Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from firestop system materials. Remove tape as soon as possible without disturbing firestop system's seal with substrates.

3.3 THROUGH-PENETRATION FIRESTOP SYSTEM INSTALLATION

A. General: Install firestopping to comply with "Performance Requirements" Article and firestop system manufacturer's written installation instructions and published drawings for products and applications indicated.
B. Install forming/damming/backing materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.

1. After installing fill materials, remove combustible forming materials and other accessories not indicated as permanent components of firestop systems.

C. Install fill materials for firestop systems by proven techniques to produce the following results:

1. Fill voids and cavities formed by openings, forming materials, accessories, and penetrating items as required to achieve fire-resistance ratings indicated.

2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
3. For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 CLEANING AND PROTECTION

A. Clean off excess fill materials adjacent to openings as Work progresses by methods and with cleaning materials that are approved in writing by through-penetration firestop system manufacturers and that do not damage materials in which openings occur.

B. Provide final protection and maintain conditions during and after installation that ensure firestopping is without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated firestopping immediately and install new materials to produce firestopping complying with specified requirements.

END OF SECTION 07 84 13

SECTION 07 92 00 - JOINT SEALANTS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes sealants for the following applications, including those specified by reference to this Section:

1. Exterior joints in the following vertical surfaces and horizontal nontraffic surfaces:

a. Construction joints in cast-in-place concrete.
b. Control and expansion joints in unit masonry.
c. Joints between different materials listed above.
d. Perimeter joints between materials listed above and frames of doors, and louvers.
e. Control joints in overhead surfaces.
f. Other joints as indicated.

2. Exterior joints in the following horizontal traffic surfaces:

a. Joints between different materials listed above.
b. Other joints as indicated.

B. Related Sections include the following:

1. Division 04 Section "Unit Masonry": Masonry control and expansion joint fillers and gaskets.
2. Division 07 Section "Metal Flashing and Trim": Sealing joints related to flashing and sheet metal; including sealant products for concealed joints in sheet metal assemblies.

1.2 PERFORMANCE REQUIREMENTS

A. Provide elastomeric joint sealants that establish and maintain watertight and airtight continuous joint seals without staining or deteriorating joint substrates.

1.3 SUBMITTALS

A. Product Data: For each joint-sealant product indicated.
B. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.
C. Samples for Verification: For each type and color of joint sealant required. Install joint sealants in 1/2-inch-wide joints formed between two 6-inch-long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

D. Product Certificates: Signed by manufacturers of joint sealants certifying that products furnished comply with requirements and are suitable for the use indicated.
E. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.
F. Preconstruction Field Test Reports: Indicate which sealants and joint preparation methods resulted in optimum adhesion to joint substrates based on preconstruction testing specified in "Quality Assurance" Article.
G. Compatibility and Adhesion Test Reports: From sealant manufacturer indicating the following:

1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
2. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.

H. Warranties: Special warranties specified in this Section.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has specialized in installing joint sealants similar in material, design, and extent to those indicated for this Project and whose work has resulted in joint-sealant installations with a record of successful in-service performance.
B. Source Limitations: Obtain each type of joint sealant through one source from a single manufacturer.
C. Preconstruction Compatibility and Adhesion Testing: Submit to joint sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.

1. Use manufacturers standard test methods to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
2. Submit not fewer than nine pieces of each type of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
3. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
4. For materials failing tests, obtain joint sealant manufacturer's written instructions for corrective measures, including the use of specially formulated primers.
5. Testing will not be required if joint sealant manufacturers submit joint preparation data that are based on previous testing of current sealant products for adhesion to, and compatibility with, joint substrates and other materials matching those submitted.

D. Preconstruction Field-Adhesion Testing: Before installing elastomeric sealants, field test their adhesion to joint substrates as follows:

1. Locate test joints where indicated or, if not indicated, as directed by Architect.
2. Conduct field tests for each type of sealant and joint substrate indicated.
3. Notify Architect seven days in advance of dates and times when test joints will be erected.
4. Arrange for tests to take place with joint sealant manufacturer's technical representative present.
5. Test Method: Test joint sealants by hand-pull method described below:
    a. Install joint sealants in 60-inch-long joints using same materials and methods for joint preparation and joint-sealant installation required for the completed Work. Allow sealants to cure fully before testing.
    b. Make knife cuts from one side of joint to the other, followed by two cuts approximately 2 inches long at sides of joint and meeting cross cut at one end. Place a mark 1 inch from cross-cut end of 2-inch piece.
    c. Use fingers to grasp 2-inch piece of sealant between cross-cut end and 1-inch mark; pull firmly at a 90-degree angle or more in direction of side cuts while holding a ruler along side of sealant. Pull sealant out of joint to the distance recommended by sealant manufacturer for testing adhesive capability, but not less than that equaling specified maximum movement capability in extension; hold this position for 10 seconds.
    d. For joints with dissimilar substrates, check adhesion to each substrate separately. Do this by extending cut along one side, checking adhesion to opposite side, and then repeating this procedure for opposite side.
6. Report whether sealant in joint connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each type of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.
7. Evaluation of Preconstruction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.5 PRODUCT HANDLING

A. Deliver materials to Project site in original unopened containers or bundles with labels indicating manufacturer, product name and designation, color, expiration date, pot life, curing time, and mixing instructions for multicomponent materials.
B. Store and handle materials in compliance with manufacturer's written instructions to prevent their deterioration or damage due to moisture, high or low temperatures, contaminants, or other causes.

1.6 PROJECT CONDITIONS

A. Environmental Limitations: Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint sealant manufacturer or are below 40 deg F.
2. When joint substrates are wet.

B. Joint-Width Conditions: Do not proceed with installation of joint sealants where joint widths are less than those allowed by joint sealant manufacturer for applications indicated.

C. Joint-Substrate Conditions: Do not proceed with installation of joint sealants until contaminants capable of interfering with adhesion are removed from joint substrates.

1.7 WARRANTY

A. General Warranty: Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Special Installer's Warranty: Written warranty, signed by Installer agreeing to repair or replace elastomeric joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.

C. Special warranties specified in this Article exclude deterioration or failure of elastomeric joint sealants from the following:

1. Movement of the structure resulting in stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression caused by structural settlement or errors attributable to design or construction.
2. Mechanical damage caused by individuals, tools, or other outside agents.

D. Provide material warranties for each type of sealant as follows:

1. Latex Sealants: 5 year material warranty.
2. Urethane Sealants: 10 year material warranty.
3. Silicone Sealants: 20 year material warranty.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products: Subject to compliance with requirements, provide one of the products indicated for each type in the sealant schedules at the end of this Section.

2.2 MATERIALS, GENERAL

A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
B. Colors of Exposed Joint Sealants: As selected by Architect from manufacturer's full range, unless otherwise indicated.

2.3 ELASTOMERIC JOINT SEALANTS

A. Elastomeric Sealant Standard: Comply with ASTM C 920 and other requirements indicated for each liquid-applied chemically curing sealant in the Elastomeric Joint-Sealant Schedule at the end of this Section, including those referencing ASTM C 920 classifications for type, grade, class, and uses.
B. Additional Movement Capability: Where additional movement capability is specified in the Elastomeric Joint-Sealant Schedule, provide products with the capability, when tested for adhesion and cohesion under maximum cyclic movement per ASTM C 719, to withstand the specified percentage change in the joint width existing at the time of installation and remain in compliance with other requirements of ASTM C 920 for uses indicated.
C. Suitability for Contact with Food: Where elastomeric sealants are indicated for joints that will come in repeated contact with food, provide products that comply with 21 CFR 177.2600.

2.4 LATEX JOINT SEALANTS

A. Latex Sealant Standard: Comply with ASTM C 834 for each product of this description indicated in the Latex Joint-Sealant Schedule at the end of this Section.

2.5 PREFORMED JOINT SEALANTS

A. Colored Preformed Foam Sealant: Provide manufacturer's standard preformed, precompressed, binary seal combining factory-applied cured silicone facing with expanding foam sealant backing; factory produced in precompressed sizes and in roll form to fit joint widths indicated and to develop a watertight and airtight seal when compressed to the degree specified by manufacturer; and complying with the following:

1. Properties: Permanently elastic, mildew resistant, nonmigratory, nonstaining, and compatible with joint substrates and other joint sealants.
2. Impregnating Agent: Chemically stabilized acrylic.
3. Density: 8.4 to 9.1 lb/cu. ft.
4. Backing: Pressure-sensitive adhesive, factory applied to one side with protective wrapping.
5. Movement Capability: Plus 25 percent and minus 25 percent, 50 percent total movement.

6. Colors: As selected by Architect from manufacturer's full range, including Standard and Special colors, to match colors of materials adjacent to joints.

2.6 JOINT-SEALANT BACKING

A. General: Provide sealant backings of material and type that are nonstaining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
B. Cylindrical Sealant Backings: ASTM C 1330, of type indicated below and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance:

1. Type C: Closed-cell material with a surface skin.

C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint where such adhesion would result in sealant failure. Provide self-adhesive tape where applicable.

2.7 MISCELLANEOUS MATERIALS

A. Primer: Material recommended by joint sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.
B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants with joint substrates.
C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint sealant manufacturer's written instructions and the following requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
2. Clean porous joint substrate surfaces by brushing, grinding, blast cleaning, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining from above cleaning operations by vacuuming or blowing out joints with oil-free compressed air. Porous joint surfaces include the following:
    a. Concrete.
    b. Masonry.
3. Remove laitance and form-release agents from concrete.
4. Clean nonporous surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants.
    a. Metal.

B. Joint Priming: Prime joint substrates where recommended in writing by joint sealant manufacturer, based on preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

C. Masking Tape: Use masking tape where required to prevent contact of sealant with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF JOINT SEALANTS

A. General: Comply with joint sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.

B. Sealant Installation Standard: Comply with recommendations of ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.

C. Install sealant backings of type indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

1. Do not leave gaps between ends of sealant backings.
2. Do not stretch, twist, puncture, or tear sealant backings.

3. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.

D. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and back of joints.
E. Install sealants by proven techniques to comply with the following and at the same time backings are installed:

1. Place sealants so they directly contact and fully wet joint substrates.
2. Completely fill recesses provided for each joint configuration.
3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

F. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.

1. Remove excess sealants from surfaces adjacent to joint.
2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
3. Provide concave joint configuration per Figure 5A in ASTM C 1193, unless otherwise indicated.

G. Installation of Preformed Foam Sealants: Install each length of sealant immediately after removing protective wrapping, taking care not to pull or stretch material, to produce seal continuity at ends, turns, and intersections of joints. For applications at low ambient temperatures where expansion of sealant requires acceleration to produce seal, apply heat to sealant to comply with sealant manufacturer's written instructions.

3.4 CLEANING AND PROTECTION

A. Clean off excess sealants or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.
B. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from the original work.

3.5 JOINT SEALANT SCHEDULE

A. Single-Component, Neutral-Curing Silicone Sealant:

1. Products: Provide one of the following:

a. GE Silicones; SilPruf SCS2000 or LM SCS2700.
b. Pecora Corporation; 864.
c. Polymeric Systems Inc.; PSI-641.
d. Tremco; Spectrem 3.

2. Type and Grade: S (single component) and NS (nonsag).
3. Class: 50
4. Use Related to Exposure: NT (nontraffic).
5. Uses Related to Joint Substrates: M, G, A, and, as applicable to joint substrates indicated, O.
6. Applications: Exterior non-traffic building joints in metal trim and drainage systems.

B. Mildew-Resistant Silicone Sealant:

1. Products: Provide one of the following:

a. Dow Corning; 786 Mildew Resistant.
b. GE Silicones; Sanitary SCS1700.
c. NUCO Industries, Inc.; NuFlex 302.
d. Pecora Corporation; 898.
e. Tremco; Tremsil 600 White.

2. Type and Grade: S (single component) and NS (nonsag).
3. Class: 50
4. Formulation: Formulated with fungicide.
5. Use Related to Exposure: NT (nontraffic).
6. Uses Related to Joint Substrates: M, G, A, and, as applicable to joint substrates indicated, O.
7. Applications: Perimeter joints of plumbing fixtures, counters and backsplashes; and perimeter joints in ceramic tile.

C. Multicomponent Nonsag Urethane Sealant:

1. Products: Provide one of the following:

a. BASF; MasterSeal NP 2.
b. Pecora Corporation; Dynatrol II.
c. Tremco; Dymeric 240/240FC.
d. Tremco; Vulkem 922.
e. Sika Corporation, Inc.; Sikaflex - 2c NS TG.

2. Type and Grade: M (multicomponent) and NS (nonsag).
3. Class: Not less than 25.
4. Use Related to Exposure: NT (nontraffic).
5. Uses Related to Joint Substrates: M, G, A, and, as applicable to joint substrates indicated, O.
6. Applications: Exterior joints in non-traffic surfaces not indicated for another type of joint sealant.

END OF SECTION 07 9200

SECTION 07 95 00 - EXPANSION CONTROL

PART 1 - GENERAL

1.1 SUMMARY

A. Types of joints for which architectural joint systems are specified include the following:

1. Interior pedestrian traffic joints.
2. Interior wall joints.
3. Interior ceiling joints.
4. Interior soffit joints.
5. Exterior wall joints.

B. Related Sections include the following:

1. Division 03 Section "Cast-in-Place Concrete": Block-outs and cast-in anchorage and frames for architectural joint systems in concrete floors.
2. Division 07 "Roofing" Sections: Roof expansion joint systems.
3. Division 07 Section "Metal Flashing and Trim": Custom fabricated sheet metal expansion joint systems.
4. Division 07 Section "Joint Sealants": Elastomeric sealants and preformed compressed-foam sealants without metal frames.
5. Division 09 Sections: Walls, partitions, and floor finishes with expansion joints.

1.2 SUBMITTALS

A. Product Data: Include manufacturer's product specifications, construction details, material and finish descriptions, and dimensions of individual components and seals.
B. Shop Drawings: Provide placement drawings for each joint system specified.

1. Include line diagrams showing entire route of each joint system, plans, elevations, sections, details, joints, splices, locations of joints and splices, and attachments to other Work.
2. Where joint systems change planes, provide Isometric Drawings depicting how components interconnect to achieve continuity of joint covers and fillers.

C. Samples for Verification: Full-size units 6 inches long of each type of joint system indicated; in sets for each finish, color, texture, and pattern specified, showing the full range of variations expected in these characteristics.

1.3 QUALITY ASSURANCE

A. Source Limitations: Obtain architectural joint systems through one source from a single manufacturer. Coordinate compatibility with adjoining joint systems specified in other Sections.
B. Fire-Test-Response Characteristics: Where indicated, provide joint systems incorporating fire barriers that are identical to those of assemblies tested for fire resistance per

ASTM E 119 and either ASTM E 814 or UL 2079, including hose-stream test of vertical wall assemblies, by a testing and inspecting agency acceptable to authorities having jurisdiction.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products: Subject to compliance with requirements, provide one of the products indicated.

2.2 MATERIALS

A. Aluminum: ASTM B 221, alloy 6063-T5 for extrusions; ASTM B 209, alloy 6061-T6 for sheet and plate.

1. Apply manufacturer's standard protective coating on aluminum surfaces to be placed in contact with cementitious materials.

B. Preformed Seals: Single or multicellular extruded elastomeric seals designed with or without continuous, longitudinal, internal baffles. Formed to be installed in frames or with anchored flanges, in color indicated or, if not indicated, as selected by Architect from manufacturer's standard colors.

C. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist the passage of flame and hot gases through a movement joint.

1. Fire Barrier Products: Joint system manufacturer's standard or optional products that will maintain the fire rating of the fire-resistive construction in which the joint system is located.

D. Accessories: Manufacturer's standard anchors, clips, fasteners, set screws, spacers, flexible moisture barrier and filler materials, drain tubes, lubricants, adhesives, and other accessories compatible with material in contact, as indicated or required for complete installations.

2.3 ARCHITECTURAL JOINT SYSTEMS

A. General: Provide joint systems of design, basic profile, materials, and operation indicated. Provide units with the capability to accommodate joint widths indicated and variations in adjacent surfaces.

1. Furnish units in longest practicable lengths to minimize number of end joints. Provide hairline mitered corners where joint changes directions or abuts other materials.
2. Include closure materials and transition pieces, tee-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous joint systems.

B. Floor-to-Floor and Floor to CMU/GWB Wall Joints: Metal frames and preformed seals for interior pedestrian traffic joints.

1. Products: Subject to compliance with requirements, provide one of the following:
   a. Model GFT-200 X 2" and GFTW-200 X2”; Conspec Systems Inc., C/S Group.
2. Nominal Joint Width: 2 inches.
3. Movement Capability: 25 percent.
4. Type of Movement Capability: Expansion and contraction.
5. Cyclic-Movement-Test-Response Characteristics: No evidence of visual fatigue, inability to cycle between designated joint widths, or other types of failure as determined by testing products identical to those indicated per ASTM E 1399 including Appendix X3.
6. Preformed Seal Material: Manufacturer's standard thermoplastic gasket.
   a. Seal Color: Selected by Architect.
7. Exposed Frame Material: Aluminum.
8. Moisture Barrier: Provide manufacturer's standard unit.
9. Fire-Resistance Ratings: Provide manufacturer's standard fire barrier with a rating not less than that of adjacent construction.

C. Gypsum Board Wall-to-Wall In-plane and Corner Joints: Metal frames and preformed seals for interior in-plane gypsum board joints.

1. Products: Subject to compliance with requirements, provide one of the following:
   a. Model FWF-200 and Thinline Corner Wall Cover, Model FWFC-200; Conspec Systems Inc., C/S Group.
2. Nominal Joint Width: 2 inches.
3. Movement Capability: 25 percent.
4. Type of Movement Capability: Expansion and contraction.
5. Cyclic-Movement-Test-Response Characteristics: No evidence of visual fatigue, inability to cycle between designated joint widths, or other types of failure as determined by testing products identical to those indicated per ASTM E 1399 including Appendix X3.
6. Exposed Frame Material: Aluminum.
7. Fire-Resistance Ratings: Provide manufacturer's standard fire barrier with a rating not less than that of adjacent construction.

D. Masonry Wall-to-Wall In-plane and Corner Joints: Metal frames and preformed seals for interior masonry wall joints.

1. Products: Subject to compliance with requirements, provide one of the following:
   a. Thinline Wall Cover, Model FWF-200 and Thinline Corner Wall Cover, Model FWFC-200 (with frame modified to suit condition); Conspec Systems Inc., C/S Group.
   b. FSWNE-200 (with frame modified to suit condition); MM Systems Corp.
2. Nominal Joint Width: 2 inches.
3. Movement Capability: 25 percent.
4. Type of Movement Capability: Expansion and contraction.

5. Cyclic-Movement-Test-Response Characteristics: No evidence of visual fatigue, inability to cycle between designated joint widths, or other types of failure as determined by testing products identical to those indicated per ASTM E 1399 including Appendix X3.
6. Exposed Frame Material: Aluminum.
7. Fire-Resistance Ratings: Provide manufacturer's standard fire barrier with a rating not less than that of adjacent construction.

E. Gypsum Board Ceiling Joints: Metal frames and preformed seals for interior in-plane gypsum board joints.

1. Basis-of-Design Product: Ribbed Seal Ceiling Cover, Model FCS-200; Conspec Systems Inc., C/S Group. Subject to compliance with requirements, provide the named product or comparable product by the following:

   a. FSW-200, MM Systems Corp.

2. Nominal Joint Width: 2 inches.
3. Movement Capability: 25 percent.
4. Type of Movement Capability: Expansion and contraction.
5. Cyclic-Movement-Test-Response Characteristics: No evidence of visual fatigue, inability to cycle between designated joint widths, or other types of failure as determined by testing products identical to those indicated per ASTM E 1399 including Appendix X3.
6. Exposed Frame Material: Aluminum.
7. Fire-Resistance Ratings: Provide manufacturer's standard fire barrier with a rating not less than that of adjacent construction.

F. Gypsum Board Ceiling Corner Joints: Metal frames and preformed seals for interior gypsum board ceiling corner joints.

1. Basis-of-Design Product: Ribbed Seal Ceiling to Wall Cover, Model FCSC-200; Conspec Systems Inc., C/S Group. Subject to compliance with requirements, provide the named product or comparable product by the following:

   a. FSWL-200, MM Systems Corp.

2. Nominal Joint Width: 2 inches.
3. Movement Capability: 25 percent.
4. Type of Movement Capability: Expansion and contraction.
5. Cyclic-Movement-Test-Response Characteristics: No evidence of visual fatigue, inability to cycle between designated joint widths, or other types of failure as determined by testing products identical to those indicated per ASTM E 1399 including Appendix X3.
6. Exposed Frame Material: Aluminum.
7. Fire-Resistance Ratings: Provide manufacturer's standard fire barrier with a rating not less than that of adjacent construction.

G. Suspended Acoustical Panel In-plane Ceiling Joints and Wall/Ceiling Joints: Preformed flexible seals for interior joints in acoustical panel ceilings, designed for use with ceiling suspension system grid members.

1. Products: Subject to compliance with requirements, provide one of the following:
    a. HC-200 and HCW; Conspec Systems Inc., C/S Group.
    b. DX-200; MM Systems Corp.
2. Nominal Joint Width: 2 inches.
3. Movement Capability: 25 percent.
4. Type of Movement Capability: Expansion and contraction.
5. Cyclic-Movement-Test-Response Characteristics: No evidence of visual fatigue, inability to cycle between designated joint widths, or other types of failure as determined by testing products identical to those indicated per ASTM E 1399 including Appendix X3.
6. Preformed Seal Material: Manufacturer's standard PVC.
    a. Seal Color: Manufacturer's standard white.

H. Exterior Wall Joints: Elastomeric compression seals for exterior wall joints.

1. Products: Subject to compliance with requirements, provide one of the following:
    a. WABO Compression Seals, WE Series, Model WE-300; Watson Bowman Acme.
    b. CSS-200; Conspec Systems Inc., C/S Group.
    c. MAF-200; MM Systems Corp.
2. Nominal Joint Width: 2 inches.
3. Type of Movement Capability: Expansion and contraction.
4. Cyclic-Movement-Test-Response Characteristics: No evidence of visual fatigue, inability to cycle between designated joint widths, or other types of failure as determined by testing products identical to those indicated per ASTM E 1399 including Appendix X3.
5. Elastomeric Membrane Seal Material: Santoprene.
    a. Seal Color: [As selected by Architect from manufacturer's full range.] [Custom colors to match materials adjacent to joints, as approved by Architect.]

2.4 ALUMINUM FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
B. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
C. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 607.1.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare substrates according to architectural joint system manufacturer's written instructions.

B. Coordinate and furnish anchorages, Placement Drawings, and instructions for installing joint systems to be embedded in or anchored to concrete or to have recesses formed into edges of concrete slab for later placement and grouting-in of frames.
C. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary to secure joint systems to in-place construction, including threaded fasteners with drilled-in expansion shields for masonry and concrete where anchoring members are not embedded in concrete. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of joint systems.

3.2 INSTALLATION

A. Comply with manufacturer's written instructions for handling and installing architectural joint assemblies and materials, unless more stringent requirements are indicated.
B. Coordinate installation of architectural joint assembly materials and associated work so complete assemblies comply with assembly performance requirements.
C. Terminate exposed ends of exterior architectural joint assemblies with factory-fabricated termination devices to maintain waterproof system.
D. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required to install joint systems.

1. Install joint cover assemblies in true alignment and proper relationship to joints and adjoining finished surfaces measured from established lines and levels.
2. Allow adequate free movement for thermal expansion and contraction of metal to avoid buckling.
3. Set covers in horizontal surfaces at elevations that place exposed surfaces flush with adjoining finishes.
4. Locate wall, ceiling and soffit covers in continuous contact with adjacent surfaces.
5. Securely attach in place with required accessories.
6. Locate anchors at interval recommended by manufacturer, but not less than 3 inches from each end and not more than 24 inches o.c.

E. Continuity: Maintain continuity of joint systems with a minimum number of end joints and align metal members. Cut and fit ends to produce joints that will accommodate thermal expansion and contraction of metal to avoid buckling of frames. Adhere flexible filler materials, if any, to frames with adhesive or pressure-sensitive tape as recommended by manufacturer.
F. Extruded Preformed Seals: Install seals to comply with manufacturer's written instructions and with minimum number of end joints.

1. For straight sections, provide preformed seals in continuous lengths.
2. For turns, follow manufacturer's instructions for preparing preformed seals for upturns and downturns, to maintain continuity and uniformity of seal section throughout turns.
3. Vulcanize or heat-weld field splice joints in preformed seal material to provide watertight joints using procedures recommended by manufacturer.
4. Apply adhesive, epoxy, or lubricant adhesive approved by manufacturer to both frame interfaces before installing preformed seals.
5. Seal transitions according to manufacturer's written instructions.
6. Install foam seals with adhesive recommended by manufacturer and heat seal all splices.

G. Joint Systems with Seals: Seal end joints within continuous runs and joints at transitions according to manufacturer's written instructions to provide a watertight installation.
H. Fire Barriers: Install fire barriers to provide continuous, uninterrupted fire resistance throughout length of joint, including transitions and end joints.

3.3 CLEANING AND PROTECTION

A. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's written instructions.

END OF SECTION 07 9500

SECTION 08 11 13 - HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Hollow metal doors.
2. Hollow metal door frames.

B. Related Sections include the following:

1. Division 04 Section "Unit Masonry": Installing anchors and grouting frames in masonry construction.
2. Division 08 Section "Door Hardware": Door hardware and weather stripping.
3. Division 09 Section "Painting and Coating": Field painting factory-primed doors and frames.

1.2 DEFINITIONS

A. Steel Sheet Thicknesses: Thickness dimensions, including those referenced in ANSI A250.8, are minimums as defined in referenced ASTM standards for both uncoated steel sheet and the uncoated base metal of metallic-coated steel sheets.

1.3 SUBMITTALS

A. Product Data: For each type of door and frame indicated, include door designation, type, level and model, material description, core description, construction details, label compliance, sound and fire-resistance ratings, and finishes.

B. Shop Drawings: Show the following:

1. Elevations of each door design.
2. Details of doors including vertical and horizontal edge details.
3. Frame details for each frame type including dimensioned profiles.
4. Details and locations of reinforcement and preparations for hardware.
5. Details of each different wall opening condition.
6. Details of anchorages, accessories, joints, and connections.

C. Door Schedule: Use same reference designations indicated on Drawings in preparing schedule for doors and frames.

1.4 QUALITY ASSURANCE

A. Hollow Metal Door and Frame Standard: Comply with ANSI A 250.8, unless more stringent requirements are indicated.

1.5 PRODUCT HANDLING

A. Deliver doors and frames cardboard-wrapped or crated to provide protection during transit and job storage.
B. Inspect doors and frames on delivery for damage, and notify shipper and supplier if damage is found. Minor damages may be repaired provided refinished items match new work and are acceptable to Architect. Remove and replace damaged items that cannot be repaired as directed.
C. Store doors and frames at building site under cover. Place units on minimum 4-inch-high wood blocking. Avoid using nonvented plastic or canvas shelters that could create a humidity chamber. If door packaging becomes wet, remove cartons immediately. Provide minimum 1/4-inch spaces between stacked doors to permit air circulation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. CECO Door Products (C).
2. Curries Company (CU).
3. Steelcraft (S).

2.2 MATERIALS

A. Hot-Rolled Steel Sheets: ASTM A 569/A 569M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.
C. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.
D. Frame Anchors: ASTM A 653/A 653M, Commercial Steel (CS), Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.

2.3 HOLLOW METAL DOORS

A. General: Provide doors of sizes, thicknesses, and designs indicated.
B. Exterior Doors: Provide doors complying with requirements indicated below by referencing ANSI A250.8 for level and model and ANSI A250.4 for physical-endurance level:

1. Level 3 and Physical Performance Level A (Extra Heavy Duty), Model 2 (Seamless).
2. Level 3 and Physical Performance Level A (Extra Heavy Duty).
    a. Model 2 (Seamless) unless otherwise indicated.
    b. Model 3 (Stile and Rail) where indicated.

3. Door Face Thickness: 0.053 inch (16 gage).

2.4 HOLLOW METAL FRAMES

A. General: Provide steel frames for doors and other openings that comply with ANSI A250.8 and with details indicated for type and profile. Conceal fastenings, unless otherwise indicated.
B. Frames of 0.067-inch-thick (14 gage) steel sheet for:

1. Door openings wider than 48 inches.
2. Exterior doors.

C. Supports and Anchors: Fabricated from not less than 0.042-inch-thick, electrolytic zinc-coated or metallic-coated steel sheet.
D. Inserts, Bolts, and Fasteners: Manufacturer's standard units. Where zinc-coated items are to be built into exterior walls, comply with ASTM A 153/A 153M, Class C or D as applicable.

2.5 FABRICATION

A. General: Fabricate hollow metal door and frame units to comply with ANSI A250.8 and to be rigid, neat in appearance, and free from defects including warp and buckle. Where practical, fit and assemble units in manufacturer's plant. Clearly identify work that cannot be permanently factory assembled before shipment, to assure proper assembly at Project site.
B. Exterior Door Construction: For exterior locations and elsewhere as indicated, fabricate doors, panels, and frames from metallic-coated steel sheet. Close top and bottom edges of doors flush as an integral part of door construction or by addition of 0.053-inch-thick, metallic-coated steel channels with channel webs placed even with top and bottom edges.
C. Core Construction: One of the following manufacturer's standard core materials that produce a door complying with SDI standards:

1. Resin-impregnated kraft/paper honeycomb.
2. Vertical steel stiffeners.
3. Rigid mineral-fiber board.

D. Clearances for Non-Fire-Rated Doors: Not more than 1/8 inch at jambs and heads, except not more than 1/4 inch between pairs of doors. Not more than 3/4 inch at bottom.
E. Tolerances: Comply with SDI 117, "Manufacturing Tolerances for Standard Steel Doors and Frames."
F. Fabricate concealed stiffeners, reinforcement, edge channels, louvers, and moldings from either cold- or hot-rolled steel sheet.
G. Exposed Fasteners: Unless otherwise indicated, provide countersunk flat or oval heads for exposed screws and bolts.
H. Thermal-Rated (Insulating) Assemblies: At exterior locations and elsewhere as shown or scheduled, provide doors fabricated as thermal-insulating door and frame assemblies and tested according to ASTM C 236 or ASTM C 976 on fully operable door assemblies.

1. Unless otherwise indicated, provide thermal-rated assemblies with U-value of 0.41 Btu/sq. ft. x h x deg F or better.

I. Hardware Preparation: Prepare doors and frames to receive mortised and concealed hardware according to final door hardware schedule and templates provided by hardware supplier. Comply with applicable requirements in ANSI A250.6 and ANSI A115 Series specifications for door and frame preparation for hardware.

J. Frame Construction: Fabricate frames to shape shown.

1. Fabricate frames with mitered or coped and continuously welded corners and seamless face joints unless otherwise indicated.
2. Fabricate knock-down, drywall slip-on frames for in-place gypsum board partitions.
3. Provide welded frames with temporary spreader bars.

K. Reinforce doors and frames to receive surface-applied hardware. Drilling and tapping for surface-applied hardware may be done at Project site.

L. Locate hardware as indicated on Shop Drawings or, if not indicated, according to ANSI A250.8.

2.6 FINISHES

A. Prime Finish: Manufacturer's standard, factory-applied coat of rust-inhibiting primer complying with ANSI A250.10 for acceptance criteria.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. General Contractor to verify the accuracy of dimensions given to the steel door and frame manufacturer for existing openings or existing frames (strike height, hinge spacing, hinge back set, etc.).

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove welded in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.

B. Prior to installation, adjust and securely brace welded hollow metal frames for square, level, twist, and plumb condition.

C. Tolerances shall comply with SDI-117 "Manufacturing Tolerances Standard Steel Doors and Frames."

D. Drill and tap doors and frames to receive non-template, mortised, and surface-mounted door hardware.

3.3 INSTALLATION

A. General: Install hollow metal work plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.

B. Hollow Metal Frames: Install hollow metal frames of size and profile indicated. Comply with ANSI/SDI A250.11 and NFPA 80 at fire rated openings.

1. Set frames accurately in position, plumbed, leveled, aligned, and braced securely until permanent anchors are set. After wall construction is complete and frames properly set and secured, remove temporary braces, leaving surfaces smooth and undamaged. Shim as necessary to comply with installation tolerances.
2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with post-installed expansion anchors.
3. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with mortar.
4. Grout Requirements: Do not grout head of frames unless reinforcing has been installed in head of frame. Do not grout vertical or horizontal closed mullion members.

C. Hollow Metal Doors: Fit hollow metal doors accurately in frames, within clearances specified below. Shim as necessary.

1. Non-Fire-Rated Standard Steel Doors:

    a. Jambs and Head: 1/8 inch plus or minus 1/16 inch.
    b. Between Edges of Pairs of Doors: 1/8 inch plus or minus 1/16 inch.
    c. Between Bottom of Door and Top of Threshold: Maximum 3/8 inch.
    d. Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum 3/4 inch.

3.4 ADJUSTING AND CLEANING

A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including hollow metal work that is warped, bowed, or otherwise unacceptable.

B. Remove grout and other bonding material from hollow metal work immediately after installation.

C. Prime-Coat and Painted Finish Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat, or painted finishes, and apply touchup of compatible air drying, rust-inhibitive primer, zinc rich primer (exterior and galvanized openings) or finish paint.

END OF SECTION 08 11 13

SECTION 08 14 16 – FLUSH WOOD DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Solid-core doors with wood-veneer faces with transparent finish.
2. Factory finishing flush wood doors with transparent finish.
3. Factory fitting flush wood doors to frames and factory machining for hardware.

B. This Section includes requirements that wood products are obtained from forests certified by an FSC-accredited certification body.

C. Related Sections:

1. Division 08 Section "Hollow Metal Doors and Frames": Hollow metal frames for wood doors.
2. Division 08 Section "Door Hardware": Hardware for wood doors.
3. Division 08 Section "Glazing": Glass view panels in flush wood doors.

1.2 SUBMITTALS

A. Product Data: For each type of door indicated. Include details of core and edge construction and trim for openings. Include factory-finishing specifications.

B. Shop Drawings: Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data; location and extent of hardware blocking; and other pertinent data.

1. Indicate dimensions and locations of mortises and holes for hardware.
2. Indicate dimensions and locations of cutouts.
3. Indicate requirements for veneer matching.
4. Indicate doors to be factory finished and finish requirements.
5. Indicate fire ratings for fire doors.
6. Indicate configurations and layouts of factory-applied moldings

C. Samples for Initial Selection: Color charts consisting of actual materials in small sections for the following:

1. Faces of Factory-Finished Doors: Show the full range of colors available for stained finishes.

D. Samples for Verification:

1. Corner sections of doors, approximately 8 by 10 inches, with door faces and edgings representing typical range of color and grain for each species of veneer and solid lumber required. Finish sample with same materials proposed for factory-finished doors.
2. Frames for light openings, 6 inches long, for each material, type, and finish required.

E. Certificates of Chain-of-Custody: Signed by door manufacturers certifying that wood products were obtained from forests certified by an FSC-accredited certification body to comply with FSC 1.2, "Principles and Criteria." Include evidence that door manufacturer is certified for chain-of-custody by an FSC-accredited certification body.
F. Warranty: Special warranty specified in this Section.

1.3 QUALITY ASSURANCE

A. Source Limitations: Obtain flush wood doors through one source from a single manufacturer.
B. Quality Standard: Comply with AWI's "Architectural Woodwork Quality Standards Illustrated."
C. Forest Certification: Provide doors made from wood products obtained from forests certified by an FSC-accredited certification body to comply with FSC 1.2, "Principles and Criteria."
D. Fire-Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 252 or UL 10C.

1. Test Pressure: Test at positive pressure.
    a. Except for 20 minutes doors, after 5 minutes into the test, the neutral pressure level in furnace shall be established at 40 inches or less above the sill.
    b. For 20 minutes corridor doors, comply with NFPA 252 or UL 10C without the hose stream test.

2. Smoke Doors: Where smoke doors are indicated, comply with the following in addition to requirements for fire-rated doors:
    a. UL 1784, with test conducted according to International Building Code, Section 715.3.3.

3. Testing Agency Certification Labels: Provide labels for fire doors, and "S" labels for smoke doors.
4. Temperature-Rise Rating: At exit enclosures in buildings without approved fire suppression systems, provide doors that have a temperature-rise rating of 450 deg F maximum in 30 minutes of fire exposure.

E. Fire Door Inspection: Provide one additional door leaf of typical size and with typical hardware preparation for fire-rated wood doors used for the project, for destructive testing to verify that internal blocking complies with requirements.

1. One fire-rated door will be selected at random by Architect. Remove face veneer as directed by Architect for inspection of internal construction.
2. If Architect determines that door construction does not comply with requirements, continue testing doors as designated by Architect until compliance can be verified.

1.4 PRODUCT HANDLING

A. Comply with requirements of referenced standard and manufacturer's written instructions.
B. Package doors individually in plastic bags or cardboard cartons.
C. Mark each door on top and bottom rail with opening number used on Shop Drawings.

1.5 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install doors until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature and relative humidity at occupancy levels during the remainder of the construction period.

1.6 WARRANTY

A. Special Warranty: Manufacturer's standard form, signed by manufacturer, Installer, and Contractor, in which manufacturer agrees to repair or replace doors that are defective in materials or workmanship, have warped (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section, or show telegraphing of core construction in face veneers exceeding 0.01 inch in a 3-inch span.

1. Warranty shall be in effect during the following period of time from date of Substantial Completion:

a. Solid-Core Interior Doors: Life of installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Algoma Hardwoods, Inc.
2. Eggers Industries.
3. Graham Manufacturing, Corp.
4. Marshfield Door Systems, Inc..
5. Weyerhauser Architectural Doors.

2.2 DOOR CONSTRUCTION, GENERAL

A. Doors for Transparent Finish:

1. Grade: AWI Premium, with Grade AA faces.
2. Species and Cut: Select white birch, plain sliced.
3. Match between Veneer Leaves: Book / Slip match.
4. Assembly of Veneer Leaves on Door Faces: Balance match.
5. Pair and Set Match: Provide for doors hung in same opening or separated only by mullions.
6. Stiles: Applied wood-veneer edges of same species as faces and covering edges of faces.

2.3 SOLID-CORE DOORS

A. Structural Composite Lumber Cores: Comply with the following requirements:

1. Structural Composite Lumber: WDMA I.S. 10

a. Screw withdrawal Face: 700 lbf.
b. Screw withdrawal Edge: 400 lbf.

B. Interior Veneer-Faced Doors:

1. Core: Structural Composite Lumber.
2. Construction: Five or seven plies with stiles and rails bonded to core, then entire unit abrasive planed before veneering. Veneer shall be hot-pressed to core assembly.

C. Fire-Rated Doors:

1. Construction: Construction and core specified above for type of face indicated or manufacturer's standard mineral-core construction as needed to provide fire rating indicated.
2. Blocking: For mineral-core doors, provide composite blocking with improved screw-holding capability approved for use in doors of fire ratings indicated as needed to eliminate through-bolting hardware.
3. Edge Construction: At hinge stiles, provide manufacturer's standard laminated-edge construction with improved screw-holding capability of not less than 1,000 lbs. and split resistance not less than 690 lbs. and with outer stile matching face veneer.

a. Provide rails of solid lumber or other material to comply with manufacturer's fire door approvals.
b. Provide edges with Type A concealed intumescent seals in locations where positive-pressure fire testing is indicated or required.

4. Pairs: Provide fire-rated pairs with fire-retardant stiles matching face veneer that are labeled and listed for kinds of applications indicated without formed-steel edges and astragals.

a. Provide stiles with concealed intumescent seals in locations where positive-pressure fire testing is indicated or required.

5. Applied Moldings: UL Listed, solid lumber moldings matching species and cut specified for door faces; installed on both sides of door faces in the factory before doors are finished.

a. Profile: Algoma Hardwoods No. A-3; 1-1/4 by 9/16 inch.

2.4 LIGHT FRAMES

A. Wood Beads for Rectangular Light Openings in Wood Doors:

1. Wood Species: Same species as door faces.
2. Profile: Flush rectangular beads.
3. At 20-minute, fire-rated, wood-core doors, provide wood beads and metal glazing clips approved for such use.

B. Metal Frames for Light Openings in Fire Doors: Manufacturer's standard frame formed of 0.0478-inch-thick, cold-rolled steel sheet; factory primed and approved for use in doors of fire rating indicated.

2.5 FABRICATION

A. Factory Fitted Doors: Factory fit doors to suit frame-opening sizes indicated, with the following uniform clearances and bevels, unless otherwise indicated:

1. Comply with clearance requirements of referenced quality standard for fitting. Comply with requirements in NFPA 80 for fire-rated doors.

B. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with DHI-WDHS-3. Comply with final hardware schedules, door frame Shop Drawings, DHI A115-W series standards, and hardware templates.

1. Coordinate measurements of hardware mortises in metal frames to verify dimensions and alignment before factory machining.

C. Openings: Cut and trim openings through doors to comply with applicable requirements of referenced standards for kind(s) of door(s) required.

1. Light Openings: Trim openings with moldings of material and profile indicated.
2. Louvers: Factory install louvers in prepared openings.

2.6 FACTORY FINISHING

A. General: Comply with referenced quality standard for factory finishing.
B. Finish doors at factory.
C. Transparent Finish:

1. Grade: Premium.

2. Finish: Manufacturer's standard finish with performance comparable to AWI System TR-4 conversion varnish.
3. Staining: As selected by Architect from manufacturer's full range.
4. Sheen: Satin.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine doors and installed door frames before hanging doors.

1. Verify that frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
2. Reject doors with defects.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Hardware: For installation, see Division 08 Section "Door Hardware."
B. Manufacturer's Written Instructions: Install doors to comply with manufacturer's written instructions, referenced quality standard, and as indicated.

1. Install fire-rated doors in corresponding fire-rated frames according to NFPA 80.

C. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.
D. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.3 ADJUSTING

A. Operation: Rehang or replace doors that do not swing or operate freely.
B. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION 08 14 16

SECTION 08 33 23 - OVERHEAD COILING DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following types of overhead coiling doors:

1. Interior, manually-operated counter doors with galvanized steel / stainless steel / aluminum curtain.

B. Stainless steel counters and jamb liners for counter doors are included in this Section.
C. Related Sections include the following:

1. Division 05 Section "Formed Metal Fabrications": Stainless steel counters.
2. Division 05 Section "Formed Metal Counters": Counters located at counter doors.
3. Division 08 Section "Overhead Coiling Grilles."
4. Division 08 Section "Door Hardware": Lock cylinders and keying.
5. Division 26 Sections: Electrical service, disconnect switches, circuit breakers and connections for powered operators.

1.2 DEFINITIONS

A. Operation Cycle: One complete cycle of a door begins with the door in the closed position. The door is then moved to the open position and back to the closed position.

1.3 PERFORMANCE REQUIREMENTS

A. Operation-Cycle Requirements: Design overhead coiling door components and operator to operate for not less than 20,000 cycles.

1. Design auto-set fire door for 50,000 cycles.
2. Include tamperproof cycle counter concealed by hood.

1.4 SUBMITTALS

A. Product Data: For each type and size of overhead coiling door and accessory. Include details of construction relative to materials, dimensions of individual components, profiles, and finishes. Provide roughing-in diagrams, operating instructions, and maintenance information. Include the following:

1. Setting drawings, templates, and installation instructions for built-in or embedded anchor devices.
2. Summary of forces and loads on walls and jambs.
3. Fire-Rated Doors: Information describing fire-release system, including testing and resetting instructions.

4. Motors: Show nameplate data and ratings; characteristics; mounting arrangements; size and location of winding termination lugs, conduit entry, and grounding lug; and coatings.

B. Shop Drawings: For special components and installations not dimensioned or detailed in manufacturer's data sheets.

1. Wiring Diagrams: Detail wiring for power, signal, and control systems. Differentiate between manufacturer-installed and field-installed wiring and between components provided by door manufacturer and those provided by others.

C. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors available for units with factory-applied finishes.
D. Samples for Verification: Of each type of exposed finish required.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced installer who is an authorized representative of the overhead coiling door manufacturer for both installation and maintenance of units required for this Project.
B. Source Limitations: Obtain overhead coiling doors through one source from a single manufacturer.

1. Provide all types of overhead coiling doors and grilles for the Project produced by the same manufacturer.

C. Listing and Labeling: Provide electrically operated fixtures specified in this Section that are listed and labeled.

1. The Terms "Listed" and "Labeled": As defined in NFPA 70, Article 100.

D. SMACNA Standard: Fabricate fabrications to comply with the Sheet Metal and Air Conditioning Contractors National Association's (SMACNA) "Kitchen Equipment Fabrication Guidelines," unless otherwise indicated.
E. NSF Standards: Comply with applicable NSF International (NSF) standards and criteria for fabrications located in food services areas.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Products: Subject to compliance with requirements, provide the following for applications indicated:

1. Interior Counter Door: Cornell Iron Works Inc.; Model No. ESC-10

B. Comparable Manufacturers: Subject to compliance with requirements, provide the named products or comparable products by one of the following:

1. Atlas Door Corp.; Div. of Clopay Building Products Co.
2. Cornell Iron Works Inc.
3. Overhead Door Corporation.
4. Raynor Garage Doors

2.2 DOOR CURTAIN MATERIALS AND CONSTRUCTION

A. Door Curtain: Fabricate overhead coiling door curtain of interlocking slats, designed to withstand wind loading indicated, in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of material thickness recommended by door manufacturer for performance, size, and type of door indicated, and as follows:

1. Steel Door Curtain Slats: Structural-quality, cold-rolled galvanized steel sheets complying with ASTM A 653, with G90 zinc coating.
2. Provide manufacturer's standard flat-profile slats; with outer face formed from metal not less than 0.0329 inch thick (20 gage), and inside face formed from metal not less than 0.0269 inch thick (22 gage).

B. Endlocks for Counter Doors: Manufacturer's standard locks on not less than alternate curtain slats for curtain alignment and resistance against lateral movement.

C. Bottom Bar for Counter Doors: Manufacturer's standard continuous channel or tubular shape, either stainless-steel or aluminum extrusions to suit type of curtain slats.

1. Astragal: Provide a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene, between angles or fitted to shape, as a cushion bumper for interior door.

D. Curtain Jamb Guides for Counter Doors: Fabricate curtain jamb guides of angles, or channels and angles of material and finish to match curtain slats, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Provide continuous integral wear strips to prevent metal-to-metal contact and minimize noise of travel and removable stops on guides to prevent overtravel of curtain.

2.3 HOODS AND ACCESSORIES

A. Hood: Form to entirely enclose coiled curtain and operating mechanism at opening head and act as weatherseal. Contour to suit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Provide closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting projecting beyond wall face. Provide intermediate support brackets as required to prevent sag.

1. Fabricate steel hoods, for steel doors, of not less than 0.028-inch thick, hot-dip galvanized steel sheet with G90 zinc coating, complying with ASTM A 653.
   a. Finish: Match door curtain.

2. Include automatic drop baffle to guard against passage of smoke or flame for fire-rated assemblies.

B. Push/Pull Handles: Provide galvanized steel lifting handles on each side of door.
C. Fabricate locking device assembly with lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bar to engage through slots in tracks.

1. Locking Bars: Full-disc Cremone type, both jamb sides, operable from inside and outside.
2. Provide manufacturer's standard lock cylinder, and deliver two keys to Owner.

D. Provide automatic-closing device inoperative during normal door operations, with governor unit complying with requirements of NFPA 80, with easily tested and reset release mechanism, and designed to be activated by the following:

1. Governor: Oscillating type or viscous-speed type, as standard with manufacturer.
2. Building fire alarm and detection system and door-holder-release devices.

2.4 COUNTERS AND JAMB LINERS

A. Stainless-Steel Sheet and Plate: ASTM A 666, Type 304, stretcher leveled.
B. Sealant for Counters in Food Preparation Areas: ASTM C 920; Type S, Grade NS, Class 25, Use NT; NSF certified and meeting requirements of FDA 21 CFR, Section 177.2600 for use in areas that come in contact with food.

1. Color: As selected by Architect from manufacturer's full range of colors.
2. Backer Rod: Closed-cell polyethylene, in diameter larger than joint width.

C. Fabricate stainless steel counters according to NSF 2 requirements. Factory assemble as single units to greatest extent possible.

1. For metal butt joints, comply with referenced SMACNA standard, unless otherwise indicated.
2. Sheared Metal Edges: Finish free of burrs, fins, and irregular projections.
3. Provide surfaces in food zone, as defined in NSF 2, free from exposed fasteners.
4. Edges and Backsplashes: Provide counter edges and backsplashes indicated complying with referenced SMACNA standard.
5. Counters: Fabricate with reinforced tops to comply with referenced SMACNA standard, using stainless steel minimum 0.0781-inch-thick.

2.5 COUNTERBALANCING MECHANISM

A. General: Counterbalance doors by means of adjustable-tension steel helical torsion spring, mounted around a steel shaft and contained in a spring barrel connected to door curtain with required barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.
B. Counterbalance Barrel: Fabricate spring barrel of hot-formed, structural-quality, welded or seamless carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft. of span under full load.
C. Provide spring balance of one or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment

accessible from outside barrel. Provide cast-steel barrel plugs to secure ends of springs to barrel and shaft.

D. Fabricate torsion rod for counterbalance shaft of cold-rolled steel, sized to hold fixed spring ends and carry torsional load.
E. Brackets: Provide mounting brackets of manufacturer's standard design, either cast-iron or cold-rolled steel plate with bell-mouth guide groove for curtain.

2.6 STEEL AND GALVANIZED STEEL FINISHES

A. Powder-Coat-Applied Finish: Apply manufacturer's standard powder-coat-applied finish consisting of primer and topcoat(s) according to coating manufacturer's written instructions for cleaning, pretreatment, application, thermosetting, and minimum dry film thickness.

1. Color and Gloss: As selected by Architect from manufacturer's full range.
2. Applications: Apply powder-coat finish to exterior coiling door assemblies.

2.7 MANUAL DOOR OPERATORS

A. Push-up Operation for Counter Doors: Design counterbalance mechanism so required lift or pull for door operation does not exceed 25 lbf.

2.8 DOOR ASSEMBLY

A. Counter Door: Overhead coiling door formed with curtain of interlocking metal slats.
B. Door Curtain Material: Galvanized steel.
C. Door Curtain Slats: Flat profile slats of 1-1/4-inch (32-mm) center-to-center height.
D. Curtain Jamb Guides: Galvanized steel with exposed finish matching curtain slats. Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise.
E. Hood: Match curtain material and finish.

1. Shape: Square.
2. Mounting: Face of wall.

a. Integral Frame, Hood, and Fascia for Counter Door: Galvanized steel.

F. Sill Configuration for Counter Door: Integral metal sill at cafeteria (no sill at ticket booth or snack bar.
G. Locking Devices: Equip door with locking device assembly.

1. Locking Device Assembly: Cremone type, both jamb sides locking bars, operable from inside and outside with cylinders.
2. Provide manufacturer's standard lock cylinder, and deliver two keys to Owner.

H. Manual Door Operator: Push-up operation.
I. Door Finish: Powder-Coated Finish: Color as indicated by manufacturer's

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install door and operating equipment complete with necessary hardware, jamb and head mold strips, anchors, inserts, hangers, and equipment supports according to Shop Drawings, manufacturer's written instructions, and as specified.
B. Counters: Install counters and jamb liners level and plumb, according to fabricator's instructions and referenced standards.

1. Complete equipment field assembly, where required, using methods indicated.

a. Provide closed butt and contact joints that do not require a filler.
b. Grind field welds on stainless-steel counters smooth, and polish to match adjacent finish.

2. Securely anchor and attach counters and jamb liners to walls or bases with stainless-steel fasteners, unless otherwise indicated.
3. Install sealant in joints between fabrications and abutting surfaces with continuous joint backing, unless otherwise indicated. Provide airtight, watertight, vermin-proof, sanitary joints.

3.2 ADJUSTING

A. Lubricate bearings and sliding parts; adjust doors to operate easily, free from warp, twist, or distortion and fitting weathertight for entire perimeter.
B. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
C. Test door closing when activated by detector or alarm connected fire-release system. Reset door-closing mechanism after successful test.

3.3 DEMONSTRATION

A. Startup Services: Engage a factory-authorized service representative to perform startup services and to train Owner's maintenance personnel as specified below:

1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

a. Test door closing when activated by detector or alarm connected fire-release system. Reset door-closing mechanism after successful test.

2. Train Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, preventive maintenance, and procedures for testing and resetting release devices.
3. Review data in the maintenance manuals.
4. Schedule training with Owner with at least 7 days advance notice.

END OF SECTION 08 33 23

SECTION 08 33 26 - OVERHEAD COILING GRILLES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes motor-operated overhead coiling grilles.
B. Related Sections include the following:

1. Division 8 Section "Overhead Coiling Doors."
2. Division 8 Section "Overhead Coiling Grilles - Egress."
3. Division 8 Section "Door Hardware": Lock cylinders and keying.

1.2 DEFINITIONS

A. Operation Cycle: One complete cycle of a grille begins with the grille in the closed position. The grille is then moved to the open position and back to the closed position.

1.3 PERFORMANCE REQUIREMENTS

A. Operation-Cycle Requirements: Design overhead coiling grille components and operator to operate maximum of 25 cycles per day and for not less than 50,000 cycles for the life of the grille.

1.4 SUBMITTALS

A. Product Data: For each type and size of overhead coiling grille and accessory. Include details of construction relative to materials, dimensions of individual components, profiles, and finishes. Provide roughing-in diagrams, operating instructions, and maintenance information. Include the following:

1. Setting drawings, templates, and installation instructions for built-in or embedded anchor devices.
2. Summary of forces and loads on walls and jambs.
3. Motors: Show nameplate data and ratings; characteristics; mounting arrangements; size and location of winding termination lugs, conduit entry, and grounding lug; and coatings.

B. Shop Drawings: For special components and installations not dimensioned or detailed in manufacturer's data sheets.

1. Wiring Diagrams: Detail wiring for power, signal, and control systems. Differentiate between manufacturer-installed and field-installed wiring and between components provided by grille manufacturer and those provided by others.

C. Samples for Verification: Of each type of exposed finish required.
D. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced installer who is an authorized representative of the overhead coiling grille manufacturer for both installation and maintenance of units required for this Project.

B. Source Limitations: Obtain overhead coiling grilles through one source from a single manufacturer.

1. Obtain operators and controls from the overhead coiling grille manufacturer.
2. Provide all types of overhead coiling doors and grilles for the Project produced by the same manufacturer.

C. Listing and Labeling: Provide electrically operated fixtures specified in this Section that are listed and labeled.

1. The Terms "Listed" and "Labeled": As defined in NFPA 70, Article 100.
2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" as defined in OSHA Regulation 1910.7.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Cornell Iron Works, Inc.; Model 5015Subject to compliance with requirements, provide the named product or comparable product by one of the following:

1. Atlas Door Corp.; Div. of Clopay Building Products Co.
2. Overhead Door Corporation.
3. Raynor Garage Doors

2.2 GRILLE CURTAIN MATERIALS AND CONSTRUCTION

A. General: Fabricate overhead coiling grille curtain consisting of a network of 5/16-inch-minimum diameter horizontal rods, or rods covered with tube spacers, spaced as indicated. Interconnect rods by vertical links approximately 5/8 inch wide, spaced as indicated and rotating on rods.

1. Link Spacing: Approximately 9 inches apart.
2. Aluminum Grilles: ASTM B 221, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated. Equip grilles with felt stripping to separate guide and curtain.

B. Bottom Bar: Manufacturer's standard continuous channel, tubular shape, or 2 angles, finished to match grille.

1. Astragal: Provide a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene, between angles or fitted to shape, as a cushion bumper for interior grille.
2. Provide motor-operated grilles with combination bottom astragal and sensor edge.

C. Curtain Jamb Guides: Manufacturer's standard extruded-aluminum shape having curtain groove with return lips or bars to retain curtain. Provide continuous integral wear strips to prevent metal-to-metal contact and minimize noise of travel. Provide removable stops on guides to prevent overtravel of curtain.

2.3 HOODS AND ACCESSORIES

A. Hood: Form to entirely enclose coiled curtain and operating mechanism at opening head. Contour to suit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Provide closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting projecting beyond wall face. Provide intermediate support brackets as required to prevent sag.

1. Provide removable metal soffit when hood is mounted above ceiling of same material and finish of curtain, unless otherwise indicated.

B. Where grille unit is power operated, provide safety interlock switch to disengage power supply when grille is locked.
C. Mounting Tube Frame: Provide manufacturer's standard mounting tube frame designed to support grille; factory fabricated from structural-steel tubes; fastened to floor and structure above grille; to be built into wall construction; and complete with anchors, connections, and fasteners.

2.4 COUNTERBALANCING MECHANISM

A. General: Counterbalance grille by means of adjustable-tension steel helical torsion spring, mounted around a steel shaft and contained in a spring barrel connected to the curtain. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.
B. Counterbalance Barrel: Fabricate spring barrel of hot-formed, structural-quality, welded or seamless carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of curtain and to limit barrel deflection to not more than 0.03 in./ft. of span under full load.
C. Provide spring balance of one or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Provide cast-steel barrel plugs to secure ends of springs to barrel and shaft.
D. Fabricate torsion rod for counterbalance shaft of case-hardened steel, sized to hold fixed spring ends and carry torsional load.
E. Brackets: Provide mounting brackets of manufacturer's standard design, either cast-iron or cold-rolled steel plate.

2.5 ALUMINUM FINISHES

A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
C. Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes.
D. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 607.1.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install grilles and operating equipment complete with necessary hardware, according to Shop Drawings, manufacturer's written instructions, and as specified.

3.2 ADJUSTING

A. Lubricate bearings and sliding parts; adjust grilles to operate easily, free from warp, twist, or distortion and fitting tight for entire perimeter.

3.3 DEMONSTRATION

A. Startup Services: Engage a factory-authorized service representative to perform startup services and to train Owner's maintenance personnel as specified below.

1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
2. Train Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, preventive maintenance, and procedures for testing and resetting release devices.
3. Review data in the maintenance manuals. Refer to Division 1 Section "Contract Closeout."
4. Schedule training with Owner with at least 7 days advance notice.

END OF SECTION 08 33 26

SECTION 08 33 26.13 - OVERHEAD COILING GRILLES - EGRESS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Electrically operated access-controlled egress rolling grilles that provide alarm and fail-safe automatic opening emergency response and automatic locking capabilities.
B. Related Sections:

1. Division 05 Section “Metal Fabrications” for miscellaneous steel supports.
2. Division 08 Section “Door Hardware Sets”: Lock cylinders and keying.
3. Division 08 Section “Overhead Coiling Doors”.
4. Division 08 Section “Overhead Coiling Grilles”.
5. Division 26. Electrical wiring and conduit, fuses, disconnect switches, connection of operator to power supply, and installation of control station and wiring.

C. Products Furnished, But Not Installed Under This Section:

1. Control station.
2. IBC and ICC/ANSI A117 compliant Emergency Exit Push-Button Station and Signage.
3. Local Horn/Strobe Alarm for Emergency Exit Push-Button Station.

1.2 DEFINITIONS

A. Operation Cycle: One complete cycle of a grille begins with the grille in the closed position. The grille is then moved to the open position and back to the closed position.

1.3 PERFORMANCE REQUIREMENTS

A. Operation Cycle Requirements: Design overhead coiling grille components and operator to operate for not less than 20,000 cycles.

1.4 SUBMITTALS

A. Product Data: For each type and size of overhead coiling grille and accessory.

1. Include construction details, material descriptions, dimensions of individual components, profiles for curtain components, and finishes.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.

B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.

1. Include plans, elevations, sections, and mounting details.

2. Include details of equipment assemblies. Indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
4. Show locations of controls, locking devices, and other accessories.
5. Wiring Diagrams: Detail wiring for power, signal and control systems. Differentiate between manufacturer-installed and field-installed wiring and between components provided by grille manufacturer and those provided by others.

C. Samples for Verification: For each type of exposed finish required.

D. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.

E. Maintenance Data: For overhead coiling grilles to include in maintenance manuals.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer for both installation and maintenance of units required for this Project.
B. Source Limitations: Obtain overhead grilles through one source from a single manufacturer.

1. Obtain operators and controls from the overhead coiling grille manufacturer.
2. Provide all types of overhead coiling doors and grilles for the Project produced by the same manufacturer.

C. Listing and Labeling: Provide electrically operated fixtures specified in this Section that are listed and labeled.

1. The Terms “Listed” and “Labeled”: As defined in NFPA 70, Article 100.
2. Listing and Labeling Agency Qualifications: A “Nationally Recognized Testing Laboratory” as defined in OSHA Regulation 1910.7.

1.6 DELIVERY STORAGE AND HANDLING

A. Follow manufacturer's written instructions.

1.7 WARRANTY

A. Standard Warranty: Two years from date of shipment against defects in material and workmanship.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Basis-of-Design Product: Cornell Iron Works, Inc.; Model ERG-IBC.
B. Comparable Products: Subject to compliance with requirements, provide the basis-of-design product indicated or comparable product by one of the following:

1. Atlas Door Corp.; Div. of Clopay Building Products Co.
2. Overhead Door Corporation.
3. Wayne-Dalton Corp.
4. Raynor Garage Doors

C. GRILLE SCHEDULE

1. EG-01, EG-02, EG-03, EG-04

2.2 MATERIALS AND CONSTRUCTION

A. General: Fabricate overhead coiling grille curtain consisting of a network of 5/16-inch minimum diameter horizontal rods, or rods covered with tube spacers, spaced as indicated. Interconnect rods by vertical links approximately 5/8-inch wide, spaced as indicated and rotating on rods.

1. Horizontal Rods: Rod Spacing: Approximately 2 inches o.c.
2. Vertical Chains: Link Spacing: Approximately 9 inches apart.
3. Bottom Bar: Aluminum Grilles: ASTM B221, allow and temper recommended by aluminum producer and finisher for type of use and finish indicated. Equip grilles with felt stripping to separate guide and curtain.
4. Finish:
   a. Aluminum Curtain and Bottom Bar:
5. Curtain: Clear anodized.

B. Guides, Tube Mounted: Manufacturer’s standard heavy-duty extruded aluminum shape having curtain groove with return lips or bars to retain curtain. Provide continuous integral wear strips to prevent metal-to-metal contact and minimize noise of travel. Provide removable stops on guides to prevent overtravel of curtain.

1. Provide recessed steel tube and mounting angles as required for mounting configuration indicated on Drawings.
   a. Finish: Powder coat to match guide finish.

C. End Locks: Continuous end links, chains or other devices at ends of rods, locking and retaining grille curtain in guides against excessive pressures, maintaining curtain alignment, and preventing lateral movement.
D. Bottom Bar: Manufacturer’s standard continuous channel, tubular shape, or two angles, finished to match grille.

1. Astragal: Provide a replaceable, adjustable, continuous compressible gasket of flexible vinyl, rubber or neoprene, between angles or fitted to shape, as a cushion bumper for interior grille.
2. Provide motor-operated grilles with combination bottom astragal and sensor edge.

2.3 HOODS AND ACCESSORIES

A. Provide removable metal soffit when hood is mounted above ceiling of same material and finish of curtain, unless otherwise indicated.
B. Concealed Self Locking Mechanism: Provide manual lifting jamb lock assemblies that will prevent forced opening of a closed grille. Lock mechanism shall not interfere with normal electric operation, fail-safe or emergency response self opening features.

1. Basis-of-Design Product: Cornell Iron Works, Inc., AutoLock.
2. Lock cylinder is specified in Division 8 Section "Door Hardware Sets."
3. Where grille unit is power operated, provide safety interlock switch to disengage power supply when grille is locked.

C. Mounting Tube Frame: Provide manufacturer's standard mounting tube frame designed to support grille; factory fabricated from structural-steel tubes; fastened to floor and structure above grille; to be built into wall construction; and complete with anchors, connections, and fasteners.

2.4 COUNTERBALANCING MECHANISM

A. General: Counterbalance grille by means of adjustable-tension steel helical torsion spring, mounted around a steel shaft and contained in a spring barrel connected to the curtain. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.
B. Counterbalance Barrel: Fabricate spring barrel of hot-formed, structural-quality, welded or seamless carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of curtain and to limit barrel deflection to not more than 0.03 in./ft. of span under full load.
C. Provide spring balance of one or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Provide cast-steel barrel plugs to secure ends of springs to barrel and shaft.
D. Fabricate torsion rod for counterbalance shaft of case-hardened steel, sized to hold fixed spring ends and carry torsional load.
E. Brackets: Provide mounting brackets of manufacturer's standard design, either cast-iron or cold-rolled steel plate.

1. Finish: Manufacturer’s standard polyester powder coat.
    a. Colors: As selected by Architect from manufacturer’s full range.

2.5 ALUMINUM FINISHES

A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
C. Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes.
D. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 607.1.

2.6 ELECTRIC GRILLE OPERATORS

A. General: Provide electric grille operator assembly of size and capacity recommended and provided by grille manufacturer for grille and operational life specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking grille, and accessories required for proper operation.
B. Emergency Egress: Provide emergency egress operator system compliant with applicable codes, with self-locking mechanism that automatically unlocks, automatically releases, and opens grille fully to permit passage upon activation by central smoke/fire alarm system, emergency exit push-button station or if power is not available.
C. Comply with NFPA 70.
D. Disconnect Device: Provide hand-operated disconnect or mechanism for automatically engaging sprocket-chain operator and releasing brake for emergency manual operation while disconnecting motor, without affecting timing of limit switch. Mount disconnect and operator so they are accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
E. Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency auxiliary operator.
F. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V, ac or dc.
G. Grille-Operator Type: Provide wall-, hood-, or bracket-mounted, jackshaft grille operator unit consisting of electric motor, enclosed worm-gear running-in-oil primary drive, chain and sprocket secondary drive, and quick disconnect-release for manual operation.
H. Electric Motors: Provide high-starting torque, reversible, continuous-duty, Class A insulated, electric motors, complying with NEMA MG 1, with overload protection, sized to start, accelerate, and operate grille in either direction, from any position, at not less than 2/3 fps and not more than 1 fps, without exceeding nameplate ratings or considering service factor.

    1. Type: Polyphase, medium-induction type.
    2. Service Factor: According to NEMA MG 1, unless otherwise indicated.
    3. Coordinate wiring requirements and electric characteristics of motors with building electrical system.
    4. Provide open dripproof-type motor, and controller with NEMA ICS 6, Type 1 enclosure.
    5. Provide totally enclosed, nonventilated or fan-cooled motors, fitted with plugged drain, and controller with NEMA ICS 6, Type 4 enclosure where indicated.

6. Provide enclosure cover for motors mounted exposed below the ceiling.

I. Remote-Control Station: Provide momentary-contact, keyed, three-position control station with labeled "Open," "Close," and "Stop" positions.

1. Provide interior units, full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
2. Lock cylinder is specified in Division 8 Section "Door Hardware."

J. Obstruction Detection Device: Provide each motorized grille with indicated external automatic safety sensor able to protect full width of grille opening. Activation of sensor immediately stops and reverses downward grille travel. UL 325-2010 compliant Entrapment for Motor Operation.

1. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in grille opening without contact between grille and obstruction.
2. Sensor Edge: Provide each motorized grille with an automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor immediately stops and reverses downward grille travel. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.

a. Provide pneumatically actuated automatic bottom bar.

K. Limit Switches: Provide adjustable switches, interlocked with motor controls and set to automatically stop grille at fully opened and fully closed positions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates upon which work will be installed and verify conditions are in accordance with approved shop drawings.
B. Coordinate with responsible entity to perform corrective work on unsatisfactory substrates.
C. Commencement of work by installer is acceptance of substrate.

3.2 INSTALLATION

A. General: Install grille and operating equipment with necessary hardware, anchors, inserts, hangers and supports.
B. Follow manufacturer's installation instructions.

3.3 ADJUSTING

A. Following completion of installation, including related work by others, lubricate, test, and adjust grilles for ease of operation, free from warp, twist, or distortion.

3.4 FIELD QUALITY CONTROL

A. Site Test: Test grilles for normal operation and the emergency opening feature by means of alarm, power failure and emergency exit push-button station at door opening. Coordinate with Authority Having Jurisdiction to witness test.

3.5 CLEANING

A. Clean surfaces soiled by work as recommended by manufacturer.
B. Remove surplus materials and debris from the site.

3.6 DEMONSTRATION

A. Startup Services: Engage a factory-authorized service representative to perform startup services and to train Owner's maintenance personnel as specified below.

1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
2. Train Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, preventive maintenance, and procedures for testing and resetting release devices.
3. Review data in the maintenance manuals.
4. Schedule training with Owner with at least 7 days advance notice.

END OF SECTION 08 33 26.13

SECTION 08 41 13 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Exterior aluminum stile and rail glazed entrance doors.
2. Vestibule doors and other interior doors matching entrance doors.
3. Frames for entrances.
4. Storefront-type framing system for exterior glazed openings, including the following:
    a. Fixed glass.
5. Storefront-type framing system for interior applications.

B. Related sections include the following:

1. Division 07 Section "Joint Sealants": Joint sealants installed as part of storefront systems.
2. Division 08 Section "Flush Wood Doors": Interior wood doors in storefront framing.
3. Division 08 Section "Door Hardware": Lock cylinders for entrances and other hardware not specified in this Section.
4. Division 08 Section "Glazing": Glass and glazing for storefront systems.

1.2 SYSTEM DESCRIPTION

A. General: Provide aluminum-framed storefront systems capable of withstanding loads and thermal and structural movement requirements indicated without failure, based on testing manufacturer's standard units in assemblies similar to those indicated for this Project. Failure includes the following:

1. Air infiltration and water penetration exceeding specified limits.
2. Framing members transferring stresses, including those caused by thermal and structural movement, to glazing units.

B. Glazing: Physically and thermally isolate glazing from framing members.

C. Thermally Broken Construction: Provide systems that isolate aluminum exposed to exterior from aluminum exposed to interior with a material of low thermal conductance.

D. Wind Loads: Provide aluminum-framed storefront systems, including anchorage, capable of withstanding wind-load design pressures calculated according to requirements of authorities having jurisdiction or the American Society of Civil Engineers' ASCE 7, "Minimum Design Loads for Buildings and Other Structures," 6.4.2, "Analytical Procedure," whichever are more stringent. Determine wind loads by calculations based on load criteria indicated on Drawings.

1. Deflection of framing members in a direction normal to wall plane is limited to 1/175 of clear span or 3/4 inch, whichever is smaller, unless otherwise indicated.
2. Static-Pressure Test Performance: Provide aluminum-framed storefront systems that do not evidence material failures, structural distress, failure of operating components to function normally, or permanent deformation of main framing members exceeding 0.2 percent of clear span when tested according to ASTM E 330.
    a. Test Pressure: 150 percent of inward and outward wind-load design pressures.
    b. Duration: As required by design wind velocity; fastest 1 mile of wind for relevant exposure category.

E. Dead Loads: Provide aluminum-framed storefront system members that do not deflect an amount which will reduce glazing bite below 75 percent of design dimension when carrying full dead load.

1. Provide a minimum 1/8-inch clearance between members and top of glazing or other fixed part immediately below.
2. Provide a minimum 1/16-inch clearance between members and operable windows and doors.

F. Live Loads: Provide aluminum-framed storefront systems, including anchorage, that accommodate the supporting structures' deflection from uniformly distributed and concentrated live loads indicated without failure of materials or permanent deformation.

G. Air Infiltration: Provide aluminum-framed storefront systems with permanent resistance to air leakage through fixed glazing and frame areas of not more than 0.06 cfm/sq. ft. of fixed wall area when tested according to ASTM E 283 at a static-air-pressure difference of 1.57 lbf/sq. ft.

H. Water Penetration: Provide aluminum-framed storefront systems that do not evidence water leakage through fixed glazing and frame areas when tested according to ASTM E 331 at minimum differential pressure of 20 percent of inward-acting wind-load design pressure as defined by ASCE 7, "Minimum Design Loads for Buildings and Other Structures," but not less than 6.24 lbf/sq. ft. Water leakage is defined as follows:

1. Uncontrolled water infiltrating systems or appearing on systems' normally exposed interior surfaces from sources other than condensation. Water controlled by flashing and gutters that is drained back to the exterior and cannot damage adjacent materials or finishes is not water leakage.

I. Thermal Movements: Provide aluminum-framed storefront systems, including anchorage, that accommodate thermal movements of systems and supporting elements resulting from the following maximum change (range) in ambient and surface temperatures without buckling, damaging stresses on glazing, failure of joint sealants, damaging loads on fasteners, failure of doors or other operating units to function properly, and other detrimental effects.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

J. Structural-Support Movement: Provide aluminum-framed storefront systems that accommodate structural movements including, but not limited to, sway and deflection.
K. Condensation Resistance: Provide storefront systems with condensation resistance factor (CRF) of not less than 45 when tested according to AAMA 1503.1.
L. Average Thermal Conductance: Provide storefront systems with average U-values of not more than 0.63 Btu/sq. ft. x h x deg F when tested according to AAMA 1503.1.
M. Dimensional Tolerances: Provide aluminum-framed storefront systems that accommodate dimensional tolerances of building frame and other adjacent construction.

1.3 SUBMITTALS

A. Product Data: For each product specified. Include details of construction relative to materials, dimensions of individual components, profiles, and finishes.
B. Shop Drawings: For aluminum-framed storefront systems. Show details of fabrication and installation, including plans, elevations, sections, details of components, provisions for expansion and contraction, and attachments to other work.

1. For entrance systems, include hardware schedule and indicate operating hardware types, quantities, and locations.

C. Samples for Verification: Of each type of exposed finish required in manufacturer's standard sizes. Where finishes involve normal color and texture variations, include Sample sets showing the full range of variations expected.
D. Cutaway Sample: Of each vertical-to-horizontal framing intersection of systems, made from minimum 6-inch lengths of full-size components and showing details of the following:

1. Joinery.
2. Anchorage.
3. Expansion provisions.
4. Glazing.
5. Flashing and drainage.

E. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.
F. Product Test Reports: Based on evaluation of tests performed by manufacturer and witnessed by a qualified independent testing agency, indicate compliance of aluminum-framed storefront systems with requirements based on comprehensive testing of current systems.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced installer to assume engineering responsibility and perform work of this Section who has specialized in installing aluminum-framed storefront systems similar to those required for this Project and who is acceptable to manufacturer.

1. Engineering Responsibility: Prepare data for aluminum-framed storefront systems, including Shop Drawings, based on testing and engineering analysis of

manufacturer's standard units in assemblies similar to those indicated for this Project.

B. Source Limitations: Obtain each type of aluminum-framed storefront system through one source from a single manufacturer.
C. Welding Standards: Comply with applicable provisions of AWS D1.2, "Structural Welding Code--Aluminum."

1.5 PROJECT CONDITIONS

A. Field Measurements: Verify dimensions by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating systems without field measurements. Coordinate construction to ensure actual dimensions correspond to established dimensions.

1.6 WARRANTY

A. General Warranty: The special warranty specified in this Article shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents.
B. Special Warranty: Submit a written warranty executed by the manufacturer agreeing to repair or replace components of aluminum-framed storefront systems that fail in materials or workmanship within the specified warranty period. Failures include, but are not limited to, the following:

1. Structural failures including, but not limited to, excessive deflection.
2. Failure of system to meet performance requirements.
3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
4. Failure of operating components to function normally.
5. Water leakage through fixed glazing and frame areas.
6. Warranty Period: 2 years from date of Substantial Completion.

C. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes do not comply with requirements or that fail in materials or workmanship within specified warranty period. Warranty does not include normal weathering.

1. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Provide the products specified below, by Kawneer Company, Inc.

1. Storefront Framing Systems: Kawneer Trifab Versaglaze 601/601T/601UT
2. Stile and Rail Aluminum Doors: Kawneer 500 Swing Doors.

B. Comparable Manufacturers: Subject to compliance with requirements, provide the specified products or comparable products by the following:

1. Tubelite
2. YKK AP America

2.2 MATERIALS

A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated, complying with the requirements of standards indicated below.

1. Sheet and Plate: ASTM B 209.
2. Extruded Bars, Rods, Shapes, and Tubes: ASTM B 221.
3. Extruded Structural Pipe and Tubes: ASTM B 429.
4. Bars, Rods, and Wire: ASTM B 211.
5. Welding Rods and Bare Electrodes: AWS A5.10.

B. Steel Reinforcement: Complying with ASTM A 36 for structural shapes, plates, and bars; ASTM A 611 for cold-rolled sheet and strip; or ASTM A 570 for hot-rolled sheet and strip.
C. Glazing as specified in Division 08 Section "Glazing."
D. Glazing Gaskets: Manufacturer's standard pressure-glazing system of black, resilient glazing gaskets, setting blocks, and shims or spacers, fabricated from an elastomer of type and in hardness recommended by system and gasket manufacturer to comply with system performance requirements. Provide gasket assemblies that have corners sealed with sealant recommended by gasket manufacturer.
E. Spacers, Setting Blocks, Gaskets, and Bond Breakers: Manufacturer's standard permanent, nonmigrating types in hardness recommended by manufacturer, compatible with sealants, and suitable for system performance requirements.
F. Secondary Sealant: For use as weatherseal, compatible with structural silicone sealant and other system components with which it comes in contact, and that accommodates a 50 percent increase or decrease in joint width at the time of application when measured according to ASTM C 719.

1. Color: Black.
2. Use neutral-cure silicone sealant with insulating-glass units.

G. Framing system gaskets, sealants, and joint fillers as recommended by manufacturer for joint type.
H. Sealants and joint fillers for joints at perimeter of aluminum-framed storefront systems as specified in Division 07 Section "Joint Sealants."

I. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements, except containing no asbestos, formulated for 30-mil thickness per coat.

2.3 COMPONENTS

A. Framing Systems: Provide primary storefront framing member sizes as follows, with types corresponding to designations on Drawings:

1. Storefront Type: 1-3/4 by 4-1/2 inches.

B. Stile and Rail Doors: Provide manufacturer's standard 1-3/4-inch-thick glazed doors with minimum 0.125-inch-thick, extruded tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deep penetration and fillet welded or that incorporate concealed tie-rods.

1. Glazing Stops and Gaskets: Provide manufacturer's standard snap-on extruded-aluminum glazing stops and preformed gaskets.
2. Door Design: Wide stile; 5-inch nominal width.
3. Door Design: As indicated on Drawings.
4. Accessible Doors: Smooth surfaced for width of door in area within 10 inches above floor or ground plane.
5. Intermediate Rails: Provide vertical and horizontal intermediate rails in doors, of configurations indicated on Drawings.

C. Subframes and Sills: Provide subframes and sills with anchors for frame units as shown, of profile and dimensions indicated but not less than 0.062-inch-thick extruded aluminum. Miter or cope corners, and weld and dress smooth with concealed mechanical joint fasteners. Finish to match frames.

D. Trim and Closures: Provide trim, cover plates and other closures, for both exterior and interior conditions as shown, matching storefront framing, complete with anchors for support to structure and installation of window units. Allow for erection tolerances and provide for movement of frame units due to thermal expansion and building deflections.

1. Include cladding for structural members supporting sunscreen assemblies adjacent to storefront systems.

E. Brackets and Reinforcements: Provide manufacturer's standard brackets and reinforcements that are compatible with adjacent materials. Provide nonstaining, nonferrous shims for aligning system components.

F. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

1. Reinforce members as required to retain fastener threads.
2. Do not use exposed fasteners, except for hardware application. For hardware application, use countersunk Phillips flat-head machine screws finished to match framing members or hardware being fastened, unless otherwise indicated.

G. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123 or ASTM A 153 requirements.

H. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing, compatible with adjacent materials, and of type recommended by manufacturer.

I. Weather Stripping: Manufacturer's standard replaceable weather stripping as follows:

1. Compression Weather Stripping: Molded neoprene complying with ASTM D 2000 requirements or molded PVC complying with ASTM D 2287 requirements.

J. Brixwell CTC12 Brushed Stainless Steel 12” x 10” x 2” Standard Counter Top Deal Tray

1. Installed per manufacturer’s recommendations.

K. Quickserv Natural Voice Speak-thru for Ticket Window, CSE-QS-NV by Quickserv, or equal approved by architect

1. Installed per manufacturer's recommendations.

2.4 HARDWARE

A. Hardware: As specified in Division 08 Section "Door Hardware."

1. Coordinate with specified products.

2.5 FABRICATION

A. General: Fabricate components that, when assembled, will have accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

1. Fabricate components for screw-spline frame construction.

B. Forming: Form shapes with sharp profiles, straight and free of defects or deformations, before finishing.

C. Prepare components to receive concealed fasteners and anchor and connection devices.

D. Fabricate components to drain water passing joints and condensation and moisture occurring or migrating within the system to the exterior.

E. Welding: Weld components to comply with referenced AWS standard. Weld before finishing components to greatest extent possible. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

F. Glazing Channels: Provide minimum clearances for thickness and type of glass indicated according to FGMA's "Glazing Manual."

1. Provide glazing stops to accommodate stained glass panels furnished by Owner in locations indicated.

G. Metal Protection: Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape

recommended by manufacturer for this purpose. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

H. Framing System: Fabricate framing in profiles indicated for flush glazing (without projecting stops).

1. Provide subframes and reinforcing of types indicated or, if not indicated, as required for a complete system, to withstand imposed loads, and to maintain indicated width and depth of primary frame members.
2. Factory assemble components to greatest extent possible. Disassemble components only as necessary for shipment and installation.

I. Entrances: Fabricate door framing in profiles indicated. Reinforce as required to support imposed loads. Factory assemble door and frame units and factory install hardware to greatest extent possible. Reinforce door and frame units as required for installing hardware indicated. Cut, drill, and tap for factory-installed hardware before finishing components.

1. Exterior Doors: Provide compression weather stripping at fixed stops. At other locations, provide sliding weather stripping retained in adjustable strip mortised into door edge.
2. Interior Doors: Provide ANSI/BHMA A156.16 silencers at stops to prevent metal to metal contact. Provide 3 silencers on strike jamb of single-door frames and 2 silencers on head of double-door frames.

2.6 ALUMINUM FINISHES

A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations relative to applying and designating finishes.
B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
C. Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes.
D. High-Performance Organic Finish (2-Coat Fluoropolymer): AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: conversion coating; Organic Coating: manufacturer's standard 2-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2605 and with coating and resin manufacturers' written instructions.

1. Color and Gloss: As selected by Architect from manufacturer's full range.
    a. Include custom color selection to match interior trim as noted on finish schedule.

2.7 STEEL PRIMING

A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations relative to applying primer.
B. Surface Preparation: Perform manufacturer's standard cleaning operations to remove dirt, oil, grease, or other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel.
C. Priming: Apply manufacturer's standard corrosion-resistant primer immediately after surface preparation and pretreatment.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of aluminum-framed storefront systems. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Comply with manufacturer's written instructions for protecting, handling, and installing aluminum-framed storefront systems. Do not install damaged components. Fit frame joints to produce hairline joints free of burrs and distortion. Rigidly secure nonmovement joints. Seal joints watertight.
B. Metal Protection: Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
C. Install components to drain water passing joints and condensation and moisture occurring or migrating within the system to the exterior.
D. Set continuous sill members and flashing in a full sealant bed to provide weathertight construction, unless otherwise indicated. Comply with requirements of Division 07 Section "Joint Sealants."
E. Install framing components plumb and true in alignment with established lines and grades without warp or rack of framing members.
F. Install entrances plumb and true in alignment with established lines and grades without warp or rack. Lubricate operating hardware and other moving parts according to hardware manufacturers' written instructions.

    1. Install surface-mounted hardware according to manufacturer's written instructions using concealed fasteners to greatest extent possible.

G. Install glazing to comply with requirements of Division 08 Section "Glazing," unless otherwise indicated.
H. Install secondary-sealant weatherseal according to sealant manufacturer's written instructions to provide weatherproof joints. Install joint fillers behind sealant as recommended by sealant manufacturer.

I. Install perimeter sealant to comply with requirements of Division 07 Section "Joint Sealants," unless otherwise indicated.

1. Provide neat, uniform sealant joints with bead formed by edges of framing members. Remove excess sealant which overlaps onto adjacent face of framing members during application of sealants.

J. Erection Tolerances: Install aluminum-framed storefront systems to comply with the following maximum tolerances:

1. Variation from Plane: Limit variation from plane or location shown to 1/8 inch in 12 feet; 1/4 inch over total length.
2. Alignment: Where surfaces abut in line, limit offset from true alignment to 1/16 inch. Where surfaces meet at corners, limit offset from true alignment to 1/32 inch.
3. Diagonal Measurements: Limit difference between diagonal measurements to 1/8 inch.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified independent testing agency to perform field quality-control testing indicated.
B. Hose Stream Test: After completing the installation of test areas indicated, test storefront system for water penetration according to AAMA 501.2 requirements.

1. Perform tests on two locations for each different storefront condition.
2. Continue testing until obtaining two consecutive passing results for each different storefront condition.

C. Repair or remove and replace Work that does not meet requirements or that is damaged by testing; replace to conform to specified requirements.

3.4 ADJUSTING AND PROTECTION

A. Adjust doors and hardware to provide tight fit at contact points and weather stripping, smooth operation, and weathertight closure.
B. Remove excess sealant and glazing compounds, and dirt from surfaces.
C. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure aluminum-framed storefront systems are without damage or deterioration at the time of Substantial Completion.

END OF SECTION 08 41 13

SECTION 08 44 13 - GLAZED ALUMINUM CURTAIN WALLS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes conventionally glazed aluminum curtain walls installed as stick systems, and the following:

1. Metal spandrel panels.
2. Frame adapters for entrance doors set in curtain wall construction.

B. Related Sections include the following:

1. Division 07 Section "Fire-Resistive Joint Systems": Perimeter fire-containment systems (safing insulation) field installed with curtain wall systems.
2. Division 07 Section "Joint Sealants": Installation of joint sealants installed with glazed aluminum curtain-wall systems and for sealants to the extent not specified in this Section.
3. Division 08 Section "Aluminum-Framed Entrances and Storefronts": Entrance systems installed with glazed aluminum curtain-wall systems.
4. Division 08 Section "Door Hardware": Operating hardware for entrances.
5. Division 08 Section "Glazing": Glass requirements.

1.2 PERFORMANCE REQUIREMENTS

A. General: Provide glazed aluminum curtain-wall systems, including anchorage, capable of withstanding, without failure, the effects of the following:

1. Structural loads.
2. Movements of supporting structure indicated on Drawings including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
3. Dimensional tolerances of building frame and other adjacent construction.
4. Failure includes the following:
    a. Deflection exceeding specified limits.
    b. Thermal stresses transferred to building structure.
    c. Framing members transferring stresses, including those caused by thermal and structural movements, to glazing.
    d. Noise or vibration created by wind and thermal and structural movements.
    e. Loosening or weakening of fasteners, attachments, and other components.
    f. Sealant failure.

B. Structural Loads:

1. Wind Loads: Provide glazed aluminum curtain wall system, including anchorage, capable of withstanding wind-load design pressures calculated according to

requirements of authorities having jurisdiction or the American Society of Civil Engineers' ASCE 7, "Minimum Design Loads for Buildings and Other Structures," 6.4.2, "Analytical Procedure," whichever are more stringent. Determine wind loads by calculations based on load criteria indicated on Drawings.

2. Seismic Loads: Provide glazed aluminum curtain wall system, including anchorage, capable of withstanding the effects of earthquake motions calculated according to requirements of authorities having jurisdiction or ASCE 7, "Minimum Design Loads for Buildings and Other Structures," Section 9, "Earthquake Loads," whichever are more stringent.

C. Structural-Test Performance: Provide glazed aluminum curtain-wall systems, including anchorage, capable of withstanding test pressure indicated without material and deflection failures and permanent deformation of structural members exceeding 0.2 percent of span when tested according to ASTM E 330.

1. Submit reports of tests performed on manufacturer's standard assemblies.
2. Test Pressure: 150 percent of positive and negative wind-load design pressures.
3. Test Duration: As required by design wind velocity but not less than 60 seconds.

D. Deflection of Framing Members:

1. Deflection Normal to Wall Plane: Limited to 1/175 of clear span or 3/4 inch, whichever is smaller.
2. Deflection Parallel to Glazing Plane: Limited to 1/360 of clear span or 1/8 inch, whichever is smaller.

    a. Operable Doors: Provide a minimum 1/16-inch clearance between framing members and operable units.

E. Thermal Movements: Provide glazed aluminum curtain-wall systems that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

F. Air Infiltration: Provide glazed aluminum curtain-wall systems with maximum air leakage of 0.06 cfm/sq. ft. of fixed wall area when tested according to ASTM E 283 at a minimum static-air-pressure differential of 6.24 lbf/sq. ft.

G. Water Penetration Under Static Pressure: Provide aluminum glazed curtain-wall systems that do not evidence water penetration when tested according to ASTM E 331 at a minimum differential static pressure of 20 percent of positive design wind load, but not less than 10 lbf/sq. ft.

1. Maximum Water Leakage: No uncontrolled water penetrating systems or appearing on systems' normally exposed interior surfaces from sources other than condensation. Water controlled by flashing and gutters that is drained to exterior and cannot damage adjacent materials or finishes is not considered water leakage.

H. Condensation Resistance: Provide glazed aluminum curtain-wall systems with condensation-resistance factor (CRF) of not less than 55 when tested according to AAMA 1503.
I. Average Thermal Conductance: Provide glazed aluminum curtain-wall systems with average U-factor of not more than 0.66 Btu/sq. ft. x h x deg F when tested according to AAMA 1503.

1.3 SUBMITTALS

A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of product indicated.
B. Shop Drawings: Prepared by or under the supervision of a qualified professional engineer detailing fabrication and assembly of glazed aluminum curtain-wall systems.

1. Include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

C. Samples for Initial Selection: For units with factory-applied color finishes.
D. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for glazed aluminum curtain-wall systems.
F. Field quality-control test reports.
G. Warranties: Special warranties specified in this Section.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: Capable of assuming engineering responsibility and performing Work of this Section and who is acceptable to manufacturer.

1. Engineering Responsibility: Preparation of data for glazed aluminum curtain-wall systems, including Shop Drawings based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.

B. Testing Agency Qualifications: An independent agency qualified according to ASTM E 699 for testing indicated.
C. Product Options: Information on Drawings and in Specifications establishes requirements for systems' aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, and in-service performance.

1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.

D. Welding: Qualify procedures and personnel according to AWS D1.2, "Structural Welding Code--Aluminum."

1.5 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of structural supports for glazed aluminum curtain-wall systems by field measurements before fabrication and indicate measurements on Shop Drawings.

1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating glazed aluminum curtain-wall systems without field measurements. Coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.6 WARRANTY

A. Special Assembly Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of glazed aluminum curtain-wall systems that do not comply with requirements or that deteriorate as defined in this Section within specified warranty period.

1. Failures include, but are not limited to, the following:
   a. Structural failures including, but not limited to, excessive deflection.
   b. Noise or vibration caused by thermal movements.
   c. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
   d. Water leakage.
   e. Failure of operating components to function normally.

2. Warranty Period: 2 years from date of Substantial Completion.

B. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.

1. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Products: The design for glazed aluminum curtain-wall systems is based on the following products of Kawneer Company, Inc.:

1. Curtain Wall System: 1600 Wall System 1.

B. Comparable Products: Subject to compliance with requirements, provide the named products or comparable products as follows:

1. EFCO Corporation;
2. Wausau Windows and Wall Systems:
3. Tubelite;

2.2 FRAMING SYSTEMS

A. Framing System Sizes: Provide primary curtain wall framing member sizes as follows, with types corresponding to designations on Drawings:

1. Curtain Wall: 2-1/2 by 7-1/2 inches.

B. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

1. Sheet and Plate: ASTM B 209.
2. Extruded Bars, Rods, Shapes, and Tubes: ASTM B 221.
3. Extruded Structural Pipe and Tubes: ASTM B 429.
4. Welding Rods and Bare Electrodes: AWS A5.10/A5.10M.

C. Steel Reinforcement: With manufacturer's standard corrosion-resistant primer complying with SSPC-PS Guide No. 12.00 applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.

1. Structural Shapes, Plates, and Bars: ASTM A 36/A 36M.
2. Cold-Rolled Sheet and Strip: ASTM A 611.
3. Hot-Rolled Sheet and Strip: ASTM A 570/A 570M.

D. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

E. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

1. Where fasteners are subject to loosening or turn out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
2. Reinforce members as required to receive fastener threads.
3. Use exposed fasteners with countersunk Phillips screw heads.
4. Finish exposed portions to match framing system.
5. At movement joints, use slip-joint linings, spacers, and sleeves of material and type recommended by manufacturer.

F. Anchors: Three-way adjustable anchors that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.

1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.

G. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.
H. Framing Gaskets: As recommended by manufacturer for joint type.
I. Framing Sealants: As recommended by manufacturer for joint type, and as specified in Division 07 Section "Joint Sealants."

2.3 GLAZING SYSTEMS

A. Glazing: As specified in Division 08 Section "Glazing."
B. Glazing Sealants: As recommended by manufacturer for joint type, and as specified in Division 08 Section "Glazing."

2.4 AUXILIARY COMPONENTS

A. Fillers, Trim and Closures: Provide filler panels, trim, cover plates, mullion covers, column covers and other closures, for both exterior and interior conditions as shown, complete with anchors for support to structure. Allow for erection tolerances and provide for movement of curtain wall due to thermal expansion and building deflections, as indicated.

1. Include cladding for structural members supporting sunscreen assemblies adjacent to storefront systems.

B. Metal Panels: Laminated, metal-faced flat panels with no deviations in plane exceeding 0.8 percent of panel dimension in width or length.

1. Overall Panel Thickness: 1/2 inch.
2. Exterior Skin: Aluminum.

a. Thickness: Manufacturer's standard for finish and texture indicated.
b. Finish: Matching framing system.
c. Texture: Smooth.
d. Backing Sheet: 0.125-inch- (3.2-mm-) thick, corrugated, high-density polyethylene.

3. Interior Skin: Aluminum.

a. Thickness: Manufacturer's standard for finish and texture indicated.
b. Finish: Matching aluminum framing.
c. Texture: Smooth.
d. Backing Sheet: 0.125-inch- (3.2-mm-) thick, corrugated, high-density polyethylene.

4. Core: ½ inch plywood.
5. Surface-Burning Characteristics: For exposed interior surfaces of panels, when tested according to ASTM E 84 as follows:

a. Flame-Spread Index: 25 or less.
b. Smoke-Developed Index: 450 or less.

C. Entrance Frame Adapters: Manufacturer's standard system designed to integrate specified entrance doors into curtain wall system.

2.5 ACCESSORY MATERIALS

A. Perimeter Fire-Containment Systems (Safing Insulation): Specified in Division 07 Section "Fire-Resistive Joint Systems."
B. Insulating Materials: Specified in Division 07 Section "Thermal Insulation."
C. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

2.6 FABRICATION

A. Fabricate framing in profiles indicated.

1. Factory assemble components to greatest extent possible. Disassemble components only as necessary for shipment and installation.
2. Form aluminum shapes before finishing.
3. Provide reinforcing required for a complete system, to withstand imposed loads, and to maintain indicated width and depth of primary frame members.

B. Fabricate components that, when assembled, have the following characteristics:

1. Sharp profiles, straight and free of defects or deformations.
2. Accurately fitted joints with ends coped or mitered.
3. Internal guttering systems or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within the system to exterior.
4. Physical and thermal isolation of glazing from framing members.
5. Accommodations for thermal and mechanical movements of glazing and framing to prevent glazing-to-glazing contact and to maintain required glazing edge clearances.
6. Provisions for reglazing from exterior.

C. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
D. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.7 ALUMINUM FINISH

A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
B. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
C. High-Performance Organic Finish (2-Coat Fluoropolymer): AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: conversion coating; Organic Coating: manufacturer's standard 2-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70

percent polyvinylidene fluoride resin by weight). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2605 and with coating and resin manufacturers' written instructions.

1. Color and Gloss: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General:

   1. Comply with manufacturer's written instructions.
   2. Do not install damaged components.
   3. Fit joints to produce hairline joints free of burrs and distortion.
   4. Rigidly secure nonmovement joints.
   5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
   6. Weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
   7. Seal joints watertight, unless otherwise indicated.

B. Metal Protection:

   1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape or installing nonconductive spacers as recommended by manufacturer for this purpose.
   2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

C. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within the system to exterior.
D. Install components plumb and true in alignment with established lines and grades.
E. Install operable doors level and plumb, securely anchored, and without distortion. Adjust weather-stripping contact and hardware movement to produce proper operation.
F. Install glazing as specified Division 08 Section "Glazing."
G. Install sealants as specified in Division 07 Section "Joint Sealants."
H. Install perimeter fire-containment systems (safing insulation) as specified in Division 07 Section "Fire-Resistive Joint Systems."
I. Erection Tolerances: Install glazed aluminum curtain-wall systems to comply with the following maximum tolerances:

   1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.

2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
3. Alignment:
    a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
    b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
    c. Where surfaces are separated by reveal or protruding element of 1 inch wide or greater, limit offset from true alignment to 1/4 inch.
4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
B. Testing Services: Conduct testing and inspecting of representative areas to determine compliance of installed system. Do not proceed with installation of the next area until test results for previously completed areas show compliance with requirements.

1. Water Spray Test: After the installation of minimum area of 75-feet-by-2-story glazed aluminum curtain-wall system has been completed but before installation of interior finishes has begun, a 2-bay area of system designated by Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.

C. Repair or remove work where test results and inspections indicate that it does not comply with specified requirements.
D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.4 ADJUSTING AND PROTECTION

A. Adjust doors and hardware to provide tight fit at contact points and weather stripping, smooth operation, and weathertight closure.
B. Remove excess sealant and glazing compounds, and dirt from surfaces.
C. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure aluminum-framed curtain wall system is without damage or deterioration at the time of Substantial Completion.

END OF SECTION 08 44 13

SECTION 08 71 00 – DOOR HARDWARE

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Hardware for wood, aluminum, and hollow metal doors.
B. Hardware for fire-rated doors.
C. Electrically operated and controlled hardware.
D. Lock cylinders for doors with balance of hardware specified in other sections.
E. Thresholds.
F. Smoke and draft control seals.
G. Weatherstripping and gasketing.

1.02 RELATED REQUIREMENTS

A. Section 081113 - Hollow Metal Doors and Frames.
B. Section 081116 - Aluminum Doors and Frames.
C. Section 081213 - Hollow Metal Frames.
D. Section 081416 - Flush Wood Doors.
E. Section 281000 - Access Control: Electronic access control devices.

1.03 REFERENCE STANDARDS

A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design 2010.
B. BHMA A156.1 - Standard for Butts and Hinges 2021.
C. BHMA A156.2 - Bored and Preassembled Locks and Latches 2017.
D. BHMA A156.3 - Exit Devices 2020.
E. BHMA A156.4 - Door Controls - Closers 2019.
F. BHMA A156.8 - Door Controls - Overhead Stops and Holders 2021.
G. BHMA A156.13 - Mortise Locks & Latches Series 1000 2017.
H. BHMA A156.16 - Auxiliary Hardware 2018.
I. BHMA A156.18 - Materials and Finishes 2020.
J. BHMA A156.21 - Thresholds 2019.
K. BHMA A156.25 - Electrified Locking Devices 2018.
L. BHMA A156.26 - Standard for Continuous Hinges 2021.
M. BHMA A156.28 - Recommended Practices For Mechanical Keying Systems 2018.
N. BHMA A156.115 - Hardware Preparation In Steel Doors And Steel Frames 2016.
O. BHMA A156.115W - Hardware Preparation in Wood Doors with Wood or Steel Frames 2006.
P. DHI (H&S) - Sequence and Format for the Hardware Schedule 2019.
Q. DHI (KSN) - Keying Systems and Nomenclature 2019.
R. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

S. NFPA 80 - Standard for Fire Doors and Other Opening Protectives 2022.

T. NFPA 101 - Life Safety Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

U. NFPA 105 - Standard for Smoke Door Assemblies and Other Opening Protectives 2022.

V. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies 2022.

W. UL 10C - Standard for Positive Pressure Fire Tests of Door Assemblies Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordinate the manufacture, fabrication, and installation of products that door hardware is installed on.

B. Sequence installation to ensure facility services connections are achieved in an orderly and expeditious manner.

C. Preinstallation Meeting: Convene a preinstallation meeting four weeks prior to commencing work of this section; require attendance by affected installers and the following:
   1. Architect.
   2. Installer's Architectural Hardware Consultant (AHC).
   3. Hardware Installer.
   4. Owner's Security Consultant.

D. Furnish templates for door and frame preparation to manufacturers and fabricators of products requiring internal reinforcement for door hardware.

E. Keying Requirements Meeting: Arrange meeting with Owner, Architect and finish hardware supplier to determine keying requirements immediately upon receipt of finishing hardware schedule.

1.05 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Manufacturer's catalog literature for each type of hardware, marked to clearly show products to be furnished for this project, and includes construction details, material descriptions, finishes, and dimensions and profiles of individual components.

C. Shop Drawings - Door Hardware Schedule: A detailed listing that includes each item of hardware to be installed on each door.
   1. Prepared by or under supervision of Architectural Hardware Consultant (AHC).
   2. Comply with DHI (H&S) using door numbering scheme and hardware set numbers as indicated in Contract Documents.
      - Submit in vertical format.
   3. List groups and suffixes in proper sequence.
   4. Include complete description for each door listed.
   5. Include manufacturer's and product names, and catalog numbers; include functions, types, styles, sizes and finishes of each item.
   6. Include account of abbreviations and symbols used in schedule.

D. Shop Drawings - Electrified Door Hardware: Include diagrams for power, signal, and control wiring for electrified door hardware that include details of interface with building safety and security systems. Provide elevations and diagrams for each electrified door opening as follows:
   1. Prepared by or under supervision of Architectural Hardware Consultant (AHC) and Electrified Hardware Consultant (EHC).

2. Elevations: Include front and back elevations of each door opening showing electrified devices with connections installed and an operations narrative describing how opening operates from either side at any given time.
3. Diagrams: Include point-to-point wiring diagrams that show each device in door opening system with related colored wire connections to each device.

E. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

F. Manufacturer's qualification statement.

G. Installer's qualification statement.

H. Supplier's qualification statement.

I. Maintenance Data: Include data on operating hardware, lubrication requirements, and inspection procedures related to preventative maintenance.
1. Include manufacturer's parts lists and templates.
2. Bitting List: List of combinations as furnished.

J. Keying Schedule:
1. Submit three (3) copies of Keying Schedule in compliance with requirements established during Keying Requirements Meeting unless otherwise indicated.

K. Warranty: Submit manufacturer's warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

L. Project Record Documents: Record actual locations of concealed equipment, services, and conduit.

M. Maintenance Materials and Tools: Furnish the following for Owner's use in maintenance of project.
1. See Section 016000 - Product Requirements, for additional provisions.
2. Tools: One set of each special wrench or tool applicable for each different or special hardware component, whether supplied by hardware component manufacturer or not.

1.06 QUALITY ASSURANCE

A. Standards for Fire-Rated Doors: Maintain one copy of each referenced standard on site, for use by Architect and Contractor.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years of documented experience.

C. Installer Qualifications: Company specializing in performing work of the type specified for commercial door hardware with at least three years of documented experience.

D. Supplier Qualifications: Company with certified Architectural Hardware Consultant (AHC) and Electrified Hardware Consultant (EHC) to assist in work of this section.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Package hardware items individually; label and identify each package with door opening code to match door hardware schedule.

1.08 WARRANTY

A. See Section 017800 - Closeout Submittals for additional warranty requirements.

B. Manufacturer Warranty: Provide manufacturer warranty against defects in material and workmanship for period indicated, from Date of Substantial Completion. Complete forms in Owner's name and register with manufacturer.
   1. Closers: Ten years, minimum.
   2. Exit Devices: Five years, minimum.
   3. Locksets and Cylinders: Ten years, minimum.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Provide specified door hardware as required to make doors fully functional, compliant with applicable codes, and secure to extent indicated.

B. Provide individual items of single type, of same model, and by same manufacturer.

C. Locks: Provide a lock for each door, unless it's indicated that lock is not required.
   1. Lock Function: Provide lock and latch function numbers and descriptions of manufacturer's Series. As indicated in hardware sets.
   2. Trim: Provide lever handle or pull trim on outside of each lock, unless otherwise indicated.
   3. Strikes:
      - Finish: To match lock or latch.
      - Curved-Lip Strikes: Provide as standard, with extended lip to protect frame, unless otherwise indicated.
      - Center Strike At Pairs of Doors:7/8 inch (22.2 mm) lip.

D. Closers:
   1. Provide door closer on each exterior door, unless otherwise indicated.
   2. Provide door closer on each fire-rated and smoke-rated door.
   3. Spring hinges are not an acceptable self-closing device, unless otherwise indicated.

E. Overhead Stops and Holders (Door Checks).
   1. Provide stop for every swinging door, unless otherwise indicated.
   2. Overhead Stop is not required if positive stop feature is specified for door closer; positive stop feature of door closer is not an acceptable substitute for a stop, unless otherwise indicated.
   3. Overhead stop is not required if a floor or wall stop has been specified for the door.

F. Drip Guards: Provide at head of outswinging exterior doors unless protected by roof or canopy directly overhead.

G. Thresholds:
   1. Exterior Applications: Provide at each exterior door, unless otherwise indicated.

H. Smoke and Draft Control Seals:
   1. Provide gasketing for smoke and draft control doors that complies with local codes, requirements of assemblies tested in accordance with UL 1784.

I. Weatherstripping and Gasketing:
   1. Provide weatherstripping on each exterior door at head, jambs, and meeting stiles of door pairs, unless otherwise indicated.
   2. Provide door bottom sweep on each exterior door, unless otherwise indicated.

J. Electrically Operated and/or Controlled Hardware: Provide necessary power supplies, power transfer hinges, relays, and interfaces as required for proper operation; provide wiring between hardware and control components and to building power connection in compliance with NFPA 70.

K. See Section 281000 for additional access control system requirements.

L. Fasteners:
1. Provide fasteners of proper type, size, quantity, and finish that comply with commercially recognized standards for proposed applications.
    - Aluminum fasteners are not permitted.
    - Provide phillips flat-head screws with heads finished to match door surface hardware unless otherwise indicated.
2. Provide machine screws for attachment to reinforced hollow metal and aluminum frames.
    - Self-drilling (Tek) type screws are not permitted.
3. Provide stainless steel machine screws and lead expansion shields for concrete and masonry substrates.
4. Provide wall grip inserts for hollow wall construction.
5. Fire-Resistance-Rated Applications: Comply with NFPA 80.
    - Provide wood or machine screws for hinges mortised to doors or frames, strike plates to frames, and closers to doors and frames.
    - Provide steel through bolts for attachment of surface mounted closers, hinges, or exit devices to door panels unless proper door blocking is provided.

2.02 PERFORMANCE REQUIREMENTS

A. Provide door hardware products that comply with the following requirements:
1. Applicable provisions of federal, state, and local codes.
    - NFPA 101.
2. Accessibility: ADA Standards and ICC A117.1.
3. Fire-Resistance-Rated Doors: NFPA 80, listed and labeled by qualified testing agency for fire protection ratings indicated, based on testing at positive pressure in accordance with NFPA 252 or UL 10C.
4. Hardware on Fire-Resistance-Rated Doors: Listed and classified by UL (DIR), ITS (DIR), or testing firm acceptable to authorities having jurisdiction as suitable for application indicated.
5. Hardware for Smoke and Draft Control Doors: Provide door hardware that complies with local codes, and requirements of assemblies tested in accordance with UL 1784.
6. Hardware Preparation for Steel Doors and Steel Frames: BHMA A156.115.
7. Hardware Preparation for Wood Doors with Wood or Steel Frames: BHMA A156.115W.
8. Products Requiring Electrical Connection: Listed and classified by UL (DIR) as suitable for the purpose specified.

2.03 HINGES

A. Manufacturers: Conventional butt hinges.
1. BEST; dormakaba Group:
2. Mckinney.
3. Ives Hardware.

B. Properties:
1. Butt Hinges: As applicable to each item specified.
    - Standard Weight Hinges: Minimum of two (2) permanently

lubricated non-detachable bearings.
- Heavy Weight Hinges: Minimum of four (4) permanently lubricated bearings on heavy weight hinges.
- Template screw hole locations.
- Bearings: Concealed fully hardened bearings.
- UL 10C listed for fire-resistance-rated doors.

C. Sizes: See Door Hardware Schedule.
1. Hinge Widths: As required to clear surrounding trim.
2. Sufficient size to allow 180 degree swing of door.

D. Finishes: See Door Hardware Schedule.
1. Fully polish hinges; front, back, and barrel.

E. Grades:
1. Butt Hinges: Comply with BHMA A156.1 and BHMA A156.7 for templated hinges.
2. Comply with BHMA A156.18 Materials and Finishes.

F. Material: Base metal as indicated for each item by BHMA material and finish designation.

G. Types:
1. Butt Hinges: Include full mortise hinges.

H. Options: As applicable to each item specified.

I. Quantities:
1. Butt Hinges: Three (3) hinges per leaves up to 90 inches (2286 mm) in height. Add one (1) for each additional 30 inches (762 mm) in height or fraction thereof.
- Hinge weight and size unless otherwise indicated in hardware sets:
  a) For doors up to 36 inches (914 mm) wide and up to 1-3/4 inches (44.5 mm) thick provide hinges with a minimum thickness of 0.134 inch (3.4 mm) and a minimum of 4-1/2 inches (114 mm) in height.
  b) For doors from 36 inches (914 mm) wide up to 42 inches (1067 mm) wide and up to 1-3/4 inches (44.5 mm) thick provide hinges with a minimum thickness of 0.145 inch (3.7 mm) and a minimum of 4-1/2 inches (114 mm) in height.
  c) For doors from 42 inches (1067 mm) wide up to 48 inches (1219 mm) wide and up to 1-3/4 inches (44.5 mm) thick provide hinges with a minimum thickness of 0.180 inch (4.6 mm) and a minimum of 5 inches (127 mm) in height.
  d) For doors greater than 1-3/4 inches (44.5 mm) thick provide hinges with a minimum thickness of 0.180 inch (4.6 mm) and a minimum of 5 inches (127 mm) in height.

J. Applications: At swinging doors.
1. Provide non-removable pins at out-swinging doors with locking hardware and all exterior doors.

K. Products:
1. Butt Hinges:
- Ball Bearing, Five (5) Knuckle.

2.04 CONTINUOUS HINGES

A. Manufactures:

1. Best Access
2. Roton
3. Select Hardware

Geared Continuous Hinges: As applicable to each item specified.

1) Non-handed.
2) Anti-spinning through-fastener.
3) UL 10C listed for fire-resistance-rated doors.
   (a) Metal Door Installation: Rated up to 90 minutes.
   (b) Wood Door Installation: Rated up to 60 minutes.
4) Sufficient size to permit door to swing 180 degrees

B. Finishes: See Door Hardware Schedule.

2.05 BOLTS

A. Manufacturers:
   1. ABH.
   2. Burns.
   3. Trimco.
B. Properties:
   1. Dustproof Strikes: For bolting into floor, provide except at metal thresholds.
C. Options:
   1. Extension Bolts: In leading edge of door, one bolt into floor, one bolt into top of frame.
   2. Lever extensions: Provide for top bolt at oversized doors.

2.06 EXIT DEVICES

A. Manufacturers:
   1. Precision Apex 2000 Series
   2. Sargent 19GL80 Series.
   3. Von Duprin 98 Series
B. Properties:
   1. Actuation: Crossbar.
   2. Touchpads: 'T" style metal touchpads and rail assemblies with matching chassis covers end caps.
   3. Latch Bolts: Stainless steel deadlocking with 3/4 inch (19 mm) projection using latch bolt.
   4. Lever Design: Match project standard lockset trims.
   5. Cylinder: Include where cylinder dogging or locking trim is indicated.
   6. Strike as recommended by manufacturer for application indicated.
   7. Dogging:
      - Non-Fire-Resistance-Rated Devices: Cylinder 1/4 inch (6 mm) hex key dogging.
      - Fire-Resistance-Rated Devices: Manual dogging not permitted.
   8. Touch bar assembly on wide style exit devices to have a 1/4 inch (6.3 mm) clearance to allow for vision frames.
   9. All exposed exit device components to be of architectural metals and "true" architectural finishes.
   10. Handing: Field-reversible.
   11. Fasteners on Back Side of Device Channel: Concealed - exposed fasteners not allowed.
   12. Vertical Latch Assemblies' Operation: Gravity, without use of springs.
C. Grades: Complying with BHMA A156.3, Grade 1.

1. Provide exit devices tested and certified by UL or by a recognized independent laboratory for mechanical operational testing to 10 million cycles minimum with inspection confirming Grade 1 Loaded Forces have been maintained.

D. Standards Compliance:
1. UL Listed for Panic and Fire for Class II Circuitry.
2. Provide UL (DIR) listed exit device assemblies for fire-resistance-rated doors.
3. Comply with UL 10C.

E. Code Compliance: As required by authorities having jurisdiction in the State in which the Project is located.
1. Listed by UL as a Controlled Exit Device (FULA) and Special Locking Arrangements (FWAX) category.

F. Options:
1. Electrified Devices:
2. Delayed Egress Devices: Manufacturer's standard for the application.
3. Internally mounted switch used to signal other components.
4. Internally mounted switch that monitors the position of the latchbolt.
5. MLR: Motorized latch retraction.

G. Products:
1. 2000.

2.07 ELECTRIC STRIKES

A. Manufacturers:
1. RCI
2. HES.
3. Allegion.

B. Properties:
1. Provide UL 1034 compliant devices.
2. Provide UL 10C compliant devices.
3. Include transformer and rectifier as necessary for complete installation.

C. Installation: Connect electric strikes into fire alarm where non-rated doors are scheduled to release with fire or sprinkler alarm condition.

2.08 LOCK CYLINDERS

A. Manufacturers:
1. BEST CORMAX Plus, Existing District System
2. No Substitution.

B. Material:
1. Manufacturer's standard corrosion-resistant brass alloy.

C. Types: As applicable to each item specified.
1. Patented small format interchangeable core (SFIC) type cylinders, with seven pin cores.

2.09 MORTISE LOCKS

A. Manufacturers:
1. BEST, 45H Series, Existing District System.
2. No Substitution

B. Properties:
1. Mechanical Locks: Manufacturer's standard.
    - Fitting modified ANSI A115.1 door preparation.

- Door Thickness Coordination Fitting 1-3/4 inch (44 mm) to 2-1/4 inch (57 mm) thick doors.
- Latch: Solid, one-piece, anti-friction, self-lubricating stainless steel.

a) Latchbolt Throw: 3/4 inch (19 mm), minimum.

- Auxiliary Deadlatch: One piece stainless steel, permanently lubricated.
- Backset: 2-3/4 inch (70 mm).
- Lever Trim:

a) Functionality: Allow the lever handle to move up to 45 degrees from horizontal position prior to engaging the latchbolt assembly.
b) Strength: Locksets outside locked lever designed to withstand minimum 1,400 inch-lbs (158.2 Nm) of torque. In excess of that, a replaceable part will shear. Key from outside and/or inside lever will still operate lockset.
c) Spindle: Designed to prevent forced entry from attacking of lever.
d) Independent spring mechanism for each lever.

- Trim to be self-aligning and thru-bolted.

2. Electrified Locks: Same properties as standard locks, and as follows:
   - Function: Electrically locked (Fail Safe) or unlocked (Fail Secure), as indicated for each lock in Door Hardware Schedule.

C. Finishes: See Door Hardware Schedule.
   1. Core Faces: Match finish of lockset.

D. Grades:

E. Products: Mortise locks, including standard and electrified types.
   1. 45H.

2.10 CYLINDRICAL LOCKS

A. Manufacturers:
   1. BEST 9K Series, Existing District System.
   2. No Substition.

B. Properties:
   1. Mechanical Locks:
      a. Fitting modified ANSI A115.2 door preparation.
      b. Door Thickness Fit: 1-3/8 inches (35 mm) to 2-1/4 inches (57 mm) thick doors.
      c. Construction: Hub, side plate, shrouded rose, locking pin to be a one-piece casting with a shrouded locking lug.
         1) Through-bolted anti-rotational studs.
      d. Cast stainless steel latch retractor with roller bearings for exceptionally smooth operation and superior strength and durability.
      e. Bored Hole: 2-1/8 inch (54 mm) diameter.
      f. Backset: 2-3/4 inches (70 mm) unless otherwise indicated.
      g. Latch: Single piece tail-piece construction.
         1) Latchbolt Throw: 9/16 inch (14.3 mm), minimum.
      h. Cylinders:
         1) Cylinder Core Types: Locks capable of supporting manufacturers' cores, as applicable.

i. Lever Trim:
1) Style: See Door Hardware Schedule.
2) Outside Lever Sleeve: Seamless one-piece construction.

2. Electrified Locks: Same properties as standard locks, and as follows:
a. Function: Electrically locked (Fail Safe) or unlocked (Fail Secure), as indicated for each lock in Door Hardware Schedule.

C. Finishes: See Door Hardware Schedule.
1. Core Faces: Match finish of lockset.

D. Grades: Comply with BHMA A156.2, Grade 1, Series 4000, Operational Grade 1, Extra Heavy Duty.

E. Material: Manufacturer's standard for specified lock.

F. Products: Cylindrical locks, including mechanical and electrified types.
1. 9K (Grade 1).

2.11 DOOR PULLS AND PUSH PLATES

A. Manufacturers:
1. ABH.
2. Burns.
3. Trimco.

B. Material: Stainless steel, unless otherwise indicated.

2.12 LADDER PULLS

A. Manufacturers:
1. ABH
2. Trimco
3. Rockwood Manufacturing Company.

B. Properties:
1. Proper number of support fixings to accommodate length of pull as recommended by the manufacturer.

C. Installation:
1. Pull Handles Mounting Style: Use single-sided - SNG or back-to-back - B2B mounting methods, as appropriate for item specified and in coordination with door type and other hardware items.

2.13 CLOSERS

A. Manufacturers:
1. Dorma 8900 Series
2. LCN 4040XP Series.
3. Sargent 351 Series

B. Grades:
1. Closers: Comply with BHMA A156.4, Grade 1.
- Underwriters Laboratories Compliance:
a) Product Listing: UL (DIR) and ULC for use on fire-resistance-rated doors.
- UL 228 - Door Closers-Holders, With or Without Integral Smoke Detectors.

C. Installation:
1. Mounting: Includes surface mounted installations.
2. Mount closers on non-public side of door and stair side of stair doors unless otherwise noted in hardware sets.

3. At outswinging exterior doors, mount closer on interior side of door.
4. Provide adapter plates, shim spacers, and blade stop spacers as required by frame and door conditions.
5. Where an overlapping astragal is included on pairs of swinging doors, provide coordinator to ensure door leaves close in proper order.

2.14 OVERHEAD STOPS AND HOLDERS

A. Manufacturers:
   1. Architectural Builders Hardware Mfg (ABH)
   2. Glynn Johnson
   3. Rixson

B. Sizes: Manufacturer's standard for the application.

C. Finishes:
   1. Arms and Brackets: Zinc-plated.

D. Grades: As applicable to item specified.
   1. Comply with BHMA A156.8, Grade 1.

E. Types:
   1. Surface-applied.
   2. Concealed.

2.15 PROTECTION PLATES

A. Manufacturers:
   1. ABH.
   2. Burns.
   3. Trimco.

B. Properties:
   1. Plates:
      - Kick Plates: Provide along bottom edge of push side of every wood door with closer, except aluminum storefront and glass entry doors, unless otherwise indicated.
        a) Size: 10 inches (254 mm) high by 2 inch (51 mm) less door width (LDW) on push side of door.
      - Mop Plates: Provide along bottom edge of pull side of doors to provide protection from cleaning liquids and equipment damage to door surface.
      - Edges: Beveled, on four (4) unless otherwise indicated. CSK Screws.

C. Grades: Comply with BHMA A156.6.

D. Material: As indicated for each item by BHMA material and finish designation.
   1. Metal Properties: Stainless steel.
      - Metal, Standard Duty: Thickness 0.050 inch (1.27 mm), minimum.

E. Installation:
   1. Fasteners: Countersunk screw fasteners

2.16 STOPS AND HOLDERS

A. Manufacturers:
   1. ABH.
   2. Burns.
   3. Trimco.

B. General: Provide overhead stop/holder when wall or floor stop is not feasible.

C. Grades:
   1. Door Holders, Wall Bumpers, and Floor Stops: Comply with BHMA A156.16 and Resilient Material Retention Test as described in this standard.

D. Types:

2.17 THRESHOLDS

A. Manufacturers:
   1. National Guard Products
   2. Pemko.
   3. Reese.

B. Properties:
   1. Threshold Surface: Fluted horizontal grooves across full width.

C. Grades: Thresholds: Comply with BHMA A156.21.

D. Material: Base metal as indicated for each item by BHMA material and finish designation.

E. Types: As applicable to project conditions. Provide barrier-free type at every location where specified.
   1. Saddle Thresholds: Without thermal break.
   2. Bumper Seal Thresholds with Gasket: Use silicone gaskets.

2.18 WEATHERSTRIPPING AND GASKETING

A. Manufacturers:
   1. National Guard Products, Inc: www.ngpinc.com/#sle.
   2. Pemko .
   3. Reese.

B. Products:
   1. Weatherstripping: See Door Hardware Schedule.
   2. Smoke Seals: See Door Hardware Schedule.
   3. Meeting Stile Seals: See Door Hardware Schedule.
   4. Door Bottom Seals:
      - Door Sweeps: See Door Hardware Schedule.

2.19 ELECTRIFIED HARDWARE

A. Manufacturers: Door Position Switch
   1. Dorma MC4
   2. Securitron DPS
   3. SDC MC-4

B. Properties:
   1. Door Position Switches: Recessed devices with magnetic contacts.
      - DPDT configuration.

2.20 KEYS AND CORES

A. Manufacturers:
   1. BEST, CORMAX Plus, No Substitution, Existing District System.

B. Properties: Complying with guidelines of BHMA A156.28.
   1. Provide small format interchangeable core.
   2. Provide interchangeable cores for all locks listed in the hardware spec by one supplier even if door supplied by different manufacturer.
   3. Provide Standard keys and cores.
   4. Stamp all keys “DO NOT DUPLICATE”
   5. Provide keying information in compliance with DHI (KSN) standards.

6. Keying Schedule: Arrange for a keying meeting, with Architect, Owner and hardware supplier, and other involved parties to ensure locksets and locking hardware, are functionally correct and keying complies with project requirements.
7. Keying: Master keyed.
8. Include construction keying and control keying with Brass removable core cylinders.
9. Supply keys in following quantities:
    - Grand Master Keys: 2 each.
    - Master Keys: 4 each each group.
    - Construction Master Keys: 4 each.
    - Construction Control Keys: 2 each.
    - Perm Core Control Keys: 4 each.
    - Change Keys: 2 each change keys for each keyed core.
10. Deliver keys with identifying tags to Owner by security shipment direct from manufacturer.
11. Include installation of permanent cores and return construction cores to hardware supplier. Construction cores and keys to remain property of hardware supplier.

2.21 KEY CABINETS

A. Manufacturers:
    1. Lund Equipment Company, Inc
    2. Telkee

B. Properties:.
    1. Key Management System: For each keyed lock on project, provide one set of consecutively numbered duplicate key tags with hanging hole and snap catch.
    2. Security Key Tags: For each keyed lock on project, provide one set of matching key tags for permanent attachment to one key of each set.
    3. Provide key collection envelopes, receipt cards, and index cards in quantity suitable to manage number of keys.
    4. Mounting: Wall surface mounted.
    5. CapacityActual quantity of keys, plus 50 percent additional capacity.
    6. Key cabinet lock to facility's keying system.

C. Finishes: Baked enamel, manufacturer's standard color.

D. Material: Sheet steel.

2.22 FINISHES

A. Finishes: Identified in Hardware Sets.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that doors and frames are ready to receive this work; labeled, fire-rated doors and frames are properly installed, and dimensions are as indicated on shop drawings.

B. Correct all defects prior to proceeding with installation.

C. Verify that electric power is available to power operated devices and of correct characteristics.

3.02 INSTALLATION

A. Install hardware in accordance with manufacturer's instructions and applicable codes.

B. Install hardware using the manufacturer’s fasteners provided. Drill and tap all screw holes located in metallic materials. Do not use “Riv-Nuts” or similar products.

C. Install hardware on fire-rated doors and frames in accordance with applicable codes and NFPA 80.

D. Install hardware for smoke and draft control doors in accordance with NFPA 105.

E. Use templates provided by hardware item manufacturer.

F. Do not install surface mounted items until application of finishes to substrate are fully completed.

G. Wash down masonry walls and complete painting or staining of doors and frames.

H. Complete finish flooring prior to installation of thresholds.

I. Set exterior door thresholds with full-width bead of elastomeric sealant at each point of contact with floor providing a continuous weather seal; anchor thresholds with stainless steel countersunk screws.

3.03 FIELD QUALITY CONTROL

A. Perform field inspection and testing under provisions of Section 014000 - Quality Requirements.

3.04 CLEANING

A. Clean finished hardware in accordance with manufacturer's written instructions after final adjustments have been made.

B. Clean adjacent surfaces soiled by hardware installation activities.

3.05 PROTECTION

A. Protect finished Work under provisions of Section 017000 - Execution and Closeout Requirements.

B. Do not permit adjacent work to damage hardware or finish.

SECTION 08 80 00 - GLAZING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
B. Related Sections: Section(s) related to this section include:

1. Division 06 Section “Interior Architectural Woodwork” for glazing in custom fabrications.
2. Division 08 Section “Aluminum –Framed Entrances and Storefronts”
3. Division 08 Section “Glazed Aluminum Curtain Walls”
4. Division 08 Section “Security Glazing”

C. Section includes glazing for the following products and applications, including those specified in other Sections where glazing requirements are specified by reference to this Section:

1. Doors.
2. Glazed curtain walls.
3. Storefront framing.
4. Glazed entrances.
5. Interior borrowed lites.

1.2 DEFINITIONS

A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.
B. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.
C. Interspace: Space between lites of an insulating-glass unit.
D. Deterioration of Coated Glass: Defects developed from normal use that are attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in metallic coating.
E. Deterioration of Insulating Glass: Failure of hermetic seal under normal use that is attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.
F. Deterioration of Laminated Glass: Defects developed from normal use that are attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning laminated glass contrary to manufacturer's written

instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1.3 PERFORMANCE REQUIREMENTS

A. General: Provide glazing systems capable of withstanding normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, and installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

B. Glass Design: Glass thickness designations indicated are minimums and are for detailing only. Confirm glass thicknesses by analyzing Project loads and in-service conditions. Provide glass lites in the thickness designations indicated for various size openings, but not less than thicknesses and in strengths (annealed or heat treated) required to meet or exceed the following criteria:

1. Glass Thicknesses: Select minimum glass thicknesses to comply with ASTM E 1300, according to the following requirements:

   a. Design Wind Loads: Determine design wind loads applicable to Project from basic wind speed indicated in miles per hour (meters per second) at 33 feet (10 m) above grade, according to ASCE 7, "Minimum Design Loads for Buildings and Other Structures": Section 6.5, "Method 2-Analytical Procedure," based on mean roof heights above grade indicated on Drawings.

   b. Specified Design Snow Loads: As indicated, but not less than snow loads applicable to Project as required by ASCE 7, "Minimum Design Loads for Buildings and Other Structures": Section 7.0, "Snow Loads."

   c. Probability of Breakage for Vertical Glazing: 8 lites per 1000 for lites set vertically or not more than 15 degrees off vertical and under wind action.

      1) Load Duration: 60 seconds or less .

   d. Probability of Breakage for Sloped Glazing: 1 lite per 1000 for lites set more than 15 degrees off vertical and under wind and snow action.

      1) Load Duration: 30 days.

   e. Maximum Lateral Deflection: For the following types of glass supported on all 4 edges, provide thickness required that limits center deflection at design wind pressure to 1/50 times the short side length or 1 inch (25 mm), whichever is less.

      1) For monolithic-glass lites heat treated to resist wind loads.
      2) For insulating glass.
      3) For laminated-glass lites.

   f. Minimum Glass Thickness for Exterior Lites: Not less than 6.0 mm.

g. Thickness of Tinted and Heat-Absorbing Glass: Provide the same thickness for each tint color indicated throughout Project.

C. Thermal Movements: Provide glazing that allows for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures acting on glass framing members and glazing components. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

D. Thermal and Optical Performance Properties: Provide glass with performance properties specified based on manufacturer's published test data, as determined according to procedures indicated below:

1. For monolithic-glass lites, properties are based on units with lites 6.0 mm thick.
2. For laminated-glass lites, properties are based on products of construction indicated.
3. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
4. Center-of-Glass Values: Based on using LBL-44789 WINDOW 5.0 computer program for the following methodologies:
   a. U-Factors: NFRC 100 expressed as Btu/ sq. ft. x h x deg F (W/sq. m x K).
   b. Solar Heat Gain Coefficient: NFRC 200.
   c. Solar Optical Properties: NFRC 300.

1.4 SUBMITTALS

A. Product Data: For each glass product and glazing material indicated.
B. Glass Samples: For each type of glass product; 12 inches square.
C. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.
D. Qualification Data: For installers.
E. Product Certificates: For glass and glazing products, from manufacturer.
F. Warranties: Sample of special warranties.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications for Insulating-Glass Units with Sputter-Coated, Low-E Coatings: A qualified insulating-glass manufacturer who is approved by coated-glass manufacturer.
B. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.
C. Source Limitations for Glass: Obtain from single source from single manufacturer for each glass type.

D. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer for each product and installation method.

E. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.

1. GANA Publications: GANA's "Laminated Glazing Reference Manual" and GANA's "Glazing Manual."
2. AAMA Publications: AAMA GDSG-1, "Glass Design for Sloped Glazing," and AAMA TIR-A7, "Sloped Glazing Guidelines."
3. IGMA Publication for Sloped Glazing: IGMA TB-3001, "Guidelines for Sloped Glazing."
4. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."

F. Fire-Protection-Rated Glazing Labeling: Permanently mark fire-protection-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, test standard, whether glazing is for use in fire doors or other openings, whether or not glazing passes hose-stream test, whether or not glazing has a temperature rise rating of 450 deg F, and the fire-resistance rating in minutes.

G. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.

B. Comply with insulating-glass manufacturer's written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.

1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40 deg F.

1.8 WARRANTY

A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer's standard form in which coated-glass manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

1. Warranty Period: 10 years from date of Substantial Completion.

B. Manufacturer's Special Warranty on Laminated Glass: Manufacturer's standard form in which laminated-glass manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1. Warranty Period: Five years from date of Substantial Completion.

C. Manufacturer's Special Warranty on Insulating Glass: Manufacturer's standard form in which insulating-glass manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GLASS PRODUCTS, GENERAL

A. Basis of Design: Vitro Architectural Glass Solarban 70
B. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass lites in thicknesses as needed to comply with requirements indicated.

1. Minimum Glass Thickness for Exterior Lites: Not less than 6.0 mm.

C. Strength: Where float glass is indicated, provide annealed float glass, Kind HS heat-treated float glass, or Kind FT heat-treated float glass as needed to comply with "Performance Requirements" Article. Where heat-strengthened glass is indicated, provide Kind HS heat-treated float glass or Kind FT heat-treated float glass as needed to comply with "Performance Requirements" Article. Where fully tempered glass is indicated, provide Kind FT heat-treated float glass.

D. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:

1. For monolithic-glass lites, properties are based on units with lites 6.0 mm thick.
2. For laminated-glass lites, properties are based on products of construction indicated.
3. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
4. U-Factors: Center-of-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F.
5. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
6. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

2.2 GLASS PRODUCTS

A. Provide heat-strengthened glass at locations where recommended by the glass manufacturer.
B. Provide safety glass as specified in locations where required by Consumer Product Safety Commission "Safety Standard for Architectural Glazing Material" (16 CFR 1201.)
C. Provide Clear Laminated Insulating Low-E-Glass “LIG” on all windows, storefronts, curtainwalls and doors on first floor up to 10’ above grade.
D. TYPES

1. Clear Tempered Glass: Indicated on Drawings as "**CT**"

   a. glass; ¼ inch thick, clear tempered glass;
   b. Provide "Tempered Glass" by VITRO ARCHITECTURAL GLASS, Guardian; or equal products of alternatives of the quality necessary to meet the specifications
   c. Provide where indicated on the Drawings

2. Clear Insulating Low-E Glass: Indicated on Drawings as “**CIG**”

   a. consisting of an exterior side of 1/4” clear glass and an interior side of 1/4” clear glass.
   b. Glass shall be separated by a spacer and be hermetically sealed using double seal organic sealants.
   c. Low E coating on #2 surface.
   d. Unit thickness including ½-inch air space shall total 1 inch.
   e. Provide “Solorban 70 - Clear” by VITRO ARCHITECTURAL GLASS; or “Sun-Guard SN-68” by Guardian; or equal products of alternatives of the quality necessary to meet the specifications.
   f. Provide at locations indicated except where safety glass is required by CPSC 16 CFR 1201;

3. Clear Insulating Tempered Low-E Glass: Indicated on Drawings as “**CIT**”

   a. exterior side of 1/4” clear tempered glass
   b. interior side of 1/4” clear tempered glass.

c. Glass shall be separated by a spacer and be hermetically sealed using double seal organic sealants.
d. Unit thickness including ½-inch air space shall total 1 inch.
e. Low-E Coating on #2 surface.
f. Provide “Solorban 70 - Clear” by VITRO ARCHITECTURAL GLASS; or equal products of alternatives of the quality necessary to meet the specifications.
g. Provide in Curtainwall and/or Storefront System where safety glass is required by CPSC 16 CFR 1201.

4. Insulating Glass Spandrel: Indicated on Drawings as “**SP**”

a. exterior side of 1/4 inch tinted tempered glass
b. interior side of spandrelite glass fourth surface.
c. Glass separated by a spacer and hermetically sealed using double seal organic sealants.
d. Unit thickness including 1/2-inch air space shall total 1 inch.
e. "OPACI-COAT-300®" by VITRO ARCHITECTURAL GLASS, or alternatives of the quality necessary to meet the specifications.

5. Clear Glass: Indicated on Drawings as “**CG**”

a. ¼ inch thick ultra-clear glass, VLT: 90 percent
b. U-Value Winter 1.02
c. U-Value Summer 0.93
d. SHGC .90
e. Shading Coefficient 1.03
f. Visible Light reflectance 8 percent.
g. Provide “Starphire” by VITRO ARCHITECTURAL GLASS; or equal products of alternatives of the quality necessary to meet the specifications

6. Specially Tempered Monolithic Glass: Indicated on Drawings as “**FRG**”

a. Proprietary Category II safety glazing product in the form of a specially tempered 1/4-inch- (6.4-mm-) thick monolithic lite, and as follows:

1) Fire-Protection Rating: 20 minutes, and permanently labeled by a testing and inspecting agency acceptable to authorities having jurisdiction.
2) Basis of Design Product: Subject to compliance with requirements, “FireGlass20” as manufactured by J. R. Four Ltd., and distributed by Technical Glass Products or a comparable product by one of the following:.

a) “SuperLite20” by SAFTIFIRST.
b) AGC InterEdge, Technologies., ; PyroEdge-20.

2.3 GLAZING GASKETS

A. Dense Compression Gaskets: Molded or extruded gaskets of profile and hardness required to maintain watertight seal, made from one of the following:

1. Neoprene complying with ASTM C 864.
2. EPDM complying with ASTM C 864.
3. Silicone complying with ASTM C 1115.
4. Thermoplastic polyolefin rubber complying with ASTM C 1115.

B. Soft Compression Gaskets: Extruded or molded, closed-cell, integral-skinned neoprene, EPDM, silicone, or thermoplastic polyolefin rubber gaskets complying with ASTM C 509, Type II, black; of profile and hardness required to maintain watertight seal.

C. Lock-Strip Gaskets: Neoprene extrusions in size and shape indicated, fabricated into frames with molded corner units and zipper lock-strips, complying with ASTM C 542, black.

D. Neoprene Glazing Gaskets for bullet resistant glazing:

1. Interior Glazing gaskets closed cell cellular neoprene conforming to ASTM C509 Type II Option 1 with a 40-50 Shore A Durometer.
2. Exterior Glazing gaskets solid neoprene conforming to ASTM C864 with a 65-75 Shore A Durometer.

2.4 GLAZING SEALANTS

A. General: Provide products of type indicated, complying with the following requirements:

1. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
3. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range.

B. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 100/50, Use NT.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Dow Corning Corporation; 790.
b. GE Advanced Materials - Silicones; SilPruf LM SCS2700.
c. Tremco Incorporated; Spectrem 1.

C. Glazing Sealants for Fire-Rated Glazing Products: Products that are approved by testing agencies that listed and labeled fire-resistant glazing products with which they are used for applications and fire-protection ratings indicated.

2.5 GLAZING TAPES

A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:

1. AAMA 804.3 tape, where indicated.
2. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
3. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.

B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:

1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.6 MISCELLANEOUS GLAZING MATERIALS

A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.
D. Spacers: Elastomeric blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
E. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).
F. Cylindrical Glazing Sealant Backing: ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.
G. Perimeter Insulation for Fire-Resistive Glazing: Product that is approved by testing agency that listed and labeled fire-resistant glazing product with which it is used for application and fire-protection rating indicated.

2.7 FABRICATION OF GLAZING UNITS

A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written

instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.

C. Grind smooth and polish exposed glass edges and corners.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:

1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
2. Presence and functioning of weep systems.
3. Minimum required face and edge clearances.
4. Effective sealing between joints of glass-framing members.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

3.3 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.

B. Adjust glazing channel dimensions as required by Project conditions during installation to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.

D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.

E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

G. Provide spacers for glass lites where length plus width is larger than 50 inches.

1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
2. Provide 1/8-inch minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.
I. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
J. Set glass lites with proper orientation so that coatings face exterior or interior as specified.
K. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.
L. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

3.4 TAPE GLAZING

A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.
D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
E. Do not remove release paper from tape until right before each glazing unit is installed.
F. Apply heel bead of elastomeric sealant.
G. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.5 GASKET GLAZING (DRY)

A. Fabricate compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.
C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start

gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
E. Install gaskets so they protrude past face of glazing stops.

3.6 SEALANT GLAZING (WET)

A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.7 CLEANING AND PROTECTION

A. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.
C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.
D. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.
E. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION 08 80 00

SECTION 08 88 53 - SECURITY GLAZING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes glass-clad polycarbonate and insulating security glazing for the following applications:
   1. Doors.
   2. Storefront framing.
   3. Interior borrowed lites.

B. Related Sections include the following:
   1. Division 08 Section “Glazing”: Non-security glazing types including clear float glass lites incorporated as part of insulated security glazing assemblies.
   2. Division 08 Sections “Aluminum-Framed Entrances and Storefronts” and “Glazed Aluminum Curtain Walls”.

1.2 DEFINITIONS

A. Glazing Manufacturers: Firms that produce primary glass or fabricated security glazing, as defined in referenced glazing publications.
B. Interspace: Space between lites of insulating security glazing.

1.3 COORDINATION

A. Coordinate glazing channel dimensions to provide necessary bite on security glazing, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
   2. Review temporary protection requirements for security glazing during and after installation.

1.5 SUBMITTALS

A. Product Data: For each type of product.
B. Security Glazing Samples: For each type of security glazing; 12 inches square.

C. Glazing Accessory Samples: For sealants, in 12-inch lengths. Install sealant Samples between two strips of material representative in color of the adjoining framing system.
D. Security Glazing Schedule: List security glazing types and thicknesses for each size opening and location. Use same designations indicated on Drawings. Indicate coordinated dimensions of security glazing and construction that receives security glazing, including clearances and glazing channel dimensions.
E. Qualification Data: For installers, manufacturers of insulating security glazing with sputter-coated, low-e coatings and glazing testing agency.
F. Product Certificates: For each type of product indicated, from manufacturer.
G. Product Test Reports: For each type of security glazing, for tests performed by manufacturer and witnessed by a qualified testing agency.
H. Product Test Reports: For each type of glazing sealant, for tests performed by a qualified testing agency.
    1. Provide test reports based on testing current sealant formulations within previous 36-month period.

I. Preconstruction adhesion and compatibility test reports.
J. Sample Warranties: For special warranties.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs glazing installers for this Project who are certified under the National Glass Association Glazier Certification Program.
B. Sealant Testing Agency Qualifications: Qualified according to ASTM C 1021 for testing indicated.

1.7 PRECONSTRUCTION TESTING

A. Preconstruction Adhesion and Compatibility Testing: Test each security glazing type, tape sealant, gasket, glazing accessory, and glazing-framing member for adhesion to and compatibility with elastomeric glazing sealants.
    1. Testing will not be required if data based on previous testing of current sealant products and glazing materials match those submitted.
    2. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to security glazing, tape sealants, gaskets, and glazing channel substrates.
    3. Test no fewer than eight Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
    4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
    5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures, including the use of specially formulated primers.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Protect security glazing and glazing materials according to manufacturer's written instructions. Prevent damage from condensation, temperature changes, direct exposure to sun, or other causes.
B. Comply with insulating security glazing manufacturers' written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.9 FIELD CONDITIONS

A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
   1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40 deg F.

1.10 WARRANTY

A. Manufacturer's Special Warranty for Laminated Glass and Polycarbonate: Manufacturer agrees to replace laminated glass and polycarbonate that deteriorates within specified warranty period. Deterioration of laminated glass and polycarbonate is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass and polycarbonate contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glazing, blemishes exceeding those allowed by referenced glass-clad polycarbonate standard, yellowing, and loss of light transmission.
   1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Security Glazing: Obtain security glazing from single source from single manufacturer using the same types of lites, plies, interlayers, and spacers for each security glazing type indicated.
B. Source Limitations for Glazing Sealants and Gaskets: Obtain from single source from single manufacturer for each product and installation method.

2.2 PERFORMANCE REQUIREMENTS

A. General:

   1. Installed security glazing shall withstand normal thermal movement and wind loads without failure, including loss or breakage attributable to the following: defective

manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing; or other defects in construction.

2. Installed security glazing shall withstand security-related loads and forces without damage to the glazing beyond that allowed by referenced standards.

B. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated.

1. Design Procedure for Glass: ASTM E 1300 and ICC's International Building Code.
2. Design Wind Pressures: For exterior security glazing, as indicated on Drawings.
3. Forced-Entry Resistance: Class 1.3 according to ASTM F1233.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on glazing framing members and glazing components.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

D. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.

2.3 SECURITY GLAZING, GENERAL

A. Glazing Publications: Comply with published recommendations of security glazing and glazing material manufacturers and organizations below unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.
1. GANA Publications: "Laminated Glazing Reference Manual" and "Glazing Manual."
2. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."

B. Plastic Glazing Labeling: Identify plastic sheets with appropriate markings of applicable testing and inspecting agency, indicating compliance with required fire-test-response characteristics.

C. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the Safety Glazing Certification Council. Label shall indicate manufacturer's name, type of glazing, glass thickness, and safety glazing standard with which glazing complies.

D. Fire-Test-Response Characteristics of Polycarbonate Sheets: As determined by testing polycarbonate sheets identical to those used in security glazing products by a qualified testing agency acceptable to authorities having jurisdiction.
1. Self-ignition temperature of 650 deg F or more when tested according to ASTM D 1929 on plastic sheets in thicknesses indicated for the Work.
2. Smoke-Developed Index of 450 or less when tested according to ASTM E 84, or smoke density of 75 or less when tested according to ASTM D 2843 on plastic sheets in thicknesses indicated for the Work.
3. Burning extent of 1 inch or less when tested according to ASTM D 635 at a nominal thickness of 0.060 inch or thickness indicated for the Work.

2.4 GLASS PRODUCTS

A. Float Glass: ASTM C 1036, Type I, Quality-Q3, Class I (clear) unless otherwise indicated.
B. Heat-Treated Float Glass: ASTM C 1048; Type I; Quality-Q3; Class I (clear) unless otherwise indicated; of kind and condition indicated.

1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
2. For heat-strengthened float glass, comply with requirements for Kind HS.
3. For fully tempered float glass, comply with requirements for Kind FT.
4. For uncoated glass, comply with requirements for Condition A.
5. For coated vision glass, comply with requirements for Condition C (other coated glass).

2.5 POLYCARBONATE SECURITY GLAZING

A. Polycarbonate Sheet: ASTM C 1349, Appendix X1, Type II, coated, mar-resistant, UV-stabilized polycarbonate with coating on exposed surfaces and Type I, standard, UV-stabilized polycarbonate where no surfaces are exposed.
B. Glass-Clad Polycarbonate: ASTM C 1349.

2.6 INSULATING SECURITY GLAZING

A. Insulating Security Glazing: Factory-assembled units, consisting of sealed lites of glazing material indicated separated by a dehydrated interspace, qualified according to ASTM E 2190.
1. Sealing System: Dual seal, with manufacturer's standard primary and secondary sealants.
2. Spacer: Manufacturer's standard spacer material and construction.

2.7 GLAZING SEALANTS

A. General:

1. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they contact, including security glazing, seals of insulating security glazing and air-gap security glazing, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
2. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range.

B. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 100/50, Use NT.

C. Security Sealant: Manufacturer's standard, nonsag, tamper-resistant sealant for joints with low movement complying with ASTM C 920, Grade NS, Class 12.5 or 25, Use NT, and with a Shore A hardness of at least 45 when tested according to ASTM C 661.

2.8 GLAZING TAPES

A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and security glazing manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:
   1. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
   2. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.

B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:

   1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
   2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.9 MISCELLANEOUS GLAZING MATERIALS

A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of security glazing and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.
D. Spacers: Elastomeric blocks or continuous extrusions of hardness required by security glazing manufacturer to maintain security glazing lites in place for installation indicated.
E. Edge Blocks: Elastomeric material of hardness needed to limit security glazing lateral movement (side walking).
F. Cylindrical Glazing Sealant Backing: ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

2.10 FABRICATION OF SECURITY GLAZING

A. Fabricate security glazing in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written

instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

B. Grind smooth and polish exposed security glazing edges and corners.

2.11 SECURITY GLASS UNITS

A. Security Glazing Type SG: Clear symmetrical glass-clad polycarbonate with both exposed surfaces of clear float glass.
   1. Basis-of-Design Product: Global Security Glazing, Inc.; Childguard Security Glazing.
   2. Comparable Products: Subject to compliance with requirements, provide the basis-of-design product indicated or a comparable product by one of the following:
      a. LTI Smart Glass Inc.; School Guard Glass
   3. Forced-Entry Resistance: Class 1.3 according to ASTM F1233.
   4. Overall Unit Thickness: 3/8 inch
   5. Kind FT (fully tempered).
   6. Core: Manufacturer's standard polycarbonate.
   7. Overall Visible Light Transmittance: .77 percent minimum.
   8. Provide safety glazing labeling.

2.12 INSULATING SECURITY GLASS UNITS

A. Security Glazing Type ISG: Clear insulating security glazing with monolithic glass outdoor lite and glass-clad polycarbonate indoor lite.
   1. Basis-of-Design Product: Global Security Glazing, Inc.; Childguard Security Glazing.
   2. Comparable Products: Subject to compliance with requirements, provide the basis-of-design product indicated or a comparable product by one of the following:
      a. LTI Smart Glass Inc.; School Guard Glass.
   1. Forced-Entry Resistance: Class 1.3 according to ASTM F1233.
   2. Overall Unit Thickness: 1-inch nominal.
   3. Outdoor Lite: Class 1 (clear) float glass, Vitro Architectural Glass; Solarban 60 Solar Control Low-E or comparable product.
      a. Kind FT (fully tempered).
   4. Indoor Lite: Glass-clad polycarbonate.
      a. Outer and inner glass plies: Class 1 (clear) float glass 3/8".
         1) Kind FT (fully tempered).
      b. Core: Manufacturer's standard polycarbonate.
   5. Interspace Content: Air.
   6. Low-E Coating: Sputtered on second surface.
   7. Visible Light Transmittance: 68-70 percent.
   8. Winter Nighttime U-Factor: 0.29 maximum.
   9. Summer Daytime U-Factor: 0.28 maximum.
   10. Solar Heat Gain Coefficient: 0.38 maximum.
   11. Outdoor Visible Reflectance: 0.11 percent maximum.
   12. Shading Coefficient: 0.44
   13. Provide safety glazing labeling.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine framing for security glazing, with Installer present, for compliance with the following:

1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
2. Presence and functioning of weep system.
3. Minimum required face or edge clearances.
4. Minimum required bite.
5. Effective sealing between joints of framing members.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean glazing channels and other framing members receiving security glazing immediately before glazing. Remove coatings not firmly bonded to substrates.
B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that will leave visible marks in the completed work.

3.3 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of security glazing, sealants, gaskets, and other glazing materials unless more stringent requirements are indicated, including those in referenced glazing publications.
B. Protect edges of security glazing from damage during handling and installation. Remove damaged security glazing from Project site and legally dispose of off Project site. Damaged security glazing includes units with edge or face damage or other imperfections that, when installed, could weaken security glazing and impair performance and appearance.
C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications unless otherwise required by glazing unit manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
E. Do not exceed edge pressures stipulated by security glazing manufacturers for installing lites.
F. Provide spacers for security glazing lites where the length plus width is larger than 50 inches.
    1. Locate spacers directly opposite each other on both inside and outside faces of security glazing. Install correct size and spacing to preserve required face clearances unless gaskets and glazing tapes are used that have demonstrated

ability to maintain required face clearances and to comply with performance requirements.

2. Provide 1/8-inch minimum bite of spacers on glazing lites and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

G. Provide edge blocking where indicated or needed to prevent security glazing from moving sideways in glazing channel, as recommended in writing by security glazing manufacturer and according to requirements in referenced glazing publications.
H. Set security glazing in each series with uniform pattern, draw, bow, and similar characteristics.
I. Set coated security glazing with proper orientation so that coatings and films face exterior or interior as specified.
J. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.
K. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

3.4 TAPE GLAZING

A. Position tapes on fixed stops so that, when compressed by security glazing, their exposed edges are flush with or protrude slightly above sightline of stops.
B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.
D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
E. Do not remove release paper from tape until just before each glazing unit is installed.
F. Apply heel bead of elastomeric sealant.
G. Center security glazing in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.5 GASKET GLAZING (DRY)

A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
B. Insert soft compression gasket securely in place between glazing unit and frame or fixed stop, so it is securely in place with joints miter cut and bonded together at corners.
C. Installation with Drive-in Wedge Gaskets: Center security glazing in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets

to produce a weathertight seal without developing bending stresses in security glazing. Seal gasket joints with sealant recommended by gasket manufacturer.

D. Installation with Pressure-Glazing Stops: Center security glazing in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in security glazing. Seal gasket joints with sealant recommended by gasket manufacturer.

E. Install gaskets so they protrude past face of glazing stops.

3.6 SEALANT GLAZING (WET)

A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between security glazing and glazing stops to maintain face clearances and to prevent sealant from extruding into glazing channel and blocking weep systems. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.

B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to security glazing and channel surfaces.

C. Tool exposed surfaces of sealants to provide a substantial washaway from security glazing.

3.7 CLEANING AND PROTECTION

A. Immediately after installation remove nonpermanent labels and clean surfaces.

B. Protect security glazing from contact with contaminating substances resulting from construction operations, including weld splatter. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.

1. If, despite such protection, contaminating substances do come into contact with security glazing, remove substances immediately as recommended in writing by security glazing manufacturer. Remove and replace security glazing that cannot be cleaned without damage.

C. Wash security glazing on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash security glazing as recommended in writing by security glazing manufacturer.

END OF SECTION 08 88 53

SECTION 09 21 16 - GYPSUM BOARD ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:
1. Interior gypsum wallboard, including abuse-resistant gypsum board.
2. Tile backing panels.
3. Non-load-bearing steel framing for gypsum board assemblies, interior gypsum board soffits, and exterior fiber cement board soffits.
4. Special corner finishing units for gypsum board assemblies, designed to bond structurally with gypsum panels to prevent cracks.
5. Sound attenuation blankets and acoustical sealant for gypsum board assemblies.
6. Installation of access panels in gypsum board assemblies.

B. Related Sections include the following:
1. Division 05 Section "Cold-Formed Metal Framing": Steel framing for exterior walls, roofs and other conditions.
2. Division 06 Section "Rough Carpentry": Wood blocking for support of wall-mounted items; and gypsum wallboard used as underlayment for interior raised platform construction.
3. Division 06 Section “Sheathing": Installations over steel framing.
4. Division 07 Section "Firestopping": Firestopping.
5. Division 07 Section "Fire-Resistive Joint Systems": Fire-resistance-rated joint sealants.
6. Division 09 Section "Tiling": Mortar applied over cementitious backer units.

1.2 DEFINITIONS

A. Gypsum Board Terminology: Refer to ASTM C 11 for definitions of terms for gypsum board assemblies not defined in this Section or in other referenced standards.

1.3 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide non-load-bearing gypsum board wall and partition assemblies capable of withstanding uniform load of 5 lbf/sq. ft. over entire wall for heights of partitions indicated without failing.
1. Deflection Limit: L/360, unless otherwise indicated; L/600 for gypsum board assemblies with ceramic tile facing.
2. Provide framing member size, thickness and spacing, and supplemental bracing as necessary to comply with manufacturer's published recommendations for conditions of installation and performance requirements.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Sustainable Design Submittals:
C. Shop Drawings: Show locations, fabrication, and installation of control and expansion joints including plans, elevations, sections, details of components, and attachments to other units of Work.
D. Samples: For the following products:
   1. Trim Accessories: Full-size sample in 12-inch-long length for each trim accessory indicated.

1.5 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: For gypsum board assemblies with fire-resistance ratings, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.
   1. Fire-Resistance-Rated Assemblies: Indicated by design designations from UL's "Fire Resistance Directory."
   2. Construct fire-resistance rated partitions in compliance with tested assembly requirements indicated on Drawings.
   3. Rated assemblies to be substantiated from applicable testing using proposed products, by Contractor.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Deliver materials in original packages, containers, or bundles bearing brand name and identification of manufacturer or supplier.
B. Store materials inside under cover and keep them dry and protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, and other causes. Stack gypsum panels flat to prevent sagging.
C. Protect cold-formed framing from corrosion, deformation, and other damage during delivery, storage, and handling as required by AISI’s “Code of Standard Practice”.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Comply with ASTM C 840 requirements or gypsum board manufacturer's written recommendations, whichever are more stringent.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Steel Framing and Furring:
      a. Consolidated Systems, Inc.
      b. ClarkDietrich Building Systems.
      c. Marino\WARE.
   2. Gypsum Board and Related Products:
      a. G-P Gypsum Corp.
      b. National Gypsum Company.

c. United States Gypsum Co.
d. Lafarge, North America, Inc.

3. Special Corner Finishing Units:
   a. No-Coat; distributed by Grabber Construction Products, (888) 662-6281.

2.2 STEEL SUSPENDED CEILING AND SOFFIT FRAMING

A. Contractor's Option: Use framing or grid suspension system as specified in this Article.
B. Components, General: Comply with ASTM C 645 for conditions indicated.
C. Tie Wire: ASTM A 641, Class 1 zinc coating, soft temper, 0.0625-inch-diameter wire, or double strand of 0.0475-inch-diameter wire.
D. Hangers: Wire hangers; ASTM A 641, Class 1 zinc coating, soft temper, 0.162-inch diameter.
E. Carrying Channels: Cold-rolled, commercial-steel sheet with a base steel thickness of 0.0538 inch, a minimum 1/2-inch-wide flange, with ASTM A 653, G40, hot-dip galvanized zinc coating; depth as needed to support impose loads, but not less than the following:
   1. Overhead Structural Support Spacing up to 4 Feet: 1-1/2 inches.
   2. Overhead Structural Support Spacing Between 4 Feet and 6 Feet: 2-1/2 inches.
   3. Overhead Structural Support Spacing Between 6 Feet and up to 10 Feet: 4 inches.

F. Furring Channels (Furring Members): Commercial-steel sheet having a coating with equivalent corrosion resistance complying with ASTM A 653, G40, hot-dip galvanized zinc coating.
   1. Steel Studs: ASTM C 645; minimum base metal thickness 0.0296 inch (22 gage).
   2. Depth: 3-5/8 inches unless otherwise indicated.

G. Grid Suspension System for Interior Ceilings: ASTM C 645, direct-hung system composed of main beams and cross-furring members that interlock.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Armstrong World Industries, Inc.; Furring Systems/Drywall.
      b. Chicago Metallic Corporation; Drywall Furring 640 System.
      c. USG Interiors, Inc.; Drywall Suspension System.
   2. Supplemental Supports: In locations where building structural elements supporting ceiling suspension systems are spaced more than 48 inches o.c. and where obstructions or other conditions prevent support of ceiling suspension systems at 48 inches o.c. or less, provide cold-formed metal framing to support ceiling systems to comply with specified standards, with depth of supplemental framing members not less than the following:
      a. Overhead Structural Support Spacing up to 4 Feet: 1-1/2 inches.
      b. Overhead Structural Support Spacing Between 4 Feet and 6 Feet: 2-1/2 inches.
      c. Overhead Structural Support Spacing Between 6 Feet and 10 Feet: 4 inches.

2.3 STEEL PARTITION AND SOFFIT FRAMING

A. Components, General: As follows:

1. Comply with ASTM C 645 for conditions indicated.
2. Steel Sheet Components: Complying with ASTM C 645 requirements for metal and having a coating with equivalent corrosion resistance complying with ASTM A 653, G40, hot-dip galvanized zinc coating. A40 galvannealed products are not acceptable.
    a. Coatings shall demonstrate equivalent corrosion resistance with an evaluation report acceptable to the authority having jurisdiction.

B. Steel Studs and Runners: ASTM C 645; depth 3-5/8 inches unless otherwise indicated; thickness as follows:
1. 0.027 inch (22 gage) unless otherwise indicated or required by referenced standards to support indicated loads within maximum deflections specified.
2. 0.0296 inch (22 gage) for the following applications:
    a. For studs supporting wall-mounted items.
    b. For studs in partitions that are not braced or secured at top.
    c. At fire door frames.
    d. Wherever abuse-resistant or impact-resistant wallboard is indicated.
    e. Where indicated.
3. Equivalent Gauge “EQ” steel studs and runners:
    a. Product: Subject to compliance with requirements, provide ClarkDietrich Building Systems, ProSTUD/ProTRAK products, or a comparable product from one of the members of the SFIA.
    b. Minimum base-steel thickness: 0.0190 inch (20 EQ) 65ksi.
    c. “EQ” (Equivalent Gauge Thickness) steel studs and runners: Members that can show certified third party testing with gypsum board in accordance with ICC ES AC86 (Approved May 2012) need not meet the minimum thickness limitation or minimum section properties set forth in ASTM C 645. The submission of an evaluation report is acceptable to show conformance to this requirement.

C. Proprietary Deflection Track: Steel sheet top runner manufactured to prevent cracking of gypsum board applied to interior partitions resulting from deflection of structure above; in thickness indicated for studs and in width to accommodate depth of studs.
1. Product: Subject to compliance with requirements, provide one of the following:
    a. ClarkDietrich Building Systems; MaxTrak slotted deflection track.
    b. The Steel Network; VertiClip SLD.

D. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated or needed for supported items; minimum base metal thickness 0.0312 inch.

E. Hat-Shaped, Rigid Furring Channels: ASTM C 645.
1. Minimum Base Metal Thickness: 0.0179 inch.
2. Depth: 7/8 inch unless otherwise indicated.

F. Resiliant Furring Channels: ½ inch deep, steel sheet members designed to reduce sound transmission.
1. Product: Subject to compliance with requirements, provide ClarkDietrich Building Systems; Resilient Channel RC Deluxe (RCSD), or approved equal.

G. Headers and Jambs: Manufacturer's proprietary shape used to form header beams and jambs, columns or posts, or web depths indicated, unpunched, with stiffened flanges and as follows:
   1. Product: Subject to compliance with requirements, provide ClarkDietrich Building Systems: Heavy Duty Studs – HDS**,** or approved equal.

H. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1 ¼ inches, wall attachment flange of 7/8 inch, minimum uncoated-metal thickness of 0.0179 inch, and depth required to fit insulation thickness indicated.
   1. Product: Subject to compliance with requirements, provide ClarkDietrich Building Systems; Z-Furring Channel, or a comparable product.

I. Backing Plate: Proprietary fire-resistance-treated blocking and bracing in width indicated.
   1. Product: Subject to compliance with requirements, provide ClarkDietrich Building Systems; Danback Fire-Treated Wood Backing Plate D24F, or approved equal.

J. Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

2.4 INTERIOR GYPSUM WALLBOARD

A. Panel Size: Provide in maximum lengths and widths available that will minimize joints in each area and correspond with support system indicated.

B. Gypsum Wallboard (GWB): ASTM C 1396.
   1. Type: Type X.
   2. Thickness: 5/8 inch.
   3. Long Edges: Tapered.
   4. Location: Typical locations, unless otherwise indicated.

C. Abuse-Resistant Gypsum Wallboard (ARW): ASTM C 1629/C 1629M, [Level 3].
   1. Core: 5/8 inch, Type X.
   2. Long Edges: Tapered.
   3. Locations: Finish floor up to door frame height in all locations.

D. Gypsum Board, Type C: ASTM C 1396/C 1396M. Manufactured to have increased fire-resistive capability.
   1. Product: USG Corporation; Firecode C Core.
   2. Thickness: As required by fire-resistance-rated assembly indicated on Drawings.
   3. Long Edges: Tapered.

2.5 TILE BACKING PANELS

A. Panel Size: Provide in maximum lengths and widths available that will minimize joints in each area and correspond with support system indicated.

B. Glass-Mat, Water-Resistant Backing Board: ASTM C 1178.
   1. Product: Dens-Shield Tile Backer; G-P Gypsum Corp.
   2. Core: 5/8 inch, Type X.

C. Cementitious Backer Units: ANSI A118.9.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Custom Building Products; Wonderboard.
      b. FinPan, Inc.; Util-A-Crete Concrete Backer Board.
      c. United States Gypsum Co.; DUROCK Cement Board.
   2. Thickness: 5/8 inch.

2.6 TRIM ACCESSORIES

A. Interior Trim: ASTM C 1047.
   1. Material: Galvanized or aluminum-coated steel sheet or rolled zinc, except as otherwise indicated.
   2. Shapes:
      a. Cornerbead: Use at outside corners, unless otherwise indicated.
      b. Expansion (Control) Joint: Use where indicated.

B. Self-Masking Trim: PVC edge moldings with removable protective strip.
   1. Use at exposed panel edges where gypsum board abuts other materials.
   2. Manufacturers: Subject to compliance with requirements, provide products one of the following:
      a. Fast Mask S-100; Flannery Inc.
      b. Peel Away Angle; A-Z Bogart Inc.
      c. Ceiling Trim No. 22 Vinyl Tech; Plastic Components Inc.

C. Aluminum Trim: Extruded accessories of profiles and dimensions indicated.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Fry Reglet Corp.
      b. Gordon, Inc.
      c. MM Systems Corporation.
      d. Pittcon Industries.
   2. Aluminum: Alloy and temper with not less than the strength and durability properties of ASTM B 221, alloy 6063-T5.
   3. Finish: Corrosion-resistant primer compatible with joint compound and finish materials specified.
   4. Column Collars: Provide assemblies including aluminum molding, PVC spacer and adjustable band to form reveal between gypsum board surfaces and round steel columns, with flange to receive joint compound.
      a. Basis-of-Design Product: Fry Reglet Corp.; Column Collar.
      b. Finish: Manufacturer's standard chemical conversion coating for field painted finish.
      c. Spacer Color: White. / Dark bronze.

D. Special Corner Finishing Units: Paper-surfaced, pre-formed units with tapered, high-strength plastic membrane forming rigid corner unit with inner surface and paper flap that bond permanently with gypsum board with joint compound.
   1. Product: ULTRACORNER; No-Coat.
   2. Locations: At Contractor's option, special corner finishing units may be used at exterior corners in gypsum board walls instead of metal corner beads.

2.7 JOINT TREATMENT MATERIALS

A. General: Comply with ASTM C 475.

B. Joint Tape: Paper, unless otherwise indicated.
   1. Joint Tape for Tile Backing Panels: As recommended by panel manufacturer.

C. Joint Compound for Interior Gypsum Wallboard: For each coat use formulation that is compatible with other compounds applied on previous or for successive coats.
   1. Prefilling: At open joints, panel edges, and damaged surface areas, use setting-type taping compound.
   2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use setting-type taping compound.
   3. Fill Coat: For second coat, use setting-type, sandable topping compound.
   4. Finish Coat: For third coat, use drying-type, all-purpose compound.
   5. Skim Coat: For final coat of Level 5 finish, use drying-type, all-purpose compound.

D. Joint Compound for Tile Backing Panels: As recommended by manufacturer.

E. Joint Treatment for GRG Fabrications: Provide materials complying with ASTM C 475 and with the recommendations of the manufacturers of both glass-fiber reinforced gypsum fabrications and joint treatment materials for each application indicated.

2.8 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer's written recommendations.

B. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.

C. Steel Drill Screws: ASTM C 1002, unless otherwise indicated.
   1. Use screws complying with ASTM C 954 for fastening panels to steel members from 0.033 to 0.112 inch thick.
   2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.

D. Isolation Strip at Exterior Walls: Asphalt-saturated organic felt; ASTM D 226, Type I (No. 15 asphalt felt), nonperforated.

E. Acoustical Sealant for Exposed and Concealed Joints: Nonsag, paintable, nonstaining, latex sealant complying with ASTM C 834 that effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Pecora Corp.; AC-20 FTR Acoustical and Insulation Sealant.
      b. United States Gypsum Co.; SHEETROCK Acoustical Sealant.

F. Acoustical Sealant for Concealed Joints: Nondrying, nonhardening, nonskinning, nonstaining, gunnable, synthetic-rubber sealant recommended for sealing interior concealed joints to reduce airborne sound transmission.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Ohio Sealants, Inc.; Pro-Series SC-170 Rubber Base Sound Sealant.
      b. Pecora Corp.; AIS-919.
      c. Tremco, Inc.; Tremco Acoustical Sealant.

G. Sound Attenuation Blankets: ASTM C 665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
   1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Suspended Ceilings: Coordinate installation of ceiling suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive ceiling hangers at spacing required to support ceilings and that hangers will develop their full strength.
   1. Furnish concrete inserts and other devises indicated to other trades for installation in advance of time needed for coordination and construction.

3.3 INSTALLING STEEL FRAMING, GENERAL

A. Installation Standards: ASTM C 754, and ASTM C 840 requirements that apply to framing installation.

B. Install supplementary framing, blocking, and bracing at terminations in gypsum board assemblies to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction. Comply with details indicated and with gypsum board manufacturer's written recommendations or, if none available, with United States Gypsum's "Gypsum Construction Handbook."

C. Isolate steel framing from building structure at locations indicated to prevent transfer of loading imposed by structural movement.
   1. Isolate ceiling assemblies where they abut or are penetrated by building structure.

2. Isolate partition framing and wall furring where it abuts structure, except at floor. Install slip-type joints at head of assemblies that avoid axial loading of assembly and laterally support assembly.
   a. Use proprietary deflection track except as otherwise indicated.

D. Do not bridge building control and expansion joints with steel framing or furring members. Frame both sides of joints independently.

3.4 INSTALLING STEEL SUSPENDED CEILING AND SOFFIT FRAMING

A. Suspend ceiling hangers from building structure as follows:
1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or ceiling suspension system. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with the location of hangers required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.
3. Secure wire hangers by looping and wire-tying, either directly to structures or to inserts, eyescrews, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause them to deteriorate or otherwise fail.
4. Secure hangers to structure, including intermediate framing members, by attaching to inserts, eyescrews, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
5. Do not support ceilings directly from permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.
6. Do not attach hangers to steel deck tabs.
7. Do not attach hangers to steel roof deck or to bridging for roof joists or floor joists. Attach hangers to structural members.
8. Do not connect or suspend steel framing from ducts, pipes, or conduit.

B. Installation Tolerances: Install steel framing components for suspended ceilings so members for panel attachment are level to within 1/8 inch in 12 feet measured lengthwise on each member and transversely between parallel members.

C. Sway-brace suspended steel framing with hangers used for support.

D. Wire-tie or clip furring channels to supports, as required to comply with requirements for assemblies indicated.

E. Install suspended steel framing components in sizes and spacings indicated, but not less than that required by the referenced steel framing and installation standards.
1. Hangers: 48 inches o.c.
2. Carrying Channels (Main Runners): 48 inches o.c.

3. Furring Channels (Furring Members): 16 inches o.c.

F. Grid Suspension System: Attach perimeter wall track or angle where grid suspension system meets vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.

3.5 INSTALLING STEEL PARTITION AND SOFFIT FRAMING

A. Install tracks (runners) at floors, ceilings, and structural walls and columns where gypsum board assemblies abut other construction.
1. Where studs are installed directly against exterior walls, install asphalt-felt isolation strip between studs and wall.

B. Installation Tolerance: Install each steel framing and furring member so fastening surfaces vary not more than 1/8 inch from the plane formed by the faces of adjacent framing.

C. Extend partition framing full height to structural supports or substrates above suspended ceilings, except where partitions are indicated to terminate at suspended ceilings. Continue framing over frames for doors and openings and frame around ducts penetrating partitions above ceiling to provide support for gypsum board.
1. Cut studs 1/2 inch short of full height to provide perimeter relief.
2. For fire-resistance-rated and STC-rated partitions that extend to the underside of floor/roof slabs and decks or other continuous solid-structure surfaces to obtain ratings, install framing around structural and other members extending below floor/roof slabs and decks, as needed to support gypsum board closures and to make partitions continuous from floor to underside of solid structure.

D. Install steel studs and furring at 16 inches o.c., unless otherwise indicated.

E. Install steel studs so flanges point in the same direction and leading edge or end of each panel can be attached to open (unsupported) edges of stud flanges first.

F. Frame door openings to comply with GA-600 and with gypsum board manufacturer's applicable written recommendations, unless otherwise indicated. Screw vertical studs at jambs to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.
1. Install two studs at each jamb, unless otherwise indicated.
2. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch clearance from jamb stud to allow for installation of control joint.
3. Extend jamb studs through suspended ceilings and attach to underside of floor or roof structure above.

G. Frame openings other than door openings the same as required for door openings, unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.

3.6 APPLYING AND FINISHING PANELS, GENERAL

A. Gypsum Board Application and Finishing Standards: ASTM C 840 and GA-216.

B. Install sound attenuation blankets before installing gypsum panels, unless blankets are readily installed after panels have been installed on one side.

C. Install ceiling board panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in the central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.

D. Install gypsum panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch of open space between panels. Do not force into place.

E. Locate edge and end joints over supports. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.

F. Attach gypsum panels to steel studs so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.

G. Attach gypsum panels to framing provided at openings and cutouts.

H. Form control and expansion joints with space between edges of adjoining gypsum panels.

I. Cover both faces of steel stud partition framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
   1. Unless concealed application is indicated or required, coverage may be accomplished with scraps of not less than 8 sq. ft. in area.
   2. Fit gypsum panels around ducts, pipes, and conduits.
   3. Where partitions intersect open concrete coffers or structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch-wide joints to install sealant.

J. Isolate perimeter of non-load-bearing gypsum board partitions at structural abutments, except floors. Provide 1/4- to 1/2-inch-wide spaces at these locations, and trim edges with L-bead edge trim where edges of gypsum panels are exposed.

K. Sound-Insulated Assemblies: Seal construction at perimeters, behind control and expansion joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919 and manufacturer's written recommendations for locating edge trim and closing off sound-flanking paths around or through gypsum board assemblies, including sealing partitions above acoustical ceilings.
   1. Penetrations in assemblies include, but are not limited to, ducts, pipes, conduits, electrical boxes, outlets and switches.

L. Space fasteners in gypsum panels according to referenced gypsum board application and finishing standard and manufacturer's written recommendations.
   1. Space screws a maximum of 12 inches o.c. for vertical applications.
   2. Space fasteners in tile substrates a maximum of 8 inches o.c.

3.7 PANEL APPLICATION METHODS

A. Single-Layer Application:
   1. On ceilings, apply gypsum panels before wall/partition board application to the greatest extent possible and at right angles to framing, unless otherwise indicated.
   2. On partitions/walls, apply gypsum panels vertically (parallel to framing), unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.
      a. Stagger abutting end joints not less than one framing member in alternate courses of board.
      b. At stairwells and other high walls, install panels horizontally, unless otherwise indicated or required by fire-resistance-rated assembly.
      c. In locations where gypsum board surfaces will be illuminated by continuous cove lighting, install panels vertically.

B. Multilayer Application on Ceilings: Apply gypsum board indicated for base layers before applying base layers on walls/partitions; apply face layers in same sequence. Apply base layers at right angles to framing members and offset face-layer joints 1 framing member, 16 inches minimum, from parallel base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly.

C. Multilayer Application on Partitions/Walls: Apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.

D. Single-Layer Fastening Methods: Apply gypsum panels to supports with steel drill screws.

E. Multilayer Fastening Methods: Fasten base layers with screws; fasten face layers with adhesive and supplementary fasteners.
   1. Where required for fire-resistance ratings, fasten base layers and face layers separately to supports with screws.

F. Laminating to Substrate: Where gypsum panels are indicated as directly adhered to a substrate (other than studs, joists, furring members, or base layer of gypsum board), comply with gypsum board manufacturer's written recommendations and temporarily brace or fasten gypsum panels until fastening adhesive has set.

G. Tile Backing Panels:
   1. Glass-Mat, Water-Resistant Backing Panel: Comply with manufacturer's written installation instructions and install at locations indicated to receive tile and behind shower enclosures. Install with 1/4-inch gap where panels abut other construction or penetrations.
   2. Cementitious Backer Units: ANSI A108.11.
      a. Locations: Install at curved wall surfaces indicated to receive tile, in nominal 12-inch wide segments.

3. Where tile backing panels abut other types of panels in the same plane, shim surfaces to produce a uniform plane across panel surfaces.

3.8 INSTALLING TRIM ACCESSORIES

A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.

B. Control Joints: Install control joints at locations indicated on Drawings and according to ASTM C 840, in specific locations approved by Architect for visual effect.

C. Special Corner Finishing Units: Apply according to manufacturer's instructions at outside wall corners.

3.9 FINISHING GYPSUM BOARD ASSEMBLIES

A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.

B. Prefill open joints, rounded or beveled edges, and damaged surface areas.

C. Apply joint tape over gypsum board joints, except those with trim having flanges not intended for tape.

D. Gypsum Board Finish Levels: Finish panels to levels indicated below, according to ASTM C 840, for locations indicated:
   1. Level 1: Embed tape at joints in ceiling plenum areas, concealed areas, and where indicated.
   2. Level 2: Embed tape and apply separate first coat of joint compound to tape, fasteners, and trim flanges where panels are substrate for tile and where indicated.
   3. Level 4: Embed tape and apply separate first, fill, and finish coats of joint compound to tape, fasteners, and trim flanges at panel surfaces that will be exposed to view, unless otherwise indicated.
   4. Level 5: Embed tape and apply separate first, fill, and finish coats of joint compound to tape, fasteners, and trim flanges, and apply skim coat of joint compound over entire surface where indicated.
      a. Provide Level 5 finish in locations where gypsum board surfaces will be illuminated by continuous cove lighting and at locations indicated on Drawings.

END OF SECTION 09 2116

SECTION 09 30 00 - TILING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:
1. Floor tile.
2. Wall tile.
3. Tile accessories and trim.
4. Waterproof membrane for thin-set tile installations on elevated floor slabs.
5. Crack-suppression membrane.
6. Provisions for installing crack-suppression membrane at all minor cracks in floor slabs receiving floor tile. Allow for 15% of total floor tile area for crack suppression membrane.

B. Related Sections include the following:
1. Division 03 Section "Cast-In-Place Concrete": Monolithic slab finishes specified for tile substrates.
2. Division 04 Section "Unit Masonry": Parging applied to masonry walls to receive tile.
3. Division 07 Section "Joint Sealants": Sealing of expansion, contraction, control, and isolation joints in tile surfaces.
4. Division 09 Section "Gypsum Board Assemblies": Tile backer board.

1.2 DEFINITIONS

A. Module Size: Actual tile size (minor facial dimension as measured per ASTM C 499) plus joint width indicated.

B. Facial Dimension: Nominal tile size as defined in ANSI A137.1.

1.3 PERFORMANCE REQUIREMENTS

A. Static Coefficient of Friction: For tile installed on walkway surfaces, provide products with minimum value of 0.6 as determined by testing identical products per ASTM C 1028.

B. Load-Bearing Performance: For ceramic tile installed on walkway surfaces, provide installations rated for the following load-bearing performance level based on testing assemblies according to ASTM C 627 that are representative of those indicated for this Project:
1. Extra Heavy: Passes cycles 1 through 14.

1.4 SUBMITTALS

A. Product Data: For each type of tile, mortar, grout, patching material, and other products specified.

B. Shop Drawings: For the following:
   1. Tile patterns and locations.
   2. Widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces including details of typical expansion, control joint [and crack suppression membrane] installation.
   3. Flooring transition details between tile and other floor materials.
   4. Build-up of sloped substrate for shower areas and adjacent areas to receive thinset tile, including indication of methods to achieve slopes to drain.

C. Grout Samples for Initial Selection: Manufacturer's color charts consisting of actual sections of grout showing the full range of colors available for each type of grout indicated.

D. Samples for Verification: Include Sample sets showing the full range of variations expected.
   1. Tile: 12 inches square for each type and color, mounted on cement backer units, with grouted joints.
   2. Accessories: Full-size units of each type of trim and accessory for each color required.
   3. Stone Thresholds: 6-inch lengths.

E. Master Grade Certificates: For each shipment, type, and composition of tile, signed by tile manufacturer and Installer.

F. Product Certificates: Signed by manufacturers certifying that the products furnished comply with requirements.

G. Material Test Reports: For each tile-setting and -grouting product and special purpose tile.

H. Qualification Data: For firms and persons specified in the "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names of architects and owners, and other information specified.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced installer who has completed tile installations similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance. Installer to have a minimum 5 years experienced and or member of the NTCA (National Tile Contractors Association).

B. Source Limitations for Tile: Obtain each color, grade, finish, type, composition, and variety of tile from one source with resources to provide products from the same production run for each contiguous area of consistent quality in appearance and physical properties without delaying the Work.

C. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from a single manufacturer and each aggregate from one source or producer.

D. Source Limitations for Other Products: Obtain each of the following products specified in this Section from one source and by a single manufacturer for each product:
   1. Stone thresholds.
   2. Waterproofing/Crack Suppression Membranes.
   3. Joint sealants.

E. Mockups: Before installing tile, construct mockups for each form of construction and finish required to verify selections made under Sample submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mockups to comply with the following requirements, using materials indicated for completed Work.
   1. Locate mockups in the location and of the size indicated or, if not indicated, as directed by Architect.
   2. Include mockup of sloped tile floors in bathrooms and of typical expansion, and control joints and crack suppression joints.
   3. Notify Architect 7 days in advance of the dates and times when mockups will be constructed.
   4. Demonstrate the proposed range of aesthetic effects and workmanship.
   5. Obtain Architect's approval of mockups before proceeding with final unit of Work.
   6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
   7. Approved mockups in an undisturbed condition at the time of Substantial Completion may become part of the completed Work.

1.6 PRODUCT HANDLING

A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirement of ANSI A137.1 for labeling sealed tile packages.

B. Prevent damage or contamination to materials by water, freezing, foreign matter, and other causes.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not install tile until construction in spaces is completed and ambient temperature and humidity conditions are being maintained to comply with referenced standards and manufacturer's written instructions.
   1. Comply with underlayment and patching material manufacturer's written recommendations for substrate temperature and moisture content, ambient temperature and humidity, ventilation, and other conditions affecting product performance.

B. Close areas to traffic during patching and underlayment application and for time period after application recommended in writing by manufacturer.

1.8 EXTRA MATERIALS

A. Deliver extra materials to Owner. Furnish extra materials described below that match products installed, are packaged with protective covering for storage, and are identified with labels describing contents.

B. Tile and Trim Units: Furnish quantity of full-size units equal to 3 percent of amount installed, for each type, composition, color, pattern, and size indicated; but not less than 2 unopened boxes for each color, pattern and size.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Tile Products: Subject to compliance with requirements, provide products indicated in Finish Legend on the Drawings.
   1. For comparable products proposed by Contractor, submit detailed product data for scheduled products and proposed products for comparison and Architects approval.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Tile Setting and Grouting Materials:
      a. Mapei Corporation.
      b. Custom Building Products.
      c. Laticrete International, Inc.
      d. Boiardi Products Corporation.
      e. Bonsal: W.R. Bonsal Company.
      f. Bostik.
      g. C-Cure Corporation.
      h. Southern Grouts & Mortars, Inc.
      i. TEC Incorporated.
      j. ProSpec, LLC.

2.2 PRODUCTS, GENERAL

A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1, "Specifications for Ceramic Tile," for types, compositions, and other characteristics indicated.
   1. Provide tile complying with Standard Grade requirements, unless otherwise indicated.
   2. For facial dimensions of tile, comply with requirements relating to tile sizes specified in Part 1 "Definitions" Article.

B. ANSI Standards for Tile Installation Materials: Provide materials complying with latest 2014/2015 ANSI standards referenced in "Setting Materials" and "Grouting Materials" articles.

C. Colors, Textures, and Patterns: Where manufacturer's standard products are indicated for tile, grout, and other products requiring selection of colors, surface textures, patterns, and other appearance characteristics, provide specific products or materials complying with the following requirements:
   1. Match colors, textures, and patterns indicated by referencing manufacturer's standard designations for these characteristics.
   2. Provide tile trim and accessories that match color and finish of adjoining flat tile.
   3. Tile for Sloped Surfaces: For tile located on ramps and other sloped surfaces, provide textured surface pattern for slip resistance, selected by Architect from full range of available patterns.

D. Factory Blending: For tile exhibiting color variations within the ranges selected during Sample submittals, blend tile in the factory and package so tile units taken from one package show the same range in colors as those taken from other packages and match approved Samples.

2.3 TILE PRODUCTS

A. Ceramic Wall Tile: Flat tile as follows:
   1. Module Size: As indicated on Drawings
   2. Thickness: 5/16 inch.
   3. Face: Plain with cushion edges.
   4. Finish: As indicated on Drawings.
   5. Product: As indicated on Drawings.

B. Porcelain Paver Tile: Flat tile as follows:
   1. Composition: Porcelain.
   2. Module Size: As indicated on Drawings
   3. Thickness: 1/2 inch.
   4. For polymer-modified grouted paver tile, precoat with temporary protective coating.
   5. Product: As indicated on Drawings.

C. Trim Units: Provide metal trim units as indicated in finish notes to finish paver tile tops, outside corners and cove base.
   1. Shapes: As follows, selected from manufacturer’s standard shapes:
      a. Base: As indicated on Design Selection Summary
      b. Wainscot Cap: Schluter Jolly, color coated aluminum
      c. External Corners: Schluter Quadec, colored coated aluminum
      d. Internal Corners: Schluter DILEX-AHK, color coated aluminum.

2.4 WATERPROOFING AND CRACK-SUPPRESSION MEMBRANES

A. General: Manufacturer's standard product that complies with ANSI A118.10, selected from the following.

B. Chlorinated-Polyethylene-Sheet Product: Nonplasticized, chlorinated polyethylene faced on both sides with high-strength, nonwoven polyester fabric, for adhering to latex-portland cement mortar; 60 inches wide by 0.030-inch nominal thickness.

1. Product: The Noble Company; Nobleseal TS.

C. Fabric-Reinforced, Fluid-Applied Product: System consisting of liquid-latex rubber and fabric reinforcement.
   1. Products: One of the following:
      a. LATICRETE International Inc.; Laticrete 9235 Waterproof Membrane.
      b. MAPEI Corporation; “Mapelastic 400”.
      c. Custom Building Products: “Custom 9240” Waterproofing and Anti-fracture Membrane.

2.5 SETTING AND GROUTING MATERIALS

A. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.1A and as specified below:
   1. Cleavage Membrane: Asphalt felt, ASTM D 226, Type I (No. 15); or polyethylene sheeting, ASTM D 4397, 4.0 mils thick.
   2. Reinforcing Wire Fabric: Galvanized, welded wire fabric, 2 by 2 inches by 0.062-inch diameter; comply with ASTM A 185 and ASTM A 82 except for minimum wire size.
   3. Latex Additive: Manufacturer's standard acrylic resin or styrene-butadiene-rubber water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement and aggregate mortar bed.

B. Latex-Portland Cement Mortar (Thinset - Small Format Tile 12 inches or less in any direction): ANSI A118.4, composed as follows:
   1. Prepackaged Dry-Mortar Mix: Factory-prepared mixture of portland cement; dry, redispersible, ethylene vinyl acetate additive; and other ingredients to which only water needs to be added at Project site.
      a. For wall applications, provide nonsagging, latex-portland cement mortar complying with ANSI A118.4 for mortar of this type defined in Section F-2.1.2.

C. Latex-Portland Cement Mortar (Medium Bed/LHT Thin Set-Large Format Tile Mortar 12 inches or greater in any direction): ANSI A118.4 and ANSI A118.15.

D. High Performance Cement Grout: ANSI A118.7.
   1. Polymer Type: Ethylene vinyl acetate, in dry, redispersible form, prepackaged with other dry ingredients. Basis of Design: Custom Building Products; Prism Ultimate Performance Grout
      a. Unsanded grout mixture for joints 1/8 inch and narrower.
         1) Laticrete; Permacolor
         2) Mapei; Ultracolor
      b. Sanded grout mixture for joints 1/8 inch and wider.
         1) Laticrete; Permacolor
         2) Mapei; Ultracolor

E. Water-Cleanable Epoxy Grout: ANSI A118.3.
   1. Chemical resistant water cleanable epoxy grouts. Basis of Design: Custom Building Products Ceg-Lite 100% Epoxy Grout or equal product by one of the following:

a. Laticrete; Spectra Lock Pro
b. Mapei; Kerapoxy

2.6 MISCELLANEOUS MATERIALS

A. Cementitious Patching and Underlayment: Cement-based, polymer-modified product that can be applied in uniform thicknesses from 1/8 inch and that can be feathered at edges to match adjacent floor elevations. For patching, use trowel-grade product suitable for build-up of slopes as indicated. For underlayment, use self-leveling product.
   1. Cement Binder: ASTM C 150, portland cement, or hydraulic or blended hydraulic cement as defined by ASTM C 219.
   2. Compressive Strength: Not less than 4700 psi at 28 days when tested according to ASTM C 109/C 109M.
   3. Underlayment Additive: Resilient-emulsion product of underlayment manufacturer formulated for use with underlayment when applied to substrate and conditions indicated.
   4. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch, or coarse sand as recommended by underlayment manufacturer.
      a. Provide aggregate when recommended in writing by underlayment manufacturer for underlayment thickness required.
   5. Water: Potable and at a temperature of not more than 70 deg F.
   6. Primer: Product of underlayment manufacturer recommended in writing for substrate, conditions, and application indicated.

B. Trowelable Underlayments and Patching Compounds: Latex-modified, portland-cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.

C. Temporary Protective Coating: Provide product indicated below that is formulated to protect exposed surfaces of tile against adherence of mortar and grout; is compatible with tile, mortar, and grout products; and is easily removable after grouting is completed without damaging grout or tile.
   1. Grout release in form of manufacturer's standard proprietary liquid coating that is specially formulated and recommended for use as a temporary protective coating for tile.

D. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

E. Grout Sealer: Manufacturer's standard product for sealing grout joints that does not change color or appearance of grout.
   1. Applications: Apply grout sealer to grout joints in tile floors, except in locations with epoxy grout; and to grout joints in tile walls located in toilet rooms.
   2. Products: Subject to compliance with requirements, provide one of the following:
      a. Aqua Mix; Grout and Tile Sealer
      b. Custom Building Products; Tilelab grout and Tile Sealer
      c. Bonsal, W. R., Company; Grout Sealer.

d. Bostik; CeramaSeal Grout Sealer.
e. C-Cure; Penetrating Sealer 978.
f. Southern Grouts & Mortars, Inc.; Silicone Grout Sealer.
g. Summitville Tiles, Inc.; SL-15, Invisible Seal Penetrating Grout and Tile Sealer.

2.7 MIXING

A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.
1. Add materials, water, and additives in accurate proportions.
2. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

B. Mixing Cementitious Patching and Underlayment Materials: Provide batch type mechanical mixer for mixing topping material at Project site. Equip batch mixer with a suitable charging hopper, water storage tank, and a water measuring device. Use only mixers that are capable of mixing aggregates, cement, and water into a uniform mix within specified time, and of discharging mix without segregation.
1. Proportion materials following manufacturer's recommendations.
2. Provide aggregate as recommended by manufacturer for thickness of pour required.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of installed tile.
1. Verify that substrates for setting tile are firm; dry; clean; free from oil, waxy films, and curing compounds; and within flatness tolerances required by referenced ANSI A108 series of tile installation standards for installations indicated.
2. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed before installing tile.
3. Verify that cracks and each type of joint in tile substrates are coordinated with tile joint locations; if not coordinated, adjust in consultation with Architect.

B. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove coatings, including curing compounds, and other substances that contain soap, wax, oil, or silicone and are incompatible with tile-setting materials by using a terrazzo or concrete grinder, a drum sander, or a polishing machine equipped with a heavy-duty wire brush.

B. Provide concrete substrates for tile floors installed with thinset mortars that comply with flatness tolerances specified in referenced ANSI A108 series of tile installation standards for installations indicated.
   1. Use trowel-able leveling and patching compounds per tile-setting material manufacturer's written instructions to fill cracks, holes, and depressions.
   2. Remove protrusions, bumps, and ridges by sanding or grinding.

C. Prepare and clean substrate for application of cementitious patching and underlayment according to manufacturer's written instructions for substrate indicated. Provide clean, dry, neutral-pH substrate for product application.
   1. Treat nonmoving substrate cracks to prevent cracks from telegraphing (reflecting) through underlayment according to manufacturer's written recommendations.
   2. Fill substrate voids to prevent underlayment from leaking.
   3. Concrete Substrates: Mechanically remove laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants that might impair underlayment bond according to manufacturer's written instructions.
   4. Adhesion Tests: After substrate preparation, test substrate for adhesion with underlayment according to manufacturer's written instructions.
   5. Joints: Mark locations of joints in base slab so that joints in top course will be placed directly over them.

D. Blending: For tile exhibiting color variations within the ranges selected during Sample submittals, verify that tile has been blended in the factory and packaged so tile units taken from one package show the same range in colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

E. Field-Applied Temporary Protective Coating: Where indicated under tile type or needed to prevent adhesion or staining of exposed tile surfaces by grout, protect exposed surfaces of tile against adherence of mortar and grout by precoating them with a continuous film of temporary protective coating indicated below, taking care not to coat unexposed tile surfaces:
   1. Grout release.

3.3 INSTALLATION, GENERAL

A. ANSI Tile Installation Standards: Comply with parts of ANSI A108 series of tile installation standards in "Specifications for Installation of Ceramic Tile" that apply to types of setting and grouting materials and to methods indicated in ceramic tile installation schedules.

B. TCNA Installation Guidelines: TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation." Refer to latest edition. Comply with TCNA installation methods indicated in ceramic tile installation schedules.

C. Extend tile work into recesses and under or behind equipment and fixtures to form a complete covering without interruptions, unless otherwise indicated. Terminate work

neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.

D. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

E. Jointing Pattern: Lay tile in grid pattern, unless otherwise indicated. Align joints when adjoining tiles on floor, base, walls, and trim are the same size. Lay out tile work and center tile fields in both directions in each space or on each wall area. Adjust to minimize tile cutting. Provide uniform joint widths, unless otherwise indicated.
   1. For tile mounted in sheets, make joints between tile sheets the same width as joints within tile sheets so joints between sheets are not apparent in finished work.

F. Lay out tile wainscots to next full tile beyond dimensions indicated.

G. Movement Joints: Locate expansion, control, contraction, isolation, and other joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.
   1. Locate joints in tile surfaces as referenced in EJ171 from latest edition of TCNA and at other locations where fillers are placed between adjoining construction elements.
   2. Prepare joints and apply sealants to comply with requirements of Division 07 Section "Joint Sealants."

H. Grout tile to comply with ANSI A108.10.

3.4 WATERPROOFING AND CRACK-SUPPRESSION MEMBRANE INSTALLATION

A. Install waterproofing to comply with ANSI A108.13 and waterproofing manufacturer's written instructions to produce waterproof membrane of uniform thickness bonded securely to substrate.

B. Install crack-suppression membrane to comply with manufacturer's written instructions to produce membrane of uniform thickness bonded securely to substrate.

C. Do not install tile over membrane until membrane has cured and been tested to determine that it is watertight.

3.5 FLOOR TILE INSTALLATION

A. General: Install tile to comply with requirements in the Ceramic Tile Installation Schedule, including those referencing TCNA installation methods and ANSI A108 series of tile installation standards.

B. Joint Widths: Install tile on floors with the following joint widths:
   1. Paver Tile: 1/4 inch, unless otherwise indicated or directed.

3.6 WALL TILE INSTALLATION

A. Install types of tile designated for wall installations to comply with requirements in the Ceramic Tile Installation Schedule, including those referencing TCNA installation methods and ANSI setting-bed standards.

B. Joint Widths: Install tile on walls with the following joint widths:
   1. Wall Tile: 1/16 inch.

3.7 CLEANING AND PROTECTING

A. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
   1. Remove high performance cement grout residue from tile as soon as possible.
   2. Unglazed tile may be cleaned with acid solutions only when permitted by tile and grout manufacturer's written instructions, but no sooner than 10 days after installation. Protect metal surfaces, cast iron, and vitreous plumbing fixtures from effects of acid cleaning. Flush surface with clean water before and after cleaning.
   3. Remove temporary protective coating by method recommended by coating manufacturer that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent it from clogging drains.

B. Grout Sealer: Apply grout sealer to tile joints~~,~~ according to grout-sealer manufacturer's written instructions. As soon as grout sealer has penetrated joints, remove excess sealer and sealer that has gotten on tile faces by wiping with soft cloth.

C. Finished Tile Work: Leave finished installation clean and free of cracked, chipped, broken, unbonded, and otherwise defective tile work.

D. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure tile is without damage or deterioration at the time of Substantial Completion.
   1. When recommended by tile manufacturer, apply a protective coat of neutral protective cleaner to completed tile walls and floors. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear.
   2. Prohibit foot and wheel traffic from tiled floors for at least 7 days after grouting is completed.

E. Before final inspection, remove protective coverings and rinse neutral cleaner from tile surfaces.

3.8 PREPARATION FOR COMMERCIAL TRAFFIC

A. Clean quarry tile flooring not more than 4 days prior to dates scheduled for inspections intended to establish date of Substantial Completion in each area of Project. Clean tile flooring using method recommended by manufacturer.
   1. Apply first coat of maintenance finish on floor tile after cleaning.
   2. Coordinate selection of floor finish product with Owner's maintenance service.

3.9 CERAMIC TILE INSTALLATION SCHEDULE

A. Porcelain Paver Tile Bonded to Concrete Floors (Bathrooms):
   1. Installation Method: Thin-set mortar bonded to concrete subfloor; TCNA F113.
   2. Setting Bed and Grout: ANSI A108.5 with the following mortar and grout:
      a. Medium-bed for large format tile (LFT), latex portland cement mortar.
      b. High performance cement sanded grout.

B. Interior Wall Tile Thinset on Tile Backer Board:
   1. Setting Method: Glass-mat, water-resistant backer board; thin-set mortar; TCNA W245 and ANSI A108.5.
   2. Thin-Set Mortar: Latex-portland cement mortar.
   3. Grout: High performance cement unsanded grout.

END OF SECTION 09 3000

SECTION 09 51 00 - ACOUSTICAL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:
   1. Acoustical panels and exposed suspension systems for ceilings, with panels of the following types:
      a. Standard mineral fiber acoustical panels.
   2. Acoustical sealant for acoustical panel ceilings.
   3. Acoustical panel replacement for repairing ceilings damaged by other contractors.

B. Related Sections include the following:
   1. Division 9 Section “Gypsum Board Assemblies”.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Coordinate Drawings: Reflected ceiling plans drawn to scale and coordinating penetrations and ceiling-mounted items. Show the following:
   1. Ceiling suspension members.
   2. Method of attaching hangers to building structure.
      a. Furnish layouts for cast-in-place anchors, clips, and other ceiling attachment devices whose installation is specified in other Sections.
   3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
   4. Minimum Drawing Scale: 1/4 inch = 1 foot.

C. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below.
   1. Acoustical Panels: Set of full-size Samples of each type, color, pattern, and texture.
   2. Wood Panels: Set of 12-inch square Samples with specified wood species, pattern and finish.
   3. Exposed Suspension System Members, Moldings, and Trim: Set of 12-inch-long Samples of each type, finish, and color.

1.3 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of acoustical ceiling panel and supporting suspension system through one source from a single manufacturer.

B. Seismic Standard: Provide acoustical panel ceilings designed and installed to withstand the effects of earthquake motions according to the following:

1. CISCA's Recommendations for Acoustical Ceilings: Comply with CISCA's "Recommendations for Direct-Hung Acoustical Tile and Lay-in Panel Ceilings--Seismic Zones 0-2."

C. Mockups: Build mockups to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution.
1. Locate mockups in the location and of size directed by Architect.
2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.4 PRODUCT HANDLING

A. Deliver acoustical panels, suspension system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

C. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

1.5 PROJECT CONDITIONS

A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Coordination: Coordinate layout and installation of acoustical panels and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

1.6 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Acoustical Ceiling Panels and Scrubbable mineral fiber panels : Full-size panels equal to 2 percent of quantity installed; but not less than 3 boxes of each type.
2. Suspension System Components: Quantity of each exposed component equal to 2 percent of quantity installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Armstrong Ceiling or comparable product by one of the following:
   1. CertainTeed Corp.
   2. USG
   3. Rockfon

2.2 ACOUSTICAL PANELS

A. Acoustical Panel Standard: Provide manufacturer's standard panels of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectance's, unless otherwise indicated.
   1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches away from test surface per ASTM E 795.

B. Standard Mineral Fiber Acoustical Panels: Match appearance characteristics indicated for each product type listed in finish legend (ACT)
   1. Color: White.
   2. Edge Detail: Square Lay-In.
   3. Thickness: 3/4 inch, unless otherwise indicated.
   4. Style: As indicated on drawings.
   5. Size: As indicated on Drawings.
   6. Sag Resistance: Equivalent to Armstrong "HumiGuard Plus No Sag Warranty"; 90 percent humidity.

C. SoundScapes Blades:
   1. Surface texture: Fine
   2. Composition: Fiberglass
   3. Color: Custom Color as selected by Architect
   4. Size & Design: Custom as noted by Architect
   5. Edge Profile: Square
   6. Recycled content: 43%
   7. Acoustics: Sound absorption up to 1.80 Noise Reduction Coefficient (NRC) ASTM C423 dependent on blade depth and spacing.
   8. Flame Spread: ASTM E 1264; Class A (UL)
   9. Dimensional Stability: HumiGuard Plus; Anti-Microbial, inherent

2.3 METAL SUSPENSION SYSTEMS

A. Metal Suspension System Standard: Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C 635.

B. Finishes and Colors, General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Provide manufacturer's standard factory-applied finish for type of system indicated.

C. Attachment Devices: Size for five times the design load indicated in ASTM C 635, Table 1, "Direct Hung," unless otherwise indicated.
   1. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC 1 service condition; unless otherwise indicated.
   2. Corrosion Protection: Stainless-steel components complying with ASTM F 593 and ASTM F 594; for ceilings located in wet areas as follows:
      a. Shower Areas and Dishwashing Areas: Alloy 304 or 316.
      b. Swimming Pool Areas: Alloy 316.

D. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:
   1. Zinc-Coated Carbon-Steel Wire: ASTM A 641, Class 1 zinc coating, soft temper; unless otherwise indicated.
   2. Nickel-Copper-Alloy Wire: ASTM B 164, nickel-copper-alloy UNS No. N04400; for ceilings located in wet areas including shower areas, dishwashing areas and swimming pools.
   3. Size: Select wire diameter so its stress at three times hanger design load (ASTM C 635, Table 1, "Direct Hung") will be less than yield stress of wire, but provide not less than 0.106-inch diameter wire.

E. Wide-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, hot-dip galvanized according to ASTM A 653, not less than G30 coating designation, with prefinished 15/16-inch-wide metal caps on flanges.
   1. Structural Classification: Intermediate-duty system.
   2. End Condition of Cross Runners: Override (stepped) or butt-edge type.
   3. Face Design: Flat, flush.
   4. Cap Materials:
      a. Typical Locations: Steel cold-rolled sheet.
      b. Wet Areas: Aluminum sheet; for acoustical ceilings located in bathrooms and shower areas.
      c. Areas Indicated for Scrubbable Panels: Aluminum sheet.
   5. Cap Finish: Painted white to match acoustical panels.
   6. Cap Finish: Painted flat black / gun metal grey at locations with wood panels.

F. Roll-Formed Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that fit acoustical panel edge details and suspension systems indicated; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension system runners.
   1. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.

G. Special Accessories for Acoustical Ceilings: Provide factory-prepared units as described below to accommodate installation conditions indicated, finished to match appearance of exposed suspension system members.
   1. Accessory for Bullnose Concrete Masonry: Snap-over molding to trim outside corners, fitting over 1-inch radius masonry units.
      a. Product: Bullnose Corner Cover No. 7866; Armstrong.

2. Drywall Transition Clip: For transition from 5/8 inch gypsum board to acoustical ceiling; eliminates need for drywall bead.
   a. Product: DW58; Armstrong.
3. Expansion Joints: Special moldings and trim to accommodate building expansion joints in ceiling assemblies as indicated.
4. Hold-Down Clips: Where indicated, provide manufacturer's standard hold-down clips spaced 24 inches o.c. on all cross tees.
   a. Locations: Provide hold-down clips for acoustical ceilings located in Vestibules 306 & 315 and bathrooms.

H. Supplemental Supports: In locations where building structural elements supporting ceiling suspension systems are spaced more than 48 inches o.c. and where obstructions or other conditions prevent support of ceiling suspension systems at 48 inches o.c. or less, provide cold-formed metal framing to support ceiling systems to comply with specified standards, with depth of supplemental framing members not less than the following:
1. Overhead Structural Support Spacing up to 4 Feet: 1-1/2 inches.
2. Overhead Structural Support Spacing Between 4 Feet and 6 Feet: 2-1/2 inches.
3. Overhead Structural Support Spacing Between 6 Feet and 10 Feet: 4 inches.

I. Aircraft Cable:
1. Item 6655L8CR - 4-Point Hanging Kit (4 per bag)
2. Item 625530 - Extended Hanging Aircraft Cables (30' length, 4 per bag). For use with Item 6655L8CR when longer cables are needed

2.4 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer's written recommendations.

B. Custom Closures and Terminations: Provide trim and closures, of configurations indicated; matching exposed ceiling suspension system members.
1. Provide units complete with anchors for support to structure and installation of ceiling systems.
2. Provide units fabricated from aluminum plate, shapes and break metal as indicated.

C. Acoustical Sealant: Nondrying, nonhardening, nonskinning, nonstaining, gunnable, synthetic-rubber sealant recommended for sealing interior concealed joints to reduce airborne sound transmission.
1. Products: Subject to compliance with requirements, provide one of the following:
   a. Pecora Corp.; BA-98.
   b. Pecora Corp.; AC-20 FTR Acoustical and Insulation Sealant.
   c. Tremco, Inc.; Tremco Acoustical Sealant.
   d. United States Gypsum Co.; SHEETROCK Acoustical Sealant.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans.

3.3 INSTALLATION, GENERAL

A. General: Install acoustical panel ceilings to comply with ASTM C 636 and seismic requirements indicated, per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
   1. Provide secondary restraint as required for acoustical panel ceilings.

B. Suspend ceiling hangers from building's structural members and as follows:
   1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
   2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
   3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
   4. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
   5. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
   6. Do not attach hangers to steel deck tabs.
   7. Do not attach hangers to steel roof deck or to bridging for roof joists or floor joists. Attach hangers to structural members.

8. Space hangers not more than 48 inches o.c. along each member supported directly from hangers, unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.

C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.

D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
2. Screw attach moldings to substrate at intervals not more than 16 inches o.c. and not more than 3 inches from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet. Miter corners accurately and connect securely.
3. Do not use exposed fasteners, including pop rivets, on moldings and trim.

E. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

F. Install acoustical panels with undamaged edges and fit accurately into suspension system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.
1. Arrange directionally patterned acoustical panels as indicated on reflected ceiling plans.
2. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension system runners and moldings.
3. For reveal-edged panels on suspension system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges. Use of teg tabs at perimeter will not be accepted.
4. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.

G. Install sound attenuation insulation on top of acoustical panels in locations indicated, according to insulation manufacturer's instructions.

H. Install suspended reveal ceiling systems by mechanically mounting panels to T-bar with 15/16 inch face flange at 1-1/2 inch web height.
1. Secure T-bar to factory-installed clips on panel backs, then hang the completed assembly in place using hanger wires or rods.
2. Handle panels only with clean, lightweight, white gloves.
3. Comply with panel manufacturer's printed instructions for installation, including requirements for field-cutting panels.

3.4 CLEANING

A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension system members. Comply with manufacturer's written instructions for

cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 09 5100

SECTION 09 64 66 - WOOD ATHLETIC FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:
   1. Maple, strip flooring on floating, double-layer, plywood subfloor.
   2. Maple strip flooring, nosings and trim at front of stage platform, matching appearance of wood athletic flooring.
   3. Field finishing wood athletic flooring.
   4. Game line markings and custom painted graphics.

B. Related Sections include the following:
   1. Division 01 Section "Temporary Facilities and Controls": Self-adhesive surface protection products to protect flooring installations during construction.
   2.
   3. Division 09 Section "Resilient Athletic Flooring."
   4. Division 09 Section "Stage Wood Flooring":
   5. Division 11 Section "Gym Equipment": Floor inserts for standards and other athletic equipment.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Show installation details including location and layout of each type of wood, athletic-flooring assembly and accessory. Include the following:
   1. Expansion provisions and trim details.
   2. Layout, colors, widths, and dimensions of game lines and markers.
   3. Locations of athletic equipment floor anchors installed in wood flooring.

C. Samples for Initial Selection: Manufacturer's color charts showing colors and glosses available for the following:
   1. Floor finish.
   2. Game-line and marker paint.

D. Samples for Verification: For each type of wood flooring, game-line and marker paint, finish, and accessory required; approximately 12 inches long and of same thickness and material indicated for the Work. Include sample sets showing the full range of normal color and texture variations expected.

1.3 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed wood, athletic flooring similar in material, design, and extent to that indicated for this Project and whose work has

resulted in wood, athletic-flooring installations with a record of successful in-service performance.

1. Installer's Responsibilities: Installation of flooring assembly, including the following:
   a. Subfloor.
   b. Wood finish flooring.
   c. Game lines and markers.
   d. Finish.
   e. Accessories.

B. Painter Qualifications: Engage an experienced painter to apply custom graphics painted on athletic flooring. Comply with details indicated, or if not indicated, according to sketches prepared by Architect.

C. Maple Flooring: Comply with MFMA grading rules for grade and cut.
   1. Certification: Provide flooring that carries MFMA Certification Mark on each piece.

1.4 PRODUCT HANDLING

A. Deliver wood-flooring materials in unopened cartons or bundles.

B. Protect wood flooring from exposure to moisture. Do not deliver wood flooring until after concrete, masonry, plaster, ceramic tile, and similar wet work is complete and dry.

C. Store wood-flooring materials in a dry, warm, well-ventilated, weathertight location.

D. Move wood flooring into spaces where it will be installed at least 7 days before installation.

1.5 PROJECT CONDITIONS

A. Conditioning: Maintain relative humidity conditions planned for building occupants, but not greater or less than the relative humidity range recommended by MFMA, and an ambient temperature between 55 and 75 deg F in spaces to receive wood flooring for at least seven days before installation, during installation, and for at least seven days after installation. After postinstallation period, maintain relative humidity conditions and ambient temperature planned for building occupants.
   1. Open sealed packages to allow wood flooring to acclimatize.
   2. Do not install flooring until it adjusts to the relative humidity of and is at the same temperature as the space where it is to be installed.
   3. Close spaces to traffic during flooring installation and for time period after installation recommended in writing by flooring and finish manufacturer, but not less than 10 days.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Flooring System: . Robbins Sports Systems; Bio-Channel SB Floor System or approved equal.

B. Finishing Materials: Subject to compliance with requirements, provide products by one of the following:
   1. Basic Coatings.
   2. BonaKemi USA, Inc.
   3. Crawford Laboratories.
   4. Hillyard Inc.
   5. Flooring-assembly manufacturer.

2.2 MAPLE FLOORING

A. Flooring shall be Eco-Friendly 25/32” (20mm) thick x 2 1/2" (63mm) facewidth; 2-1/4” (57mm) facewidth available at mill discretion; 2nd & Better grade; Factory Sanded Advantage™ XL (Non-Factory Sanded maple available as contractor option); T&G and EM, KD Northern Hard Maple; Continuous Strip XLplus™ Flooring as manufactured by Robbins and graded in accordance with MFMA-FJ rules. Flooring will have XLplus™ technology to reduce or eliminate routine spacing for expansion.
   1. Grade: 2nd and Better

2.3 SUBFLOOR SYSTEM

A. 16 gauge coated metal anchor channels.

2.4 FASTENERS

A. Flooring – 1 ¾” (45mm) barbed cleats or staples.

B. Channel anchors – 2” (51 mm) ong steel SPIKE anchor

2.5 FINISHING MATERIALS

A. Floor-Finish System: MFMA-listed system of compatible components recommended by flooring and finish manufacturers for application indicated.
   1. Type: Group 5, Water Based Finishes; polyurethane.
   2. Floor Sealer: Pliable, oil-based, penetrating type.
   3. Finish Coats: Formulated for gloss finish and multicoat application.

B. Game-Line and Marker Paint: High-gloss enamel compatible with finish and recommended by finish and paint manufacturers for this purpose.

2.6 ACCESSORY MATERIALS

A. Vapor Retarder: ASTM D 4397, polyethylene sheet not less than 6 mils thick.

B. Fasteners: Type and size recommended by manufacturer, but not less than those recommended by MFMA for application indicated.

C. Wall Base: Molded, vented, rubber or vinyl cove base; 4 by 3 by 48 inches; with premolded outside corners.

1. Color: Selected by Architect from manufacturer's full range.
2. Provide wall base for perimeter of wood athletic flooring area indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas and conditions, with Installer present, for compliance with requirements, installation tolerances, and other conditions affecting performance of wood-flooring assembly. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with wood athletic flooring. Verify that concrete slabs comply with the following:
   1. Finishes of subfloors comply with tolerances and other requirements specified in Division 03 Section "Cast-In-Place Concrete" for slabs receiving stage wood flooring
      a. Grind high spots and fill low spots to provide a maximum 1/8-inch (3-mm) deviation in any direction when checked with a 10-foot (3-m) straight edge.
   2. Repair damaged and deteriorated concrete according to Maple Flooring Manufacturers Association’s written recommendations.
   3. Verify that concrete substrates are dry according to test methods recommended in writing by wood athletic flooring manufacturer and as follows:
      a. Perform anhydrous calcium chloride test, ASTM F 1869. Proceed with application only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) of slab in 24 hours.
      b. Perform plastic sheet test, ASTM D 4263. Proceed with application only after testing indicates absence of moisture in substrates.
      c. Perform additional moisture tests recommended by manufacturer. Proceed with application only after substrates pass testing.
   4. Verify that concrete substrates have neutral Ph in compliance with wood athletic flooring manufacturer’s written requirements. Perform tests recommended by manufacturer to confirm alkalinity. Proceed with application only after substrates pass testing.
   5. Testing Failure: Remedy new floor slabs exceeding the wood athletic flooring manufacturer’s limits for alkalinity and/or moisture content using methods acceptable to wood athletic flooring manufacturer, in a manner and with materials compatible with wood athletic flooring assembly. Required remediation must be performed by the contractor at no cost to the Owner and with no extension of the contract time.

3.2 INSTALLATION

A. General: Comply with flooring-assembly manufacturer's written instructions, but not less than recommendations of MFMA applicable to flooring type indicated.

B. Pattern: Lay flooring parallel with the long dimension of the space to be floored, unless otherwise indicated.

C. Expansion Spaces: Provide as indicated, but not less than that required by manufacturer's written instructions and MFMA's written recommendations at walls and other obstructions, and at interruptions and terminations of flooring.
   1. Cover expansion spaces with base molding, trim, and saddles, as indicated.

D. Vapor Retarder: Install with joints lapped a minimum of 6 inches and sealed.

E. Installation Tolerances: 1/8 inch in 10 feet variance from level.

3.3 SANDING AND FINISHING

A. Allow installed flooring to acclimate to ambient conditions for at least 10 days before sanding.

B. Machine sand with coarse, medium, and fine grades of sandpaper to achieve a level, smooth, uniform surface without ridges or cups. Remove sanding dust by tack or vacuum.

C. Finish: Apply seal and finish coats of finish system according to manufacturer's written instructions. Provide not less than four coats total and not less than two finish coats.
   1. Water-Based Finishes: Use finishing methods recommended by finish manufacturer to reduce grain raise and sidebonding effect.
   2. Lines and Markers: Apply game-line and marker paint and custom graphics between final seal coat and first finish coat according to paint manufacturer's written instructions. Mask flooring to provide sharp edges. Where game lines cross, break minor game line at intersection; do not overlap lines.

D. Install base molding and other cover trim indicated for expansion spaces at edges and interruptions of flooring.

3.4 CLEANING AND PROTECTION

A. Protect wood flooring during remainder of construction period to allow finish to cure and to ensure that flooring and finish are without damage or deterioration at time of Substantial Completion.

B. Clean wood athletic flooring not more than 4 days before dates scheduled for inspections intended to establish date of Substantial Completion in each Project area. Use cleaning materials and procedures recommended in writing by wood athletic flooring manufacturer.

END OF SECTION 09 64 66

SECTION 09 65 00 – RESILIENT FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:
   1. Vinyl composite tile (VCT).
   2. Solid vinyl tile (SVT)
   3. Quartz tile (QT)
   4. Resilient wall base. (RWB)
   5. Resilient stair treads and landing tiles. (RT)
   6. Resilient flooring accessories.

B. Related Sections include the following:
   1. Division 04 Section "Unit Masonry": Prefaced masonry wall base units installed at locations of resilient sheet flooring; and requirements to rake mortar joints at base of wall units to allow resilient sheet to be tucked in below masonry base.
   2. Division 07 Section "Joint Sealants": Sealant for joints between glazed masonry wall base and resilient flooring.
   3. Division 09 Section "Carpeting": Installation of resilient carpet accessories, and for carpeted areas to receive resilient wall base.

1.2 SUBMITTALS

A. Product Data: For each type of product specified.

B. Shop Drawings: Show installation details including the following:
   1. Tile patterns and locations.
   2. Profiles, locations and colors of resilient accessories and flooring transition strips; and floor leveling for transitions between flooring materials.

C. Samples for Initial Selection: Manufacturer's color charts showing colors and patterns available for flooring.
   1. Include selection samples showing colors and glosses available for game-line and marker paint.

D. Samples for Verification: For each different color and pattern of resilient flooring and accessory specified, showing full range of variations expected in these characteristics:
   1. Tiles: Full size units.
   2. Sheet Flooring: 6 x 9-inch sections.
   3. Resilient Wall Base and Accessories: 12 inches long.

E. Maintenance Data: To include in Operating and Maintenance Manual specified in Division 01.

1.3 QUALITY ASSURANCE

A. Accessibility: Comply with applicable requirements of the Americans with Disabilities Act "Accessibility Guidelines" (ADAAG), together with ANSI A117.1 "Accessible and Usable Buildings and Facilities."

B. Single-Source Responsibility for Flooring: Obtain each type, color, and pattern of flooring from a single source with resources to provide products of consistent quality in appearance and physical properties without delaying progress of the Work.

C. Fire Performance Characteristics: Provide resilient flooring with the following fire performance characteristics as determined by testing products per ASTM test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
   1. Critical Radiant Flux: 0.45 watts per sq cm or more per ASTM E 648.
   2. Smoke Density: Less than 450 per ASTM E 662.

D. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01. Review methods and procedures related to resilient floorings including, but not limited to, the following:
   1. Inspect and discuss condition of substrate and other preparatory work performed by other trades and including testing requirements specified in Part 3.
   2. Review condition of concrete substrates in detail for cleanliness of concrete substrate and methods of contamination and dirt removal.
   3. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
   4. Review special designs and patterns.
   5. Review protection procedures.

1.4 PRODUCT HANDLING

A. Deliver resilient flooring materials and installation accessories to Project site in original manufacturer's unopened cartons and containers each bearing names of product and manufacturer, Project identification, and shipping and handling instructions.

B. Store flooring materials in dry spaces protected from the weather with ambient temperatures maintained between 50 deg F and 90 deg F.

C. Store tiles on flat surfaces.

D. Move resilient flooring and installation accessories into spaces where they will be installed at least 48 hours in advance of installation.

1.5 PROJECT CONDITIONS

A. Maintain a minimum temperature of 70 deg F in spaces to receive flooring for at least 48 hours prior to installation, during installation, and for not less than 48 hours after installation. After this period, maintain a temperature of not less than 55 deg F.

B. Do not install flooring materials until they are at the same temperature as the space where they are to be installed.

C. Close spaces to traffic during flooring installation.

D. Moisture Testing Results: Should testing indicate moisture and/or pH levels in concrete slabs exceed the limits acceptable to manufacturer of the floor finish, the contractor shall take necessary means to correct the deficiency. Proposed corrective action other than the method specified herein shall be submitted to the Architect for approval.

1.6 SEQUENCING AND SCHEDULING

A. Install flooring and accessories after other finishing operations, including painting, have been completed.

B. Do not install flooring over concrete slabs until the slabs have cured and are sufficiently dry to bond with adhesive as determined by flooring manufacturer's recommended bond and moisture test.

1.7 EXTRA MATERIALS

A. Deliver extra materials to Owner. Furnish extra materials matching products installed as described below, packaged with protective covering for storage and identified with labels clearly describing contents.
   1. Tile: Furnish not less than one box for each 50 boxes or fraction thereof, of each class, wearing surface, color, pattern and size of resilient floor tile installed.
   2. Sheet Flooring: Furnish not less than 10 linear feet for each 500 linear feet or fraction thereof, in roll form of each different composition, wearing surface, color, and pattern of sheet floor covering installed.
   3. Wall Base and Accessories: Furnish not less than 10 linear feet for each 500 linear feet or fraction thereof of each different type and color of resilient wall base and accessory strips installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Resilient Flooring Products: Subject to compliance with requirements, provide products indicated in Finish Legend on the Drawings.
   1. For substitutions proposed by Contractor, submit detailed product data for scheduled products and proposed substitutions for comparison.

2.2 COLORS AND PATTERNS

A. Resilient Flooring Product Colors and Patterns: As indicated on Drawings, or if not indicated, as selected by Architect from manufacturer's full range.

2.3 RESILIENT TILE

A. Vinyl Composite Tile (VCT): Armstrong Flooring
1. Thickness: .125 inch.
2. Size: 12 by 12 inches.
3. Product: As indicated on Drawings.

B. Solid Vinyl Tile (SVT): Shaw Contract
1. Class: Class 1, monolithic, Type A (smooth)
2. Thickness: 0.125 inches (3.17 mm).
3. Size: 36 by 36 inches.
4. Product: As indicated on Drawings.

2.4 RESILIENT WALL BASE

A. Rubber Wall Base: ASTM F 1861.
1. Type (Material Requirement): TS (rubber, vulcanized thermoset).
2. Group (Manufacturing Method): I (solid).
3. Style: Cove with top-set toe.
4. Minimum Nominal Thickness: 1/8 inch.
5. Height: 4 inches.
6. Lengths: Cut to size from coils; use of 4 foot or other single lengths is not permitted.
7. Exterior Corners: Job-formed.
8. Interior Corners: Job-formed.

2.5 RESILIENT STAIR ACCESSORIES

A. Rubber Stair Treads: Products of style suitable for use indicated and complying with FS RR-T-650, Composition A, Type 2 design (designed) products complying with the following requirements.
1. Type: Combination tread and riser.
2. Type 2 Design: Raised-disc pattern with minimum 2 inch wide contrasting nosing strip in color selected by Architect.
3. Thickness: 1/4 inch tapering to 3/16 inch at back edge.
4. Size: Lengths and depths to fit each stair tread in one piece or, for treads exceeding maximum lengths manufactured, obtain Architect’s approval for joint locations.

B. Rubber Tiles for Stair Landings: Homogeneous rubber tile, solid color.
1. Wearing Surface: Molded pattern matching stair treads.
2. Thickness: 0.125 inch.
3. Size: Not less than 18 by 18 inches.

2.6 RESILIENT FLOORING ACCESSORIES

A. Resilient Molding Accessory:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Burke Mercer Flooring Products; Division of Burke Industries, Inc.

b. Flexco, Inc.
c. Johnsonite.
d. R.C.A. Rubber Company (The).
e. Roppe Corporation, USA.
f. VPI, LLC; Floor Products Division.

2. Description: Carpet edge for glue-down applications, Low profile reducer strip for resilient floor covering, Joiner for tile and carpet, Transition strips.
3. Material: Rubber.
4. Profile and Dimensions: As indicated or as selected by Architect from all types available.
5. Colors and Patterns: As indicated on drawings or as selected by Architect from full range of industry colors.

2.7 INSTALLATION ACCESSORIES

A. Concrete Slab Primer: Nonstaining type as recommended by flooring manufacturer.

B. Trowelable Underlayments and Patching Compounds: Latex-modified, portland-cement-based formulation provided or approved by flooring manufacturer for applications indicated.

C. Adhesives (Cements): Water-resistant type recommended by flooring manufacturer to suit resilient flooring products and substrate conditions indicated.

D. Seam Sealer: Formulation provided or approved by floor covering manufacturer for products indicated.

E. Rod for Heat-Welding Seams: Product of floor covering manufacturer in color selected by Architect.

F. Transition Strips: Rubber accessory moldings for edges of flooring and transitions between different flooring materials, as specified in Division 09 Section "Resilient Base and Accessories."

G. Stair Tread Nose Filler: Two-part epoxy compound recommended by resilient tread manufacturer to fill nosing substrates not conforming to tread contours.

PART 3 - EXECUTION

3.1 EXAMINATION

A. General: Examine areas where installation of resilient flooring will occur, with Installer present, to verify that substrates and conditions are satisfactory for installation and comply with flooring manufacturer's requirements and those specified in this Section.

B. Concrete Substrates: Verify that concrete slabs comply with ASTM F 710 and the following:
1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials whose presence would interfere with bonding of adhesive.

Determine adhesion and alkalinity characteristics by performing tests recommended by resilient material manufacturer.

2. Finishes of subfloors comply with tolerances and other requirements specified in Division 03 Section "Cast-In-Place Concrete" for slabs receiving resilient flooring.
3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits of any kind.
4. Moisture Testing: Perform tests recommended by manufacturer and as follows. Proceed with installation only after substrates pass testing.
    a. Perform relative humidity test using in situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum 90% relative humidity level measurement.
5. Testing Failure: New floor slabs exceeding the finish manufacturer’s limits for alkalinity and/or moisture shall be remedied by the contractor at no cost to the Owner and with no extension to the contract. The following remediation is acceptable to the Architect. Other methods must be submitted to the Architect for approval.
    a. Basis of Design Product: For treatment applied on new cured floor slabs, provide “CS2000 2-Day System” as manufactured by Creteseal, Santa Ana, CA (800 278 4273), www.creteseal.com. This system requires preparation of new slabs including shot-blasting of surface, patching cracks, application of moisture treatment and skim coating with approved underlayment.

C. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General: Comply with manufacturer's installation specifications to prepare substrates indicated to receive flooring.

B. Use trowelable leveling and patching compounds per flooring manufacturer's directions to fill cracks, holes, and depressions in substrates.

C. Slope substrate with patching material to produce flush transitions between flooring materials. Taper transitions not less than 24 inches in any direction, unless otherwise approved by Architect.
    1. In locations where flooring materials change at a doorway, extend elevated portion of patched area so taper is located beyond door opening, and so finish flooring is level at adjacent doors.

D. Use stair tread nose filler per tread manufacturer's directions to fill nosing substrates not conforming to tread contours.

E. Remove coatings, including curing compounds, and other substances that are incompatible with flooring adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by flooring manufacturer.
    1. Do not use solvents.
    2. Chemically strip existing flooring surfaces scheduled to receive resilient flooring, if recommended by manufacturer of new floor covering materials.

3. Lightly scarify all floors using rotary floor machine with Carborundum stones, spring steel scrapers or equivalent to remove surface contamination and adhered dirt.

F. Broom or vacuum clean substrates to be covered by resilient flooring immediately before installation. Following cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust.

G. Apply concrete slab primer, if recommended by flooring manufacturer, prior to applying adhesive. Apply according to manufacturer's directions.

3.3 RESILIENT FLOORING INSTALLATION, GENERAL

A. General: Comply with flooring manufacturer's installation directions and other requirements indicated that are applicable to each type of flooring included in Project.

B. Where demountable partitions and other items are indicated for installing on top of finished floor, install flooring before these items are installed.

C. Scribe, cut, and fit flooring to butt tightly to vertical surfaces, permanent fixtures, built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings.

D. Extend flooring into toe spaces, door reveals, closets, and similar openings.

E. Maintain reference markers, holes, or openings that are in place or plainly marked for future cutting by repeating on finish flooring as marked on subfloor. Use chalk or other nonpermanent marking device.

F. Install flooring on covers for telephone and electrical ducts, and similar items occurring within finished floor areas. Maintain overall continuity of color and pattern with pieces of flooring installed on these covers. Tightly adhere edges to perimeter of floor around covers and to covers.

G. Adhere flooring to substrates without producing open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, or other surface imperfections in completed installation.

H. Use full spread of adhesive applied to substrate in compliance with flooring manufacturer's directions including those for trowel notching, adhesive mixing, and adhesive open and working times.

I. Hand roll flooring where required by tile manufacturer.

J. Apply game-line and marker paint according to manufacturer's written instructions. Mask flooring to provide sharp edges.

K. Tuck resilient flooring into raked joint at base of prefaced masonry wall base units.
1. Apply joint sealant to fill joint after installation of resilient flooring.

3.4 INSTALLATION OF TILES

A. Lay out tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths at perimeter that equal less than one-half of a tile. Install tiles square with room axis, unless otherwise indicated.

B. Match tiles for color and pattern by selecting tiles from cartons in same sequence as manufactured and packaged, if so numbered. Cut tiles neatly around all fixtures. Discard broken, cracked, chipped, or deformed tiles.
   1. Lay tiles with grain running in one direction as directed by Architect.

3.5 INSTALLATION OF RESILIENT ACCESSORIES

A. Apply resilient wall base to walls, columns, pilasters, casework, and other permanent fixtures in rooms and areas where base is required. Install wall base in lengths as long as practicable. Tightly adhere wall base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.
   1. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient wall base with manufacturer's recommended adhesive filler material.
   2. Install inside and exterior corners before installing straight pieces.
   3. Form inside corners on job from straight pieces of maximum lengths possible by cutting an inverted V-shaped notch in toe of wall base at the point where corner is formed. Shave back of base where necessary to produce snug fit to substrate.
   4. Form outside corners on job from straight pieces of maximum lengths possible by shaving back of base at point where bending will occur. Remove a strip perpendicular to length of base and only deep enough to produce a snug fit without bends whitening or removal of more than half the thickness of wall base.

B. Apply resilient accessories to stairs as indicated and according to manufacturer's installation instructions.

C. Place resilient flooring accessories so they are butted to adjacent materials of type indicated and bond to substrates with adhesive. Install reducer strips at edges of flooring that otherwise would be exposed.

3.6 FIELD QUALITY CONTROL

A. Testing: Arrange for testing electrical resistance of static-control resilient floor covering systems for compliance with requirements in accordance with Owner's electrostatic-discharge control program.
   1. Arrange for testing of floors prior to performing any floor polish procedures.

3.7 CLEANING AND PROTECTION

A. Perform the following operations immediately after completing flooring installation:
   1. Remove visible adhesive and other surface blemishes using cleaner recommended by flooring manufacturers.
   2. Sweep or vacuum floor thoroughly.

3. Do not wash floor until after time period recommended by resilient flooring manufacturer.
4. Damp-mop flooring to remove black marks and soil.

B. Protect flooring against mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period. Use protection methods indicated or recommended by flooring manufacturer.
   1. If recommended by flooring manufacturer, apply protective floor polish to flooring surfaces that are free from soil, visible adhesive, and surface blemishes.
      a. Use commercially available product acceptable to flooring manufacturer.
      b. Coordinate selection of floor polish with Owner's maintenance service.
   2. Cover flooring with undyed, untreated building paper or self-adhesive surface protection until inspection for Substantial Completion.
   3. Do not move heavy and sharp objects directly over resilient flooring. Place plywood or hardboard panels over flooring and under objects while they are being moved. Slide or roll objects over panels without moving panels.

END OF SECTION 09 65 00

SECTION 09 66 23 – EPOXY TERRAZZO FLOORING

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes:

1. Epoxy terrazzo with divider and accessory strips.
2. Precast terrazzo stair assemblies.

B. Related Requirements:

1. Concrete subfloor, Section 03 Cast-in-place Concrete
2. Attach metal stairs including any welding and/or reinforcing, Section 05 Metal Pan Stairs

1.02 DEFINITIONS

A. NTMA: National Terrazzo and Mosaic Association, Inc.

1.03 PREINSTALLATION MEETINGS

A. Pre installation Conference: The General Contractor shall conduct a conference at project site before Terrazzo Contractor begins installation.

1. The General Contractor shall invite Terrazzo Contractor, the Architect and representatives of the Owner.
2. Review methods and procedures related to terrazzo including, but not limited to, the following:

a. Inspect and discuss condition of substrate and other preparatory work performed by other trades.

b. Review and finalize construction schedule and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.

c. Review terrazzo mixes, designs and patterns.

d. Coordination with the work of other installers.

1.04 SUBMITTALS

A. Product Data: Terrazzo Contractor shall submit Product Data for each type of product required for installation including:

B. Shop Drawings: Terrazzo Contractor shall prepare and submit Shop Drawings that include plans, elevations, sections, component details and attachments to other work. Include terrazzo installation requirements. Show layout of the following:

1. Divider strips.
2. Expansion joint strips.
3. Accessory strips.
4. Terrazzo patterns.
5. Abrasive strips.
6. Stair treads.

C. Samples:

1. Terrazzo Contractor shall prepare and submit a maximum of three samples, sizes 6 by 6 inches for each color and type of terrazzo specified.

2. Terrazzo Contractor shall submit a maximum of three samples, 6 inches in length for each color and type of precast terrazzo specified.

3. Accessories: 6 inch long Samples of each type and kind of exposed strip item required

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: Terrazzo Contractor shall submit two copies of qualification data.

1. Include list of projects indicating name and location of project, name of Owner, name and contact information for General Contractor, and name and contact information for Architect.

2. The Terrazzo Contractor shall furnish a written statement from the manufacturer that the installer is acceptable.

B. Material Certificates:

1. Epoxy Resin: For each type of resin required indicating that materials meet specification requirements, signed by manufacturer.

2. Aggregate: For each type of aggregate required indicating compatibility with terrazzo mix, signed by aggregate supplier.

1.06 CLOSEOUT SUBMITTALS

A. Maintenance Literature: Terrazzo Contractor shall submit two copies of maintenance recommendations from NTMA and/or manufacturer's maintenance recommendations.

1.07 QUALITY ASSURANCE

A. Acceptable Epoxy Resin Manufacturer: An Associate Member of the NTMA, experienced in manufacturing epoxy resin in accordance with NTMA standards and with a record of successful in-service performance, as well as sufficient production capacity to produce required materials.

B. Acceptable Terrazzo Contractor: A Contractor Member of NTMA or NTMA contractor prospective member whose work has resulted in construction with a record of successful in-service performance.

1. Installer shall have completed terrazzo installations within the past 5 years of scale and complexity similar to the proposed installation.

2. Installer must be approved by the manufacturer of the floor surfacing materials.

C. Terrazzo Standards: Terrazzo Contractor shall furnish materials and install terrazzo according to NTMA's “Terrazzo Specifications and Design Guide” and with written recommendations for terrazzo type indicated unless more stringent requirements are specified.

D. Source Limitations for Aggregates: Terrazzo Contractor shall obtain each color, grade, type and variety of granular materials from sources with resources to provide materials of consistent quality in appearance and physical properties.

E. Mockups: Terrazzo Contractor shall construct a mockup to demonstrate aesthetic effects and set quality standards for materials and execution. Mock-up size must not be less than 4 square feet for a portable mock-up.
1. Build mockup as indicated on Drawings. Acceptable mock-up to be standard of quality for installed work.
2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion

1.08 DELIVERY, STORAGE AND HANDLING

A. Materials shall be delivered to Project site in supplier's original wrappings and containers, labeled with source or manufacturer's name, material or product brand name, date of manufacture, and lot/batch numbers if any.

B. Materials shall be stored in their original, undamaged packages and containers, in a location where they will not be exposed to direct sunlight.

1. Epoxy components shall be stored in a space where the ambient temperature can be maintained 60 and 80 deg. F before use.

C. Follow all manufacturer's specific instructions and prudent safety practices for storage and handling.

1.09 PROJECT CONDITIONS

A. General Contractor shall provide sufficient water, temporary heat and light, and adequate electric power with suitable outlets connected and distributed for use within 100 feet of any working space.

B. General Contractor shall provide temporary enclosures and other suitable methods to protect adjacent spaces from damage during installation.

1. Maintain ambient temperatures in the area to receive terrazzo at not less than 60 deg. F.
2. Maintain adequate ventilation in the area to receive terrazzo.

C. Terrazzo Contractor shall protect other adjacent work from water and dust generated by grinding operations.

1.10 GUARANTEE

A. One year from date of substantial completion of terrazzo installation.

PART 2 - PRODUCTS

2.01 PERFORMANCE

A. As a basis of design, specifications based on Key Resin Company, Key Epoxy Terrazzo.

1. Local Representation: Jon Lattin, 610-559-8182

B. Provide conforming products based on:

1. Key Resin Company: Key Epoxy Terrazzo

2. Key Resin is considered the approved quality standard for this job. Any other material bid for this section must have as a minimum the standards set forth in this specification.

C. Other acceptable manufacturer’s upon a compliance review include:

1. Dex-O-Tex Terrazzo

2. Terroxy Resin Systems

2.02 MATERIALS

A. Moisture Primer: Moisture Vapor Primer required for base bid.

1. MVT Primer: Key #597 MVT Primer

2. If MVT levels are greater than base bid MVT primer limits, additional MVT control will be an Add-On to the contract.

B. Primer: As recommended, manufactured and supplied by epoxy resin manufacturer.

1. Primer: Key #502 Primer

C. Crack Suppression/Isolation Membrane: As recommended, produced and supplied by approved terrazzo resin formulator, having minimum 120 percent elongation potential per ASTM D 412. Allow 15% crack coverage for slab-on-grade, 100% coverage for elevated slab.

1. Key #580 Flexible Epoxy

2. Reinforcement: Fiberglass scrim.

D. Epoxy Resin Matrix: Key #108 Epoxy resin, a two-component, 100% solids resin complying with specified performance requirements.

1. Color: As required for mix indicated.

E. Aggregates: As required to match architect's terrazzo sample

1. Comply with NTMA gradation standards.

2. Abrasion and Impact Resistance: Loss of 40 percent or less when tested according to ASTM C 131 (LA Abrasion).

3. Aggregates shall contain no deleterious or foreign matter.

F. Divider Strips:

1. Material: Aluminum

2. Strip Thickness: 1/8".

3. Type: "L" strip: 3/8 inch by 1/2 inch.

2.03 PRECAST TERRAZZO

A. Provide conforming products based on:

1. Wausau Tile Precast Terrazzo

2. Romoco Precast Terrazzo

3. Angelozzi Precast Terrazzo Products

B. Precast Terrazzo Base: Minimum 3/8-inch-thick, epoxy terrazzo units cast in maximum lengths possible, but not less than 36 inches. Comply with precast manufacturer's written recommendations for fabricating precast terrazzo base units in sizes and profiles indicated.

1. Type: Straight Base

2. Top Edge: Eased edge with polished top surface.

3. Outside Corner Units: With finished returned edges or mitered at outside corner.

4. Color, Pattern, and Finish: Match adjacent poured-in-place terrazzo flooring field.

C. Precast Terrazzo Stair Units: 3/4" to 1” epoxy terrazzo (or 2-1/2-inch-thick, cement terrazzo) stair units cast in maximum lengths possible. Comply with precast manufacturer's written recommendations for fabricating precast terrazzo units in sizes and profiles indicated. Finish exposed-to-view edges and reveals to match face finish. Ease exposed edges to 1/8-inch radius.

1. Provide the following types of precast stair units:

a. Stair treads.

2. Color, Pattern, and Finish: Match adjacent poured-in-place terrazzo flooring as indicated.

D. Setting Materials for Precast Terrazzo: One of the following acceptable to the manufacturer of precast terrazzo units.

1. Epoxy Adhesive: Two component, compatible with terrazzo units and substrate.

2.04 MISCELLANEOUS ACCESSORIES

A. Sealer: Terrazzo Contractor shall provide a non-ambering, clear sealer that is chemically neutral; does not impair terrazzo aesthetics or physical properties; is recommended by terrazzo matrix manufacturer. Sealers shall comply with the following:

1. Comply with requirements of authorities having jurisdiction.

2. Surface Friction: Not less than 0.6 (ADA) according to ASTM D 2047.

3. Water Based Sealer Properties: With pH factor between 7 and 10.

B. Moisture Mitigation Primer: Two-component, high solids, moisture tolerant, high density, low odor, epoxy-based product produced by epoxy terrazzo resin

manufacturer specifically recommended to reduce alkalinity levels and moisture emission to not more than 3 lbs/ per 1000 sq. ft per 24 hours.

1. Key Epocon SL Moisture Vapor Control System.

2. Key Resin #635-PLUS Moisture Vapor Transmission Primer.

2.05 MIXES

A. Terrazzo Selection: Terrazzo Contractor shall provide standard terrazzo mix(es) according to the following:

1. Key Resin Sample CTS-25002 (White)

2. Key Resin Sample CTS-25003 (Grey)

B. Proportions for Epoxy Terrazzo Topping: Comply with resin supplier's recommendations.

C. Mixing of Terrazzo Topping: Mix epoxy components with aggregates in accordance with manufacturer's recommendations.

PART 3 - EXECUTION

3.01 EXAMINATION

A. The General Contractor and Architect shall examine substrates and areas, with Terrazzo Contractor present, for compliance with requirements for installation tolerances and other conditions affecting performance of the work.

1. Slab Flatness Tolerance: Subfloor is not to vary more than 1/4 inch from true plane in a 10 foot span.

2. Cracks: Locate cracks and joints in concrete substrates. Verify location of control joints and expansion joints in epoxy terrazzo flooring.

B. The General Contractor shall be responsible for correcting non-conforming concrete substrates using materials compatible with epoxy terrazzo flooring system and as approved by the Terrazzo Contractor.

1. Materials used to correct nonconforming conditions must be compatible with the selected epoxy system and be approved by the manufacturer of epoxy resin materials and Terrazzo Contractor.

C. Terrazzo Contractor shall proceed with installation only after unsatisfactory conditions, including levelness tolerances, cracking, excessive moisture vapor transmission, and alkalinity have been corrected.

3.02 PREPARATION

A. General Contractor shall broom clean area to receive terrazzo to remove loose chips and all foreign matter.

B. Terrazzo Contractor shall mechanically abrade concrete surface to provide a standard profile of ICRI (International Concrete Repair Institute) CSP 3-5.

1. Repair any deteriorated or damaged concrete with a standard epoxy sand fill mixture per manufacturer's instructions.

C. The General Contractor shall retain the services of an independent testing laboratory to verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to epoxy resin manufacturer's written instructions.

1. Perform relative humidity test using in situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum 90 percent relative humidity level measurement when using the moisture vapor tolerant primer as specified in 2.02.A.

D. Terrazzo Contractor shall provide flexible epoxy crack isolation/suppression membrane as defined in Section 2.02.B.

3.03 POURED-IN-PLACE TERRAZZO INSTALLATION

A. General: Apply each component of the Epoxy Thin-set Terrazzo Flooring System in compliance with manufacturer's written installation instructions and strictly adhere to mixing and installation methods, recoat windows, cure times and environmental restrictions.

B. Strip Materials: Terrazzo Contractor shall install strip materials as follows:

1. Divider and Control-Joint Strips:

a. Locate divider strips in locations indicated.

b. Install control joint strips back to back in locations indicated.

c. Install strips in epoxy adhesive without voids below strips.

2. Accessory Strips: Install as required to provide a complete installation.

C. Placing Terrazzo:

1. Prime subfloor in accordance with manufacturer's recommendations.

2. Install Key #580 Flexible Epoxy Membrane as outlined above.

3. Reinforce membrane with fiberglass scrim where recommended by the manufacturer.

4. Proportion and thoroughly blend the materials.

5. Place mixture to achieve specified thickness.

D. Finishing: Terrazzo Contractor shall finish the terrazzo topping as follows:

1. Rough Grinding:

a. Grind with 24 or finer grit stones or with comparable diamond abrasives.

b. Follow initial grind with 60/80 grit stones or with comparable diamond abrasives.

2. Grouting:

a. Clean terrazzo with clean water and rinse. Allow to dry.

b. Apply epoxy grout per manufacturer's instructions.

c. Allow grout to cure.

3. Fine Grinding/Polishing: Grind with a minimum 200 grit or with comparable diamond abrasives until all grout is removed from surface.

E. Terrazzo Cleaning: Terrazzo Contractor shall clean finished terrazzo as follows:

1. Remove grinding residue from terrazzo surface.

2. Wash terrazzo surfaces immediately after final grinding of terrazzo flooring with water and allow surfaces to dry thoroughly.

F. Sealing: Terrazzo Contractor shall seal terrazzo according to sealer manufacturer’s written instructions.

3.04 PRECAST TERRAZZO INSTALLATION

A. Terrazzo Contractor shall install precast terrazzo units as follows:

1. Precast Terrazzo Stair Units: Use epoxy adhesive to install treads over steel or concrete substrates according to ANSI 108.6.

3.05 REPAIR

A. Terrazzo Contractor shall repair terrazzo areas that evidence lack of bond between topping and underbed according to NTMA’s written recommendations.

3.06 PROTECTION

A. After application of the sealer, the Work shall be ready for final inspection and acceptance by the Owner or his agent.

B. The General Contractor shall protect the finished floor after the Terrazzo Contractor has completed final grinding and applied sealer to terrazzo surfaces.

END OF SECTION 09 66 23

SECTION 09 67 23 - RESINOUS FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes:
   1. Solid color, smooth finish, self-leveling slurry, 1/8” thick flooring with integral cove base

B. Related Sections include the following:
   1. Division 01 Section "Temporary Facilities and Controls": Self-adhesive surface protection products to protect flooring installations during construction.
   2. Division 03 Section "Cast-in-Place Concrete": Concrete substrates to receive resinous flooring.
   3. Division 07 Section "Joint Sealants": Joint-sealant materials and installation of sealant materials at joints in resinous flooring systems.

1.2 SUBMITTALS

A. Product Data: Include manufacturer's technical data, installation instructions, and recommendations for each resinous flooring component required.

B. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors, textures, and patterns available.

C. Samples for Verification: 6 inches square, applied by Installer for this Project to a rigid backing, in color, texture, and finish indicated.

D. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.

E. Material Test Reports: From a qualified independent testing agency indicating and interpreting test results of the resinous flooring's reaction to chemicals and other reagents and substantiating compliance with requirements.

F. Maintenance Data: For resinous flooring to include in the maintenance manuals specified in Division 01.

1.3 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced installer (applicator) who has specialized in installing resinous flooring similar in material, design, and extent to that indicated for this Project and who is acceptable to resinous flooring manufacturer.
   1. Engage an installer who is certified in writing by resinous flooring manufacturer as qualified to install resinous flooring systems specified.

B. Source Limitations: Obtain primary resinous flooring materials, including primers, resins, hardening agents, and sealing or finish coats, through one source from a single manufacturer. Provide secondary materials including patching and fill material, joint sealant, and repair materials of type and from source recommended by manufacturer of primary materials.

C. Field Samples: On floor area selected by Architect, provide full-thickness resinous flooring system samples that are at least 48 inches square to demonstrate texture, color, thickness, chemical resistance, cleanability, and other features of each resinous flooring system required. Simulate finished lighting conditions for review of in-place field samples.
   1. If field samples are unacceptable, make adjustments to comply with requirements and apply additional samples until field samples are approved.
   2. After field samples are approved, these surfaces will be used to evaluate resinous flooring.
   3. Obtain Architect's approval of field samples before applying resinous flooring.
   4. Final approval of colors will be from field samples, not samples submitted for verification.

1.4 PRODUCT HANDLING

A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage and mixing with other components.

B. Store materials to comply with manufacturer's written instructions to prevent deterioration from moisture, heat, cold, direct sunlight, or other detrimental effects.

1.5 PROJECT CONDITIONS

A. Environmental Limitations: Comply with resinous flooring manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting resinous flooring installation.
   1. Maintain a minimum slab temperature of 60 degrees before, during, and for 72 hours after installation and at a minimum 5 degrees above dew point during installation..

B. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during resinous flooring installation.

C. Close spaces to traffic during resinous flooring application and for not less than 24 hours after application, unless manufacturer recommends a longer period.

D. Moisture Testing Results: Should testing indicate moisture and/or pH levels in concrete slabs exceed the limits acceptable to manufacturer of the floor finish, the contractor shall take necessary means to correct the deficiency. Corrective action shall not require extension of the contract or additional cost to the Owner. Proposed corrective action other than the method specified herein shall be submitted to the Architect for approval.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: FlowResin Flowfresh SL (self-leveling slurry with BCM broadcast quartz), urethane topcoat seamless flooring system.
   1. System Materials:
      a. Topping: FlowResin Flowfresh SL with Polygiene anti-microbial additive included.
      b. The aggregate shall be Estes BCM quartz aggregate
      c. Topcoat: FlowResin Flowfresh SR Sealer with Polygiene anti-microbial additive included.
   2. Patch Materials
      a. Shallow Fill and Patching: Use FlowResin Flowfresh SR (up to ¼ inch).
      b. Deep Fill and Sloping Material (over ¼ inch): Use FlowResin Flowfresh HF
      c. Substitutions: For substitutions proposed by Contractor, submit detailed product data for basis-of-design products and proposed products for comparison, in accordance with substitution procedures specified in Division 01

2.2 MATERIALS

A. Resinous Flooring: Resinous floor surfacing system consisting of primer; body coat(s) including resin, hardener, aggregates, and colorants; and sealing or finish coat(s).
   1. Topping: Flowfresh SL
   2. Percent Solids 100 %
   3. VOC <10 g/L
   4. Bond Strength to Concrete ASTM D 4541 > 400 psi, failure in substrate
   5. Compressive Strength, ASTM C 579 8,128 psi
   6. Tensile Strength, ASTM C 307 1,450 psi
   7. Flexural Strength, ASTM C 580 2,900 psi
   8. Impact Resistance @ 125 mils, MIL D-3134, 160 inch lbs

B. Topcoat: Flowfresh SR Sealer
   1. Percent Solids 100%
   2. VOC <10 g/L
   3. Elongation at break, ASTM D638 20%
   4. Tensile Strength, ASTM C307 1,650 psi
   5. Flexural Strength, ASTM C580 2,400 psi

C. Joint Sealant: Type recommended or produced by resinous flooring manufacturer for type of service and joint condition indicated.

PART 3 - EXECUTION

3.1 PREPARATION

A. General: Prepare and clean substrate according to resinous flooring manufacturer's written instructions for substrate indicated. Provide clean, dry, and neutral substrate for resinous flooring application.

B. Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminates incompatible with resinous flooring.
   1. Comply with ASTM C 811 requirements and ICRI Guidelines #310-2-1997, unless resinous flooring manufacturer's written instructions are more stringent.
   2. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
      a. Provide surface profile of concrete substrate equivalent to concrete surface profile CSP 3-5.
   3. Repair damaged and deteriorated concrete according to resinous flooring manufacturer's written recommendations.
   4. Moisture Testing: Perform tests recommended by manufacturer and as follows. Proceed with installation only after substrates pass testing.
      a. Perform relative humidity test using in situ probes, ASTM F 2170. Proceed with installation only after substrates comply with resinous flooring manufacturer’s written requirements, in no instance to exceed a maximum 75% relative humidity level measurement.
   5. Testing Failure: Remedy new floor slabs exceeding the resinous flooring manufacturer’s limits for alkalinity and/or moisture content using methods acceptable to resinous flooring manufacturer, in a manner and with materials compatible with resinous flooring assembly. Required remediation must be performed by the contractor at no cost to the Owner and with no extension of the contract time.

C. Resinous Materials: Mix components and prepare materials according to resinous flooring manufacturer's written instructions.

D. Use patching and fill material to fill holes and depressions in substrates according to manufacturer's written instructions.

E. Treat nonmoving substrate cracks to prevent cracks from reflecting through resinous flooring according to manufacturer's written recommendations.

F. All isolation/expansion and other joints subject to movement: Movement joints must be honored through the flooring system. Comply with manufacturer’s recommendations for movement joints.

3.2 APPLICATION

A. General: Apply components of resinous flooring system according to manufacturer's written instructions to produce a uniform, monolithic wearing surface of thickness indicated.
   1. Coordinate application of components to provide optimum adhesion of resinous flooring system to substrate and optimum intercoat adhesion.
   2. Cure resinous flooring components according to manufacturer's written instructions. Prevent contamination during application and curing processes.
   3. At substrate expansion and isolation joints, provide joint in resinous flooring to comply with resinous flooring manufacturer's written recommendations.
      a. Apply joint sealant to comply with manufacturer's written recommendations.

B. Apply primer over prepared substrate at manufacturer's recommended spreading rate.

C. Apply first slurry body coat by spreading with rubber squeegee and cross rolling at spread rate of 140-145 sq. feet per gallon.
   1. Allow material to self-level for 10-15 minutes.
   2. Broadcast aggregates and, after resin is cured, remove excess aggregates.
   3. Smooth imperfections such as high spots before application of second broadcast.

D. Apply second slurry body coat by pulling out with V-notched rubber squeegee and cross rolling at spread rate of 65-70 sq. feet per gallon.
   1. Allow material to self-level for 10-15 minutes.
   2. Broadcast aggregates to produce required surface texture.

E. Integral Cove Base: Apply cove base mix to wall surfaces at locations indicated. Round internal and external corners. Install cove base according to manufacturer's written instructions and details including taping, mixing, priming, troweling, sanding, and topcoating of cove base.

F. Apply grout coat and seal coat, of type recommended by resinous flooring manufacturer to produce finish indicated. Apply in number of coats and at spreading rates recommended in writing by manufacturer.

3.3 CLEANING AND PROTECTING

A. Protect resinous flooring from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by resinous flooring manufacturer.

B. Clean resinous flooring not more than 4 days before dates scheduled for inspections intended to establish date of Substantial Completion in each Project area. Use cleaning materials and procedures recommended in writing by resinous flooring manufacturer.

END OF SECTION 09 67 23

SECTION 09 6813 - TILE CARPETING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes carpet tile and installation.

B. Related Sections include the following:
1. Division 03 Section "Cast-in-Place Concrete": Curing compounds and other concrete treatments compatibility with carpet and carpet cushion adhesives.
2. Division 09 Section "Resilient Flooring": Wall base and termination strips installed with carpet.
3. Division 09 Section "Sheet Carpeting": Broadloom carpet applications.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated. Include manufacturer's written data on physical characteristics, durability, and fade resistance. Include installation methods.

B. Shop Drawings: Show the following:
1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet tiles.
2. Carpet tile type, color, and dye lot.
3. Type of subfloor.
4. Type of installation.
5. Pattern of installation.
6. Pattern type, location, and direction.
7. Pile direction.
8. Transition details to other flooring materials.

C. Samples: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
1. Carpet Tile: Full-size Sample.
2. Exposed Edge Stripping and Accessory: 12-inch-long Samples.

D. Product Schedule: Use same room and product designations indicated on Drawings and in schedules.

E. Maintenance Data: For carpet tile to include in maintenance manuals specified in Division 1. Include the following:
1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.

1.3 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who is certified by the Floor Covering Installation Board or who can demonstrate compliance with its certification program requirements.

B. Fire-Test-Response Characteristics: Provide products with the critical radiant flux classification indicated in Part 2, as determined by testing identical products per ASTM E 648 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.

C. Mockups: Before installing carpet tile, install mockups for each type of carpet tile installation required to demonstrate aesthetic effects and qualities of materials and execution. Install mockups to comply with the following requirements, using materials indicated for the completed Work:
   1. Install mockups in the location and of the size indicated or, if not indicated, as directed by Architect.
   2. Notify Architect 7 days in advance of dates and times when mockups will be installed.
   3. Demonstrate the proposed range of aesthetic effects and workmanship.
   4. Obtain Architect's approval of mockups before starting work.
   5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
   6. Approved mockups may become part of the completed Work if undamaged at time of Substantial Completion.

1.4 PRODUCT HANDLING

A. General: Comply with CRI 104, Section 5, "Storage and Handling" for delivery, storage and handling of carpet tile.

1.5 PROJECT CONDITIONS

A. General: Comply with CRI 104, Section 6.1, "Site Conditions; Temperature and Humidity."

B. Environmental Limitations: Do not install carpet tile until wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

C. Do not install carpet tile over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer.

D. Where demountable partitions or other items are indicated for installation on top of carpet tile, install carpet tile before installing these items.

1.6 WARRANTY

A. General Warranty: Special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Special Carpet Tile Warranty: Written warranty, signed by carpet tile manufacturer agreeing to replace carpet tile that does not comply with requirements or that fails within specified warranty period. Warranty does not include deterioration or failure of carpet tile due to unusual traffic, failure of substrate, vandalism, or abuse. Failures include, but are not limited to, more than 10 percent loss of face fiber, edge raveling, snags, runs, and delamination.
   1. Warranty Period: 15 years from date of Substantial Completion.

1.7 EXTRA MATERIALS

A. Furnish extra materials described below, before installation begins, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Carpet Tile: Full-size units equal to 5 percent of amount installed for each type indicated, but not less than 10 sq. yd.

PART 2 - PRODUCTS

2.1 CARPET TILE

A. Carpet Products: Subject to compliance with requirements, provide products indicated in Finish Legend on the Drawings.
   1. Drawing Type Designation: [CPT-#].
   2. For substitutions proposed by Contractor, submit detailed product data for scheduled products and proposed substitutions for comparison.

B. Performance Characteristics: As follows:
   1. Critical Radiant Flux Classification: Not less than 0.45 W/sq. cm.
   2. Dry Breaking Strength: Not less than 100 lbf per ASTM D 2646.
   3. Colorfastness to Crocking: Not less than 4, wet and dry, per AATCC-165.
   4. Colorfastness to Light: Not less than 4 after 40 AFU (AATCC fading units) per AATCC-16.
   5. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria; not less than 1-mm halo of inhibition for gram-negative bacteria; no fungal growth; per AATCC-174.

2.2 INSTALLATION ACCESSORIES

A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided by or recommended by carpet tile manufacturer.

B. Adhesives: Water-resistant, mildew-resistant, nonstaining type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet tile and that is recommended by carpet tile manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION
