F. Manufacturers:

1. National Guard Products (NG).
2. Pemko (PE).
3. Reese Enterprises, Inc. (RE).

2.16 ELECTRONIC ACCESSORIES

A. Door Position Switches: Door position magnetic reed contact switches specifically designed for use in commercial door applications. On recessed models the contact and magnetic housing snap-lock into a 1" diameter hole. Surface mounted models include wide gap distance design complete with armored flex cabling. Provide SPDT, N/O switches with optional Rare Earth Magnet installation on steel doors with flush top channels.

1. Manufacturers:

a. Alarm Controls (AK) - CP1-1026 Series.
b. Securitron (SU) - DPS Series.

B. Switching Power Supplies: Provide the least number of power supplies at the appropriate amperage level sufficient to exceed the required total draw for the specified electrified hardware and access control equipment.

1. Power supplies shall meet all functions and features as specified herein.

a. UL listed dual voltage 12 or 24 VDC field selectable continuous output.

b. Tolerates brownout or overvoltage input ± 15% of nominal voltage.
c. Thermal shutdown protection with auto restart.
d. Circuit breaker protection against overcurrent and reverse battery faults.
e. Integrated battery charging circuit to prevent overvoltage on locking devices.
f. Available with a single relay fire trigger or individually triggered relayed outputs.
g. Monitoring options as specified.

2. Manufacturers:

a. Securitron (SU) - AQD Series.

C. Intelligent Switching Power Supplies: Provide the least number of power supplies at the appropriate amperage level sufficient to exceed the required total draw for the specified electrified hardware and access control equipment.

1. Power supplies shall meet all functions and features as specified herein.

a. UL listed dual voltage 12 or 24 VDC field selectable continuous output.
b. Dedicated fast charger to prolong battery life with low battery cutoff to protect batteries from deep discharge.
c. Enhanced surge immunity for input/output protection
d. Separate, dedicated battery charging circuit to keep locks cooler.
e. Dual-color LED visual notification to prevent applying incorrect voltages to the power supply.
f. Instant auto-switch to battery on AC loss.
g. Expandable up to 16 outputs in the standard enclosure
h. Integrated fire alarm interface to allow main output shutdown or disconnect on a per output basis when using an R8 output module.
i. Network ready and remotely manage locks and connected devices when using an M8 managed output module on network models.
j. Lifetime replacement, no-fault, no questions asked warranty.

2. Manufacturers:

a. Securitron (SU) - AQL Series.

2.17 FABRICATION

A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.18 FINISHES

A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.

B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware

C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.

B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.3 INSTALLATION

A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.

1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.

B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:

1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
2. DHI TDH-007-20: Installation Guide for Doors and Hardware.
3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.

C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

D. Push Plates and Door Pulls: When through-bolt fasteners are in the same location as a push plate, countersink the fasteners flush with the door face allowing the push plate to sit flat against the door.

E. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."

F. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

A. Field Inspection (Punch Report): Reference Division 01 Sections “Closeout Procedures”. Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.

1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.

3.5 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.6 CLEANING AND PROTECTION

A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.

B. Clean adjacent surfaces soiled by door hardware installation.

C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

1. Quantities listed are for each pair of doors, or for each single door.
2. The supplier is responsible for handing and sizing all products.
3. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.
4. At existing openings with new hardware the supplier shall field inspect existing conditions prior to the submittal stage to verify the specified hardware will work as required. Provide alternate solutions and proposals as needed.

B. Refer to Section 080671, Door Hardware Sets, for hardware sets.

END OF SECTION 08.7100

SECTION 08.8000 - GLAZING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Related Sections: Section(s) related to this section include:
1. Section 08.1113 “Hollow Metal Doors and Frames”
2. Section 08.1416 “Flush Wood Doors”
3. Section 08.4113 “Aluminum –Framed Entrances and Storefronts”
4. Section 08.4413 “Glazed Aluminum Curtain Walls

C. Section includes glazing for the following products and applications, including those specified in other Sections where glazing requirements are specified by reference to this Section:

1. Windows.
2. Doors.
3. Glazed curtain walls.
4. Storefront framing.
5. Glazed entrances.
6. Interior borrowed lites.

1.2 DEFINITIONS

A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.

B. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.

C. Interspace: Space between lites of an insulating-glass unit.

1.3 PERFORMANCE REQUIREMENTS

A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

1.4 SUBMITTALS

A. Product Data: For each glass product and glazing material indicated.

B. Glass Samples: For each type of glass product; 12 inches square.

C. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

D. Qualification Data: For installers.

E. Product Certificates: For glass and glazing products, from manufacturer.

F. Warranties: Sample of special warranties.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications for Insulating-Glass Units with Sputter-Coated, Low-E Coatings: A qualified insulating-glass manufacturer who is approved by coated-glass manufacturer.

B. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.

C. Source Limitations for Glass: Obtain from single source from single manufacturer for each glass type.

D. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer for each product and installation method.

E. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.

1. GANA Publications: GANA's "Laminated Glazing Reference Manual" and GANA's "Glazing Manual."
2. AAMA Publications: AAMA GDSG-1, "Glass Design for Sloped Glazing," and AAMA TIR-A7, "Sloped Glazing Guidelines."
3. IGMA Publication for Sloped Glazing: IGMA TB-3001, "Guidelines for Sloped Glazing."
4. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."

F. Safety Glazing Labeling: Where safety glazing labeling is indicated, permanently mark glazing with certification label of the SGCC or another certification agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.

G. Fire-Protection-Rated Glazing Labeling: Permanently mark fire-protection-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, test standard, whether glazing is for use in fire doors or other openings,

whether or not glazing passes hose-stream test, whether or not glazing has a temperature rise rating of 450 deg F, and the fire-resistance rating in minutes.

H. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.

B. Comply with insulating-glass manufacturer's written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.

1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40 deg F.

1.8 WARRANTY

A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer's standard form in which coated-glass manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

1. Warranty Period: 10 years from date of Substantial Completion.

B. Manufacturer's Special Warranty on Laminated Glass: Manufacturer's standard form in which laminated-glass manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1. Warranty Period: Five years from date of Substantial Completion.

C. Manufacturer's Special Warranty on Insulating Glass: Manufacturer's standard form in which insulating-glass manufacturer agrees to replace insulating-glass units that deteriorate within specified

warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GLASS PRODUCTS, GENERAL

A. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass lites in thicknesses as needed to comply with requirements indicated.

1. Minimum Glass Thickness for Exterior Lites: Not less than 6.0 mm.

B. Strength: Where float glass is indicated, provide annealed float glass, Kind HS heat-treated float glass, or Kind FT heat-treated float glass as needed to comply with "Performance Requirements" Article. Where heat-strengthened glass is indicated, provide Kind HS heat-treated float glass or Kind FT heat-treated float glass as needed to comply with "Performance Requirements" Article. Where fully tempered glass is indicated, provide Kind FT heat-treated float glass.

C. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:

1. For monolithic-glass lites, properties are based on units with lites 6.0 mm thick.
2. For laminated-glass lites, properties are based on products of construction indicated.
3. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
4. U-Factors: Center-of-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F.
5. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
6. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

2.2 GLASS PRODUCTS

A. Provide heat-strengthened glass at locations where recommended by the glass manufacturer.

B. Provide safety glass as specified in locations where required by Consumer Product Safety Commission "Safety Standard for Architectural Glazing Material" (16 CFR 1201.)

C. GLASS MANUFACTURERS:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Guardian Glass, LLC; or comparable product by one of the following:

a. Vitro.
b. Pilkington North America.

D. GLASS TYPES
1. Low Iron Tempered Glass: Indicated on Drawings as "**CT**"
a. 1/4 inch (6 mm), UltraClear (low Iron) glass by Guardian Glass, LLC; or equal products of alternatives of the quality necessary to meet the specifications.
b. Heat Treatment: Tempered.
c. Provide where safety glazing is required by CPSC 16 CFR 1201 and indicated on drawings.

2. Low Iron, Low-E Coated, Insulating **Vision** Glass: Indicated on Drawings as "**CIG**"
a. Overall Unit Thickness: 1 inch (25 mm).
b. Minimum Thickness of Each Glass Lite: 1/4 inch (6 mm).
c. Outboard Lite: Guardian UltraClear Low Iron Float Glass.
1) Low-E Coating Sputtered on Surface #2: Guardian SunGuard SN 68 or comparable product.
2) Heat Treatment: Heat Strengthened.
d. Interspace: Argon filled, 12 mm (1/2 inch) wide, hermetically sealed.
e. Inboard Lite: Guardian UltraClear Low Iron float glass.
1) Heat Treatment: Heat Strengthened.
f. Glass Unit Performance Characteristics:
1) Visible Light Transmittance: 71 percent minimum.
2) Solar Heat Gain Coefficient: 0.39 maximum.
3) Winter Nighttime U-Factor: 0.245 maximum.
4) Summer Daytime U-Factor: 0.22 maximum.

3. Low Iron, Low-E Coated, Fully Tempered, Insulating **Vision** Glass: Indicated on Drawings as "**CIT**"
a. Overall Unit Thickness: 1 inch (25 mm).
b. Minimum Thickness of Each Glass Lite: 1/4 inch (6 mm).
c. Outboard Lite: Guardian UltraClear Low Iron Float Glass.
1) Low-E Coating Sputtered on Surface #2: Guardian SunGuard SN 68 or comparable product.
2) Heat Treatment: Fully tempered.
d. Interspace: Argon filled, 12 mm (1/2 inch) wide, hermetically sealed.
e. Inboard Lite: Guardian UltraClear Low Iron float glass.
1) Heat Treatment: Fully tempered.
f. Glass Unit Performance Characteristics:
1) Visible Light Transmittance: 68.1 percent minimum.
2) Solar Heat Gain Coefficient: 0.37 maximum.
3) Winter Nighttime U-Factor: 0.245 maximum.
4) Summer Daytime U-Factor: 0.22 maximum.
g. Provide in Curtainwall, Storefront System and Sliding Aluminum-Framed Glass Doors and where safety glass is required by CPSC 16 CFR 1201.

4. Ceramic or Silicone Coated, Low Iron, Low-E Coated, Insulating **Spandrel** Glass: Indicated on Drawings as "**SP-01**"

a. Overall Unit Thickness: 1 inch (25 mm).
b. Minimum Thickness of Each Glass Lite: 1/4 inch (6 mm).
c. Outboard Lite: Guardian UltraClear Float Glass.
    1) Low-E Coating Sputtered on Surface #2: Guardian SunGuard SN 68 or comparable product.
    2) Heat Treatment: Fully tempered.
d. Interspace: Argon filled, 12 mm (1/2 inch) wide, hermetically sealed.
e. Inboard Lite: Guardian UltraClear float glass.
    1) Spandrel Coating on Surface #4: Harmonizing Color Wind Breaker (LI), Spandrel Number 3-4913LI, "OPACI-COAT-300®" by ICD Coatings or alternatives of the quality necessary to meet the specifications.
    2) Heat Treatment: Fully tempered.
f. Glass Unit Performance Characteristics:
    1) Visible Light Transmittance: 0 percent minimum.
    2) Solar Heat Gain Coefficient: 0.29 maximum.
    3) Winter Nighttime U-Factor: 0.245 maximum.
    4) Summer Daytime U-Factor: 0.22 maximum.

5. Fire-Protection Rated Glazing: Indicated on Drawings as "**FRG**"
    a. Location: Interior.
    b. Laminated Glazing: Clear, Low-iron flat glass: 1-3/8 inch nominal thickness
    c. Visible Transmission: 88%
    d. STC rating: Minimum 39
    e. Rating: 60 minutes w/ hose stream. ASTM E119 & UL 263
    f. Impact Safety Rating: CPSC 16 CFR 1201 Cat. I and II & ANSI Z97.1
    g. Hard Body Impact Classification: ASTM C1629/C1629M Level 3
    h. Soft Body Impact Classification: ASTM E695 Level 3
    i. Surface Abrasion Resistance: ASTM D4977 Level 3
    j. Subject to compliance provide glass by:
        1) Safti First: **SuperLite II-XL 60** (Basis of Design)
        2) FireLite
        3) Schott North America, Inc.; Pyran Star
        4) Vetrotech Saint-Gobain: SGG Keralite FR-R
        5) Pilkington: Pyrostop

2.3 GLAZING GASKETS

A. Dense Compression Gaskets: Molded or extruded gaskets of profile and hardness required to maintain watertight seal, made from one of the following:

1. Neoprene complying with ASTM C 864.
2. EPDM complying with ASTM C 864.
3. Silicone complying with ASTM C 1115.
4. Thermoplastic polyolefin rubber complying with ASTM C 1115.

B. Soft Compression Gaskets: Extruded or molded, closed-cell, integral-skinned neoprene, EPDM, silicone, or thermoplastic polyolefin rubber gaskets complying with ASTM C 509, Type II, black; of profile and hardness required to maintain watertight seal.

C. Lock-Strip Gaskets: Neoprene extrusions in size and shape indicated, fabricated into frames with molded corner units and zipper lock-strips, complying with ASTM C 542, black.

D. Neoprene Glazing Gaskets for bullet resistant glazing:
1. Interior Glazing gaskets closed cell cellular neoprene conforming to ASTM C509 Type II Option 1 with a 40-50 Shore A Durometer.
2. Exterior Glazing gaskets solid neoprene conforming to ASTM C864 with a 65-75 Shore A Durometer.

2.4 GLAZING SEALANTS

A. General: Provide products of type indicated, complying with the following requirements:

1. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
3. Verify sealant complies with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
4. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range.

B. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 100/50, Use NT.

1. Products: Subject to compliance with requirements, provide one of the following:
   a. Dow Corning Corporation; 790.
   b. GE Advanced Materials - Silicones; SilPruf LM SCS2700.
   c. Tremco Incorporated; Spectrem 1.

C. Glazing Sealants for Fire-Rated Glazing Products: Products that are approved by testing agencies that listed and labeled fire-resistant glazing products with which they are used for applications and fire-protection ratings indicated.

D. Glazing Sealants for bullet resistant glazing:
1. Dow 995 or Dow 795 for exterior applications.
2. Dow 995, Dow 795, or 3M IPA for interior applications.

2.5 GLAZING TAPES

A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:

1. AAMA 804.3 tape, where indicated.
2. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
3. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.

B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:

1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.6 MISCELLANEOUS GLAZING MATERIALS

A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.

B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.

C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

D. Spacers: Elastomeric blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.

E. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).

F. Cylindrical Glazing Sealant Backing: ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

G. Perimeter Insulation for Fire-Resistive Glazing: Product that is approved by testing agency that listed and labeled fire-resistant glazing product with which it is used for application and fire-protection rating indicated.

2.7 FABRICATION OF GLAZING UNITS

A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.

C. Grind smooth and polish exposed glass edges and corners.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:

1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
2. Presence and functioning of weep systems.
3. Minimum required face and edge clearances.
4. Effective sealing between joints of glass-framing members.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

3.3 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.

B. Adjust glazing channel dimensions as required by Project conditions during installation to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.

D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.

E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

G. Provide spacers for glass lites where length plus width is larger than 50 inches.

1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing

tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.

2. Provide 1/8-inch minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

I. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.

J. Set glass lites with proper orientation so that coatings face exterior or interior as specified.

K. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

L. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

3.4 TAPE GLAZING

A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.

B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.

C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.

D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.

E. Do not remove release paper from tape until right before each glazing unit is installed.

F. Apply heel bead of elastomeric sealant.

G. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.

H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.5 GASKET GLAZING (DRY)

A. Fabricate compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.

B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.

C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

E. Install gaskets so they protrude past face of glazing stops.

3.6 SEALANT GLAZING (WET)

A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.

B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.

C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.7 APPLIED GLAZING FILM

A. Apply glazing film at locations indicated, according to manufacturer’s written instructions.

3.8 CLEANING AND PROTECTION

A. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.

C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.

D. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.

E. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION 08.8000

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Silvered flat glass mirrors.

B. Related Requirements:

1. Section 08.8000 "Glazing" for glass with reflective coatings used for vision and spandrel lites.
2. Section 10.2800 "Toilet, Bath, and Laundry Accessories" for metal-framed mirrors.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Mirrors: Include description of materials and process used to produce each type of silvered flat glass mirror specified that indicates sources of glass, glass coating components, edge sealer, and quality-control provisions.

B. Shop Drawings: Include mirror elevations, edge details, mirror hardware, and attachment details.

C. Samples: For each type of the following:

1. Mirrors: 12 inches (300 mm) square, including edge treatment on two adjoining edges.
2. Mirror Clips: Full size.
3. Mirror Trim: 12 inches (300 mm) long.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Certificates: For each type of mirror and mirror mastic.

C. Preconstruction Test Reports: From mirror manufacturer indicating that mirror mastic was tested for compatibility and adhesion with mirror backing and substrates on which mirrors are installed.

D. Sample Warranty: For special warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For mirrors to include in maintenance manuals.

1.5 PRECONSTRUCTION TESTING

A. Preconstruction Mirror Mastic Compatibility Test: Submit mirror mastic products to mirror manufacturer for testing to determine compatibility of mastic with mirror backing.

1. Testing is not required if data are submitted based on previous testing of mirror mastic products and mirror backing matching those submitted.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect mirrors in accordance with mirror manufacturer's written instructions and as needed to prevent damage to mirrors from moisture, condensation, temperature changes, direct exposure to sun, or other causes.

B. Comply with mirror manufacturer's written instructions for shipping, storing, and handling mirrors as needed to prevent deterioration of silvering, damage to edges, and abrasion of glass surfaces and applied coatings. Store indoors.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Do not install mirrors until ambient temperature and humidity conditions are maintained at levels indicated for final occupancy.

1.8 WARRANTY

A. Special Warranty: Manufacturer agrees to replace mirrors that deteriorate within specified warranty period. Deterioration of mirrors is defined as defects developed from normal use that are not attributed to mirror breakage or to maintaining and cleaning mirrors contrary to manufacturer's written instructions. Defects include discoloration, black spots, and clouding of the silver film.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Guardian UltraMirror by Guardian Glass, LLC, fabricated as specified.
   1. Alternative products subject to Division 01 requirements for Substitutions.

B. Source Limitations for Mirrors: Obtain mirrors from single source from single manufacturer.

C. Source Limitations for Mirror Accessories: Obtain mirror-glazing accessories from single source.

D. Tempered Glass Mirrors: Mirror Glazing Quality for blemish requirements and complying with ASTM C1048 for Kind FT, Condition A, tempered float glass before silver coating is applied; clear.

   1. Nominal Thickness: ¼" (6.0 mm).

   2. Comply with ASTM C1503 for silvered flat-glass mirrors.

E. Safety Glazing Products: For tempered mirrors, provide products that comply with 16 CFR 1201, Category II and ANSI Z97.1, Class A.

2.2 MISCELLANEOUS MATERIALS

A. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

B. Edge Sealer: Coating compatible with glass coating and approved by mirror manufacturer for use in protecting against silver deterioration at mirrored glass edges.

C. Mirror Mastic: An adhesive setting compound, asbestos-free, produced specifically for setting mirrors and certified by both mirror and mastic manufacturer as compatible with glass coating and substrates on which mirrors will be installed.

D. Film Backing for Safety Mirrors: Film backing and pressure-sensitive adhesive; both compatible with mirror backing paint as certified by mirror manufacturer.

2.3 MIRROR HARDWARE

A. Aluminum J-Channels: Aluminum extrusions with a return deep enough to produce a glazing channel to accommodate mirrors of thickness indicated and in lengths required to cover edges of mirrors in a single piece.

1. Aluminum J Channel Bottom Trim: J-channels formed with front leg and back leg not less than 3/8 and 7/8 inch (9.5 and 22 mm) in height, respectively, and a thickness of not less than 0.04 inch (1.0 mm).

2. Aluminum J Channel Top Trim: J-channels formed with front leg and back leg not less than 5/8 and 1 inch (16 and 25 mm) in height, respectively, and a thickness of not less than 0.04 inch (1.0 mm).

3. Finish: Clear anodized.

B. Mirror Bottom Clips: As indicated.

C. Mirror Top Clips: As indicated.

D. Plated Steel Hardware: Formed-steel shapes with plated finish indicated.

1. Profile: As indicated.
2. Finish: Polished Chrome.

E. Fasteners: Fabricated of same basic metal and alloy as fastened metal and matching it in finished color and texture where fasteners are exposed.

F. Anchors and Inserts: Provide devices as required for mirror hardware installation. Provide toothed or lead-shield, expansion-bolt devices for drilled-in-place anchors. Provide galvanized anchors and inserts for applications on inside face of exterior walls and where indicated.

2.4 FABRICATION

A. Shop fabricate mirrors to greatest extent possible.

B. Fabricate cutouts for notches and holes in mirrors without marring visible surfaces. Locate and size cutouts, so they fit closely around penetrations in mirrors.

C. Mirror Edge Treatment: Flat high polished.

1. Seal edges of mirrors with edge sealer after edge treatment to prevent chemical or atmospheric penetration of glass coating.

2. Require mirror manufacturer to perform edge treatment and sealing in factory immediately after cutting to final sizes.

D. Film-Backed Safety Mirrors: Apply film backing with adhesive coating over mirror backing paint, as recommended in writing by film-backing manufacturer, to produce a surface free of bubbles, blisters, and other imperfections.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, over which mirrors are to be mounted, with Installer present, for compliance with installation tolerances, substrate preparation, and other conditions affecting performance of the Work.

B. Verify compatibility with and suitability of substrates, including compatibility of existing finishes or primers with mirror mastic.

C. Proceed with installation only after unsatisfactory conditions have been corrected and surfaces are dry.

3.2 PREPARATION

A. Comply with mastic manufacturer's written installation instructions for preparation of substrates, including coating substrates with mastic manufacturer's special bond coating where applicable.

3.3 INSTALLATION

A. General: Install mirrors to comply with mirror manufacturer's written instructions and with referenced National Glass Association (NGA) publications. Mount mirrors accurately in place in a manner that avoids distorting reflected images.

1. NGA Publications: “Glazing Manual" and "Installation Techniques Designed to Prolong the Life of Flat Glass Mirrors."

B. Provide a minimum airspace of 1/8 inch (3 mm) between back of mirrors and mounting surface for air circulation between back of mirrors and face of mounting surface.

C. Install mirrors with mastic and mirror hardware. Attach mirror hardware securely to mounting surfaces with mechanical fasteners installed with anchors or inserts as applicable. Install fasteners so heads do not impose point loads on backs of mirrors.

1. Aluminum J-Channels: Provide setting blocks 1/8 inch (3 mm) thick by 4 inches (100 mm) long at quarter points. To prevent trapping water, provide, between setting blocks, two slotted weeps not less than 1/4 inch (6.4 mm) wide by 3/8 inch (9.5 mm) long at bottom channel.
2. Aluminum J-Channels and Cleat: Fasten J-channel directly to wall and attach top trim to continuous cleat fastened directly to wall.
3. Mirror Clips: Place a felt or plastic pad between mirror and each clip to prevent spalling of mirror edges. Locate clips so they are symmetrically placed and evenly spaced.
4. Install mastic as follows:

    a. Apply barrier coat to mirror backing where approved in writing by manufacturers of mirrors and backing material.
    b. Apply mastic to comply with mastic manufacturer's written instructions for coverage and to allow air circulation between back of mirrors and face of mounting surface.
    c. After mastic is applied, align mirrors and press into place while maintaining a minimum airspace of 1/8 inch (3 mm) between back of mirrors and mounting surface.

3.4 CLEANING AND PROTECTION

A. Protect mirrors from breakage and contaminating substances resulting from construction operations.

B. Do not permit edges of mirrors to be exposed to standing water.

C. Maintain environmental conditions that prevent mirrors from being exposed to moisture from condensation or other sources for continuous periods of time.

D. Clean exposed surface of mirrors not more than four days before date scheduled for inspections that establish date of Substantial Completion. Clean mirrors as recommended in writing by mirror manufacturer and NGA's publication "Proper Procedures for Cleaning Flat Glass Mirrors."

END OF SECTION 08.8300

SECTION 08.9000 - ARCHITECTURAL LOUVERS

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Extruded aluminum inverted chevron stationary louver with drainable blades.

B. Blank-off panels for louvers

1.2 RELATED SECTIONS

A. Section 03 30 00 - Cast-In-Place Concrete.

B. Section 04 20 00 - Masonry Units.

C. Section 05 12 00 - Structural Steel Framing.

D. Section 06 10 53 – Miscellaneous Rough Carpentry.

E. Section 07 42 00 – Architectural Metal Wall Panels.

F. Section 07 62 00 – Sheet Flashing and Trim.

G. Section 07 92 00 - Joint Sealants.

H. Section 09 22 16 – Non-Structural Metal Framing

I. Section 09 91 00 - Painting.

J. Section 23 00 00 - Heating, Ventilation, and Air Conditioning

1.3 REFERENCES

A. AAMA 2604 – High Performance Organic Coatings on Architectural Extrusions and Panels.

B. AAMA 2605 - High Performance Organic Coatings on Architectural Extrusions and Panels.

C. AAMA 611 – Voluntary Specification for Anodized Architectural Aluminum.

D. AMCA 500 - Test Methods for Louvers, Dampers and Shutters.

E. AMCA 511 - Certified Ratings Program for Air Control Devices..

F. ASCE 7 - Minimum Design Loads for Buildings and Other Structures.

G. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

H. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

I. ASTM D822 - Standard Practice for Filtered Open-Flame Carbon-Arc Exposures of Paint and Related Coatings

J. ASTM D2244 - Standard Test Method for Calculation of Color Differences From Instrumentally Measured Color Coordinates.

K. ASTM D4214 - Standard Test Methods for Evaluating the Degree of Chalking of Exterior Paint Films.

1.4 DEFINITIONS

A. Louver Terminology: Definitions of terms for metal louvers contained in AMCA 501 apply to this Section unless otherwise defined in this Section or in referenced standards.

B. Horizontal Louver: Louver with horizontal blades; i.e., the axes of the blades are horizontal.

C. Drainable-Blade Louver: Louver with blades having gutters that collect water and drain it to channels in jambs and mullions, which carry it to bottom of unit and away from opening.

D. Rain-Resistant Louver: Louver that provides specified wind-driven rain performance, as determined by testing according to AMCA 500-L.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.

B. Shop Drawings: For louvers and accessories. Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.

1. Show weep paths, gaskets, flashings, sealants, and other means of preventing water intrusion.
2. Show mullion profiles and locations.

C. Delegated-Design Submittal: For louvers indicated to comply with structural and seismic performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and Installer.

B. Product Test Reports: For each type of louver, for tests performed by a qualified testing agency.

C. Field quality-control reports.

D. Sample Warranties: For manufacturer's warranties.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications:
   1. The manufacturer shall have implemented the management of quality objectives, continual improvement, and monitoring of customer satisfaction to assure that customer needs and expectations are met.
   2. Manufacturer shall be International Organization for Standardization (ISO) 9001 accredited.

B. Product Qualifications:
   1. Louvers licensed to bear AMCA Certified Ratings Seal. Ratings based on tests and procedures performed in accordance with AMCA 511 and comply with AMCA Certified Ratings Program. AMCA Certified Ratings Seal applies to air performance and water penetration ratings.

   2. Louvers shall be factory engineered to withstand the specified seismic loads.
      a. Minimum design loads shall be calculated to comply with ASCE – 7, or local requirements of Authority Having Jurisdiction (AHJ).

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Store materials in a dry area indoors, protected from damage and in accordance with manufacturer's instructions.

C. Handling: Protect materials and finishes during handling and installation to prevent damage.

D. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.9 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.10 WARRANTY

A. Manufacturer shall provide standard limited warranty for louver systems for a period of five years (60 months) from date of installation, no more than 60 months after shipment from manufacturing plant. When notified in writing from the Owner of a manufacturing defect, manufacturer shall promptly correct deficiencies without cost to the Owner.

B. Manufacturer shall provide 20-year limited warranty for fluoropolymer-based finish on extruded aluminum substrates.
Finish coating shall not peel, blister, chip, crack or check.
Chalking, fading or erosion of finish when measured by the following tests:
   a. Finish coating shall not chalk in excess of 8 numerical ratings when measured in accordance with ASTM D4214.
   b. Finish coating shall not change color or fade in excess of 5 NBS units as determined by ASTM D2244 and ASTM D822.
   c. Finish coating shall not erode at a rate in excess of 10%/ 5 year as determined by Florida test sample.

C. Manufacturer shall provide a 5-year limited warranty for Class I and a 3-year limited warranty for Class II anodized finish on extruded aluminum substrates.
   1. Seller warrants the Finish under normal atmospheric conditions.
      a. Will not crack, craze, flake or blister
      b. Will not change or fade more than (5) Delta-E Hunter units as determined by ASTM method D-2244
      c. Will not chalk in excess of ASTM D-4214-07 number (8) rating, determined by the procedure outlined in ASTMD-4214-07 specification test.
   2. Any forming or welding must be done prior to finishing. Post forming or welding will void the warranty.
   3. This Warranty applies only if the anodized aluminum product is installed in strict accordance with Seller's recommended practices and maintained in accordance with AAMA (American Architectural Manufacturers Association) publication number 609 and 610-09 ("Cleaning and Maintenance Guide for Architecturally Finished Aluminum").

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers standard drainable sight proof louvers, as manufactured by; Ruskin or alternatives of the quality necessary to meet the specifications.

B. Available Manufacturers: Subject to compliance with requirements, provide the named product or comparable product by one of the following:
   1. Airolite Company, LLC (The).
   2. Greenheck Fan Corporation.
   3. Pottorff.
   4. Ruskin Company.

C. Manufacturers of equivalent products submitted and approved in accordance with Section 01630 – Product Substitution Procedures.

2.2 STATIONARY BLADE LOUVER

A. Fabrication:

1. Design: Stationary inverted chevron blade louver with mechanical fastened construction. Hidden vertical supports to allow limited continuous line appearance.
2. Frame:
   a. Frame Depth: 4 inches as indicated on drawings.
   b. Frame Depth: 6 inches as indicated on drawings
   c. Wall Thickness: 0.081 inch (2.1 mm), nominal.
   d. Material: Extruded aluminum, Alloy 6063-T6.
3. Blades:
   a. Style: Inverted Chevron 45 degrees spaced at 1 7/16 inches (36.5 mm)
   b. Wall Thickness: 0.081 inch (2.1 mm), nominal.
   c. Material: Extruded aluminum, Alloy 6063-T6.
4. Minimum Assembly Size: 12 inches wide by 12 inches high (305 mm x 305 mm).
5. Maximum Factory Assembly Size: Single sections shall not exceed 72 inches wide by 144 inches high (1829 mm x 3658 mm) . Louvers larger than the maximum single size shall be constructed of smaller sections.

B. Performance Data:
1. Performance Ratings: AMCA licensed.
   a. Based on testing 48 inch by 48 inch (1219 mm by 1219 mm) size unit in accordance with AMCA 500.
2. Free Area: 45 percent, nominal.
3. Free Area Size: 7.29 sf (.68 sm).
4. Maximum Recommended Air Flow through Free Area: 2024 feet per minute (7.2 m/s).
5. Air Flow: 14755 cubic feet per minute (418 cu. m/min).
6. Maximum Pressure Drop: .42 inches w.g. (.05 kPa).

C. Wind Driven Water Penetration Performance:
1. Based on testing 39 inches x 39 inches (1 m x 1 m) core area, 41 inches x 44 inches (1.04 m x 1.12 m) nominal size unit in accordance with AMCA 500-L.
2. Wind Velocity: 29 mph (47 kph).
   a. Rainfall Rate: 3 inches/hour (76 mm/hour).
   b. Free Area Velocity: 2010 feet per minute (10.0 m/sec).
   c. Water Resistance Effectiveness: 100% (AMCA Class A).
3. Wind Velocity: 50 mph (80 kph).
   a. Rainfall Rate: 8 inches/hour (203 mm/hour).
   b. Free Area Velocity: 2024 feet per minute (10.1 m/sec).
   c. Water Resistance Effectiveness: 100% (AMCA Class A).

A. Design Windload: Per Code.

B. Design Windload: Incorporate structural supports required to withstand wind load of _20 pounds per square foot.

C. Louvers shall be factory engineered to withstand the specified seismic loads.
1. Minimum design loads shall be calculated to comply with ASCE – 7, or local requirements of Authority Having Jurisdiction (AHJ).

2.3 ACCESSORIES

A. Insulated Blank-Off Panels: Laminated panels consisting of an insulating core surfaced on back and front with metal sheets and attached to back of louver.
   1. Thickness: 2 inches .
   2. Metal Facing Sheets: Aluminum sheet, not less than 0.032-inch nominal thickness.
   3. Insulating Core: Rigid, glass-fiber-board insulation or extruded-polystyrene foam .
   4. Edge Treatment: Trim perimeter edges of blank-off panels with louver manufacturer's standard extruded-aluminum-channel frames, not less than 0.080-inch nominal thickness, with corners mitered and with same finish as panels.
   5. Seal perimeter joints between panel faces and louver frames with gaskets or sealant.
   6. Panel Finish: Same finish applied to louvers .
   7. Attach blank-off panels with sheet metal screws .
   8. Provide at locations open to mechanical rooms

B. Bird Screen:
   1. Aluminum: Aluminum, 1/2 inches by 0.063 inch (13 mm by 1.6 mm), expanded and flattened.
   2. Frame: Removable.

C. Insect Screens:
   1. Aluminum: 18-16 mesh, mill finish, .011 inch (0.3 mm) wire.
   2. Frame: Aluminum.

D. Extended Sills:
   1. Extruded aluminum, Alloy 6063-T6. Minimum nominal thickness 0.060 inch (1.5 mm).

E. Visible Mullions: Manufacturer's standard horizontal or vertical visible mullions for architectural accent as indicated on drawings.

2.4 FINISHES

A. Finish: 50 percent PVDF: Finish shall be applied at 1.2 mil total dry film thickness.
   1. Coating shall conform to AAMA 2604, sections 4.2 and 4.3. Apply coating following cleaning and pretreatment. Cleaning: AA-C12C42R1X.
      a. Baked Enamel (50% PVDF).
      b. Pearledize 50 (2-coat mica).
   2. 20-year finish warranty.

B. Finish: Prime Coat:
   1. Apply alkyd prime coat following chemical cleaning and pretreatment.
   2. Primer preparation for field painting.

C. Color: Custom color to match metal panels.

PART 3 EXECUTION

3.1 EXAMINATION

A. Inspect areas to receive louvers. Notify the Architect of conditions that would adversely affect the installation or subsequent utilization of the louvers. Do not proceed with installation until unsatisfactory conditions are corrected.

B. If opening preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean opening thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

A. Install louvers at locations indicated on the drawings and in accordance with manufacturer's instructions.

B. Install louvers plumb, level, in plane of wall, and in alignment with adjacent work.

C. The supporting structure shall be designed to accommodate the point loads transferred by the louvers when subject to the design wind loads.

D. Install joint sealants as specified in Section 07 92 00.

3.4 CLEANING

A. Clean louver surfaces in accordance with manufacturer's instructions.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION 08.9000

SECTION 09.2216 – NON-STRUCTURAL METAL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes non-load-bearing steel framing members for the following applications:

1. Interior framing systems (e.g., supports for partition walls, framed soffits, furring, etc.).
2. Interior suspension systems (e.g., supports for ceilings, suspended soffits, etc.).

B. Related Sections

1. Division 09 “Gypsum Board”
2. Division 06 “Sheathing”

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

1.3 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.

B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

PART 2 - PRODUCTS

2.1 NON-LOAD-BEARING STEEL FRAMING, GENERAL

A. Framing Members, General: Comply with ASTM C 754 for conditions indicated.

1. Steel Sheet Components: Comply with ASTM C 645 requirements for metal, unless otherwise indicated.
2. Protective Coating: ASTM A 653/A 653M, G40 (Z120), hot-dip galvanized, unless otherwise indicated.

2.2 STEEL FRAMING FOR FRAMED ASSEMBLIES

A. Steel Studs and Runners: ASTM C 645.

1. Minimum Base-Metal Thickness: 0.0179 inch (0.45 mm) unless indicated otherwise.
2. Minimum Base-Metal Thickness: 0.0312 inch (0.79 mm) wherever gypsum board or cementitious backer boards (CBB) are scheduled and at low-height partitions.
3. Depth: 3-5/8 inches (92.1 mm) unless indicated otherwise on Drawings.

B. Slip-Type Head Joints: Where indicated, provide one of the following:

1. Double-Runner System: ASTM C 645 top runners, inside runner with 2-inch- (50.8-mm-) deep flanges in thickness not less than indicated for studs and fastened to studs, and outer runner sized to friction fit inside runner.
2. Deflection Track: Steel sheet top runner manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.

a. Products: Subject to compliance with requirements, provide one of the following:

1) Steel Network Inc. (The); VertiClip SLD Series.
2) Superior Metal Trim; Superior Flex Track System (SFT).

C. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.

1. Minimum Base-Metal Thickness: 0.0312 inch (0.79 mm).

D. Cold-Rolled Channel Bridging: 0.0538-inch (1.37-mm) bare-steel thickness, with minimum 1/2-inch- (12.7-mm-) wide flanges.

1. Depth: 1-1/2 inches (38.1 mm).
2. Clip Angle: Not less than 1-1/2 by 1-1/2 inches (38.1 by 38.1 mm), 0.068-inch- (1.73-mm-) thick, galvanized steel.

E. RC Resilient Channel: RC Deluxe Resilient Channel by Clark Dietrich, or equal.
1. 22 mil steel, Grade 33ksi minimum yield strength
2. Coating: G40EQ
3. Meet or exceed ASTM C645 and ASTM A 1003.
4. Dimensions: 2-5/8 inches by 1/2-inch.

F. Sound Isolation Clips: Basis of Design IsoMax as manufactured by Kinetics Noise Control.
1. Provide furring channel widths from 2.38 inches to 2.75 inches.
2. Dimensions: 1-inch wide by 3.86-inches wide.
3. Location: Provide in mechanical rooms B-119, B133, B-211, B225, B-311, B-325 on wall separating mechanical room and classroom and as indicated on Drawings.

2.3 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards.

1. Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

B. Isolation Strip at Exterior Walls: Provide one of the following:

1. Asphalt-Saturated Organic Felt: ASTM D 226, Type I (No. 15 asphalt felt), nonperforated.
2. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch (3.2 mm) thick, in width to suit steel stud size.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.

1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.

3.3 INSTALLATION, GENERAL

A. Installation Standard: ASTM C 754, except comply with framing sizes and spacing indicated.

1. Portland Cement Plaster Assemblies: Also comply with requirements in ASTM C 1063 that apply to framing installation.
2. Gypsum Board Assemblies: Also comply with requirements in ASTM C 840 that apply to framing installation.

B. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.

C. Install bracing at terminations in assemblies.

D. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

3.4 INSTALLING FRAMED ASSEMBLIES

A. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.

B. Install studs so flanges within framing system point in same direction.

1. Space studs as follows:

a. Single-Layer Application: 16 inches (406 mm) o.c., unless otherwise indicated.
b. Multilayer Application: 16 inches (406 mm) o.c., unless otherwise indicated.
c. Tile backing panels: 16 inches (406 mm) o.c., unless otherwise indicated.

C. Install tracks (runners) at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings, except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts penetrating partitions above ceiling.

1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
2. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.

a. Install two studs at each jamb, unless otherwise indicated.
b. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch (12.7-mm) clearance from jamb stud to allow for installation of control joint in finished assembly.
c. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.

3. Other Framed Openings: Frame openings other than door openings the same as required for door openings, unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
4. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.

a. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.

5. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.
6. Curved Partitions:

    a. Bend track to uniform curve and locate straight lengths so they are tangent to arcs.
    b. Begin and end each arc with a stud, and space intermediate studs equally along arcs. On straight lengths of not less than 2 studs at ends of arcs, place studs 6 inches (150 mm) o.c.

D. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch (3 mm) from the plane formed by faces of adjacent framing.

END OF SECTION 09.2216

SECTION 09.2900 - GYPSUM BOARD

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Standard Gypsum Board
2. Abused Resistant Gypsum Board
3. Fire-Resistance Rated Gypsum Board
4. Mold and Moisture Resistant Gypsum Board
5. Cement Board
6. Ceiling Board.

B. Related Requirements:

1. Division 06 "Sheathing" for gypsum sheathing for exterior walls.
2. Division 07 "Thermal Insulation" for building insulation.
3. Division 09 "Gypsum Board Shaft Wall Assemblies" for metal shaft-wall framing, gypsum shaft liners, and other components of shaft-wall assemblies.
4. Division 09 "Non-Structural Metal Framing" for non-structural steel framing and suspension systems that support gypsum board panels.
5. Division 09 "Ceramic Tiling" for cementitious backer units installed as substrates for ceramic tile.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Show locations, fabrication, and installation of control and expansion joints including plans, elevations, sections, details of components, and attachments to other units of Work.

C. Samples: For the following products:

1. Trim Accessories: Full-size Sample in 12-inch- (300-mm-) long length for each trim accessory indicated.

1.3 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: For gypsum board assemblies with fire-resistance ratings, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.

1. Fire-Resistance-Rated Assemblies: Indicated by design designations from UL's "Fire Resistance Directory."

B. Sound Transmission Characteristics: For gypsum board assemblies with STC ratings, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by a qualified independent testing agency.

1. STC-Rated Assemblies: Indicated by design designations from GA-600, "Fire Resistance Design Manual."

1.4 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in original packages, containers, or bundles bearing brand name and identification of manufacturer or supplier.

B. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.5 FIELD CONDITIONS

A. Environmental Limitations: Comply with ASTM C840 requirements or gypsum board manufacturer's written instructions, whichever are more stringent.

B. Do not install paper-faced gypsum panels until installation areas are enclosed and conditioned.

C. Do not install panels that are wet, moisture damaged, and mold damaged.

1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing agency.

B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E90 and classified according to ASTM E413 by an independent testing agency.

2.2 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Gypsum Board and Related Products:
      a. National Gypsum Company.
      b. Certainteed Corp.
      c. G-P Gypsum Corp.
      d. United States Gypsum Co.

2.3 STANDARD GYPSUM BOARD

A. Gypsum Wallboard: ASTM C1396/C1396M.

B. Basis of Design: Gold Bond® BRAND Gypsum Board
   1. Panel Physical Characteristics:
      a. Core: Regular gypsum core.
      b. Surface Paper: 100 percent recycled content paper on front, back and long edges.
      c. Long Edges: Tapered.
      d. Overall Thickness: 5/8 inch (15.9 mm).
      e. Panel complies with requirements of ASTM C 1396
   2. Location: Typical wall construction (unless noted otherwise). See drawings

2.4 FIRE-RESISTANCE RATED GYPSUM BOARD

A. Gypsum Board, Type X: ASTM C1396/C1396M.

B. Basis of Design: Gold Bond® BRAND Fire-Shield C™ Gypsum Board
   1. Type C, Panel Physical Characteristics
      a. Core: Enhanced fire-resistance rated (Type C) gypsum core

b. Surface paper: 100 percent recycled content paper on front, back and long edges
c. Long Edges: Tapered
d. Overall thickness: 5/8 inch (15.9 mm).
e. Panel complies with Type X requirements of ASTM C 1396.

2. Location: All fire-rated walls. See drawings

2.5 ABUSE RESISTANT GYPSUM BOARD

A. ASTM C1396/C1396M gypsum board, tested according to ASTM C1629/C1629M.
B. Basis of Design: Gold Bond BRAND Hi-Abuse® XP® Gypsum Board
C. Performance Criteria - Wall Assembly STC: 52

1. Panel Physical Characteristics:
   a. Core: Fire-resistance rated gypsum core, with additives to enhance surface indentation resistance and impact resistance.
   b. Surface paper: Abrasion resistant, 100 percent recycled content moisture/mold/mildew resistant paper on front, back and long edges.
   c. Overall thickness: 5/8 inch (15.9 mm).
   d. Long Edges: Tapered.
   e. Panel complies with Type X requirements of ASTM C 1396.
   f. Surface Abrasion Resistance: ASTM C1629/C1629M, meets or exceeds Level 3 requirements.
   g. Indentation Resistance: Classification Level 1 in accordance with ASTM C 1629.
   h. Soft Body Impact Resistance: Classification Level 2 in accordance with ASTM C 1629.
   i. Hard Body Impact Resistance: Classification Level 1 in accordance with ASTM C 1629.
   j. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

2. Location: All corridors and vestibules. See drawings.

2.6 MOLD-RESISTANT GYPSUM BOARD

A. ASTM C1396/C1396M. With moisture- and mold-resistant core and paper surfaces.
B. Basis of Design: Gold Bond® BRAND XP Gypsum Board

1. Panel Physical Characteristics:
   a. Core: Mold and moisture resistant gypsum core
   b. Surface paper: 100 percent recycled content moisture/mold/mildew resistant paper on front, back, and long edges
   c. Long Edges: Tapered
   d. Overall thickness: 5/8 inch
   e. Panel complies with requirements of ASTM C 1396

f. Mold/Mildew Resistance: 10 when tested in accordance with ASTM D 3273

2. Location: All restroom, shower, locker room locations. See drawings.

2.7 CEMENT BOARD

A. Cementitious Backer Units: ANSI A118.9 and ASTM C1288 or ASTM C1325, with manufacturer's standard edges.
B. Cement Backerboard Basis of Design: PermaBase® BRAND Cement Board.

1. Panel Physical Characteristics:
   a. Core: Cementitious, water-durable
   b. Surface: Fiberglass mesh on front and back
   c. Long Edges: Round
   d. Overall Thickness: 5/8 inch
   e. Panel complies with requirements of ASTM C 1325 and ANSI A 118.9
   f. Density: 72 lbs. per cu. ft.
   g. Water Absorption: Not greater than 8 percent when tested for 24 hours in accordance with ASTM C 473
   h. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.
   i. Mold/Mildew Resistance: ASTM G21; Score of 0.
   j. Shear Bond Strength: > 50 psi.

2. Location: Partition types with tile. See drawings.

2.8 TRIM ACCESSORIES

A. Interior Trim: ASTM C1047.

1. Material: Galvanized or aluminum-coated steel sheet or rolled zinc.
2. Shapes:

   a. Cornerbead.
   b. Bullnose bead.
   c. LC-Bead: J-shaped; exposed long flange receives joint compound.
   d. L-Bead: L-shaped; exposed long flange receives joint compound.
   e. U-Bead: J-shaped; exposed short flange does not receive joint compound.
   f. Expansion (control) joint.
   g. Curved-Edge Cornerbead: With notched or flexible flanges.

B. Exterior Trim: ASTM C1047.

1. Material: Hot-dip galvanized-steel sheet.

2. Shapes:

    a. Cornerbead.
    b. LC-Bead: J-shaped; exposed long flange receives joint compound.

2.9 AUXILIARY MATERIALS

A. Provide auxiliary materials that comply with referenced installation standards and manufacturer's written instructions.

B. Steel Drill Screws: ASTM C1002 unless otherwise indicated.

1. Use screws complying with ASTM C954 for fastening panels to steel members from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick.
2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.

C. Acoustical sealant:
1. Conform to ASTM C 919
2. VOC content less than 2 g/L
3. Products/Manufacturer:
    a. Grabber Acoustical Sealant GSC
    b. STI SpecSeal Smoke N Sound Caulk
    c. BOSS 824 Acoustical Sound Sealant.

D. Firestopping:
1. Conform to ASTM E 90
2. Products/Manufacturer:
    a. STI SpecSeal SSP Putty Pads
    b. BOSS 818 Fire Rated Putty Pads.

E. Fasteners for use with cement board
1. PermaBase Cement Board drill point screws (No. 8)
    a. Wafer head, corrosion-resistant
    b. Overall Thickness: 1-5/8 inch
    c. For use with 20 to 14 ga. Steel framing and complying with ASTM C 1002

F. Joint Treatment
1. Tape:
    a. Paper Tape: 2-1/16 inches wide
    b. Paper Tape: 2 inches wide with metal strips laminated along the center crease to form inside and outside corners
    c. Fiberglass Tape: Nominal 2 inches wide self-adhering tape

G. Joint Sealant
   1. Conform to ASTM C 920
   2. VOC content less than 2 g/L

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and substrates including welded hollow-metal frames and support framing, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Suspended Ceilings: Coordinate installation of ceiling suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive ceiling hangers at spacing required to support ceilings and that hangers will develop their full strength.

   1. Furnish concrete inserts and other devises indicated to other trades for installation in advance of time needed for coordination and construction.

B. Coordination with Sprayed Fire-Resistive Materials:

   1. After sprayed fire-resistive materials are applied, remove them only to extent necessary for installation of gypsum board assemblies and without reducing the fire-resistive material thickness below that which is required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

3.3 INSTALLATION AND FINISHING OF PANELS, GENERAL

A. Comply with Gypsum Board Application and Finishing Standards: ASTM C 840 and GA-216.

B. Install sound attenuation blankets before installing gypsum panels, unless blankets are readily installed after panels have been installed on one side.

C. Install ceiling board panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.

D. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch (1.5 mm) of open space between panels. Do not force into place.

E. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.

F. Attach gypsum panels to framing provided at openings and cutouts.

G. Form control and expansion joints with space between edges of adjoining gypsum panels.

H. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.

1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. (0.7 sq. m) in area.
2. Fit gypsum panels around ducts, pipes, and conduits.
3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch- (6.4- to 9.5-mm-) wide joints to install sealant.

I. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments. Provide 1/4- to 1/2-inch- (6.4- to 12.7-mm-) wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.

J. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C919 and with manufacturer's written instructions for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.

K. Space fasteners in gypsum panels according to referenced gypsum board application and finishing standard and manufacturer's written recommendations.

1. Space screws a maximum of 12 inches (304.8 mm) o.c. for vertical applications.

L. Space fasteners in panels that are tile substrates a maximum of 8 inches (203.2 mm) o.c.

3.4 INSTALLATION OF INTERIOR GYPSUM BOARD

A. Install interior gypsum board in the following locations:
   1. Regular Type: Vertical surfaces, unless otherwise indicated.
   2. Type X: Where required for fire-resistance-rated assembly.
   3. Flexible Type: Apply in double layer at curved assemblies.
   4. Ceiling Type: Ceiling surfaces.

3.5 PANEL APPLICATION METHODS

A. Single-Layer Application:

   1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing unless otherwise indicated.
   2. On partitions/walls, apply gypsum panels vertically (parallel to framing), unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.

      a. Stagger abutting end joints not less than one framing member in alternate courses of panels.
      b. At stairwells and other high walls, install panels horizontally unless otherwise indicated or required by fire-resistance-rated assembly.

   3. On Z-shaped furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
   4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.

B. Multilayer Application:

   1. On ceilings, apply gypsum board indicated for base layers before applying base layers on walls/partitions; apply face layers in same sequence. Apply base layers at right angles to framing members and offset face-layer joints one framing member, 16 inches (400 mm) minimum, from parallel base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly.
   2. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
   3. On Z-shaped furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.

4. Fastening Methods: Fasten base layers and face layers separately to supports with screws.
5. For double-layer construction, fasten base layer to studs with screws 16 inches (400 mm) o.c. Center gypsum board face layer over joints in base layer, and fasten to studs with screws spaced 12 inches (300 mm) o.c.

3.6 INSTALLATION OF TILE BACKING PANELS

A. Cementitious Backer Units: ANSI A108.11, at locations indicated to receive tile.

B. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

3.7 INSTALLATION OF TRIM ACCESSORIES

A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.

B. Control Joints: Install control joints according to ASTM C840 and in specific locations approved by Architect for visual effect.

C. Interior Trim: Install in the following locations:

1. Cornerbead: Use at outside corners.
2. Bullnose Bead: Use where indicated.
3. L-Bead: Use where indicated.
4. U-Bead: Use at exposed panel edges.

3.8 FINISHING GYPSUM BOARD

A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.

B. Prefill open joints, rounded or beveled edges, and damaged surface areas.

C. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.

D. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C840:

1. Level 1: Ceiling plenum areas, concealed areas, and where indicated.
   a. Where level 1 gypsum board finish is indicated, apply joint compound specified for embedding coat.
2. Level 4: For all exposed gypsum board surfaces.

   a. For level 4 gypsum board finish, embed tape in finishing compound plus two separate coats applied over joints, angles, fastener heads, and trim accessories.

   b. Primer and its application to surfaces are specified in Section 09.9100 "Painting."

E. Cementitious Backer Units: Finish according to manufacturer's written instructions.

3.9 FIELD QUALITY CONTROL

A. Above-Ceiling Observation: Architect will conduct an above-ceiling observation before installing gypsum board ceilings and report deficiencies in the Work observed. Do not proceed with installation of gypsum board to ceiling support framing until deficiencies have been corrected.
   1. Notify Architect seven days in advance of date and time when Project, or part of Project, will be ready for above-ceiling observation
   2. Before notifying Architect, complete the following in areas to receive gypsum board ceilings:
      a. Installation of 80 percent of lighting fixtures, powered for operation.
      b. Installation, insulation, and leak and pressure testing of water piping systems.
      c. Installation of air-duct systems.
      d. Installation of air devices.
      e. Installation of mechanical system control-air tubing.
      f. Installation of ceiling support framing.

3.10 PROTECTION

A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.

B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.

C. Remove and replace panels that are wet, moisture damaged, and mold damaged.

   1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.

2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION 09.2900

SECTION 09.3000 – TILING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Porcelain tile
2. Marble thresholds
3. Tile backing panels
4. Waterproof membrane.
5. Cleavage membrane.
6. Crack isolation membrane.
7. Metal edge strips.

B. Related Sections:

1. Division 07 Section "Joint Sealants" for sealing of expansion, contraction, control, and isolation joints in tile surfaces.

2. Division 09 Section "Gypsum Board" for cementitious backer units and glass-mat, water-resistant backer board.

1.3 DEFINITIONS

A. General: Definitions in the ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.

B. Face Size: Actual tile size, excluding spacer lugs.

C. Module Size: Actual tile size plus joint width indicated.

1.4 PERFORMANCE REQUIREMENTS

A. Static Coefficient of Friction: For tile installed on walkway surfaces, provide products with the following values as determined by testing identical products per ASTM C 1028:

1.5 SUBMITTALS

A. Product Data: For each type of product

B. Samples:

1. Each type and composition of tile and for each color and finish required. [For porcelain tile in color blend patterns, provide samples of each color blend.]

2. Assembled samples mounted on a rigid panel, with grouted joints, for each type and composition of tile and for each color and finish required.

3. Marble thresholds

1.6 QUALITY ASSURANCE

A. Tile Council of America, Inc., "Handbook for Ceramic Tile Installation," latest edition.

B. American National Standards Institute (ANSI) "American National Standard Specifications for Ceramic Tile - ANSI-137.1."

C. Source Limitations for Tile: Obtain tile of each type and color or finish from one source or producer.

1. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.

D. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from one manufacturer and each aggregate from one source or producer.

E. Source Limitations for Other Products: Obtain each of the following products specified in this Section from a single manufacturer for each product:

1. Marble thresholds.
2. Waterproof membrane.
3. Crack isolation membrane.
4. Joint sealants.
5. Cementitious backer units.
6. Metal edge strips.

F. Pre-installation Conference: Conduct conference at Project site.

1. Review requirements in ANSI A108.01 for substrates and for preparation by other trades.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.

B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.

C. Store aggregates where grading and other required characteristics can be maintained, and contamination can be avoided.

D. Store liquid materials in unopened containers and protected from freezing.

E. Handle tile that has temporary protective coating on exposed surfaces to prevent coated surfaces from contacting backs or edges of other units. If coating does contact bonding surfaces of tile, remove coating from bonding surfaces before setting tile.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

1.9 EXTRA MATERIALS

A. Furnish extra materials that match and are from same production runs as products installed and that are packaged with protective covering for storage and identified with labels describing contents.

B. Tile and Trim Units: Furnish quantity of full-size units equal to 5 percent of amount installed for each type, composition, color, pattern, and size indicated but no less than one carton of each type and color. Box for storage, date, and mark the box "maintenance tile".

C. Grout: Furnish quantity of grout equal to 3 percent of amount installed for each type, composition, and color indicated.

PART 2 - PRODUCTS

2.1 PRODUCTS, GENERAL

A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.

B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCA installation methods specified in tile installation schedules, and other requirements specified.

C. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.

D. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer unless otherwise indicated.

E. Factory-Applied Temporary Protective Coating: Where indicated under tile type, protect exposed surfaces of tile against adherence of mortar and grout by pre-coating with continuous film of petroleum paraffin wax, applied hot. Do not coat unexposed tile surfaces.

2.2 TILE PRODUCTS

A. Basis of design manufacture: Daltile Corporation and Tilebar as indicated on the Design Selection Schedule.

B. Accepted alternate manufactures include Crossville, Interceramic, and American Olean.

C. Floor Tile: Indicated on the Drawings as PFT-01, 02.

D. Wall Tile: Indicated on Drawings as CWT-01, 02.

E. Wall Base: SCHLUTER DILEX-AHK. See details within Construction Drawings.

2.3 THRESHOLDS

A. General: Fabricate to sizes and profiles indicated or required to provide transition between adjacent floor finishes.

1. Bevel edges at 1:2 slope, with lower edge of bevel aligned with or up to 1/16 inch above adjacent floor surface. Finish bevel to match top surface of threshold. Limit height of threshold to 1/2 inch or less above adjacent floor surface.

B. Marble Thresholds: ASTM C 503, with a minimum abrasion resistance of 10 per ASTM C 1353 or ASTM C 241 and with honed finish.

1. Description: Provide the following or approved equal:
   a. Vermont Marble Company "Imperial Danby".

2.4 WATERPROOF MEMBRANE

A. General: Manufacturer's standard product that complies with ANSI A118.10 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric; 40 mil nominal thickness.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Noble Company (The); Nobleseal “Chloraloy 240”

2.5 CRACK ISOLATION MEMBRANE

A. General: Manufacturer's standard product that complies with ANSI A118.12 for heavy duty performance and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric; 30 mil nominal thickness.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Noble Company (The); Nobleseal CIS.

2.6 CLEAVAGE MEMBRANE

A. Cleavage Membrane: 15-pound roofing felt ASTM D 226, for use under full set tile locations on slab on grade, unless other material is indicated on the Drawings or specified.

2.7 SETTING MATERIALS

A. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02.

   1. Cleavage Membrane: Asphalt felt, ASTM D 226, Type I (No. 15); or polyethylene sheeting, ASTM D 4397, 4.0 mils (0.1 mm) thick.
   2. Reinforcing Wire Fabric: Galvanized, welded wire fabric, 2 by 2 inches (50.8 by 50.8 mm) by 0.062-inch (1.57-mm) diameter; comply with ASTM A 185 and ASTM A 82 except for minimum wire size.
   3. Expanded Metal Lath: Diamond-mesh lath complying with ASTM C 847.

      a. Base Metal and Finish for Interior Applications: Uncoated or zinc-coated (galvanized) steel sheet, with uncoated steel sheet painted after fabrication into lath.
      b. Base Metal and Finish for Exterior Applications: Zinc-coated (galvanized) steel sheet.
      c. Configuration over Studs and Furring: Flat.
      d. Configuration over Solid Surfaces: Self furring.
      e. Weight: 2.5 lb/sq. yd.

   4. Latex Additive: Manufacturer's standard water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement and aggregate mortar bed.

B. Latex-Portland Cement Mortar (Thin Set): ANSI A118.4.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Bonsal American; an Oldcastle company.
   b. Bostik, Inc.
   c. Laticrete International, Inc.
   d. MAPEI Corporation.

2. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
3. Provide prepackaged, dry-mortar mix combined with [liquid-latex additive at Project site.
4. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.4.

2.8 GROUT MATERIALS

A. Polymer-Modified Tile Grout: ANSI A118.7.

1. Basis-of-Design Product: Subject to compliance with requirements, provide “Classic Collection” and “Designer Series” as manufactured by MAPEI Corporation or comparable product by one of the following:
   a. Bonsal American; an Oldcastle company.
   b. Laticrete International, Inc.
   c. Southern Grouts & Mortars, Inc.
   d. Summitville Tiles, Inc.
2. Polymer Type: Ethylene vinyl acetate or acrylic additive, in dry, redispersible form, prepackaged with other dry ingredients.

2.9 ELASTOMERIC SEALANTS

A. General: Provide sealants, primers, backer rods, and other sealant accessories that comply with the following requirements and with the applicable requirements in Division 07 Section "Joint Sealants."

1. Use sealants that have a VOC content of [250] <Insert limit> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Use primers, backer rods, and sealant accessories recommended by sealant manufacturer.

B. Colors: Provide colors of exposed sealants to match colors of grout in tile adjoining sealed joints unless otherwise indicated.

C. One-Part, Mildew-Resistant Silicone Sealant: ASTM C 920; Type S; Grade NS; Class 25; Uses NT, G, A, and, as applicable to nonporous joint substrates indicated, O; formulated with fungicide, intended for sealing interior ceramic tile joints and other nonporous substrates that are subject to in-service exposures of high humidity and extreme temperatures.

1. Products: Subject to compliance with requirements, provide the following or approved equal:
   a. Dow Corning Corporation; Dow Corning 786TR-WHT.

2.10 MISCELLANEOUS MATERIALS

A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.

B. Metal Edge Divider Strip: Types as indicated on Drawings as manufactured by Schluter Systems L.P., Plattsburgh, NY; or alternatives of the quality necessary to meet the specifications.

C. Temporary Protective Coating: Either product indicated below that is formulated to protect exposed surfaces of tile against adherence of mortar and grout; compatible with tile, mortar, and grout products; and easily removable after grouting is completed without damaging grout or tile.

1. Petroleum paraffin wax, fully refined and odorless, containing at least 0.5 percent oil with a melting point of 120 to 140 deg F per ASTM D 87.
2. Grout release in form of manufacturer's standard proprietary liquid coating that is specially formulated and recommended for use as temporary protective coating for tile.

D. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

2.11 MIXING MORTARS AND GROUT

A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.

B. Add materials, water, and additives in accurate proportions.

C. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of installed tile.

1. Verify that substrates for setting tile are firm, dry, clean, free of coatings that are incompatible with tile-setting materials including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
2. Verify that concrete substrates for tile floors comply with surface finish requirements in ANSI A108.01 for installations indicated.

a. Verify that surfaces that received a steel trowel finish have been mechanically scarified.
b. Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.

3. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.
4. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Fill cracks, holes, and depressions in concrete substrates for tile floors with trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.

B. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped 1/4 inch per foot toward drains.

C. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not, factory blended, either return to manufacturer or blend tiles at Project site before installing.

D. Field-Applied Temporary Protective Coating: If indicated under tile type or needed to prevent grout from staining or adhering to exposed tile surfaces, precoat them with continuous film of temporary protective coating, taking care not to coat unexposed tile surfaces.

3.3 TILE INSTALLATION

A. Comply with TCA's "Handbook for Ceramic Tile Installation" for TCA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 Series "Specifications for Installation of Ceramic Tile" that are referenced in TCA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used

B. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments. Use bullnosed shapes to terminate tile except at inside corners.

C. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

D. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.

1. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets so joints between sheets are not apparent in finished work.
2. Align joints where adjoining tiles on floor, base, walls, and trim are the same size.
3. Where tiles are specified or indicated to be whole integer multiples of adjoining tiles on floor, base, walls, or trim, align joints unless otherwise indicated.

E. Joint Widths: Unless otherwise indicated, install tile with the following joint widths:

1. Ceramic Mosaic Tile: 1/16 inch.
2. Quarry Tile: 1/4 inch.
3. Paver Tile: 1/4 inch.
4. Glazed Wall Tile: 1/16 inch.
5. Decorative Thin Wall Tile: 1/16 inch.

F. Lay out tile wainscots to dimensions indicated or to next full tile beyond dimensions indicated.

G. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated on Drawings and as follows. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.

1. Where tile floors abut vertical surfaces such as bases, walls, curbs, etc., provide 1/4-inch-wide control joints, full depth through the ceramic tile and under bed, to receive control joint sealant.
2. At building control points, between ceramic tile and metal door frames and between ceramic tile and marble thresholds.
3. Control joints shall also be located directly over joints in concrete slabs. Joints shall be in accordance with the "Handbook for Ceramic Tile Installation" of the Tile Council of America, EJ171-06. Base/cove installation shall be "Flush" as indicated in the "Handbook for Ceramic tile Installation."
4. All control joints shall be left open, protected, and maintained clean to receive the control joint sealant and backing.
5. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants."

H. Marble Thresholds: Install stone thresholds in same type of setting bed as adjacent floor unless otherwise indicated.

1. At locations where mortar bed (thickset) would otherwise be exposed above adjacent floor finishes, set thresholds in latex-portland cement mortar (thin set).
2. Do not extend cleavage membrane waterproofing or crack isolation membrane under thresholds set in dry-set or latex-portland cement mortar. Fill joints between such thresholds and adjoining tile set on cleavage membrane waterproofing or crack isolation membrane with elastomeric sealant.

I. Metal Edge Strips: Install [at locations indicated and where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with or below top of tile and no threshold is indicated.

3.4 WATERPROOFING INSTALLATION

A. Install waterproofing to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness and bonded securely to substrate.

B. Do not install tile or setting materials over waterproofing until waterproofing has cured and been tested to determine that it is watertight.

3.5 CRACK ISOLATION MEMBRANE INSTALLATION

A. Install crack isolation membrane to comply with ANSI A108.17 and manufacturer's written instructions to produce membrane of uniform thickness and bonded securely to substrate.

B. Do not install tile or setting materials over crack isolation membrane until membrane has cured.

3.6 CLEANING AND PROTECTING

A. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.

1. Remove grout residue from tile as soon as possible.
2. Clean grout smears and hazes from tile according to tile and grout manufacturer's written instructions but no sooner than 10 days after installation. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.
3. Remove temporary protective coating by method recommended by coating manufacturer and that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent drain clogging.

B. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.

C. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.

D. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces.

3.7 TILE INSTALLATION SCHEDULE

A. Ceramic tile installation shall be in accordance with the following methods from the “Handbook For Ceramic Tile Installation," of the Tile Council of America, Inc., Latest Edition:

1. Thin-set floor: F113 with wet-cured, Latex-Portland cement/sand grout (1 pc = 1 sand) with crack protection sheet

2. Thin set with waterproofing membrane: F111, provide at second floor toilet rooms.
3. Thin-set, wall: W243.
4. Threshold: TH611.

B. All work shall be laid out to minimize cutting. Where cutting is required, tile shall be neatly cut and fitted with edges ground smooth.

C. Reinforce setting beds over waterproofing and cleavage membranes with the specified mesh reinforcing. Do not install tile floors over membrane until the membrane has been tested and accepted.

D. Apply silicone sealant at top edge of ceramic and quarry base between wall surface and base.

E. Use a grout release coating product as approved by the tile manufacture.

F. Limits of tile:

1. Extend tile into recesses and under equipment and fixtures to form a complete covering without interruption.
2. Terminate tile neatly at obstructions, edges, and corners, without disruption of pattern or joint alignment.
3. Use bullnose shapes to terminate tile except at inside corners.

END OF SECTION 09.3000

SECTION 09.3050 – METAL COVE BASE & TRIM

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Edge-protection and transition profiles for floors.

B. Finishing and edge-protection profiles for walls and countertops.

C. Movement joint and cove-shaped profiles.

1.2 RELATED SECTIONS

A. Section 03 30 00 - Cast-in-Place Concrete.

B. Section 06 10 00 - Rough Carpentry.

C. Section 07 90 00 - Joint Protection.

D. Section 09 28 13 - Cementitious Backing Boards.

E. Section 09 30 00 - Tiling.

F. Section 09 30 00 - Tiling. Shower trays, curbs, ramps, bench, niche, sealing compound, waterproofing membrane, drainage panels, drainage membrane compatible with floor drains.

G. Section 10 26 13 - Corner Guards.

H. Section 22 13 19.13 - Sanitary Drains.

I. Section 08 90 00 - Radiant Heating Units.

1.3 REFERENCES

A. CSA B79-08: Floor, Area, and Shower Drains, and Cleanouts for Residential Construction.

B. IAPMO IGC 195: Interim Guide Criteria for Floor Drain with Integrated Bonding Flange.

C. Tile Council of North America (TCNA) Handbook for Ceramic Tile Installation.

D. Terrazzo, Tile and Marble Association of Canada (TTMAC) Specification Guide 09300 Tile Installation Manual.

E. American National Standard Specifications for the installation of ceramic tile A108 / A118 / A136.1.

1.4 SUBMITTALS

A. Submit under provisions of Section 01 30 00.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Verification Samples: For each finish product specified, two samples, minimum size 6 inches (150 mm) long, representing actual product, color, and finish.

D. Manufacturer's Certificates: Certify products meet or exceed specified requirements.

E. Warranty document showing duration and scope to be submitted with product submittals.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the work of this section with minimum five years' experience.

B. Source Limitations for Setting Materials and Accessories: Obtain product of a uniform quality for each application condition from a single manufacturer.

C. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship.
1. Finish areas designated by Architect.
2. Do not proceed with remaining work until workmanship, color, and sheen are approved by Architect.
3. Refinish mock-up area as required to produce acceptable work.

D. Preinstallation Conference: Conduct conference at the Project site.
1. Convene one week prior to commencing work of this section.
2. Require attendance of installation material manufacturer, tile supplier, tile installer and installers of related work. Review installation procedures and coordination required with related work.
3. Meeting agenda includes but is not limited to:
    a. Surface preparation.
    b. Tile and installation material compatibility.
    c. Manufacturer and installer warranty duration and scope covered by warranty.
    d. Edge protection, transition, and pre-fabricated movement joint profiles.
    e. Waterproofing techniques.
    f. Crack isolation techniques.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Protect materials from exposure to moisture. Do not deliver until after wet work is complete and dry.

C. Store materials in a dry, warm, ventilated weathertight location.

1.7 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits

recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.8 WARRANTY

A. Provide sample warranty during submittal process.

B. Acknowledge warranty duration and scope covered by warranty.

C. Coordinate Work with other operations and installation of floor finish materials to avoid damage to installed materials.

D. Obtain products of a uniform quality for each premanufactured tile profile, and mortar and waterproofing and uncoupling membrane from a single manufacturer, to maintain the installation system and provide multi-product warranty from selected manufacturer.

1.9 COORDINATION

A. Coordinate Work with other operations and installation of floor finish materials to avoid damage to installed materials.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturer: Schluter Systems L.P., which is located at: 194 Pleasant Ridge Road.; Plattsburgh, NY 12901-5841; ASD Toll Free Tel: 800-472-4588; Fax: 800-477-9783; Email: specassist@schluter.com; Web: www.schluter.com/schluter-us/en_US/.

B. Requests for substitutions will be considered in accordance with provisions of Section 01 60 00.

2.2 EDGE-PROTECTION AND TRANSITION PROFILES FOR FLOORS

A. Schluter-DECO: Profile with 1/4 inch (6 mm) wide visible surface and integrated trapezoid-perforated anchoring leg.
   1. Profile Height: As required to coordinate with tile selection and setting system.
   2. Material and Finish:
      a. E: Stainless Steel Type 304 equals V2A.

2.3 FINISHING AND EDGE-PROTECTION PROFILES FOR WALLS AND COUNTERTOPS

A. Schluter-JOLLY: L-shaped profile. 9/64 inch (3.5 mm) wide top and vertical wall sections that together form the visible surface. Integrated trapezoid-perforated anchoring leg, and integrated grout joint spacer.
   1. Corners: Matching inside corners.
   2. Corners: Matching outside corners.
   3. Anchoring Leg: Straight anchoring leg.
   4. Profile Height: As required to coordinate with tile selection and setting system.
   5. Material and Finish:
      a. EB: Brushed Stainless Steel 304 / V2A.

B. Schluter-SCHIENE: L-shaped profile with 1/8 inch (3.2 mm) wide visible surface, integrated trapezoid-perforated anchoring leg, and integrated grout joint spacer.
   1. Anchoring Leg: Straight anchoring leg.
   2. Profile Height: As required to coordinate with tile selection and setting system.
   3. Material and Finish:
      a. EV4A: Stainless Steel Type 316 L equals V4A.

C. Schluter-QUADEC: Profile with square visible surface, integrated trapezoid-perforated anchoring leg, and integrated grout joint spacer.
   1. Corners: Matching inside corners.
   2. Corners: Matching outside corners.
   3. Corners: Internal connectors.
   4. Profile Height: As required to coordinate with tile selection and setting system.
   5. Material and Finish:
      a. E: Stainless Steel Type 304 equals V2A.

2.4 MOVEMENT JOINTS AND COVE-SHAPED PROFILES (PTB-01)

A. Schluter-DILEX-HKS: Profile with integrated, roll-formed stainless steel with trapezoid-perforated anchoring legs, connected at a 90-degree angle by a stainless steel cove-shaped section with 23/32 inch (18.5 mm) radius and 1/2 inch (12.5 mm) wide thermoplastic rubber movement zone, which together form the visible surface. Available in gray only.
   1. Corners: Matching inside corners.
   2. Corners: Matching outside corners.
   3. Corners: Matching end caps.
   4. Corners: Matching connectors.
   5. Profile Height: As required to coordinate with tile selection and setting system.
   6. Material and Finish:
      a. E: Stainless Steel Type 304 equals V2A.
   7. Movement Zone Color:
      a. PG: Classic Grey.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

3.4 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION 09.3050

SECTION 09.5100 - ACOUSTICAL CEILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general conditions of Contract, including General and Supplementary Conditions and Divisions-1 Specification sections apply to work of this section.

1.2 SUMMARY

A. This Section includes the following:
   1. Acoustical panels and exposed suspension systems for ceilings, with panels of the following types:
      a. Standard mineral fiber acoustical panels.
      b. Exposed grid suspension system
      c. Wire hangers, fasteners, main runners, cross tees, and wall angle moldings
      d. Perimeter Trim.

B. Related Sections include the following:
   1. Division 9 Section “Gypsum Board Assemblies”
   2. Divisions 23 - HVAC Air Distribution
   3. Division 26 – Electrical

C. Alternate manufacturers will be considered subject to the provisions of Division 01 – Substitutions.

1.4 SYSTEM DESCRIPTION

A. Continuous/Wall-to-Wall

1.5 SUBMITTALS

A. Product Data: Product Data: Submit manufacturer's technical data for each type of acoustical ceiling unit and suspension system required.

B. Coordination Drawings: Reflected ceiling plans drawn to scale and coordinating penetrations and ceiling-mounted items. Show the following:
   1. Ceiling suspension members.
   2. Method of attaching hangers to building structure.
      a. Furnish layouts for cast-in-place anchors, clips, and other ceiling attachment devices whose installation is specified in other Sections.
   3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
   4. Minimum Drawing Scale: 1/4 inch = 1 foot.

C. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below.
   1. Acoustical Panels: Minimum 6 inch x 6 inch samples of specified acoustical panel.
   2. Wood Panels: Set of 12-inch square Samples with specified wood species, pattern and finish.
   3. Exposed Suspension System Members, Moldings, and Trim, including main runner and 4 foot cross tees: Set of 12-inch-long Samples of each type, finish, and color.

D. Acoustical Certifications: Manufacturer's certifications that products comply with specified requirements, including laboratory reports showing compliance with specified tests and standards. For acoustical performance, each carton of material must carry an approved independent laboratory classification of NRC, CAC, and AC.
   1. If the material supplied by the acoustical subcontractor does not have an Underwriter's Laboratory classification of acoustical performance on every carton, subcontractor shall be required to send material from every production run appearing on the job to an independent or NVLAP approved laboratory for testing, at the architect's or owner's discretion. All products not conforming to manufacturer's current published values must be removed, disposed of and replaced with complying product at the expense of the Contractor performing the work.

1.6 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of acoustical ceiling panel and supporting suspension system through one source from a single manufacturer.

1. Fire Performance Characteristics: Identify acoustical ceiling components with appropriate markings of applicable testing and inspecting organization.
2. Surface Burning Characteristics: As follows, tested per ASTM E 84 and complying with ASTM E 1264 Classification.
3. Fire Resistance: As follows tested per ASTM E119 and listed in the appropriate floor or roof design in the Underwriters Laboratories Fire Resistance Directory.

B. Seismic Standard: Provide acoustical panel ceilings designed and installed to withstand the effects of earthquake motions according to the following:
1. CISCA's Recommendations for Acoustical Ceilings: Comply with CISCA's "Recommendations for Direct-Hung Acoustical Tile and Lay-in Panel Ceilings--Seismic Zones 0-2."

C. Coordination of Work: Coordinate acoustical ceiling work with installers of related work including, but not limited to building insulation, gypsum board, light fixtures, mechanical systems, electrical systems, and sprinklers.

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver acoustical panels, suspension system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

C. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Coordination: Coordinate layout and installation of acoustical panels and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

C. Space Enclosure:
1. HumiGuard Plus Ceilings: Building areas to receive ceilings shall be free of construction dust and debris. Products with HumiGuard Plus performance and hot

dipped galvanized steel, aluminum or stainless steel suspension systems can be installed up to 120°F (49°C) and in spaces before the building is enclosed, where HVAC systems are cycled or not operating. Cannot be used in exterior applications where standing water is present or where moisture will come in direct contact with the ceiling.

2. HumiGuard Max Ceilings: Building areas to receive ceilings shall be free of construction dust and debris. Ceilings with HumiGuard Max performance can be installed in conditions up to 120°F (49°C) and maximum humidity exposure including outdoor applications, and other standing water applications, so long as they are installed with either SS Prelude Plus, AL Prelude Plus, or Prelude Plus Fire Guard XL suspension systems. Products with Humiguard Max performance can be installed in exterior applications, where standing water is present, or where moisture will come in direct contact with the ceiling. Only Ceramaguard with AL Prelude Plus suspension system can be installed over swimming pools.

1.9 WARRANTY

A. Acoustical Panel: Submit a written warranty executed by the manufacturer, agreeing to repair or replace panels that fail within the warranty period. Failures include, but are not limited to the following:
   1. Acoustical Panels: Sagging and warping
   2. Grid System: Rusting and manufacturer's defects

B. Warranty Period:
   1. Acoustical panels: Ten (10) years from date of substantial completion
   2. Suspension: Ten (10) years from date of substantial completion
   3. Ceiling System: Thirty (30) years from date of substantial completion.

C. The Warranty shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and will be in addition to and run concurrent with other warranties made by the Contractor under the requirements of the Contract Documents.

1.10 EXTRA MATERIALS

A. Extra Materials: Deliver extra materials to Owner. Furnish extra materials described below that match products installed. Packaged with protective covering for storage and identified with appropriate labels.
   1. Acoustical Ceiling Units: Furnish quality of full-size units equal to 5.0 percent of amount installed.
   2. Exposed Suspension System Components: Furnish quantity of each exposed suspension component equal to 2.0 percent of amount installed.
   3. Provide an additional 50 tiles of each type listed below above and beyond the 5.0 percent for replacement of damaged tiles during construction.

a. Types ACT-01 and ACT-02.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide ceiling products as follows:
1. Ceiling Panels: Armstrong World Industries, Inc.
2. Suspension Systems: Armstrong World Industries, Inc.
3. Perimeter Systems: Armstrong World Industries, Inc.

B. Subject to compliance with requirements, products of the following manufacturers may be considered:
1. CertainTeed Corp.
2. USG
3. Rockfon

2.2 ACOUSTIC CEILING TILES

A. Acoustical Panel Standard: Provide manufacturer's standard panels of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectance's, unless otherwise indicated.
1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches away from test surface per ASTM E 795.

B. Acoustical Panels **Type ACT-01**:
1. Surface Texture: Fine
2. Composition: Mineral Fiber
3. Color: White
4. Size: 24 in x 24 in
5. Thickness: 3/4"
6. Edge Profile: Square Lay-In 15/16 in for interface with PRELUDE XL 15/16" Exposed Tee grid.
7. Noise Reduction Coefficient (NRC): ASTM C 423; Classified with UL label on product carton 0.75
8. Ceiling Attenuation Class (CAC): ASTM C 1414; Classified with UL label on product carton 35
9. Sabin: N/A
10. Articulation Class (AC): 170
11. Flame Spread: ASTM E 1264; Class A (UL)
12. Light Reflectance (LR) White Panel: ASTM E 1477; 88%
13. Dimensional Stability: HumiGuard Plus+

14. Mold/Mildew Resistance: BIOBLOCK
15. Recycle Content: Post-Consumer - 0% - 1% Pre-Consumer - 75% - 76%
16. Material Ingredient Transparency: Health Product Declaration (HPD); Declare Label
17. Life Cycle Assessment: Third Party Certified Environment Product Declaration (EPD)
18. Acceptable Product: ULTIMA 1911HRC Tegular as manufactured by Armstrong World Industries.

C. Acoustical Panels Type **ACT-02:**
1. Surface Texture: Medium
2. Composition: Mineral Fiber
3. Color: White
4. Size: 24 in x 48 in
5. Thickness: 5/8”
6. Edge Profile: Square Lay-In 15/16 in for interface with PRELUDE Plus XL Fire Guard 15/16" Exposed Tee grid.
7. Noise Reduction Coefficient (NRC): N/A
8. Ceiling Attenuation Class (CAC): ASTM C 1414; Classified with UL label on product carton 40
9. Sabin: N/A
10. Articulation Class (AC): 170
11. Flame Spread: ASTM E 1264; Class A (UL); FIREGUARD
12. Light Reflectance (LR) White Panel: ASTM E 1477; 86%
13. Dimensional Stability: HumiGuard Max
14. Mold/Mildew Resistance: BioBlock
15. Recycle Content: Post-Consumer - 0% Pre-Consumer - 41%
16. Material Ingredient Transparency: Health Product Declaration (HPD); Declare Label
17. Life Cycle Assessment: Third Party Certified Environment Product Declaration (EPD)
18. Acceptable Product: CERAMAGUARD 605, as manufactured by Armstrong World Industries.

2.3 METAL SUSPENSION SYSTEMS GENERAL

A. Metal Suspension System Standard: Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C 635.

B. Finishes and Colors, General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Provide manufacturer's standard factory-applied finish for type of system indicated.

C. Attachment Devices: Size for five times the design load indicated in ASTM C 635, Table 1, "Direct Hung," unless otherwise indicated.

1. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC 1 service condition; unless otherwise indicated.
2. Corrosion Protection: Stainless-steel components complying with ASTM F 593 and ASTM F 594; for ceilings located in wet areas as follows:
   a. Shower Areas and Dishwashing Areas: Alloy 304 or 316.
   b. Swimming Pool Areas: Alloy 316.

D. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:
1. Zinc-Coated Carbon-Steel Wire: ASTM A 641, Class 1 zinc coating, soft temper; unless otherwise indicated.
2. Nickel-Copper-Alloy Wire: ASTM B 164, nickel-copper-alloy UNS No. N04400; for ceilings located in wet areas including shower areas, dishwashing areas and swimming pools.
3. Size: Select wire diameter so its stress at three times hanger design load (ASTM C 635, Table 1, "Direct Hung") will be less than yield stress of wire but provide not less than 0.106-inch diameter wire.

2.4 METAL SUSPENSION SYSTEMS **ACT-01 and ACT-02**

A. Wide-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, hot-dip galvanized according to ASTM A 653, not less than G30 coating designation, with prefinished 15/16-inch-wide metal caps on flanges. Exposed surfaces chemically cleansed, capping prefinished galvanized steel in baked polyester paint. Main beams and cross tees shall have rotary stitching.
1. Structural Classification: Intermediate-duty system. ASTM C635.
2. End Condition of Cross Runners: Override (stepped) or butt-edge type.
3. Face Design: Flat, flush.
4. Cap Materials:
   a. Typical Locations: Steel cold-rolled sheet.
   b. Wet Areas: Aluminum sheet; for acoustical ceilings located in bathrooms and shower areas.
   c. Areas Indicated for Scrubbable Panels: Aluminum sheet.
5. Cap Finish: Painted white to match acoustical panels.
6. Sustainability: Environmental Product Declaration (EPD), Health Product Declaration (HPD)
7. Acceptable Product: PRELUDE XL 15/16" Exposed Tee as manufactured by Armstrong World Industries.

B. Roll-Formed Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that fit acoustical panel edge details and suspension systems indicated; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension system runners.
1. #7800 - 12' Wall Molding

2. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.

2.5 Special Accessories for Acoustical Ceilings: Provide factory-prepared units as described below to accommodate installation conditions indicated, finished to match appearance of exposed suspension system members.

1. Accessory for Bullnose Concrete Masonry: Snap-over molding to trim outside corners, fitting over 1-inch radius masonry units.
   a. Product: Bullnose Corner Cover No. 7866; Armstrong.
2. Drywall Transition Clip: For transition from 5/8 inch gypsum board to acoustical ceiling; eliminates need for drywall bead.
   a. Product: DW58; Armstrong.
3. Hold-Down Clips: Where indicated, provide manufacturer's standard hold-down clips spaced 24 inches o.c. on all cross tees.
   a. Locations: Provide hold-down clips for acoustical ceilings located in Vestibules and Toilet Rooms, Showers, etc..

B. Supplemental Supports: In locations where building structural elements supporting ceiling suspension systems are spaced more than 48 inches o.c. and where obstructions or other conditions prevent support of ceiling suspension systems at 48 inches o.c. or less, provide cold-formed metal framing to support ceiling systems to comply with specified standards, with depth of supplemental framing members not less than the following:

1. Overhead Structural Support Spacing up to 4 Feet: 1-1/2 inches.
2. Overhead Structural Support Spacing Between 4 Feet and 6 Feet: 2-1/2 inches.
3. Overhead Structural Support Spacing Between 6 Feet and 10 Feet: 4 inches.

2.6 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer's written recommendations.

B. Custom Closures and Terminations: Provide trim and closures, of configurations indicated; matching exposed ceiling suspension system members.

1. Provide units complete with anchors for support to structure and installation of ceiling systems.
2. Provide units fabricated from aluminum plate, shapes and break metal as indicated.

C. Acoustical Sealant: Nondrying, nonhardening, nonskinning, nonstaining, gunnable, synthetic-rubber sealant recommended for sealing interior concealed joints to reduce airborne sound transmission.

1. Products: Subject to compliance with requirements, provide one of the following:
   a. Pecora Corp.; BA-98.
   b. Pecora Corp.; AC-20 FTR Acoustical and Insulation Sealant.

c. Tremco, Inc.; Tremco Acoustical Sealant.
d. United States Gypsum Co.; SHEETROCK Acoustical Sealant.

D. Sound Attenuation Insulation: ASTM C 665, Type I (without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans.

3.3 INSTALLATION, GENERAL

A. General: Install acoustical panel ceilings to comply with ASTM C 636 and seismic requirements indicated, per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
1. Provide secondary restraint as required for acoustical panel ceilings.

B. Suspend ceiling hangers from building's structural members and as follows:
1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.

4. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
5. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
6. Do not attach hangers to steel deck tabs.
7. Do not attach hangers to steel roof deck or to bridging for roof joists or floor joists. Attach hangers to structural members.
8. Space hangers not more than 48 inches o.c. along each member supported directly from hangers, unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.

C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.

D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
2. Screw attach moldings to substrate at intervals not more than 16 inches o.c. and not more than 3 inches from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet. Miter corners accurately and connect securely.
3. Do not use exposed fasteners, including pop rivets, on moldings and trim.

E. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

F. Install acoustical panels with undamaged edges and fit accurately into suspension system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.
1. Arrange directionally patterned acoustical panels as indicated on reflected ceiling plans.
2. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension system runners and moldings.
3. For reveal-edged panels on suspension system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges. Use of teg tabs at perimeter will not be accepted.

4. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.

G. Install sound attenuation insulation on top of acoustical panels in locations indicated, according to insulation manufacturer's instructions.

H. Install suspended reveal ceiling systems by mechanically mounting panels to T-bar with 15/16 inch face flange at 1-1/2 inch web height.
1. Secure T-bar to factory-installed clips on panel backs, then hang the completed assembly in place using hanger wires or rods.
2. Handle panels only with clean, lightweight, white gloves.
3. Comply with panel manufacturer's printed instructions for installation, including requirements for field-cutting panels.

3.4 CLEANING

A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 09.5000

SECTION 09.6513 - RESILIENT WALL BASE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Resilient Wall Base and accessories.
2. Substrate preparation.

B. Related Work: The following items are not included in this Section and are specified under the designated Sections:

1. Section 03.3000 - CAST-IN-PLACE CONCRETE for concrete substrate; slab surface tolerances;
2. Section 06.1000 - ROUGH CARPENTRY for plywood substrate and surface tolerances.

C. References (Industry Standards):

1. ASTM International (ASTM):
   a. ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials
   b. ASTM E648 Standard Test Method for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source
   c. ASTM E662 Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials
   d. ASTM F710 Standard Practice for Preparing Concrete to Receive Resilient Flooring
   e. ASTM F1861 Standard Specification for Resilient Wall Base
   f. ASTM F386 Standard Test Method for Thickness of Resilient Flooring Materials Having Flat Surfaces.
2. Canadian ULC Standards (CAN/ULC):
   a. CAN/ULC-S102.2 Surface Burning Characteristics

3. National Fire Protection Association (NFPA):
   a. NFPA 253 Test Method for Critical Radiant Flux of Floor Covering Systems Using a Radiant Energy Source
   b. NFPA 258 Test Method for Specific Density of Smoke Generated by Solid Materials

c. NFPA 255 Test Method of Test of Surface Burning Characteristics of Building Materials.

1.3 SUBMITTALS

A. General: Submit listed submittals in accordance with Conditions of the Contract and Division 1 Submittal Procedures.

B. Product Data: Submit manufacturer's technical data sheet, care & maintenance document, submittal and/or warranty for each material and accessory proposed for use.

C. Samples for Initial Selection: For each type of product indicated.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: Provide resilient flooring materials manufactured in the United States of America by a firm with a minimum of 10 years' experience with resilient flooring materials of type equivalent to those specified.
   1. Manufacturer's quality management system must have ISO 9001:2000 approval.
   2. Provide resilient flooring products, including wall base, accessories and subfloor preparation products from one manufacturer to ensure color matching and compatibility.
   3. Manufacturer shall be capable of providing technical training and technical field service representation.

B. Installer Qualifications: Installer must be professional, licensed, insured and acceptable to manufacturer of resilient flooring materials. Project Managers or Field Supervisors must be INSTALL (International Standards & Training Alliance) certified, CFI (Certified Floorcovering Installers) Certified and/or an FCICA (The Flooring Contractors Association) CIM (Certified Installation Manager) for the requirements of the project.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in labeled packages. Store and handle in strict compliance with manufacturer's recommendations.

B. Deliver materials sufficiently in advance of installation to condition materials to the required temperature for 48-hours prior to installation

C. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by Johnsonite, but not less than 55 deg F (13 deg C) or more than 85 deg F (29 deg C).

1.6 PROJECT CONDITIONS

A. Install resilient products after other finishing operations, including painting, have been completed.

B. Maintain ambient temperatures within range recommended by the manufacturer, but not less than 65 deg F (18 deg C) or more than 85 deg F (29 deg C) in spaces to receive resilient products during the following time periods:
   1. 48 hours before installation.
   2. During installation.
   3. 48 hours after installation.

C. Maintain the ambient relative humidity between 40% and 60% during installation.

D. Until Substantial Completion, maintain ambient temperatures within range recommended by the manufacturer, but not less than 55 deg F (13 deg C) or more than 85 deg F (29 deg C).

PART 2 - PRODUCTS

2.1 RESILIENT WALL BASE

A. Basis of Design Manufacturer:
   1. Johnsonite, Inc., 16910 Munn Road, Chagrin Falls, Ohio 44023;
      a. Phone: (800) 899-8916, (440) 543-8916
      b. Fax: (440) 543-8920
      c. Web: www.tarkettna.com
      d. E-mail: info@johnsonite.com

B. RUBBER WALL BASE – **RWB-01**
   1. Collection: Baseworks Thermoset Rubber (TSBT)
   2. Pattern: Toeless & Straight.
   3. Color: As indicated on the Drawings.
   4. Height: 4” and as indicated on the Drawings.
   5. Corners: Provide inside and outside preformed corners, 1/8” thick with 4" returns.
   6. Physical Characteristics:
      a. Manufactured from a proprietary thermoset rubber formulation.
      b. Meets performance requirements for ASTM F-1861, Type TS, Group 1.
      c. ASTM E 648, Standard Test Method for Critical Radiant Flux of 0.45 watts/cm^2 or greater, Class I.
      d. ASTM E 84, Standard Test Method for Surface Burning Characteristics of Building Materials, Class B, Smoke <450.

e. Flexibility: Does not crack, break, or show any signs of fatigue when bent around a 1/4" (6.4 mm) diameter cylinder when tested according to ASTM F 137 Standard Test Method for Flexibility of Resilient Flooring Materials protocols.
f. Color Stability: Meets or exceeds ASTM F 1861 requirements for color stability when tested to ASTM F 1515 Standard Test Method for Measuring Light Stability of Resilient Flooring protocols.
g. Phthalate, chlorine and halogen free.
h. 100% Recyclable.
i. SCS FloorScore® Certified and meets California Specifications Section 01350.
j. Contains 2.3% rapidly renewable content.

2.2 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based formulation manufactured and warranted by a reputable manufacturer.

B. Adhesives: as recommended by the manufacturer to meet site conditions.
1. Johnsonite 960 Cove Base Adhesive.
2. Johnsonite 946 Premium Contact Bond Adhesive.

C. Maintenance Products: As recommended by the manufacturer.

PART 3 - EXECUTION

3.1 GENERAL

A. General Contractor's Responsibilities:

1. Supply a safe, climate controlled building and subfloor as detailed in Technical Data Sheets.
2. Ensure substrate meets the requirements of ASTM F710, Technical Data Sheets and Excelsior Technical Data Sheets.
3. Ensure horizontal concrete substrates have been tested per ASTM F2170 and/or ASTM F1869 to confirm that concrete relative humidity and/or moisture vapor emission rates are within tolerance of the approved adhesive.
4. Confirm the porosity of all substrates to ensure proper adhesive usage.
5. Provide a secure storage area that is maintained permanently or temporarily at normal operating temperature and humidity conditions (except walk in freezers or similar) between 65° F and 85° F and between 40% and 65% relative humidity, for at least 48-hours prior to and during the application of the flooring, so the flooring contractor can acclimate the flooring materials per manufacturer's instructions.
6. Provide an installation area that is weather tight and maintained either permanently or temporarily at ambient service temperature and humidity (except walk in freezers or

similar), normal operating temperature and humidity conditions (except walk in freezers or similar) between 65° F and 85° F and between 40% and 65% relative humidity, for at least 48-hours prior to and during the application of the flooring per the manufacturer's instructions.

7. Ensure areas with direct prolonged exposure to sunlight are protected with protective UVA/UVB restrictive coatings or films.
8. Areas of the flooring that are subject to direct sunlight through doors or windows should have them covered using blinds, curtains, cardboard or similar for the time of the installation and 72-hours after the installation to allow the adhesive to cure. Note: These areas should be installed using wet adhesives only.
9. Protect newly installed flooring with construction grade paper or protective boards, such as Masonite or Ram Board, to prevent flooring damage, especially by other trades. Limit usage and foot traffic according to the adhesive's requirements. When moving appliances or heavy furniture, protect flooring from scuffing and tearing using temporary floor protection.
10. Ensure furniture casters are made of a soft material and have a contact point of at least 1" in width to limit indentation and flooring damage. All rolling chairs or seating must have a resilient flooring chair pad installed over the finished floor to protect floor covering. All fixed furniture legs must have permanent felt or soft rubber floor protectors installed on all contact points to reduce indentation. Floor protectors must have a flat contact point of at least 1" in width and must cover the entire bottom surface of the furniture leg.
11. Conduct initial maintenance prior to final usage per the Care & Maintenance Documents. Do not conduct initial maintenance until adhesive has cured per the adhesive technical data.

B. Flooring Contractor's Responsibilities:
   1. Provide trained installers that are professional, licensed, insured and acceptable to manufacturer of resilient flooring materials.
   2. Ensure installers or installation teams meet one of the following requirements:
      a. Have completed INSTALL (International Standards & Training Alliance) or CFI (Certified Floorcovering Installers) training programs and/or are certified by INSTALL or CFI.
      b. Are being supervised by Project Managers or Field Supervisors that are INSTALL (International Standards & Training Alliance) certified, CFI (Certified Floorcovering Installers) Certified and/or an FCICA (The Flooring Contractors Association) CIM (Certified Installation Manager).
   3. Follow all requirements in the appropriate Excelsior Technical Data Sheets, Care & Maintenance Documents, Warranties and other technical documents or instructions.

3.2 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the work.

B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

A. Ensure substrate meets the requirements of ASTM F710, Technical Data Sheets and Excelsior Technical Data Sheets. Substrates must be free of visible water or moisture, dust, sealers, paint, sweeping compounds, curing compounds, residual adhesives and adhesive removers, concrete hardeners or densifiers, solvents, wax, oil, grease, asphalt, visible alkaline salts or excessive efflorescence, mold, mildew and any other extraneous coating, film, material or foreign matter

B. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient wall base.

C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.

D. Move resilient products and installation materials into spaces where they will be installed at least 48 hours in advance of installation.

E. Vacuum clean substrates to be covered by resilient products immediately before installation.

3.4 RESILIENT BASE INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient base.

B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.

C. Install resilient base in lengths as long as practicable without gaps at seams and with tops of adjacent pieces aligned.

D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.

E. Do not stretch resilient base during installation.

F. Preformed corners: Install preformed corners before installing straight pieces.

G. Job-formed corners:

1. Provide manufacturer's factory-made inside and outside corners matching wall base in material, color, height, and profile where available. Where matching factory-made corners are unavailable, form corners from wall base in accordance with manufacturer's written instructions and as follows:
    a. Outside corners: Form by bending without producing discoloration (whitening) at bends.
    b. Inside corners: Butt one piece to corner then scribe next piece to fit.

3.5 CLEANING AND PROTECTION

A. Comply with manufacturers written instructions for cleaning and protection of resilient products.

B. Perform the following operations immediately after completing resilient product installation:
    1. Remove adhesive and other blemishes from exposed surfaces.
    2. Damp-mop surfaces to remove marks and soil.

C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

END OF SECTION 09.65.13

SECTION 09.6519 - RESILIENT TILE FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Flooring and accessories as shown on the drawings and schedules and as indicated by the requirements of this section.
    a. Solid vinyl floor tile.
    b. Rubber floor tile.

B. Related Documents:
1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

C. Related Sections:
1. Other Division 9 sections for floor finishes related to this section but not the work of this section
2. Division 3 Concrete; not the work of this section
3. Division 6 Wood and Plastics; not the work of this section
4. Division 7 Thermal and Moisture Protection; not the work of this section.

1.3 REFERENCES

A. ASTM International:
1. ASTM E 648 Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source
2. ASTM E 662 Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials
3. ASTM F 710 Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring
4. ASTM F 1066 Standard Specification for Vinyl Composition Tile
5. ASTM F 1482, Standard Guide to Wood Underlayment Products Available for Use Under Resilient Flooring

6. ASTM F 1861 Standard Specification for Resilient Wall Base
7. ASTM F 1869 Standard Test Method for Measuring Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride
8. ASTM F 2170 Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes

B. National Fire Protection Association (NFPA):
1. NFPA 253 Standard Method of Test for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source
2. NFPA 258 Standard Test Method for Measuring the Smoke Generated by Solid Materials

C. Canadian Standards
1. CAN/ULC-S102.2 Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials and Assemblies.

1.4 SYSTEM DESCRIPTION

A. Performance Requirements: Provide flooring which has been manufactured, fabricated, and installed to performance criteria certified by manufacturer without defects, damage, or failure.

B. Administrative Requirements:
1. Pre-installation Meeting: Conduct an on-site pre-installation meeting to verify project requirements, substrate conditions, manufacturer's installation instructions and manufacturer's warranty requirements. Comply with Division 1 Project Management and Coordination (Project Meetings) Section.
2. Pre-installation Testing: Conduct pre-installation testing as follows:
   a. Moisture Tests
   b. Bond Test
   c. pH Test

C. Test Installations/Mock-ups: Install at the project site a job mock-up using acceptable products and manufacturer approved installation methods, including concrete substrate testing. Obtain Owner's and Consultant's acceptance of finish color, texture and pattern, and workmanship standards.
1. Mock-Up Size: 10'X10'
2. Incorporation: Mock-up may be incorporated into the final construction with Owner's approval.

D. Sequencing and Scheduling:
1. Install flooring and accessories after the other finishing operations, including painting, have been completed. Close spaces to traffic during the installation of the flooring.

2. Do not install flooring over concrete slabs until they are sufficiently dry to achieve a bond with the adhesive, in accordance with the manufacturer's recommended bond, moisture tests and pH test.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Submit shop drawings, seaming plan, coving details, and manufacturer's technical data, installation and maintenance instructions for flooring and accessories.

C. Submit full size samples of each color for flooring and applicable accessories.

D. Submit Safety Data Sheets (SDS) available for adhesives, moisture mitigation systems, primers, patching/leveling compounds, floor finishes (polishes) and cleaning agents and Material Information Sheets for flooring products.

E. If required, submit the manufacturer's certification that the flooring has been tested by an independent laboratory and complies with the required fire tests.

F. Closeout Submittals: Submit the following:
1. Operation and Maintenance Data: Operation and maintenance data for installed products in accordance with Division 1 Closeout Submittals (Maintenance Data and Operation Data) Section. Include methods for maintaining installed products, and precautions against cleaning materials and methods detrimental to finishes and performance.
2. Warranty: Warranty documents specified herein

1.6 QUALITY ASSURANCE

A. Single-Source Responsibility: provide types of flooring and accessories supplied by one manufacturer, including moisture mitigation systems, primers, leveling and patching compounds, and adhesives.

B. Installer Qualifications: An entity that employs installers and supervisors who are competent in techniques required by manufacturer for floor tile installation and seaming method indicated.

1. Engage an installer who employs workers for this Project who are trained or certified by floor tile manufacturer for installation techniques required.

2. Confirm installer's certification by requesting their credentials.

C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Coordinate mockups in this Section with mockups specified in other Sections.

a. Size: Minimum 100 sq. ft. (9.3 sq. m) for each type, color, and pattern in locations directed by Architect.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.+

1.7 DELIVERY, STORAGE, AND HANDLING

A. Comply with manufacturer's ordering instructions and lead time requirements to avoid construction delays..

B. Deliver materials in good condition to the jobsite in the manufacturer's original unopened containers that bear the name and brand of the manufacturer, project identification, and shipping and handling instructions.

C. Store floor tile and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F (10 deg C) or more than 90 deg F (32 deg C). Store floor tiles on flat surfaces. Store flooring, adhesives, and accessories in the spaces where they will be installed for at least 48 hours before beginning installation.

1.8 FIELD CONDITIONS

A. Maintain a minimum temperature in the spaces to receive the flooring and accessories of 65º F (18º C) and a maximum temperature of [100º F (38º C)] for at least 48 hours before, during, and for not less than 48 hours after installation. Thereafter, maintain a minimum temperature of 55º F (13º C) in areas where work is completed. Protect all materials from the direct flow of heat from hot-air registers, radiators, or other heating fixtures and appliances. Refer to product installation recommendations for a complete guide on project conditions Close spaces to traffic during floor tile installation.

B. Close spaces to traffic for 48 hours after floor tile installation.

C. Install floor tile after other finishing operations, including painting, have been completed.

1.9 LIMITED WARRANTY

A. Resilient Flooring: Submit a written warranty executed by the manufacturer, agreeing to repair or replace resilient flooring that fails within the warranty period.

B. Limited Warranty Period: 20 years

C. Limited Warranty shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and will be in addition to and run concurrent with other warranties made by the Contractor under the requirements of the Contract Documents.

D. For the Limited Warranty to be valid, this product is required to be installed using the appropriate Manufacturer's Installation System. Product installed not using the specific instructions from the Manufacturer's Installation System will void the warranty.

1.10 MAINTENANCE

A. Extra Materials: Deliver extra materials to Owner. Furnish extra materials from same production run as products installed. Packaged with protective covering for storage and identified with appropriate labels.
   1. Quantity: Furnish quantity of flooring units equal to 5 % of amount installed.
   2. Delivery, Storage and Protection: Comply with Owner's requirements for delivery, storage, and protection of extra material.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: For resilient floor tile, as determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.

   1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
   2. Smoke Density: ASTM E662; maximum specific optical density of 450 or less.

2.2 LUXURY VINYL FLOOR TILE – **LVT-01**

A. Manufacturer: Basis of Design: Mohawk, Hot & Heavy Collection as indicated on the Drawings.

B. Tile Standard: ASTM F1700.

   1. Class: Class II, Surface-Decorated Vinyl Tile.

2. Type: B, Embossed Surface.

C. Thickness: 0.100 inch (2.5 mm).

D. Size: 18 by 36 inches (457 by 914 mm).

E. Colors and Patterns: As indicated by manufacturer's designations on the Drawings.

2.3 RUBBER FLOOR TILE – **RSF-02 & RSF-03**

A. Manufacturer: Basis of Design: Mannington Commercial, Teles Rubber Tile as indicated on the Drawings.

B. Tile Standard: ASTM F1344, Class I-B, Homogeneous Rubber Tile, through mottled.

C. Hardness: Grade 1, minimum hardness of 85 when measured using Shore, Type A durometer according to ASTM D2240.

D. Wearing Surface: Smooth.

E. Thickness: 0.125 inch (3.2 mm).

F. Size: 35.0 by 35.0 inches (899 by 899 mm).

G. Colors and Patterns: As indicated on the Drawings.

2.4 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by floor tile manufacturer for applications indicated.

B. Adhesives: Water-resistant type recommended by floor tile and adhesive manufacturers to suit floor tile and substrate conditions indicated.

1. <Double click to insert sustainable design text for flooring adhesive.>
2. <Double click to insert sustainable design text for adhesives.>

C. Floor Polish: Provide protective, liquid floor-polish products recommended by floor tile manufacturer.

2.5 ACCESSORIES

A. For patching, smoothing, and leveling monolithic subfloors concrete, provide manufactures recommended leveling compound as required for smooth surface to receive flooring.

B. For creating a moisture barrier, provide S-462 Seal Strong™ two-part moisture mitigation system.

C. For sealing joints between the top of wall base or integral cove cap and irregular wall surfaces such as masonry, provide plastic filler applied according to the manufacturer's recommendations.

D. Provide transition/reducing strips tapered to meet abutting materials.
1. Cap for cove carpet
2. Cap for cove resilient sheet floor covering
3. Carpet edge for glue-down applications
4. Nosing for carpet
5. Nosing for resilient floor covering
6. Reducer strip for resilient floor covering
7. Joiner for tile and carpet.

E. Provide threshold of thickness and width as shown on the drawings.

F. Provide resilient edge strips of width shown on the drawings, of equal gauge to the flooring, homogeneous vinyl, or rubber composition, tapered or bullnose edge, with color to match or contrast with the flooring, or as selected by the Architect from standard colors available.

G. Provide metal edge strips of width shown on the drawings and of required thickness to protect exposed edges of the flooring. Provide units of maximum available length to minimize the number of joints. Use butt-type metal edge strips for concealed anchorage or overlap-type metal edge strips for exposed anchorage. Unless otherwise shown, provide strips made of extruded aluminum with a mill finish.

PART 3 - EXECUTION

3.1 MANUFACTURER'S INSTRUCTIONS

A. Compliance: Comply with manufacturer's product data, including technical bulletins, product catalog, installation instructions, and product carton instructions for installation and maintenance procedures as needed.

3.2 EXAMINATION

A. Site Verification of Conditions: Verify substrate conditions (which have been previously installed under other sections) are acceptable for product installation in accordance with manufacturer's instructions (i.e., moisture tests, bond test, pH test, etc.).

B. Visually inspect flooring materials, adhesives, and accessories prior to installation. Flooring material with visual defects shall not be installed and shall not be considered as a legitimate claim.

C. Examine subfloors prior to installation to determine that surfaces are smooth and free from cracks, holes, ridges, and other defects that might prevent adhesive bond or impair durability or appearance of the flooring material.

D. Inspect subfloors prior to installation to determine that surfaces are free from curing, sealing, parting and hardening compounds; residual adhesives; adhesive removers; and other foreign materials that might prevent adhesive bond. Visually inspect for evidence of moisture, alkaline salts, carbonation, dusting, mold, or mildew.

E. Report conditions contrary to contract requirements that would prevent a proper installation. Do not proceed with the installation until unsatisfactory conditions have been corrected.

F. Failure to call attention to defects or imperfections will be construed as acceptance and approval of the subfloor. Installation indicates acceptance of substrates regarding conditions existing at the time of installation.

3.3 PREPARATION

A. Prepare substrates according to floor tile manufacturer's written instructions to ensure adhesion of resilient products.

B. Concrete Substrates: Prepare according to ASTM F710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by floor tile manufacturer. Do not use solvents.
3. Alkalinity and Adhesion Testing: Perform tests recommended by floor tile manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing.
4. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m) and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.

C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

D. Do not install floor tiles until materials are the same temperature as space where they are to be installed.

1. At least 48 hours in advance of installation, move resilient floor tile and installation materials into spaces where they will be installed.

E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient floor tile.

F. Concrete pH Testing: Perform pH tests on concrete floors regardless of their age or grade level. All test results shall be documented and retained.

3.4 FLOOR TILE INSTALLATION

A. Comply with manufacturer's written instructions for installing floor tile. Failure to comply may result in voiding the manufacturer’s warranty listed in Paragraph 1.9.

B. Install flooring wall to wall before the installation of floor-set cabinets, casework, furniture, equipment, movable partitions, etc. Extend flooring into toe spaces, door recesses, closets, and similar openings as shown on the drawings.

C. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.

1. Lay tiles in pattern(s) indicated on the Drawings.

D. Match floor tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.

E. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.

F. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.

G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent marking device.

H. Install floor tiles on covers for telephone and electrical ducts, building expansion-joint covers, and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of tile installed on covers and adjoining tiles. Tightly adhere tile edges to substrates that abut covers and to cover perimeters.

I. Install flooring with adhesives, tools, and procedures in strict accordance with the manufacturer's written instructions. Observe the recommended adhesive trowel notching, open times, and working times.

3.5 INSTALLATION OF ACCESSORIES

A. Apply top set wall base to walls, columns, casework, and other permanent fixtures in areas where top-set base is required. Install base in lengths if practical, with inside corners fabricated from base materials that are mitered or coped. Tightly bond base to vertical substrate with continuous contact at horizontal and vertical surfaces.

B. Fill voids with plastic filler along the top edge of the resilient wall base or integral cove cap on masonry surfaces or other similar irregular substrates.

C. Place resilient edge strips tightly butted to flooring, and secure with adhesive recommended by the edge strip manufacturer. Install edge strips at edges of flooring that would otherwise be exposed.

3.6 CLEANING AND PROTECTION

A. Perform initial and on-going maintenance according to the latest edition of the Maintenance Instructions for Vinyl Composition Tile.

B. Comply with manufacturer's written instructions for cleaning and protecting floor tile.

C. Perform the following operations immediately after completing floor tile installation:

1. Remove adhesive and other blemishes from surfaces.
2. Sweep and vacuum surfaces thoroughly.
3. Damp-mop surfaces to remove marks and soil.

D. Protect floor tile from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

E. Floor Polish: Remove soil, adhesive, and blemishes from floor tile surfaces before applying liquid floor polish.

1. Apply two coat(s).

F. Cover floor tile until Substantial Completion.

END OF SECTION 09.6519

SECTION 09.6566 - RESILIENT ATHLETIC FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Interlocking, Athletic Rubber Floor Tile.

1.3 REFERENCES

A. ASTM International:
1. ASTM E 648 Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source
2. ASTM E 662 Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials
3. ASTM F 710 Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring
4. ASTM F 1066 Standard Specification for Vinyl Composition Tile
5. ASTM F 1482, Standard Guide to Wood Underlayment Products Available for Use Under Resilient Flooring
6. ASTM F 1861 Standard Specification for Resilient Wall Base
7. ASTM F 1869 Standard Test Method for Measuring Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride
8. ASTM F 2170 Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.

B. National Fire Protection Association (NFPA):
1. NFPA 253 Standard Method of Test for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source
2. NFPA 258 Standard Test Method for Measuring the Smoke Generated by Solid Materials

C. Canadian Standards:
1. CAN/ULC-S102.2 Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials and Assemblies.

1.4 SYSTEM DESCRIPTION

A. Performance Requirements: Provide Vulcanized Composition Rubber resilient flooring, which has been manufactured and installed to maintain performance criteria stated by manufacturer without defects, damage, or failure.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product, , including manufacturer's guide specifications product roll or tile, for specified products.

B. Shop Drawings: Submit shop drawings showing layout, profiles and product components, including anchorage, accessories, finish colors, patterns, and textures.

C. Samples: For each exposed product and for each type, color, and pattern specified, 6-inch-(150-mm-) square in size and of the same thickness indicated for the Work.

D. Samples for Initial Selection: For each type of resilient athletic flooring.

E. Samples for Verification: For each type, color, and pattern of flooring specified, 6-inch- (150-mm) square in size and of same thickness and material indicated for the Work.

1.6 INFORMATIONAL SUBMITTALS

A. Installer Qualification Data:
   1. Installer experienced in performing work of this section who has specialized in installation of work similar to that required for this project.

B. Manufacturer Qualification Data:
   1. Manufacturer capable of providing field service representation during construction and approving application method.

1.7 QUALITY ASSURANCE

A. Quality Assurance Submittals: Submit the following:
   1. Certificates: If required, certification of performance characteristics specified in this document shall be provided by the manufacturer.
   2. Manufacturer's Instructions: Manufacturer's installation instructions.

1.8 CLOSEOUT SUBMITTALS

A. Maintenance Data: For resilient athletic flooring to include in maintenance manuals.

1. Operation and Maintenance Data: Operation and maintenance data for installed products in accordance with Division 1 Closeout Submittals (Maintenance Data and Operational Data) Section. Include methods for maintaining installed products and precautions against cleaning materials and methods detrimental to finishes and performance.
2. Warranty: Warranty documents specified herein.

1.9 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Floor Tile: Furnish extra floor tiles equal to 5 percent of the quantity installed for each type, color, pattern, and size. Provide each quantity in unopened, full boxes, rounded up to the next full box.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storing.

B. Store materials to prevent deterioration.

1. Store materials at temperature and humidity conditions recommended by manufacturer and protect from exposure to harmful weather conditions.
2. Store tiles on flat surfaces.

1.11 FIELD CONDITIONS

A. Field Measurements: Verify actual measurements/openings by field measurements before fabrication; show recorded measurements on shop drawings. Coordinate field measurements and fabrication schedule with construction progress to avoid construction delays

B. Adhesively Applied Products:
1. Maintain a stable room and subfloor temperature for a period of 48 hrs. prior, during and 48 hrs. after installation. Recommended range: 60°F to 86° F (16° C to 30° C).
2. After post installation period, maintain temperatures within range recommended in writing by manufacturer, but not less than 55° F (13° C) or more than 95° F (35° C).
3. Close spaces to traffic during flooring installation.
4. Close spaces to traffic for 48 hours after flooring installation unless manufacturer recommends longer period in writing.

C. Install flooring after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Products: Subject to compliance with requirements, products that may be incorporated in the Work include, but are not limited to, the following:

1. ECOsurfaces, 715 Fountain Ave., Lancaster, PA 17601; 833-888-1760. BOD.
2. Dinoflex Sport Mat, 8 mm, selected red-fleck color;
3. REGUPOL Aktiv, 5/16-inch thickness, selected red-fleck color.

2.2 INTERLOCKING, RUBBER FLOOR TILE - **RSF-01**

A. Description: ECOsurfaces athletic flooring consisting of modular Vulcanized Composition Rubber Resilient Flooring and adhesives for commercial applications.
B. Material: ECOnights Vulcanized Composition Rubber resilient Interlocking Tile flooring.
C. Size: 23 inches (0.58m) square.
D. Thickness: 5/16 inch (8.0 mm).
E. Color and Pattern: As indicated on the Drawings.
F. Physical Properties:

Performance Criteria	Test Method	Typical Results
Tensile Strength	ASTM D412	200 psi
Flexibility	ASTM F137	Pass
Thermal Conductivity	ASTM C518	0.10 F-ft2-h/Btu
Recovery After Static Load (@400 psi)	ASTM F970 Modified	0.005”
Coefficient of Friction	ASTM D2047	> 0.8
FloorScore	CA 01350	Pass
Resistance to Light	ASTM F1515	Pass
Chemical Resistance	ASTM F925	Good, No Change
Abrasion Resistance	ASTM D3389	Pass
Flammability – Pill Test	ASTM D2859	Pass
Noise Reduction Coefficient (NRC)	ASTM C423	8mm: 0.10 6mm: 0.07
Impact Insulation Class (IIC)*	ASTM E492	8mm: 51 6mm: 49
Delta IIC*	ASTM E2179	8mm: 22 6mm: 20
Force Reduction	Deltec Field Tester	8mm: 10.4% 6mm: Not tested
Energy Restitution	Deltec Field Tester	8mm: 71.9% 6mm: Not tested
VOC Washington State IAQ Test	ASTM D5116	Pass
Sound Transmission Coefficient (STC)*	ASTM E90	8mm: 50 6mm: 50
Roll Dimensions	Manufacturer	3/8” [8 mm] x 4’ by 25’ [1.2 m x 7.62 m]; Custom: 1/4” [6 mm] in 4’ by 25’ [1.2m x 7.62 m]

Roll Tolerance Width	Manufacturer	+3/4" – 0" / +19mm – 0mm
Roll Tolerance Length	Manufacturer	+ 1% - 0"
Roll & Tile Tolerance Thickness	Manufacturer	+/- 0.3 mm
Interlocking Tile Dimensions	Manufacturer	23" x 23" x 8mm (6mm custom)
Interlocking Tile Tolerance	Manufacturer	± 0.5% Length and Width

G. Source Quality: Obtain Vulcanized Composition Rubber resilient flooring materials from a single manufacturer.

2.3 ACCESSORIES

A. Trowelable Leveling and Patching Compound: Latex-modified, hydraulic-cement-based formulation approved by flooring manufacturer.

B. Adhesives: Water-resistant type recommended in writing by manufacturer for substrate and conditions indicated.

PART 3 - EXECUTION

3.1 MANUFACTURER'S INSTRUCTIONS

A. Compliance: Comply with manufacturer's product data, including technical bulletins, product catalog, installation instructions, and product carton instructions for installation and maintenance procedures as needed.

3.2 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for installation tolerances, moisture content, and other conditions affecting performance of the Work.

1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.

B. Visually inspect flooring materials, adhesives, and accessories prior to installation. Flooring material with visual defects shall not be installed and shall not be considered as a legitimate claim.

C. Examine subfloors prior to installation to determine that surfaces are smooth and free from cracks, holes, ridges, and other defects that might prevent adhesive bond or impair durability or appearance of the flooring material.

D. Inspect subfloors prior to installation to determine that surfaces are free from curing, sealing, parting and hardening compounds; residual adhesives; adhesive removers; and other foreign materials that might prevent adhesive bond. Visually inspect for evidence of moisture, alkaline salts, carbonation, dusting, mold, or mildew.

E. Report conditions contrary to contract requirements that would prevent a proper installation. Do not proceed with the installation until unsatisfactory conditions have been corrected.

F. Failure to call attention to defects or imperfections will be construed as acceptance and approval of the subfloor. Installation indicates acceptance of substrates regarding conditions existing at the time of installation.

G. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of flooring.

B. Concrete Substrates: Prepare according to ASTM F710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.

2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by floor tile manufacturer. Do not use solvents
3. Alkalinity and Adhesion Testing: Perform tests recommended by floor tile manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing.
4. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m) and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

    a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb. of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
    b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum [75] percent relative humidity level measurement.

C. Use trowelable leveling and patching compound to fill cracks, holes, and depressions in substrates.

D. Move flooring and installation materials into spaces where they will be installed at least 48 hours in advance of installation unless manufacturer recommends a longer period in writing.

1. Do not install flooring until it is the same temperature as space where it is to be installed.

E. Sweep and vacuum clean substrates to be covered by flooring immediately before installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, and dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.4 FLOORING INSTALLATION, GENERAL

A. Comply with manufacturer's written installation instructions.

B. Scribe, cut, and fit flooring to butt neatly and tightly to vertical surfaces, equipment anchors, floor outlets, and other interruptions of floor surface.

C. Extend flooring into toe spaces, door reveals, closets, and similar openings unless otherwise indicated.

D. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating subfloor markings on flooring. Use nonpermanent, nonstaining marking device.

3.5 FLOOR TILE INSTALLATION

A. Lay out tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.

1. Lay tiles in pattern indicated.

B. Discard broken, cracked, chipped, or deformed tiles.

C. Tile Matching: Match tiles for color and pattern by selecting tiles from cartons in same sequence as manufactured and packaged if so numbered.

D. Adhered Floor Tile: Adhere products to substrates using a full spread of adhesive applied to substrate to comply with adhesive and flooring manufacturers' written instructions, including those for trowel notching, adhesive mixing, and adhesive open and working times.

1. Provide completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.6 CLEANING AND PROTECTION

A. Perform the following operations immediately after completing flooring installation:

1. Remove adhesive and other blemishes from flooring surfaces.
2. Sweep and vacuum flooring thoroughly.
3. Damp-mop flooring to remove marks and soil after time period recommended in writing by manufacturer.

B. Protect flooring from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period. Use protection methods recommended in writing by manufacturer.

1. Do not move heavy and sharp objects directly over flooring. Protect flooring with plywood or hardboard panels to prevent damage from storing or moving objects over flooring.

END OF SECTION 09.6566

SECTION 09.6710 – POURED THIN-FILM EPOXY FLOOR – EP-01

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes surface preparation and the application of paint systems.
   1. Fluid applied seamless flooring with all necessary accessories for complete installation.
   2. Preparation of flooring substrate.
   3. Accessories necessary for complete installation.
   4. Protection of adjacent materials and substrates.

B. Related Sections
   1. Cast-in-Place Concrete: Section 03.3000.
      a. Concrete sub-floor to be level (maximum variation not to exceed ¼ inch in 10 feet) and to have a steel troweled finish. No curing agents or other additives which could prevent bonding should be used unless the mechanical surface preparation method completely removes the curing agent residue or sealer.
      b. Slabs on grade must have an efficient puncture resistant vapor barrier placed directly under the slab.
   2. Joint Sealants: Section 07.9200.
   3. Gypsum Board: Section 09.2900.
   4. Adjacent floor finishes: Division 9.

1.2 REFERENCE STANDARDS

A. American Society for Testing and Materials (ASTM) Publications:

B. C-307Test Method for Tensile Strength of Chemical-Resistant Mortars.

C. C-501Test Method for Relative Resistance to Wear Unglazed Ceramic Tile by the Taber Abraser.

D. C-531Test Method for Linear Shrinkage and Coefficient of Thermal Expansion of Chemical-Resistant Mortars, Grouts, and Monolithic Surfacing.

E. C-579Test Methods for Compressive Strength of Chemical-Resistant Mortars and Monolithic Surfaces.

F. C-580Test Method for Flexural Strength and Modulus of Elasticity of Chemical-Resistant Mortars, Grouts, and Monolithic Surfacing.

G. C-884Test Method for Thermal Compatibility Between Concrete and an Epoxy Resin Overlay.

H. D-570 Water Absorption of Plastics.

I. D-695 Compression Properties of Rigid Plastic.

1.3 DEFINITIONS

A. Epoxy Resin Flooring specified under this section is referenced on the drawings.

1.4 SYSTEM DESCRIPTION

A. System shall be a Thin-Film coating system shall consist of an epoxy primer and urethane topcoat. The finished floor system shall be 6-15 mils in thickness, dense, and nonporous with a gloss finish, Key #'s 450 & 467-HS.

1.5 SUBMITTALS

A. Samples: Submit 6 by 6 inch cured samples of flooring system indicating color combination and non-skid properties. Approved samples will be used during installation for product match.

B. Certified Test: Submit two copies of suppliers/ manufacturers written certification that flooring system meets or exceeds required properties.

C. Manufacturers Application Instructions: Submit descriptive data and specific recommendations for mixing, application, curing including any precautions of special handling instructions required to comply with the Occupational Safety and Health Act.

D. Shop Drawings: Shop Drawings shall be furnished showing installation of termination details, and details at floor material transitions and where adjoining equipment.

1. Locate and provide detailing for flexible joints required for flooring in area of installation.

E. Maintenance Instructions: Submit current copies of the flooring manufacturer's printed recommendations on maintenance methods and products. Submit in accordance with Section 01.7300 - Operation and Maintenance Manuals

1.6 QUALITY ASSURANCE

A. Obtain primary Epoxy/Urethane Coating System materials including primers, resins, hardening agents, specially blended aggregates, and finish coats from a single manufacturer

providing materials of the type specified in this section. Provide all secondary materials from a source recommended by the manufacturer of primary materials.

B. Installation shall be performed by an applicator with not less than ten years of satisfactory experience in the application of the type of system as specified in this section and shall be approved by the manufacturer of the Epoxy/Urethane Coating System.

C. Installer to verify locations of all joints requiring a soft sealant and/or epoxy joint material. Follow recommendations of material manufacture for treatment of all joints, expansion joints, and cracks.

D. Installer to keep daily log of the date of installation, room number, type, color, and method of application of product being installed. Log must be available for inspection by the Architect upon request.

E. Portable mock-up: Prior to starting application of coating system, provide full scale portable mock-up to establish acceptable quality, durability, and appearance. Mock-up size must not be less than 4 square feet.
   1. Acceptable mock-up to be standard of quality for installed work.
   2. Unacceptable installed work to be removed and replaced until acceptable. Aesthetically unacceptable but well bonded work may be recoated per Manufacturer's instructions if thickness clearances permit.

F. Qualifications:
   1. Installer: Must be acceptable to Architect, and Manufacturer.

1.7 PROJECT CONDITIONS

A. Maintain the ambient room and the floor temperatures at 60 degrees Fahrenheit, or above, for a period extending from 72 hours before, during and after floor installation. Concrete to receive surfacing shall have cured for at least 28 days and shall have been free of water for at least 7 days.

B. Dew Point: Substrate temperature must be minimum of 5 degrees above dew point prior to, during or up to 24 hours after application of flooring system.

C. Illumination: Apply flooring system only where a minimum of 30 footcandles exist when measured 3 feet from surface.

D. Advise other trades of fixtures and fittings not to be installed until flooring is cured and protected.

1.8 PROTECTION

A. Protect adjacent surfaces not scheduled to receive the flooring by masking, or by other means, to maintain these surfaces free of the flooring material.

B. B. Provide adequate ventilation and fire protection at all mixing and placing operations. Prohibit smoking or use of spark or flame producing devices within 50 feet of any mixing or placing operation.

C. C. Provide polyethylene or rubber gloves or protective creams for all workmen engaged in applying products containing epoxy.

1.9 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Primary system materials shall be delivered in the manufacturer's undamaged, unopened containers. Each container shall be clearly marked with the following:
   1. Product name
   2. Manufacturer's name
   3. Component designation (A or B, etc.)
   4. Mixing ratio of component mixture

B. Provide equipment and personnel to handle the materials by methods which prevent damage.

C. The applicator shall promptly inspect all direct job site deliveries to assure that quantities are correct and that materials comply with requirements and are not damaged.

D. Store materials in accordance with manufacturer's instructions, with seals and labels intact and legible. Maintain temperatures within the required range. Do not use materials that have been stored for a longer period of time than the manufacturer's maximum recommended shelf life.

1.10 WARRANTY

A. Contractor to guarantee work under this Section to be free from defects of material and installation for the duration of the warranty period. Defects occurring during warranty period shall be repaired, in a manner satisfactory to the Owner and the Architect, at no additional cost to the Owner.
   1. Warranty Period: One (1) Year.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Specifications and quality of design standard (basis of design) based on Key Resin Company: Key Thin-Film Coating System.
1. Key Resin Company: 888-943-4532, www.keyresin.com
2. System Designation: EP-01

B. System description: 2-Part Thin-Film coating system consisting of an epoxy primer and urethane topcoat with broadcast silica aggregate for non-skid texture.

C. Alternative manufacturers must have as a minimum the standards set forth in this specification and must be preapproved in accordance with project requirements.

2.2 MATERIALS

A. Color to be selected by architect from manufacturer's full range.

B. Prime Coat: Pigmented, Two component penetrating damp-proof epoxy.

C. Topcoat: Two component aliphatic urethane topcoat with Non-Skid Additive (NSA): Key #450 Urethane or #467-HS urethane.

PART 3 - EXECUTION

3.1 PREPARATION

A. Obtain Architect's approval of mock-up before installing flooring; see QUALITY ASSURANCE in PART 1.

B. Preparation of Surface:
1. Inspect surfaces to receive flooring and verify that condition is smooth and free from conditions that will adversely affect execution, permanence, or quality of work.
   a. Remove all projections, all debris detrimental to flooring system, and dirt, oil contaminates, grease, and surface coatings affecting bond.
2. Notify Architect or Owner in writing prior to commencing work of any conditions deemed unsatisfactory for the installation; installation of flooring materials is understood as acceptance of the substrate as satisfactory.
3. Concrete: The General Contractor shall be responsible for hiring an independent testing service to test for moisture content and moisture vapor emission rate; install no flooring over concrete until the concrete has been cured and is sufficiently dry to achieve

acceptable bond with flooring as determined by material manufacturer's recommended bond and moisture tests.

a. Effectively remove concrete laitance by steel shot blasting or other method approved by flooring manufacturer.
b. Concrete slab shall have an efficient puncture-resistant moisture vapor barrier 10 mils thick minimum placed directly under the concrete slab (for slab on grade). Testing must be done to verify that the moisture vapor emission rate of the slab does not exceed that as recommended by the manufacturer at time of installation of the flooring or at any future date. Moisture vapor emission and moisture content testing must conform with the requirements of ASTM F-1869-98 (Calcium Chloride Test) and ASTM F-2170-02 (Relative Humidity Probe Test). If test results show excessive levels of moisture content or vapor emission rate, installation shall not proceed until source of excessive moisture is identified and removed or corrected. If excessive moisture cannot be removed or prevented, apply manufacturer's recommended moisture vapor emission control material.
c. Treat cracks in concrete using manufacturer's recommended practices. Rout out crack and fill with rigid epoxy; Reinforce crack with fiberglass cloth.

3.2 INSTALLATION

A. Apply each component of the Epoxy/Urethane Coating System in compliance with manufacturer's installation instructions including mixing and application methods, recoat windows, cure times and environmental restrictions.

B. Route out all cracks (larger than hairline width) and fill with Key Crack Filler or other material approved by Manufacturer of floor materials. Reinforce crack with fiberglass cloth using Key #502 Primer or the epoxy used to fill the crack.

C. Apply pigmented epoxy primer per recommended coverage rates.

D. Urethane Top Coat: Apply one or two pigmented urethane top coats as needed to ensure full coverage and approved texture. Add non-skid grit (fine mesh) to urethane coating application to provide textured finish.
   1. Cure finish coat(s) to manufacturer's recommendations.

E. Obtain architect/engineer's approval of the system just after completion of the final coat, prior to completion of curing.

3.3 CURING AND PROTECTION

A. Cure High-Build Epoxy/Urethane Coating System materials in compliance with manufacturer's directions, taking care to prevent contamination during stages of the application and prior to completion of the curing process.

B. Apply temporary protection until floor is fully cured. The General Contractor shall protect the finished floor from the time that the sub-contractor completes the work.

END OF SECTION 09.6710

SECTION 09.6720 – POURED EPOXY FLOOR – EP-02

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes surface preparation and the application of paint systems.
   1. Fluid applied seamless flooring with integral cove base.
   2. Joint, edge, and termination strips.
   3. Prior to installation of structural floor slab, advise General Contractor, in writing, of all requirements of concrete substrate regarding finish, level tolerance, and curing; see INSPECTION in Part 3.
   4. Locate all flexible joints required. See submittals below.
   5. Accessories necessary for complete installation.

B. Related Sections
   1. Cast-in-Place Concrete: Section 03.3000.
      a. Concrete sub-floor to be level (maximum variation not to exceed ¼ inch in 10 feet) and to have a steel troweled finish. No curing agents or other additives which could prevent bonding should be used unless the mechanical surface preparation method completely removes the curing agent residue or sealer.
      b. Slabs on grade must have an efficient puncture resistant vapor barrier placed directly under the slab.
   2. Joint Sealants: Section 07.9200.
   3. Gypsum Board: Section 09.2900.
   4. Adjacent floor finishes: Division 9.

1.2 REFERENCE STANDARDS

A. American Society for Testing and Materials (ASTM) Publications:

B. C-307Test Method for Tensile Strength of Chemical-Resistant Mortars.

C. C-501Test Method for Relative Resistance to Wear Unglazed Ceramic Tile by the Taber Abraser.

D. C-531Test Method for Linear Shrinkage and Coefficient of Thermal Expansion of Chemical-Resistant Mortars, Grouts, and Monolithic Surfacing.

E. C-579Test Methods for Compressive Strength of Chemical-Resistant Mortars and Monolithic Surfaces.

F. C-580Test Method for Flexural Strength and Modulus of Elasticity of Chemical-Resistant Mortars, Grouts, and Monolithic Surfacing.

G. C-884Test Method for Thermal Compatibility Between Concrete and an Epoxy Resin Overlay.

H. D-570 Water Absorption of Plastics.

I. D-695 Compression Properties of Rigid Plastic.

1.3 DEFINITIONS

A. Epoxy Resin Flooring specified under this section is referenced on the drawings.

1.4 SYSTEM DESCRIPTION

A. System shall be 1/8 inch textured epoxy surfacing with broadcast aggregate to form a skid resistant surface. Surface finish shall be a two component, chemical resistant epoxy, Key Mortar SLT.

1.5 SUBMITTALS

A. Samples: Submit 6 by 6 inch cured samples of flooring system indicating color combination and non-skid properties. Approved samples will be used during installation for product match.

B. Certified Test: Submit two copies of suppliers/ manufacturers written certification that flooring system meets or exceeds required properties.

C. Manufacturers Application Instructions: Submit descriptive data and specific recommendations for mixing, application, curing including any precautions of special handling instructions required to comply with the Occupational Safety and Health Act.

D. Shop Drawings: Shop Drawings shall be furnished showing installation of cove base and termination details, and details at floor material transitions and where adjoining equipment.

1. Locate and provide detailing for flexible joints required for flooring in area of installation.

E. Maintenance Instructions: Submit current copies of the flooring manufacturer's printed recommendations on maintenance methods and products. Submit in accordance with Section 01.7300 - Operation and Maintenance Manuals

1.6 QUALITY ASSURANCE

A. Materials used in the floor surfacing shall be the products of a single manufacturer. Obtain primary resinous flooring materials, including primers, resins, hardening agents, and finish or sealing coats, from a single manufacturer. Provide secondary materials including underlayment, joint sealant, and repair materials only of type and from source recommended by manufacturer of primary materials.

B. Installation shall be performed by an applicator with minimum 10 years' experience in work of similar nature and scope. Installer must be approved by the manufacturer of the floor surfacing materials. The contractor shall furnish a written statement from the manufacturer that the installer is acceptable.

C. Installer to verify locations of all flexible joints required by the provisions of this Section and by the recommendations of the related material manufacturers.

1. Joint locations may or may not be shown in drawings.

2. Refer to drawings required under SUBMITTALS above.

D. Installer to keep daily log of the date of installation, room number, type, color, and method of application of product being installed. Log must be available for inspection by the Architect upon request.

E. Contractor to have proven experience with specified system.

F. Portable mock-up: Prior to starting application of flooring, provide full scale portable mock-up to establish acceptable quality, durability, and appearance. Mock-up size must not be less than 4 square feet.

1. Acceptable mock-up to be standard of quality for installed work.

2. Unacceptable installed work to be removed and replaced until acceptable. Aesthetically unacceptable but well bonded work may be overlaid or recoated per Manufacturer's instructions if thickness clearances permit.

G. Qualifications:

1. Installer: Must be acceptable to Architect, and Manufacturer.

1.7 PROJECT CONDITIONS

A. Maintain the ambient room and the floor temperatures at 60 degrees Fahrenheit, or above, for a period extending from 72 hours before, during and after floor installation. Concrete to receive surfacing shall have cured for at least 28 days and shall have been free of water for at least 7 days.

B. Dew Point: Substrate temperature must be minimum of 5 degrees above dew point prior to, during or up to 24 hours after application of flooring system.

C. Illumination: Apply flooring system only where a minimum of 30 footcandles exist when measured 3 feet from surface.

D. Advise other trades of fixtures and fittings not to be installed until flooring is cured and protected.

1.8 PROTECTION

A. Protect adjacent surfaces not scheduled to receive the flooring by masking, or by other means, to maintain these surfaces free of the flooring material.

B. B. Provide adequate ventilation and fire protection at all mixing and placing operations. Prohibit smoking or use of spark or flame producing devices within 50 feet of any mixing or placing operation.

C. C. Provide polyethylene or rubber gloves or protective creams for all workmen engaged in applying products containing epoxy.

1.9 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. All materials shall be delivered to project site in original manufacturer's sealed containers including type of material, batch numbers, date of manufacture, and pertinent labels intact and legible.

B. Store materials in dry protected area at a temperature between 60° F to 80° F.

C. Follow all manufacturer's specific instructions and prudent safety practices for storage and handling.

1.10 WARRANTY

A. Contractor to guarantee work under this Section to be free from defects of material and installation for the duration of the warranty period. Defects occurring during warranty period shall be repaired, in a manner satisfactory to the Owner and the Architect, at no additional cost to the Owner.

1. Warranty Period: One (1) Year.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Specifications and quality of design standard (basis of design) based on Key Resin Company: Key Mortar SLT

1. Key Resin Company: 888-943-4532, www.keyresin.com

2. System Designation: EP-02

B. System description: Heavy duty, three-component epoxy resin surfacing broadcast with silica aggregate for non-skid texture.

C. Alternative manufacturers must have as a minimum the standards set forth in this specification and must be preapproved in accordance with project requirements.

2.2 MATERIALS

A. Color to be selected by architect from manufacturer's full range.

B. Prime Coat: Two component penetrating damp-proof epoxy.

C. Epoxy Matrix
1. Two component, 100% solids epoxy matrix (Key #511) with blended self-leveling aggregate composition.

D. Broadcast Aggregates:
1. 50-70 mesh broadcast silica sand or broadcast quartz.

E. Grout Coat:
1. Two component epoxy grout coat: Key #520 or Key #511 pigmented.

F. Topcoat:
1. Two component aliphatic urethane topcoat: Key #450 Urethane or #467-HS urethane.

G. Cove Base: Two component epoxy cove paste, Key #510-CV with blended aggregates.

2.3 FINISHES

A. Color as selected by Architect or Owner from the manufacturer's standard colors.

B. Provide slip-resistant, cleanable, and textured finish. Finished work to match the approved mock-up.

PART 3 - EXECUTION

3.1 PREPARATION

A. Obtain Architect's approval of mock-up before installing flooring; see QUALITY ASSURANCE in PART 1.

B. Preparation of Surface:

1. Inspect surfaces to receive flooring and verify that condition is smooth and free from conditions that will adversely affect execution, permanence, or quality of work.

    a. Remove all projections, all debris detrimental to flooring system, and dirt, oil contaminates, grease, and surface coatings affecting bond.

2. Notify Architect or Owner in writing prior to commencing work of any conditions deemed unsatisfactory for the installation; installation of flooring materials is understood as acceptance of the substrate as satisfactory.

3. Concrete: The General Contractor shall be responsible for hiring an independent testing service to test for moisture content and moisture vapor emission rate; install no flooring over concrete until the concrete has been cured and is sufficiently dry to achieve acceptable bond with flooring as determined by material manufacturer's recommended bond and moisture tests.

    a. Effectively remove concrete laitance by steel shot blasting or other method approved by flooring manufacturer.

    b. Concrete slab shall have an efficient puncture-resistant moisture vapor barrier 10 mils thick minimum placed directly under the concrete slab (for slab on grade). Testing must be done to verify that the moisture vapor emission rate of the slab does not exceed that as recommended by the manufacturer at time of installation of the flooring or at any future date. Moisture vapor emission and moisture content testing must conform with the requirements of ASTM F-1869-98 (Calcium Chloride Test) and ASTM F-2170-02 (Relative Humidity Probe Test). If test results show excessive levels of moisture content or vapor emission rate, installation shall not proceed until source of excessive moisture is identified and removed or corrected. If excessive moisture cannot be removed or prevented, apply manufacturer’s recommended moisture vapor emission control material.

    c. Treat cracks in concrete using manufacturer's recommended practices. Rout out crack and fill with rigid epoxy; Reinforce crack with fiberglass cloth. Refer to section 3.02.B.

3.2 INSTALLATION

A. Install all floor materials in strict conformance with manufacturer's instructions.

B. Route out all cracks (larger than hairline width) and fill with Key Crack Filler or other material approved by Manufacturer of floor materials. Reinforce crack with fiberglass cloth using Key #502 Primer or the epoxy used to fill the crack.

C. Prime entire surface with recommended primer.

D. Integral Cove Base: Where scheduled, provide integral cove base formed from flooring over tile backerboard as specified under 09250 - Gypsum Drywall. Provide cove cap strip at top of base as recommended by flooring manufacturer and trowel material up wall to form smooth, integral transition and base 4-6 inches high unless otherwise indicated or scheduled.

E. Apply epoxy matrix and broadcast aggregate at rates recommended by the manufacturer to achieve the specified thickness.

F. Apply epoxy grout and Urethane seal coats to provide a uniform, dense surface.

G. Match finished work to approved samples, uniform in thickness, sheen, color, pattern and texture, and free from defects detrimental to appearance.

3.2 CURING AND PROTECTION

A. Cure resinous system materials in compliance with manufacturer's directions, taking care to prevent contamination during stages of the application and prior to completion of the curing process.

B. The Contractor shall protect the finished floor from the time flooring installation is completed until Substantial Completion of the project.

.

END OF SECTION 09.6720

SECTION 09.6723 - RESINOUS FLOORING

HYBRI-FLEX AB

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This section includes the following:

1. Resinous flooring system as shown on the drawings and in schedules.

B. Related sections include the following:

1. Cast-in-Place Concrete, section 03 30 00
2. Concrete Curing, section 03 39 00

1.3 SYSTEM DESCRIPTION

A. The work shall consist of preparation of the substrate, the furnishing and application of a cementitious urethane based self-leveling seamless flooring system with flintshot natural quartz aggregate broadcast, pigmented epoxy resin broadcast and pigmented aliphatic resinous grout coat and topcoat.
B. The system shall have the color and texture as specified by the Owner with a nominal thickness of 1/4 inch. It shall be applied to the prepared area(s) as defined in the plans strictly in accordance with the Manufacturer's recommendations.
C. Cove base (if required) to be applied where noted on plans and per manufacturers standard details unless otherwise noted

1.4 SUBMITTALS

A. Product Data: Latest edition of Manufacturer's literature including performance data and installation procedures.
B. Manufacturer’s Safety Data Sheet (SDS) for each product being used.
C. Samples: A 3 x 3 inch square sample of the proposed system. Color, texture, and thickness shall be representative of overall appearance of finished system subject to normal tolerances.
A. Provide 4’x4’ mock-up to be approved in writing by owner.

1.5 QUALITY ASSURANCE

A. The Manufacturer shall have a minimum of 10 years experience in the production, sales, and technical
support of epoxy and urethane industrial flooring and related materials.
B. The Applicator shall have experience in installation of the flooring system as confirmed by the manufacturer in
all phases of surface preparation and application of the product specified.

C. No requests for substitutions shall be considered that would change the generic type of the specified System.
D. System shall be in compliance with requirements of United States Department of Agriculture (USDA),
Food, Drug Administration (FDA), and local Health Department.
E. System shall be in compliance with the Indoor Air Quality requirements of California section 01350 as verified by a qualified independent testing laboratory.
F. A pre-installation conference shall be held between Applicator, General Contractor and the Owner to review this specification, application procedure, quality control, inspection and acceptance criteria and production schedule.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Packing and Shipping
1. All components of the system shall be delivered to the site in the Manufacturer's packaging, clearly identified with the product type and batch number.

B. Storage and Protection

1. The Applicator shall be provided with a dry storage area for all components. The area shall be between 50 F and 85 F, dry, out of direct sunlight and in accordance with the Manufacturer's recommendations and relevant health and safety regulations.
2. Copies of Safety Data Sheets (SDS) for all components shall be kept on site for review by the Engineer or other personnel.

C. Waste Disposal

1. The Applicator shall be provided with adequate disposal facilities for non-hazardous waste generated during installation of the system.

1.7 PROJECT CONDITIONS

A. Site Requirements

1. Application may proceed while air, material and substrate temperatures are between 50 F and 85 F providing the substrate temperature is above the dew point. Outside of this range, the Manufacturer shall be consulted.
2. The Applicator shall be supplied with adequate lighting equal to the final lighting level during the preparation and installation of the system.

B. Conditions of new concrete to be coated with cementitious urethane material.

1. Concrete shall be moisture cured for a minimum of 7 days and have fully cured for 14 days in accordance
with ACI-308 prior to the application of the coating system pending moisture tests. Outside of these
parameters manufacturer shall be consulted.
2. Concrete shall have a flat rubbed finish, float or light steel trowel finish (a hard steel trowel finish is neither necessary nor desirable).
3. Sealers and curing agents should not be used.
4. Concrete surfaces on grade shall have been constructed with a vapor barrier to protect against the effects of vapor transmission and possible delamination of the system.

C. Safety Requirements

1. The Owner shall be responsible for the removal of foodstuffs from the work area.
2. Non-related personnel in the work area shall be kept to a minimum.

1.8 WARRANTY

A. Sherwin-Williams warrants that material shipped to buyers at the time of shipment substantially free from material defects and will perform substantially to Sherwin-Williams HPF published literature if used in accordance with the latest prescribed procedures and prior to the expiration date.
B. Sherwin-Williams liability with respect to this warranty is strictly limited to the value of the material purchase. One-year standard material warranty.

PART 2 – PRODUCTS

2.1 FLOORING

A. System Designation: **RN-01 & RN-02**
B. Sherwin-Williams High Performance Flooring, Hybri-Flex AB (self leveling solid color broadcast quartz), epoxy resin broadcast and aliphatic resinous topcoat seamless flooring system.

1. System Materials:

a. Topping: Sherwin-Williams Poly-Crete SL resin, SL hardener and SL aggregate.
b. The broadcast aggregate shall be Sherwin-Williams Flintshot quartz aggregate.
c. Broadcast coat: Sherwin-Williams Resuflor Glaze epoxy-based, two-component resin and hardener.
d. Topcoat: Sherwin-Williams pigmented Accelera resin and hardener.
e. *Optional primer. See Application Guide.*

2. Patch Materials
a. Shallow Fill and Patching: Use Sherwin-Williams. Poly-Crete MD (up to ¼ inch).

b. Deep Fill and Sloping Material (over ¼ inch): Use Sherwin-Williams Poly-Crete WR or Cemlack UM.

2.2 MANUFACTURER

A. The Sherwin-Williams High Performance Flooring, 866-540-1299 swflooring@sherwin.com
Website: https://industrial.sherwin-williams.com/na/us/en/resin-flooring.html

B. Manufacturer of Approved System shall be single source and made in the USA.

C. Alternates must be approved 10 days prior to bid date.

2.3 PRODUCT REQUIREMENTS

A. Topping	Poly-Crete SL
1. Percent Reactive	100%
2. VOC	0 g/L
3. Bond Strength to Concrete ASTM D 4541	400 psi, substrates fails
4. Compressive Strength, ASTM C 579	9,000 psi
5. Tensile Strength, ASTM D 638	2,175 psi
6. Flexural Strength, ASTM D 790	5,076 psi
7. Impact Resistance @ 125 mils, MIL D-3134, No visible damage or deterioration	160 inch lbs

B. Broadcast Coat	Resuflor Glaze
1. Percent Reactive,	100 %
2. VOC	<8 g/L
3. Water Absorption, ASTM D 570	0.04 %
4. Tensile Strength, ASTM D 638	4,000 psi
5. Coefficient of thermal expansion ASTM D 696,	2 x 10^{-5} in/in/F
6. Flammability ASTM D-635	Self-Extinguishing
7. Flame Spread/ NFPA 101 ASTM E-84	Class A

C. Topcoat	ACCELERA
1. Percent Solids	100 %
2. VOC	0 g/L
3. Bond Strength to Concrete ASTM D 4541	400 psi, substrates fails
4. Hardness, Shore D ASTM D2240	70
5. Compressive Strength, ASTM C579	18,000 psi
6. Tensile Strength, ASTM D638	2,600 psi
7. Abrasion Resistance, ASTM D4060	27 mg loss

C-17 Wheel, 1,000 gm load, 1,000 cycles

8. Potlife @ 70 F — 7 – 10 minutes
9. Gloss (ASTM D523) 60° — 90
10. Static Coefficient of Friction* , ANSI B101.1 — >0.6
11. Dynamic Coefficient of Friction - Wet* , ANSI A326.3 — >0.4

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas and conditions, with Applicator present, for compliance with requirements for maximum moisture content, installation tolerances and other conditions affecting flooring performance.

1. Verify that substrates and conditions are satisfactory for flooring installation and comply with requirements specified.

3.2 PREPARATION

A. General

1. New and existing concrete surfaces shall be free of oil, grease, curing compounds, loose particles, moss,
algae growth, laitance, friable matter, dirt, and bituminous products.
2. Moisture Testing: Perform tests recommended by manufacturer and as follows.
. a. Perform anhydrous calcium chloride test ASTM F 1869-98. Application will proceed only when the vapor/moisture emission rates from the slab is less than and not higher than 20 lbs/1,000 sf/24 hrs.
   b. Perform relative humidity test using is situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum 99% relative humidity level measurement.
   c. If the vapor drive exceeds 99% relative humidity or 20 lbs/1,000 sf/24 hrs then the Owner and/or Engineer shall be notified and advised of additional cost for the possible installation of a vapor mitigation system that has been approved by the manufacturer or other means to lower the value to the acceptable limit.
3. Mechanical surface preparation
   a. Shot blast all surfaces to receive flooring system with a mobile steel shot, dust recycling machine (Blastrac or equal). All surface and embedded accumulations of paint, toppings hardened concrete layers, laitance, power trowel finishes and other similar surface characteristics shall be completely removed leaving a bare concrete surface having a minimum profile of CSP 4-5 as described by the International Concrete Repair Institute.
   b. Floor areas inaccessible to the mobile blast machines shall be mechanically abraded to the same degree of cleanliness, soundness and profile using diamond grinders, needle guns, bush hammers, or other suitable equipment.
   c. Where the perimeter of the substrate to be coated is not adjacent to a wall or curb, a minimum 1/4 inch

key cut shall be made to properly seat the system, providing a smooth transition between areas. The
detail cut shall also apply to drain perimeters and expansion joint edges.

d. Cracks and joints (non-moving) greater than 1/8 inch wide are to be chiseled or chipped-out and repaired per manufacturer's recommendations.

4. At spalled or worn areas, mechanically remove loose or delaminated concrete to a sound concrete and
patch per manufactures recommendations.

3.3 APPLICATION

A. General

1. The system shall be applied in four distinct steps as listed below:
   a. Substrate preparation

   b. Topping/overlay application with quartz aggregate broadcast.
   c. Resin application with quartz aggregate broadcast.

   d. Topcoat application.
2. Prior to the application of any component of the system, the surface shall be dry and any remaining dust or loose particles shall be removed using a vacuum.
3. The handling, mixing and addition of components shall be performed in a safe manner to achieve the desired results in accordance with the Manufacturer's recommendations.
4. The system shall follow the contour of the substrate unless pitching or other leveling work has been specified by the Architect.
5. A neat finish with well-defined boundaries and straight edges shall be provided by the Applicator.

B. Topping

1. The topping shall be applied as a self-leveling system as specified by the Architect. The topping shall be applied in one lift with a nominal thickness of 1/8 inch.
2. The topping shall be comprised of three components, a resin, hardener and filler as supplied by the Manufacturer.
3. The hardener shall be added to the resin and thoroughly dispersed by suitably approved mechanical means. SL Aggregate shall then be added to the catalyzed mixture and mixed in a manner to achieve a homogenous blend.
4. The topping shall be applied over horizontal surfaces using ½ inch "v" notched squeegee, trowels or other systems approved by the Manufacturer.
5. Immediately upon placing, the topping shall be degassed with a loop roller.
6. Flintshot quartz aggregate shall be broadcast to rejection into the wet material at the rate of 0.8 lbs./sf. see Application Instructions for more detail as the timing and temperature for proper broadcasting into SL.
7. Allow material to fully cure. Vacuum, or sweep to remove all loose aggregate.

C. Broadcast Coat

1. The broadcast coat shall be comprised of two components, a resin, and hardener as supplied by the Manufacturer and mixed in the ratio of 2 parts resin to 1 part hardener.
2. The resin shall be added to the hardener and thoroughly mixed by suitably approved mechanical means.
3. The broadcast coat shall be applied over horizontal surfaces using squeegee and back rolled at the rate of 90 sf/gal.
4. Flintshot quartz aggregate shall be broadcast to excess into the wet material at the rate of 0.5 lbs./sf.
5. Allow material to fully cure. Vacuum, or sweep to remove all loose aggregate.

E. Topcoat

1. The topcoat shall be comprised of ACCELERA (LH, Regular, or EXT) pigmented resin and hardener mixed per the manufacturer's instructions.
2. The topcoat shall be applied using a flat squeegee and cross rolled with a 3/8 inch nap roller at the rate of 65 SF/kit.
3. The finished floor will have a nominal thickness of ¼ inch.

3.4 FIELD QUALITY CONTROL

A. Tests, Inspection

1. The following tests shall be conducted by the Applicator:
   a. Temperature
      1. Air, substrate, and dew point temperatures.
   b. Relative Humidity
      1. ACCELERA is impacted by humidity. Use LH version when below 30% RH.
   c. Coverage Rates
      1. Rates for all layers shall be monitored by checking quantity of material used against the area covered.

3.5 CLEANING AND PROTECTION

A. Cure flooring material in compliance with manufacturer's directions, taking care to prevent their contamination during stages of application and prior to completion of the curing process.
B. Remove masking. Perform detail cleaning at floor termination, to leave cleanable surface for subsequent work of other sections.

END OF SECTION 09.6723

SECTION 09.6813 - TILE CARPETING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Division 01 Specification Sections

1.2 SUMMARY

A. This section relates to carpet tile.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated. Include manufacturer's written data on physical characteristics, durability, and fade resistance. Include installation methods and as follows:

1. Yarn: Textile manufacturer’s current ATMI certification report or evidence of current ATMI “E3” certification.
2. Carpet: Submit a cut sheet for all carpet types and carpet materials, indicating compliance with CRI Green Label Test Program VOC Limits.
3. Adhesives: Specified certification.
4. Certification of post-consumer recycled content for yarn, carpet backing, and separate cushions.

B. Shop Drawings: Show the following:

1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet tiles.
2. Carpet tile type, color, and dye lot.
3. Type of subfloor.
4. Type of installation.
5. Pattern of installation.
6. Pattern type, location, and direction.
7. Pile direction.
8. Type, color, and location of insets and borders.
9. Type, color, and location of edge, transition, and other accessory strips.
10. Transition details to other flooring materials.

C. Samples: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.

1. Carpet Tile: Full-size Sample.
2. Exposed Edge Stripping and Accessory: 12-inch- (300-mm-) long Samples.

D. Product Schedule: Use same room and product designations indicated on Drawings and in schedules.
E. Product Certificates: Submit manufacturers' certifications or cut sheets for all carpet types and components indicating compliance with specified requirements, including requirements for the percentages of post-industry recycled content and post-consumer recycled content.

F. Maintenance Data: For carpet tile to include in maintenance manuals specified in Division 1. Include the following:

1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule. Training shall include instruction in the use of recommended bio-degradable cleaning products.
2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who is certified by the Floor Covering Installation Board or who can demonstrate compliance with its certification program requirements.

B. Fire-Test-Response Characteristics: Provide products with the critical radiant flux classification indicated in Part 2, as determined by testing identical products per ASTM E 648 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.

C. Indoor Air Qualifications; Provide carpet and related carpet materials that meet or exceed the VOC limits established by the Carpet and Rug Institute (CRI) Green Label Test Program.

1.5 DELIVERY, STORAGE, AND HANDLING

A. General: Comply with CRI 104, Section 5, "Storage and Handling."

1.6 PROJECT CONDITIONS

A. General: Comply with CRI 104, Section 6.1, "Site Conditions; Temperature and Humidity."

B. Environmental Limitations: Do not install carpet tile until wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

C. Do not install carpet tile over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer.

D. Where demountable partitions or other items are indicated for installation on top of carpet tile, install carpet tile before installing these items.

1.7 WARRANTY

A. General Warranty: Special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Special Carpet Tile Warranty: Written warranty, signed by carpet tile manufacturer agreeing to replace carpet tile that does not comply with requirements or that fails within specified warranty period. Warranty does not include deterioration or failure of carpet tile due to unusual traffic, failure of substrate, vandalism, or abuse.

Failures include, but are not limited to, more than 10 percent loss of face fiber, edge raveling, snags, runs, and delamination.

1. Warranty Period: As indicated in manufacturers written literature.

1.8 EXTRA MATERIALS

A. Furnish extra materials described below, before installation begins, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Carpet Tile: Full-size units equal to two (5) percent of amount installed for each type indicated.

PART 2 – PRODUCTS

2.1 MATERIALS

A. Carpet Tile

1. Refer to Drawings.
    a. CPT-01 – Milliken, Revelation
    b. WO – Milliken, Obex.

2.2 INSTALLATION ACCESSORIES

A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided by or recommended by carpet tile manufacturer to level or raise area under carpet tiles to the level as required and indicated, according to the Construction Documents.

1. Gypsum-based products will not be Permitted!

B. Adhesives: Water-resistant, mildew-resistant, nonstaining type to suit products 36 and subfloor conditions indicated, that complies with flammability requirements for installed carpet tile and that is recommended by carpet tile manufacturer.

1. VOC Limits: Provide adhesives that comply with the following limits for VOC content when tested according to ASTM D 5116:
    a. Total VOCs: 10.00 mg/sq. m x h.
    b. Formaldehyde: 0.05 mg/sq. m x h.
    c. 2-Ethyl-1-Hexanol: 3.00 mg/sq. m x h.
2. Carpet adhesives shall not exceed 50 g/L as per EQc4.1.

B. Primer (if needed): 9050 is an acrylic solution made to neutralize excess alkali that is also recommend as a primer coat to prevent over absorption of adhesive and to ensure a better bond. Formulated with an antimicrobial agent, it provides protection against bacteria, fungi, and mildew in the wet or dry state. Contains no solvent, alcohol, or other hazardous materials per OSHA 29 CFR 1910.1200. Non-photo chemically reactive per rule #102. Available in 4-gallon pails.

C. Leveling and Patching Compounds: Use a cementitious patching/leveling compound that meets or exceeds the required moisture level and pH requirements. Use of gypsum-based patching and/or leveling compounds which contain Portland or high alumina cement and meet or exceed the compressive strength of 3,000 psi are acceptable.

D. Transition Strips

E. Cove Base Accessories:
1. Angle Profile
2. Detail Profile
3. Quarter Round

PART 3 - EXECUTION

3.1 EXAMINATION

A. Substrates shall be smooth, structurally sound, permanently dry, clean and free of all foreign material such as dust, wax, solvents, paint, grease, oils, old adhesive residue, curing and hardening/ curing compounds, sealers and other foreign material that might prevent adhesive bond.

B. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 and the following:
1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by carpet tile manufacturer.
2. Subfloor finishes comply with requirements specified in Division 3 Section "Cast-in-Place Concrete" for slabs receiving carpet tile.
3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 LAYOUT AND INSTALLATION

A. Start the tile installation as near to the center of the room as possible and position it to use the largest perimeter cut tile size.

B. Snap a chalk line parallel to one major wall bisecting the starting point. It may be necessary to offset the center chalk line to assure perimeter tiles will be at least half size.

C. Snap a second chalk line from the starting point at 90° to the first line. Use a 3-4-5, 6-8-10, or larger triangle depending on the room size. Meters or feet may be used to lay out the triangle in these proportions.

D. Install each full carton and complete an entire pallet before starting another pallet to minimize product variation. Each tile has directional arrows on the back. These arrows allow for one-directional or multi-directional installation. Some styles may be large scale or linear in design and require quarter turning. If you are unsure about whether or not your product requires a quarter turned installation, please contact 1.877.502.7429. Numbers within the arrows are for manufacturing purposes and are not related to installation.

E. Begin installation at the intersection of two chalk lines. Continue until you complete one quadrant. Proceed to an adjoining quadrant until all four quadrants are completed. Larger areas may require chalk lines bisecting the original four quadrants.

F. Install tiles using the pyramid technique. This gives you multiple alignment checks. If the edges do not align and the misalignment increases with progression of the installation, find and correct the source of the problem.

G. Carpet tiles come in various sizes. All Shaw tiles have directional arrows on the back of the tile. Slide tiles into position to prevent yarn from being trapped between the tiles. Trapped yarn will adversely affect the appearance of the installation and will cause alignment problems.

H. Tiles must fit snugly, but not be compressed. Press the entire surface of the tile to ensure adhesion. Check for fit by measuring the length of ten full tiles after installation. The measurement must not be less than, or exceed by more than 1/4 inch, the length of the tiles being multiplied by ten. For example: if 24" X 24" tiles are being installed, the measurement should be between 240 and 240 1/4 inches.

I. Measure and cut tiles from the back using a straight edge. Be sure the arrows are pointing in the correct direction.

J. Roll the entire installation with a 75 lb. or greater roller to assure the proper adhesion to the substrate.

3.3 MAINTENANCE

A. Post-installation Care
1. Place plywood over the carpet when heavy objects will be moved within 24 hours after installation.

B. Preventative Floor Care
1. Use protective chair mats under chairs with casters.
2. Use soil removal mats at exterior entrances.
3. Use absorbent mats in areas where moisture, oil and grease are present.

C. Routine Maintenance
1. Set a schedule depending on traffic and vacuum regularly.
2. Remove spots with spot removers as soon as they occur.
3. Use encapsulation agents periodically.
4. Clean with hot water extraction periodically.

END OF SECTION 09.6813

SECTION 098319 – SOUND-ABSORBING UNITS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general conditions of Contract, including General and Supplementary Conditions and Divisions-1 Specification sections apply to work of this section.

1.2 SUMMARY

A. Section Includes:

1. Acoustical wall panels and installation components.

B. Related Sections:

1. Section 09 20 00 (09200) – Plaster and Gypsum Board

2. Division 26 Sections - Electrical Work

C. Alternates

1. Prior Approval: Unless otherwise provided for in the Contract documents, proposed product substitutions may be submitted no later than TEN (10) working days prior to the date established for receipt of bids. Acceptability of a proposed substitution is contingent upon the Architect's review of the proposal for acceptability and approved products will be set forth by the Addenda. If included in a Bid are substitute products which have not been approved by Addenda, the specified products shall be provided without additional compensation.

2. Submittals which do not provide adequate data for the product evaluation will not be considered. The proposed substitution must meet all requirements of this section, including but not necessarily limited to, the following: Single source materials suppliers (if specified in Section 1.5); Panel design, size, composition, color, and finish; installation system component profiles and sizes; Compliance with the referenced standards.

1.3 REFERENCES

A. Test Methods:

1. ASTM C 423 Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.

2. ASTM E 84/CAN/ULC S102 Standard Test Method for Surface Burning Characteristics of Building Materials.

3. CAN/ULC S102 Standard Test Method for Surface Burning Characteristics of Building Materials.

1.4 SUBMITTALS

A. Product Data: Submit manufacturer's technical data for each type of acoustical wall panel required.

B. Samples: Minimum 3-inch x 3-inch samples of specified acoustical wall substrate; minimum 4-inch-long samples of attachment method including trim and decorative accents.

C. Shop Drawings: Submit shop drawings showing how panels are to be laid out on the walls, details of trim members and width of panels. Width of panels and location of vertical seams are critical.

1.5 QUALITY ASSURANCE

A. Single-Source Responsibility: Provide acoustical panel units and installation components by a single manufacturer.

B. Fire Performance Characteristics: Identify acoustical wall components with appropriate markings of applicable testing and inspecting organization.

1. Surface Burning Characteristics: As follows, tested per ASTM E 84,

a. Flame Spread: 25 or less

b. Smoke Developed: 200 or less

C. Coordination of Work: Coordinate acoustical wall work with installers of related work including, but not limited to building insulation, gypsum board, light fixtures, mechanical systems, electrical systems, and sprinklers.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver acoustical wall panels to project site in original, unopened packages and store them in a fully enclosed space where they will be protected against damage from moisture, direct sunlight, surface contamination, and other causes.

B. Before installing acoustical wall panels, permit them to reach room temperature and a stabilized moisture content.

C. Handle acoustical wall panels carefully to avoid chipping edges or damaged units in any way.

1.7 PROJECT CONDITIONS

A. Space Enclosure:

1. Soundsoak Fiberglass Panels: All wet work must be complete and dry prior to installation. Installation shall be carried out where the temperature is between 40 degrees F and 120 degrees F. These temperature conditions must be maintained throughout the life of the warranty.

1.8 WARRANTY

A. Acoustical Wall Panel: Submit a written warranty executed by the manufacturer, agreeing to repair or replace acoustical panels that fail within the warranty period. Failures include, but are not limited to:

1. Acoustical Wall Panels: Manufacturer's defects.

B. Warranty Period:

1. Acoustical wall panels: One (1) year from date of substantial completion.

C. The Warranty shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and will be in addition to and run concurrent with other warranties made by the Contractor under the requirements of the Contract Documents.

1.9 MAINTENANCE

A. Extra Materials: Deliver extra materials to Owner. Furnish extra materials described below that match products installed. Packaged with protective covering for storage and identified with appropriate labels.

1. Acoustical Wall Panels: Furnish quantity of full-size units equal to 5.0 percent of amount installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Acoustic Wall Panels: AWP-01 Art Concepts, Akuwood

B. Or equals: Kinetics Noise Control, Inc., Decoustics

2.2 ACOUSTIC WALL PANELS

A. Acoustical Wall Panels: Type **AWP-01**:

1. Manufacturer: Artizin Acoustical Solutions, 3402 W Miller Road, Garland, TX 75041
2. Composition: 18mm Artfelt, 60% recycled Polyester fiber, 40% virgin Fiber
3. Style: Duo-Cut, Dot& Dash, 2 color, as indicated on drawings
4. Sizes: 47.5" x 95" or as indicated on drawings.
5. Noise Reduction Coefficient (NRC): .60
6. Flame Spread: ASTM E84 ISAN -Class A rating.
7. Installation: Glued

A. Acoustical Ceiling Panels: Type ACT-01:

1. Manufacturer: Akuwood Panel, 2803 Philadelphia Pike, Suite B PMB 7149, Claymont, DE 19703
2. Composition: PET Polyesterbacking and MDF slats with Wood Veneer
3. Thickness: 1 inch
4. Sizes: 48” x 96” or as indicated on drawings.
5. Noise Reduction Coefficient (NRC): .85
6. Flame Spread: ASTM E84 ISAN -Class A rating.
7. Installation, Glued and screwed.

B. Acoustical Wall Panel Accessories:

1. Adhesive – As recommended by the manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Do not proceed with installation until all wet work such as concrete, terrazzo, plastering and painting has been completed and thoroughly dried out, unless expressly permitted by manufacturer’s printed recommendations.

3.2 PREPARATION

A. Measure each wall area and establish layout of acoustical units to balance border widths at opposite edges of each wall. Coordinate panel layout with mechanical and electrical fixtures.

3.3 INSTALLATION

A. Install wall panels by attaching the panels to an existing wall per the manufacturer’s instructions, LA-297301, and in accordance with the authorities having jurisdiction.
B. For installation instructions with internal H spline, refer to installation instructions for standard Soundsoak, LA-295818.

3.4 ADJUSTING AND CLEANING

A. Replace damaged and broken panels.
B. Routine maintenance of wall panels should consist of frequent vacuuming to minimize dirt accumulation. Work in with a damp sponge and vacuum to remove residue.

END OF SECTION 09.8319

SECTION 09.9100 – PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes surface preparation and the application of paint systems.

B. Paint and finish all new and existing, exterior and interior exposed surfaces throughout the building as indicated on the Drawings, as listed on the Painting Schedule in Part 3 of this Section, as specified herein, and as needed for a complete and proper installation.

C. Work not included:
1. Unless otherwise indicated, painting is not required on surfaces in concealed areas and inaccessible areas such as furred spaces and the area above suspended ceilings;
2. Metal surfaces of anodized aluminum, stainless steel, chromium plate, copper, bronze, and similar finished materials will not require painting under this Section unless otherwise indicated;
3. Do not paint moving parts of operating units; mechanical or electrical parts such as valve operators, linkages, sensing devices, and motor shafts, unless otherwise indicated;
4. Do not paint over required labels or equipment identification, performance rating, name, or nomenclature plates;
5. Metal surfaces of pre-finished galvalume and galvanized steel, metal roofing, metal fascia and trims, metal siding, metal ceiling, all galvanized bollards, all exposed zinc coated steel plates, anchors, and fasteners, etc. that have galvalume or galvanizing will not require painting under this Section unless otherwise indicated.

D. Definitions: "Paint" or “Epoxy” as used herein, means coating systems materials including primers, emulsions, epoxy enamels, sealers, fillers, and other applied materials whether used as prime, intermediate, or finish coats.

E. Related work: Priming or priming and finishing of certain surfaces may be specified to be factory-performed or installer-performed under pertinent other Sections.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Samples for Initial Selection: For each type of topcoat product indicated.

C. Samples for Verification: For each type of paint system and in each color and gloss of topcoat indicated.

1. Submit Samples on rigid backing, 8 inches square.
2. Step coats on samples to show each coat required for system.
3. Label each coat of each Sample.
4. Label each Sample for location and application area.

D. Product List: For each product indicated, include the following:

1. Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules.

E. Color selection and samples:

1. Colors will be selected by the Architect from one or more of the specified manufacturers paint lines. Submit samples on rigid cardboard 8-1/2 inches by 11 inches in size with the Architects scheduled colors and glosses applied, for approval before starting work. Sample panels shall be resubmitted to the Architect until final approval is granted. Finished work shall match approved samples;
2. The Architect may select, allocate, and vary colors on different surfaces throughout the Work, subject to the following:
    a. Exterior work: A maximum of four different colors will be used, with variations for trim, doors, miscellaneous work, and metal work;
    b. Interior work: A maximum of eight different pigmented colors will be used, with variations for trim, wall surfaces and wainscots;
    c. Dark tones: A maximum of four dark tones will be used as accent colors for the interior;

1.4 QUALITY ASSURANCE

A. MPI Standards:

1. Products: Complying with MPI standards indicated and listed in "MPI Approved Products List."
2. Preparation and Workmanship: Comply with requirements in "MPI Architectural Painting Specification Manual" for products and paint systems indicated.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.

1. Maintain containers in clean condition, free of foreign materials and residue.
2. Remove rags and waste from storage areas daily.

1.6 PROJECT CONDITIONS

A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F.

B. Do not apply paints in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.

C. Protection:
1. Remove or protect during painting, all finish hardware, accessories, fixtures, plates, lighting fixtures, and similar items installed prior to painting and not required to be painted. If removed, carefully replace and adjust on completion of painting;
2. Furnish and lay drop cloths in all areas where painter's finish work is being done, to protect floors and all other adjacent work and materials from defacement. Remove all temporary protections and coverings from the work and repair or replace finishes;
3. Any damage resulting from neglect of the above requirements shall be repaired at the Contractor's expense to the complete satisfaction of the Architect.

D. Environmental Conditions:
1. No exterior painting shall be done in rainy, damp or frosty weather, or until surface is thoroughly dry. No interior painting or finishing shall be permitted until the building has reached a temperature and humidity level recommended by the manufacturer of the paint products being applied;
2. Maintain temperature of rooms at 70 degrees F or higher where varnish, lacquer or enamel is being applied and at 50 degrees F or higher during other painting and finishing. Exterior painting shall be done only when air temperature is 40 degrees F or higher and only in dry weather;
3. Apply material under adequate illumination and ventilation;
4. In the event excessive moisture is present, the General Contractor shall provide the necessary ventilation to establish appropriate conditions. Should the surface be too dry for the product application, the Painting Contractor shall provide the necessary methods to establish the appropriate conditions.

1.7 EXTRA MATERIALS

A. Furnish extra materials described below that are from same production run (batch mix) as materials applied and that are packaged for storage and identified with labels describing contents.

1. Quantity: Furnish an additional 10 percent, but not less than 1 gallon of each material and color applied.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: All paint materials and their related products specified herein are based on products of first grade and top line manufactured products, of Sherwin-Williams Company. Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Benjamin Moore & Co.
2. PPG Architectural Finishes, Inc.

B. Semi-transparent colored stain for architectural millwork items shall be by Minwax, or alternatives of the quality necessary to meet the specifications, offering a range of colored semi-transparent colored stain selections, and as approved by the Architect.

2.2 PAINT, GENERAL

A. Material Compatibility:

1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of work. Correct conditions detrimental to timely and proper completion of the Work prior to proceeding.

B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
   1. Concrete: 12 percent.
   2. Masonry (Clay and CMU): 12 percent.
   3. Wood: 15 percent.
   4. Plaster: 12 percent.
   5. Gypsum Board: 12 percent.
   6. Plaster: 12 percent.

C. Verify suitability of substrates, including surface conditions and compatibility with finishes and primers.

D. Begin coating application only after unsatisfactory conditions have been corrected and surfaces are dry.
   1. Beginning coating application constitutes Contractor's acceptance of substrates and conditions.

E. Coordination of Work: Review other Sections in which primers are provided to ensure compatibility of the total system for various substrates. On request, furnish information on characteristics of finish materials to ensure use of compatible primers.
   1. Notify the Architect about anticipated problems using the materials specified over substrates primed by others.

3.2 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and paint systems indicated.

B. Remove plates, machined surfaces, and similar items already in place that are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.

   1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
   2. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
   3. Mask surfaces and construction adjacent to paint application areas to prevent paint from spilling or spattering other areas.

C. Clean substrates of substances that could impair bond of paints, including dirt, oil, grease, and incompatible paints and encapsulants.

   1. Remove incompatible primers and reprime substrate with compatible primers as required to produce paint systems indicated.

2. Cementitious Materials: Prepare concrete and masonry surfaces to be painted. Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods of surface preparation.
    a. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not paint surfaces where moisture content exceeds that permitted in manufacturer's written instructions.
    b. Clean concrete floors to be painted with a 5 percent solution of muriatic acid or other etching cleaner. Flush the floor with clean water to remove acid, neutralize with ammonia, rinse, allow to dry, and vacuum before painting.
3. Ferrous Metals: Clean ungalvanized ferrous-metal surfaces that have not been shop coated; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with the Steel Structures Painting Council's (SSPC) recommendations.
    a. Blast steel surfaces clean as recommended by paint system manufacturer and according to requirements of SSPC-SP 10.
    b. Treat bare and sandblasted or pickled clean metal with a metal treatment wash coat before priming.
    c. Touch up bare areas and shop-applied prime coats that have been damaged. Wire-brush, clean with solvents recommended by paint manufacturer, and touch up with the same primer as the shop coat.

D. Spackle all wall cracks, voids and similar imperfections, in drywall and plaster.

E. Clean all metal free from dust and grease and carefully wire brush to remove all rust or scale. Sand badly rusted spots until metal is clean. Sheet metal, steel and cast wrought iron with priming coat applied, shall be cleaned of debris, and if necessary, the marred surfaces shall be primed before applying the first coat. Clean and lightly sand prefinished metals, such as rooftop mechanical equipment thoroughly before applying the first coat.

F. Galvanized materials shall receive a prime coating of an approved galvanized primer, such as zinc dust. Apply zinc chromate or an equivalent primer as recommended by the paint and aluminum alloy manufacturer to aluminum work, which is specified or noted as being painted.

G. Thoroughly clean, sand, and wipe woodwork to remove all surface dirt.

1. Fill nail holes or similar imperfections smooth with putty after prime coat has become dry and hard. On natural finish wood, the nail hole compound shall be pigmented to match the face veneer.
2. When transparent finish is required, backprime with spar varnish.

H. Prepare surfaces of masonry to be painted in strict conformance with the recommendations of the paint manufacturer. Insure that all loose material and material that will dust or dislodge

when lightly abraded has been completely removed from masonry surfaces before the application of paint materials.

I. Materials Preparation: Mix and prepare paint materials according to manufacturer's written instructions.
   1. Maintain containers used in mixing and applying paint in a clean condition, free of foreign materials and residue.
   2. Stir material before application to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into material. If necessary, remove surface film and strain material before using.
   3. Use only thinners approved by paint manufacturer and only within recommended limits.

J. Tinting: Tint each undercoat a lighter shade to simplify identification of each coat when multiple coats of the same material are applied. Tint undercoats to match the color of the finish coat, but provide sufficient differences in shade of undercoats to distinguish each separate coat.

3.3 APPLICATION

A. Apply paints according to manufacturer's written instructions. Use applicators and techniques best suited for substrate and type of material being applied.

   1. Apply materials with roller or brush, except that spraying will be permitted for items such as mechanical equipment, grilles, or similar items. Mask off adjoining areas not receiving a spray finish against overspray.
   2. Paint surfaces behind movable equipment and furniture items same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture items with prime coat only.
   3. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
   4. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to formation of a durable paint film.
   5. Provide finish coats that are compatible with primers used.
   6. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, convector covers, covers for finned-tube radiation, grilles, and similar components are in place. Extend coatings in these areas, as required, to maintain the system integrity and provide desired protection.
   7. Paint interior surfaces of ducts with a flat, nonspecular black paint where visible through registers or grilles.
   8. Finish exterior doors on tops, bottoms, and side edges the same as exterior faces.
   9. Sand lightly between each succeeding enamel or varnish coat.

B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Tint undercoats to match color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.

D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

E. Allow exterior paints and finishes to dry at least 48 hours between coats. Allow interior paints to dry at least 24 hours between coats. Allow enamels, lacquers and varnishes to dry at least forty-eight hours between coats. Sand lightly between coats with No. 00 sandpaper and dust well before succeeding coat is applied. Allow additional drying time if conditions warrant, to assure that all coats are perfectly dry before applying succeeding coats.

F. Review with the Architect prior to application the surface texture of all painting and finishing. Submit samples, if requested, for approval.

G. All materials throughout shall receive the manufacturer's recommended primer before the finish coats are applied. Touch-up shop applied prime coats, which have been damaged, and touch-up bare areas prior to start of finish coats application.

H. Miscellaneous surfaces and procedures:

1. Exposed mechanical items:
    a. Finish electric panels, access doors, conduits, pipes, ducts, grilles, registers, vents, hangers, and items of similar nature to match adjacent wall and ceiling surfaces, or as directed;
    b. Paint visible duct surfaces behind vents, registers, and grilles flat black;
    c. The painting of mechanical piping and equipment shall include the painting of non-ferrous piping and valve and trap bodies in finished spaces;
    d. Paint exterior louvers, dampers, and grilles in colors as selected by the Architect;
2. Exposed electrical items: Paint all exterior electrical items in colors as selected by the Architect;
3. Paint hollow metal and miscellaneous metal installations in unfinished spaces;
4. Paint metal doors in unfinished spaces.

I. Minimum Coating Thickness: Apply paint materials no thinner than manufacturer's recommended spreading rate. Provide the total dry film thickness of the entire system as recommended by the manufacturer. Use application rate to achieve finished dry film thickness (DFT) as indicated for each coat.

J. Mechanical and Electrical Work: Painting of mechanical and electrical work is limited to items exposed in equipment rooms and in occupied spaces.

K. Mechanical items to be painted include, but are not limited to, the following:
1. Cabinet heater enclosures.
2. Piping, pipe hangers, and supports.
3. Heat exchangers.
4. Tanks.
5. Ductwork.
6. Insulation.
7. Supports.
8. Motors and mechanical equipment.
9. Accessory items.

L. Electrical items to be painted include, but are not limited to, the following:
1. Conduit and fittings.
2. Switchgear.
3. Panelboards.

M. Block Fillers: Apply block fillers to concrete masonry block at a rate to ensure complete coverage with pores filled.
1. Provide a smooth, uniform finish, appearance, and coverage. Spotting, laps, roller marks, runs, sags, ropiness, or other surface imperfections will not be acceptable.
2. Spray application will not be permitted unless combined with back rolling or squeegeeing. Do not thin filler. Apply sufficient material to allow back rolling or squeegeeing to fill surface.
3. Where two filler coats are scheduled, allow first coat to fully dry before application of second. Back roll or squeegee both coats.
4. Do not use squeegee for scored unit masonry; backroll in manner that prevents buildup of block filler in score joints.
5. Extend block filler coats the full extent of exposed surfaces. Protect adjacent surfaces.

N. Prime Coats: Before applying finish coats, apply a prime coat of material, as recommended by the manufacturer, to material that is required to be painted or finished and that has not been field prime coated by others. Recoat primed and sealed surfaces where evidence of suction spots or unsealed areas in first coat appears, to ensure a finish coat with no burn through or other defects due to insufficient sealing.

O. Pigmented (Opaque) Finishes: Completely cover surfaces as necessary to provide a smooth, opaque surface of uniform finish, color, appearance, and coverage. Cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections will not be acceptable.

P. Transparent (Clear) Finishes: Use multiple coats to produce a glass-smooth surface film of even luster. Provide a finish free of laps, runs, cloudiness, color irregularity, brush marks, orange peel, nail holes, or other surface imperfections.
   1. Provide satin finish for final coats.

Q. Electrostatic Painting: Connect target substrate to be painted to ground to create magnetic surface that will attract negatively charged paint particles. Apply paint to prepare surfaces to produce uniform, regular coating layers and a smooth, even finish.

R. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or repaint work not complying with requirements.

3.4 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.

B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.

D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.5 FINISH

A. Finished surfaces shall be uniform in finish and color and free of brush marks, sagging, corduroy and other imperfections. Should any coat be judged unsatisfactory, sandpaper or otherwise clean off this coat and apply another. If the undercoating is disturbed, complete refinishing will be required. Where necessary for proper coverage, one additional coat shall be applied by the painter without any additional cost to the Owner.

B. Edges of paint or finish adjoining other materials or colors shall be sharp and clean without overlapping.

C. Should workmanship be found defective, proper preparatory work shall be done and additional coats applied as necessary to give finish in accordance with specified requirements.

3.6 PAINTING SCHEDULE

A. The following paint schedule shall generally cover the type of paint required for the project based on Sherwin Williams Company. Verify finishes with finish schedule and Architect prior to application. Verify first coat in accordance with manufacturer's recommendation for previously painted surfaces.

INTERIOR PAINT SCHEDULE

Masonry and Concrete – Ceilings and Soffits - Flat Finish
Primer: Loxon Concrete and Masonry Primer
2 finish coats: ProMar 200 Zero VOC flat

Masonry and Concrete – Eggshell Finish
Primer: Loxon Concrete and Masonry Primer
2 finish coats: ProMar 200 Zero VOC eggshell

CMU – Eggshell Finish
Filler: ProIndustrial HD Block Filler
2 finish coats: ProMar 200 Zero VOC eggshell

CMU – Pre-Catalyzed EPOXY (eggshell finish or semi-gloss finish)
Light Commercial, Dry Laboratories and Rest Rooms
Filler: ProIndustrial HD Block Filler
2 finish coats: ProIndustrial Pre-Catalyzed Water-Based Epoxy semi-gloss

Gypsum – Ceilings and Soffits- Flat Finish
Primer: ProMar Ceiling Paint flat
Finish coat: ProMar Ceiling Paint flat

Gypsum – Eggshell Finish
Primer: ProMar 200 Zero Primer
2 finish coats: ProMar 200 Zero VOC eggshell

Gypsum – Semi-Gloss Finish
Primer: ProMar 200 Zero VOC Primer
2 finish coats: ProMar 200 Zero VOC semi-gloss

Gypsum – Pre-Catalyzed EPOXY
Light commercial, Dry Laboratories and Rest Rooms
Primer: ProMar 200 Zero VOC Primer
2 finish coats: ProIndustrial Pre-Catalyzed Water-Based Epoxy eggshell

Wood- Painted – Semi-Gloss Finish

Primer: ProMar 200 Zero VOC Primer
2 finish coats: Solo 100% Acrylic Latex, semi-gloss

Ferrous Metal and Non-Ferrous Metal – Doors, Frames, non-traffic Stair components and miscellaneous Metals, including elevator frames and doors

Primer: ProIndustrial Pro-Cryl Universal Primer
2 finish coats: ProIndustrial Pre-Catalyzed Water-Based Epoxy, semi-gloss
semi gloss

Concrete Floors – (Pigmented or Clear)

2 finish coats: ArmorSeal 8100 WB Epoxy coating,

Exposed Ceilings:

Primer (Ferrous and Non-Ferrous Metal): ProIndustrial Pro-cryl Universal Primer
2 coats: Low VOC Waterborne Acrylic Dryfall, **Flat** B42-W00081
OR Low VOC Waterborne Acrylic Dryfall, **Eg-shell** B42-W00082

EXTERIOR SCHEDULE

Exterior AES

Primer: MacroPoxy 646 Epoxy
2 finish coats: Hi Solids Polyurethane, semi-gloss

Ferrous Metal and Non-Ferrous Metal **Doors, Frames, Stair Components and Miscellaneous Metals Includes, but is not limited to, Elevator Frames and Doors.**

Primer: ProIndustrial Pro-Cryl Universal Primer
2 finish coats: ProIndustrial WB Alkyd Urethane Enamel, B53 series, semi-gloss

END OF SECTION 09.9100

SECTION 10.1100 - VISUAL DISPLAY UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Markerboards.
2. Tackboards.
3. Combination Boards.
4. Floor-to-Ceiling Visual Display Assemblies.
5. Corridor Bulletin Boards to replace existing.
6. Display rails.

B. Related Requirements:
1. Section 061000 "Rough Carpentry" for proper blocking and other anchorages required to sustain visual display units.
2. Section 097723 "Fabric-Wrapped Panels" for tackable, fabric-covered panels mounted on walls.
3. Section 099123 "Interior Painting" for the use of primers and sealants when visual display assemblies are adhered to walls with adhesive.
4. Section 101200 "Display Cases" for bulletin boards and display cases.
5. Section 101146 "Visual Display Fabrics" for visual display wall coverings intended for use with dry-erase markers.

1.3 REFERENCES

A. ASTM B 221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

B. ASTM C 208 - Standard Specification for Cellulosic Fiber Insulating Board.

C. ASTM E 84 - Standard Test Method for Surface Burning Characteristics for Building Materials.

D. Federal Specifications (FS) CCC-W-408D - Wall Covering, Vinyl Coated.

E. Porcelain Enamel Institute PEI-1002 - Manual and Performance Specifications for Porcelain Enamel Writing Surfaces.

F. ANSI A 135.1 - Hardboard.

G. ANSI A 208.1 - Particleboard.

1.4 ACTION SUBMITTALS

A. Product Data:

1. Include manufacturer's technical data sheets, listing construction details, material descriptions, dimensions of individual components and profiles, finishes, and accessories for visual display units.

B. Shop Drawings:

1. Include dimensioned plans, elevations, details, and attachment(s) to other work. Show anchors and accessories.
2. Show locations of panel joints. Show locations of field-assembled joints for factory-fabricated units too large to ship in one piece.
3. Include sections of typical trim members.

C. Samples for Initial Selection: For each type of visual display unit indicated, for units with factory-applied color finishes, and as follows:

1. Samples of facing, core, and backing for each visual display panel type, indicating color and texture.
2. Swatches of tackable material indicating color and texture, including natural and colored cork, vinyl, and fabric.

D. Samples for Verification:

1. Visual Display Panel: Not less than 13 by 17 inches (330 by 431 mm), with facing, core, and backing indicated for final Work. Include one panel for each type, color, and texture required.
2. Trim: 6-inch- (150-mm-) long sections of each trim profile.
3. Display Rail: 6-inch- (150-mm-) long section of each type.
4. Accessories: Full-size Sample of each type of accessory.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: Provide manufacturer's standard care and cleaning instructions, installation guide, and a clean copy of the final approved submittals for owner's records.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver factory-fabricated visual display units completely assembled in one piece. If dimensions exceed maximum manufactured unit size, or if unit size is impracticable to ship in one piece, provide two or more pieces with joints in locations indicated on approved Shop Drawings.

B. Ship products upright in a manner providing proper protection.

C. Provide factory-installed protective covering for markerboards. Do not remove until after installation

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install visual display units until spaces are enclosed and weather-tight, wet-work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

B. Field Measurements: Verify actual dimensions of construction relevant to visual display units before fabrication.

1.8 WARRANTY

A. Markerboards: Provide manufacturer's life of the building warranty providing coverage against loss of original writing or erasing capabilities, crazing, cracking, flaking, and staining of the porcelain enamel writing surface.

B. Tackboards: Provide manufacturer's five-year warranty providing coverage against manufacturing defects in material and workmanship for all tackable surfaces.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain each type of visual display unit from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified independent testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: Less than 450.

2.3 MARKERBOARDS

A. Basis-of-Design Product: Subject to compliance with requirements, provide AJW Architectural Products; Markerboards or comparable product by one of the following:
   1. Claridge

2. Moore Co.
3. Egan Visual Inc.
4. Aarco Products

B. Substitutions: Under provisions of Division 01.

C. Markerboard Assembly:

1. Height: 4’-0”
2. Width: 10’-0”
3. Mounting Method: Direct to wall.

D. Markerboard Panel: Balanced, high-pressure laminated, porcelain enamel-faced panels, of three ply construction consisting of face sheet, core material, and backing.

1. Porcelain Face Sheet: Enameling grade cold-rolled steel, specially processed for temperatures used in coating porcelain on steel. Coat faces and exposed edges with three coat process consisting of primer, ground coat, and color cover coat.
2. Core Material: 1/2 inch (13 mm) thick particleboard, ANSI 208.1, Grade 1-M-1.
3. Backing Sheet: Manufacturer's standard aluminum foil sheet.
4. Laminating Adhesive: Manufacturer's standard moisture resistant thermoplastic adhesive.

E. Fabricated from not less than 0.062-inch- (1.57-mm-) thick, extruded aluminum; 3/4 inch (19 mm) Flat Trim.
1. Aluminum Finish: Clear anodized finish.

F. Joints: Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, as indicated on approved Shop Drawings.

G. Marker Tray: Continuous.

1. Box Type: Extruded aluminum with slanted front, grooved tray, and cast-aluminum end closures.
2. Aluminum Finish: Match finish of visual display assembly trim.

H. Location:
1. Provide as indicated on Equipment plans

2.4 DISPLAY RAILS

A. Basis-of-Design Product: Subject to compliance with requirements, provide AJW Architectural Products; Display Rail or a comparable product by one of the following:

1. Claridge
2. Moore Co.
3. Egan Visual Inc.

B. Substitutions: Under provisions of Division 01.

C. Aluminum Display Rail: Extruded-aluminum display rail with tackable insert designed to hold accessories.

1. Profile: 2 inch (50 mm)
2. Tackable Insert: 1/4 inch (6.4 mm) Natural Cork

D. Map Rail: Provide the following accessories:

1. Display Rail: Continuous and integral with map rail; fabricated from cork approximately 2 inches wide.
2. End Stops: Located at each end of map rail.
3. Map Hooks/Paper Holder and Clips: Two map hooks with flexible metal clips for every 10 feet of map rail or fraction thereof.

2.9 MATERIALS

a. Porcelain-Enamel Face Sheet: PEI-1002, with face sheet manufacturer's standard three-coat process.

b. Hardboard: ANSI A135.4, tempered.

c. Particleboard: ANSI A208.1, Grade 1-M-1 that complies with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

d. Fiberboard: ASTM C 208 cellulosic fiber insulating board.

e. Extruded Aluminum: ASTM B 221 (ASTM B 221M), Alloy 6063.

f. Adhesives for Field Application: Mildew-resistant, nonstaining adhesive for use with specific type of panels, sheets, or assemblies; and for substrate application; as recommended in writing by visual display unit manufacturer.

i. Adhesives shall have a VOC content of 50 g/L or less.
ii. Adhesives shall comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

g. Primer/Sealer: Mildew-resistant primer/sealer complying with requirements in Section 099100 "Interior Painting" and recommended in writing by visual display unit manufacturer for intended substrate.

2.10 GENERAL FINISH REQUIREMENTS

a. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

b. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

c. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.11 ALUMINUM FINISHES

A. Clear Anodized Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine all work areas and verify that all applicable measurements, structural supports, backing, and environmental conditions are in accordance with manufacturer's prerequisites for installation.

B. Examine walls and partitions for proper preparation and backing for visual display units.

C. Examine walls and partitions for suitable framing depth where sliding visual display units will be installed.

D. Proceed with installation only after the above criteria is met.

A. Comply with manufacturer's written instructions for surface preparation.

B. Clean substrates of substances, such as dirt, mold, and mildew, that could impair the performance of and affect the smooth, finished surfaces of visual display boards.

C. Prepare surfaces to achieve a smooth, dry, clean surface free of flaking, unsound coatings, cracks, defects, projections, depressions, and substances that will impair bond between visual display units and wall surfaces.

D. Prepare recesses for sliding visual display units as required by type and size of unit.

3.03 INSTALLATION

A. General: Install visual display surfaces in locations and at mounting heights indicated on Drawings, or if not indicated, at heights indicated below. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.

B. Field-Assembled Visual Display Board Assemblies: Coordinate field-assembled units with grounds, trim, and accessories indicated. Join parts with a neat, precision fit.

C. Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, as indicated on approved Shop Drawings.

D. Where size of visual display board assemblies or other conditions require support in addition to normal trim, provide structural supports or modify trim as indicated or as selected by Architect from manufacturer's standard structural support accessories to suit conditions indicated.

E. Factory-Fabricated Visual Display Board Assemblies: Attach concealed clips, hangers, and grounds to wall surfaces and to visual display board assemblies with fasteners at not more than 16 inches (400 mm) o.c. Secure tops and bottoms of boards to walls.

F. Mounting Height for Grades K through Fifth 26 inches (610 mm) above finished floor to top of marker tray.

G. Display Rails: Install rails at mounting heights indicated on Drawings, or if not indicated, at height indicated below. Attach to wall surface with fasteners at not more than 16 inches (400 mm) o.c.

H. Floor-to-Ceiling Tackboard Panels: Attach panels to wall surface in accordance with Forbo’s installation guidelines.

3.4 CLEANING AND PROTECTION

h. Remove temporary protective coatings.

i. Clean visual display units according to manufacturer's written instructions. Attach one removable cleaning instructions label to visual display unit in each room.

j. Touch up factory-applied finishes to restore damaged or soiled areas.

k. Cover and protect visual display units after installation and cleaning.

3.5 FINAL CLEANUP

l. Legally dispose of all packaging and construction debris.

END OF SECTION 10.1100

SECTION 10.1400 – INTERIOR TACTILE SIGNAGE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section

1.1 SECTION INCLUDES

A. Interior panel signs.

1.3 REFERENCES

A. Department of Justice - Title II regulation (28CFR Part 35) and Title III regulation (28 CFR Part 36).
B. ICC/ANSI A117.1 2003 Standard on Accessible and Useable Buildings and facilities or applicable standards of authorities having jurisdiction.
C. ADA Accessibility Guidelines for Buildings and Facilities – ADAAG.

1.4 SUBMITTALS

A. Submit the following according to the Conditions of the Contract and Division 1 Specification Sections.
B. Product Data: Manufacturers descriptive literature for each sign product specified including installation instructions.
C. Shop Drawings: Elevation and plan drawings for each sign type showing: material, thickness, color, design, shape, size, edge, corner; text, Braille and/or pictogram layout, and components.
D. Sample: Provide a sample of each sign product specified to verify compliance with the drawings and specifications.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store products in protective packaging until ready for installation.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. Basis-of Design Product: Subject to compliance with requirements, provide the following or a comparable product by one of the available manufactureres indicated:

1. Provide signs based on ASE, Inc. Product Series: IN 500 – Inlayed Acrylic: Architectural Signs & Engraving, (ASE, Inc.)

B. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be considered to be incorporated into the Work include, but are not limited to, the following:

1. Inpro Corp
2. Identity Group
3. Fast Signs
4. iSign

C. Contractor must submit any product not specified a minimum ten (10) days before the bid date to Architect in order for product to be considered for approval. The Architect will notify Contractor in writing of decision to accept or reject request.

D. Substitutions: Products proposed as equal to the products specified in this Section shall be submitted in accordance with Bidding Requirements and Division 1 provisions.

1. Include a list of three (3) projects of similar type and extent, located within a one hundred mile radius from the location of the project. In addition, the three projects must be at least five (5) years old and be available for inspection by the Architect, Owner or Owner's Representative.

2. Equivalency of performance criteria, warranty terms, submittal procedures, and contractual terms will constitute the basis of acceptance.

3. The Owner's decision regarding substitutions will be considered final. Unauthorized substitutions will be rejected.

2.2 MATERIALS

A. Acrylic sheet: Cast methyl methacrylate monomer plastic sheet
   a. ASTM D790 minimum flexural strength – 16,000 psi.
   b. Maximum continuous temperature – 180 – 200 degrees F.
   c. Matte non-glare finish.

B. Single ply modified acrylic plate.
   d. UV stable.
   e. Matte non-glare finish.

C. Lexan: Polycarbonate resin thermoplastic

2.3 FABRICATION

A. Signs shall comply with the regulations and standards referenced in 10440.1.2.
B. Acrylic sheet shall be CNC cut to specifications with square or radius corners, and/or custom shapes.

C. Identically sized1/32 inch modified acrylic plate shall be adhered to theacrylic plate with a high bond chemical adhesive and the text and/or symbols shall be CNC cut to specifications. Text and/or symbols shall be removed from the sign face.
D. Corresponding text and/or symbols shall be CNC cut from 1/16 inch modified acrylic embedded 1/32 inch and chemically welded to the acrylic plate.
E. Domed grade 2 Braille shall be embedded in the surface.
F. Comply with requirements indicated for material, thickness, color, finish, design, shape, size and details of construction.
G. Text and symbols shall contrast with their background, i.e. light characters on a dark background or dark characters on a light background.

2.4 SIGNS

A. Provide signs in accordance with Section 10440.3.4 (See sign schedule and drawings.)
B. Inlayed acrylic signs:
    a. Text and graphics color to be selected by Architect from manufacturers standard colors.
    b. Background color to be custom color as selected by Architect
    c. Sign size: Refer to sign schedule and/or drawings.
    d. Text size: [5/8 inch high (min)][Size], raised 1/32 inch, with grade 2 Braille below text.
    e. Graphics: International symbols for indicated information.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Verify that substrate has been properly prepared and that surfaces are cured.
B. Notify Architect of unsatisfactory preparation before proceeding.

3.2 INSTALLATION

A. Locate signs where indicated or directed by Architect. Install level and plumb in accordance with manufacturers recommendations.
B. Locate in accordance with Section 10440.1.2.
C. Wall Mounted Signs: Comply with sign manufacturer's written instructions except where more stringent requirements apply

1. Concealed screw mounting: Mount signs by inserting threaded studs into tapped lugs on back of signs. Set in a predrilled holes filled with quick-setting cement.

3.3 PROTECTION

Protect installed products until project completion. Clean signs according to manufacturers instruction.

3.4 SCHEDULES

A. Room identification signage: Provide room identification signs for all rooms listed on the room finish schedules except for the following:

1. Vestibule
2. Corridors
3. Passage

B. Directional Signage: Whether indicated or not, provide directional signage which indicates the route to the nearest like accessible element at the following locations:

1. Inaccessible building entrances
2. Inaccessible public toilets
3. Elevators not serving an accessible route
4. Maximum load occupancy Signage: Provide at all assembly space.

END OF SECTION 10.1400

SECTION 10.1416 - PLAQUES AND SIGNAGE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Exterior Building Letters
2. Interior Building Plaque

1.3 SUBMITTALS

A. Comply with pertinent provisions of Division 1 Section “Submittals.”

B. Product data:

1. Materials list of items proposed to be provided under this Section;
2. Manufacturer's specifications and other data needed to prove compliance with the specified requirements;
3. Manufacturer's data clearly defining the required support and other details of installation to enable proper interface with the work of other trades;
4. Manufacturer's recommended installation procedures.

C. Shop Drawings:

1. Complete full size Shop Drawings of the graphic layout of the work which, when approved by the Architect, will become the basis for accepting or rejecting the actual products. Shop Drawings for plaques shall be submitted in at least three stages (as conceptual layouts, preliminary designs, and final fabrication drawings) and shall be revised and resubmitted at each stage until the Architect's approval is secured for that particular stage of submission. The initial conceptual stage submission shall present at least three alternate concepts for each plaque from which the final design may evolve;

D. Samples: Color samples of manufacturers' full ranges of standard colors.

1.4 QUALITY ASSURANCE

A. Regulatory requirements: All signage shall be in accordance with all applicable government regulations and requirements.

PART 2 – PRODUCTS

2.1 INTERIOR BUILDING PLAQUE

A. Design is based on the use of standard products manufactured by A.R.K. Ramos Architectural Signage Systems, Oklahoma City, Oklahoma. Provide products of specified manufacturer, or equal products by Matthews Architectural Division, Pittsburgh, PA; or Metal Arts, Inc, Division of L&H Manufacturing Co; or alternative products of the quality necessary to meet the specifications.

B. Provide interior cast plaque as follows:
1. 30 inches by 42 inches cast aluminum plaques.
2. Letter style as selected by the Architect from manufactures full range of available fonts. Allow for the use of 700 letters on the plaque.
3. Border style: "504."
4. Background texture: matte.
5. Plaque finish: Satin aluminum raised areas, with gun metal gray background.
6. Mounting method: concealed mounting for masonry.
7. Location: Where indicated on the Drawings or as directed by the Architect.

B. Design and layout will be provided by the Architect from which shop drawings shall be developed. Do not fabricate plaque until final shop drawing approval has been achieved.

2.2 EXTERIOR BACK LIT LETTERS

A. Cast Characters: Characters with uniform faces, sharp corners, and precisely formed lines and profiles, and as follows:
1. Character Material: Cast aluminum.
2. Character Height: As indicated on Drawings.
3. Finishes:
   a. Integral Aluminum Finish: powder coated color as selected by architect.
4. Basis of Design: Cast Aluminum Letters in natural brushed finish by Impact Signs, Inc.

B. Fabricated Channel Characters: Metal face and side returns formed free from warp and distortion; with uniform faces, sharp corners, and precisely formed lines and profiles; internally braced for stability, to meet structural performance loading without oil-canning or other surface deformation, and for securing fasteners; and as follows.
1. Illuminated Characters: Backlighted LED lighting, including transformers, insulators, and other accessories for operability, with provision for servicing and concealing connections to building electrical system. Use tight or sealed joint construction to prevent unintentional light leakage. Space lamps apart from each other and away from character surfaces as needed to illuminate evenly.
   a. Power: As indicated on electrical Drawings.
2. Character Material: Sheet or plate Stainless Steel.
3. Character Height: As indicated on Drawings.
4. Character Depth: 1 inch.
5. Finishes:
   a. As selected by architect from manufacturers full range of colors

6. Mounting: Concealed, painted stainless steel back bar or bracket assembly.
   a. Hold characters at manufacturer's recommended distance from wall surface.
7. Basis of Design: LED Halo Lit Fabricated Metal Channel Letters by Impact Signs, Inc.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions where work of this Section will be performed. Correct unsatisfactory conditions prior to proceeding.

3.2 INSTALLATION

A. Coordinate with other trades to assure proper and adequate provision in the work of those trades for interface with the work of this Section.

B. Install the work of this Section in strict accordance with the manufacturers' recommendations, using only the approved mounting materials, and anchoring all components firmly into position, level and plumb, using approved shop drawings for installation layout.

END OF SECTION 10.1416

SECTION 10.1419 - DIMENSIONAL LETTER SIGNAGE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Cutout dimensional characters.

1.3 COORDINATION

A. Furnish templates for placement of electrical service embedded in permanent construction by other installers.

1.4 SUBMITTALS

A. Submittals for this section are subject to the re-evaluation fee identified in Article 4 of the General Conditions.

B. Manufacturer's/fabricator's installation instructions shall be provided along with product data.

C. Submittals shall be provided in the order in which they are specified and tabbed (for combined submittals).

D. Product Data: For each type of product.

E. Shop Drawings: For signs.

   1. Include fabrication and installation details and attachments to other work.
   2. Show sign mounting heights, locations of supplementary supports to be provided by other installers, and accessories.
   3. Show message list, typestyles, graphic elements, and layout for each sign at least half size.

F. Samples for Initial Selection: For each type of sign assembly, exposed component, and exposed finish.

   1. Include representative Samples of available typestyles and graphic symbols.

G. Samples for Verification: For each type of sign assembly showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:

1. Dimensional Characters: Full-size Sample of dimensional character.
2. Exposed Accessories: Full-size Sample of each accessory type.
3. Full-size Samples, if approved, will be returned to Contractor for use in the Project.

H. Product Schedule: For dimensional letter signs. Use same designations indicated on Drawings or specified.

I. Delegated-Design Submittal: For signs indicated in "Performance Requirements" Article.

1. Include structural analysis calculations for signs indicated to comply with design loads; signed and sealed by the qualified professional engineer, licensed in the State of New York, responsible for their preparation.

J. Qualification Data: For Installer and manufacturer, minimum 5 years' experience with similar projects and materials.

K. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For signs to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: an entity that employs installers and supervisors who are trained and approved by manufacturer/fabricator

1.7 FIELD CONDITIONS

A. Field Measurements: Verify locations of electrical service embedded in permanent construction by other installers by field measurements before fabrication and indicate measurements on Shop Drawings.

1.8 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Deterioration of finishes beyond normal weathering.
b. Separation or delamination of sheet materials and components.

2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, licensed and registered to practice in the State of PA, to design sign structure and anchorage of dimensional character according to structural performance requirements.

B. Structural Performance: Signs and supporting elements shall withstand the effects of gravity and other loads within limits and under conditions indicated.

2.2 DIMENSIONAL CHARACTERS

A. Cutout Characters See Elevation 4/A5.11 Characters with uniform faces; square-cut, smooth**,** eased edges; precisely formed lines and profiles; and as follows:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
   a. Fast Signs
   b. Poyaint Signs
   c. Approved equivalent.

2. Character Material: Walnut Wood.
3. Character Height: As indicated on Drawings.
4. Thickness: 2”
5. Finishes:
   a. Wood stained to match project English Walnut control sample.

6. Mounting: Direct concealed mount.
7. Typeface: Century Gothic.

2.3 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signs, noncorrosive and compatible with each material joined, and complying with the following:

1. Use concealed fasteners and anchors unless indicated to be exposed.

2.4 FABRICATION

A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.

1. Preassemble signs and assemblies in the shop to greatest extent possible. Disassemble signs and assemblies only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.

2. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
3. Internally brace dimensional characters for stability, to meet structural performance loading without oil-canning or other surface deformation, and for securing fasteners.
4. Provide rabbets, lugs, and tabs necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match sign finish.

2.5 GENERAL FINISH REQUIREMENTS

A. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

B. Directional Finishes: Run grain with long dimension of each piece and perpendicular to long dimension of finished trim or border surface unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Verify that sign-support surfaces are within tolerances to accommodate signs without gaps or irregularities between backs of signs and support surfaces unless otherwise indicated.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.

1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
2. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.

B. Mounting Methods:

1. Concealed Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.

a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place sign in position and push until flush to surface, embedding studs in holes. Temporarily support sign in position until adhesive fully sets.

b. Thin or Hollow Surfaces: Place sign in position and flush to surface, install washers and nuts on studs projecting through opposite side of surface, and tighten.

3.3 ADJUSTING AND CLEANING

A. Remove and replace damaged or deformed characters and signs that do not comply with specified requirements. Replace characters with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.

B. Remove temporary protective coverings and strippable films as signs are installed.

C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect them from damage until acceptance by the Director’s Representative.

END OF SECTION 10.1419

SECTION 10.1453 - POST MOUNTED SIGNS

PART 1 GENERAL

1.01 SECTION DESCRIPTION

A. This work is the furnishing and installation Post Mount Signs Type A, Type B, and Type C as identified in the Pennsylvania Department of Transportation Publication 408 Specifications, latest edition; Publication 72 Standards for Roadway Construction, latest edition; and Publication 111 Traffic Control – Pavement Markings and Signing Standards.

1. Post Mounted Signs Type A - This work is furnishing, and installation of fabricated aluminum signs of the type indicated on steel S or W beam posts and breakaway system per PennDOT Pub 408, Section 930.

2. Post Mounted Signs Type B - This work is furnishing and installation of flat sheet signs on breakaway steel posts per PennDOT Pub 408, Section 931.

3. Post Mounted Signs Type C - This work is the furnishing and installation of flat sheet signs on wood posts per PennDOT Pub 408, Section 932.

PART 2 PRODUCTS

2.01 MATERIAL

A. Materials used shall be in accordance with Sections 1103.02, 1103.03, 1103.04, 1103.07, 1103.08, 1103.09, 1103.11, and 1105.02 of PennDOT Publication 408 related to applicable Post Mounted Sign Type.

PART 3 EXECUTION

3.01 CONSTRUCTION

A. Installation as shown in Publication 111 Traffic Control – Pavement Markings and Signing Standards and described in Publication 408 Specifications.

1. Type A - Erect posts plumb using a method that does not twist, bend or otherwise deform the posts. Before erection, correct twisted, bent, or deformed posts. Erect signs by a method that does not twist, bend, or otherwise deform the signs. Level, correctly align, and then center signs on the posts and properly fasten. Repair or replace damaged posts and signs. Fasten the signs to the posts with the necessary hardware as detailed in TC-8700 Series.

2. Type B - Drive anchors into undisturbed earth with anchor top a maximum of 4 inches above lower slope side. Drill concrete if posts are to be located in concrete areas. Drive square anchor into undisturbed earth and place concrete if square steel posts are used in concrete. Complete installation after concrete is cured a minimum of 72 hours. Fasten STOP and YIELD signs, and other signs if indicated, to posts with anti-theft hardware. Permanently scribe 1-inch numerals on back of sign indicating the month and year of installation. Remove and dispose of existing signs or sign installations, only when indicated or as directed by Owner.

3. Type C - Excavate for the post foundation. Place the post, with shim plates and bars attached, in the sleeve in the excavated foundation. Carefully set the sleeve, using the

temporary framing to ensure proper location. Place foundation concrete, as specified in the applicable parts of Section 1001.3, against undisturbed earth. Finish the foundation tops flush and in the same plane as the adjacent ground, except trowel the concrete surface and shape to prevent water standing against the posts. Drill or form the hole if posts are to be located in concrete such as divisors or islands. Limit field cutting of posts to a minimum. Field treat the cut area with the original post preservative. Where multiple sign assemblies on the same installation require larger posts than shown on the Standard Drawings, refer to the Standard Drawings for post mounted signs, Type E. Permanently scribe 1-inch numerals on back of sign indicating the month and year of installation

B. Location

The indicated location of sign installations is approximate with the exact location established at the site. Mark longitudinal and lateral location by stake or paint marks with an identifying symbol. Install posts and signage at required roadway setback and height clearance per PennDOT Pub 111, TC-8700 Series.

END OF SECTION

SECTION 10.2113 – TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Solid plastic toilet compartments including the following:

1. Floor mounted overhead-braced toilet compartments.
2. Privacy screens.

1.2 RELATED SECTIONS

A. Section 05.5000 - Metal Fabrications.

B. Section 06.1000 - Rough Carpentry.

1.3 REFERENCES

A. ASTM A 666 - Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.

B. ASTM B 221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

C. National Fire Protection Association (NFPA) 286 - Standard Methods of Fire Tests for Evaluating Contribution of Wall and Ceiling Interior Finish to Room Fire Growth.

D. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.4 SUBMITTALS

A. Submit under provisions of Section 01.3000 - Administrative Requirements.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Shop Drawings: Provide layout drawings and installation details with location and type of hardware required.

D. Verification Samples: For each finish product specified, two samples representing actual product, color, and patterns.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: A company regularly engaged in manufacture of products specified in this section, and whose products have been in satisfactory use under similar service conditions for not less than 5 years.

B. Installer Qualifications: A company regularly engaged in installation of products specified in this Section, with a minimum of 5 years experience.

C. Materials: Doors, panels and pilasters, constructed from high density polyethylene (HDPE) resins. Partitions to be fabricated from polymer resins compounded under high pressure, forming a single component which is waterproof, nonabsorbent and has a self-lubricating surface that resists marks from pens, pencils, markers and other writing instruments. Cover all plastic components with a protective plastic masking.

D. Performance Requirements:

1. Fire Resistance: Partition materials shall comply with the following requirements, when tested in accordance with ASTM E 84:
    a. Class A flame spread/smoke developed rating.
    b. Class B flame spread/smoke developed rating.
2. Material Fire Ratings:
    a. National Fire Protection Association (NFPA) 286: Pass.
    b. International Code Council (ICC): Class B.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

1.7 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.8 WARRANTY

A. Manufacturer guarantees its plastic against breakage, corrosion, and delamination under normal conditions for 25 years from the date of receipt by the customer. If materials are found to be defective during that period for reasons listed above, the materials will be replaced free of charge. Labor not included in warranty.

PART 2 – PRODUCTS

2.1 MANUFACTURER

A. Basis of Design: Basis of Design: Hiny Hiders Toilet Partitions as manufactured by and supplied by Scranton Products.

B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, the following:

1. ASI Partitions.
2. General Partitions.
3. Metpar.

2.2 MATERIAL

A. Plastic Panels: High density polyethylene (HDPE) suitable for exposed applications, waterproof, non-absorbent, and graffiti-resistant textured surface.

1. Recycled Content; Post Industrial: 25 percent.
2. Recycled Content; Post Industrial: 100 percent.
3. Recycled Content; Post Consumer: 100 percent.

B. Zinc Aluminum Magnesium and Copper Alloy (Zamac): ASTM B 86.

C. Stainless Steel Castings: ASTM A167, Type 304.

D. Aluminum: ASTM 6463-T5 alloy.

2.2 SOLID PLASTIC TOILET COMPARTMENTS

A. Basis of Design: Hiny Hiders Toilet Partitions as manufactured by and supplied by Scranton Products.
1. Style: Floor mounted overhead-braced toilet compartments.

B. Doors, Panels, and Pilasters: 1 inch (25 mm) thick with all edges rounded to a radius. Mount doors and dividing panels based on height of specified system.
1. Door and Panel Height: 55 inches (1397 mm).
2. Aluminum heat sink fastened to bottom edges.
3. Door: Flat
4. Panel Edge: Standard.
5. Pilasters: 82 inches (2083 mm) high and fastened to floor.

C. Panel Color: Traditional Series.
1. As indicated on the Drawings in the Design Selection Summary.

D. Pilaster Shoes: 3 inches (76 mm) high type 304, 20 gauge stainless steel. Secured to pilasters with a stainless steel tamper resistant Torx head sex bolt.

E. Headrail: Heavy-duty extruded 6463-T5 alloy aluminum with anti-grip design. Finish to be clear anodized. Fastened to headrail brackets with stainless steel tamper resistant Torx head sex bolt, and fastened at the top of the pilaster with stainless steel tamper resistant Torx head screws.

1. Headrail Brackets: 20 gauge stainless steel with satin finish. Secured to the wall with stainless steel tamper resistant Torx head screws.

F. Wall Brackets:

1. Stainless Steel Brackets: Stainless steel type 304.
2. Brackets are fastened to pilasters with stainless steel tamper resistant Torx head screws and fastened to the panels with stainless steel tamper resistant Torx head sex bolts.
3. Bracket Type: Stirrup stainless steel double ear.
4. Bracket Type: Stirrup stainless steel single ear.

G. Door Hardware:

1. Continuous Aluminum Hinge:
    a. Length: 54 inches (1372 mm).
2. Wrap-Around Hinges: 8 inches (203 mm) and fabricated from heavy-duty extruded aluminum. Hinges are through-bolted to pilasters and doors with stainless steel tamper resistant Torx head sex bolts. Hinges operate with field adjustable nylon cams. Cams can be field set in 30, 60 or 9 degree increments.
3. Door Strike/Keeper: Heavy-duty extruded aluminum 6436-T5 alloy with a bright dip anodized finish. Secured to pilasters with stainless steel tamper resistant Torx head sex bolts. Bumper shall be made of extruded black vinyl.
    a. Style: 6 inches (152 mm) aluminum.
4. Aluminum Slide Bolt Latch and Housing: Heavy-duty extruded 6463-T5 alloy aluminum. Latch and housing to have a bright dip anodized finish. Slide bolt and button to have a black anodized finish.
5. Doors supplied with one coat hook/bumper and door pull made of chrome plated Zamak.
6. Equip outswing handicapped doors with second door pull and door stop.

2.3 SOLID PLASTIC PRIVACY SCREENS

A. Provide plastic privacy screens in urinal and entry toilet room applications as indicated or scheduled.

B. Panels, and pilasters, if required, 1 inch (25 mm) thick with edges rounded to a radius. Screens to be mounted at 14 inches (356 mm) above the finished floor. Color as selected by Architect from manufacturer's full line of current colors.

1. Aluminum heat sink fastened to bottom edges.
2. Recycled content: Minimum 25 percent.

C. Screen Type: Wall mounted.

1. Urinal Screens: 24 inches (610 mm) wide by 42 inches (1067 mm) high.

D. Wall Brackets: Extruded PVC plastic. Fastened to the panel/pilaster with stainless steel tamper resistant torx head screws and fastened to wall with stainless steel tamper resistant torx head sex bolts.

1. Length of Wall Brackets: 41 inches (1041 mm).
2. Bracket Color: Grey.

E. Aluminum Slide Bolt Latch and Housing: Heavy-duty extruded 6463-T5 alloy aluminum. Latch and housing to have a bright dip anodized finish. Slide bolt and button to have a black anodized finish.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Examine areas to receive toilet partitions, screens, and shower compartments for correct height and spacing of anchorage/blocking and plumbing fixtures that affect installation of partitions. Report discrepancies to the architect.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install partitions rigid, straight, plumb, and level manor, with plastic laid out as shown on shop drawings.

C. Clearance at vertical edges of doors shall be uniform top to bottom and shall not exceed 3/8 inch (9.5 mm).

D. No evidence of cutting, drilling, and/or patching shall be visible on the finished work.

E. Finished surfaces shall be cleaned after installation and be left free of imperfections.

3.4 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION 10.2100

SECTION 10.2123 - CUBICLE CURTAINS AND TRACK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply in this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Curtain tracks and curtain carriers.
2. Cubicle curtains.

B. Related Sections include the following:

1. Division 6 Section "Rough Carpentry" for wood blocking for mounting items requiring anchorage.
2. Division 9 Section "Acoustical Ceilings".

1.3 SUBMITTALS

A. Comply with pertinent provisions of Division 1 Section “Submittals.”

B. Product data:

1. Materials list of items proposed to be provided under this Section;
2. Manufacturer's specifications and other data needed to prove compliance with the specified requirements;
3. Manufacturer's recommended installation procedures.

C. Shop Drawings: Dimensioned drawings in sufficient detail to show suspension, layout, lateral restraint, installation, anchorage, and interface of the work of this Section with the work of adjacent trades.

D. Samples: Samples of each item in full range of colors and patterns available in the specified grades from the proposed manufacturers for selection by the Architect.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Design is based on the use of standard products manufactured by General Cubicle Company, Inc., Telford, PA.

B. Provide products meeting the requirements of these specifications as manufactured by:
   a. Watrows Division of Lansbric Corp., Northbrook, IL;
   b. Beltor Manufacturing Corp., Berlin, NJ;
   c. Imperial Fastener Company, Pompano Beach, FL.

2.2 TRACK AND CARRIERS

A. Where indicated on the Drawings, provide extruded dual channel track and carriers with the following attributes:

1. Track material: 6063-T5 satin finish aluminum;
2. Size: 1-3/8 inches wide by 3/4 inch deep with 1/16 inch minimum wall thickness;
3. Installation: Surface mount;
4. Fastening: Maximum 2 feet on center;
5. Carriers: General Carrier #1062N, nylon axle and wheel combination with nickel plated brass bead chain and hook assembly, one for each foot of track;
6. Other: Provide carrier gates, carrier stops, splices, bends, fasteners, fire-resistive treated blocking, hanger wire, and other standard accessories, as required.

2.3 CUBICLE CURTAINS

A. At each track location shown on the Drawings provide nylon mesh topped curtains with the following attributes:

1. Curtain material: “Oxford Cloth”, 100 percent "Avora FR Polyester, 13.5 ounces per lineal yard, 100 percent washable fabric, complying with NFPA 701 standards, as manufactured by Interspec Fabrics, Allenwood, NJ;
2. Nylon top material: "Mesh 'B'", 100 percent nylon washable mesh with ½ inch openings and flame retardant finishing;
3. Curtains shall be minimum 15 percent wider than total track length and shall hang to within 15 inches of finished flooring;
4. Nylon top width shall be standard 21 inches.
5. Provide in colors and patterns as selected by the Architect from manufacturer’s full range of standard colors and patterns.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Coordinate as required with other trades to assure proper and adequate provision in the work of those trades for interface with the work of this Section.

B. Install the work of this Section, anchoring all components firmly into position, in strict accordance with the original design, the approved Shop Drawings, and the manufacturer's recommended installation procedures and the following:
1. Attach track directly to heavy duty suspended ceiling T-bars at maximum 2 feet centers with #8 panhead sheet metal screws;
2. Where T-bar spacing exceeds 2 feet centers, provide minimum 2 by 3 fire-resistive treated wood blocking between ceiling runners to support track;
3. Provide hanger wire supports to the structure above at each point of track attachment.

C. Adjust installation for smooth and easy operation.

END OF SECTION 10.2123

SECTION 10.2600 – CORNER GUARDS

PART 1 – GENERAL

1.01 SUMMARY
- A. Corner guard system for wall protection:

1.02 SECTION INCLUDES
- A. Stainless Steel Corner Guard Systems

1.03 SUBMITTALS
- A. Product data for each type of corner guard specified.
- B. Detail drawings indicating mounting details with the appropriate fasteners for specific project substrates.
- C. Samples for verification purposes of corner guard, 6" (152mm) long, in full size profiles of each type and color indicated.
- D. Cleaning and maintenance instructions for door and wall protection systems.

1.04 DELIVERY, STORAGE AND HANDLING
- A. Deliver materials in unopened factory packaging to the jobsite and store in original packaging in a climate controlled location away from direct sunlight.

1.05 PROJECT CONDITIONS
- A. Products must be installed in an interior climate controlled environment.

1.06 WARRANTY
- A. Standard IPC Limited Lifetime Warranty against material and manufacturing defects.

PART 2 – PRODUCTS

2.01 MANUFACTURER
- A. Basis-Of-Design Product: Inpro Corporation, IPC Door and Wall Protection Systems PO Box 406 Muskego, WI 53150 USA; Telephone: 800.222.5556, Fax: 888.715.8407, Website: www.inprocorp.com.
  1. Submit comparable products of one the following for approval by architect:
     a. Insert name of manufacture of comparable product
     b. Submit requests for substitution in accordance with Instructions to Bidders and Division 01 General Requirements
     c. Alternate Manufacturers: Wolf Gordon, CSI Construction Specialties

2.02 MANUFACTURED UNITS

A. Corner Guards
   1. SS Corner Guards:
      a. 1½"(38mm) x 1½"(38mm) x 96" (2.43m) x ⅛" radius, Screw-on, 304 Stainless Steel, 16 gauge - SAS-181128H-304

2.03 MATERIALS
A. Stainless Steel: Corner Guards shall be manufactured from Type 430, 16 gauge Stainless Steel.

2.04 COMPONENTS
A. Attachment
   1. Fasteners: Pre-drilled beveled holes and Phillips head screws.

2.05 FINISHES
A. Stainless steel: No. 4 satin finish.

PART 3 – EXECUTION

3.01 EXAMINATION
A. Examine areas and conditions in which the corner guard systems will be installed.
   1. Complete all finishing operations, including painting, before beginning installation of corner guards.
B. Wall surface shall be dry and free from dirt, grease and loose paint.

3.02 PREPARATION
A. Surface Prep: Prior to installation, clean the substrate to remove dust, debris and loose particles. Ensure the substrate is sound and per project plans.
B. Acclimate product in temperatures between 65°F and 80°F [18°-27°C] and a humidity level less than 80% 24 hours in advance of installation.
C. The area of installation must temperature and humidity controlled for at least 48 hours after installation.

3.03 INSTALLATION
A. General: Locate the corner guard as indicated on the approved detail drawing for the appropriate substrate and in compliance with the IPC installation instructions. Install corner guard level and plumb at the height indicated on the drawings.
B. Installation of Stainless Steel Corner Guards:
   1. Surface must be dry, clean and properly sealed.

2. Cement on: Apply a bead of PL Premium Heavy Duty Adhesive in a zigzag pattern over the back of each wing of the corner guard. Position corner guard on the wall and apply pressure until a tight fit is achieved.
3. Screw on: Position the corner guard on the wall and attach it using the supplied screws.
4. Remove the protective plastic covering from the exposed surface of the corner guard.

3.04 CLEANING

A. At completion of the installation, clean surfaces in accordance with the IPC clean up and maintenance instructions.

END OF SECTION 10.2600

SECTION 10.2813 – TOILET ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Washroom accessories.
2. Custodial accessories.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated. Include the following:

1. Construction details and dimensions.
2. Anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.
3. Material and finish descriptions.
4. Features that will be included for Project.
5. Manufacturer's warranty.

B. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required.

1. Identify locations using room designations indicated on Drawings.
2. Identify products using designations indicated on Drawings.

C. Maintenance Data: For toilet and bath accessories to include in maintenance manuals.

1.3 QUALITY ASSURANCE

A. Source Limitations: For products listed together in the same articles in Part 2, provide products of same manufacturer unless otherwise approved by Architect.

1.4 COORDINATION

A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.

B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.

1.5 WARRANTY

A. Special Mirror Warranty: Manufacturer's standard form in which manufacturer agrees to replace mirrors that develop visible silver spoilage defects and that fail in materials or workmanship within specified warranty period.

1. Warranty Period: 15 years from date of Substantial Completion.

PART 2 – PRODUCTS

2.1 MATERIALS

A. Stainless Steel: ASTM A 666, Type 304, 0.0312-inch (0.8-mm) minimum nominal thickness, unless otherwise indicated.

B. Steel Sheet: ASTM A 1008/A 1008M, Designation CS (cold rolled, commercial steel), 0.0359-inch (0.9-mm) minimum nominal thickness.

C. Galvanized Steel Sheet: ASTM A 653/A 653M, with G60 (Z180) hot-dip zinc coating.

D. Galvanized Steel Mounting Devices: ASTM A 153/A 153M, hot-dip galvanized after fabrication.

E. Fasteners: Screws, bolts, and other devices of same material as accessory unit and tamper-and-theft resistant where exposed, and of galvanized steel where concealed.

F. Finish: Satin Stainless

G. Mirrors: ASTM C 1503, Mirror Glazing Quality, clear-glass mirrors, nominal 6.0 mm thick.

2.2 TOILET ROOM / WASHROOM ACCESSORIES

A. Basis-of-Design Products: The design for accessories is based on products indicated on the Toilet Accessories Schedule on the drawings. Subject to compliance with requirements, provide the named product or a comparable product by one of the available manufacturers indicated.

a. Basis-of-Design Products by Bobrick Washroom Equipment, Inc.

B. Available Manufacturers: The design for accessories is based on products indicated on the Toilet Accessories Schedule. Subject to compliance with requirements, provide the named product or a comparable product by one of the following:

a. American Specialties, Inc. (ASI)

b. Bradley Corporation.

C. Toilet Accessories Schedule: Provide toilet accessories where shown on Drawings or as provided in these specifications. Provide products of the same manufacturer for each type of accessory unit and for units exposed in the same area.

D. Toilet accessories shall be of the quality as manufactured by Bobrick. The accessories which are indicated on the drawings are listed with Bobrick catalog numbers for convenience in identifications only. The use of a catalog numbers as a description of an item shall be taken to include the description or specification for the item in the manufacturer's catalog.

E. In addition to the accessories scheduled on the Drawings, provide the following accessories at locations as directed by the Architect.

   a. Mop and Broom Holder (B223 x 36)

   b. Quantity: 4.

2.3 FABRICATION

A. General: Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.

B. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to Owner's representative.

PART 3 – EXECUTION

3.1 INSTALLATION

A. Install accessories according to manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.

B. Grab Bars: Install to withstand a downward load of at least 250 lbf (1112 N) when tested according to method in ASTM F 446.

C. Provide solid wood blocking or 12 gauge steel anchor plates behind gypsum board surfaces at each toilet accessory for secure anchorage.

D. Secure mirrors to walls in concealed, tamperproof manner with special hangers, toggle bolts, or screws. Set units plumb, level, and square at locations indicated, according to manufacturer's instructions for type of substrate involved.32

3.2 ADJUSTING AND CLEANING

A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.

B. Remove temporary labels and protective coatings.

C. Clean and polish exposed surfaces according to manufacturer's written recommendations

END OF SECTION 10.2813

SECTION 10.4400 – FIRE PROTECTION SPECIALTIES

PART 1 – GENERAL

1.1 SUMMARY

A. Section Includes:

1. Section includes portable, hand-carried, fire extinguishers, and mounting brackets for fire extinguishers.

2. Section includes fire protection cabinets for the following:
   a. Portable fire extinguishers.
   b. Fire Protection Cabinets

B. Related Sections:

1. Division 10 Section "Signage" for directional signage to out-of-sight fire extinguishers and cabinets.
2. Division 26 Sections or the Drawings for low-voltage wiring for fire protection cabinet alarms.
3. Division 26 Section "Interior Lighting" or the Drawings for fire extinguisher location lights.

1.2 SUBMITTALS

A. Product Data:

1. Fire Extinguishers: For each type of product indicated. Include rating and classification, material descriptions, dimensions of individual components and profiles, and finishes for fire extinguisher and mounting brackets.

2. Fire Protection Cabinets: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for fire protection cabinets. Include roughing-in dimensions, details showing mounting methods, relationships of box and trim to surrounding construction, door hardware, cabinet type, trim style, and panel style.

B. Product Schedule: For fire extinguishers and fire protection cabinets.

1. Coordinate final fire extinguisher schedule with fire protection cabinet schedule to ensure proper fit and function.

2. Coordinate final fire protection cabinet schedule with fire extinguisher schedule to ensure proper fit and function

C. Operation and Maintenance Data: For fire extinguishers and fire protection cabinets to include in maintenance manuals.

D. Shop Drawings: For fire protection cabinets. Include plans, elevations, sections, details, and attachments other work.

E. Samples for Initial Selection: For each type of fire protection cabinet indicated.

F. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:

1. Size: 6 by 6 inches (150 by 150 mm) square.

G. Warranty: Sample of special warranty.

1.3 QUALITY ASSURANCE

A. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."

B. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.

1. Provide fire extinguishers approved, listed, and labeled by FMG.

C. Fire-Rated, Fire Protection Cabinets: Listed and labeled to comply with requirements in ASTM E 814 for fire-resistance rating of walls where they are installed.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to fire extinguishers including, but not limited to, the following:

a. Schedules and coordination requirements.

2. Review methods and procedures related to fire protection cabinets including, but not limited to, the following:

a. Schedules and coordination requirements.

1.4 COORDINATION

A. Coordinate type and capacity of fire extinguishers with fire protection cabinets to ensure fit and function.

B. Coordinate size of fire protection cabinets to ensure that type and capacity of fire hoses, hose valves, and hose racks indicated are accommodated

C. Coordinate sizes and locations of fire protection cabinets with wall depths.

1.5 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
    a. Failure of hydrostatic test according to NFPA 10.
    b. Faulty operation of valves or release levers.
2. Warranty Period: Six years from date of Substantial Completion.

PART 2 – PRODUCTS

2.1 PORTABLE FIRE EXTINGUISHERS

A. Multi–purpose dry chemical fire extinguishers, 4A:60B:C UL rating:
1. Larsen's Manufacturing Company, Model "MP10".
2. Potter Roemer, Model Number 3010.
3. Or alternative of the quality necessary to meet the specifications.

B. Carbon dioxide fire extinguishers, 10B:C UL rating:
1. Larsen's Manufacturing Company, Model "CD 10."
2. Potter Roemer, Model Number "3410."
3. Or alternative of the quality necessary to meet the specifications.

C. Wet chemical fire extinguishers, 2A-K UL rating for use in kitchens:
1. Larsen's Manufacturing Company, Model "WC-6L."
2. Or alternative of the quality necessary to meet the specifications.

D. Where indicated on the Drawings, and at each fire extinguisher cabinet, provide one multi-purpose dry chemical fire extinguisher with UL rating.

E. Provide four carbon dioxide fire extinguishers with UL rating to be located by Architect.

F. Provide wet chemical fire extinguishers with UL rating at all Kitchens.

G. Provide manufacturer's standard wall mounting brackets for all portable fire extinguishers except those furnished in cabinets.

H. Service, charge, and tag each fire extinguisher not more than five calendar days prior to the Date of Substantial Completion of the Work as that Date is established by the Architect.

2.1 FIRE PROTECTION CABINET (FEC)

A. Cabinet Type: Suitable for fire extinguisher.

1. Basis of Design Cabinet Type: The following cabinet(s) are listed with a specific manufacturer's catalog number for convenience in identification only. The use of a catalog number as a description of the cabinet shall be taken to include the specification for the item. Equal products from the available manufacturers listed in this section will be acceptable.
    a. Larsen's "Cameo Series #C2409-R" (Fully recessed - flat trim) or "Cameo Series #FSC2409-R" (Fully recessed - flat trim) in all fire-rated walls.
    b. J. L. Industries' "Clear VU Series #1515-G25" (Fully recessed - flat trim) or "Clear VU Series #1515-G25FX" (Fully recessed - flat trim) in all fire-rated walls.
    c. Cabinet bubble projection cannot exceed 4 inches.

2. Available Manufacturers: Subject to compliance with requirements, manufacturers whose products may be considered to be included in the Work, include:

    a. J. L. Industries, Inc.; a division of Activar Construction Products Group.
    b. Kidde Residential and Commercial Division; Subsidiary of Kidde plc.
    c. Larsen's Manufacturing Company.
    d. Modern Metal Products, Division of Technico, Inc.
    e. Potter Roemer LLC.

B. Cabinet Construction: Manufacturer's standard enameled steel box, with trim, frame, door and hardware to suit cabinet type, trim style, and door style indicated. Weld all joints and grind smooth. Miter and weld perimeter door frames.

C. Fire-rated Cabinet Construction:

1. Construct fire-rated cabinets with double walls fabricated from 0.0428-inch- (1.1-mm-) thick, cold-rolled steel sheet lined with minimum 5/8-inch- (16-mm-) thick, fire-barrier material. Provide factory-drilled mounting holes.

D. Cabinet Material:

1. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.
2. Acrylic Bubble: One piece.

E. Fully Recessed Cabinet: Cabinet box recessed in walls of sufficient depth to suit style of trim indicated.

1. Trimless with Concealed Flange: Surface of surrounding wall finishes flush with exterior finished surface of cabinet frame and door, without overlapping trim attached to cabinet. Provide recessed flange, of same material as box, attached to box to act as drywall bead.
2. Trimless with Hidden Flange: Flange of same metal and finish as box overlaps surrounding wall finish And is concealed from view by an overlapping door.
3. Exposed Flat Trim: One-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend).

F. Cabinet Trim Material: Steel sheet.

G. Door Material: Steel sheet.

H. Door Style: JL Indust. “Clear VU Series, or Larsen's "Cameo Series (Full bubble with frame).

I. Door Glazing: Molded acrylic bubble.

1. Acrylic Bubble Color: Clear, transparent.

J. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.

1. Provide projecting lever handle with cam-action latch or recessed door pull and friction latch.
2. Provide continuous hinge, of same material and finish as trim, permitting door to open 180 degrees.

K. Accessories:

1. Mounting Bracket: Manufacturer's standard steel, designed to secure fire extinguisher to fire protection cabinet, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish..
2. Door Lock: Cam lock that allows door to be opened during emergency by pulling sharply on door handle.
3. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated.
    a. Identify fire extinguisher in fire protection cabinet with the words "FIRE EXTINGUISHER."
        1) Location: Applied to cabinet door.
        2) Application Process: Silk-screened.
        3) Lettering Color: As selected by Architect.
        4) Orientation: Vertical.

L. Finishes:

1. Manufacturer's standard baked-enamel paint for the following:
    a. Exterior of cabinet, door, and trim except for those surfaces indicated to receive another finish.
    b. Interior of cabinet and door.
2. Steel: Baked enamel or powder coat.

2.2 FABRICATION

A. Fire Protection Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.

1. Weld joints and grind smooth.
2. Provide factory-drilled mounting holes.
3. Prepare doors and frames to receive locks.
4. Install door locks at factory.

B. Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles selected.

1. Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 1/2 inch (13mm) thick.
2. Fabricate door frames of one-piece construction with edges flanged.
3. Miter and weld perimeter door frames.

C. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

2.3 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces of fire protection cabinets from damage by applying a strippable, temporary protective covering before shipping.

C. Finish fire protection cabinets after assembly.

D. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.4 FIRE PROTECTION CABINET STEEL FINISHES

A. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, complying with.After cleaning, apply a conversion coating suited to the organic coating to be applied over it.

B. Factory Prime Finish: Apply manufacturer's standard, fast-curing, lead- and chromate-free, universal primer immediately after surface preparation and pretreatment.

C. Baked-Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils.

1. Color and Gloss: As selected by Architect from manufacturer's full range.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine walls and partitions for suitable framing depth and blocking where recessed cabinets will be installed.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Examine fire extinguishers for proper charging and tagging.

1. Remove and replace damaged, defective, or undercharged fire extinguishers.
2. Proceed with installation of fire extinguishers only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare recesses for recessed fire protection cabinets as required by type and size of cabinet and trim style.

3.3 INSTALLATION OF FIRE PROTECTION CABINETS

A. General: Install fire protection cabinets in locations and at mounting heights indicated or, if not indicated, at heights acceptable to authorities having jurisdiction.

END OF SECTION 10.4400

SECTION 10.5030 – TURNOUT GEAR LOCKERS

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Design, fabrication and installation of wall mounted turnout gear lockers as specified herein.

B. Design, fabrication and installation mobile turnout gear lockers as specified herein.

1.2 RELATED SECTIONS

A. Division 00 Section “ARRA Grant Requirements” for “The Buy American Act” requirements as applicable.

B. Section 10: Metal Lockers.

C. Sections of Division 16: electrical as applicable.

1.3 SUBMITTALS

A. Product Data: Submit manufacturer’s product data and installation instructions.

B. Shop Drawings: Submit manufacturer’s shop drawings for each individual run of lockers.

C. Samples: Submit manufacturer’s standard color samples.

D. Owner’s Manual: Provide maintenance manual at closeout.

E. Warranty: Submit manufacturer’s standard warranty.

1.4 QUALITY ASSURANCE

A. Manufacturer shall have a minimum of fifteen years experience in the direct manufacture of lockers.

B. Installer Qualifications: Installer shall have experience necessary to assure lockers are installed properly and according to manufacturer’s instructions.

C. Reference:

1. ASTM A513 – Minimum properties of Electric-Resistance-Welded Carbon Allow Steel Mechanical Tubing

2. ASTM A510 - Minimum properties of Wire Rods and Coarse Round Wire, Carbon Steel and Alloy Steel

1.5 DELIVERY, STORAGE AND HANDLING

A. Delivery: Deliver materials to site in manufacturer's original, unopened containers with labels identifying product and manufacturer's name.

B. Storage: Store materials in a clean dry area.

C. Handling: Protect materials and finish during installation and handling to prevent damage.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Acceptable Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. GearGrid Corporation, 670 SW 15th Street, Forest Lake, MN 55025. Toll-free 888-643-6694. Phone 651-464-4468. Fax 651-464-4780. Web site www.geargrid.com. Email sales@geargrid.com.

2. DS fabrications : Locker: Supreme WM

3. Global Industrial, Locker: Red Rack

2.2 TURNOUT GEAR LOCKER FABRICATION

A. Model: GEARGRID Wall Mounted Storage System.

B. Locker Sizes: (Please reference project drawings for indicated sizes and quantity)

1. Widths: 20", 24"

2. Depths: 20"

3. Height: 74.5”

C. Model: GEARGRID Mobile Unit

1. 4-pack unit having 4 openings on each side back-to-back

a. 20” unit overall dimensions: 83” high x 43” wide x 39” deep

b. see drawings for quantity

1. 2-pack unit having 2 openings on one side

a. 20” unit overall dimensions: 83” high x 43” wide x 20” deep

b. see drawings for quantity

D. Construction: Units shall be welded at all applicable joints. Forming of metal shall be completed by standard cold-forming operations. Use of fasteners will only be required to allow for knock-down shipping, securing units to mounting surface and on applicable accessories.

E. Vertical Dividers:

1. Outer Frames: 1.25” O.D. x 16 gauge wall thickness ASTM A513 steel tubing.

2. Inner Grid: .25” diameter ASTM 510 cold drawn steel wire resistance welded to a 3” square pattern.

3. Inner Grid wires must be full length and width of inside vertical divider frame. Wires not running full length or width, thus creating exposed wire ends will not be acceptable.

4. Inner Grid wires must run horizontally and vertically creating a square or rectangular grid pattern only. Grid wires not creating a square or rectangular grid pattern will not be acceptable.

5. Inner Grid wires shall intersect and cross all perpendicular wires, and shall be welded at all intersections.

F. Back Panel:

1. Required on each locker to protect the locker contents and wall substrate, as well as provide an additional panel for accessory attachment.

2. Grid: .25" diameter ASTM 510 cold drawn steel wire resistance welded to a 3" square pattern.

3. Back panel must engage and be secured to vertical dividers via horizontal wires which extend into mounting holes pre-drilled in vertical dividers. Back panels are sandwiched between vertical dividers, preventing them from being removed after assembly is complete.

4. Inner Grid wires must be full length and width of inside vertical divider frame. Wires not running full length or width, thus creating exposed wire ends will not be acceptable.

6. Inner Grid wires must run horizontally and vertically creating a square or rectangular grid pattern only. Grid wires not creating a square or rectangular grid pattern will not be acceptable.

5. Inner Grid wires shall intersect and cross all perpendicular wires, and shall be welded at all intersections.

G. Shelves: (1) Upper, (1) Lower. .25" diameter ASTM 510 cold drawn steel wire resistance welded and cold formed. Upper shelf shall include an integrated 20 gauge steel bracket to accept a 2" x 16" name placard(not included), unless doors are selected as an option, in which case the name placard holder will be integrated into the door.

H. Apparel Hooks: (3) per locker opening. .192" diameter ASTM 510 cold drawn steel wire resistance welded, cold formed and powder coated. Apparel hooks must securely engage and snap onto side or back grid, to prevent unintentional disengagement of hook.

I. Base Assembly for Mobile Unit: Base frame shall be manufactured from 1.25" x 11 gauge wall thickness ASTM A513 square steel tubing. Each unit to be supplied with four (4) casters per unit. Casters to have a 250 lbs. capacity per each caster. Each caster is a swivel model with brake.

2.3 ACCESSORIES

A. Hang Bar

1. Hang Bars must be manufactured to allow each locker user to install at their desired height. Hang Bars that span multiple locker openings are not acceptable.

2. Tube: 1.25”O.D. x 16 gauge 304 stainless steel tubing.

3. Brackets: Allow Hang Bars to be securely attached to each vertical divider, powder coated.

C. Heavy Hanger:

1. .25” diameter 304 stainless steel wire cold formed and resistance welded.

2. Black vinyl coating on hook end.

D. Gear Dryer Hanger:

1. .25” diameter 304 stainless steel wire cold formed and resistance welded. Includes formed loops to prop open sleeves on jackets to promote better circulation throughout the garment.

2. Black vinyl coating on hook end.

E. Glove Drying Hanger:

1. .25” diameter 304 stainless steel wire cold formed and resistance welded.

2. Black vinyl coating on hook end.

F. Helmet Holder

1. .25” diameter ASTM 510 cold drawn steel wire resistance welded. Powder coated finish in specified color.

G. Secure Box:

1. 6” wide x 6” high x 12” deep 6061 Aluminum enclosure with hinged, lockable door at outer end. Design shall include an integrated mail slot. Powder coated finish in specified color.

1. Shelf spanning across the top of the lockers for additional gear storage above lockers. .25”

diameter ASTM 510 cold drawn steel wire resistance welded to a 3" square pattern. Powder coated finish in specified color.

2.4 FINISH

A. General: All system components excluding assembly and mounting hardware and stainless steel components are to receive the standard finish.

B. Standard Finish: Components to be cleaned using a phosphatized bath, clear water rinse and electro-statically coated with a durable and UV-stable TGIC powder coating process. Thickness of applied finish shall be 3 – 4 mm for added protection.

1. Anti-Corrosive Primer:

C. Color: RED (Manufacturer must provide a minimum 7 standard color choices for selection)

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine area to receive lockers. Notify architect if area are not acceptable. Do not begin Installation until unacceptable conditions have been corrected.

3.2 INSTALLATION

A. Install lockers in accordance with manufacturer's instructions.

B. Use manufacturer's hardware for assembly.

C. Anchor to mounting surface with proper hardware.

END OF SECTION 10.5030

SECTION 10.5100 – LOCKERS

PART 1-GENERAL

1.01 Summary

A. Section includes:
1. Solid phenolic lockers

C. References

1. UL – GREENGUARD certified low emitting materials.
2. ASTM - B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
3. ASTM – A167 - Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.

1.02 Submittals

A. Product Data: Submit manufacturer's technical data for materials, fabrication, finishing, fastenings, hardware, and installation details.

B. Shop Drawings: Submit shop drawings indicating room sizes, layout, locker dimensions, material thickness, trim, hardware, finishes, locks, base, doors, accessories, and installation details.

C. Samples: Submit samples of edge details, colors, patterns, finishes, and textures.

D. Closeout Documents: Submit the following:
1. Operation and maintenance data
2. Warranty

1.03 Quality Assurance

A. Qualifications:
1. Fabricator shall be capable of providing field service representation.
2. Installer shall be approved by the manufacturer and be experienced in performing work of similar size and scope.

B. Pre-installation Meeting: Conduct pre-installation meeting prior to installation to verify project requirements and conditions.

1.04 Delivery, Storage and Handling

A. Storage and Handling: Store materials in an enclosed shelter providing protection from damage, temperature, humidity, and exposure to the elements.

B. Delivery: Deliver materials in the manufacturer's original protective packaging.

1.05 Coordination and Project Conditions

A. Field Measurements: Before material fabrication, verify actual field measurements and show actual measurements on shop drawings.

B. Coordination: Coordinate field measurements with fabrication schedule and construction progress to avoid construction delays.

1.06 Warranty

A. Submit executed copy of the Summit Lockers 20-year warranty against defects in material signed by an authorized representative of Summit Lockers.

PART 2 – PRODUCTS

2.01 SOLID PHENOLIC LOCKERS

A. Manufacturer: Subject to compliance with requirements, provide lockers by one of the following. Prior approvals submitted to contractor 30 days prior to bid will be considered.

1. Summit Lockers Inc.
2. Clubline Lockers.
3. Spectrum Lockers.
4. Titan Lockers
5. Columbia Lockers

B. Basis of Design: Summit Solid Phenolic lockers as manufactured by Summit Lockers Inc. (138 McLeod Road, Columbia, SC 29203, 803-403-8816, info@summitlockers.com)

C. Size
1. Provide 72” high X 15” wide X 15” Deep lockers

2.02 MATERIALS

A. Panel Material:
1. Decorative papers impregnated with a melamine resin on faces with a clear protective overcoat and integrally compression molded within a core consisting of solid phenolic impregnated kraft papers.
2. Fire Rating: Core or panel material shall meet fire Class B resistance per ASTM E84

B. Doors, End Panels, Filler Panels, Sloped Top & Ancillary Panels:
1. Material thickness: 1/2” (13mm) thick solid phenolic composite material.
2. Corners: Eased edges
3. Door Fastening: Blind fastening unless through bolts are requested
4. Color: Wilsonart, Formica, Tespa as selected by architect from full range of premium colors from mfg.

C. Locker Body Construction
1. Tops, Bottoms, and Shelves: Minimum 3/8” (10mm) thick solid phenolic composite material with ventilation holes.
2. Sides and Backs: Minimum 5/16” (8mm) thick solid phenolic composite material.
3. Wall Mounting Cleats: Minimum 1/2” (12mm) thick solid phenolic.
4. Mortise & Tenon Joints: All tops, bottoms and shelves use mortised joints and are secured with mechanical fasteners.
5. Exposed edges: Straight profile; eased edges to remove sharpness; machine polished and free from tooling imperfections.
6. Color: Wilsonart 1573 Frosty White.

D. Hardware
1. Hinges: Concealed 6-Knuckle Stainless Steel hinge. Opens 90°. Include three (3) hinges for doors > 36” tall or two (2) for all other heights.
2. Interior Side hooks:
   a. Material: Stainless steel. Plastic and nylon hooks are not acceptable.
   b. Two per opening for all openings 30” tall or greater.
3. Fasteners: All fasteners shall be stainless steel.
4. Door Identification Plates:
   a. Material: 1.75” x 6.25” black plastic with reverse engraved numbers and surface mounted with permanent adhesive.
   b. Fonts to be a minimum 1/2” high and up to four characters.
   c. Numbering sequence to be provided by architect.

5. Door Locks:
   a. Stainless steel hasp bar for customer supplied padlock
   b. Other Locks as specified. Options include: Digital Day Use, Digital Assigned Use, Mechanical Day Use, Mechanical Assigned Use, Key Lock, Coin Retain Lock, Coin Return Lock, Combination Lock, Card Locks.

E. Ventilation:

1. Vertical ventilation: Provide six 5/16" (8mm) diameter ventilation holes on tops, bottoms, and intermediate shelves. Provide three 5/16" (8mm) diameter ventilation holes on "Z" type intermediary shelves.
2. Horizontal ventilation: Provide ventilation around the edge of the door equal to at least 1.43 square inches of ventilation surface area per linear foot of door perimeter.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Examine site conditions before locker installation. Notify architect of unacceptable areas. Do not install lockers until unacceptable conditions have been corrected.

3.02 INSTALLATION

A. Install *ten* (10) of the specified lockers in the personal decon room . see equipment plans

B. Install lockers installed secured, plumb, level, square, and flush. Base by others must be flat and level.

C. Install all required trim, fillers, end panels, and closures per manufacturer's instructions.

D. Use hardware supplied or recommended by the manufacturer.

E. Attach number plates to doors as indicated on shop drawings.

F. Correct and/or replace damaged components as directed by architect.

G. General contractor to supply base as required for lockers as indicated by locker manufacturer. Match surrounding finish base material .

3.03 ADJUSTMENT

A. Adjust doors and locks for smooth operation without binding.

B. Lubricate door hinges and locks per manufacturer's instructions.

3.04 CLEANING

A. Clean all surfaces in accordance with manufacturer's instructions.

B. Do not use abrasive cleaners.

END OF SECTION 10.5126

SECTION 10.5113 – BUNK ROOM LOCKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

Personal Storage Lockers with built-in bench drawers

(Note: all lockers include electrical functionality as required. Tiered lockers excluded)

(Note: all Personal Storage Lockers, Personal Storage with built-in bench drawers, and Personal Storage Lockers with built-in external access drawers must include environmental ventilation functionality as required)

B. Related Work, Not Furnished:

1. Finish floor covering material and installation.
2. Attachment to building HVAC system and balancing air flow through locker system. Manufacturer will provide guidance only upon request.

Finish floor covering materials and installation.

C. Related Sections:

[Sections in Division 9 – Finishes, relating to finish floor and base materials]

1.3 REFERENCES

A. American National Standards Institute (ANSI) Standards:

Applicable standards for fasteners used for assembly.

B. American Society for Testing and Materials (ASTM) Standards:

Applicable standards for steel sheet materials used for fabrication

Applicable standards for the testing of electrostatically applied Powder Coat Paint

C. American Institute Of Steel Construction (AISC) Standards:

Applicable standards for steel materials used for fabrication.

1.4 DESCRIPTION

A. General: Welded Metal Lockers only with end-user reconfigurable interior. Specialized lances to provide the flexibility of on-site, end-user reconfiguration/addition of internal components anytime, anywhere, now or in the future.

B. Finishes:

Fabricated Metal Components and Assemblies: All components to be painted with an electro-statically applied Powder Coat paint that can meet or exceed test requirements set out by ASTM standard D3451-06 Standard Guide for Testing Coating Powders and Powder Coatings.

C. Sizes:

Personal Storage Lockers with built-in bench drawers, and Personal Storage Lockers with built-in external access drawers: Reference drawings.

1.5 PERFORMANCE REQUIREMENTS

A. Design Requirements:

Limit overall width not to exceed specified nominal width; locker width designed for zero growth.

B. Seismic Performance: Provide Welded Metal Lockers capable of withstanding the effects of earthquake movement when required by applicable building codes.

1.6 SUBMITTALS

A. Product Data: Submit manufacturer's product literature and installation instructions for each type of welded metal locker required. Include data substantiating that product to be furnished comply with requirements of the contract documents.

B. Shop Drawings: Show fabrication, assembly, and installation details, including descriptions of procedures and diagrams. Show complete locker installation layout, including quantities, locations and types of accessory units required. Include notations and descriptions of all installation items and components.

Show installation details at non-standard conditions, if any.

Provide layout, dimensions, and identification of each unit, corresponding to sequence of installation procedures.

Provide installation schedule and procedures to ensure proper installation.

C. Samples: Provide minimum [3] inches example of each color and texture on actual substrate for each component to remain exposed after installation.

D. Selection Samples: For initial selection of colors and textures, submit manufacturer's color charts, consisting of actual product pieces, showing full range of colors and textures available.

E. Warranty: Submit draft copy of proposed warranty for review by the [Architect/Engineer].

F. Maintenance Data: Provide written documentation of the manufacturer's statement, claiming the maintenance free nature of the product.

G. Reference List: Provide a list of recently installed welded metal lockers to be visited by owner, architect, and contractor. Intent of list is to aid in verifying the suitability of manufacturer's products and comparison with materials and product specified in this section. Include contact name, address, and phone numbers.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Engage an experienced manufacturer who is ISO 9001:2008 certified for the design, production, installation and service of welded metal lockers. Furnish certification attesting ISO 9001:2008 quality system registration.

B. Installer Qualifications: Engage an experienced installer who is the manufacturer's authorized representative for the specified products for installing welded metal lockers.

Minimum Qualifications: 1-year experience installing welded metal lockers of comparable size and complexity to specified project requirements.

1.8 DELIVERY, STORAGE AND HANDLING

A. Follow manufacturer's instructions and recommendations for delivery, storage and handling requirements.

1.9 PROJECT CONDITIONS

A. Field Measurements: Verify quantities of welded metal locker units before fabrication. Indicate verified measurements on shop drawings. Coordinate fabrication and delivery to ensure no delay in progress of the work.

B. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating welded metal lockers units without field measurements. Coordinate construction to ensure actual dimensions correspond to established dimensions.

1.10 WARRANTY

A. Provide a written warranty, executed by Contractor, Installer, and Manufacturer, agreeing to repair or replace units which fail in materials or workmanship within the established warranty pe-

riod. This warranty shall be in addition to, and not a limitation of, other rights the Owner may have under General Condition's provisions of the Contract Documents.

B. Limited Lifetime Warranty: Subject to the terms in the written warranty, warrant the original purchaser exclusively that the locker frames manufactured by it will be free from defects in materials and workmanship for the lifetime of the locker.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: : FreeStyle™ Personal Storage Lockers, FreeStyle™ Personal Storage with built-in bench drawers, Personal Storage with built-in external access drawers, FreeStyle™ Personal Storage Lockers in Multi-Tier configurations; based upon welded metal lockers manufactured by Spacesaver Corporation, 1450 Janesville Avenue, Fort Atkinson, Wisconsin 53538-2798. Telephone: 800-492-3434.

B. Acceptable Manufactures:

1. Columbia Lockers
2. Clubline

2.2 BASIC MATERIALS

A. General: Provide materials and quality of workmanship, which meets or exceeds established industry standards for products specified. Use furniture grade sheet metal, solid hardwood benches and fasteners for component fabrication unless indicated otherwise. Material thicknesses/gauges are manufacturer's option unless indicated otherwise.

2.3 LOCKER TYPES

A. Personal Storage Lockers. Provide personal storage lockers with built-in bench drawers by Spacesaver Corporation.

B. Note

1. All locker types (except Multi-Tier) to be equipped with the functionality of attaching a modular electrical system as required.
2. All locker types to be equipped with the functionality of attaching a continuous sloped top.

2.4 MANUFACTURED COMPONENTS

A. Welded Frame:

1. The welded frame must consist of top, bottom, back, and sides constructed of a minimum of 18-gauge or [1.214] millimeters steel. All frame components shall be joined using resistance welding. Riveting of structural members will not be permitted.
2. Horizontal front flanges will be a minimum of [2] inches or [50.8] millimeters. Vertical front flanges will be a minimum of [1] inch or [25.4] millimeters. Horizontal and vertical flanges will overlap and be secured with a minimum two (2) resistance welds per corner.
3. Corner gussets shall be MIG and spot welded in each of the four front corners of the locker for increased stiffness and rigidity.
4. Provide side panel lances evenly spaced on [3] inch or [76.2] millimeter centers. Lances to provide the flexibility of on-site, end-user reconfiguration/addition of internal components anytime, anywhere, now or in the future.
5. Bench Housing for built-in bench drawer
    a. Welded frame construction shall consist of top, bottom, and side components joined by using resistance welding. Riveting of bench housing structural members will not be permitted.
    b. Corner gussets shall be welded in the two (2) front bottom corners of the bench housing for increased stiffness and rigidity.
    c. Horizontal front flanges will be a minimum of [1] inch
    d. Vertical front flanges will be a minimum of [1] inch
    e. Horizontal and Vertical front flanges will overlap and shall be secured with minimum of one (1) resistance weld per corner.
    f. Side panels – Lances symmetric and evenly spaced to provide optimum component locations (standard based on [3] inch on center vertical placement to match mating locker lance design).
    g. Return flanges on housing to securely fasten housing to welded frame of locker.
    h. Base of bench housing shall include four (4) 3/8”-16 UNC threaded weld-nuts and corresponding leveling feet.
    i. Top of bench housing shall include hole pattern for mating bench seat.
    j. Sides of bench housing shall include mounting holes in the event lockers are ganged together.
6. Lockers with built-in bench drawer and built-in external access drawer shall have intermediate base shelf with interlocking mechanism for securing drawer when locker door is closed. Cable release of lockers not acceptable.
7. Provide four (4) [0.875] inch diameter electrical knock-outs per locker, two (2) located on top of the locker in both right and left rear corners, and two (2) located in the back of locker centered at a distance no greater than [24] inches from the top and bottom. Knock-outs allow end-user flexibility of adding electrical capability to lockers.

8. Provide a minimum of four (4) duplex receptacle electrical knock-outs per locker; to be used with a UL listed manufactured electrical wiring system as required. This manufactured electrical wiring system is a simple, unique, flexible, and cost-effective method of providing electrical capability to the lockers. This electrical system can be added in the future.
    a. Top of the locker shall have four (4) duplex electrical knock-outs.
    b. Top of locker shall have electrical duplex receptacle knock-outs located on both right and left side of locker.
    c. Back panel of locker shall have a minimum of two (2) duplex electrical knock-outs.
    d. Back of locker shall have electrical duplex receptacle knock-outs located on both right and left side of locker and no farther than [24] inches from the top of the locker.
9. Provide ventilation holes in top of locker to allow mechanically extracted air to be pulled up through the locker system as required. Ventilation shall be controlled by eight (8) evenly spaced [0.625] diameter holes. Proper ventilation system ensures unpleasant odors are removed from locker system.
10. Lockers shall be prepared with mounting holes for use with the continuous sloped top system.
11. Lockers shall be prepared with mounting holes for attaching necessary trim components
12. Locker shall be prepared with mounting holes for ganging lockers back-to-back or side-by-side
13. Base of lockers shall include four (4) 3/8”-16 UNC threaded weld-nuts and corresponding leveling feet.
14. Base shelf for lockers with built-in external access drawers and bench drawers shall have holes to accommodate double-door lock rod and door stop bracket. (Only on [24] inch wide and larger)
15. End Panels: End Panels with no exposed fasteners shall be provided on the end of each locker run; thus, providing a clean and aesthetically pleasing appearance.
16. All locker sizes and types to be specified by architect.
    a. Width:
        1) Personal Storage Locker with built-in bench drawer or external access drawer:
    b. Height:
        1) Personal Storage Locker with built in bench drawer or external access drawer:

c. Depth:

1) All lockers [24] inches

2) Bench drawers: [36] inches

c) Bench seat depth [13.0] inches

c) Leading edge of bench seat to extend [1.125] inches from front of bench drawer

B. Ventilation:

1. Provide ventilation holes in top of locker to allow mechanically extracted air to be pulled up through the locker system as required. Ventilation shall be controlled by eight (8) evenly spaced [0.625] inch diameter holes. Proper ventilation system ensures odors are removed from locker system.
2. Provide an adjustable air baffle for system balancing when mechanical air extraction is used. Upon balancing system, air baffle shall be secured with a fastener to maintain ventilation setting.
3. Provide louvered air vents in bottom of the main locker door/s to allow mechanically extracted air to be pulled up through the locker system.
4. Provide louvered air vents in drawer front when built-in bench drawer or built-in external access drawer models are required.
5. Minimum [0.500] inch gap between back of shelving components and back of locker to provide uninterrupted air flow up the rear of the locker system.
6. Minimum [2.00] inches gap between front of shelving and locker door to provide uninterrupted air flow up the front of the locker system.
7. Multi-Tier ventilation is provided thru door panels
8. Upon request manufacturer shall provide HVAC tech data to serve as a guideline for the General Contractor and HVAC Contactor. It is the General Contractor and/or HVAC contractors' responsibility to establish/balance air flow through locker system according to building HVAC constraints.

C. Electrical

1. Shall provide four (4) electrical knock-outs per locker as described in section 2.4-A item 7. This feature provides the end-user the opportunity for hard wire electrical connection points for each locker. End-user or General Contractor is responsible for final electrical installation.
2. Shall provide a minimum of four (4) duplex receptacle electrical knock-outs per locker as described in section 2.4-A item 8.
3. Shall provide UL Listed manufactured electrical wiring system as required. This manufactured electrical wiring system provides connection for a maximum of 78 receptacles

per hardwired power in-feed (Note: total number of receptacles is dependent on load requirements). This manufactured electrical wiring system is a modular, unique, flexible, and cost-effective method of providing electrical capability to the lockers.

D. Drawers (for bench drawer and external access drawer):

1. Drawer body wrapper shall have welded frame construction. Riveting of structural members will not be permitted.
2. Drawers for locker with built-in bench drawers and built-in external access drawers shall have box-formed drawer front.
3. Provide interlock system for securing drawer when main locker doors are closed and provide access only when main locker door/s is opened. Cable drawer release mechanism will not be tolerated.
4. Built-in bench drawer shall have a nominal [36] inches depth.
5. Provide a flush mounted pull handle.
6. Drawer Slides: Provide [200] lbs maximum load capacity and pass 50,000 cycle performance testing (Max. load, uniform distribution) (Test data to be provided by manufacturer upon request)
7. Drawer base minimum [21] inches drawer extension
8. Bench drawer minimum [26.5] inches drawer extension
9. Provide louvered air vents in drawer front when built-in bench drawer or built-in external access drawer models are required.
10. Provide capability of attaching glides for Body Armored Drying Rack, as requested.

E. Bench Seat:

1. Provide 13.0 inches deep laminated kiln dried maple bench seat; material thickness [1.25]
2. Front (leading edge) of bench seat to have [.625] inch or radius bull nose.
3. Finish of bench seat shall be sanded smooth and have two (2) coats of catalyzed varnish applied.

F. Single-Piece Welded Doors (Single and Double Door Models):

1. Shall be formed from two (2) pieces of minimum 18-gauge cold rolled steel box formed and welded together using modern GMAW techniques. Single-piece door with inner and outer door panels shall have a combined steel thickness of no less than [0.096] inches thick. Welded door design with inner panel optimizes structural integrity of locker door system over and above any single frame door design.
2. Exterior door panel shall be constructed with formed flanges and return flanges to add stiffness.

3. Internal door panel shall be constructed with formed flanges for added stiffness.
4. All inner door panel (except Multi-Tier) heights shall be minimum 70% of external door height.
5. Single-piece welded door frame shall consist of internal door panel nested inside exterior door panel and welded per the following requirements:
    a. Top / bottom. Exterior and Interior panels to be welded in a minimum of three (3) places with weld spacing not to exceed [6] inches between adjacent welds and [1] inch from any corner.
    b. Sides. Exterior and interior panels to be welded with spacing not to exceed [12] inches between adjacent welds and [1] inch from any corner.
6. Inner door panel to have peg board style hole pattern, allowing the attachment of Document Holder and any standard peg board accessory.
7. Inner door panel to have [4] inch rectangular slot centered towards the top of the locker.
8. External door panel shall have louvers to provide adequate air circulation throughout locker system.
    a. Louvered air vents shall be located at the bottom of the locker door to enhance circulation of mechanically extracted air from the bottom of the locker out of the top.
    b. Louvered air vents shall be approximately [3] inches in width and [0.75] inches or in height and spaced on [1] inch centers.
9. Single door designs available in: Reference drawings.
10. All doors shall have neoprene silencers on each door for noise reduction
11. Door torsional deflection shall not exceed [0.1875] inch with a [20] lb point load. (Test data to be provided by manufacturer upon request)
12. Hinge:
    a. Provide 16-gauge full length hinge for increased strength and security of locker system.
    b. Hinges to be welded to door frame with spot welds not to exceed [6] inch separation.
13. Door assembly to be riveted to door frame on factory pre-established hole pattern.
14. Locking Mechanism.
    a. Provide three locking options (all locking options have protective stainless steel cover plate for durability and scratch resistance):
        1) Padlock hasp only.

G. Interior/Accessory components (Architect/Owner to specify):

1. All interior components must be constructed of minimum 18-gauge steel (unless otherwise clarified in specification).
2. For added security, internal component can be secured utilizing blind rivets, threaded fasteners, or bending specially designed tab.
3. All interior components available at time of order and as post-installation upgrades in the future.
4. Shelves (available all locker models)
    a. Shelf with integral hanger bracket
        1) Size specified by locker width
        2) Hanger bracket designed with perforations on approximately [3] inch centers to insure clothing separation for optimum ventilation
        3) Performance: Uniform load rating [300] lbs

H. Electrical system
1. UL listed manufactured electrical wiring system with plug-in-play component design
2. Receptacles – standard 20 amp duplex receptacles and 20 amp GFCI duplex receptacles

I. Locker Tag Numbers
1. Shall provide locker numbers on each locker per customer requirement

J. ACCESSORIES:
1. Trim and Fillers: Provide manufacturer's standard.
2. Continuous Sloped Top. Provide manufacturers standard.

2.5 FABRICATION

A. General: Coordinate fabrication and delivery to ensure no delay in progress of the work.

2.6 FINISHES

A. Colors: Selected from manufacturer's standard available colors

B. Paint Finish: Textured (Standard) – Provide factory applied electrostatic powder coat paint. Meet or exceed specifications of the American Society for Testing and Materials (ASTM) Standards:

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine Lockers scheduled to receive accessories [with Installer present] for compliance with requirements for installation tolerances and other conditions affecting performance of specified accessory items.

B. Proceed with accessory installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Follow manufacturer's written instructions for installation of each type of accessory item specified.

3.3 FIELD QUALITY CONTROL

A. Verify accessory unit alignment and plumb after installation. Correct if required, following manufacturer's instructions.

B. Remove components that are chipped, scratched, or otherwise damaged and which do not match adjoining work. Replace with new matching units, installed as specified and in manner to eliminate evidence of replacement.

3.4 ADJUSTING

A. Adjust all accessories to provide smoothly operating, visually acceptable installation.

3.5 CLEANING

A. Immediately upon completion of installation, clean components and surfaces. Remove surplus materials, rubbish and debris, resulting from installation, upon completion of work and leave areas of installation in neat, clean condition.

3.6 DEMONSTRATION/TRAINING

A. Schedule and conduct demonstration of installed accessory items and features with Owner's personnel.

B. Schedule and conduct maintenance training with Owner's maintenance personnel. Training session should include lecture and demonstration of all maintenance and repair procedures that end-user personnel would normally perform.

3.7 PROTECTION

A. Protect system against damage during remainder of construction period. Advise owner of additional protection needed to ensure that system will be without damage or deterioration at time of substantial completion.

END OF SECTION 10.5113

SECTION 10.7500 - FLAGPOLES

PART 1 - GENERAL

1.1 STIPULATIONS

The specifications sections “General Conditions of Contract”, “Special Conditions” and “Division 1 – General Requirements” form a part of this section by this reference thereto, and shall have the same force and effect as if printed herewith in full.

1.2 SUMMARY

A. Sections includes flagpoles and accessories.

B. Related Requirements:

1. Section 03 30 00 – Cast-in-Place Concrete: Flagpole base concrete.

1.3 REFERENCE STANDARDS

A. ASTM International:

1. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
2. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
3. ASTM A312/A312M - Standard Specification for Seamless and Welded Austenitic Stainless Steel Pipes.
4. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
5. ASTM B241/B241M - Standard Specification for Aluminum and Aluminum-Alloy Seamless Pipe and Seamless Extruded Tube.

B. Copper Development Association Inc.:

1. CDA – Copper Brass Bronze Design Handbook: Architectural Applications.

1.4 PERFORMANCE REQUIREMENTS

A. Flagpole with Flag Flying: Resistant without permanent deformation to 45 miles/hr wind velocity; non-resonant, safety design factor of 2.5.

B. Flagpole without Flag: Resistant without permanent deformation to 70 miles/hr wind velocity; non-resonant, safety design factor of 2.5.

1.5 SUBMITTALS

A. Shop Drawings: Indicate detailed dimensions, base, attachment details, anchor requirements, and imposed loads. Provide professional engineers design for all structural components including foundation.

B. Product Data: Submit data on pole, accessories, and configurations.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Submit Operation and Maintenance Data.

1.7 QUALITY ASSURANCE

A. Perform Work in accordance with Commonwealth of Pennsylvania standards.

1.8 QUALIFICATIONS

A. Design flagpole, foundation, and supports under direct supervision of Professional Engineer experienced in design of this Work and licensed in Commonwealth of Pennsylvania.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Spiral wrap flagpole with protective covering and pack in protective shipping tubes or containers.

B. Protect flagpole and accessories from damage or moisture.

PART 2 - PRODUCTS

2.1 FLAGPOLES

A. Manufacturers:

1. Eder Flag Manufacturing Company, Inc.
   a. One (1) Federal Flagpole: Model EC50IH, 50’ Exposed Height, 3 Section, Internal Halyard

B. Product Description: Aluminum Flagpole, fabricated from seamless 6063-T6 aluminum tubing with tensile strength not less than 30,000 psi with yield point of 25,000 psi. Heat treated after fabrication to comply with ASTM B 597, temper T-6

C. Finish: Highly polished with fine grain aluminum oxide cloth Satin finish

2.2 COMPONENTS

A. Outside Butt Diameter:

1. Model EC50: 10"

B. Outside Top Diameter:

1. Model EC50: 4""

C. Nominal Wall Thickness:

1. Model EC50: .188"

D. Exposed Height:

1. Model EC50: 50'

E. Flagpole: Ground set, including foundation sleeve, stainless steel cable assembly, Winch system, Winch Handle, and two (4-3/4") stainless steel swivel snap hooks. Finishes to match flagpole.

F. Flagpole Design: Cone tapered.

G. Halyard: Internal.

2.3 ACCESSORIES

A. Finial Ball:

1. Flagpole Model EC50: Model SB110, Aluminum, 10" diameter, Gold Anodized

B. Flag: (American Flag)

1. Flagpole Model EC50: 10' x 15' size, Nylon fabric, brass grommets, hemmed edges

C. Winch Lock:

1. Winch Lock and four (4) keys.

D. Flash Collar:

1. High Profile "Trumpet" Aluminum Flash Collar – Satin Finish

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify concrete foundation is ready to receive work and dimensions are as indicated on shop drawings.

3.2 INSTALLATION

A. Section 03 30 00 – Cast-in-Place Concrete: Fill foundation tube sleeve with concrete.

B. Install steel foundation plate, grounding spike, and centering wedges for flagpoles base set in concrete base and fasten.

3.3 ERECTION TOLERANCES

A. Maximum Variation From Plumb: 1/2 inch

3.4 ADJUSTING

A. Adjust operating devices so halyard and flag function smoothly.

END OF SECTION 10 75 00

SECTION 10.7516 – FLAGPOLE

PART 1 - GENERAL

1.01 SECTION DESCRIPTION

A. The Work of This Section Includes:

1. Furnish and install an aluminum flagpole with flag in accordance with the requirements of this Section and where shown on the Drawings. Flag shall be provided along with the pole.

1.02 QUALITY ASSURANCE

A. Reference Standards:

1. American Society for Testing and Materials (ASTM):

B241 Specification for Aluminum and Aluminum-Alloy Seamless Pipe and Seamless Extruded Tube.

B. Manufacturing Standards:

1. Provide each flag pole as a complete unit produced by a single manufacturer, including fittings, accessories and anchorage devices.

C. Design Criteria:

1. 40’ flagpole and installation method constructed to withstand a 171 mph wind unflagged and a wind velocity of 117 mph when flying a 8’ x 12’ flag.
2. 30’ flagpole and installation method constructed to withstand a 184 mph wind unflagged and a wind velocity of 117 mph when flying a 5’ x 8’ flag.

D. Pole Construction:

1. Construct pole and ship to site in one (1) piece if possible. If more than one (1) piece is required, provide precise joints with self aligning, internal splicing sleeve arrangement.

1.03 SUBMITTALS

A. Manufacturers Literature:

1. Submit manufacturer's descriptive literature for the following items in accordance with Section 01 33 00:

- Flagpole
- Ground Sleeve
- Fittings and accessories

B. Shop Drawings

1. Submit detail shop drawings of the flagpole and complete anchoring and supporting system in accordance with Section 01 33 00.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Comply with the requirements set forth in Section 01 60 00 of these specifications relative to transportation and handling along with storage and protection.

B. Deliver materials to the job site in good condition and properly protected against damage to finished surfaces. Spiral wrap flagpole with heavy kraft paper or other protective wrapping and ship in hard fiber tube or other protective enclosure. Exercise care when off-loading material to prevent damage.

C. Storage on site

1. Store material in a location and in a manner to avoid damage. Stacking shall be done in a way which will prevent bending.

2. Store aluminum, components and materials in clean, dry location, away from uncured concrete and masonry. Cover with waterproof paper, tarpaulin or polyethylene sheeting in a manner that will permit circulation of air inside the covering.

D. Keep handling on site to a minimum. Exercise particular care to avoid damage to finishes of materials.

E. In the event of any damage to the material, however slight, Contractor shall notify the Resident Project Representative at once and shall repair or replace the material in a manner satisfactory to Owner.

PART 2 - PRODUCTS

2.01 FLAGPOLE SYSTEM

A. Flagpole Shaft

1. Commercial grade aluminum construction fabricated from seamless extruded tubing, complying with ASTM B241, 6063-T6 aluminum alloy having a tensile strength of not less than 30,000 psi and a yield point of 25,000 psi. Heat treat and age harden after fabrication.

2. Finish shall be deep luster finish, fine, directional mechanical 100 grit polish (NAAMM-32)

3. Description:

a. 30’ Pole:
- Exposed height: 30’
- Butt diameter: 6” minimum at base, tapered to 3 ½” top.
- Wall thickness: 0.156” at base minimum

b. 40’ Pole:
- Exposed height: 40’
- Butt diameter: 8” minimum at base, tapered to 3 ½” top.
- Wall thickness: 0.156” at base minimum

B. Mounting

1. Standard embedded system including ground sleeve fabricated from 16 gauge galvanized steel with steel base plate and steel support plate and ground spike at least 3/4” diameter and 18” long.

C. Fittings

1. Flagpole have an internal halyard and shall be equipped with:
   a. Single sheave truck, cast aluminum revolving, non-fouling, internal halyard truck.
   b. Gearless, self-locking direct drive winch with six tumbler cylinder lock

2. Spun Aluminum Flash Collar with diameter at least 1” greater than diameter of ground sleeve.

D. Acceptable Manufacturer

1. Liberty Flagpoles or approved equivalent.

PART 3 - EXECUTION

3.01 GENERAL

1. Review location of flagpole for overhead and buried utilities, including electrical and natural gas lines, which pose situations requiring extreme care during installation of foundation and flagpole.

3.02 INSTALLATION OF FOUNDATION

1. Dig hole for foundation of the approximate size and exact location as shown on the Drawings.

2. Set ground sleeve slightly above finish grade level and plumb in center of hole.

3. Pour minimum PennDOT Class AA concrete around outside of ground sleeve making sure sleeve remains in center and plumb.

4. Cover sleeve opening to prevent entry of debris and water.

3.03 INSTALLATION OF FLAGPOLE

1. Install flagpole in compliance with approved submittal and manufacturer’s instructions.

2. Paint portions of flagpole below grade with a heavy coat of bituminous paint.

END OF SECTION

SECTION 12.2400 - WINDOW SHADES

PART 1 – GENERAL

1.1 SECTION INCLUDES

A. Opaque window shade system: Manually operated, roll-up fabric opaque window shade system for complete blackout of window opening including side and bottom channels, headbox, manual operator, and mounting hardware.
B. Opaque window shade system: Motorized, roll-up fabric interior window shades including motor operator, controls, and mounting hardware

1.2 RELATED SECTIONS

A. Section 06 10 53 - Rough Carpentry
B. Section 09 29 00 - Gypsum Board
C. Section 09 50 00 - Acoustical Ceilings
D. Division 26 - Electrical: Electrical supply, conduit, and wiring for motorized window shades

1.3 REFERENCES

A. NFPA 70 - National Electrical Code
B. NFPA 701-99 - Fire Tests for Flame-Resistant Textiles and Films

1.4 SUBMITTALS

A. Submit under provisions of Section 01.3326 - Source Quality Control Reporting:

B. Product Data: Manufacturer's data sheets on each product specified, including:

1. Preparation instructions and recommendations.
2. Installation and maintenance instructions.
3. Styles, material descriptions, dimensions of individual components, profiles, features, finishes and operating instructions.
4. Storage and handling requirements and recommendations.
5. Mounting details and installation methods.
6. Typical wiring diagrams including integration of motor controllers with building management system, audiovisual and lighting control systems as applicable.

C. Shop Drawings: Plans, elevations, sections, product details, installation details, operational clearances, wiring diagrams and relationship to adjacent work.

D. Window Treatment Schedule: For all roller shades. Use same room designations as indicated on the Drawings, field verified window dimensions, quantities, type of shade, controls, fabric, and color, and include opening sizes and key to typical mounting details.

E. Selection Samples: For each finish product specified, two complete sets of shade cloth options and aluminum finish color samples representing manufacturer's full range of available colors and patterns.

F. Verification Samples: For each finish product specified, two complete sets of shade components, unassembled, demonstrating compliance with specified requirements. Shade fabric sample and aluminum finish sample as selected, representing actual product, color, and patterns. Mark face of material to indicate interior faces.

G. Maintenance Data: Methods for maintaining roller shades, precautions regarding cleaning materials and methods, instructions for operating hardware and controls.

H. Manufacturer's Certificates: Certify products meet or exceed specified requirements.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Obtain roller shades through one source from a single manufacturer with a minimum of twenty years' experience in manufacturing products comparable to those specified in this section.

B. NFPA Flame-Test: Passes NFPA 701. Materials tested shall be identical to products proposed for use.

C. Mock-Up: Provide a mock-up of one of each type roller shade assembly specified for evaluation of mounting, appearance and accessories.

1. Locate mock-up in window(s) designated by Architect.
2. Do not proceed with remaining work until mock-up is accepted by Architect.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver window shades until building is enclosed and construction within spaces where shades will be installed is substantially complete.

B. Deliver products in manufacturer's original, unopened, undamaged containers with labels intact.

C. Label containers and shades according to Window Shade Schedule.

D. Store products in manufacturer's unopened packaging until ready for installation.

1.7 SEQUENCING

A. Ensure that locating templates and other information required for installation of products of this section are furnished to affected trades in time to prevent interruption of construction progress.

B. Ensure that products of this section are supplied to affected trades in time to prevent interruption of construction progress.

1.8 PROJECT CONDITIONS

A. Install roller shades after finish work and ambient temperature, humidity and ventilation conditions are maintained at levels recommended for project upon completion.

1.9 WARRANTY

A. Hardware and Shade Fabric: Draper's standard twenty-five year limited warranty.
B. Spring Roller Shades: Draper's standard ten year limited warranty.
C. Motors and Controls: Draper's standard five year limited warranty.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturer: Draper, Inc., which is located at: 411 S. Pearl P. O. Box 425 ; Spiceland, IN 47385-0425; Toll Free Tel: 800-238-7999; Tel: 765-987-7999; Email:request info; Web:www.draperinc.com

B. Approved Equals: Hunter Douglas, MechoShade and Lutron.

C. Requests for substitutions will be considered in accordance with provisions of Section 01 60 00.

2.2 MANUALLY OPERATED WINDOW SHADES

A. Manually Operated Window Shades with Independent Control: Manually operated, vertical

roll-up, fabric window shade with components necessary for complete installation; Manual FlexShade as manufactured by Draper, Inc.

1. Operation: Bead chain and clutch operating mechanism allowing shade to stop when chain is released. Designed never to need adjustment or lubrication. Provide limit stops to prevent shade from being raised or lowered too far.
    a. Clutch mechanism: Fabricated from high carbon steel and molded fiberglass reinforced polyester or injected molded nylon. White or Black color as selected by Architect.
    b. Bead chain loop: Stainless steel bead chain hanging at side of window.
    c. Idler Assembly: Provide roller idler assembly of molded nylon with adjustable or spring-loaded length idler pin to facilitate easy installation, and removal of shade for service.
    d. Bead Chain Hold Down: Spring-Loaded Tensioner complies with ANSI/WCMA A100.1-2018 safety standard.

2. Roller Tube: Fabricated from extruded aluminum, galvanized steel, or enameled steel. Diameter, wall thickness, and material selected by manufacturer to accommodate shade type and size. Fabric connected to the roller tube with LSE (low surface energy) double sided adhesive specifically developed to attach coated textiles to metal. Adhesive attachment to eliminate horizontal impressions in fabric.
3. Bottom Slat
    a. Closed pocket elliptical slat: 1" (25mm) aluminum elliptical slat inside of a 1 5/8" (41mm) pocket with heat sealed ends
4. Mounting:
    a. Mounting brackets.
    b. Endcaps and fascia.
    c. Endcaps and headbox.
5. Brackets: Plated stamped steel. Provide size compatible with roller size.
    a. Mounted to jamb.
6. Endcaps: Stamped steel with universal design suitable for mounting to ceiling, wall, and jamb. Provide size compatible with roller size.
    a. Endcap covers: To match fascia or headbox color.
7. Headbox Ceiling/Wall style: Aluminum fabrication with removable closure, endcaps, and back and top cover piece:
    a. Finish: Custom powder coat as selected by the Architect.

2.3 MOTORIZED WINODW SHADES

A. Type: UL listed, motorized, vertical roll-up, fabric window shade with motors, controls, mounting brackets, and other components necessary for complete installation; Motorized FlexShade AC as manufactured by Draper, Inc.

1. Endcaps and ceiling/wall headbox.

B. Shade Motor and Control System
   1. Motorized FlexShade AC
      a. Standard Motor: 120V AC, single phase, 60 HZ, instantly reversible, lifetime lubricated, and equipped with internal thermal overload protector, electric brake, and pre-set accessible limit switches. Tubular motor concealed inside each shade roller tube.
         1) Wall Switch – Key operated three position wall switch.
      b. Individual and Group Control: IGC4N1. Individual and Group control of up to four motors with up to three intermediate positions per motor.

C. Configuration:
   1. Single Roller.
      a. Mounting.
         1) Headbox Ceiling/Wall Style: Aluminum fabrication with removable closure, endcaps, and back and top cover piece:
            a) Finish: Custom powder coat as selected by the Architect.

D. Shade slat:
   1. Closed pocket elliptical slat: 1 inch (25 mm) aluminum elliptical slat inside of a 1-5/8 inch (41 mm) pocket with heat sealed ends.

E. Roller: Fabricated from extruded aluminum or steel. Wall thickness and material selected by manufacturer to accommodate shade size. Provide with roller idler assembly of molded nylon and zinc-plated steel pin. Sliding pin to allow easy installation and removal of roller. Fabric connected to the roller tube with LSE (low surface energy) double sided adhesive specifically developed to attach coated textiles to metal. Adhesive attachment to eliminate horizontal impressions in fabric.

2.4 FABRIC

A. Room Darkening Fabrics
   1. Flocké by Mermet, as supplied by Draper, Inc.: Opaque, light-blocking fiberglass textile with acrylic coating and cotton flocked backing; composition of 42 percent fiberglass, 51 percent acrylic, and 7 percent cotton; 0 percent openness. Fire performance: NFPA 701, Test Method 1. Nominal weight: 15.93 oz./sq. yd.; nominal thickness: 0.020 inch, each with manufacturer's tolerance of ±10 percent. Color: As selected by Architect from manufacturer's full range.

B. Standard Shade Fabric:
   1. E Screen 3% by Mermet, as supplied by Draper, Inc.: PVC-coated fiberglass yarn

woven in a 2 by 2 basketweave; composition of 36 percent fiberglass and 64 percent vinyl; 3 percent openness. Fire performance: NFPA 701. Nominal weight: 11.6 oz./sq. yd.; nominal thickness: 0.017 inch, each with manufacturer's tolerance of ±5 percent. Color: Pearl/Grey

PART 3 – EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. A. Coordinate requirements for blocking and structural supports to ensure adequate means for installation of window shades.

B. Coordinate requirements for blocking, construction of shade pockets, and structural supports to ensure adequate means for installation of window shades.

C. Coordinate installation of recessed shade pockets with construction of suspended acoustical panel ceilings specified in Section 09.5000.+

D. Coordinate installation of recessed shade pockets with construction of suspended gypsum board ceilings specified in Section 09.2900.

E. Coordinate requirements for power supply conduit, and wiring required for window shade motors and controls.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install roller shades level, plumb, square, and true. Allow proper clearances for window operation hardware.

C. Shade pockets:

1. Install shade pockets prior to installation of suspended ceiling system. Attach to supporting structure with screws through top of pocket at 24 inches (610 mm) minimum centers.
2. Install shade pockets in conjunction with installation of suspended ceiling system. Attach to supporting structure with screws through top of pocket at 24 inches (610 mm) minimum centers.
3. Install corner pieces securely and in alignment with pockets.
4. Install pocket ends securely and in alignment with pockets.
5. After interior construction is essentially complete, install shade and operating mechanism in pocket.
6. Install the following items to conceal roller and operating mechanism. Do not use exposed fasteners.
    a. Fascias
    b. Closure panels
    c. Endcaps

D. Install headbox, side channels, and sill channel with sealant specified in Section 07 90 00 - Joint Protection.

E. Position shades level, plumb, and at proper height relative to adjacent construction. Secure with fasteners recommended by manufacturer.

3.4 TESTING AND DEMONSTRATION

A. Test motorized window shades to verify that controls, limit switches, interface to other building systems, and other operating components are functional. Correct deficiencies.

B. Test window shades to verify that operating mechanism, fabric retainer, and other operating components are functional. Correct deficiencies.
    1. Chain and clutch.

C. During daylight hours, lower shades and turn off interior lights. Verify that there are no light leaks at perimeter or within shade assembly. Correct deficiencies.

D. Demonstrate operation of shades to Owner's designated representatives.

3.5 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

3.6 SCHEDULES

A. Refer to Drawings for shade types and locations.

END OF SECTION 12.2400

SECTION 12.3200 - MANUFACTURED CASEWORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Plastic-laminate-faced wood cabinets of stock design.
   2. Plastic-laminate countertops- custom.
   3. Quartz Countertops
   4. Stainless Steel Countertops.

B. Related Sections include the following:
   1. Division 06 Section "Rough Carpentry" for wood blocking for anchoring manufactured wood casework.
   2. Division 06 Section "Architectural Woodwork."
   3. Division 09 Section "Resilient Base and Accessories" for resilient base applied to manufactured wood casework.

1.3 DEFINITIONS

A. MDF: Medium-density fiberboard.

B. Exposed Portions of Cabinets: Surfaces visible when doors and drawers are closed, including bottoms of cabinets more than 48 inches above floor, and surfaces visible in open cabinets.

C. Semi-exposed Portions of Cabinets: Surfaces behind opaque doors, such as interiors of cabinets, shelves, dividers, interiors and sides of drawers, and interior faces of doors. Tops of cases 78 inches or more above floor are defined as semi-exposed.

D. Concealed Portions of Cabinets: Surfaces not usually visible after installation, including sleepers, web frames, dust panels, and ends and backs that are placed directly against walls or other cabinets.

E. Hardwood Plywood: A panel product composed of layers or plies of veneer, or of veneers in combination with lumber core, hardboard core, MDF core, or particleboard core, joined with adhesive, and faced both front and back with hardwood veneers.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work. Show fabrication details, including types and locations of hardware. Show installation details, including field joints and filler panels. Indicate manufacturer's catalog numbers for casework.

C. Samples for Verification: Accompanying the Shop Drawings, submit Samples of pulls, full range of standard high pressure laminate colors, and full range of standard PVC edging colors for selections by the Architect.

1.5 QUALITY ASSURANCE

A. Source Limitations: Obtain manufactured wood casework from single source from single manufacturer.

B. Product Designations: Drawings indicate sizes, configurations, and finish material of manufactured wood casework by referencing designated manufacturer's catalog numbers. Other manufacturers' casework of similar sizes and door and drawer configurations, of same finish material, and complying with the Specifications may be considered.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver manufactured wood casework only after painting, utility roughing-in, and similar operations that could damage, soil, or deteriorate casework have been completed in installation areas. If casework must be stored in other than installation areas, store only in areas where environmental conditions meet requirements specified in 1.7 "Project Conditions" below.

B. Keep finished surfaces covered with polyethylene film or other protective covering during handling and installation.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install manufactured wood casework until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

B. Field Measurements: Verify actual dimensions of construction contiguous with manufactured wood casework by field measurements before fabrication.

1.8 COORDINATION

A. Coordinate layout and installation of framing and reinforcements in walls and partitions for support of manufactured wood casework.

1.9 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of manufactured wood casework that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Delamination of components or other failures of glue bond.
b. Warping of components.
c. Failure of operating hardware.
d. Deterioration of finishes.

2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Stevens Advantage. or comparable product by one of the following: (Drawings indicate product numbers of Case Systems Inc.)

1. Plastic-Laminate-Faced Manufactured Casework:
a. Mastercraft Woodworking Company, Inc.
b. Case Systems Inc

2.2 MATERIALS, GENERAL

A. Maximum Moisture Content for Lumber: 7 percent for hardwood and 12 percent for softwood.

B. Hardwood Plywood: HPVA HP-1, either veneer core or particleboard core unless otherwise indicated.

C. Softwood Plywood: DOC PS 1.

D. Hardboard: AHA A135.4, Class 1 Tempered.

E. Plastic Laminate: High-pressure decorative laminate complying with NEMA LD 3.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. ARBORITE – Basis of Design.
   b. Nevamar Company, LLC; Decorative Products Div.
   c. Wilsonart International; Div. of Premark International, Inc.
2. Edgebanding for Plastic Laminate: Rigid PVC extrusions, through color with satin finish, 3 mm thick at doors and drawer fronts, 1 mm thick elsewhere.

F. Quartz Surfacing: Polyester resin binder and pigments with 90-93% crushed quartz aggregates.
1. Manufacturers:
   a. Viatera:
      1) Contact: 1-610-256-8703
   b. Silestone (by Cosentino Group)
      1) 1401 W. Morehead St., Charlotte, NC 28208
      2) Phone: 877-978-2789
      3) sales@caesarstoneus.com
2. Thickness: 2 cm or as indicated on the drawings.
3. Finish: Polished
4. Performance:
   a. Water Absorption: ≤ 0.05% (ASTM C97)
   b. Flexural Strength: ≥ 6,000 psi.
   c. Flame Spread Index: ≤ 25 (ASTM E84).
5. Color and Pattern: As selected by the Architect from manufacturer's full range of premium colors.

G. Stainless Steel Countertops: Factory-fabricated stainless steel countertops, backsplashes, WATERFALL EDGES, integral sinks, and related trim.
1. Manufacturers:
   a. Stainless Supply, Monroe, NC, stainlesssupply.com/stainless-kitchen-products
   b. Commercial Stainless, Inc., Phone: (570) 387-8980, Fax: (570) 387-8982, commercialstainless.com.
   c. Great Lakes Stainless, Traverse City, MI, Phone: 231-943-7648, info@greatlakesstainless.com
   d. Stainless Steel Fabricators, Inc., Raleigh, NC, Email: mail@berlinusa.com
2. Materials:
   a. Stainless Steel Sheet:
      1. Type: ASTM A240, Type 316
      2. Finish: No. 4 Satin (directional brushed finish) unless otherwise indicated.
      3. Thickness: Minimum 14 gauge (0.075 in) for countertops; 18 gauge (0.050 in) for vertical risers and backsplashes.
3. Substrate:
   a. Marine-grade plywood or moisture-resistant core per manufacturer's recommendation.
4. Edge Profile:

a. Square, marine, or rolled edge, as indicated on drawings.

5. Sinks: As selected by the Architect.
6. Accessories:
   a. Adhesives, sealants, and mounting hardware as recommended by fabricator and compatible with stainless steel.

H. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, suitable for exposed applications.

I. Label Holders: Where shown or called for, shall be self-adhesive type aluminum with satin finish and designed for 2-1/2" x 1-1/8" cards, unless otherwise specified.

J. Number Plates: Where shown or called for, shall be self-adhesive type aluminum with indented black lettering.

2.3 CABINET MATERIALS

A. Exposed Cabinet Materials:
   1. Plastic Laminate:
      a. Grade HGS in general offices, conference rooms, etc.
      b. Grade CHEM in all labs and workrooms not scheduled for other types of countertops.
   2. Unless otherwise indicated, provide specified edgebanding on all exposed edges.

B. Semiexposed Cabinet Materials:
   1. Plastic Laminate: Grade VGS.
      a. Provide plastic laminate for semiexposed surfaces unless otherwise indicated.
      b. Provide plastic laminate for interior faces of doors and drawer fronts and where indicated.
   2. Metal for Steel Drawer Pans: Cold-rolled, steel sheet.
   3. Unless otherwise indicated, provide specified edgebanding on all semiexposed edges.

C. Concealed Cabinet Materials:
   1. Solid Wood: Any hardwood or softwood species, with no defects affecting strength or utility.
   2. Plywood: Hardwood plywood. Provide backs of same species as faces.
   3. Plastic Laminate: Grade BKL.

2.4 DESIGN, COLOR, AND FINISH

A. Design: Provide manufactured wood casework of the following design:
   1. Heavy Duty Stainless Steel wire pulls, ADA compliant.

B. Plastic-Laminate Colors, Patterns, and Finishes: As selected by Architect from plastic-laminate manufacturer's full range of colors and patterns

C. PVC Edgebanding Color: As selected from casework manufacturer's full range.

2.5 CABINET FABRICATION

A. Plastic-Laminate-Faced Cabinet Construction: As required by referenced quality standard, but not less than the following:

1. Bottoms and Ends of Cabinets, and Tops of Wall Cabinets and Tall Cabinets: 3/4-inch plywood, plastic-laminate faced on exposed surfaces, thermoset decorative panels on semiexposed surfaces. Solid sub top.
2. Shelves: 3/4-inch plywood to 27 inches wide, 1 inch thick over 27 inches wide and at open cabinets, reversible, edged on front only.
3. Backs of Cabinets: 1/2-inch plywood, plastic-laminate faced
4. Base Cabinet Sub-tops: 3/4-inch plywood panel product glued and pinned or screwed
5. Drawer Fronts: 3/4-inch hardwood, plastic-laminate faced.
6. Drawer Sides and Backs: 1/2-inch solid-wood or veneer-core hardwood plywood, with glued dovetail or multiple-dowel joints.
7. Drawer Bottoms: 1/4-inch hardwood plywood glued and dadoed into front, back, and sides of drawers.
8. Doors: 3/4-inch plywood, plastic-laminate faced.

B. Filler Strips: Provide as needed to close spaces between cabinets and walls, ceilings, and indicated equipment. Fabricate from same material and with same finish as cabinets.

C. Fabricate design to comply with the requirements of the American with Disabilities Handbook – EEOC-BK-19, dated October 1992, and Appendix B-ADA Accessibility Guidelines, except where the height of cabinets is noted otherwise on the Drawings.

2.6 CASEWORK HARDWARE AND ACCESSORIES

A. Hardware, General: Unless otherwise indicated, provide manufacturer's standard commercial-quality, heavy-duty hardware.

1. Use threaded metal or plastic inserts with machine screws for fastening to particleboard except where hardware is through-bolted from back side.

B. Butt Hinges: Powder-coated, chrome finish, semi-concealed, 5-knuckle hinges complying with BHMA A156.9, Grade 1, with antifriction bearings and rounded tips. Provide 2 hinges for doors less than 48 inches high and 3 hinges for doors more than 48 inches high.

C. Frameless Concealed Hinges (European Type): BHMA A156.9, Type B01602, 170 degrees of opening, self-closing.

D. Pulls: Solid stainless steel wire pulls, with clear anodized finish, fastened from back with two screws. For sliding doors, provide recessed chrome-plated flush pulls. Provide 2 pulls for drawers more than 24 inches wide.

E. Door Catches: Powder-coated dual, self-aligning, permanent magnet catch. Provide 2 catches on doors more than 48 inches high.

F. Drawer Slides: BHMA A156.9, Type B05091.

1. Heavy Duty (Grade 1HD-100 and Grade 1HD-200): Side mounted; full-extension type; zinc-plated, steel ball-bearing slides.

G. Label Holders: Chrome plated, sized to receive standard label cards approximately 1 by 2 inches, attached with screws or brads.

1. Provide label holders where indicated.

H. Drawer and Hinged Door Locks: Cam type, 5-pin tumbler, brass with chrome-plated finish, and complying with BHMA A156.11, Grade 1.

1. Provide a minimum of two keys per lock and six master keys.
2. Provide locks on all doors and drawers. Key locks alike in each room and master keyed throughout the building.
3. Digital Evidence Cabinet shall be keyed as indicated on the Drawings.

I. Adjustable Shelf Supports: 2-pin locking plastic shelf rests complying with BHMA A156.9, Type B04013, 300 pound load rating per support.

J. Grommets for Cable Passage through Countertops: 2-inch OD, molded-plastic grommets and matching plastic caps with slot for wire passage.

2.7 COUNTERTOPS

A. Countertops, General: Provide countertops as one continuous piece wherever possible. Minimize seams to greatest extent possible. Provide smooth, clean exposed tops and edges in uniform plane free of defects. Provide front and end overhang of 1 inch over base cabinets.

B. Plastic-Laminate Tops: Plastic-laminate sheet, shop bonded to both sides of 1 inch thick plywood. Sand surfaces to which plastic laminate is to be bonded.

1. Plastic Laminate for Flat Tops: Grade HGS, 0.050 inch thick
2. Plastic Laminate for Flat Tops in Labs: Grade CHEM, 0.050 inch thick
3. Plastic Laminate for Backing: Grade BKL.
4. Provide plastic-laminate edgings of the same material as top on front edge of top, on top edges of backsplashes and end splashes, and on ends of tops and splashes.

C. Quartz Tops, General: Provide countertops as one continuous piece wherever possible. Minimize seams to greatest extent possible. Provide smooth, clean exposed tops and edges in uniform plane free of defects. Provide front and end overhang of 1 inch over base cabinets.

D. Stainless Steel Countertops, General: Provide countertops as one continuous piece wherever possible. Minimize seams to greatest extent possible. Provide smooth, clean exposed tops and edges in uniform plane free of defects. Provide front and end overhang of 1 inch over base cabinets

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances, location of framing and reinforcements, and other conditions affecting performance of manufactured wood casework.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPERATION

A. Coordinate with other trades to assure proper and adequate provision in the work of those trades for interface with the work of this Section.

B. Plumbing Contractor will furnish templates for all cut-outs in countertops and cabinets where sinks and associated items will be installed.

C. Take necessary measurements in the field to assure proper fit of shop fabricated items.

D. Prior to start of installation verify that the work of other trades is sufficiently complete to properly permit this installation to proceed.

3.3 CASEWORK INSTALLATION

A. Install level, plumb, and true; shim as required, using concealed shims. Where manufactured wood casework abuts other finished work, apply filler strips and scribe for accurate fit, with fasteners concealed where practical.

B. Base Cabinets: Set cabinets straight, level, and plumb. Adjust subtops within 1/16 inch of a single plane. Fasten cabinets to masonry or framing, wood blocking, or reinforcements in walls and partitions with fasteners spaced 24 inches o.c. Bolt adjacent cabinets together with joints flush, tight, and uniform. Align similar adjoining doors and drawers to a tolerance of 1/16 inch.

1. Where base cabinets are not installed adjacent to walls, fasten to floor at toe space with fasteners spaced 16 inches o.c. Secure sides of cabinets to floor, where they do not adjoin other cabinets, with not less than two fasteners.

C. Wall Cabinets: Hang cabinets straight, level, and plumb. Adjust fronts and bottoms within 1/16 inch of a single plane. Fasten to hanging strips, masonry, or framing, blocking, or reinforcements in walls or partitions. Align similar adjoining doors to a tolerance of 1/16 inch.

1. Fasten through back, near top and bottom, at ends, and not more than 16 inches o.c.
2. Use toggle bolts at hollow masonry.
3. Use expansion anchors at solid masonry.
4. Use No. 10 wafer-head screws sized for 1-inch penetration at wood hanging strips.
5. Use No. 10 wafer-head screws sized for 1-inch penetration into wood framing or blocking at wood-framed partitions.
6. Use No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish at metal-framed partitions.
7. Use toggle bolts at plaster on metal lath.

D. Install hardware uniformly and precisely. Set hinges snug and flat in mortises unless otherwise indicated. Adjust and align hardware so moving parts operate freely and contact points meet accurately. Allow for final adjustment after installation.

E. Adjust casework and hardware so doors and drawers operate smoothly without warp or bind. Lubricate operating hardware as recommended by manufacturer.

3.4 INSTALLATION OF TOPS

A. Field Jointing: Where possible make in the same manner as shop jointing, using dowels, splines, adhesives, and fasteners recommended by manufacturer. Prepare edges to be joined in shop so Project-site processing of top and edge surfaces is not required. Locate field joints where shown on Shop Drawings.

1. Secure field joints in plastic-laminate countertops with concealed clamping devices located within 6 inches of front and back edges and at intervals not exceeding 24 inches. Tighten according to manufacturer's written instructions to exert a constant, heavy-clamping pressure at joints.

B. Support countertops uniformly with full bearing; secure in place with manufacturer’s approved adhesives.

C. Provide tight, flush, hairline joints.

D. Secure tops to cabinets with Z- or L-type fasteners or equivalent, using two or more fasteners at each front, end, and back.

E. Abut top and edge surfaces in one true plane, with internal supports placed to prevent deflection. Secure backsplashes and end splashes to walls with adhesive.

F. Seal junctures of tops, splashes, and walls with mildew-resistant silicone sealant or another permanently elastic sealing compound recommended by countertop material manufacturer.

3.5 ADJUSTING

A. Adjust casework and hardware so doors and drawers are centered in openings and operate smoothly without warp or bind. Lubricate operating hardware as recommended by manufacturer.

B. Inspect completed installation for damage, gaps, and alignment. Replace defective work.

3.6 CLEANING AND PROTECTING

A. Repair or remove and replace defective work as directed on completion of installation.

B. Clean finished surfaces, touch up as required, and remove or refinish damaged or soiled areas to match original factory finish, as approved by Architect.

C. Protection: Provide 6-mil plastic or other suitable water-resistant covering over countertop surfaces. Tape to underside of countertop at a minimum of 48 inches o.c. Remove protection at Substantial Completion.

END OF SECTION 12.3200

SECTION 12.3600 - SOLID SURFACING COUNTERTOPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Solid surface material countertops.
2. Solid surface material backsplashes.
3. Solid surface material end splashes.
4. Solid surface material apron fronts.

B. Related Requirements:

1. Division 22 " Plumbing " for and plumbing fittings.

1.3 ACTION SUBMITTALS

A. Product Data: For countertop materials.

B. Shop Drawings: For countertops. Show materials, finishes, edge and backsplash profiles, methods of joining, and cutouts for plumbing fixtures.

1. Show locations and details of joints.
2. Show direction of directional pattern, if any.
3. Details shall be produced in 1/2-inch scale minimum for all fabricated items

C. Samples for Verification: For the following products:

1. Countertop material, 6 inches square.
2. Wood trim, 8 inches long.
3. One full-size solid surface material countertop, with front edge and backsplash, 8 by 10 inches, of construction and in configuration specified.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For solid surface material countertops to include in maintenance manuals. Include Product Data for care products used or recommended by Installer and names, addresses, and telephone numbers of local sources for products.

1.6 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate countertops similar to that required for this Project, and whose products have a record of successful in-service performance.

B. Installer Qualifications: Fabricator of countertops.

C. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and execution.

1. Build mockup of typical countertop as shown on Drawings.
2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 FIELD CONDITIONS

A. Field Measurements: Verify dimensions of countertops by field measurements after base cabinets are installed but before countertop fabrication is complete.

1.8 COORDINATION

A. Coordinate locations of utilities that will penetrate countertops or backsplashes.

1.9 DELIVERY, STORAGE AND HANDLING

A. Deliver no components to project site until areas are ready for installation

B. Store components indoors prior to installation.

C. Handle materials to prevent damage to finished surfaces.

1. Provide protective coverings to prevent physical damage or staining following installation for duration of project.

1.10 WARRANTY

A. Provide manufacturer’s warranty against defects in materials.

1. Warranty shall provide material and labor to repair or replace defective materials.
2. Damage caused by physical or chemical abuse or damage from excessive heat will not be warranted.
3. Warranty shall be transferable to subsequent owner for remainder of warranty period.

B. Manufacturer's warranty period

1. Ten years from date of substantial completion

PART 2 - PRODUCTS

2.1 SOLID SURFACE COUNTERTOP MATERIALS – **SS-01 & SS-02**

A. Solid Surface Material: Homogeneous-filled plastic resin complying with ICPA SS-1.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. LG Hausys Hi-Macs
   b. Wilsonart LLC.
   c. Nevamar
2. Basis of design:
   a. As indicated on drawings – Design Summary Selection
3. Type: Provide Standard unless Special Purpose type is indicated.
4. Integral Sink Bowls: Comply with CSA B45.5/IAPMO Z124.
5. Colors and Patterns: as per drawings.

B. Particleboard: ANSI A208.1, Grade M-2-Exterior Glue.

C. Plywood: Exterior softwood plywood complying with DOC PS 1, Grade C-C Plugged, touch sanded.

2.2 COUNTERTOP FABRICATION

A. Fabricate countertops according to solid surface material manufacturer's written instructions and to the AWI/AWMAC/WI's "Architectural Woodwork Standards."

1. Grade: Premium .

B. Countertops: 1/2-inch- thick, solid surface material with front edge built up with same material.

C. Backsplashes: 1/2-inch- thick, solid surface material.

D. Fabricate tops with shop-applied edges unless otherwise indicated. Comply with solid surface material manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.

1. Fabricate with loose backsplashes for field assembly.

E. Joints: Fabricate countertops in sections for joining in field.

1. Joint Locations: Not within 18 inches of a sink or cooktop and not where a countertop section less than 36 inches long would result, unless unavoidable.
2. Splined Joints: Accurately cut kerfs in edges at joints for insertion of metal splines to maintain alignment of surfaces at joints. Make width of cuts slightly more than thickness of splines to provide snug fit. Provide at least three splines in each joint.

F. Cutouts and Holes:

1. Undercounter Plumbing Fixtures: Make cutouts for fixtures in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.
   a. Provide vertical edges, slightly eased at juncture of cutout edges with top and bottom surfaces of countertop and projecting 3/16 inch into fixture opening.

2.3 INSTALLATION MATERIALS

A. Adhesive: Product recommended by solid surface material manufacturer.

1. Verify adhesives have a VOC content of 70 g/L or less.
2. Verify adhesive complies with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

B. Sealant for Countertops: Comply with applicable requirements in Section 079200 "Joint Sealants."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates to receive solid surface material countertops and conditions under which countertops will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of countertops.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install countertops level to a tolerance of 1/8 inch in 8 feet, 1/4 inch maximum. Do not exceed 1/64-inch difference between planes of adjacent units.

B. Fasten subtops to cabinets by screwing through subtops into cornerblocks of base cabinets. Shim as needed to align subtops in a level plane.

C. Secure countertops to subtops with adhesive according to solid surface material manufacturer's written instructions. Align adjacent surfaces and, using adhesive in color to match countertop, form seams to comply with manufacturer's written instructions. Carefully dress joints smooth, remove surface scratches, and clean entire surface.

D. Bond joints with adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.

1. Install metal splines in kerfs in countertop edges at joints. Fill kerfs with adhesive before inserting splines and remove excess immediately after adjoining units are drawn into position.
2. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.

E. Install backsplashes and end splashes by adhering to wall and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears.

F. Install aprons to backing and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears. Fasten by screwing through backing. Predrill holes for screws as recommended by manufacturer.

G. Complete cutouts not finished in shop. Mask areas of countertops adjacent to cutouts to prevent damage while cutting. Make cutouts to accurately fit items to be installed, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.

1. Seal edges of cutouts in particleboard subtops by saturating with varnish.

H. Apply sealant to gaps at walls; comply with Section 07.9200 "Joint Sealants."

END OF SECTION 12.3600

SECTION 12.3661.19 - QUARTZ SURFACING COUNTERTOPS & SILLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Quartz agglomerate surfacing countertops.
2. Quartz agglomerate backsplashes.
3. Quartz agglomerate end splashes.
4. Quartz agglomerate apron fronts.
5. Quartz agglomerate vanities.
6. Quartz agglomerate window sills.
7. Adhesives and sealants.

B. Related Requirements:

1. Section 05.5000 "Metal Fabrications".
2. Section 06.1000 "Rough Carpentry".
3. Section 07.9200 "Joint Sealants".
4. Section 12.3200 "Manufactured Casework".
5. Section 22.4100 "Residential Plumbing Fixtures" for sinks and plumbing fittings.

1.3 REFERENCES

A. ASTM C 97: Standard Test Methods for Absorption ad Bulk Specific Gravity of Dimension Stone.

B. ASTM C 170: Standard Test Method for Compressive Strength of Dimension Stone.

C. ASTM C 501: Standard Test Method for Relative Resistance to Wear of Unglazed Ceramic Tile by Taber Abraser.

D. ASTM C 834: Standard Specification for Latex Sealants.

E. ASTM C 920: Standard Specification for Elastomeric Joint Sealants.

F. ASTM D 790: Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.

G. ASTM E 84: Standard Test Method for Surface Burning Characteristics of Building Materials.

H. ISO: International Organization of Standardization.

I. ISO 9001: Quality Management Systems.

J. NSF/ANSI Standard 51: Food Equipment Materials.

K. SCAQMD Rule 1168: Adhesive and Sealant Applications.

L. UL 2818: GREENGUARD Certification Program for Chemical Emissions for Building Materials, Finishes, and Furnishings.

1.4 ACTION SUBMITTALS

A. Product Data: For countertop materials.

1. Submit data for each specified product. Include manufacturer's technical data sheets and published installation instructions.
2. Submit Safety Data Sheets (SDS) for adhesives and sealants.

B. Sustainable Design Submittals:
1. Product Data: For adhesives, indicating VOC content.

C. Shop Drawings: For countertops. Submit dimensioned shop drawings showing countertop layouts, backsplashes, vanities, window sills, joinery, edge conditions, terminations, substrate construction, cutouts, and holes.

1. Show locations and details of joints.
2. Show direction of directional pattern, if any.
3. Show plumbing installation provisions.

D. Samples for Initial Selection: For each type of material exposed to view.

E. Samples for Verification: For the following products:

1. Countertop material, 6 inches (150 mm) square.
2. One full-size quartz agglomerate countertop, with front edge and backsplash, 8 by 10 inches (200 by 250 mm), of construction and in configuration specified.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator.

B. Test Reports: Submit certified test reports showing compliance with specified performance characteristics and physical properties.

C. Warranty: Submit specimen copy of specified warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For quartz agglomerate countertops to include in maintenance manuals. Submit manufacturer's published maintenance and care manual. Include Product Data for care products used or recommended by Installer and names, addresses, and telephone numbers of local sources for products.

1.7 QUALITY ASSURANCE

A. Regulatory Requirements

1. Accessibility Requirements: Comply with the U.S. Architectural & Transportation Barriers Compliance Board ADA-ABA Accessibility Guidelines for Buildings and Facilities.
2. Adhesives, Sealants, and Sealant Primers.

    a. SCAQMD (South Coast Air Quality Management District) Rule 1168.

B. Manufacturing Facility Qualifications: Quartz surfacing materials produced in an ISO 9001 certified facility.

C. Fabricator Qualifications: Minimum of five years documented experience in fabricating quartz surfacing countertops similar in scope and complexity to this Project, using water-cooled cutting tools. Currently certified by the manufacturer as an acceptable fabricator.

D. Installer Qualifications: Minimum of five years documented installation experience for projects similar in scope and complexity to this Project, and currently certified by the manufacturer as an acceptable installer.

E. A mockup may be a reasonable precaution for projects that require many quartz agglomerate countertops, but it may be impractical for other applications.

F. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and execution.

1. Build mockup of typical countertop as shown on Drawings.

2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Comply with manufacturer's recommendations for shipping and handling quartz surfacing materials to preclude breakage and damage. Brace quartz surfacing units as necessary during shipment, transporting in near-vertical position with finished face towards finished face. Do not allow finished surfaces to rub during shipping and handling.

B. Store materials protected from exposure to harmful weather conditions, at temperature and humidity conditions recommended by the manufacturer. Store quartz surfacing sheet materials on racks in near-vertical position to preclude damage. Store with finished face turned towards finished face. Prevent warpage and breakage.

1.9 FIELD CONDITIONS

A. Field Measurements: Verify dimensions of countertops and openings by field measurements after base cabinets are installed but before countertop fabrication is complete. Show recorded measurements on shop drawings.

B. Adhesives: Acclimate adhesives to occupancy room temperatures with maximum temperature not to exceed 75 deg F (24 deg C).

1.10 COORDINATION

A. Coordinate field measurements and fabrication schedule with construction progress to avoid construction delays.

B. Coordinate locations of utilities that will penetrate countertops or backsplashes.

1.11 WARRANTY

A. Manufacturer's Limited Warranty: Standard 10 Year Commercial and Residential Limited Warranty against defects in quartz surfacing sheet materials.

PART 2 - PRODUCTS

2.1 QUARTZ AGGLOMERATE COUNTERTOP MATERIALS

A. Quartz Agglomerate: Solid sheets consisting of up to 93 percent quartz aggregate combined with polyester resin binders and proprietary pigments that are fabricated using vacuum vibrocompaction technology.

1. Basis-of-Design Product: (**QZ-01**) Subject to compliance with requirements, provide LX HAUSYS VIATERA or a comparable product by one of the following:

    a. Cambria
    b. Silestone

2. Composition: Up to 93 percent quartz aggregate combined with polyester resin binders and proprietary pigments that are fabricated into slab.
3. Material Thickness: 1.18 inch (3 cm)], nominal.
4. Material Weight: 620 LBS. for 63” X 130” slab (2 cm) thick surfacing.
5. Countertop Dimensions: As indicated on Drawings.
6. Vanity Dimensions: As indicated on Drawings
7. Window Sill Dimensions: As indicated on Drawings
8. Conformance Standards:

    a. NSF/ANSI Standard 51.
    b. UL 2818:

        1) GREENGUARD, emission levels in UL 2818, Section 7.1 are applicable for furniture products.
        2) GREENGUARD Gold, emission levels in UL 2818, Section 7.2 are applicable for building materials, finishes, and furnishings.

9. Physical Characteristics:

    a. Flexural Strength: Greater than 7,500; ASTM D 790.
    b. Stain resistance (24 Hour): No effect to moderate effect; NEMA LD-3.
    c. Abrasion Resistance: Greater than 100 in. lbs.; ASTM C 501.
    d. Density: Greater than 2.3 g/.cu. m per ASTM C 97.
    e. Compressive Strength (One Axis - Div.): Greater than 24,000 psi (138 MPa) per ASTM C 170.
    f. Moisture Absorption: Less than 0.07 percent per ASTM C 97.
    g. Surface Burning Characteristics: Class I and Class A per ASTM E 84.

10. Quartz Finish: Polished finish
11. Colors and Patterns:

a. **QZ-1** Suprema Nero

12. Edge Detail: Straight with Eased Edge

2.2 COUNTERTOP FABRICATION

A. General: Fabricate components in shop, to greatest extent practicable, in sizes and shapes indicated according to approved shop drawings and MSI Fabrication manual.

B. Joint Seams: Form joint seams between quartz surfacing components with specified seam adhesive. Completed joints inconspicuous in appearance and without voids. Provide joint reinforced if required by manufacturer for particular installation conditions.

C. Cutouts and Holes: Provide holes and cutouts for service fixtures and similar countertop-mounted items as indicated. Form cutouts to required template or pattern, with smooth, even curves and eased edges.

D. Countertops: 0.78-inch - (2-cm-) quartz agglomerate with integral edge.

E. Backsplashes: 0.78-inch - (2-cm-) thick, quartz agglomerate.

F. End Splash: Matching backsplash

G. Fabricate tops with shop-applied edges and backsplashes unless otherwise indicated. Comply with quartz agglomerate manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.

1. Fabricate with loose backsplashes for field assembly.

H. Joints: Fabricate countertops without joints.

I. Joints: Fabricate countertops in sections for joining in field

1. Joint Locations: Not within 18 inches (450 mm) of a sink or cooktop and not where a countertop section less than 36 inches (900 mm) long would result, unless unavoidable.

2.3 INSTALLATION MATERIALS

A. Joint Adhesive: Methacrylate-based adhesive for chemically bonding quartz surfacing seams. Color complementary to quartz surfacing sheet material. UL 2818 GREENGUARD Gold certified and complying with SCAQMD Rule 1168.

1. Basis-of-Design Product: Integra Surface Adhesive.

2. Adhesives shall have a VOC content of 70 > g/L or less.

B. Elastomeric Sealant: Mildew-resistant silicone sealant for filling gaps between countertops and terminating substrates in wet environment applications. Complies with ASTM C920, Type S (single component), Grade NS (nonsag).

1. Basis-of-Design Product: Color Matched Caulk.
2. Color: Complementary to quartz surfacing color

C. Siliconized Acrylic Sealant: Siliconized acrylic latex sealant. For general applications to fill gaps between countertops and at terminating substrates. Complies with ASTM C 384, Type OP, Grade NF, and SCAQMD Rule 1168.

1. Basis-of-Design Product: Color Matched Caulk.
2. Color: Complementary to quartz surfacing color

D. Construction Adhesive: Countertop manufacturer's recommended silicone-based construction adhesive for backsplashes, endsplashes, and other applications according to manufacturer's published fabrication instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates to receive quartz agglomerate countertops and conditions under which countertops will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of countertops. Substrates must be sound, flat, smooth, and free from dust or other surface contaminants.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 COUNTERTOP AND VANITY INSTALLATION

A. Install quartz surfacing components plumb, level, and true according to approved shop drawings and manufacturer's published installation instructions. Use woodworking and specialized fabrication tools acceptable to the manufacturer.

1. Fasten quartz surfacing components to base cabinets or other supporting substrates with suitable adhesives acceptable to manufacturer.

B. Form joint seams with specified seam adhesive. Seams to be inconspicuous in completed work. Seams in locations shown on approved shop drawings and acceptable to manufacturer. Promptly remove excess adhesive.

1. Clamp or brace quartz surfaces in position until adhesive sets.

C. Fill gaps between countertop and terminating substrates with specified silicone sealant.

D. Install backsplashes and endsplashes where indicated on Drawings. Adhere to countertops with specified construction adhesive.

E. Vanities: Secure front panels to solid substrate with specified construction adhesive.

1. ADA Vanities: Angled front to permit wheelchair access to comply with referenced accessibility standard.

3.3 WINDOW SILL INSTALLATION

A. Install window sills for full length of each window unit, securing to substrates with concealed fasteners and specified adhesives.

B. Provide minimum 1/8 inch (3.2 mm) expansion gap on both sides of window sills. Fill gap with specified joint sealant.

C. Completed work to be plumb, level, and true, with edges eased and smooth.

3.4 REPAIRS

A. If permissible to Architect, minor surface marring for quartz surfacing components may be repaired according to manufacturer's published installation instructions.

B. Remove and replace quartz surfacing components that are damaged and cannot be satisfactorily repaired.

3.5 CLEANING AND PROTECTION

A. Clean quartz surfacing components according to manufacturer's published maintenance instructions.

B. Completely remove excess adhesives and sealants from finished surfaces.

C. Protect completed work from damage during remainder of construction period.

END OF SECTION 12.3661.19

SECTION 12.9300 - STREETSCAPE ITEMS

PART 1 - GENERAL

1.01 SECTION DESCRIPTION

A. The Work of This Section Includes:

1. This section is a materials specification covering streetscape items.

1.02 CERTIFICATION

A. Contractor shall provide to Engineer a certificate stating the name, product name, style number, and other pertinent information to fully describe the product.

1.03 SHIPMENT AND STORAGE

A. Product labels shall clearly show the manufacturer or supplier name and style number.

B. During storage, products shall be elevated off the ground, out of direct sunlight, away from sources of dust and dirt.

PART 2 - PRODUCTS

A. Materials shall be provided as indicated on the Drawings.

PART 3 - EXECUTION

A. Products shall be installed as per the manufacturer’s product specific installation instructions.

END OF SECTION

SECTION 14.2100 – ELECTRIC TRACTION ELEVATOR #1

PART 1 - GENERAL

1.01 SUMMARY

A. This section specifies electric traction elevators.

B. Work Required:

1. The work required under this section consists of all labor, materials and services required for the complete installation (including operational verification) of all the equipment required for the elevator(s) as herein specified.
2. All work shall be performed in a first class, safe and workmanlike manner.
3. In all cases where a device or part of the equipment is herein referred to in the singular, it is intended that such reference shall apply to as many of such devices or parts as are required to make complete installation.

1.02 RELATED SECTIONS

A. The following sections contain requirements that relate to this section and are performed by trades other than the elevator manufacturer/installer.

1. Section 01.5000 – Temporary Facilities and Controls: protection of floor openings and personnel barriers; temporary power and lighting.
2. Section 03.3000 – Cast-In-Place Concrete: elevator pit and elevator machine foundation.
3. Section 04.2000 – Unit Masonry: masonry hoistway enclosure, building-in and grouting hoistway doorframes, and grouting of sills.
4. Section 05.5000 – Metal Fabrications: pit ladder, divider beams, supports for entrances and rails, and hoisting beam at top of elevator hoistway.
5. Section 07.1600 – Cementitious Waterproofing: waterproofing of elevator pit.
6. Section 23.5000 – Heat Generation Equipment: ventilation and temperature control of elevator equipment areas.
7. Section 26.0500 – Common Work Results for Electrical:

a. Main disconnects for each elevator.
b. Electrical power for elevator installation and testing.
c. Disconnecting device to elevator equipment prior to activation of sprinkler system.
d. The installation of dedicated GFCI receptacles in the pit and overhead.
e. Lighting in controller area, machine area and pit.
f. Wiring for telephone service to controller.

8. Section 26.3000 – Emergency (Standby) Power Supply Systems: emergency generator for elevator operation.
9. Section 27.3000 – Voice Communications: ADAAG-required emergency communications equipment.
10. Section 28.3100 – Fire Alarm Systems: fire and smoke detectors at required locations and interconnecting devices; fire alarm signal lines to contacts in the machine area.
11. Section 31.1000 – Site Clearing: excavation for elevator pit.

1.03 REFERENCES

A. Comply with applicable building and elevator codes at the project site, including but not limited to the following:

1. ASME A17.1/CSA B44, Safety Code for Elevators and Escalators.
2. ASME A17.7/CSA B44, Performance-Based Safety Code for Elevators and Escalators.
3. ADAAG, American Disabilities Act Accessibility Guidelines.
4. ANSI A117.1, Building and Facilities, Providing Accessibility and Usability for Physically Handicapped People.
5. ANSI/NFPA 70, (NEC) National Electrical Code.
6. CAN/CSA C22.1, (CEC) Canadian Electrical Code.
7. ANSI/UL 10B, Standard for Fire Test of Door Assemblies.
8. CAN/ULC-S104-10, Standard Method for Fire Test of Door Assemblies.
9. ANSI/NFPA 80, Standard for Fire Doors and Other Opening Protectives.
10. Building Codes IBC or NBCC.
11. All Local Jurisdictional applicable codes.

1.04 SYSTEM DESCRIPTION

A. Equipment Description: Gen3 Core™ gearless machine-room less elevator where all components fit inside the hoistway.
B. Equipment Control: Otis GCS Controller.
C. IoT Connectivity: Elevator connected to Otis ONE™ IoT Platform
D. Drive: Regenerative
E. Quantity of Elevators: 1
F. Elevator Stop Designations: 1, 2
G. Stops: 2
H. Openings: Front Only
I. Travel: 14'-0" (4267 mm)
J. Pit Depth: 5'-0" (1524 mm)
K. Rated Capacity: 2100 lb (953 kg)
L. Rated Speed: 200 fpm (1.02 m/s)
M. Cab Height: 7'-9" (2362 mm).
N. Clear Cab Height: 7'-7 ¾" (2330 mm) with 1 ¼" (32 mm) Floor Recess.
O. Entrance Type and Width:
P. Entrance Height: 7'-0" (2134 mm)
Q. Main Power Supply: 480 volts ± 5% of normal, three-phase, with a separate equipment grounding conductor.
R. Car Lighting Power Supply: 120 volts, single-phase, 15 amps, 60 Hz.
S. Machine Location: Rail-mounted at the top of the hoistway.
T. Signal Fixtures: Manufacturer's standard with metal button targets (excluding CA).
U. Controller Location: Machine Roomless controller(s) must be jamb-mounted on the same side as the counterweight, located at the top landing.
V. Performance:
    1. Car Speed: ±3 % of contract speed under any loading condition or direction of travel.
    2. Car Capacity: Safely lower, stop and hold up to 120% of rated load (code required).
    3. Ride Quality:
        a. Vertical Vibration (maximum): 20 milli-g
        b. Horizontal Vibration (maximum): 12 milli-g
        c. Vertical Jerk (maximum): 4.59 ± 1.0 ft./ sec3 (1.4 ± 0.3 m/ sec3)

d. Acceleration/Deceleration (maximum): 2.62 ft./ sec2 (0.8 m/ sec2)

e. In Car Noise: 55 – 60 dB(A)

f. Stopping Accuracy: ± 0.375 in. (± 10 mm) max, ± 0.25 in. (± 6 mm) Typical

g. Re-leveling Distance: ± 0.5 in. (± 12 mm)

W. Operation: Simplex Collective Operation: Using a microprocessor-based controller, operation shall be automatic by means of the car and hall buttons. If all calls in the system have been answered, the car shall park at the last landing served.

X. Operation Features – Standard

1. Full Collective Operation
2. Anti-nuisance.
3. Fan and Light Protection.
4. Load Weighing Bypass.
5. Independent Service.
6. Firefighters' Service Phase I and Phase II (USA only); or Special Emergency Service Phase I and II – Emergency Recall and In-Car Emergency Operation (Canada only).
7. Top of Car Inspection.
8. Zoned Access at Bottom Landing.
9. Zoned Access at Top Landing.

Y. Operation Features – Optional

1. Express Priority Service with key-switch(es)
2. Emergency Hospital Service.
3. Automatic Rescue Operation
4. Automatic Standby Power Operation with Manual Override.

Z. Door Control Features:

1. Door control to open doors automatically when car arrives at a landing in response to a normal hall or car call.
2. Elevator doors shall be provided with a reopening device that will stop and reopen the car door(s) and hoistway door(s) automatically should the door(s) become obstructed by an object or person.
3. Door protection shall consist of a two-dimensional or a code required, three-dimensional, multi-beam array projecting across the car door opening.
4. Door nudging operation to occur if doors are prevented from closing for an

adjustable period of time.

AA. Provide equipment for seismic conditions: Yes.

1.05 SUBMITTALS

A. Product Data: Submit manufacturer's product data for each system proposed for use. Include the following:
   1. Signal and operating fixtures, operating panels and indicators.
   2. Cab design, dimensions and layout.
   3. Hoistway-door and frame details.
   4. Electrical characteristics and connection requirements.
   5. Expected heat dissipation of elevator equipment in hoistway (BTU).
   6. Color selection chart for Cab and Entrances.

B. Shop Drawings: Submit approval layout drawings. Include the following:
   1. Car, guide rails, buffers, and other components in hoistway.
   2. Maximum rail bracket spacing.
   3. Maximum loads imposed on guide rails requiring load transfer to building structure.
   4. Clearances and travel of car.
   5. Clear inside hoistway and pit dimensions.
   6. Location and sizes of access doors, hoistway entrances and frames.

C. Operations and Maintenance Manuals: Provide manufacturer's standard operations and maintenance manual.

1.06 QUALITY ASSURANCE

A. Manufacturer: Elevator manufacturer shall be ISO 9001 certified.

B. Manufacturer shall have a minimum of fifteen years of experience in the fabrication, installation and service of elevators.

C. Installer: Elevators shall be installed by the manufacturer.

D. Permits, Inspections and Certificates: The Elevator Contractor shall obtain and pay for necessary Municipal or State Inspection and permit as required by the elevator inspection authority, and make such tests as are called for by the regulations of such authorities. These tests shall be made in the presence of such authorities or their authorized representatives.

1.07 DELIVERY, STORAGE AND HANDLING

A. Should the building or the site not be prepared to receive the elevator equipment at the

agreed upon date, the General Contractor will be responsible to provide a proper and suitable storage area on or off the premises.

B. Should the storage area be off-site, and the equipment not yet delivered, then the elevator contractor, upon notification from the General Contractor, will divert the elevator equipment to the storage area. If the equipment has already been delivered to the site, then the General Contractor shall transport the elevator equipment to the storage area. The cost of elevator equipment taken to storage by either party, storage, and redeliver to the job site shall not be at the expense of the elevator contractor.

1.08 WARRANTY

A. The elevator contractor's acceptance is conditional on the understanding that their warranty covers defective material and workmanship. The warranty period shall not extend longer than one (1) year from the date of Substantial Completion or acceptance thereof by beneficial use, whichever is earlier, of each elevator. The warranty excludes: ordinary wear and tear, improper use, vandalism, abuse, misuse, or neglect or any other causes beyond the control of the elevator contractor and this express warranty is in lieu of all other warranties, express or implied, including any warranty of merchantability or fitness for a particular purpose.

1.09 MAINTENANCE AND SERVICE

A. Maintenance service consisting of regular examinations and adjustments of the elevator equipment shall be provided by the elevator contractor for a period of 12 Months after the elevator has been turned over for the customer's use. This service shall not be subcontracted but shall be performed by the elevator contractor. All work shall be performed by competent employees during regular working hours of regular working days. This service shall not cover adjustments, repairs, or replacement of parts due to negligence, misuse, abuse or accidents caused by persons other than the elevator contractor. Only genuine parts and supplies as used in the manufacture and installation of the original equipment shall be provided.

B. The periodic lubrication of elevator components shall not be required, including Sheaves, Rails, Belts, Ropes, Car and Counterweight guides, etc.

C. The elevator control system must:

1. Provide in the controller the necessary devices to run the elevator on inspection operation.
2. Provide on top of the car the necessary devices to run the elevator in inspection operation.
3. Provide in the controller an emergency stop switch. This emergency stop switch when opened disconnects power from the brake and prevents the motor from running.

4. Provide in the event of a power outage, means from the controller to electrically lift and control the elevator brake to safely bring the elevator to the nearest available landing.
5. Provide the means from the controller to reset the governor over speed switch and also trip the governor.
6. Provide the means from the controller to reset the emergency brake when set because of an unintended car movement or ascending car over speed.
7. Provide the means from the controller to reset elevator earthquake operation.

D. Provide system capabilities to enable a remote expert to create a live, interactive connection with the elevator system to enable the following functions:
   1. Remotely diagnose elevator issues with a remote team of experts
   2. Remotely return an elevator to service
   3. Provide real-time status updates via email
   4. Remotely make changes to selected elevator functions including:
      a. Control building traffic: Restrict floor access, remove car from group operation, shut down elevator, select up peak/down peak mode and activate independent service.
      b. Conserve energy: Activate cab light energy save mode, activate fan energy save mode, shut down car(s).
      c. Improve passenger experience: Extend door open times, change parking floor, activate auto car full, activate anti-nuisance, advance door opening, door nudging, extend specific floor extended opening time, release trapped passengers.

PART 2 - PRODUCTS

2.01 MANUFACTURER

A. Manufacturer: Design based upon Otis Elevator's Gen3 Core™ machine room-less elevator system.

2.02 DESIGN AND SPECIFICATIONS

A. Provide Gen3™ Core traction passenger elevators from Otis Elevator Company. The control system and car design based on materials and systems manufactured by Otis Elevator Company. Specifically, the system shall consist of the following components:
   1. Controller located entirely inside the hoistway.
   2. An AC gearless machine using embedded permanent magnets mounted at the top of the hoistway.

3. Polyurethane Coated-Steel Belts for elevator hoisting purposes.
4. Regenerative drive that captures normally wasted energy and feeds clean power back into the building's power grid.
5. LED lighting standard in ceiling lights and elevator fixtures.
6. Sleep mode operation for LED ceiling lights and car fan.

B. Approved Installer: Otis Elevator Company

C. Alternate Manufacturers: Subject to compliance with requirements:
1. Schindler Elevator Corporation
2. TKE

2.03 EQUIPMENT: CONTROLLER COMPONENTS

A. Controller: A microcomputer-based control system shall be provided to perform all of the functions of safe elevator operation. The system shall also perform car and group operational control.
1. All high voltage (110V or above) contact points inside the controller shall be protected from accidental contact when the controller doors are open.
2. Controller shall be separated into two distinct halves: Motor Drive side and Control side. High voltage motor power conductors shall be routed so as to be physically segregated from the rest of the controller.
3. Field conductor terminations points shall be segregated; high voltage (>30 volts DC and 110 VAC,) and low voltage (< 30 volts DC)
4. Controllers shall be designed and tested for Electromagnetic Interference (EMI) immunity according to the EN 12016 (May 1998): "EMC Product Family Standards for lifts, escalators, and passenger conveyors Part 2 – immunity"
5. Controller shall be located inside the wall next to the top landing entrance frame. Emergency access shall be provided through an access panel in the entrance frame secured by a key lock.

B. Drive: A Variable Voltage Variable Frequency AC drive system shall be provided. The drive shall be set up for regeneration of AC power back to the building grid.

2.04 EQUIPMENT: HOISTWAY COMPONENTS

A. Machine: AC gearless machine, with a synchronous permanent-magnet motor, dual solenoid service and emergency disc brakes, mounted at the top of the hoistway.

B. Governor: The governor shall be a tension type car-mounted governor.

C. Buffers, Car, and Counterweight: Polyurethane type buffers shall be used for speeds of 150 and 200 feet per minute.

D. Hoistway Operating Devices:

1. Emergency stop switch in the pit.
2. Terminal stopping switches.

E. Positioning System: Consists of an encoder, reader box, and door zone vanes.

F. Guide Rails and Attachments: Guide rails shall be Tee-section steel rails with brackets and fasteners. Side counterweight arrangements shall have a dual-purpose bracket that combines both counterweight guide rails, and one of the car guide rails to building fastening.

G. Coated-Steel Belts: Polyurethane coated belts with high-tensile-grade, zinc-plated steel cords and a flat profile on the running surface and the backside of the belt. The belts shall have an FT-1 rating as referenced by NFPA 13. All driving sheaves and deflector sheaves should have a crowned profile to ensure center tracking of the belts. A continuous 24/7 monitoring system using resistance-based technology has to be installed to continuously monitor the integrity of the coated steel belts and provide advanced notice of belt wear.

H. Governor Rope: Shall be steel and shall consist of at least eight strands wound about a sisal core center.

I. Fascia: Galvanized sheet steel shall be provided in accordance with code requirements.

J. Hoistway Entrances:

1. Frames: Entrance frames shall be of bolted construction for complete one-piece unit assembly. All frames shall be securely fastened to fixing angles mounted in the hoistway and shall be of UL fire rated steel. The entrance profile (jamb face) shall be a width of 2 7/8” (73 mm).
2. Sills shall be extruded aluminum.
3. Doors: Entrance doors shall be of metal construction with vertical channel reinforcements.
4. Fire Rating: Entrance and doors shall be UL fire rated for 1-½ hour.
5. Entrance Finish: Satin Stainless Steel.
6. Entrance Marking Plates: Entrance jambs shall be marked with 4” x 4” (102 mm x 102 mm) plates having raised floor markings with Braille located adjacent to the floor marking. Marking plates shall be provided on both sides of the entrance.
7. Sight Guards: Sight guards will be furnished with all doors painted to match with painted doors, painted black for stainless steel doors.

2.05 EQUIPMENT: CAR COMPONENTS

A. Car Frame and Safety: A car frame fabricated from formed or structural steel members shall be provided with adequate bracing to support the platform and car enclosures. The car safety shall be integral to the car frame and shall be Type "B", flexible guide clamp

type.

B. Cab: Steel Cab with vertical steel panels shall be brushed stainless steel.

C. Car Front Finish: Satin Stainless Steel

D. Car Door Finish: Satin Stainless Steel

E. Flush Ceiling with 4 LED Lights for passenger capacities and 8 LED lights for service capacities.

F. Ceiling Finish: Satin Stainless Steel

G. Emergency Car Lighting: An emergency power unit employing a 6-volt sealed rechargeable battery and totally static circuits shall be provided to illuminate the elevator car in the event of building power failure.

H. Fan: A one-speed 120 VAC fan will be mounted to the ceiling to facilitate in-car air circulation, meeting A17.1 code requirements. The fan shall be rubber mounted to prevent the transmission of structural vibration and will include a baffle to diffuse audible noise. A switch shall be provided in the car-operating panel to control the fan.

I. Handrails: Provided on the side and rear walls of the car enclosure. They shall be,1½" diameter (38.1 mm) Round Bar Handrails with a Brushed Steel Finish.

J. Threshold: Extruded Aluminum.

K. Emergency Exit Contact: An electrical contact shall be provided on the car-top exit.

L. Guides: The car shall have 3" diameter roller guides at top and bottom and the counterweight shall have slide type guides at the top and the bottom. Optional counterweight guides available.

M. Platform: The car platform shall be constructed of metal. Load weighing device shall be mounted on the belts at the top of the hoistway.

N. The LED ceiling lights, and the fan should automatically shut off when the system is not in use and be powered back up after a passenger calls the elevator and pushes a hall button.

O. Certificate frame: Provide a Certificate frame with a satin stainless steel finish.

P. Provide Otis cab UVC light purification device.

Q. Provide Otis cab air purifier.

R. Provide a complete set of Elevator Cab Pads.

2.06 EQUIPMENT: SIGNAL DEVICES AND FIXTURES

A. Car Operating Panel: A Standard Otis ONE™ Pro flat applied car operating panel shall be provided which contains all push buttons, key switches, and message indicators for elevator operation. The car operating panel shall have a brushed stainless steel finish and include a service cabinet.

1. The car operating panel shall contain a bank of round stainless steel, mechanical LED illuminated buttons. Flush mounted to the panel and marked to correspond to the landings served. All buttons to have raised numerals and Braille markings with Flush Mounted satin stainless steel buttons with white LED illuminating halos.
2. The car operating panel shall be equipped with the following features:
    a. Raised markings and Braille to the left-hand side of each push-button.
    b. Car Position Indicator at the top of and integral to the car operating panel.
    c. Door open and door close buttons.
    d. Inspection key-switch.
    e. Elevator Data Plate marked with elevator capacity and car number.
    f. Help Button: The help button shall initiate two-way communication between the car and a location inside the building, switching over to another location if the call is unanswered, where personnel are available who can take the appropriate action. Visual indicators are provided for call initiation and call acknowledgement.
    g. Display Screen: Include display screen located near the top of the COP. The display screen shall display the car position indicator, travel direction arrows, elevator status jewels, and provide emergency text communication.
    h. Camera: Include camera located above display screen for emergency video communication. This camera is for emergency communication only.
    i. Landing Passing Signal: A chime bell shall sound in the car to signal that the car is either stopping at or passing a floor served by the elevator.
    j. In car stop switch (toggle or key unless local code prohibits use)
    k. Firefighter's hat.
    l. Firefighter's Phase II Key-switch.
    m. Call Cancel Button.
    n. Firefighter's Phase II Emergency In-Car Operating Instructions: worded according to A17.1 2000, Article 2.27.7.2.
    o. Please Exit Symbol: provided with emergency hospital service, or express priority in the hall.

B. Car Position Indicator: A digital, LED car position indicator shall be integral to the car operating panel.

C. Hall Fixtures: Hall fixtures shall be provided with necessary push buttons and key switches for elevator operation. Hall fixtures shall include:
    1. Flush Mounted satin stainless steel buttons with white LED illuminating halos.

2. Car Lantern and Chime: A directional lantern visible from the corridor shall be provided in the car entrance. When the car stops and the doors are opening, the lantern shall indicate the direction in which the car is to travel, and a chime will sound.

D. Access key-switch at top floor in entrance jamb.

E. Access key-switch at lowest floor in entrance jamb.

F. Card Reader Provision.

G. Emergency Hospital Service.

PART 3 - EXECUTION

3.01 PREPARATION

A. Take field dimensions and examine conditions of substrates, supports, and other conditions under which this work is to be performed. Do not proceed with work until unsatisfactory conditions are corrected.

3.02 INSTALLATION

A. Installation of all elevator components except as specifically provided for elsewhere by others.

3.03 DEMONSTRATION

A. The elevator contractor shall make a final check of each elevator operation with the Owner or Owner's representative present prior to turning each elevator over for use. The elevator contractor shall determine that the control systems and operating devices are functioning properly.

END OF SECTION 14.2100

SECTION 14.2200 – ELECTRIC TRACTION ELEVATOR #2

PART 1 - GENERAL

1.01 SUMMARY

A. This section specifies electric traction elevators.

B. Work Required:

1. The work required under this section consists of all labor, materials and services required for the complete installation (including operational verification) of all the equipment required for the elevator(s) as herein specified.
2. All work shall be performed in a first class, safe and workmanlike manner.
3. In all cases where a device or part of the equipment is herein referred to in the singular, it is intended that such reference shall apply to as many of such devices or parts as are required to make complete installation.

1.02 RELATED SECTIONS

A. The following sections contain requirements that relate to this section and are performed by trades other than the elevator manufacturer/installer.

1. Section 01.5000 – Temporary Facilities and Controls: protection of floor openings and personnel barriers; temporary power and lighting.
2. Section 03.3000 – Cast-In-Place Concrete: elevator pit and elevator machine foundation.
3. Section 04.2000 – Unit Masonry: masonry hoistway enclosure, building-in and grouting hoistway doorframes, and grouting of sills.
4. Section 05.5000 – Metal Fabrications: pit ladder, divider beams, supports for entrances and rails, and hoisting beam at top of elevator hoistway.
5. Section 07.1600 – Cementitious Waterproofing: waterproofing of elevator pit.
6. Section 23.5000 – Heat Generation Equipment: ventilation and temperature control of elevator equipment areas.
7. Section 26.0500 – Common Work Results for Electrical:

a. Main disconnects for each elevator.
b. Electrical power for elevator installation and testing.
c. Disconnecting device to elevator equipment prior to activation of sprinkler system.
d. The installation of dedicated GFCI receptacles in the pit and overhead.
e. Lighting in controller area, machine area and pit.
f. Wiring for telephone service to controller.

8. Section 26.3000 – Emergency (Standby) Power Supply Systems: emergency generator for elevator operation.
9. Section 27.3000 – Voice Communications: ADAAG-required emergency communications equipment.
10. Section 28.3100 – Fire Alarm Systems: fire and smoke detectors at required locations and interconnecting devices; fire alarm signal lines to contacts in the machine area.
11. Section 31.1000 – Site Clearing: excavation for elevator pit.

1.03 REFERENCES

A. Comply with applicable building and elevator codes at the project site, including but not limited to the following:

1. ASME A17.1/CSA B44, Safety Code for Elevators and Escalators.
2. ASME A17.7/CSA B44, Performance-Based Safety Code for Elevators and Escalators.
3. ADAAG, American Disabilities Act Accessibility Guidelines.
4. ANSI A117.1, Building and Facilities, Providing Accessibility and Usability for Physically Handicapped People.
5. ANSI/NFPA 70, (NEC) National Electrical Code.
6. CAN/CSA C22.1, (CEC) Canadian Electrical Code.
7. ANSI/UL 10B, Standard for Fire Test of Door Assemblies.
8. CAN/ULC-S104-10, Standard Method for Fire Test of Door Assemblies.
9. ANSI/NFPA 80, Standard for Fire Doors and Other Opening Protectives.
10. Building Codes IBC or NBCC.
11. All Local Jurisdictional applicable codes.

1.04 SYSTEM DESCRIPTION

A. Equipment Description: Gen3 Core™ gearless machine-room less elevator where all components fit inside the hoistway.

B. Equipment Control: Otis GCS Controller.

C. IoT Connectivity: Elevator connected to Otis ONE™ IoT Platform

D. Drive: Regenerative

E. Quantity of Elevators: 1

F. Elevator Stop Designations: 1, 2

G. Stops: 2

H. Openings: Front and Rear

I. Travel: 14'-0" (4267 mm)

J. Pit Depth: 5'-0" (1524 mm)

K. Rated Capacity: 3500 lb (1589 kg)

L. Rated Speed: 200 fpm (1.02 m/s)

M. Cab Height: 7'-9" (2362 mm).

N. Clear Cab Height: 7'-7 ¾" (2330 mm) with 1 ¼" (32 mm) Floor Recess.

O. Entrance Type and Width:

P. Entrance Height: 7'-0" (2134 mm)

Q. Main Power Supply: 480 volts ± 5% of normal, three-phase, with a separate equipment grounding conductor.

R. Car Lighting Power Supply: 120 volts, single-phase, 15 amps, 60 Hz.

S. Machine Location: Rail-mounted at the top of the hoistway.

T. Signal Fixtures: Manufacturer's standard with metal button targets (excluding CA).

U. Controller Location: Machine Roomless controller(s) must be jamb-mounted on the same side as the counterweight, located at the top landing.

V. Performance:

1. Car Speed: ±3 % of contract speed under any loading condition or direction of travel.
2. Car Capacity: Safely lower, stop and hold up to 120% of rated load (code required).
3. Ride Quality:
   a. Vertical Vibration (maximum): 20 milli-g
   b. Horizontal Vibration (maximum): 12 milli-g
   c. Vertical Jerk (maximum): 4.59 ± 1.0 ft./ sec^3 (1.4 ± 0.3 m/ sec^3)

d. Acceleration/Deceleration (maximum): 2.62 ft./ sec^2 (0.8 m/ sec^2)

e. In Car Noise: 55 – 60 dB(A)

f. Stopping Accuracy: ± 0.375 in. (± 10 mm) max, ± 0.25 in. (± 6 mm) Typical

g. Re-leveling Distance: ± 0.5 in. (± 12 mm)

W. Operation: Simplex Collective Operation: Using a microprocessor-based controller, operation shall be automatic by means of the car and hall buttons. If all calls in the system have been answered, the car shall park at the last landing served.

X. Operation Features – Standard

1. Full Collective Operation
2. Anti-nuisance.
3. Fan and Light Protection.
4. Load Weighing Bypass.
5. Independent Service.
6. Firefighters' Service Phase I and Phase II (USA only); or Special Emergency Service Phase I and II – Emergency Recall and In-Car Emergency Operation (Canada only).
7. Top of Car Inspection.
8. Zoned Access at Bottom Landing.
9. Zoned Access at Top Landing.

Y. Operation Features – Optional

1. Express Priority Service with key-switch(es)
2. Emergency Hospital Service.
3. Automatic Rescue Operation
4. Automatic Standby Power Operation with Manual Override.

Z. Door Control Features:

1. Door control to open doors automatically when car arrives at a landing in response to a normal hall or car call.
2. Elevator doors shall be provided with a reopening device that will stop and reopen the car door(s) and hoistway door(s) automatically should the door(s) become obstructed by an object or person.
3. Door protection shall consist of a two-dimensional or a code required, three-dimensional, multi-beam array projecting across the car door opening.
4. Door nudging operation to occur if doors are prevented from closing for an

adjustable period of time.

AA. Provide equipment for seismic conditions: Yes.

1.05 SUBMITTALS

A. Product Data: Submit manufacturer's product data for each system proposed for use. Include the following:
   1. Signal and operating fixtures, operating panels and indicators.
   2. Cab design, dimensions and layout.
   3. Hoistway-door and frame details.
   4. Electrical characteristics and connection requirements.
   5. Expected heat dissipation of elevator equipment in hoistway (BTU).
   6. Color selection chart for Cab and Entrances.

B. Shop Drawings: Submit approval layout drawings. Include the following:
   1. Car, guide rails, buffers, and other components in hoistway.
   2. Maximum rail bracket spacing.
   3. Maximum loads imposed on guide rails requiring load transfer to building structure.
   4. Clearances and travel of car.
   5. Clear inside hoistway and pit dimensions.
   6. Location and sizes of access doors, hoistway entrances and frames.

C. Operations and Maintenance Manuals: Provide manufacturer's standard operations and maintenance manual.

1.06 QUALITY ASSURANCE

A. Manufacturer: Elevator manufacturer shall be ISO 9001 certified.

B. Manufacturer shall have a minimum of fifteen years of experience in the fabrication, installation and service of elevators.

C. Installer: Elevators shall be installed by the manufacturer.

D. Permits, Inspections and Certificates: The Elevator Contractor shall obtain and pay for necessary Municipal or State Inspection and permit as required by the elevator inspection authority, and make such tests as are called for by the regulations of such authorities. These tests shall be made in the presence of such authorities or their authorized representatives.

1.07 DELIVERY, STORAGE AND HANDLING

A. Should the building or the site not be prepared to receive the elevator equipment at the

agreed upon date, the General Contractor will be responsible to provide a proper and suitable storage area on or off the premises.

B. Should the storage area be off-site, and the equipment not yet delivered, then the elevator contractor, upon notification from the General Contractor, will divert the elevator equipment to the storage area. If the equipment has already been delivered to the site, then the General Contractor shall transport the elevator equipment to the storage area. The cost of elevator equipment taken to storage by either party, storage, and redeliver to the job site shall not be at the expense of the elevator contractor.

1.08 WARRANTY

A. The elevator contractor's acceptance is conditional on the understanding that their warranty covers defective material and workmanship. The warranty period shall not extend longer than one (1) year from the date of Substantial Completion or acceptance thereof by beneficial use, whichever is earlier, of each elevator. The warranty excludes: ordinary wear and tear, improper use, vandalism, abuse, misuse, or neglect or any other causes beyond the control of the elevator contractor and this express warranty is in lieu of all other warranties, express or implied, including any warranty of merchantability or fitness for a particular purpose.

1.09 MAINTENANCE AND SERVICE

A. Maintenance service consisting of regular examinations and adjustments of the elevator equipment shall be provided by the elevator contractor for a period of 12 Months after the elevator has been turned over for the customer's use. This service shall not be subcontracted but shall be performed by the elevator contractor. All work shall be performed by competent employees during regular working hours of regular working days. This service shall not cover adjustments, repairs, or replacement of parts due to negligence, misuse, abuse or accidents caused by persons other than the elevator contractor. Only genuine parts and supplies as used in the manufacture and installation of the original equipment shall be provided.

B. The periodic lubrication of elevator components shall not be required, including Sheaves, Rails, Belts, Ropes, Car and Counterweight guides, etc.

C. The elevator control system must:

1. Provide in the controller the necessary devices to run the elevator on inspection operation.
2. Provide on top of the car the necessary devices to run the elevator in inspection operation.
3. Provide in the controller an emergency stop switch. This emergency stop switch when opened disconnects power from the brake and prevents the motor from running.

4. Provide in the event of a power outage, means from the controller to electrically lift and control the elevator brake to safely bring the elevator to the nearest available landing.
5. Provide the means from the controller to reset the governor over speed switch and also trip the governor.
6. Provide the means from the controller to reset the emergency brake when set because of an unintended car movement or ascending car over speed.
7. Provide the means from the controller to reset elevator earthquake operation.

D. Provide system capabilities to enable a remote expert to create a live, interactive connection with the elevator system to enable the following functions:
   1. Remotely diagnose elevator issues with a remote team of experts
   2. Remotely return an elevator to service
   3. Provide real-time status updates via email
   4. Remotely make changes to selected elevator functions including:
      a. Control building traffic: Restrict floor access, remove car from group operation, shut down elevator, select up peak/down peak mode and activate independent service.
      b. Conserve energy: Activate cab light energy save mode, activate fan energy save mode, shut down car(s).
      c. Improve passenger experience: Extend door open times, change parking floor, activate auto car full, activate anti-nuisance, advance door opening, door nudging, extend specific floor extended opening time, release trapped passengers.

PART 2 - PRODUCTS

2.01 MANUFACTURER

A. Manufacturer: Design based upon Otis Elevator's Gen3 Core™ machine room-less elevator system.

2.02 DESIGN AND SPECIFICATIONS

A. Provide Gen3™ Core traction passenger elevators from Otis Elevator Company. The control system and car design based on materials and systems manufactured by Otis Elevator Company. Specifically, the system shall consist of the following components:
   1. Controller located entirely inside the hoistway.
   2. An AC gearless machine using embedded permanent magnets mounted at the top of the hoistway.

3. Polyurethane Coated-Steel Belts for elevator hoisting purposes.
4. Regenerative drive that captures normally wasted energy and feeds clean power back into the building's power grid.
5. LED lighting standard in ceiling lights and elevator fixtures.
6. Sleep mode operation for LED ceiling lights and car fan.

B. Approved Installer: Otis Elevator Company

C. Alternate Manufacturers: Subject to compliance with requirements:
1. Schindler Elevator Corporation
2. TKE

2.03 EQUIPMENT: CONTROLLER COMPONENTS

A. Controller: A microcomputer-based control system shall be provided to perform all of the functions of safe elevator operation. The system shall also perform car and group operational control.
1. All high voltage (110V or above) contact points inside the controller shall be protected from accidental contact when the controller doors are open.
2. Controller shall be separated into two distinct halves: Motor Drive side and Control side. High voltage motor power conductors shall be routed so as to be physically segregated from the rest of the controller.
3. Field conductor terminations points shall be segregated; high voltage (>30 volts DC and 110 VAC,) and low voltage (< 30 volts DC)
4. Controllers shall be designed and tested for Electromagnetic Interference (EMI) immunity according to the EN 12016 (May 1998): "EMC Product Family Standards for lifts, escalators, and passenger conveyors Part 2 – immunity"
5. Controller shall be located inside the wall next to the top landing entrance frame. Emergency access shall be provided through an access panel in the entrance frame secured by a key lock.

B. Drive: A Variable Voltage Variable Frequency AC drive system shall be provided. The drive shall be set up for regeneration of AC power back to the building grid.

2.04 EQUIPMENT: HOISTWAY COMPONENTS

A. Machine: AC gearless machine, with a synchronous permanent-magnet motor, dual solenoid service and emergency disc brakes, mounted at the top of the hoistway.

B. Governor: The governor shall be a tension type car-mounted governor.

C. Buffers, Car, and Counterweight: Polyurethane type buffers shall be used for speeds of 150 and 200 feet per minute.

D. Hoistway Operating Devices:

1. Emergency stop switch in the pit.
2. Terminal stopping switches.

E. Positioning System: Consists of an encoder, reader box, and door zone vanes.

F. Guide Rails and Attachments: Guide rails shall be Tee-section steel rails with brackets and fasteners. Side counterweight arrangements shall have a dual-purpose bracket that combines both counterweight guide rails, and one of the car guide rails to building fastening.

G. Coated-Steel Belts: Polyurethane coated belts with high-tensile-grade, zinc-plated steel cords and a flat profile on the running surface and the backside of the belt. The belts shall have an FT-1 rating as referenced by NFPA 13. All driving sheaves and deflector sheaves should have a crowned profile to ensure center tracking of the belts. A continuous 24/7 monitoring system using resistance-based technology has to be installed to continuously monitor the integrity of the coated steel belts and provide advanced notice of belt wear.

H. Governor Rope: Shall be steel and shall consist of at least eight strands wound about a sisal core center.

I. Fascia: Galvanized sheet steel shall be provided in accordance with code requirements.

J. Hoistway Entrances:

1. Frames: Entrance frames shall be of bolted construction for complete one-piece unit assembly. All frames shall be securely fastened to fixing angles mounted in the hoistway and shall be of UL fire rated steel. The entrance profile (jamb face) shall be a width of 2 7/8" (73 mm).
2. Sills shall be extruded aluminum.
3. Doors: Entrance doors shall be of metal construction with vertical channel reinforcements.
4. Fire Rating: Entrance and doors shall be UL fire rated for 1-½ hour.
5. Entrance Finish: Satin Stainless Steel.
6. Entrance Marking Plates: Entrance jambs shall be marked with 4" x 4" (102 mm x 102 mm) plates having raised floor markings with Braille located adjacent to the floor marking. Marking plates shall be provided on both sides of the entrance.
7. Sight Guards: Sight guards will be furnished with all doors painted to match with painted doors, painted black for stainless steel doors.

2.05 EQUIPMENT: CAR COMPONENTS

A. Car Frame and Safety: A car frame fabricated from formed or structural steel members shall be provided with adequate bracing to support the platform and car enclosures. The car safety shall be integral to the car frame and shall be Type "B", flexible guide clamp

type.

B. Cab: Steel Cab with vertical steel panels shall be brushed stainless steel.

C. Car Front Finish: Satin Stainless Steel

D. Car Door Finish: Satin Stainless Steel

E. Flush Ceiling with 4 LED Lights for passenger capacities and 8 LED lights for service capacities.

F. Ceiling Finish: Satin Stainless Steel

G. Emergency Car Lighting: An emergency power unit employing a 6-volt sealed rechargeable battery and totally static circuits shall be provided to illuminate the elevator car in the event of building power failure.

H. Fan: A one-speed 120 VAC fan will be mounted to the ceiling to facilitate in-car air circulation, meeting A17.1 code requirements. The fan shall be rubber mounted to prevent the transmission of structural vibration and will include a baffle to diffuse audible noise. A switch shall be provided in the car-operating panel to control the fan.

I. Handrails: Provided on the side and rear walls of the car enclosure. They shall be,1½" diameter (38.1 mm) Round Bar Handrails with a Brushed Steel Finish.

J. Threshold: Extruded Aluminum.

K. Emergency Exit Contact: An electrical contact shall be provided on the car-top exit.

L. Guides: The car shall have 3" diameter roller guides at top and bottom and the counterweight shall have slide type guides at the top and the bottom. Optional counterweight guides available.

M. Platform: The car platform shall be constructed of metal. Load weighing device shall be mounted on the belts at the top of the hoistway.

N. The LED ceiling lights, and the fan should automatically shut off when the system is not in use and be powered back up after a passenger calls the elevator and pushes a hall button.

O. Certificate frame: Provide a Certificate frame with a satin stainless steel finish.

P. Provide Otis cab UVC light purification device.

Q. Provide Otis cab air purifier.

R. Provide a complete set of Elevator Cab Pads.

2.06 EQUIPMENT: SIGNAL DEVICES AND FIXTURES

A. Car Operating Panel: A Standard Otis ONE™ Pro flat applied car operating panel shall be provided which contains all push buttons, key switches, and message indicators for elevator operation. The car operating panel shall have a brushed stainless steel finish and include a service cabinet.

1. The car operating panel shall contain a bank of round stainless steel, mechanical LED illuminated buttons. Flush mounted to the panel and marked to correspond to the landings served. All buttons to have raised numerals and Braille markings with Flush Mounted satin stainless steel buttons with white LED illuminating halos.
2. The car operating panel shall be equipped with the following features:
    a. Raised markings and Braille to the left-hand side of each push-button.
    b. Car Position Indicator at the top of and integral to the car operating panel.
    c. Door open and door close buttons.
    d. Inspection key-switch.
    e. Elevator Data Plate marked with elevator capacity and car number.
    f. Help Button: The help button shall initiate two-way communication between the car and a location inside the building, switching over to another location if the call is unanswered, where personnel are available who can take the appropriate action. Visual indicators are provided for call initiation and call acknowledgement.
    g. Display Screen: Include display screen located near the top of the COP. The display screen shall display the car position indicator, travel direction arrows, elevator status jewels, and provide emergency text communication.
    h. Camera: Include camera located above display screen for emergency video communication. This camera is for emergency communication only.
    i. Landing Passing Signal: A chime bell shall sound in the car to signal that the car is either stopping at or passing a floor served by the elevator.
    j. In car stop switch (toggle or key unless local code prohibits use)
    k. Firefighter's hat.
    l. Firefighter's Phase II Key-switch.
    m. Call Cancel Button.
    n. Firefighter's Phase II Emergency In-Car Operating Instructions: worded according to A17.1 2000, Article 2.27.7.2.
    o. Please Exit Symbol: provided with emergency hospital service, or express priority in the hall.

B. Car Position Indicator: A digital, LED car position indicator shall be integral to the car operating panel.

C. Hall Fixtures: Hall fixtures shall be provided with necessary push buttons and key switches for elevator operation. Hall fixtures shall include:
    1. Flush Mounted satin stainless steel buttons with white LED illuminating halos.

2. Car Lantern and Chime: A directional lantern visible from the corridor shall be provided in the car entrance. When the car stops and the doors are opening, the lantern shall indicate the direction in which the car is to travel, and a chime will sound.

D. Access key-switch at top floor in entrance jamb.

E. Access key-switch at lowest floor in entrance jamb.

F. Card Reader Provision.

G. Emergency Hospital Service.

PART 3 - EXECUTION

3.01 PREPARATION

A. Take field dimensions and examine conditions of substrates, supports, and other conditions under which this work is to be performed. Do not proceed with work until unsatisfactory conditions are corrected.

3.02 INSTALLATION

A. Installation of all elevator components except as specifically provided for elsewhere by others.

3.03 DEMONSTRATION

A. The elevator contractor shall make a final check of each elevator operation with the Owner or Owner's representative present prior to turning each elevator over for use. The elevator contractor shall determine that the control systems and operating devices are functioning properly.

END OF SECTION 14.2200

SECTION 21.0100 - GENERAL PROVISIONS

PART 1 - GENERAL

1.1 FIRE UNDERWRITER SEAL:

A. Where applicable, all material shall bear the National Board of Fire Underwriters' Seal of Approval. Certificates to this effect to be furnished to Architect upon request.

1.2 DEFINITION OF WORK RESPONSIBILITY:

A. Unless noted otherwise by the multiple contract summary, all work shall be performed as noted below.

B. All electrical control components including starters required for operation of Fire Protection equipment whether integral or remote shall be furnished and installed under this Contract. Control wiring, conduits and accessories for control devices shall be furnished and installed by the Contractor who provides the equipment. See Div. 26 specifications for starters, combination starters, and switches.

C. Power wiring from panelboards or similar source through all equipment disconnects to motors or heating equipment shall be furnished and installed by the Electrical Contractor.

D. Equipment disconnect switches, unless otherwise specified or supplied by the equipment supplier as an integral part of the equipment shall be furnished and installed by the Electrical Contractor.

E. All electrical equipment, components, and wiring furnished and installed under this portion of the specifications shall conform to all requirements of the applicable portions of the electrical specifications.

F. All base flashing, where required, shall be by the General Contractor, with necessary counter-flashing by this contractor.

G. All structural work needed for support of Fire Protection equipment or components shall be provided by this contractor unless shown on structural plans.

1.3 RULES AND REGULATIONS:

A. All work shall be performed in accordance with the rules and regulations of the ICC Codes, local plumbing code and ordinances, NFPA Code, and the public utilities having jurisdiction.

B. All work shall be performed in accordance with the rules and regulations of the Pennsylvania Department of Labor and Industry, Federal Department of Labor (Occupational Safety and Health Administration), the Department of Education, and all codes and agencies having jurisdiction.

C. All construction, design fabrication, tests, rating and installation shall comply with the rules and regulations of all local, state or national codes and agencies having jurisdiction over this project. Any costs involved in complying to these rules and regulations shall be included in original bid of this Contractor.

D. The Owner will obtain the building permit. Any other fees relative to the contractor’s work shall be paid by the contractor as part of his bid.

E. Contractor's must be licensed within the Municipality which the project is located. Copies of these licenses must be posted within the respective job trailers during construction.

1.4 ANCHOR BOLTS:

A. Contractor shall provide and set in place at the time the foundations, bases, or curbs are poured, all necessary anchor bolts as required for the various equipment specified herein, to be furnished under these Specifications. Anchor bolts must be of the hook type and of the proper sizes and length to suit the apparatus. The bolts shall be set in pipe sleeves of approximately twice the bolt diameter and as long as the imbedded length of the bolt.

B. When the equipment is set in its proper position, the bolt sleeves and the space between the rough foundations, bases or curbs of the equipment shall be completely filled with one inch of non-shrinking cement grout.

C. Contractor shall assume all responsibility for the location of all anchor bolts for the equipment furnished under these Specifications, and must have a supervisor present at the time the foundation, bases, or curbs are poured.

1.5 DRAWINGS:

A. The accompanying drawings are a part of these specifications and are intended to show approximate and relative locations of services and equipment. They shall not be scaled to determine exact positions, locations and clearances.

B. Due to the diagrammatic layout and small scale of the drawings, certain piping and duct rises, drops, offsets, valves, and related specialties are not shown. The Contractor shall provide all, piping, fittings, valves, and specialties required to insure a complete installation without additional cost to the Owner.

C. All drawings and specifications pertaining to general construction, plumbing, HVAC, electrical and other work shall be carefully examined. Where physical interferences with his work occur because of his failure to consult other trades, this Contractor shall rearrange his work at his own expense.

1.6 SUBMISSION OF SHOP DRAWINGS, EQUIPMENT AND MATERIALS

A. Refer to Division 1.

B. Contractors shall include with each submittal/shop drawing, a matrix outlining all items that do not match the specified unit. If an item is not listed on the matrix, the submitted unit will be assumed to meet all parts of the specification. Contractors will be responsible to ensure that the specifications are met in full. Items in matrix shall include scheduled performance data vs. submitted performance data, specified components vs. submitted unit components, specified construction weight, warranty, etc. vs. submitted construction, weight, warranty, etc.

1.7 VISIT TO THE SITE:

A. Prior to submission of his bid, the Contractor shall visit the site to acquaint himself with the existing conditions. Bids as submitted will be interpreted to include all costs and change made necessary by such conditions.

1.8 COORDINATION OF WORK:

A. Contractor shall coordinate his work with that of other trades. In case of interference or problems the Architect shall decide which work is to be relocated, regardless of which is installed first.

B. Contractor shall prepare coordination/arrangement CAD drawings for coordination with all other trades. The contractor shall furnish these coordination drawings to the contractor responsible for project BIM coordination.

C. This Contractor shall obtain approval of all arrangement drawings before continuing with installation of his work.

1.9 LOCATION OF EQUIPMENT:

A. All locations of fire protection equipment and associated pipe connections shall be verified by the Owner and Architect. The contractor shall verify locations sufficiently in advance of the installation to allow uninterrupted progress of the work of all trades.

1.10 MATERIALS AND EQUIPMENT:

A. All materials and equipment, unless otherwise specified, shall be new and of the best quality, and listed/approved for their specific application.

B. This Contractor shall provide, when required by the Architect, labeled samples of materials to be used on the project. Samples shall be submitted for approval by the Architect prior to their installation.

C. All materials and equipment installed by the Contractor shall be securely and rigidly supported from or attached to the building structure.

1.11 WORKMANSHIP:

A. All workmanship shall be done according to the best practices of the trade by qualified and competent tradesmen.

1.12 PROTECTION OF EQUIPMENT:

A. Contractor shall protect all furnished material and equipment from damage until final acceptance as installed. Contractor shall temporarily seal pipe openings during construction with temporary plugs and replace all damaged items with ones of exact sameness at his expense.

B. Contractor shall schedule material and systems for delivery in such a pattern that critical pieces of equipment may be stored within the building, protected from weather. Where materials are stored outside, they must be protected from the elements and damage.

C. Contractor shall be responsible for coordinating the procurement of specified materials and equipment being supplied by his sub-contractors and suppliers.

1.13 SCAFFOLDING AND HOISTING:

A. Contractor shall furnish and erect all scaffolding, hoists, shoring, platforms, railings, ladders, and other devices required by local, state, and federal laws to install his systems and equipment. Scaffolding and all other equipment shall be removed at completion of the work.

B. Contractor shall hoist or rig his own material and equipment into place, or arrange for the rigging of it by others at his expense.

1.14 FOREMAN:

A. Contractor must provide a competent foreman, subject to approval of the Owner. The foreman shall be deemed the agent of the Contractor and must be on duty at the building during all working hours.

B. Any instructions or notices given to the foreman shall have the same force as if given to the Contractor in person.

1.15 SLEEVES:

A. Contractor shall furnish and set all sleeves required for the installation of the work of this section and shall be responsible for their final and permanent locations.

B. Contractor shall fit pipes passing through masonry construction with sleeves. Each sleeve shall extend through its respective floor or wall and shall finish flush with each surface unless otherwise required. Unless otherwise specified or shown, sleeves shall be two pipe size larger than the overall outside diameter of the pipe when insulated. Sleeves in bearing and masonry walls shall be made of standard weight steel pipe. Sleeves through concrete floor slabs and other partitions shall be No. 2 U.S.S. gauge sheet metal or approved equal.

C. Where sleeves pass through foundation walls, the space between such sleeves and passing pipes shall be provided with preassembled "Link-Seals" as manufactured by Thunderline Corporation, 5495 Treadwell, Wayne, Michigan 48184.

D. All sleeves shall be properly installed and securely cemented in place. Where pipes pass through waterproofed floor or walls, design of sleeves shall be such that the waterproofing can be properly flashed around the sleeves, and of such height that the water will be restrained from entering sleeves and dripping to any finished areas below.

E. Where pipes pass through fire resisting portions of the structure, the annular space between the sleeve and the pipe shall be filled with an approved fire stopping material. Sleeve and sealant installation shall be UL Listed as an assembly for the required rating of the fire resistive structure. Refer to Div. 07 specifications for additional information.

1.16 CONCRETE AND MASONRY WORK:

A. Contractor shall furnish and install all concrete bases, reinforcing, etc. required to install the work of this Division, unless otherwise noted.

B. Prior to installing any forms, reinforcing or concrete, Contractor shall notify all other Contractors or subcontractors, in ample time for them to install any portion of their work which is to be concealed in the concrete. No such work shall be placed in a manner to interfere with the proper placing of the reinforcement unless so authorized by the Architect.

1.17 ESCUTCHEONS:

A. All exposed pipes, except as otherwise described, passing through walls, floors, ceilings, etc. in finished spaces, shall be provided with solid pattern heavy ceiling, floor or wall escutcheons with set screw. Escutcheons and plates shall be of steel or malleable iron with prime coat ready for painting. Escutcheons will not be provided where sleeves intentionally extend above finished floor.

B. All exposed piping passing through wall or floors shall be equipped with pressed brass, chromium plated, solid-type escutcheons.

1.18 ACCESS DOORS AND PANELS:

A. All ceiling and wall access panels not shown on the Architectural plans and required by work of this Division shall be furnished by this Contractor and set by the General Contractor. The location of these access panels must be approved by the Architect prior to their installation. The Contractor shall furnish

an access panel where valves, specialties, and other serviceable items are installed behind masonry, plaster, tile, or similar type non-removable surfaces.

B. Refer to Section 08 3113 - "Access Doors and Frames" for specific requirements.

1.19 CUTTING AND PATCHING:

A. Each Contractor shall give the General Contractor complete information as to size of openings to be provided by the General Contractor in new floors, and walls, etc., so that such openings may be provided as the project progresses.

B. If openings are omitted or are incorrect through failure of the Contractors to follow these instructions, the respective Contractors shall, at their own expense, engage the trade which originally installed the work, to cut and patch to the satisfaction of the Architect.

C. This Contractor shall be responsible for the cutting of existing floor slabs for the installation/demolition of any underground piping systems required by the work of this Division. The Contractor is responsible for proper bedding, backfill materials and compaction (as outlined in the specifications and on the drawings) to an elevation that is level with the bottom of the existing concrete floor slab. The Contractor is responsible for the patching of the floor slab, with proper materials which are equivalent to the adjacent finishes and materials. The new finished floor will be provided by the General Contractor.

D. Cutting and patching of exposed surfaces (other than the floor) of the building shall be the responsibility of each Contractor as required for installation of his work. All holes cut shall be in a manner approved by the Architect. Patching of existing construction and finishes are by the Contractor and must be equivalent to adjacent finishes and materials.

E. Cutting and patching of concealed surfaces (other than the floor) of the building shall be the responsibility of each Contractor as required for installation of his work. All holes cut shall be in a manner approved by the Architect. Patching of existing construction and finishes are by the Contractor and must be equivalent to adjacent finishes and materials.

F. Where it becomes necessary to cut out any portions of walls, floors, ceilings, roof or other portions of the building for the installation of work as may be required to perform and complete the work under this Contract, the Contractor shall do all necessary cutting and fitting, shall remove all excess material, and shall replace all work damaged so as to leave the entire premises in a finished condition.

G. No cutting shall be done which may in any way affect the building structurally or architecturally. Any damage incident to cutting or other causes in the performance of this Contract shall be made good by replacement or repairs. Cutting shall be done only with the prior approval of the Architect.

H. Contractor shall seal all piping penetrations through all walls and floors. Penetrations through fire rated walls or floors shall be sealed with an approved UL Listed fire stopping. Refer to Div. 07 for additional information

1.20 GUARANTEE:

A. Each Contractor shall unconditionally guarantee in writing all materials, equipment, and workmanship for a period as specified in Div. 01, from date of acceptance by Owner. The Contractor shall provide free service for all equipment provided under this Contract during this guarantee period.

B. The guarantee shall include restoration to its original condition of all adjacent work that must be disturbed in fulfilling this guarantee.

C. All such repairs and/or replacements shall be made without delay and at the convenience of the Owner.

1.21 CLEANING OF SYSTEMS:

A. The Contractors shall thoroughly clean all pipe systems to remove all grease, oil scale, core, sand and other foreign material after tests have been made and before the building is turned over to the Owner.

B. All strainers shall be opened and cleaned thoroughly.

C. Should the Contractor put any substance into any system to aid in the cleaning of it, all trace of such material shall be removed before the system is considered clean. All such substances, if used, shall be free from any acid that will set or injure valve seats in any way.

1.22 INSTRUCTION TO EMPLOYEES:

A. At the completion of the work, and before final acceptance of the building by the Owner, each Contractor, together with the representatives of the manufacturers of the equipment installed by the Contractor, shall instruct the designated employees of the Owner in the care, adjustment, maintenance and operation of equipment installed by the Contractor.

B. Contractor shall furnish three copies of factory maintenance schedules for each piece of equipment. Acceptance of materials and equipment is conditional upon receipts of maintenance manuals.

C. A representative of the manufacturer of each piece of equipment shall inspect the installation of furnished equipment, make final adjustments, and certify the equipment is properly installed and in satisfactory working condition.

1.23 SUBSTITUTIONS:

A. Refer to Division 01 for requirements in addition to the following:

1. Various items of equipment and materials that have been used as the basis for mechanical system design have been specified by a manufacturer's name and model number. Another manufacturer's product may be submitted for consideration as a substitute. The Architect shall be the sole judge as to the comparability of an item of equipment that is submitted for approval as a substitute for that which is specified. Each of the Contractor's substitute proposals shall include all labor and materials that will be required to install the equipment and make it operate satisfactorily in accordance with the original design concept. He shall include such things as changes in piping, valves, supports, fittings, ductwork, motors, controls, electrical wiring, and thermal insulation. It shall be the responsibility of the Contractor to make certain that substitute equipment, which has been accepted by the Architect will fit into the designated spaces. He shall make the necessary field measurements in order to determine that there is adequate space for the equipment, taking into consideration the clearances that are required for connections and servicing.
2. If any changes are required in the installation of mechanical or electrical services to any mechanical equipment accepted as substitutions to the basis of design, Contractor shall be responsible for any additional costs incurred to the Owner, Engineer, other contractors and costs incurred for changes to the coordination drawings

1.24 ALTERNATES:

A. Refer to Division 01 for requirements in addition to the following:

1. Various items of equipment and materials that have been used as a basis for mechanical system design have been specified by a manufacturer's name and model number. Where another manufacturer's product has been specified as an alternate to this equipment the proposed cost

for this alternate shall include all labor and materials that will be required to install the equipment and make it operate satisfactorily in accordance with the original design concept. The Contractor shall include such things as changes in piping, valves, supports and supporting structure, fittings, motors, controls, electrical wiring and thermal insulation. It shall be the responsibility of the Contractor to make certain the alternate equipment will fit into the designated spaces. He shall make the necessary field measurements in order to determine that there is adequate space for the equipment, taking into consideration the clearances that are required for connections and servicing.

1.25 ALIGNMENT:

A. Where several receptacles, devices, bells, alarms, thermostats, switches, handles, etc., are to be installed in a common location, this equipment shall be lined up in a vertical plane. It is the Contractor's responsibility to verify exact locations and alignment with the Architect in field prior to installation.

B. The Contractors shall carefully check all the Drawings and coordinate their work with all trades to provide for a symmetrical and coordinated ceiling. Ceiling T-bars, lights, registers, and other equipment shall all be symmetrically installed with provisions made for integrating the T-bars and this equipment. Failure to coordinate will result in relocation of ceiling components as directed by the Architect at the Contractor's expense.

1.26 OPERATION AND MAINTENANCE INSTRUCTIONS:

A. Refer to Division 01 for requirements in addition to the following:

1. The Contractor shall prepare for the Owner, 3 hard bound volumes, each containing all operating instructions and information necessary for the care and maintenance of the system. These volumes shall be complete in every respect, and shall include detailed operating instructions for each piece of equipment and diagrams for control wiring and piping so arranged and detailed that the maintenance staff may trace the control in the event of operational malfunctioning.
2. The Contractor shall submit 1 of the hard-bound volumes to the Architect for approval prior to presenting same to Owner.
3. The purpose of this manual is to assist the Owner in routine operation, maintenance, servicing, troubleshooting and procurement of replacement parts. All information in the manual shall be as-built and only material pertinent to the project shall be included.
4. The operating manual shall be considered a part of the final inspection and shall be submitted for approval at least 30 days in advance of a request for final inspection. The manual shall include:
    a. A copy of all final corrected equipment submittals, control diagrams, descriptive brochures, and a list of all parts of each piece of mechanical and electrical equipment which has been furnished and installed.
5. Complete and detailed typewritten operating and maintenance instructions for all major operating equipment. The operating and start-up instructions shall be written in a concise, step by step manner. Maintenance instructions shall include such things as periodic checks, adjustments and troubleshooting techniques.
6. A listing of all equipment, a compilation of the nameplate data for this same equipment, the name, address and telephone number of the nearest service organization.
    a. Copies of all A.S.M.E. pressure vessel certifications, state police approved tank permits, complete additional valve tag schedules, all electrical inspection permits and all additional mechanical and electrical permits required for occupancy by the Owner.

b. All of the materials shall be indexed, arranged categorically and be bound in a rigid, plastic covered, three ring binder.

7. The Contractor shall provide Project Records documents in accordance with requirements of Division 01.
8. O & M's must be provided once equipment is taken over by the Owner.
9. Warranty starts when Owner takes over that phase/space.

1.27 PAINTING:

A. Refer to Division 09 in addition to the following:

1. In exposed finish ceiling areas, clean and prep all piping for final paint finish. Protect all installed sprinkler heads with temporary coverings and remove coverings upon completion of painting. Refer to the Summary of Multiple Contract for designation of painting responsibilities.
2. Provide corrosion inhibiting prime coating on all ferrous materials installed on exterior of building. Coordinate color with Architect in field. Protect all building surfaces during painting of adjacent piping.
3. Paint all metal laid underground with one heavy coat of corrosion protective materials.
4. Unless specifically noted otherwise, insulation and galvanized piping in ceiling cavity area shall not be painted.

1.28 EARTHWORK:

A. Refer to Division 31 and drawing details for requirements in addition to the following:

1. Provide all excavating, backfilling, shoring, sheeting, pumping, bailing, etc., required for the installation of the Work of this Section.
2. Trench depths shall allow adequate cover over piping; walls shall be vertical and bottoms shall be instrument graded. Earth shall be scooped out under pipe hubs to provide a solid bearing for the barrel of the pipe on undisturbed earth. Concrete or other approved supports shall be provided for all pipes installed in fill.
3. Carry pipe trenches in rock below the pipe invert at least 1/4 the nominal diameter of the pipe or a minimum of 4" below the bottom of the pipe whichever is the greater. Refill space below pipe with crushed stone or gravel ranging in size from 1/4" to 3/4" and compacted as indicated in Div. 33 specifications.
4. Excavation under footings or foundations and deeper than the angle of repose from footings or foundations as determined by the Architect shall be backfilled solidly with 3,000-pound concrete, to such angle of repose and bottom of such footing or foundation. Where excavation damages existing lawns, sidewalks, roadways etc., such surfaces shall be restored to their original condition by the Contractor performing the excavation.
5. All excavated material remaining after the backfilling operation shall be removed from the site by this Contractor.
6. Any settlement in trench backfill shall be brought to grade, and damage to pavement or slabs caused by such settlement shall be repaired at the Contractor's expense.
7. All repair of macadam or concrete paving made necessary by work done under this contract shall be performed by General Contractor at the expense of this contractor. All such repairs shall match surrounding paving in materials and workmanship.

END OF SECTION 21.0100

SECTION 21.0500 - COMMON WORK RESULTS FOR FIRE SUPPRESSION

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Fire Suppression system requirement for sprinkler systems.

B. Piping and Fittings

C. General Valves

1.2 RELATED REQUIREMENTS

A. Division 09 - Painting and Coating: Preparation and painting of fire protection piping systems.

B. Section 21.0553 - Identification for Fire Suppression Piping and Equipment: Piping identification.

C. Section 21.1300 - Fire-Suppression Sprinkler Systems: Sprinkler systems design.

1.3 REFERENCE STANDARDS

A. ASME B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250; 2026.

B. ASME B16.3 - Malleable Iron Threaded Fittings: Classes 150 and 300; 2021.

C. ASME B16.4 - Gray Iron Threaded Fittings: Classes 125 and 250; 2021.

D. ASME B16.5 - Pipe Flanges and Flanged Fittings: NPS 1/2 Through NPS 24 Metric/Inch Standard; 2025.

E. ASME B16.9 - Factory-Made Wrought Buttwelding Fittings; 2024.

F. ASME B16.11 - Forged Fittings, Socket-Welding and Threaded; 2021.

G. ASME B16.22 - Wrought Copper and Copper Alloy Solder-Joint Pressure Fittings; 2021.

H. ASME B16.25 - Buttwelding Ends; 2022.

I. ASME B36.10M - Welded and Seamless Wrought Steel Pipe; 2022.

J. ASME BPVC-IX - Boiler and Pressure Vessel Code, Section IX - Qualification Standard for Welding, Brazing, and Fusing Procedures; Welders; Brazers; and Welding, Brazing, and Fusing Operators; 2025, with Errata.

K. ASTM A47/A47M - Standard Specification for Ferritic Malleable Iron Castings; 1999 (Reapproved 2026).

L. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2024.

M. ASTM A135/A135M - Standard Specification for Electric-Resistance-Welded Steel Pipe; 2021.

N. ASTM A234/A234M - Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service; 2026.

O. ASTM A269/A269M - Standard Specification for Seamless and Welded Austenitic Stainless Steel Tubing for General Service; 2025.

P. ASTM A536 - Standard Specification for Ductile Iron Castings; 2026a.

Q. ASTM A795/A795M - Standard Specification for Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Steel Pipe for Fire Protection Use; 2021.

R. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems; 2026.

S. AWS A5.8M/A5.8 - Specification for Filler Metals for Brazing and Braze Welding; 2026.

T. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2025, with Amendment (2026).

U. AWWA C110/A21.10 - Ductile-Iron and Gray-Iron Fittings; 2021.

V. AWWA C111/A21.11 - Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings; 2023.

W. AWWA C151/A21.51 - Ductile-Iron Pipe, Centrifugally Cast; 2023.

X. AWWA C606 - Grooved and Shouldered Joints; 2022.

Y. FM (AG) - FM Approval Guide; Current Edition.

Z. ITS (DIR) - Directory of Listed Products; Current Edition.

AA. NFPA 13 - Standard for the Installation of Sprinkler Systems; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

BB. NFPA 14 - Standard for the Installation of Standpipe and Hose Systems; 2024.

CC. UL (DIR) - Online Certifications Directory; Current Edition.

1.4 SUBMITTALS

A. See Division 01 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturers catalogue information. Clearly indicate exact models/model number, options, and accessories to be provided. Indicate applications where the submitted product is to be used. Indicate design pressure and ratings.

C. Shop Drawings: Indicate pipe materials used, jointing methods, supports, floor and wall penetration seals. Indicate installation, layout, weights, mounting and support details, and piping connections.

1. Grooved joint couplings and fittings shall be shown on drawings and product submittals and shall be specifically identified with the applicable Victaulic style or series number.

D. Project Record Documents: Record actual "as installed" locations of piping, sprinklers, components, and tag numbering and submit as "Record Set" after completion of all installation work.

E. Operation and Maintenance Data: Include installation instructions and spare parts lists.

F. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Division 01 - Product Requirements, for additional provisions.
2. Extra Valve Stem Packings: Two for each type and size of valve.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum five years documented experience.

B. Installer and Designer Qualifications: Company specializing in performing the work of this section with minimum 5 years experience. approved by manufacturer.

C. Conform to UL requirements.

D. Valves: Bear UL and FM label or marking. Provide manufacturer's name and pressure rating marked on valve body.

E. Products Requiring Electrical Connection: Listed and classified as suitable for the purpose specified and indicated.

F. To assure uniformity and compatibility of piping components in grooved piping systems, all grooved products utilized shall be supplied by a single manufacturer. Grooving tools shall be supplied from the same manufacturer as the grooved components.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store valves in shipping containers, with labeling in place.

B. Provide temporary protective coating on cast iron and steel valves.

C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

1.7 EXTRA MATERIALS

A. Provide cabinet, wrench, and spare sprinkler heads (quantities in accordance with NFPA13.)

B. Provide two valve stem packings for each size and type of valve installed.

PART 2 - PRODUCTS

2.1 FIRE SUPPRESSION SYSTEMS

A. Sprinkler Systems: Conform work to NFPA 13, IBC, and IFC, requirements of the Local A.H.J., requirements of the Owners insurance carrier, and all additional minimum requirements as indicated on FP Drawings and Division 21 Specifications.

2.2 BURIED PIPING

A. Ductile Iron Pipe (3 in. and Larger): AWWA C151/A21.51 cement/mortar lined in accordance with AWWA C104/A21.4

1. Fittings: AWWA C110/A21.10 standard thickness.
2. Joints: AWWA C111/A21.11 rubber gasket.
3. Mechanically Restrained Couplings: Shaped composition sealing gasket, steel bolts, nuts, and washers.

2.3 ABOVE GROUND PIPING

A. Acceptable Manufacturers for Piping and Tubing:

1. Allied Tube - Sprinkler; 16100 S. Lathrop Avenue, Harvey, IL 60426.
2. Bull Moose Tube Company, 1819 Clarkson Rd., Chesterfield, MO 63017
3. Wheatland Tube Company; 900 Haddon Ave., Collingswood, NJ 08108-2162.

B. Wet pipe systems - Threaded and Welded Steel Pipe(limitted for use in sizes 2" and smaller): Schedule 40 Sprinkler Pipe: ASTM A795, Type E, Grade A. UL listed and FM approved for use as sprinkler piping. Black mill exterior coating and antimicrobial interior coating.

C. Wet pipe systems - Roll Grooved Steel Pipe (all sizes): Schedule 10 Sprinkler Pipe: ASTM A795, Type E, Grade A. UL listed and FM approved for use as sprinkler piping. Black mill exterior coating and antimicrobial interior coating.

D. Fittings:

1. All fittings shall be pressure rated for minimum 250 psig working pressure.
2. Welded Steel Fittings: ASME B16.9, wrought steel, buttwelded, ASTM A 234/A 234M, wrought carbon steel or alloy steel, or ASME B16.5, steel flanges and fittings. Welding Materials in accordance with ASME Code.
3. Threaded Malleable Iron Fittings: ASME B16.3, Class 300, threaded fittings.
4. Mechanical Grooved Fittings as manufactured by Victaulic ONLY: ASTM A536 ductile iron or ASTM A53 carbon steel fittings with grooved ends designed to accept Victaulic couplings. FireLock® or standard fittings.
5. Mechanical Grooved Couplings as manufactured by Victaulic ONLY: Ductile iron housing clamps with tapered seat to engage and lock, "C" shaped elastomeric sealing gasket, steel bolts, nuts, and washers; galvanized for galvanized pipe.
    a. Saddle type - U-bolt style hole cut Mechanical -T's shall not be permitted for use on this project. Hole cut Mechanical-T's shall be Victaulic Style 920 or 920N and installed in strict accordance with manufacturers instructions.
    b. Rigid Couplings: Housings shall be cast with offsetting, angle-pattern bolt pads to provide system rigidity and support and hanging in accordance with NFPA 13. Tongue and recess rigid type couplings shall only be permitted if the contractor uses a torque wrench for installation. Required torque shall be in accordance with the manufacturer's latest recommendations.
        1) 1-1/4” to 4”: “Installation Ready” stab-on design, for direct 'stab' installation onto grooved end pipe without prior field disassembly and no loose parts. Victaulic FireLock® EZ Style 009.
        2) 5” and Larger: Standard rigid coupling. Victaulic FireLock® Style 005 or Style 07 Zero-Flex®.
        3) Flexible Couplings: Use in seismic areas where required by NFPA 13.
            (a) 2” to 6”: “Installation Ready” stab-on design, for direct 'stab' installation onto grooved end pipe without prior field disassembly and no loose parts. Victaulic Style 177 QuickVic™.
            (b) 8” and Larger: Standard flexible coupling. Victaulic Style 75 or 77.
            (c) Coupling gaskets shall be listed for use as follows:
        4) Coupling gaskets shall be listed for use as follows:
            (a) Dry System(Ambient Temperature) - FlushSeal® or EZ Style 009 design, Grade EPDM, Type A
            (b) Dry Freezer Applications(-30°F to 0°F) - FlushSeal®, Grade L, Silicone
            (c) Wet System(Ambient Temperature) - C-Shape or EZ Style 009 design, Grade EPDM, Type A
    c. Flanged Adapters: ASTM A536 ductile iron casting, flat faced, designed for incorporating flanged components with ANSI Class 150 bolt-hole pattern. Victaulic Style 741.

2.4 PIPE HANGERS AND SUPPORTS

A. Acceptable Manufacturers for Piping Hangers and supports:

1. TOLCO Inc.

2. Grinnell
3. Provide hangers and supports as manufactured by the listed acceptable manufacturers or equal as approved by owner/architect.

B. Pipe Hangers: Adjustable swivel ring, MSS-SP-69 Type 10, Carbon steel, or Adjustable Clevis, MSS-SP-69 Type 1, Carbon steel.

1. Adjustable swivel ring: TOLCO Inc. - Fig.200 or equal.
2. Adjustable clevis: TOLCO Inc. - Fig.1 or equal.
   a. Provide bolt spacer in all applications where seismic restraint is required.

C. Armovers and end of branch: Adjustable swivel ring with surge restrainer, MSS-SP-69 Type 10

1. Adjustable swivel ring: TOLCO Inc. - Fig.200 or equal w/ Fig.25 surge Restrainer
2. Adjustable clevis: TOLCO Inc. - Fig.1 or equal.

D. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.

E. Wall Support: Welded steel bracket and wrought steel clamp.

F. Vertical Support: Steel riser clamp, MSS-SP-69 Type 8.

1. Steel Riser Clamp: TOLCO Inc. - Fig.6 or equal.

G. Floor Support: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.

H. Structural Attachments

1. Reversible C-Type Beam Clamp, MSS-SP Type 19 - TOLCO Inc. Fig. 65 & Fig. 66 with Beam clamp retaining strap or equal as approved by Owner/Architect.
2. Bar Joist Hanger, TOLCO Inc. Fig. 61T (up to 4" pipe)
3. Threaded side Beam Bracket, TOLCO Inc. Fig. 58 (up to 4" pipe)
4. Provide additional steel to support work from structural framing members as required where support is required between framing members.

I. Victaulic Style 009, 005, and 07 rigid couplings, with angle-pattern bolt pads, may be used with IPS steel piping systems, which meet the support and hanging requirements of NFPA 13. An adequate number of Victaulic Style 177, 75 and 77 flexible couplings shall also be used to compensate for thermal expansion/contraction of the pipe.

2.5 GATE VALVES

A. 2-1/2 inch to 8 inch:

1. UL Listed FM approved, Iron body, bronze trim, , OS&Y rising stem pre-grooved for mounting tamper switch, handwheel, solid rubber covered bronze or cast iron wedge, flanged ends.
2. UL Listed FM approved, ductile iron body, bronze mounted, OS&Y brass rising stem, cast iron bonnet, EPDM coated cast iron disc, handwheel, groove x groove or groove x flanged ends, optional supervisory switch. Victaulic Series 771H or Series 771F.

2.6 GLOBE OR ANGLE VALVES

A. Up to and including 2 inches:

1. Bronze body, bronze trim, rising stem and handwheel, inside screw, renewable rubber disc, threaded ends, with backseating capacity repackable under pressure.

B. Over 2 inches:

1. Iron body, bronze trim, rising stem, handwheel, OS&Y, plug-type disc, flanged ends, renewable seat and disc.

2.7 BALL VALVES

A. Up to and including 2 inches:

1. Bronze two piece body, brass, chrome plated bronze, or stainless steel ball, teflon seats and stuffing box ring, lever handle and balancing stops, threaded ends with union.

B. Over 2 inches:

1. Cast steel body, chrome plated steel ball, teflon seat and stuffing box seals, lever handle or gear drive handwheel for sizes 10 inches and over, flanged.

2.8 BUTTERFLY VALVES

A. Bronze Body(up to 2 inches):

1. UL Listed, FM approved, Stainless steel disc, resilient replaceable seat, threaded or grooved ends, extended neck, handwheel and gear drive and integral indicating device and preinstalled supervisory switch.

B. Ductile Iron Body(up to 4 inches)

1. UL Listed, FM approved, Ductile iron body, nickel plated ductile iron disc, Nitrile seat, Type 416 stainless steel two-piece stem, TFE-lined stainless steel bearings, weather-proof actuator with pre-wired supervisory switches. Victaulic Series 765 (365 psi) and Series 705 (300 psi).

2.9 CHECK VALVES

A. 2 inch to 3 inch:

1. UL Listed, FM approved, ductile iron body, CF8M stainless steel disc, stainless steel spring, and brass shaft, nickel-plated seat with Nitrile o-ring, grooved ends, 365 psig maximum pressure rating. Victaulic Series 717H.

B. 4 inch to 12 inch:

1. UL Listed, FM approved, ductile iron body, EPDM coated ductile iron disc, stainless steel spring and shaft, welded-in nickel seat, grooved ends, 300 psig maximum pressure rating. Victaulic Series 717.

2.10 DRAIN VALVES

A. Ball Valve:

1. UL Listed, FM approved, Brass with cap and chain, 3/4 inch hose thread.

2.11 SLEEVES:

A. Sleeves through foundation walls shall be preassembled "Link-Seals" as manufactured by Thunderline Corporation, 5495 Treadwell, Wayne, Michigan 48184.

B. Sleeves in bearing and masonry walls shall be made of standard weight steel pipe.

C. Sleeves through concrete floor slabs and other partitions shall be No. 2 U.S.S. gauge sheet metal.

D. Unless otherwise specified or shown, sleeves shall be two pipe size larger than the overall outside diameter of the pipe when insulated.

2.12 ESCUTCHEONS:

A. Solid pattern, heavy ceiling floor or wall escutcheons. Steel or Malleable iron with set screw. Prime coated ready for painting.

B. Pressed brass, chromium plated, solid-type escutcheons.

2.13 ACCESS DOORS AND PANELS:

A. Refer to Division 01 for requirements in addition to the following:

B. Panels shall be of suitable size and construction for each specific location. All assemblies in painted wall or ceiling applications shall be rustproof and exposed finished edges and surfaces shall be prime-coated with rust inhibitive paint. All assemblies in tiled wall construction shall be stainless steel. Doors shall be flush and shall open 175 degrees on concealed hinges. Doors to be installed in ceilings shall be with screw driver operated cam locks. Doors for wall installation shall have master-keyed cylinder locks. Doors shall be Milcor, or equal, as follows:

	Construction	Milcor Model
a.	Masonry	Style M
b.	Plaster	Style K

2.14 ANCHOR BOLTS:

A. Anchor bolts must be of the hook type and of the proper sizes and length to suit the apparatus. The bolts shall be set in pipe sleeves of approximately twice the bolt diameter and as long as the imbedded length of the bolt.

PART 3 - EXECUTION

3.1 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.

B. Remove scale and foreign material, from inside and outside, before assembly.

C. Prepare piping connections to equipment with flanges or unions.

3.2 INSTALLATION

A. Install sprinkler system and service main piping, hangers, and supports in accordance with NFPA 13 and the additional requirements below.

1. Install hangers to provide minimum 1/2 inch space between finished covering and adjacent work.
2. Place hangers within 12 inches of each horizontal elbow.
3. Use hangers with 1-1/2 inch minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.
4. Support vertical piping at every other floor. Provide one riser support on each floor where grooved piping is used. Support riser piping independently of connected horizontal piping.

5. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers.
6. Provide additional supports as follows:
    a. Provide minimum of two hangers on any grooved piping exceeding 11ft. in length.
    b. Provide additional steel as required to span structural members for intermediate support of piping required between structural framing members. ALL piping shall be supported from structural framing members only. Coordinate all work with other trades.
        1) Do not fasten or anchor work to concrete deck except where individually approved by Structural Engineer and Architect.
        2) Do not fasten or anchor any work directly to metal roof deck.

B. Route piping in orderly manner, plumb and parallel to building structure. Maintain gradient.

C. Install piping to conserve building space, to not interfere with use of space and work of other trades.

D. Group piping whenever practical at common elevations.

E. Provide sleeves when penetrating footings, floors, and walls and fill annular space between piping and sleeves.

1. Where pipes pass through waterproofed floor or walls, design of sleeves shall be such that the waterproofing can be properly flashed around the sleeves, and of such height that the water will be restrained from entering sleeves and dripping to any finished areas below.

2. Where pipes pass through fire resisting portions of the structure, the annular space between the sleeve and the pipe shall be filled with an approved UL Listed fireproof material. The entire penetration assembly shall be UL Listed to achieve fire resistance equivalent to fire separation required for the wall or floor.

F. Provide escutcheons on all exposed pipes, except as otherwise described, passing through walls, floors, ceilings, etc. in finished spaces. Escutcheons will not be required where sleeves intentionally extend above finished floor.

G. Install valves, specialties, and other serviceable items within accessible spaces. Provide access panels where valves, specialties, and other serviceable items are required to be installed behind plaster, tile, or similar type non-removable surfaces. Coordinate panel installation with G.C. in field.

H. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

I. Perform welding In accordance with ASME Code.

J. Slope piping and arrange systems to drain at low points. Use eccentric reducers to maintain top of pipe level.

K. Prepare pipe, fittings, supports, and accessories for finish painting. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding. Refer to Section 09 9000.

L. Do not penetrate building structural members unless indicated or as approved in field by Structural Engineer.

M. When installing more than one piping system material, ensure system components are compatible and joined to ensure the integrity of the system. Provide necessary joining fittings. Ensure flanges, union, and couplings for servicing are consistently provided.

N. Install valves with stems upright or horizontal, not inverted. Remove protective coatings prior to installation.

O. Provide OS&Y gate or butterfly valves for shut-off or isolating service.

P. Provide drain valves at main shut-off valves, low points of piping and apparatus.

Q. Provide all concrete bases, reinforcing, etc. required to install the work of this section, unless otherwise noted. Prior to installing any forms, reinforcing or concrete, notify all other Contractors or subcontractors, in ample time for them to install any portion of their work which is to be concealed in the concrete.

R. Provide all necessary anchor bolts as required for the various equipment specified herein, and set in place at the time the foundations, bases, or curbs are poured. Fill all spaces between the bolt sleeves, rough foundations, bases or curbs of the equipment with one inch of non shrinking cement grout. Each Contractor shall assume all responsibility for the location of all anchor bolts for the equipment furnished by him under these Specifications, and must have a man present at the time the foundation, bases, or curbs are poured.

END OF SECTION 21.0500

SECTION 21.0548 - VIBRATION ISOLATION & SEISMIC MOUNTINGS

PART 1 - GENERAL

1.1 SECTION INCLUDES:

A. Seismic Restraint & Mountings

B. Vibration Isolation

1.2 SUMMARY

A. The extent of seismic restraint and mounting work are indicated by drawings and schedules by requirements of this section to include:

1. Restraints for Motor Driven Equipment.
2. Restraints for piping and piping risers.
3. Flexible connections for piping at Equipment.
4. The Contractor shall employ the services of a licensed Professional Engineer registered in the State of Delaware to design, submit, and supervise the installation of seismic restraining and mountings products applicable to all equipment and piping systems installed by the Contractor.

B. The extent of vibration isolation are indicated by Drawings and schedules and by requirements of this Section to include:

1. Vibration Isolation for Motor Driven Equipment.
2. Vibration Isolation for piping and piping risers.
3. Flexible connections for piping at Equipment.

1.3 SUBMITTALS

A. Refer to Division 01 Specifications for submittal procedures

B. The Manufacturer of seismic restraints products shall submit the following data clearly marked on the submittal drawing. Each piece of isolated equipment shall be clearly identified, as well as the quantity and type of vibration isolators and seismic restraints.

C. Weight and center of gravity of each piece of isolation equipment, and RPM of each piece of rotating isolated equipment. When equipment center of gravity is not available, assumed locations for center of gravity shall be identified in submittals.

1. Calculated static load on each isolator.
2. Calculated deflection for each piece of isolated equipment.
3. Calculated seismic loads, for each restraint including horizontal and vertical forces and overturning moments.

D. Submittals for bases shall clearly identify locations for all mountings, as well as all locations for attachment points of the equipment to be mounting base. Installation instructions shall be included.

E. Submittals shall include seismic calculations signed and checked by qualified licensed Engineers in the employ of the Manufacturer of the vibration isolators. Catalog cut sheets shall be included for each type of mounting used on equipment being isolated.

1. Manufacturer's certification of components seismic acceleration operational capacity and attachment.

1.4 QUALITY ASSURANCE

A. Product Qualification: Provide each type of seismic mounting unit produced by a specialized manufacturer, with not less than 5 years successful experience in the production of units similar to those for the project.

B. Except as otherwise indicated obtain support isolation units from a single manufacturer.

C. Engage the manufacturer to provide technical supervision of the installation of restraints produced by him, and of associated inertia bases.

D. Manufacturer: Provide Seismic mounting units manufactured by the following:

1. Amber/Booth
2. Consolidated Kinetics Corp.
3. Vibration Mountings and Controls, Inc./Korfund Dynamics
4. Mason Industries
5. Vibration Eliminator Co.

E. Manufacturer: Provide Vibration Isolation manufactured by the following:

1. Amber/Booth
2. Consolidated Kinetics Corp.
3. Vibration Mountings and Controls, Inc./Korfund Dynamics
4. Mason Industries

F. After installation is complete and while the system is operating, the vibration isolation Manufacturer and/or his qualified Representative shall conduct an inspection of the installation with the Contractor. The Representative will submit a written inspection report detailing any discrepancies, the Representative shall submit a report so stating. If there are discrepancies, the report shall detail corrective work to be done.

G. Submit detailed seismic drawings, drawn to the scale indicated, for each of the following installations. All seismic drawings shall be based on the Architectural and Structural Contract Drawings. All seismic drawings shall bear the stamp of a Professional Engineer licensed in the state of the Project site:

1. Mechanical Equipment rooms depicting size and location of concrete housekeeping pads and the location and type of seismic restraints. Minimum Scale: 1/4"=1'-0".
2. Piping Plans depicting location and type of seismic restraints. Minimum Scale: 1/8"=1'-0".
3. Concrete pad details depicting location and size of reinforcing, doweling, and anchor bolts for each specific piece of equipment. Minimum Scale: 1/2"=1'-0".
4. Suspended equipment depicting restraint locations, types, and methods of attachment. Minimum Scale: 1/8"=1'-0".
5. Miscellaneous Attachment Details depicting size, locations, and types of attachment (i.e., bolts, welds, anchors, cables) for securing equipment to seismic mountings and for securing seismic mountings to the building structure.

H. Submit a seismic design errors and omissions insurance certificate. (Manufacturers product liability insurance certificates are not acceptable.

1.5 DESIGN - VIBRATION ISOLATION SYSTEMS

A. Vibration isolators shall be selected based on known or estimated operating weight distributions of the isolated equipment, with the quantity and location as shown on the components Drawings. Isolator type shall be tabulated for each isolated piece of equipment.

B. Isolators shall have either known non-deflected heights of spring element or calibration markings so that, after adjustment, when carrying their load, the deflection under load can be verified to determine if the load is within the proper range of the isolator and if the correct degree of vibration isolation is being provided.

C. Isolators shall function in the linear portion of the load versus deflection curve. Theoretical vertical natural frequency shall not differ from the design objectives by more than +10%.

D. Vibration isolation available internal to the equipment shall not be considered equivalent, and may only be used where it can be shown not to compromise the strength or performance of the entire system.

E. Unless otherwise specified, all isolated equipment and all piping shall be seismically restrained in accordance with requirements contained herein. All un-isolated mechanical equipment shall be adequately secured to the structure.

F. Unless the equipment incorporates unit construction using an integral unit frame or is specified otherwise, each item of mechanical equipment, along with its drive unit, shall be mounted on a rigid steel or steel and concrete base. The equipment, including the base, shall be mounted on, or suspended from, vibration isolators to prevent the transmission of vibration and mechanically transmitted structure borne sound to the supporting structure.

G. Isolation hangers shall be used for all piping in equipment rooms or for 50 ft. from vibration equipment, whichever is greater. To avoid reducing the effectiveness of equipment isolators, at least three of the first hangers from the equipment should provide the same deflection as the equipment isolators, with a maximum limitation of 2 inch deflection. The remaining hangers shall be spring or combination spring and rubber with a minimum of 0.75 in deflection. To prevent load transfer to the equipment flanges when the piping system is filled, the first three hangers adjacent to the equipment shall be the positioning type (specification type 5). Floor supports for piping in equipment rooms and adjacent to isolated equipment shall use restrained vibration isolators. They should be selected according to the guidelines for hangers.

1.6 DESIGN - SEISMIC RESTRAINTS

A. The site is classified as follows: Design Category "C"; International Building Code 2015 and ASCE 7-10 Table 11.6-1 & Pg. 56

B. The Building Occupancy Risk Category is Category IV *(Hospital, Emergency Response, Fire, Police)* per ASCE 7-10 Table 1.5-1 Pg. 2.

C. Seismic restraint shall be required for the following installations:

1. *(Seismic Design Category C - Risk Category IV)* All Fire Protection Eqipment and piping systems

D. Internally isolated equipment in lieu of specified isolation and restraint system must include certification by the equipment manufacturer that the internal isolation system meets the specified isolation and system restraint criteria. Equipment resiliently mounted on spring or pad type isolators shall be provided with seismic restraints or snubbers. Where required by code, seismic restraints for equipment mounted on vibration isolated curbs shall consist of slack galvanized or stainless steel cables (Type 16), attached to a structurally sound element of the equipment.

E. Each piece of isolated equipment shall receive a minimum of four all-directional restraint/snubbers, located as close to the equipment corners as practical. These shall consist of either restrained isolators or free standing isolators with separate snubbers. All snubbers shall have an impact surface consisting of a high quality elastomer. The elastomer shall be easy to inspect for damage, shall be replaceable and shall be a minimum of 3/4 inch thick.

F. Calculations by the Manufacturer's qualified licensed Engineer substantiating the mounting system, seismic restraints and recommended anchor bolts shall be submitted for approval along with the mechanical Drawings. Minimum spacing of anchor bolts, as well as location from edges of structure or concrete, shall be identified.

G. Unless otherwise specified, all equipment piping shall be restrained to resist seismic forces. Restraints shall maintain mechanical equipment or piping in a captive position. Restraint devices shall be designed and selected to meet seismic requirements as defined in the latest issue of IBC.

H. Anchor bolt calculations, signed by a qualified licensed Engineer, shall be submitted showing adequacy of bolt sizing and type. Calculations shall be furnished for anchors on restraint devices, cables, isolated and rigidly mounted equipment. Calculations shall specify anchor bolt type, embedment, concrete compressive strength, minimum spacing between anchors, and minimum distances of anchors from concrete edges. Concrete anchor locations shall not be near edges, stress joints, or an existing fracture. Embedded bolt locations and spacing shall conform to IBC 2006. All bolt shall be ASTM A307 or better.

PART 2 - PRODUCTS

2.1 GENERAL

A. Unless otherwise specified, all hardware shall be stainless steel or zinc plated. Springs with a deflection of up to 2-inches shall be zinc plated, or coated with a polyester epoxy powder. Springs with a rated deflection capability greater than 2-inches may be painted. Zinc plating shall conform to ASTM B633, Class 2 SC2, minimum.

2.2 TYPE 7 MOUNTINGS - PRE-COMPRESSED HANGERS

A. Spring-Flex hangers shall consist of a color coded steel spring in series with a neoprene element molded in specific colors for proper identification of rated load capacity. Springs shall be pre-compressed to the rated deflection so as to support the suspended equipment or piping at a fixed elevation during installation regardless of load changes. For 30 degree misalignment capability, spring diameters and hanger box lower hole sizes shall be of sufficient size to permit the hanger rod to swing approximately 30 degrees before contacting the box.

B. Springs shall be coated with a polyester epoxy powder. Hardware shall be stainless steel, or zinc plated. Steel housings shall be painted or galvanized.

C. Spring-Flex hangers shall be Series RSHPR or RSHPR-30A for 30 degree misalignment capability, as manufactured by Vibration Mountings and Controls, Inc.

2.3 TYPE 8 MOUNTINGS - SPRING HANGERS

A. Spring-Flex hangers shall consist of a color coded steel spring with a neoprene and steel washer which will properly distribute the load on the spring. For 30 degree misalignment capability, spring diameters

and hanger box lower hole sizes shall be of sufficient size to permit the hanger rod to swing approximately 30 degrees before contacting the box. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. Hangers where are to be used with flat iron duct straps will be provided with eye bolts on both ends.

B. Springs shall be coated with a polyester epoxy powder. Hardware shall be stainless steel, or zinc plated. Steel housings shall be painted or galvanized.

C. Spring-Flex hangers shall be Series SH or SH-30A for 30 degree misalignment capability, as manufactured by Vibration Mountings and Controls, Inc. Hangers with eyebolts to be Type SHSC or SHSC-30A for 30 degree misalignment capability, as manufactured by Vibration Mountings and Controls, Inc.

2.4 TYPE 10 MOUNTINGS - FLOOR, WALL, AND CEILING SLEEVES

A. Where piping passes through walls, floors, or ceilings, a vibration control sleeve shall be provided to reduce the transmission of vibration. The sleeve shall consist of two pipe halves with neoprene sponge material bonded to the inside and a bolting arrangement for secure fit around piping. Where temperature exceeds 240 degrees F., an appropriate density fiberglass shall be used in place of neoprene material.

B. Sleeve shall be type VCS as manufactured by Vibration Mountings and Controls, Inc.

2.5 TYPE 11 MOUNTINGS - RESILIENT PIPE GUIDES

A. Where vertical piping runs between support points, a resilient pipe guide shall be provided. The guide shall consist of an angle frame and four double deflection neoprene mountings molded in specific colors for proper identification of rated load capacity.

B. Resilient Pipe Guide shall be type RPG as manufactured by Vibration Mountings and Controls, Inc.

2.6 TYPE 12 MOUNTINGS - PIPE ANCHORS:

A. Multi-directional pipe anchor shall consist of suitable steel sections in series with heavy duty duck and neoprene material assembled in a telescopic housing to provide the necessary restraint in both the vertical and horizontal directions. Pipe anchor shall be sized to limit load on neoprene and duck material to 500 psi.

B. Multi-directional Pipe Anchor shall be type MDPA as manufactured by Vibration Mountings and Controls, Inc.

2.7 TYPE 13 - FLEXIBLE CONNECTORS

A. Install Quiet-Sphere Flexible Connectors at the suction and discharge of each pump. The connectors shall be molded in spherical design of multiple layers of neoprene and synthetic fiber with integral corrosion resistant plate steel flanges. The connectors shall be suitable for pressures up to 214 psi and temperatures up to 240 degrees F. Where piping is not anchored, control rods must be installed at each connector to limit movement within their specified limits.

B. Flexible connectors shall be Quiet-Sphere Type VMS, VMT, or VMU as manufactured by Vibration Mountings & Controls, Inc.

2.8 TYPE 14 - SEISMIC SPRINGS WITH INTERNAL RESTRAINTS

A. Steel spring isolator incorporating elastomeric snubbing in all directions. The snubber shall be adjustable in the vertical direction and allow a maximum of 1/4 inch travel in all directions before contacting the elastomer cushion.

B. Spring diameter shall be no less than 0.8 times the compressed height of the spring at rated load. Springs shall also have a minimum additional travel to solid equal to 50% of the rated deflection.

C. Housing shall have provision to adjust the rebound plate and to inspect the spring. Housing shall be of cast ductile iron, malleable cast iron or of welded steel construction. Gray iron casings are not permitted.

D. Springs shall be color coded for proper identification of rated load capacity. Springs shall be coated with a polyester epoxy powder. Hardware shall be stainless steel, or zinc plated.

E. Mounting shall be Series AEQM or AWMR as manufactured by Vibration Mountings & Controls, Inc.

2.9 TYPE 15 - SEISMIC SNUBBERS/RESTRAINTS

A. All-directional Seismic Snubbers shall include all directional elastomer elements, having a minimum elastomer thickness of 3/4 inch in all directions. Elastomers shall be easy to inspect and shall consist of replaceable elastomer inserts. Elastomer shall be neoprene or a high quality rubber including anti-ozone and anti-oxidant materials. For installations where the expected temperature range is -20 degrees F. to +180 degrees F., the elastomer shall be neoprene conforming to either:

1. ASTM D2000 Grade 2BC; or Bridge Bearing Neoprene.

B. For installations where the expected operating temperature range can be as low as -65 degrees F. or a high as +300 degrees F., the elastomer shall be Ethylene Propylene Diene Monomer (EPDM) conforming to ASTM D2000.

C. Snubbers shall be manufactured with an air gap between steel and elastomer of 1/8 inch to 1/4 inch. Snubbers shall be installed with factory set clearances.

D. Snubber must have at least two anchor bolt holes and shall have an ultimate load capacity of at least four times the rated static load capacity.

E. Seismic Snubber shall be Seismic Restraint Series SR/SRD as manufactured by Vibration Mountings & Controls, Inc.

2.10 TYPE 16 - CABLE RESTRAINTS

A. Steel aircraft cable restraints are designed and installed to limit motion on suspended isolated equipment, piping or ducting. Cables are installed with enough slack to engage only when 1/4 movement occurs. On suspended equipment, cables are installed in sets of four, located at 45 degree angles to all three axes. Where required at pipe hangers, cables are placed two at each location, alternating orientation at successive locations.

B. Cables shall be 7 x 19 galvanized or stainless steel aircraft cable conforming to FED-STD-RR-W-410D. Cable diameters shall be available in at least three sizes to provide cost effective method of support for a wide range of supported loads.

C. Seismic cable restraints shall be Series SCR as manufactured by Vibration Mountings & Controls, Inc.

2.11 TYPE 17 - ELASTOMER MOUNTINGS

A. Consists of a captive elastomeric mount molded from neoprene or EPDM compound conforming to the requirements of ASTM D2000. Load bearing elastomer element shall be housed in either a heat treated cast aluminum housing or machined structural plate.

B. Mount shall incorporate a fail-safe captive design, and shall provide a vertical natural frequency of 15 Hz to 25 Hz, depending upon the static load. Mount shall be capable of providing dynamic deflections of up to .12 inches.

C. Use Vibration Mountings & Controls Series RB1, RB3 or RB4 with structural plate or MB1 or MB3 (aluminum housing).

PART 3 - EXECUTION

3.1 PERFORMANCE OF SEISMIC RESTRAINTS

A. The manufacturer shall warrant the selection, sizing, and application of all seismic restraints for each application.

B. The seismic engineer shall supervise and review the installation of all seismic restraints.

3.2 APPLICATIONS

A. General: Except as otherwise indicated, apply the following types of vibration isolators and seismic restraints for the indicated items of Equipment.

3.3 SEISMIC RESTRAINT SCHEDULE

A. Piping Restraints: Applicable for threaded, welded, soldered, and grooved piping; schedule 10, 20, 40 and 80: Install cable restraints at maximum intervals of 40 ft. for transverse bracing and 80 ft. for longitudinal bracing, and at each change in direction. Actual spacing shall be determined by the seismic engineer.

B. Flexible Pipe Connectors: Install in piping systems at the following locations:

1. Connections, 3/4" pipe size and larger, with vibration isolation mounted equipment.

3.4 INSTALLATION

A. Seismic restraint systems shall be installed in strict accordance with the Manufacturer's written instructions and submittal data.

B. For Seismic installations, all floor mounted equipment, whether isolated or not, shall be bolted or welded to the structure to resist seismic forces. Bolt attachments, diameter of inserts, embedment depth and weld length as shown on approved submittal Drawings, shall be followed in all respects.

C. Seismic restraints shall be installed after equipment is in operating position to assure design clearances are maintained.

3.5 NOISE AND VIBRATION

A. Particular care shall be exercised in the selection and installation of all Mechanical Equipment and components to attain reasonable noise levels in occupied spaces. In general, sound levels for various spaces shall be maintained in accordance with the recommendations of the ASHRAE Guide. Normally

the classification of noise shall be by mutual agreement but should a dispute arise regarding sound levels after occupancy of the building, representative sound measurements shall be taken to determine the average noise level in the offending space.

3.6 SOUND ISOLATION

A. All Equipment and piping shall be installed so that no noise or vibration is transmitted to any part of the building beyond the room or rooms in which such noise or vibration is generating. Moving equipment shall be isolated from the concrete foundations or floors by cork where required to prevent transmission of noise of vibration.

B. Silencers shall be installed in water connections to quick closing devices. Shock absorbers shall be used in all pipe lines where required to eliminate noise.

C. Any and all other insulation or isolation required to accomplish the results specified above shall be furnished and installed without additional cost to the Owner.

3.7 INSPECTION

A. Upon completion of installation of all vibration isolation and seismic restraint devices, a certification report prepared by the Seismic Engineer shall be submitted in writing to the contractor indicating that all systems are installed properly and in compliance with the specifications. The report must identify those areas that require corrective measures or certify that none exists. Any field coordination type changes to the originally submitted seismic restraint designs must be clearly defined and detailed in the report.

END OF SECTION 21.0548

SECTION 21.0553 - IDENTIFICATION FOR FIRE SUPPRESSION PIPING AND EQUIPMENT

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Nameplates.

B. Tags.

C. Stencils.

D. Pipe Markers.

1.2 RELATED REQUIREMENTS

A. Section 09 9000 - Painting and Coating: Identification painting.

1.3 REFERENCE STANDARDS

A. ASME A13.1 - Scheme for the Identification of Piping Systems; The American Society of Mechanical Engineers; 2007.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. List: Submit list of wording, symbols, letter size, and color coding for mechanical identification.

C. Chart and Schedule: Submit valve chart and schedule, including valve tag number, location, function, and valve manufacturer's name and model number.

D. Product Data: Provide manufacturers catalog literature for each product required.

E. Project Record Documents: Record actual locations of tagged valves.

PART 2 PRODUCTS

2.1 GENERAL

A. Coordinate names, abbreviations and other designations used in mechanical identification work, with corresponding designations shown, specified or schedule. Provide numbers, lettering and working as indicated or, if not otherwise indicated, as recommended by manufacturers or as required for proper identification and operation/maintenance of mechanical systems and equipment.

B. Multiple Systems: Where multiple systems of same generic name are shown and specified, provide identification which indicates individual system number as well as service (as examples: (Standpipe F12)

C. Manufacturers

1. Advanced Graphic Engraving: www.advancedgraphicengraving.com.
2. Brady Corporation: www.bradycorp.com.
3. Brimar Industries: www.brimar.com

4. Champion America, Inc: www.Champion-America.com.
5. Kolbi Pipe Markers: www.kolbipipemarkers.com
6. Seton Identification Products: www.seton.com/aec.

2.2 NAMEPLATES

A. Description: Laminated three-layer plastic with engraved letters.

1. Letter Color: White.
2. Letter Height: 1/4 inch.
3. Background Color: Black.

2.3 TAGS

A. Plastic Tags: Laminated three-layer plastic with engraved black letters on light contrasting background color. Tag size minimum 1-1/2 inch diameter. Minimum information indicating fluid being conveyed(FP) and FP Zone where appropriate.

B. Valve Tag Chart: Typewritten letter size list in anodized aluminum frame.

2.4 STENCILS

A. Stencils: With clean cut symbols and letters of following size:

1. 3/4 to 1-1/4 inch Outside Diameter of Insulation or Pipe: 8 inch long color field, 1/2 inch high letters.
2. 1-1/2 to 2 inch Outside Diameter of Insulation or Pipe: 8 inch long color field, 3/4 inch high letters.
3. 2-1/2 to 6 inch Outside Diameter of Insulation or Pipe: 12 inch long color field, 1-1/4 inch high letters.
4. 8 to 10 inch Outside Diameter of Insulation or Pipe: 24 inch long color field, 2-1/2 inch high letters.

B. Stencil Paint: As specified in Section 09 9000, semi-gloss enamel, colors conforming to ASME A13.1.

2.5 PIPE MARKERS

A. Color: Conform to ASME A13.1.

1. Plastic Pipe Markers: Factory fabricated, flexible, semi- rigid plastic, preformed to fit around pipe or pipe covering; minimum information indicating flow direction arrow and identification of fluid being conveyed.

2.6 CEILING TACKS

A. Description: Steel with 3/4 inch diameter color coded head.

B. Color code as follows:

1. Sprinkler Valves: Black.

PART 3 EXECUTION

3.1 PREPARATION

A. Degrease and clean surfaces to receive adhesive for identification materials.

B. Prepare surfaces in accordance with Div.1 specifications for stencil painting.

3.2 INSTALLATION

A. Attach nameplates with corrosive-resistant mechanical fasteners, or adhesive. Apply with sufficient adhesive to ensure permanent adhesion and seal with clear lacquer.

B. Attach tags to all valves with corrosion resistant chain.

C. Provide additional labelling including but not limited equipment tags, room labels, etc., for location of equipment and valving as required by the Authority Having Jurisdiction. Coordinate work with Architect in field.

D. Provide riser tags including hydraulic calculation information at all riser alarm valves and floor control assemblies.

E. Identify equipment with plastic nameplates. Small devices, such as in-line pumps, may be identified with tags.

F. Identify valves in main and branch piping with tags. Identify auxiliary drains and any piping specialty required for maintenance and operation of the system with nameplates indicating the function of the specialty.

G. Tag automatic controls, instruments, and relays. Key to control schematic.

H. Identify piping, concealed or exposed, with plastic pipe markers or Stencil painting (permitted within mechanical spaces). Verify requirements for exposed piping identification in finished areas with Architect in field. Identify service and flow direction. Install in clear view and align with axis of piping. Locate identification on horizontal piping not to exceed 20 feet on straight runs and at each side of penetration of structure or enclosure. Locate additional identification on risers and drops, adjacent to each Tee of main piping, and at each obstruction.

1. Install plastic pipe markers in accordance with manufacturer's instructions.
2. Apply stencil painting in accordance with Div. 1 specifications.

I. Locate ceiling tacks to locate valves above T-bar type panel ceilings. Locate in corner of panel closest to equipment.

END OF SECTION 21.0553

SECTION 21.1300 - FIRE-SUPPRESSION SPRINKLER SYSTEMS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Wet-pipe sprinkler system

B. System design, installation, and certification.

C. Sprinkler Heads and Accessories

D. Sprinkler Alarm Valves

E. Supervisory and Monitoring Devices

F. Sprinkler System Fire Department Connections

G. Sprinkler System Accessories and Equipment

1.2 RELATED REQUIREMENTS

A. Section 07 8413 - Penetration Fireproofing

B. Section 21 0500 - Common Work Results for Fire Suppression.

C. Section 21 0553 - Identification for Fire Suppression Piping and Equipment.

D. Section 26 2717 - Equipment Wiring: Electrical characteristics and wiring connections.

1.3 REFERENCE STANDARDS

A. FM P7825 - Approval Guide; Factory Mutual Research Corporation; current edition.

B. NFPA 13 - Standard for the Installation of Sprinkler Systems; National Fire Protection Association; 2016.

C. IBC

D. UL (FPED) - Fire Protection Equipment Directory; Underwriters Laboratories Inc.; current edition.

1.4 SUBMITTALS

A. See Division 01 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturers data on all products specified within this section including sprinklers, valves, and specialties. Clearly Indicate exact models/model numbers, options, and accessories to be provided. Indicate the application where the materials are to be used where appropriate. Manufacturers data shall include the following information as appropriate for each product: product listings (UL, FM, ASSE, etc.) performance ratings, rough-in details, weights, support requirements, and piping connections.

C. System Drawings:

1. Contractor shall prepare drawing submittals and hydraulic calculations for submittal to the Architect/Engineer, all local reviewing agencies having jurisdiction, and the owner's insurance carrier (I.S.O submittal necessary only when required by owner's insurance carrier). The shop drawings prepared by the contractor shall bear a fire protection engineer's seal, whom is registered in the Commonwealth of Pennsylvania. No work shall begin until all approvals are granted.
2. Submit preliminary layout of finished ceiling areas indicating only sprinkler locations coordinated with ceiling installation.
3. Indicate hydraulic calculations, detailed pipe layout, hangers and supports, sprinklers, components and accessories. Indicate system controls.
4. Submit shop drawings to authority having jurisdiction, and Fire Marshall for approval. Submit proof of approval to Architect.
5. Project Record Documents: Record actual locations of sprinklers and deviations of piping from drawings. Indicate drain and test locations.
6. Manufacturer's Certificate: Certify that system has been tested and meets or exceeds specified requirements and code requirements.
7. Operation and Maintenance Data: Include components of system, servicing requirements, record drawings, inspection data, replacement part numbers and availability, and location and numbers of service depot.
8. Maintenance Materials: Furnish the following spare equipment for Owner's use in maintenance of project.
    a. Extra Sprinklers: Type and size matching those installed, in quantity required by referenced NFPA design and installation standard.
    b. Sprinkler Wrenches: For each sprinkler type.
9. Sprinklers shall be referred to on drawings, submittals and other documentation, by the sprinkler identification or Model number as specifically published in the appropriate agency listing or approval. Trade names or other abbreviated designations shall not be allowed.

1.5 QUALITY ASSURANCE

A. Maintain one copy of referenced design and installation standard on site.

1. Conform to UL requirements.
2. Designer Qualifications: Design system under direct supervision of a Professional Fire Protection Engineer experienced in design of this type of work and licensed in the State in which the Project is located.
3. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.
4. Installer and Designer Qualifications: Company specializing in performing the work of this section with working knowledge of NFPA13 installation requirements with minimum 5 years experience with fire protection systems similar to that required by this project. The
5. Equipment and Components: Provide products that bear UL label or marking.
6. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc., as suitable for the purpose specified and indicated.

7. To assure uniformity and compatibility of piping components in grooved piping systems, all grooved products utilized shall be supplied by a single manufacturer. Grooving tools shall be supplied from the same manufacturer as the grooved components.

8. To assure uniformity and compatibility of sprinklers within the fire protection system, all sprinkler heads shall be supplied by a single manufacturer.
9. To assure uniformity and compatibility of piping specialties within the Fire Protection system, all products within each of the product families specified below shall be supplied by a single manufacturer.

1.6 PRE-DESIGN MEETING

A. Coordinate and convene meeting before starting work of this section. Meeting shall include representation from Fire Protection Contractor, Architect, Engineer, AHJ. Meeting shall review general design requirements, submittal requirements, procedures for field coordination with Architect, and field coordination items for local AHJ review.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store products in shipping containers and maintain in place until installation. Provide temporary inlet and outlet caps. Maintain caps in place until installation.

1.8 TESTING

A. Perform and document testing in accordance with NFPA-13, NFPA-24, and the local Authority Having Jurisdiction.

B. Testing shall be witnessed by the local Authority Having Jurisdiction and owners representative. Coordinate scheduling of testing to allow attendance by all required representatives.

1.9 EXTRA MATERIALS

A. Provide extra sprinklers of type and size matching those installed, in quantity required by referenced NFPA design and installation standard.

B. Provide suitable wrenches for each sprinkler type.

C. Provide metal storage cabinet for spare sprinklers adjacent to main service entrance. Verify exact location with Owner Representative in field.

PART 2 - PRODUCTS

2.1 SPRINKLER SYSTEM

A. Provide a “Design Build” Fire Suppression Sprinkler/Standpipe System in accordance with ICC (IBC) and NFPA 13&14 (latest edition), and inclusive of all additional requirements as indicated on the drawings and in these specifications. The entire building shall be "sprinklered throughout" with "Quick Response" standard coverage sprinklers. No Extended coverage heads shall be permitted except where specifically noted on the Fire Protection drawings. The Fire Suppression Sprinkler System shall be hydraulically calculated to provide the prescribed density uniformly over the most remote area in accordance with NFPA13 and include a minimum 10psi safety factor. Provide Manual Wet standpipes in all stair towers indicated on drawings

1. Occupancy: Building predominantly Light Hazard, some areas of other classification in accordance with NFPA 13 and document drawings.
2. Water Supply:

a. Date: March 19, 2026 at 1:30 PM
   1) Monitor Hydrant: Hydrant #8-58 @ Fayette St. & 11th St.
      (a) Static pressure: 125 psi
      (b) Residual pressure: 120 psi
   2) Flow Hydrant: Hydrant #8-17 @ Fayette St. & 9th St.
      (a) Flow: 1706gpm@ 89psi pitot pressure

b. The above flow test information is provided as basis of design for the contract documents. The fire protection contractor shall perform a water flow test at time he is preparing his hydraulic calculations and use the results of his flow test as the basis for design of the "Design Build" sprinkler system.

B. Interface system with building control system.

C. Provide Wet Manual Standpipes with hose connection valves where indicated on the FP drawings. Provide hose connection valves within recessed Cabinets. Refer to drawings for locations.

D. Provide Storage Cabinet for Spare Sprinklers and Tools: Steel, located adjacent to alarm valve.

2.2 WATER FLOW TEST

A. Perform a new water flow test before preparing hydraulic calculations and use the results of this flow test as the basis for design of the sprinkler system.

B. Submit water flow test data with Hydraulic Calculations

2.3 SPRINKLER HEADS AND ACCESSORIES

A. Acceptable Manufacturers

1. All sprinkler heads shall be provided by from a single manufacturer.
2. Viking Corporation.
3. Victaulic.
4. Tyco.

B. General:

1. UL and FM approved. Die-cast brass frame to 65-30, bronze upright or pendant deflector, beryllium nickel spring, with stainless steel lodgment spring and Teflon tape seal. Glycerin filled glass bulb, rated for working pressure to 175 psi . Where corrosion resistant construction is required by specifications or drawings, body shall be coated with UL listed and FM approved anti-corrosion nickel Teflon coating, (VC-250 - silver coloring). The sprinkler body shall be cast with hex shaped wrench boss to reduce the risk of damage during installation. Sprinklers can be ordered with NPT or IGS grooved connections. Sprinklers shall not contain rubber O-rings. Quick response type.

C. Concealed Pendant Type (with push on cover plate Suspended Ceiling Type for ACT, GWB, and other finished ceiling types) - Quick Response:

1. Finish: Brass. (Provide Nickel Teflon coated sprinkler heads where corrosion resistant heads are required and as noted on plans)
2. Cover Plate Finish/color: Color/Finish as selected by Architect from manufacturers full line of avialable color/finishes. Coordinate with Architectural ceiling plans and verify color selection in

field with Architect prior to order and Installation. Where custom color is indicated, provide custom color as selected by Architect.

3. Fusible Link: Glass bulb type temperature rated for specific area hazard. Contractor shall verify proper temperature selection in accordance with NFPA13 and coordination with any heat producing equipment located in close proximity to the sprinkler head.
4. Design Basis: Victaulic Model V38 series (Quick Response).

D. Dry Concealed Pendant Type (with matching push on escutcheon plate Suspended Ceiling Type for ACT, GWB, and other finished ceiling types) - Quick Response:

1. Finish: Brass. (Provide Nickel Teflon coated sprinkler heads where corrosion resistant heads are required and as noted on plans)
2. Escutcheon Plate Finish: Enamel, color as selected by Architect. Verify color selection in field with Architect prior to order and Installation.
3. Fusible Link: Glass bulb type temperature rated for specific area hazard. Contractor shall verify proper temperature selection in accordance with NFPA13 and coordination with any heat producing equipment located in close proximity to the sprinkler head.
4. Galvanized steel dry barrel with stainless steel inner tube
5. Design Basis: Victaulic Model V33 series (Quick Response).

E. Dry, Flexible Style, Concealed Pendent/ Pendent/ Horizontal Sidewall Type (with matching push on escutcheon plate Suspended Ceiling Type for ACT, GWB, and other finished ceiling types) - Quick Response:

1. Finish: Brass. (Provide Nickel Teflon coated sprinkler heads where corrosion resistant heads are required and as noted on plans)
2. Escutcheon Plate Finish: Enamel, color as selected by Architect. Verify color selection in field with Architect prior to order and Installation.
3. Fusible Link: Glass bulb type temperature rated for specific area hazard. Contractor shall verify proper temperature selection in accordance with NFPA13 and coordination with any heat producing equipment located in close proximity to the sprinkler head.
4. Flexible hose: UL listed FM approved SS braided hose
5. Design Basis: Victaulic Model V35 series (Quick Response).

F. Standard Upright or Pendent type, with guard (Exposed Sprinkler Areas) - Quick Response

1. Finish: Brass. (Provide Nickel Teflon coated sprinkler heads where corrosion resistant heads are required and as noted on plans)
2. Fusible Link: Glass bulb type temperature rated for specific area hazard. Contractor shall verify proper temperature selection in accordance with NFPA13 and coordination with any heat producing equipment located in close proximity to the sprinkler head.
3. Design Basis: Victaulic Model V27 series (Quick Response).

G. Dry Standard Upright, with guard (Exposed Sprinkler Areas) - Quick Response

1. Finish: Brass. (Provide Nickel Teflon coated sprinkler heads where corrosion resistant heads are required and as noted on plans)
2. Fusible Link: Glass bulb type temperature rated for specific area hazard. Contractor shall verify proper temperature selection in accordance with NFPA13 and coordination with any heat producing equipment located in close proximity to the sprinkler head.
3. Galvanized steel dry barrel with stainless steel inner tube
4. Design Basis: Victaulic Model V36 series (Quick Response).

H. Dry Standard Pendant, with guard (Exposed Sprinkler Areas) - Quick Response

1. Finish: Brass. (Provide Nickel Teflon coated sprinkler heads where corrosion resistant heads are required and as noted on plans)
2. Fusible Link: Glass bulb type temperature rated for specific area hazard. Contractor shall verify proper temperature selection in accordance with NFPA13 and coordination with any heat producing equipment located in close proximity to the sprinkler head.
3. Galvanized steel dry barrel with stainless steel inner tube
4. Design Basis: Victaulic Model V36 series (Quick Response).

I. Sidewall Type: Quick Response, Semi-recessed horizontal sidewall type with matching push on escutcheon plate.

1. Finish: Enamel, color as selected.
2. Escutcheon Plate Finish: Enamel, color as selected by Architect. Verify color selection in field with Architect prior to order and Installation.
3. Fusible Link: Glass bulb type temperature rated for specific area hazard. Contractor shall verify proper temperature selection in accordance with NFPA13 and coordination with any heat producing equipment located in close proximity to the sprinkler head.
4. Design Basis: Victaulic Model V27 series (Quick Response).

J. Dry Pendant Sprinklers (Within walk in coolers/Freezers): Quick Response, Dry pendant type with matching escutcheon plate.

1. Finish: Chrome plated.
2. Escutcheon Plate Finish: Chrome plated factory assembled.
3. Fusible Link: Glass bulb type temperature rated for specific area hazard.
4. Design Basis: Victaulic Model V36 series (Quick Response) with Integral AB6 assembly.

K. Guards: Finish chrome.

L. Flexible sprinkler connections: In lieu of rigid pipe offsets or return bends for sprinkler drops, the Victaulic VicFlex™ Multiple-Use Flexible Stainless Steel Sprinkler Drop System [with captured coupling Style 108] may be used to locate sprinklers as required by final finished ceiling tiles and walls. The drop system shall consist of a braided type 304 stainless steel flexible tube, zinc plated steel Male threaded nipple or Victaulic FireLock IGS Groove Style 108 coupling for connection to branch-line piping, and a zinc plated steel reducer with a female thread for connection to the sprinkler head.

1. Captured Coupling IGS Groove Style 108: Single-bolt, consisting of two ductile iron housings, Grade E “EPDM” gasket, and a zinc electroplated steel bolt and nut conforming to ASTM A449.
2. The drop shall include a UL-2443 approved and FM-1637 listed series AH2 braided hose with bend radius to 2” to allow for proper installation in confined spaces. The hose shall be listed for (5) bends at 36” length, (7) bends at 48” length, (9) bends at 60” length and be listed for (5) bends at 36” length, (7) bends at 48” length, (9) bends at 60” length and (10) bends at 72” length.
3. Union joints shall be provided for ease of installation. The flexible drop shall attach to the ceiling grid using a one-piece open gate Series AB1 bracket. The bracket shall allow installation before the ceiling tile is in place. The braided drop system is UL listed for sprinkler services to 175 psi. and FM Approved to 200 psi.
4. All hoses shall be factory-pressure tested to 400 psi.
5. AB6 Bracket Assembly, for use in cold storage applications with Victaulic Model V36 dry sprinklers.

6. Approvals:
   a. FM-1637
   b. UL 2443
7. Refer to the Victaulic I-VICFLEX installation manual and the Victaulic VicFlex™ Design Guide, as shown in product submittal 10.85 to ensure proper installation.

2.4 FIRE PROTECTION SERVICE ENTRANCE BACKFLOW PREVENTER

A. Acceptable Manufacturers

1. All backflow prevention devices shall be provided by from a single manufacturer.
2. Ames Co..
3. Watts.

B. Double Check Detector Assembly type (DCDA), U.L. Listed/FM approved, resilient wedge OS&Y gate valves, 300 series SS body and all internal parts, lead-free waterway construction, two independently operated tri-link check modules with reversible elastomer discs, single sleeve 304SS Sch.40 housing with grooved fittings, "low flow" bypass meter assembly and double chack assembly backflow preventer (contractor shall coordinate and install meter assembly requirements with Local Water Authority. Rated working pressure 175psi. Standards/Approvals ASSE1048, AWWA C551-92, CSA B64.5, Foundation for Cross-Connection Control and Hydraulic Research at The Unversity of Southern California (FCCCHR-USC) Contractor shall submit backflow preventer information to Water Authority for approval and coordinate all requirements with Water Authority in field prior to order.

1. Design Basis: Watts Model 757DCDA-OSY.

2.5 WET PIPE SPRINKLER ALARM CHECK VALVE

A. Acceptable Manufacturers

1. *All Alarm Valve, Riser Check Valves, and Floor Zone Control Manifold Assemblies shall be provided by from a single manufacturer.
2. Viking Corporation.
3. Victaulic.
4. Tyco.

B. Check type valve with divided seat ring, rubber faced clapper to automatically actuate water motor alarm and electric alarm, with variable pressure trim w/pressure retard chamber, and test and drain valve. Valve internal parts shall be replaceable without removing the valve from the installed position.

1. Design Basis: Victaulic FireLock® Series 751 w/Series 752 pressure retard chamber, and Style 720 TestMaster™ test and drain valve.

2.6 WET PIPE SPRINKLER RISER-CHECK VALVE

A. Acceptable Manufacturers

1. *All Alarm Valve, Riser Check Valves, and Floor Zone Control Manifold Assemblies
2. shall be provided by from a single manufacturer.
   a. Viking Corporation.
   b. Victaulic.
   c. Tyco.

B. Check type valve with a spring-assisted, single disc design which provides a leak-free seal with as little as 5 ft/1.5 m of head. The valve shall feature a single disc mechanism incorporating a spring-assisted feature for non-slamming operation, as well as upstream and downstream pressure taps. Each valve to be factory tested to the rated working pressure.

1. Design Basis: Victaulic FireLock® Series 717R and 717HR.

2.7 FLOOR ZONE CONTROL MANIFOLD ASSEMBLY

A. Acceptable Manufacturers

1. *All Alarm Valve, Riser Check Valves, and Floor Zone Control Manifold Assemblies shall be provided by from a single manufacturer.
2. Viking Corporation.
3. Victaulic.
4. Tyco.

B. Grooved end cast iron manifold for horizontal or vertical installation, including butterfly valve with supervisory switch, check valve, flow switch, pressure gauge, and test and drain valve.

1. Design Basis: Victaulic FireLock® UMC Series

2.8 FLUSH MOUNT SPRINKLER SYSTEM FIRE DEPARTMENT CONNECTION

A. Acceptable Manufacturers

1. Potter Roemer.
2. Croker.
3. Guardian Fire Equipment

B. Type: Siamese Flush Wall Mount type.

1. Outlets: Chrome plated, flush wall mount, siamese connections with style/threads as required by local fire department. Verify all requirements with local Fire Marshal Prior to Order/Installation Provide threaded dust cap and chain of matching material and finish.
2. Drain: 3/4 inch automatic drip. Refer to FP detail drawings for additional installation details.
3. Inlet: 4"NPT Back/Top/Bottom (as required by piping arrangement
4. Wall Plate/Label: Polished Brass or polished chrome plated brass verify with Architect Prior to order.
   a. Lettering: "AUTO. SPKR.. STANDPIPE". Verify all signage requirements with local Fire Marshal Prior to submittal and Order/Installation.
5. Design Basis: Potter Roemer: Model 5021-D/5022-D/5023-D

C. Type: 5" Storz x 4"NPT Flush mounted wall type.

1. Outlets: Connections with style/threads as required by local fire department. Verify all requirements with local Fire Marshal Prior to Order/Installation Provide threaded dust cap and chain of matching material and finish.
2. Wall Plate/Label: Polished Brass or polished chrome plated brass/"AUTO. SPKR.. STANDPIPE". Verify all signage requirements with local Fire Marshal Prior to submittal and Order/Installation.
3. Design Basis: Potter Roemer: Model 5795-03 w/5962-B wall plate

2.9 FREE STANDING SPRINKLER SYSTEM FIRE DEPARTMENT CONNECTION

A. Acceptable Manufacturers

1. Potter Roemer.
2. Croker.
3. Guardian Fire Equipment

B. Type: Free standing, storz connection, ductile iron pedestal

1. Body: 29 in. high, 90 degree body with stainless steel internal screen, Hard coat, annodized aluminum standard finish. Includes 5-inch Storz x 4" FNPSH connection adapter, cap, sleeve, and labelled escutcheon plate. Coordinate escutcheon labelling with Local Fire Marshal prior to order.
   a. Basis of Design: Potter Roemer Model 5795-02-FS
      1) Provide optional 120 deg. adapter, 30 deg downturn (-120)
      2) Provide optional chrome finish adapter, cap, sleeve, and plate (-C)
      3) Coordinate Escutcheon lettering with Local Fire Marshal (-A) "AUTO SPKR" - Sprinkler Systems, (-S) "STANDPIPE" - Standpipe Systems, (-AS/SP) "AUTO SPKR STANDPIPE" - Combination Sprinkler and Standpipe systems, (-DS) "DRY STANDPIPE" - Dry Standpipe systems
2. Provide locking Knox Cap. Verify requirements with local Fire Marshal prior to order.
3. Drain: 3/4 inch automatic ball drip.
   a. Locate Ball drip in vault or at low point within building as noted on plans, pipe to floor drain or crushed stone base
4. Signage: Min. 10 inch x 14 inch, laminated aluminum ID plate. Verify signage requirements with local Fire Marshal prior to order. Verify signage mounting location with Architect and Local Fire Marshal in field prior to installation.
   a. "FDC - AUTO SPKR" - Sprinkler Systems
   b. "FDC - STANDPIPE" - Standpipe systems
   c. "FDC - AUTO SPKR STANDPIPE" - Combination Sprinkler and Standpipe systems
   d. "FDC - DRY STANDPIPE" - Dry Standpipe systems

C. Type: Free standing siamese connection, ductile iron pedestal with red glossy.

1. Body: 29 in. high, 45 degree body with clapper. 2-1/2"female x 2-1/2" female – NST connection inlets. Coordinate all connection type, size, and threads requirements and accessories with the local Fire Marshal prior to order; threaded dust cap and chain of matching material and finish.
   a. Basis of Design: Potter Roemer Model 5761
      1) Provide Optional Brass body with polished brass finish (-B)
      2) Provide Optional Brass body with rough chrome plaed finish (-C)
      3) Provide Optional Brass body with polished chrome plaed finish (-D)
      4) Coordinate Escutcheon lettering with Local Fire Marshal (-A) "AUTO SPKR" - Sprinkler Systems, (-S) "STANDPIPE" - Standpipe Systems, (-AS/SP) "AUTO SPKR STANDPIPE" - Combination Sprinkler and Standpipe systems, (-DS) "DRY STANDPIPE" - Dry Standpipe systems
2. Drain: 3/4 inch automatic ball drip.
   a. Locate Ball drip in vault or at low point within building as noted on plans, pipe to floor drain or crushed stone base

3. Signage: Min. 10 inch x 14 inch, laminated aluminum ID plate. Verify signage requirements with local Fire Marshal prior to order. Verify signage mounting location with Architect and Local Fire Marshal in field prior to installation.
   a. "FDC - AUTO SPKR" - Sprinkler Systems
   b. "FDC - STANDPIPE" - Standpipe systems
   c. "FDC - AUTO SPKR STANDPIPE" - Combination Sprinkler and Standpipe systems
   d. "FDC - DRY STANDPIPE" - Dry Standpipe systems

2.10 FLUSH MOUNT BACKFLOW PREVENTER TEST CONNECTION

A. Acceptable Manufacturers

1. Potter Roemer.
2. Croker.
3. Guardian Fire Equipment

B. Type: Flush Wall Mount type.

1. Outlets: Connections 2-1/2" NST threads, 2-1/2" hose valves with caps and chains
2. Finish: Chrome Plated
3. Drain: 3/4 inch automatic drip.
4. Inlet: 4"NPT Back/Top/Bottom (as required by piping arrangement
5. Wall Plate/Label: Polished chrome plated brass (verify with Architect Prior to order)
   a. Lettering: "TEST CONNECTION". Verify all signage requirements with local Fire Marshal Prior to submittal and Order/Installation.
6. Design Basis: Potter Roemer: Model 5862-D(two valve)/5863-D(Three valve)/5864-D(Four Valve)

2.11 STANDPIPE HOSE CONNECTION VALVES

A. Acceptable Manufacturers

1. Potter Roemer.
2. Croker.
3. Guardian Fire Equipment

B. Angle type; brass finish; 2-1/2 inch (65 mm) size, N.S.T. thread to match fire department hardware, 300 psi (2070 kPa) working pressure, with threaded cap and chain of same material and finish. Provide additional 2½"x1½" N.S.T. thread reducer with cap and chain of same material and finish.

1. Basis of Design: Potter Roemer: Model 4065

C. Locking Knox cap: Stainless steel construction with brass threads, 700psi rated pressure, Knox FDC wrench operated lock, Threads matching hose valve outlet threads

1. Basis of Design: Knox Model 40xx (xx-size and thread configuration to match Hose Valve)

D. Verify all requirements with local fire marshal and AHJ prior to order/installation.

2.12 STANDPIPE HOSE CONNECTION VALVE CABINET:

A. Acceptable Manufacturers

1. Potter Roemer.
2. Croker.

3. Guardian Fire Equipment

B. Recessed mounted, 20 ga. thick, 10" deep steel box prepared for pipe and accessory rough-in., 20ga. 304SS , flush, full metal hinged door w/positive latch device and Polished Stainless Steel finish.

1. Design Basis: Potter Roemer: Model FRC1810-F (w/10"deep box)

2.13 CLASS II STANDPIPE HOSE CABINET

A. Acceptable Manufacturers

1. Potter Roemer.
2. Croker.
3. Guardian Fire Equipment

B. 20 gauge box, 20 ga tubular steel door with 18 gauage fram and a continuous steel hinge, steel corner seams weleded and ground smooth. 1 1/2" super flex hose with brass fog nozzle

1. Cabinet and Door Design Basis: Potter Roemer: Model 1258-A
2. Rack and Valve Design Basis: Potter Roemer: 2510-10-24-31-43
3. Fire Department Valve Design Basis: Potter Roemer: 2 1/2" valve

C. Verify all requirements with local fire marshal and AHJ prior to order/installation.

2.14 ELECTRIC HORN/STROBE

A. Acceptable Manufacturers

1. *All electric notification devices shall be provided by from a single manufacturer.
2. SimplexGrinnell.
3. Wheelock.

B. U.L. listed, Weatherproof A/V horn/strobe, red cover with white lettering, regulated 24 DC, with weatherproof mounting box.

1. Design Basis: SimplexGrinnell True Alert Model 4906-9131 w/Model 4905-9828 weatherproof box.

C. Coordinate exact location and mounting with Local AHJ and coordinate required wiring to fire alarm panel with E.C. in field.

2.15 WATER FLOW SWITCH

A. Acceptable Manufacturers

1. *All flow, pressure and supervisory switches shall be provided by from a single manufacturer.
2. Potter Roemer.
3. System Sensor.

B. Vane type switch for mounting horizontal or vertical, with two contacts; rated 10 amp at 125 volt AC and 2.5 amp at 24 volt DC.

2.16 PRESSURE SWITCH

A. Acceptable Manufacturers

1. *All flow, pressure and supervisory switches shall be provided by from a single manufacturer.
2. Potter Roemer.

3. System Sensor.

B. Pressure switch for mounting in upright position, with two contacts; rated 15 amp at 125 volt AC and 2.5 amp at 30 volt DC.

2.17 SUPERVISORY SWITCH

A. Acceptable Manufacturers

1. *All flow, pressure and supervisory switches shall be provided by from a single manufacturer.
2. Potter Roemer.
3. System Sensor.

B. OSY type supervisory switch, with two contacts; rated 15 amp at 125 volt AC and 2.5 amp at 30 volt DC.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Design and provide fire suppression system in accordance with all referenced standards and local codes.

B. Install equipment in accordance with manufacturer's instructions.

C. Provide fire hose connection stations including hose connection valve and valve cabinets as indicated on plans with sufficient clearance from walls, obstructions, or adjacent structure to allow unobstructed access to hose connection. Verify exact locations, height above floor, door swing, threads, signage, and required accessories with the Local AHJ prior to order/installation.

D. Provide Fire Department Connections (FDC) at locations indicated on plans. Verify all Fire Department Connection details including style, connection type, height above grade, size, threads, and signage with local Fire Marshal or Fire Department prior to order/installation.

E. Locate outside horn strobe alarm on building wall above all fire department connections, outside room containing the fire protection service entrance valving, and as indicated on plans.

F. Place pipe runs to minimize obstruction to other work.

G. Provide penetration firestopping for all work of Div. 21 in accordance with Div. 07 specifications.

H. Field coordinate all exposed piping in finished spaces with Architect prior to fabrication or installation of piping. This field coordination of proposed pipe routing shall include on site review of submittal drawings with Architect and any other trades affected by the work.

I. In areas with finished ceilings, place piping in concealed spaces above finished ceilings. Coordinate piping locations between all trades prior to installation and final design. In exposed structure areas, all pipe routing shall be reviewed in field with Architect for final approval prior to installation of any work.

J. Center sprinklers within ACT ceilings in two directions relative to scoring and grid patterns as noted on approved architectural reflected ceiling plans. Refer to Fire Protection Details on contract drawings for additional information on centering of sprinklers within various ceiling types and patterns.

K. Align sprinklers symmetrically with other ceiling fixtures and elements as shown on approved architectural reflected ceiling plans.

L. Apply protective covers to ensure concealed sprinklers, cover plates, and sprinkler escutcheons do not receive field paint finish. Covers shall be orange plastic with appropriate fastener for associated sprinkler type. Remove after painting. All painted sprinklers shall be replaced at no additional cost to the Owner. Coordinate work with G.C. prior to beginning any painting.

M. Flush entire piping system of foreign matter.

N. Install guards on all exposed sprinklers except where noted otherwise.

O. Provide sprinkler floor control valves at locations indicated on plans. Provide butterfly shutoff valve with tamper/supervisory switch, and check valve on inlet to floor control valves. Refer to details. Provide drain riser and pipe test and drains to drain riser. Terminate drain riser to building exterior at an approved location or as otherwise indicated on plans.

P. Provide system tests at locations as required by NFPA-13. Pipe all system test drains to building exterior in location approved by Architect , Owner , and AHJ.

Q. Hydrostatically test entire system in accordance with NFPA-13.Coordinate testing to be witnessed by Fire Marshal and authority having jurisdiction.

R. Provide system training for Owner representatives to include required maintenance, system supervisory devices, operating equipment, etc.

S. Provide identification for sprinkler system components and piping in accordance with Section 210553. Provide riser tags including hydraulic calculation information at all riser alarm valves and floor control assemblies

T. Provide laminated color coded Zone Maps to be displayed at main building fire alarm panel. Coordinate all requirements with local Fire Marshal prior to installation.

3.2 INTERFACE WITH OTHER PRODUCTS

A. Ensure required devices are installed and connected as required to fire alarm system. Coordinate work between all trades.

3.3 SCHEDULES

A. System Hazard Areas:

1. Lobby/Vestibules, Classrooms, Offices, Corridors, Library (Seating/General use areas), Game Rooms, Auditoriums, Platforms, Meeting/Conference Rooms, Toilet rooms, and similar spaces: Light Hazard.
2. Science Labs, Science Lab Prep Rooms, Mechanical Room, Storage Spaces, Janitors Closets, Commercial Kitchens, Mail Rooms, and similar spaces: Ordinary Hazard, Group 1.
3. Stages, Library (Stack areas) and similar spaces: Ordinary Hazard, Group 2.

END OF SECTION 21.1300

SECTION 22.0100 - GENERAL PROVISIONS

PART 1 - GENERAL

1.1 FIRE UNDERWRITER SEAL:

A. Where applicable, all material shall bear the National Board of Fire Underwriters' Seal of Approval. Certificates to this effect to be furnished to Architect upon request.

1.2 DEFINITION OF WORK RESPONSIBILITY:

A. Unless noted otherwise by the multiple contract summary, all work shall be performed as noted below.

B. All electrical control components including starters required for operation of Plumbing equipment whether integral or remote shall be furnished and installed under this Contract. Control wiring, conduits and accessories for control devices shall be furnished and installed by the Contractor who provides the equipment. See Division 26 specifications for starters, combination starters, and switches.

C. Power wiring from panel boards or similar source through all equipment disconnects to motors or plumbing equipment shall be furnished and installed by the Electrical Contractor.

D. Equipment disconnect switches, unless otherwise specified or supplied by the equipment supplier as an integral part of the equipment shall be furnished and installed by the Electrical Contractor.

E. All electrical equipment, components, and wiring furnished and installed under this portion of the specifications shall conform to all requirements of the applicable portions of the Division 26 electrical specifications.

F. All base flashing, where required, shall be by the General Contractor, with necessary counter-flashing by this contractor. Flashing shall comply with the requirements of Division 07.

G. All structural work needed for support of plumbing equipment, piping, specialties, or components shall be provided by this contractor unless shown on structural plans.

1.3 RULES AND REGULATIONS:

A. Contractor shall be licensed by the Municipality/Township in which the work is performed. Contractor is responsible for meeting all licensing requirements of the Municipality and securing all necessary certifications prior to beginning work. Copies of these licenses must be posted within the respective job trailers during construction.

B. All work shall be performed in accordance with the rules and regulations of the ICC Codes, local plumbing codes, the utilities having jurisdiction, and the NFPA Codes.

C. All work shall be performed in accordance with the rules and regulations or Pennsylvania Department of Labor and Industry, Federal Department of Labor (Occupational Safety and Health Administration), the Department of Education (where applicable), and all codes and agencies having jurisdiction.

D. All construction, design fabrication, tests, rating and installation shall comply with the rules and regulations of all local, state or national codes and agencies having jurisdiction over this project. Any costs involved in complying to these rules and regulations shall be included in original bid of this Contractor.

E. Refer to Div.01 specifications for Permit application and cost responsibilities for work of this Contract.

1.4 ANCHOR BOLTS:

A. This Contractor shall provide and set in place at the time the foundations, bases, or curbs are poured, all necessary anchor bolts as required for the various equipment specified herein, to be furnished under Div. 22 specifications. Anchor bolts must be of the hook type and of the proper sizes and length to suit the apparatus. The bolts shall be set in pipe sleeves of approximately twice the bolt diameter and as long as the imbedded length of the bolt.

B. When the equipment is set in its proper position, the bolt sleeves and the space between the rough foundations, bases or curbs of the equipment shall be completely filled with one inch of non-shrinking cement grout.

C. This contractor shall assume all responsibility for the location of all anchor bolts for the equipment furnished under Div. 22 specifications, and must have a man present at the time the foundation, bases, or curbs are poured.

1.5 DRAWINGS:

A. The accompanying drawings are a part of these specifications and are intended to show approximate and relative locations of services and equipment. They shall not be scaled to determine exact positions, locations and clearances.

B. Due to the diagrammatic layout and small scale of the drawings, certain piping and duct rises, drops, offsets, valves, and related specialties are not shown. The Contractor shall provide all piping, fittings, valves, and specialties required to insure a complete installation without additional cost to the Owner.

C. All drawings and specifications pertaining to General Construction, Plumbing, HVAC, Electrical and other work shall be carefully examined. All work shall be coordinated prior to installation. Where physical interferences with installed work occur because of failure of this Contractor to coordinate with other trades, this Contractor shall remove and reinstall the work at his own expense.

1.6 SUBMISSION OF SHOP DRAWINGS, EQUIPMENT AND MATERIALS

A. Refer to Division 1 for additional submittal requirements.

B. Contractors shall include with each submittal / shop drawing, a matrix outlining all items that do not match the specified items. If an item is not listed on the matrix, the submitted unit will be assumed to meet all parts of the specification. Contractors will be responsible to ensure that the specifications are met in full. Items in matrix shall include scheduled performance data vs. submitted performance data, specified components vs. submitted unit components, specified construction weight, warranty, etc. vs. submitted construction, weight, warranty, etc.

C. All material submittals shall be submitted in individual submittal packages corresponding to the specification Section and Paragraph of the "Part 2 - Products" section within the applicable Div. 22 specifications for the submitted material. Submittal packages with multiple types of materials from multiple spec sections and combined into a bulk submittal package delays review time and may be rejected without review.

1.7 VISIT TO THE SITE:

A. Prior to submission of his bid, the Contractor shall visit the site to acquaint himself with the existing conditions. Bids as submitted will be interpreted to include all costs and change made necessary by such conditions.

1.8 COORDINATION OF WORK:

A. Contractor shall coordinate his work with that of other trades. In case of interference or problems the Architect shall decide which work is to be relocated, regardless of which is installed first.

B. The Contractor shall prepare coordination/arrangement CAD drawings for coordination with all other trades. The contractor shall furnish these coordination drawings to the contractor responsible for project BIM coordination.

C. This Contractor shall obtain approval of all arrangement drawings before continuing with installation of his work.

1.9 LOCATION OF EQUIPMENT:

A. All locations of plumbing, HVAC and fire protection equipment and pipe connections there to shall be verified by the Owner and Architect. The contractor shall verify locations sufficiently in advance of the installation to allow uninterrupted progress of the work of all trades.

1.10 MATERIALS AND EQUIPMENT:

A. All materials and equipment, unless otherwise specified, shall be new and of the best quality, approved for their specific application.

B. This Contractor shall provide, when required by the Architect, labeled samples of materials to be used on the project. Samples shall be submitted for approval by the Architect prior to their installation.

C. All materials and equipment installed by the Contractor shall be securely and rigidly supported from or attached to the building structure.

1.11 WORKMANSHIP:

A. All workmanship shall be done according to the best practices of the trade by qualified and competent tradesmen.

1.12 PROTECTION OF EQUIPMENT:

A. The Contractor shall protect all material and equipment from damage until final acceptance as installed. He shall close all openings during construction with temporary plugs and replace all damaged items with ones of exact sameness at his expense.

B. He shall schedule material and systems for deliver in such a pattern that critical pieces of equipment may be stored within the building, protected from weather. Where materials are stored outside, they must be protected from the elements and damage.

C. This Contractor shall be responsible for coordinating the procurement of specified materials and equipment being supplied by his sub-contractors and suppliers.

1.13 SCAFFOLDING AND HOISTING:

A. The Contractor shall furnish and erect all scaffolding, hoists, shoring, platforms, railings, ladders, and other devices required by local, state, and federal laws to install his systems and equipment. Scaffolding and all other equipment shall be removed at completion of the work.

B. Contractor shall hoist or rig his own material and equipment into place, or arrange for the rigging of it by others at his expense.

1.14 FOREMAN:

A. Contractor must provide a competent foreman, subject to approval of the Owner. The foreman shall be deemed the agent of the Contractor and must be on duty at the building during all working hours.

B. Any instructions or notices given to the foreman shall be considered equivalent to the instruction or notices being given to the Contractor in person.

1.15 SLEEVES:

A. Each Contractor shall furnish and set all sleeves required for the installation of his work and shall be responsible for their final and permanent locations.

B. All pipes passing through masonry construction shall be fitted with sleeves. Each sleeve shall extend through its respective floor or wall and shall finish flush with each surface unless otherwise required. Unless otherwise specified or shown, sleeves shall be two pipe size larger than the overall outside diameter of the pipe when insulated. Sleeves in bearing and masonry walls shall be made of standard weight galvanized steel pipe. Sleeves through concrete floor slabs and other partitions shall be 18 ga. galvanized steel.

C. Where sleeves pass through foundation walls, the space between such sleeves and passing pipes shall be caulked with graphite packing and an approved plastic and waterproof caulking compound as approved by the Architect. In lieu of caulking materials, Contractor has option of using preassembled "Link-Seals" as manufactured by Thunderline Corporation, 5495 Treadwell, Wayne, Michigan 48184.

D. All sleeves shall be properly installed and securely fastened in place. Where pipes pass through waterproofed floor or walls, design of sleeves shall be such that the waterproofing can be properly flashed around the sleeves, and of such height that the water will be prevented from entering sleeves and dripping to any finished areas below.

E. Contractor shall seal all piping penetrations through all walls and floors. Where pipes pass through fire resisting portions of the structure, the annular space between the sleeve and the pipe shall be filled with an approved fireproof material. Refer to Division 1 specifications for fireproofing requirements.

1.16 CONCRETE AND MASONRY WORK:

A. The General Contractor shall furnish and install all concrete bases, reinforcing, etc. required to install the Mechanical Work, unless otherwise noted.

B. The Contractor, prior to installing any forms, reinforcing or concrete, shall notify all other Contractors or subcontractors, in ample time for them to install any portion of their work which is to be concealed in the concrete. No such work shall be placed in a manner to interfere with the proper placing of the reinforcement unless so authorized by the Architect.

1.17 ESCUTCHEONS:

A. All exposed pipes, except as otherwise described, passing through walls, floors, ceilings, etc. in finished spaces, shall be provided with solid pattern heavy ceiling, floor or wall escutcheons with set screw. Escutcheons and plates shall be of steel or malleable iron with prime coat ready for painting. Escutcheons will not be provided where sleeves intentionally extend above finished floor.

B. All exposed plumbing short branch connections to fixtures and/or equipment passing through wall or floors shall be equipped with pressed brass, chromium plated, solid-type escutcheons.

C. Provide angle collars at ducts where they pass through finished walls, floors and ceilings.

1.18 ACCESS DOORS AND PANELS:

A. All ceiling access panels not shown on the Architectural Reflected Ceiling plans and all additional wall or ceiling access panels required for access for the work of this section shall be furnished by this Contractor and set by the General Contractor. The location of these access panels must be approved by the Architect prior to their installation. The Contractor shall furnish an access panels where valves, specialties, junction boxes, and other serviceable items are installed behind plaster, tile, or similar type non-removable surfaces.

B. Refer to Section 08 3113 - "Access Doors and Frames" for specific requirements.

1.19 CUTTING AND PATCHING:

A. In areas of new construction, this Contractor shall give the General Contractor complete information as to size of openings to be provided by the General Contractor in new floors, and walls, etc., so that such openings may be provided as the project progresses.

1. If openings are omitted or are incorrect through failure of this Contractor to coordinate the required openings, this Contractor shall, at his own expense, engage the trade which originally installed the work, to cut and patch to the satisfaction of the Architect.

B. Unless noted otherwise in the Div. 01 specifications, this Contractor shall be responsible for the cutting of existing floor slabs for the installation/demolition of any underground piping systems required by the plumbing drawings and Div. 22 specifications. This Contractor is responsible for proper bedding, backfill materials and compaction (as outlined in the specifications and on the drawings) to an elevation that is level with the bottom of the existing concrete floor slab. Patching of floor slabs shall include dowels into existing slab, wire mesh reinforcing, and all additional requirements as detailed on the Architectural and Structural drawings.

C. Unless noted otherwise in the Div. 01 specifications, this Contractor shall be responsible for the cutting and patching of exposed surfaces as required for the installation/demolition of any work of the plumbing drawings and Div. 22 specifications. All holes cut shall be in a manner approved by the Architect. Patching of existing construction and finishes must be equivalent to adjacent finishes and materials.

D. Where it becomes necessary to cut out any portions of walls, floors, ceilings, roof or other portions of the building for the installation of work, and as may be required to perform and complete the work under this Contract, the Contractor shall do all necessary cutting and fitting, shall remove all excess material, and shall replace all work damaged so as to leave the entire premises in a finished condition.

E. No cutting shall be done which may in any way affect the building structurally or architecturally. Any damage incident to cutting or other causes in the performance of this Contract shall be corrected by replacement or repairs. Cutting shall be done only with the prior approval of the Architect.

F. Contractor shall seal all piping penetrations through all walls and floors. Penetrations through fire rated walls or floors shall be sealed with an approved UL Listed fire sealant.

1.20 GUARANTEE:

A. Refer to Div.01 specifications for Warranty requirements. Where warranty requirements are not specified in Div.01, this Contractor shall unconditionally guarantee in writing all materials, equipment, and workmanship for a period of one years from date of acceptance by Owner. The Contractor shall provide free service for all equipment involved in his Contract during this guarantee period.

B. The guarantee shall include restoration to its original condition of all adjacent work that must be disturbed in fulfilling this guarantee.

C. All such repairs and/or replacements shall be made without delay and at the convenience of the Owner.

1.21 CLEANING OF SYSTEMS:

A. The Contractor shall thoroughly clean all pipe systems to remove all grease, oil scale, core, sand and other foreign material after tests have been made and before the building is turned over to the Owner.

B. All strainers shall be opened and cleaned thoroughly.

C. Should the Contractor put any substance into any system to aid in the cleaning of it, all trace of such material shall be removed before the system is considered clean. All such substances, if used, shall be free from any acid that will set or injure valve seats, or other piping specialties in any way.

1.22 INSTRUCTION TO EMPLOYEES:

A. At the completion of the work, and before final acceptance of the building by the Owner, each Contractor, together with the representatives of the manufacturers of the equipment installed by the Contractor, shall instruct the designated employees of the Owner in the care, adjustment, maintenance and operation of equipment installed by him.

B. Three copies of factory maintenance schedules shall be furnished for each piece of equipment. Acceptance of materials and equipment is conditional upon receipts of maintenance manuals.

C. A representative of the manufacturer of each piece of equipment shall inspect his respective pieces of equipment, make final adjustments, and put them in a satisfactory working condition.

1.23 SUBSTITUTIONS:

A. Substitutions, if permitted, must comply with the requirements of the Instruction to Bidders for pre-bid substitutions and with Division 01 Section "Product Requirements" for post-bid substitutions.

B. Various items of equipment and materials that have been used as the basis for plumbing system design have been specified by a manufacturer's name and model number. Another manufacturer's product may be submitted for consideration as a substitute in accordance with Div. 01 requirements. The Architect/Engineer shall be the sole judge as to the comparability of an item of equipment that is submitted for approval as a substitute for that which is specified. Each substitute proposals shall include all labor and materials that will be required to install the equipment and make it operate satisfactorily in accordance with the original design concept. Changes required in piping, valves, supports, fittings, ductwork, motors, controls, electrical wiring, and thermal insulation, etc. shall be included. It shall be the responsibility of the Contractor to make certain that substitute equipment, which has been accepted by the Architect will fit into the designated spaces. Contractor shall make the necessary field measurements in order to determine that there is adequate space for the equipment, taking into consideration the clearances that are required for connections and servicing.

C. If any changes are required in the installation of mechanical or electrical services to any plumbing equipment accepted as a substitution to the basis of design, the Plumbing Contractor shall be responsible for any additional costs incurred to the Owner, Engineer, other contractors and costs incurred for changes to the coordination drawings

1.24 ALTERNATES:

A. Various items of equipment and materials that have been used as a basis for plumbing system design have been specified by a manufacturer's name and model number. Where another manufacturer's product has been specified as an alternate to this equipment the proposed cost for this alternate shall include all labor and materials that will be required to install the equipment and make it operate satisfactorily in accordance with the original design concept. He shall include such things as changes in piping, valves, supports and supporting structure, fittings, ductwork, motors, controls, electrical wiring and thermal insulation. It shall be the responsibility of the contractor to make certain the alternate equipment will fit into the designated spaces. He shall make the necessary field measurements in order to determine that there is adequate space for the equipment, taking into consideration the clearances that are required for connections and servicing.

1.25 ALIGNMENT:

A. Where several receptacles, devices, bells, alarms, thermostats, switches, handles, etc., are to be installed in a common location, this equipment shall be lined up in a vertical plane. It is the Contractor's responsibility to confer with the Architect on this alignment.

B. This Contractor shall carefully check all the Drawings and coordinate their work with all trades to provide for a symmetrical and coordinated ceiling. Ceiling T-bars, lights, registers, and other equipment shall all be symmetrically installed with provisions made for integrating the T-bars and this equipment. Failure to coordinate will result in relocation of ceiling components as directed by the Architect at the Contractor's expense.

1.26 OPERATION AND MAINTENANCE INSTRUCTIONS:

A. Refer to Division 01 "Close-out Procedures" as well as the following.

B. The Contractor shall prepare closeout documents in accordance with Div.01 specifications. Where not specified in Div.01 specifications, the Contractor shall prepare for the Owner, 3 hard bound volumes, each containing all operating instructions and information necessary for the care and maintenance of the system. These volumes shall be complete in every respect, and shall include detailed operating instructions for each piece of equipment and diagrams for control wiring and piping so arranged and detailed that the maintenance staff may trace the control in the event of operational malfunctioning.

C. The Contractor shall submit 1 of the hard-bound volumes (or electronic copy) to the Architect/Engineer for approval prior to submitting same to Owner.

D. The purpose of this manual is to assist the Owner in routine operation, maintenance, servicing, troubleshooting and procurement of replacement parts. All information in the manual shall be as-built and only material pertinent to the project shall be included.

E. The operating manual shall be considered a part of the final inspection and shall be submitted for approval at least 30 days in advance of a request for final inspection. The manual shall include:

1. A copy of all final corrected equipment submittals, control diagrams, descriptive brochures, and a list of all parts of each piece of mechanical and electrical equipment which has been furnished and installed.
2. Complete and detailed typewritten operating and maintenance instructions for all major operating equipment. The operating and start-up instructions shall be written in a concise, step by step manner. Maintenance instructions shall include such things as periodic checks, adjustments and troubleshooting techniques.

3. A listing of all items of mechanical and electrical equipment, a compilation of the nameplate data for this same equipment, the name, address and telephone number of the nearest service organization.
4. Copies of all A.S.M.E. pressure vessel certifications, state police approved tank permits, complete additional valve tag schedules, all electrical inspection permits and all additional mechanical and electrical permits required for occupancy by the Owner.
5. All of the materials shall be indexed, arranged categorically and be bound in a rigid, plastic covered, three ring binder.

F. The Contractor shall provide Project Record (As-Builts) documents in accordance with requirements of Div. 01 specifications.

G. O & M manuals must be provided prior to equipment being turned over to the Owner.

H. Warranty period shall begin starts when Owner begins occupancy the building or related phase/area of construction.

1.27 PAINTING:

A. Refer to Division 09 Section "Paintings and Coatings" for painting requirements as well as the following.

B. Provide corrosion inhibiting prime coating on all ferrous materials installed on exterior of building. Coordinate color with Archtect in field. Protect all adjacent building surfaces during painting.

C. Paint all metal laid underground trenches with corrosion protective materials.

D. All exposed piping, iron work, and equipment installed in the mechanical equipment rooms under this contract shall be painted 1 prime coat and 2 coats of best quality oil paint of color as selected by the Architect.

E. All exposed gas piping within boiler rooms and mechanical rooms shall be painted yellow and identified as required in Division 22 specifications.

F. Unless specifically noted, insulation and galvanized piping in ceiling cavity area shall not be painted.

G. Painting of piping within exposed finished areas within the building interior shall be by the General Contractor. Installation of piping by the contractor shall include cleaning and prep of the piping for final painting by General Contractor

1.28 EARTHWORK:

A. Refer to Division 31 as well as the following.

B. Provide all excavating, backfilling, shoring, sheeting, pumping, bailing, etc., required for the installation of the work of this Section.

C. Trench depths shall allow adequate cover over piping, walls shall be vertical and bottoms shall be instrument graded. Earth shall be scooped out under pipe hubs to provide a solid bearing for the barrel of the pipe on undisturbed earth. Concrete or other approved supports shall be provided for all pipes installed in fill.

D. Carry pipe trenches in rock below the pipe invert at least 1/4 the nominal diameter of the pipe or a minimum of 4" below the bottom of the pipe whichever is the greater. Backfill space below pipe with crushed stone or gravel ranging in size from 1/4" to 3/4".

E. Excavation under footings or foundations and deeper than the angle of repose from footings or foundations as determined by the Architect shall be backfilled solidly with 3,000-pound concrete, to such angle of repose and bottom of such footing or foundation. Where excavation damages existing lawns, sidewalks, roadways etc., such surfaces shall be restored to their original condition by the Contractor performing the excavation.

F. All excavated material remaining after the backfilling operation shall be removed from the site by this Contractor.

G. Any settlement in trench backfill shall be brought to grade, and damage to pavement or slabs caused by such settlement shall be repaired at the Contractor's expense.

H. All repair of macadam or concrete paving made necessary by work done under this contract shall be performed by General Contractor at the expense of this contractor. All such repairs shall match surrounding paving in materials and workmanship.

END OF SECTION 22.0100

SECTION 22.0502 - EXCAVATION, BACKFILL & COMPACTION FOR UTILITY TRENCHES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General Conditions and Division 01 Specification Sections, apply to this Section.

B. Division 31 - Earthwork

1.2 SUMMARY

A. This Section includes the following:

1. Excavation, backfill and compaction associated with utility construction including such related features as protection of adjacent utilities and structures, maintenance and protection of traffic, cutting paved surfaces, support of excavation, control of excavated materials, dewatering, piping, bedding, disposal of excavated materials, and all work related to providing all utilities and structures in connection with sanitary sewer piping.

1.3 DEFINITIONS

A. Backfill: Stone materials or imported structural fill materials.

B. Bedding Course: Layer placed over the excavated subgrade in a trench before laying a pipe.

C. Utilities: Include on-site underground pipes, conduits, ducts, and cables as well as underground services within buildings.

1.4 SUBMITTALS

A. Refer to Division 01 Specifications for submittal procedures

B. Certificates: Submit certification attesting that the composition analysis of pipe embedment and select material stone backfill materials meet specification requirements.

1.5 QUALITY ASSURANCE

A. Codes and Standards: Perform excavation work in compliance with applicable requirements of authorities having jurisdiction.

B. Testing and Inspection Service: Owner shall hire an independent testing and inspection agency to perform all soil testing during earthwork operations.

C. Testing Laboratory Qualifications: To qualify for acceptance, the testing laboratory must demonstrate to Architect's satisfaction, based on evaluation of laboratory-submitted criteria conforming to ASTM E 699, that it has the experience and capability to conduct required field and laboratory testing without delaying the progress of the work.

D. Testing & Inspection Agency: The Owner will provide and pay for the services of an Independent Testing & Inspection Agency who will have the responsibility of determining what subgrade is acceptable or unacceptable and must be removed by the Contractor. The imported fill or imported structural fill shall be installed and compacted under the direction and observation of the Independent Testing & Inspection Agency. The Independent Testing & Inspection Agency will also document quantities of all materials on a daily basis. The Independent Testing & Inspection Agency will also monitor other earthwork that the Owner determines.

1.6 PROJECT CONDITIONS

A. Excavation and Rock Removal:

1. General:
    a. The Contractor shall complete the excavation as indicated on the drawings and in Division 01.
    b. When excavation has reached required subgrade elevations, notify Architect or Independent Testing & Inspection Agency, who will make an inspection of conditions. If the Independent Testing & Inspection Agency determines that bearing materials at required subgrade elevations are unsuitable, continue excavation until suitable bearing materials are encountered and replace excavated material as to the extent directed by the Independent Testing & Inspection Agency.
2. Excavation Classifications: Refer to Division 01 and Division 31.

B. Compaction of Backfill:

1. Placing of Fill Materials: Place the specified structural fill, stone backfill and in all areas, in layers not more than 6” in loose depth for material compacted by heavy compaction equipment, and not more than 4” in loose depth for material compacted by hand-operated tampers.
2. Before compaction, moisten or aerate each layer as necessary to provide optimum moisture content. Compact each layer to required percentage of maximum dry density or relative dry density for each area classification.
3. Place imported structural fill, backfill and fill materials evenly adjacent to structures to required elevations. Prevent wedging action of backfill against structured by carrying material uniformly around structure to approximately same elevation in each lift.
4. Compaction: Provide fill compaction to minimum percentage of density specified for each area classification indicated below. Correct improperly compacted area or lifts as directed by Architect or Construction Manager if density tests indicated inadequate compaction.
    a. Percentage of Maximum Density Requirements: Compact to not less than the following percentages of maximum dry density, in accordance with ASTM D 698.
        1) Under concrete building slabs, under concrete foundations and footings, compact each layer of imported structural fill material at 98 percent of maximum dry density. Extend compacted area beyond the exterior face of the building a distance equal to the depth of fill at that area but not less than 10 feet.
        2) Under exterior concrete and asphalt paving compact each layer of backfill or fill material at 98 percent of maximum dry density.
        3) Under lawn or unpaved areas, compact each layer of backfill or fill material at 95 percent of maximum dry density.

4) At exterior face building foundation walls and walls beyond the exterior of the face of the building, each layer of backfill or fill shall be compacted to 95 percent of maximum dry density.
5) At asphalt and concrete paving the top 6 to 8 inches of subgrade under the paving and aggregate base course shall be compacted to 98 percent of the maximum dry density. The aggregate base course shall also be compacted to 100 percent of the maximum dry density.

C. Protection of Existing Utilities and Structures:

1. Take all precautions and utilize all facilities required to protect existing utilities and structures. In compliance with Act 199 (2004) of the General Assembly of Pennsylvania, advise each Utility at least three (3) working days in advance of intent to excavate, do demolition work and give the location of the job site. Request cooperative steps of the Utility and suggestions for procedures to avoid damage to its lines.
2. Advise each person in physical control of powered equipment used in excavation or demolition work of the type and location of utility lines at the job site, the Utility assistance to expect, and procedures to follow to prevent damage.
3. Immediately report to the Utility and the Architect any break, leak or other damage to the lines or protective coatings made or discovered during the work and immediately alert the occupants of premises of any emergency created or discovered.
4. Allow free access to Utility personnel at all times for purposes of maintenance, repair and inspection.

1.7 COLD WEATHER PROTECTION

A. Protect excavation bottoms against freezing when atmospheric temperature is less than 35 degrees F

PART 2 PRODUCTS

2.1 PIPE BEDDING OR EMBEDMENT MATERIAL

A. Refer to details on drawings.

PART 3 EXECUTION

3.1 EXAMINATION AND PREPARATION

A. Layout utility trenchwork and establish extent of excavation by area and elevation. Designate and identify datum elevation and project engineering reference points. Set required lines, levels, and elevations.

B. Notify Architect of unexpected subsurface conditions and discontinue work in area until notified to resume work.

C. Maintain and protect existing utilities identified by utility users within the Work area.

D. Verify that structure walls are braced to support surcharge forces imposed by backfilling operations.

3.2 PROTECTION OF ADJACENT WORK

A. Underpin adjacent structures which may be damaged by excavation work, including utilities and pipe chases.

B. Grade excavation top perimeter to prevent surface water runoff into excavation or to adjacent properties.

3.3 EXCAVATION

A. Width of Excavation:

1. Pipelines:
   a. Excavate trenches, including laterals, to a width necessary for placement and jointing of the pipe, and for placing and compacting pipe embedment under, around and over the pipe.
   b. Shape trench walls completely vertical from trench bottom to at least two (2) feet above the top of the pipe.
   c. For pressure pipeline fittings, excavate trenches to a width that will permit placement of concrete thrust blocks. Provide earth surfaces for thrust blocks that are perpendicular to the direction of thrust and are free of loose or soft material.

B. Length of Open Trench:

1. Do not advance trenching operations more than 200 feet ahead of completed pipeline.

3.4 SUPPORT OF EXCAVATION

A. Support excavations with sheeting, shoring, and bracing or in the case of pipeline construction, a "trench box" as required to comply with State, and local laws and codes.

B. Install adequate excavation supports to prevent ground movement or settlement to adjacent structures, pipelines or utilities. Damage due to settlement because of failure to provide support or through negligence or fault of contractor in any other manner, shall be repaired at contractor's expense.

C. Withdraw shoring, bracing, and sheeting as backfilling proceeds unless otherwise directed by the Architect.

D. The neglect, failure or refusal of the Architect to order the use of bracing or sheeting, or a better quality, grade, or section, or larger sizes of steel or timber, or to order sheeting, bracing, struts, or shoring to be left in place, or the giving or failure to give orders or directions as to the manner or methods of placing or driving sheeting's, bracing, jacks, wales, stringers, etc., shall not in any way or to any extent relieve Contractor of any responsibility concerning the condition of excavation or of any of his obligations under the Contract, nor shall any delay, whether caused by any action or want of action on the part of Contractor, or by any act of Owner and Architect or their agents, or employees, resulting in the keeping of an excavation open longer than would otherwise have been necessary, relieve contractor from the necessity of properly and adequately protecting the excavation from caving or slipping, nor from any of their obligations under the Contract relating to injury of persons or property, nor entitle them to any claim for extra compensation.

3.5 DEWATERING

A. Keep excavations dry and free of water. Dispose of precipitation and subsurface water clear of the work.

B. Maintain pipe trenches dry until pipe has been jointed, inspected, and backfilled, and concrete work has been completed. Prevent trench water from entering pipelines under construction.

3.6 PIPE LAYING

A. Provide required pipe bedding placed in accordance with the Drawing Details and Specifications.

B. Shape recesses for the joints or bell of the pipe by hand. Assure that the pipe is supported on the lower quadrant for the entire length of the barrel.

C. Lay pipe as specified in the appropriate Section of these Specifications for pipeline construction.

3.7 BACKFILLING EXCAVATIONS

A. Pipeline Trench:

1. After pipe installation and inspection, provide material to complete the pipe embedment in accordance with the Drawing Details and Specifications.

B. Lift Thickness Limitations:

1. Lift thicknesses shall be limited to 4 inches for pipe embedment, and 6 inches maximum for pipeline trenches within paved areas and non-paved areas and for structure excavations. In no case shall maximum lift thickness placed exceed the maximum limits specified by the manufacturer's recommendations for the compaction equipment to be utilized. Compaction equipment shall not be used over the pipe until sufficient backfill has been placed to insure that such equipment will not damage or disturb the pipe.

C. Unsuitable Backfill Material:

1. Where the Independent Testing & Inspection Agency or Architect determines backfill material to be unsuitable and rejects all or part thereof due to conditions prevailing at the time of construction, remove the unsuitable material and replace with suitable backfill material. Unsuitable material shall be legally disposed of, off-site by the contractor.

3.8 FIELD QUALITY CONTROL

A. Quality Control testing During Construction: Contractor shall coordinate with Owner’s testing laboratory to inspect and approve each subgrade and fill layer before further backfill or construction work is performed.

1. Perform field density tests in accordance with ASTM D 1556 (sand cone method) or ASTM D 2167 (rubber balloon method) as applicable.
   a. Field density tests may also be performed by the nuclear method in accordance with ASTM D 1556. In conjunction with each density calibration check, check the calibration curves furnished with the moisture gages in accordance with ASTM D 3017.
   b. If field tests are performed using nuclear methods, make calibration checks of both density and moisture gages at beginning of work, on each different type of material density and moisture gages at beginning of work, on each different type of material encountered, and at intervals as directed by the Architect.
2. Perform one test at each structure per foot of backfill and one test for each 50 lineal feet of pipe or fractions thereof, per foot of backfill.

3. If in opinion of Architect, based on testing service reports and inspection, subgrade or fills that have been placed are below specified density, perform additional compaction and testing until specified density is obtained. trenching and backfilling operations with Independent Testing and Inspection Agency to perform field inspections and tests during trenchwork operations. Laboratory, inspection service, and Independent Testing & Inspection Agency shall be subject to acceptance by the Architect.

3.9 DISPOSAL OF EXCAVATED MATERIAL

A. No excavated material shall remain after completion of backfilling. Excavated material shall be removed from the construction area, and disposed of legally, off-site.

3.10 CLEANUP

A. Upon completion of trenchwork operations, clean areas within contract limits, remove tools and equipment. Provide site clear, clean, free of debris, and suitable for site work operations.

END OF SECTION 220502

SECTION 22.0516 - EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Flexible pipe connectors.

B. Expansion joints and compensators.

C. Pipe loops, offsets, and swing joints.

1.2 RELATED REQUIREMENTS

A. Section 22 1005 - Plumbing Piping.

1.3 REFERENCE STANDARDS

A. ASTM A 269 - Standard Specification for Seamless and Welded Austenitic Stainless Steel Tubing for General Service; 2008.

B. EJMA (STDS) - EJMA Standards; Expansion Joint Manufacturers Association; 2003.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data:

1. Flexible Pipe Connectors: Indicate maximum temperature and pressure rating, face-to-face length, live length, hose wall thickness, hose convolutions per foot and per assembly, fundamental frequency of assembly, braid structure, and total number of wires in braid.
2. Expansion Joints: Indicate maximum temperature and pressure rating, and maximum expansion compensation.

C. Design Data: Indicate selection calculations.

D. Manufacturer's Instructions: Indicate manufacturer's installation instructions, special procedures, and external controls.

E. Project Record Documents: Record installed locations of flexible pipe connectors, expansion joints, anchors, and guides.

F. Maintenance Data: Include adjustment instructions.

1.5 REGULATORY REQUIREMENTS

A. Conform to UL requirements.

1.6 EXTRA MATERIALS

A. See Section 01 6000 - Product Requirements, for additional provisions.

B. Supply two sets of packing for each packed expansion joint.

PART 2 PRODUCTS

2.1 THERMAL EXPANSION LOOPS - COPPER PIPING

A. Manufacturer:

1. Flexicraft Industries: www.flexicraft.com
2. Metraflex Company: www.metraflex.com.
3. Substitutions: See Section 01 6000 - Product Requirements.

B. Inner Hose: Bronze.

C. Exterior Sleeve: Braided bronze.

D. (2) two 90° elbows, and (1) 180° return w/drain/air release plug: Bronze

E. Pressure Rating: 125 psi and 450 degrees F.

F. Joint: Flanged.

G. Size: Use pipe sized units.

H. Offset: As calculated per application. Manufacturer to calculate and verify acceptable offset for corresponding lengths of piping served

I. Installed in neutral position

2.2 EXPANSION LOOPS - SEISMIC/BUILDING EXPANSION JOINTS - COPPER PIPING

A. Manufacturer:

1. Flexicraft Industries: www.flexicraft.com
2. Metraflex Company: www.metraflex.com.
3. Substitutions: See Section 01 6000 - Product Requirements.

B. Inner Hose: Bronze.

C. Exterior Sleeve: Braided bronze.

D. (2) two 90° elbows, and (1) 180° return w/drain/air release plug: Bronze

E. Pressure Rating: 125 psi and 450 degrees F.

F. Joint: Flanged.

G. Size: Use pipe sized units.

H. Installed in neutral position. Provide Seismic bracing as determined by seismic engineer

2.3 EXPANSION LOOPS - SEISMIC/BUILDING EXPANSION JOINTS - STEEL PIPING

A. Manufacturer:

1. Flexicraft Industries: www.flexicraft.com
2. Metraflex Company: www.metraflex.com.
3. Substitutions: See Section 01 6000 - Product Requirements.

B. Inner Hose: Stainless Steel.

C. Exterior Sleeve: Braided Stainless Steel.

D. (2) two 90° elbows, and (1) 180° return w/drain/air release plug: Stainless Steel

E. Pressure Rating: 125 psi and 450 degrees F.

F. Joint: Flanged.

G. Size: Use pipe sized units.

H. Installed in neutral position. Provide Seismic bracing as determined by seismic engineer

2.4 FLEXIBLE PIPE CONNECTORS - STEEL PIPING

A. Manufacturers:

1. Flexicraft Industries: www.flexicraft.com
2. Metraflex Company: www.metraflex.com.
3. Substitutions: See Section 01 6000 - Product Requirements.

B. Inner Hose: Stainless Steel.

C. Exterior Sleeve: Single braided, stainless steel.

D. Pressure Rating: 125 psi and 450 degrees F.

E. Joint: Threaded.

F. Size: Use pipe sized units.

G. Maximum offset: 1 inch on each side of installed center line.

2.5 FLEXIBLE PIPE CONNECTORS - COPPER PIPING

A. Manufacturer:

1. Flexicraft Industries: www.mercer-rubber.com.
2. Metraflex Company: www.metraflex.com.
3. Substitutions: See Section 01 6000 - Product Requirements.

B. Inner Hose: Bronze.

C. Exterior Sleeve: Braided bronze.

D. Pressure Rating: 125 psi and 450 degrees F.

E. Joint: As specified for pipe joints.

F. Size: Use pipe sized units.

G. Maximum offset: 1 inch on each side of installed center line.

H. Application: Copper piping.

2.6 ACCESSORIES

A. Pipe Alignment Guides:

1. Two piece welded steel with enamel paint, bolted, with spider to fit standard pipe, frame with four mounting holes, clearance for minimum 1 inch thick insulation, minimum 3 inches travel.

B. Swivel Joints:

1. Bronze body, double ball bearing race, field lubricated, with rubber (Buna-N) O-ring seals.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install in accordance with manufacturer's instructions. Refer to Plumbing details for additional requirements.

B. Install in accordance with EJMA (Expansion Joint Manufacturers Association) Standards.

C. Install flexible pipe connectors on pipes connected to vibration isolated equipment. Provide line size flexible connectors.

D. Install flexible connectors at right angles to displacement. Install one end immediately adjacent to isolated equipment and anchor other end. Install in horizontal plane unless indicated otherwise.

E. Anchor pipe to building structure where indicated. Provide pipe guides so movement is directed along axis of pipe only. Erect piping such that strain and weight is not on cast connections or apparatus.

F. Provide support and equipment required to control expansion and contraction of piping. Provide loops, pipe offsets, and swing joints, or expansion joints where required. Provide Thermal Expansion fittings on all hot and hot water return piping segments exceeding 50 ft. in lengths and at intervals not to exceed 100ft. Manufacturer of expansion fittings shall provide calculations to verify suitability for individual applications.

G. All expansion fittings for natural gas service, shall be A.G.A. certified.

H. Provide seismic restraints in conjunction with seismically designed flexible connectors at all locations where piping crosses building seismic expansion joints.

I. Provide nested loops where required by available space.

END OF SECTION 22.0516

SECTION 22.0519 - METERS AND GAGES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Pressure gages and pressure gage taps.

B. Thermometers and thermometer wells.

1.2 RELATED REQUIREMENTS

A. Section 22 0100 - General Provisions

1.3 REFERENCE STANDARDS

A. ASME B40.100 - Pressure Gauges and Gauge Attachments; The American Society of Mechanical Engineers; 2005.

B. ASTM E 1 - Standard Specification for ASTM Liquid-in-Glass Thermometers; 2007.

C. ASTM E 77 - Standard Test Method for Inspection and Verification of Thermometers; 2007.

D. UL 393 - Indicating Pressure Gauges for Fire-Protection Service; Underwriters Laboratories Inc.; Current Edition, Including All Revisions.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide list that indicates use, operating range, total range and location for manufactured components.

C. Project Record Documents: Record actual locations of components and instrumentation.

1.5 FIELD CONDITIONS

A. Do not install instrumentation when areas are under construction, except for required rough-in, taps, supports and test plugs.

1.6 EXTRA MATERIALS

A. See Section 01 6000 - Product Requirements. for additional provisions.

B. Supply two spare gauges of each type and pressure range installed.

C. Supply two spare thermometers of each type and pressure range installed.

PART 2 - PRODUCTS

2.1 PRESSURE GAGES

A. Manufacturers:

1. Dwyer Instruments, Inc: www.dwyer-inst.com.
2. Moeller Instrument Co., Inc: www.moellerinstrument.com.
3. H.O. Trerice: www.trerice.com
4. Omega Engineering, Inc: www.omega.com.
5. Substitutions: See Section 01 6000 - Product Requirements.

B. Pressure Gages: ASME B40.100, UL 393 drawn steel case, phosphor bronze bourdon tube, rotary brass movement, brass socket, with front recalibration adjustment, black scale on white background. Pressure gauges installed in domestic water piping shall conform with the Lead free requirements of the Safe Water Drinking Act and NSF-372.

1. Case: Cast aluminum with phosphor bronze bourdon tube.
2. Size: 4-1/2 inch diameter.
3. Size: 2 inch diameter.
4. Mid-Scale Accuracy: One percent.
5. Scale: Psi.
6. Basis of Design: H.O. Trerice Model 620B

2.2 PRESSURE GAGE TAPPINGS

A. Isolation valve: provide gage tapping valve

1. Gage Cock: Tee or lever handle, brass for maximum 150 psi.

B. Pressure Snubber

1. Lead Free Brass, NSF-61 compliant, connection size to match gauge connection

2.3 STEM TYPE THERMOMETERS

A. Manufacturers:

1. Dwyer Instruments, Inc: www.dwyer-inst.com.
2. Omega Engineering, Inc: www.omega.com.
3. H.O. Trerice: www.trerice.com
4. Weksler Glass Thermometer Corp: www.wekslerglass.com.
5. Substitutions: See Section 01 6000 - Product Requirements.

B. Thermometers - Adjustable Angle: Red- or blue-appearing non-toxic liquid in glass; ASTM E 1; lens front tube, cast aluminum case with enamel finish, cast aluminum adjustable joint with positive locking device; adjustable 360 degrees in horizontal plane, 180 degrees in vertical plane. Thermometers installed in domestic water piping shall conform with the Lead free requirements of the Safe Water Drinking Act and NSF-372.

1. Size: 9 inch scale.
2. Window: Clear Lexan.
3. Stem: 3/4 inch NPT brass.
4. Accuracy: 2 percent, per ASTM E 77.
5. Calibration: Degrees F.
6. Basis of Design: H.O. Trerice Model BX9-403

2.4 PORTABLE TEST KIT/PLUGS

A. Test Plug: 1/4 inch or 1/2 inch brass fitting and cap for receiving 1/8 inch outside diameter pressure or temperature probe with neoprene core for temperatures up to 200 degrees F.

B. Test Kit: Carrying case, internally padded and fitted containing one 2-1/2 inch diameter pressure gages, one gage adapters with 1/8 inch probes, two 1 inch dial thermometers.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide pressure gauges before strainers and on suction and discharge of each pump.

C. Provide pressure gauge and thermometer on outlet of each water heater.

D. Provide pressure gauge at each water service entrance riser.

E. Provide pressure gauges and thermometer at all recirculation pump installations and as detailed on the plumbing drawings.

F. Install thermometers in piping systems in sockets in short couplings. Enlarge pipes smaller than 2-1/2 inch for installation of thermometer sockets. Ensure sockets allow clearance from insulation.

G. Provide instruments with scale ranges selected according to service with largest appropriate scale.

H. Install gauges and thermometers in locations where they are easily read from normal operating level. Install vertical to 45 degrees off vertical, and in accordance with manufacturers recommendations.

I. Adjust gauges and thermometers to final angle, clean windows and lenses, and calibrate to zero.

J. Locate test plugs adjacent thermometers and thermometer sockets.

3.2 SCHEDULES

A. Pressure Gages, Location and Scale Range:

1. Domestic Water Pumps, 0 to 100 psi.
2. Sprinkler system, 0 to 250 psi.
3. Backflow preventers, 0 to 100 psi.

B. Stem Type Thermometers, Location and Scale Range:

1. Domestic hot water supply and recirculation, 0 to 200 degrees F.

END OF SECTION 22.0519

SECTION 22.0548 - VIBRATION ISOLATION & SEISMIC MOUNTINGS

PART 1 - GENERAL

1.1 SECTION INCLUDES:

A. Seismic Restraint & Mountings

B. Vibration Isolation

1.2 SUMMARY

A. The extent of vibration isolation and seismic mounting work is indicated by Drawings and schedules and by requirements of this Section.

B. The types of vibration isolation and seismic mounting work specified in this Section include the following:

1. Support and vibration isolation and restraints for motor driven equipment.
2. Support and vibration isolation and restraints for equipment, piping and piping risers.
3. Flexible connections for piping at vibration isolated equipment.
4. Seismic support isolation and restraints for equipment, piping and piping risers.

1.3 SUBMITTALS

A. Refer to Division 01 Specifications for Submittal Procedures.

B. The Manufacturer of vibration isolation and seismic restraints products shall submit the following data clearly marked on the submittal drawing. Each piece of isolated equipment shall be clearly identified, as well as the quantity and type of vibration isolators and seismic restraints.

C. Weight and center of gravity of each piece of isolation equipment, and RPM of each piece of rotating isolated equipment. When equipment center of gravity is not available, assumed locations for center of gravity shall be identified in submittals.

1. Calculated static load on each isolator.
2. Calculated deflection for each piece of isolated equipment.
3. Calculated seismic loads, for each restraint including horizontal and vertical forces and overturning moments.

D. Submittals for mountings and hangers incorporating springs shall include spring diameters, rated deflections, spring free height, solid spring height and spring color code.

E. Submittals for bases shall clearly identify locations for all mountings, as well as all locations for attachment points of the equipment to be mounting base. Installation instructions shall be included.

F. Submittals shall include seismic calculations signed and checked by qualified licensed Engineers in the employ of the Manufacturer of the vibration isolators. Catalog cut sheets shall be included for each type of mounting used on equipment being isolated.

1. Manufacturer's certification of components seismic acceleration operational capacity and attachment.

1.4 QUALITY ASSURANCE

A. Product Qualification: Provide each type of vibration isolation and seismic mounting unit produced by a specialized manufacturer, with not less than 5 years successful experience in the production of units similar to those for the project.

B. Except as otherwise indicated obtain support isolation units from a single manufacturer.

C. Engage the manufacturer to provide technical supervision of the installation of support isolation units and restraints produced by him, and of associated inertia bases.

D. Manufacturer: Provide vibration isolation and seismic mounting units manufactured by the following:

1. Amber/Booth
2. Consolidated Kinetics Corp.
3. Vibration Mountings and Controls, Inc./Korfund Dynamics
4. Mason Industries
5. Vibration Eliminator Co.

E. After installation is complete and while the system is operating, the vibration isolation Manufacturer and/or his qualified Representative shall conduct an inspection of the installation with the Contractor. The Representative will submit a written inspection report detailing any discrepancies, the Representative shall submit a report so stating. If there are discrepancies, the report shall detail corrective work to be done.

F. The Contractor shall employ the services of a licensed Professional Engineer registered in the Commonwealth of Pennsylvania to design, submit, and supervise the installation of seismic restraining and mountings products applicable to all equipment and piping systems installed by the Contractor.

G. Submit detailed seismic drawings, drawn to the scale indicated, for each of the following installations. All seismic drawings shall be based on the Architectural and Structural Contract Drawings. All seismic drawings shall bear the stamp of a Professional Engineer licensed in the state of the Project site:

1. Mechanical Equipment rooms depicting size and location of concrete housekeeping pads and the location and type of seismic restraints. Minimum Scale: 1/4"=1'-0".
2. Piping Plans depicting location and type of seismic restraints. Minimum Scale: 1/8"=1'-0".
3. Concrete pad details depicting location and size of reinforcing, doweling, and anchor bolts for each specific piece of equipment. Minimum Scale: 1/2"=1'-0".
4. Suspended equipment depicting restraint locations, types, and methods of attachment. Minimum Scale: 1/8"=1'-0".
5. Miscellaneous Attachment Details depicting size, locations, and types of attachment (i.e., bolts, welds, anchors, cables) for securing equipment to seismic mountings and for securing seismic mountings to the building structure.

H. Submit a seismic design errors and omissions insurance certificate. (Manufacturers product liability insurance certificates are not acceptable.

1.5 DESIGN - VIBRATION ISOLATION SYSTEMS

A. Vibration isolators shall be selected based on known or estimated operating weight distributions of the isolated equipment, with the quantity and location as shown on the components Drawings. Isolator type shall be tabulated for each isolated piece of equipment.

B. Isolators shall have either known non-deflected heights of spring element or calibration markings so that, after adjustment, when carrying their load, the deflection under load can be verified to determine if the load is within the proper range of the isolator and if the correct degree of vibration isolation is being provided.

C. Isolators shall function in the linear portion of the load versus deflection curve. Theoretical vertical natural frequency shall not differ from the design objectives by more than +10%.

D. Vibration isolation available internal to the equipment shall not be considered equivalent, and may only be used where it can be shown not to compromise the strength or performance of the entire system.

E. Unless otherwise specified, all isolated equipment and all piping shall be seismically restrained in accordance with requirements contained herein. All un-isolated mechanical equipment shall be adequately secured to the structure.

F. Unless the equipment incorporates unit construction using an integral unit frame or is specified otherwise, each item of mechanical equipment, along with its drive unit, shall be mounted on a rigid steel or steel and concrete base. The equipment, including the base, shall be mounted on, or suspended from, vibration isolators to prevent the transmission of vibration and mechanically transmitted structure borne sound to the supporting structure.

G. Isolation hangers shall be used for all piping in equipment rooms or for 50 ft. from vibration equipment, whichever is greater. To avoid reducing the effectiveness of equipment isolators, at least three of the first hangers from the equipment should provide the same deflection as the equipment isolators, with a maximum limitation of 2 inch deflection. The remaining hangers shall be spring or combination spring and rubber with a minimum of 0.75 in deflection. To prevent load transfer to the equipment flanges when the piping system is filled, the first three hangers adjacent to the equipment shall be the positioning type (specification type 5). Floor supports for piping in equipment rooms and adjacent to isolated equipment shall use restrained vibration isolators. They should be selected according to the guidelines for hangers.

1.6 DESIGN - SEISMIC RESTRAINTS

A. The site is classified as follows: Design Category "C"; International Building Code 2015 and ASCE 7-10 Table 11.6-1 & Pg. 56.

B. The Building Occupancy Risk Category is Category IV *(Hospital, Emergency Response, Fire, Police)* per ASCE 7-10 Table 1.5-1 Pg. 2.

C. Seismic restraint shall be required for the following installations:

1. *(Seismic Design Category C - Risk Category IV)* All Plumbing equipment, all gas piping and gas fired equipment.

D. Internally isolated equipment in lieu of specified isolation and restraint system must include certification by the equipment manufacturer that the internal isolation system meets the specified isolation and system restraint criteria. Equipment resiliently mounted on spring or pad type isolators shall be provided with seismic restraints or snubbers. Where required by code, seismic restraints for equipment mounted on vibration isolated curbs shall consist of slack galvanized or stainless steel cables (Type 16), attached to a structurally sound element of the equipment.

E. Each piece of isolated equipment shall receive a minimum of four all-directional restraint/snubbers, located as close to the equipment corners as practical. These shall consist of either restrained isolators or free standing isolators with separate snubbers. All snubbers shall have an impact surface consisting of a high quality elastomer. The elastomer shall be easy to inspect for damage, shall be replaceable and shall be a minimum of 3/4 inch thick.

F. Calculations by the Manufacturer's qualified licensed Engineer substantiating the mounting system, seismic restraints and recommended anchor bolts shall be submitted for approval along with the mechanical Drawings. Minimum spacing of anchor bolts, as well as location from edges of structure or concrete, shall be identified.

G. Unless otherwise specified, all equipment piping shall be restrained to resist seismic forces. Restraints shall maintain mechanical equipment or piping in a captive position. Restraint devices shall be designed and selected to meet seismic requirements as defined in IBC.

H. Anchor bolt calculations, signed by a qualified licensed Engineer, shall be submitted showing adequacy of bolt sizing and type. Calculations shall be furnished for anchors on restraint devices, cables, isolated and rigidly mounted equipment. Calculations shall specify anchor bolt type, embedment, concrete compressive strength, minimum spacing between anchors, and minimum distances of anchors from concrete edges. Concrete anchor locations shall not be near edges, stress joints, or an existing fracture. Embedded bolt locations and spacing shall conform to The International Building Code. All bolt shall be ASTM A307 or better.

PART 2 - PRODUCTS

2.1 GENERAL

A. Unless otherwise specified, all hardware shall be stainless steel or zinc plated. Springs with a deflection of up to 2 inches shall be zinc plated, or coated with a polyester epoxy powder. Springs with a rated deflection capability greater than 2 inches may be painted. Zinc plating shall conform to ASTM B633, CLASS 2 SC2, minimum.

2.2 TYPE 7 MOUNTINGS - PRE-COMPRESSED HANGERS

A. Spring-Flex hangers shall consist of a color coded steel spring in series with a neoprene element molded in specific colors for proper identification of rated load capacity. Springs shall be pre-compressed to the rated deflection so as to support the suspended equipment or piping at a fixed elevation during installation regardless of load changes. For 30 degree misalignment capability, spring diameters and hanger box lower hole sizes shall be of sufficient size to permit the hanger rod to swing approximately 30 degrees before contacting the box.

B. Springs shall be coated with a polyester epoxy powder. Hardware shall be stainless steel, or zinc plated. Steel housings shall be painted or galvanized.

C. Spring-Flex hangers shall be Series RSHPR or RSHPR-30A for 30 degree misalignment capability, as manufactured by Vibration Mountings and Controls, Inc.

2.3 TYPE 8 MOUNTINGS - SPRING HANGERS

A. Spring-Flex hangers shall consist of a color coded steel spring with a neoprene and steel washer which will properly distribute the load on the spring. For 30 degree misalignment capability, spring diameters and hanger box lower hole sizes shall be of sufficient size to permit the hanger rod to swing

approximately 30 degrees before contacting the box. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. Hangers where are to be used with flat iron duct straps will be provided with eye bolts on both ends.

B. Springs shall be coated with a polyester epoxy powder. Hardware shall be stainless steel, or zinc plated. Steel housings shall be painted or galvanized.

C. Spring-Flex hangers shall be Series SH or SH-30A for 30 degree misalignment capability, as manufactured by Vibration Mountings and Controls, Inc. Hangers with eyebolts to be Type SHSC or SHSC-30A for 30 degree misalignment capability, as manufactured by Vibration Mountings and Controls, Inc.

2.4 TYPE 10 MOUNTINGS - FLOOR, WALL, AND CEILING SLEEVES

A. Where piping passes through walls, floors, or ceilings, a vibration control sleeve shall be provided to reduce the transmission of vibration. The sleeve shall consist of two pipe halves with neoprene sponge material bonded to the inside and a bolting arrangement for secure fit around piping. Where temperature exceeds 240 degrees F., an appropriate density fiberglass shall be used in place of neoprene material.

B. Sleeve shall be type VCS as manufactured by Vibration Mountings and Controls, Inc.

2.5 TYPE 11 MOUNTINGS - RESILIENT PIPE GUIDES:

A. Where vertical piping runs between support points, a resilient pipe guide shall be provided. The guide shall consist of an angle frame and four double deflection neoprene mountings molded in specific colors for proper identification of rated load capacity.

B. Resilient Pipe Guide shall be type RPG as manufactured by Vibration Mountings and Controls, Inc.

2.6 TYPE 12 MOUNTINGS - PIPE ANCHORS

A. Multi-directional pipe anchor shall consist of suitable steel sections in series with heavy duty duck and neoprene material assembled in a telescopic housing to provide the necessary restraint in both the vertical and horizontal directions. Pipe anchor shall be sized to limit load on neoprene and duck material to 500 psi.

B. Multi-directional Pipe Anchor shall be type MDPA as manufactured by Vibration Mountings and Controls, Inc.

2.7 TYPE 13 - FLEXIBLE CONNECTORS

A. Install Quiet-Sphere Flexible Connectors at the suction and discharge of each pump. The connectors shall be molded in spherical design of multiple layers of neoprene and synthetic fiber with integral corrosion resistant plate steel flanges. The connectors shall be suitable for pressures up to 214 psi and temperatures up to 240 degrees F. Where piping is not anchored, control rods must be installed at each connector to limit movement within their specified limits.

B. Flexible connectors shall be Quiet-Sphere Type VMS, VMT, or VMU as manufactured by Vibration Mountings & Controls, Inc.

2.8 TYPE 14 - SEISMIC SPRINGS WITH INTERNAL RESTRAINTS

A. Steel spring isolator incorporating elastomeric snubbing in all directions. The snubber shall be adjustable in the vertical direction and allow a maximum of 1/4 inch travel in all directions before contacting the elastomer cushion.

B. Spring diameter shall be no less than 0.8 times the compressed height of the spring at rated load. Springs shall also have a minimum additional travel to solid equal to 50% of the rated deflection.

C. Housing shall have provision to adjust the rebound plate and to inspect the spring. Housing shall be of cast ductile iron, malleable cast iron or of welded steel construction. Gray iron casings are not permitted.

D. Springs shall be color coded for proper identification of rated load capacity. Springs shall be coated with a polyester epoxy powder. Hardware shall be stainless steel, or zinc plated.

E. Mounting shall be Series AEQM or AWMR as manufactured by Vibration Mountings & Controls, Inc.

2.9 TYPE 15 - SEISMIC SNUBBERS/RESTRAINTS

A. All-directional Seismic Snubbers shall include all directional elastomer elements, having a minimum elastomer thickness of 3/4 inch in all directions. Elastomers shall be easy to inspect and shall consist of replaceable elastomer inserts. Elastomer shall be neoprene or a high quality rubber including anti-ozone and anti-oxidant materials. For installations where the expected temperature range is -20 degrees F. to +180 degrees F., the elastomer shall be neoprene conforming to either:

1. ASTM D2000 Grade 2BC; or Bridge Bearing Neoprene.

B. For installations where the expected operating temperature range can be as low as -65 degrees F. or a high as +300 degrees F., the elastomer shall be Ethylene Propylene Diene Monomer (EPDM) conforming to ASTM D2000.

C. Snubbers shall be manufactured with an air gap between steel and elastomer of 1/8 inch to 1/4 inch. Snubbers shall be installed with factory set clearances.

D. Snubber must have at least two anchor bolt holes and shall have an ultimate load capacity of at least four times the rated static load capacity.

E. Seismic Snubber shall be Seismic Restraint Series SR/SRD as manufactured by Vibration Mountings & Controls, Inc.

2.10 TYPE 16 - CABLE RESTRAINTS

A. Steel aircraft cable restraints are designed and installed to limit motion on suspended isolated equipment, piping or ducting. Cables are installed with enough slack to engage only when 1/4 movement occurs. On suspended equipment, cables are installed in sets of four, located at 45 degree angles to all three axes. Where required at pipe hangers, cables are placed two at each location, alternating orientation at successive locations.

B. Cables shall be 7 x 19 galvanized or stainless steel aircraft cable conforming to FED-STD-RR-W-410D. Cable diameters shall be available in at least three sizes to provide cost effective method of support for a wide range of supported loads.

C. Seismic cable restraints shall be Series SCR as manufactured by Vibration Mountings & Controls, Inc.

2.11 TYPE 17 - ELASTOMER MOUNTINGS

A. Consists of a captive elastomeric mount molded from neoprene or EPDM compound conforming to the requirements of ASTM D2000. Load bearing elastomer element shall be housed in either a heat treated cast aluminum housing or machined structural plate.

B. Mount shall incorporate a fail-safe captive design, and shall provide a vertical natural frequency of 15 Hz to 25 Hz, depending upon the static load. Mount shall be capable of providing dynamic deflections of up to .12 inches.

C. Use Vibration Mountings & Controls Series RB1, RB3 or RB4 with structural plate or MB1 or MB3 (aluminum housing).

PART 3 - EXECUTION

3.1 PERFORMANCE OF VIBRATION ISOLATORS AND SEISMIC RESTRAINTS

A. The manufacturer shall warrant the selection, sizing, and application of all vibration isolators and seismic restraints for each application.

B. The seismic engineer shall supervise and review the installation of all seismic restraints.

3.2 APPLICATIONS

A. General: Except as otherwise indicated, apply the following types of vibration isolators and seismic restraints for the indicated items of Equipment.

B. Vibration Isolation

1. Provide vibration isolation on each side of pumps and inline motor driven equipment.

C. Seismic Restraint Schedule

1. Piping Restraints: Applicable for threaded, welded, soldered, and grooved piping; schedule 10, 20, 40 and 80: Install cable restraints at maximum intervals of 40 ft. for transverse bracing and 80 ft. for longitudinal bracing, and at each change in direction. Actual spacing shall be determined by the seismic engineer.
2. Flexible Pipe Connectors: Install in piping systems at the following locations:
3. Connections, 3/4" pipe size and larger, with vibration isolation mounted equipment.

3.3 INSTALLATION

A. Isolation and seismic restraint systems shall be installed in strict accordance with the Manufacturer's written instructions and submittal data. Locations of all vibration isolation products shall be selected for ease of inspection and adjustment, as well as for proper operation. Electrical and plumbing connections to vibration isolated equipment shall be flexible.

B. All vibration isolators shall be leveled and aligned squarely below the mounting points of the supported equipment. Isolators for equipment with bases shall be located on the sides of the bases which are parallel to the equipment shaft (generally, the long axis) unless this is not possible because of physical restraints.

C. Unless otherwise indicated, there shall be a minimum operating clearance of 1 inch between inertia bases or structural steel frames and the concrete housekeeping pad or floor beneath the equipment. The clearance space shall be checked by the Contractor to ensure that no construction debris has been left to short circuit or restrict the proper operation of the vibration isolation system.

D. Vibration isolation hangers shall be positioned as high as possible in the hanger rod assembly, and so that the hanger housings may rotate a full 360 degrees without touching any object. Hanger rods shall not contact any object which would short out the vibration isolation systems. Parallel running pipes

may be hung together on a trapeze which is isolated from the building. Do not mix vibration isolated and non-vibration isolated pipes on the same trapeze.

E. Attention must be paid to movements of piping caused be expansion and contraction.

F. For Seismic installations, all floor mounted equipment, whether isolated or not, shall be bolted or welded to the structure to resist seismic forces. Bolt attachments, diameter of inserts, embedment depth and weld length as shown on approved submittal Drawings, shall be followed in all respects.

G. Seismic restraints shall be installed after equipment is in operating position to assure design clearances are maintained.

3.4 EXAMINATION OF RELATED WORK

A. Installer of vibration isolation work shall observe the installation of other Work related to vibration isolation work, including work connected to vibration isolation work; and after completion of other related Work (but before Equipment startup), shall furnish a written report to the Engineer listing observed inadequacies for proper operation and performance of vibration isolation work. Report shall cover, but not necessarily be limited to the following:

1. Equipment installations (performed as Work of other Sections) on vibration isolators.
2. Piping connections including flexible connections.
3. Passage of piping which is to be isolated through walls and floors.
4. Do not start up Equipment until inadequacies have been corrected in a manner acceptable to vibration isolation installer.

3.5 NOISE AND VIBRATION

A. Particular care shall be exercised in the selection and installation of all Mechanical Equipment and components to attain reasonable noise levels in occupied spaces. In general, sound levels for various spaces shall be maintained in accordance with the recommendations of the ASHRAE Guide. Normally the classification of noise shall be by mutual agreement but should a dispute arise regarding sound levels after occupancy of the building, representative sound measurements shall be taken to determine the average noise level in the offending space.

3.6 VIBRATION ELIMINATION

A. Vibration isolation supports shall be supplied for all moving or rotating equipment. Supports by Vibration Mountings and Controls, Inc. or approved in advance equal, installed in accordance with manufacturer's recommendations, shall be used unless specified otherwise herein.

B. Rotating or moving machinery or equipment suspended from building structure shall be provided with approved resilient type suspension mounting with lock washer and double nuts.

C. The entire system shall operate free from objectionable vibrations, to the satisfaction of the Engineer.

3.7 SOUND ISOLATION

A. All Equipment and piping shall be installed so that no noise or vibration is transmitted to any part of the building beyond the room or rooms in which such noise or vibration is generating. Moving equipment shall be isolated from the concrete foundations or floors by cork where required to prevent transmission of noise of vibration.

B. Silencers shall be installed in water connections to quick closing devices. Shock absorbers shall be used in all pipe lines where required to eliminate noise.

C. Any and all other insulation or isolation required to accomplish the results specified above shall be furnished and installed without additional cost to the Owner.

3.8 INSPECTION

A. Upon completion of installation of all vibration isolation and seismic restraint devices, a certification report prepared by the Seismic Engineer shall be submitted in writing to the contractor indicating that all systems are installed properly and in compliance with the specifications. The report must identify those areas that require corrective measures or certify that none exists. Any field coordination type changes to the originally submitted seismic restraint designs must be clearly defined and detailed in the report.

END OF SECTION 22.0548

SECTION 22.0553 - IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Nameplates.

B. Tags.

C. Stencils.

D. Pipe Markers.

1.2 REFERENCE STANDARDS

A. ASME A13.1 - Scheme for the Identification of Piping Systems; The American Society of Mechanical Engineers; 2007.

1.3 SUBMITTALS

A. Labelling List: Submit list of wording, symbols, letter size, and color coding for mechanical identification.

B. Chart and Schedule: Submit valve chart and schedule, including valve tag number, location, function, and valve manufacturer's name and model number.

C. Product Data: Provide manufacturers catalog literature for each product required.

D. Manufacturer's Installation Instructions: Indicate special procedures, and installation.

E. Project Record Documents: Record actual locations of tagged valves.

PART 2 - PRODUCTS

2.1 GENERAL

A. Coordinate names, abbreviations and other designations used in mechanical identification work, with corresponding designations shown, specified or schedule. Provide numbers, lettering and working as indicated or, if not otherwise indicated, as recommended by manufacturers or as required for proper identification and operation/maintenance of mechanical systems and equipment.

B. Multiple Systems: Where multiple systems of same generic name are shown and specified, provide identification which indicates individual system number as well as service (as examples: (Standpipe F12)

C. Manufacturers

1. Advanced Graphic Engraving: www.advancedgraphicengraving.com.
2. Brady Corporation: www.bradycorp.com.
3. Brimar Industries: www.brimar.com
4. Champion America, Inc: www.Champion-America.com.
5. Kolbi Pipe Markers: www.kolbipipemarkers.com

6. Seton Identification Products: www.seton.com/aec.

2.2 NAMEPLATES

A. Description: Laminated three-layer plastic with engraved letters.

1. Letter Color: White.
2. Letter Height: 1/2 inch.
3. Background Color: Black.

2.3 VALVE TAGS

A. Plastic Tags: Laminated three-layer plastic with engraved black piping system abbreviation (1/4" high lettering) and sequenced valve numbers (1/2" high lettering), light contrasting background color and with 5/32" hole for fastener. Tag size minimum 1-1/2 inch diameter.

B. Valve Tag Fasteners: Manufacturer's standard solid brass chain (wire link or beaded type), or solid brass S hooks of the sizes required for proper attachment of tags to valves, and manufactured specifically for that purpose.

C. Valve Schedule: Provide valve schedule for each piping system, typewritten and reproduced on 8-1/2" x 11" bond paper. Tabulate valve number, piping system, system abbreviation (as shown on tag), location of valve (room or space), and variations for identification (if any). Mark valves which are intended for emergency shut-off and similar special uses, by special "flags" in margin of schedule. In addition to mounted copies, furnish extra copies for Maintenance Manuals as specified in Division 1.

1. Frame: For each page of the valve schedule, provide a glazed display frame, with screws for removable mounting on masonry walls. Provide frames of finished hardwood or extruded aluminum, with SSB grade sheet glass.

2.4 PIPE MARKERS

A. Comply with ASME A13.1.

B. Plastic Pipe Markers: Provide manufacturer's standard preprinted, flexible or semi rigid, permanent, color coded, plastic sheet pipe markers, complying with ANSI A13.1. Factory fabricated, flexible, semi-rigid plastic, preformed to fit around pipe or pipe covering; minimum information indicating flow direction arrow and identification of fluid being conveyed.

1. All Piping: Provide snap-on application of pre-tensioned semi-rigid plastic full-bank pipe markers, extending 360 degrees around pipe at each location.
2. Lettering: Manufacturer's standard pre-printed nomenclature which best describes piping system in each instance, as selected by Architect/Engineer in cases of variance with names as shown or specified.
3. Arrows: Print each pipe marker with arrows indicating direction of flow, either integrally with piping system service lettering (to accommodate both directions), or as separate unit of plastics.

2.5 UNDERGROUND PLASTIC PIPE MARKERS:

A. Description: Manufacturer's standard 2" wide warning tape color coded and labeled to match pipe identification labels. Material shall be detectable polyester complying with ASTM B-721.

2.6 CEILING TACKS

A. Description: Self-adhesive plastic coded dots. Color coded to match color of pipe marker.

PART 3 - EXECUTION

3.1 PREPARATION

A. Where identification is to be applied to surfaces which require insulation, painting or other covering or finish, including valve tags in finished mechanical spaces, install identification after completion of coverings and painting. Install identification prior to installation of acoustical ceilings and similar removable concealment. Degrease and clean all surfaces to receive adhesive for identification materials.

3.2 INSTALLATION

A. Piping System Identification:

1. Install pipe markers on each system indicated to receive identification, and include arrows to show normal direction of flow:
2. Plastic pipe markers, with application system as indicated under "Products" in this section.
3. Locate pipe markers and color bands on all piping within mechanical rooms, accessible maintenance spaces, and above acoustic tile ceilings. Where piping is exposed to view in occupied/finished spaces, verify identification requirements with Architect in field prior to installation. Locate additional pipe markers in each of the following locations.
    a. Near each valve and control device.
    b. Near each branch, excluding short take-offs for fixtures and terminal units; mark each pipe at branch, where there could be question of flow pattern.
    c. Near locations where pipes pass through walls or floors/ceilings, or enter non-accessible enclosures.
    d. At access doors, manholes and similar access points which permit view of concealed piping.
    e. Near major equipment items and other points of origination and termination.
    f. Spaced intermediately at maximum spacing of 50' along each piping run, except reduce spacing to 25' in congested areas of piping and equipment. On piping above removable acoustical ceilings, omit intermediately spaced markers.
4. Provide underground warning tape for all underground piping outside the building approximately 6-8 inches below finish grade.

B. Valve Identification:

1. Provide valve tag on every valve, cock and control device in each piping system; exclude check valves, valves within factory-fabricated equipment units, plumbing fixture faucets, convenience and lawn-watering hose bibs, and shut-off valves at plumbing fixtures, HVAC terminal devices and similar rough-in connections of end-use fixtures and units. List each tagged valve in valve schedule for each piping system.
2. Mount valve schedule frames and schedules in machine rooms where indicated or, of not otherwise indicated, where directed by Architect/Engineer.

3. Provide valve finder ceiling dots at all concealed valve locations. Locate on ceiling grid not on ceiling tile.

C. Mechanical Equipment Identification:

1. General: Install engraved plastic laminate nameplate on or near each major item of mechanical equipment and each operational device, as specified herein if not otherwise specified for each item or device. Provide signs for the following general categories of equipment and operational devices:
   a. Main control and operating valves, including safety devices and hazardous units such as gas pressure regulators.
   b. Tanks and pressure vessels.
   c. Domestic water heaters
   d. Domestic water pressure booster pumps
   e. Recirculation pumps
   f. Sewage and Stormwater ejectors

END OF SECTION 22.0553

SECTION 22.0719 - PLUMBING PIPING INSULATION

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Piping insulation.

1.2 RELATED SECTIONS

A. Section 078400 - Firestopping.

B. Section 099000 - Painting and Coating: Painting insulation jacket.

C. Section 221005 - Plumbing Piping: Placement of hangers and hanger inserts.

1.3 REFERENCES

A. ASTM C 177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded Hot Plate Apparatus; 2004.

B. ASTM C 534 - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form; 2005.

C. ASTM C 547 - Standard Specification for Mineral Fiber Pipe Insulation; 2006.

D. ASTM C 552 - Standard Specification for Cellular Glass Thermal Insulation; 2003.

E. ASTM C 795 - Standard Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel; 2003.

F. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2005.

G. ASTM E 96/E 96M - Standard Test Methods for Water Vapor Transmission of Materials; 2005.

H. IECC - ICC - International Energy Conservation Code

I. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials; National Fire Protection Association; 2006.

J. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials; Underwriters Laboratories Inc.; 2003.

1.4 SUBMITTALS

A. See Division 01 specifications for submittal procedures.

B. Product Data: Provide product description, thermal characteristics, list of materials and thickness for each service, and locations.

C. Manufacturer's Instructions: Indicate installation procedures that ensure acceptable workmanship and installation standards will be achieved.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with not less than three years of documented experience.

B. Applicator Qualifications: Company specializing in performing the type of work specified in this section with minimum THREE years of experience.

1.6 DELIVERY, STORAGE, AND PROTECTION

A. Accept materials on site, labeled with manufacturer's identification, product density, and thickness.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Maintain ambient conditions required by manufacturers of each product.

B. Maintain temperature before, during, and after installation for minimum of 24 hours.

PART 2 - PRODUCTS

2.1 REQUIREMENTS FOR ALL PRODUCTS OF THIS SECTION

A. Surface Burning Characteristics: Flame spread/Smoke developed index of 25/50, maximum, when tested in accordance with ASTM E 84, NFPA 255, or UL 723.

2.2 GLASS FIBER

A. Manufacturers:

1. Knauf Fiber Glass: www.knaufusa.com.
2. Johns Manville Corporation: www.jm.com.
3. Owens Corning Corp: www.owenscorning.com.
4. CertainTeed Corporation: www.certainteed.com.
5. Substitutions: See Section 016000 - Product Requirements.

B. Insulation: ASTM C 547 and ASTM C 795; rigid molded, noncombustible.

1. 'K' value: ASTM C 177, 0.24 at 75 degrees F.
2. Maximum service temperature: 850 degrees F.
3. Maximum moisture absorption: 0.2 percent by volume.

C. Insulation: ASTM C 547 and ASTM C 795; semi-rigid, noncombustible, end grain adhered to jacket.

1. 'K' value: ASTM C 177, 0.24 at 75 degrees F.
2. Maximum service temperature: 650 degrees F.
3. Maximum moisture absorption: 0.2 percent by volume.

D. Vapor Barrier Jacket: White kraft paper with glass fiber yarn, bonded to aluminized film; moisture vapor transmission when tested in accordance with ASTM E 96/E 96M of 0.02 perm-inches.

E. Tie Wire: 0.048 inch stainless steel with twisted ends on maximum 12 inch centers.

F. Vapor Barrier Lap Adhesive:

1. Compatible with insulation.

G. Insulating Cement/Mastic:

1. ASTM C 195; hydraulic setting on mineral wool.

2.3 FLEXIBLE ELASTOMERIC CELLULAR INSULATION

A. Manufacturer:

1. Armacell International: www.armacell.com.
2. Substitutions: See Section 016000 - Product Requirements.

B. Insulation: Preformed flexible elastomeric cellular rubber insulation complying with ASTM C 534 Type I, Tubular Grade 1; ASTM E 84/ UL 723 25/50 rated for use in return air plenums, use molded tubular material wherever possible. ArmaFlex Ultra or approved equal.

1. Thermal Conductivity: 0.27 Btu-in/hr-ft2-degF @ 75 deg.F Mean Temp
2. Minimum Service Temperature: -40 degrees F.
3. Maximum Service Temperature: 220 degrees F.
4. Connection: Waterproof vapor barrier adhesive.

C. Elastomeric Foam Adhesive: Air dried, contact adhesive, compatible with insulation.

2.4 PLENUM INSULATION

A. Manufacturer

1. Unifrax Corporation
2. Substitutions: See Section 016000 - Product Requirements.

B. Insulation: Fyrewrap .5 plenum insulation, high temperature, bio-soluble insulation, aluminum foil/fiberglass reinforced scrim encapsulated

2.5 JACKETS

A. PVC Plastic.

1. Manufacturers:
   a. Johns Manville Corporation: www.jm.com.
   b. Substitutions: See Section 016000 - Product Requirements.
2. Jacket: One piece molded type fitting covers and sheet material, off-white color.
   a. Minimum Service Temperature: 0 degrees F.
   b. Maximum Service Temperature: 150 degrees F.
   c. Moisture Vapor Permeability: 0.002 perm inch, maximum, when tested in accordance with ASTM E 96/E 96M.
   d. Thickness: 10 mil.
   e. Connections: Brush on welding adhesive.

B. Stainless Steel Jackets

1. Standards:
   a. ASTM-A240 and A666 Standards
2. Thickness
   a. .016” (.4mm)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that piping has been tested before applying insulation materials.

B. Verify that surfaces are clean and dry, with foreign material removed.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install in accordance with NAIMA National Insulation Standards.

C. Exposed Piping: Locate insulation and cover seams in least visible locations.

D. Insulated pipes conveying fluids below ambient temperature: Insulate entire system including fittings, valves, unions, flanges, strainers, flexible connections, pump bodies, and expansion joints.

E. Glass fiber insulated pipes conveying fluids below ambient temperature:

1. Provide vapor barrier jackets, factory-applied or field-applied. Secure with self-sealing longitudinal laps and butt strips with pressure sensitive adhesive. Secure with outward clinch expanding staples and vapor barrier mastic.
2. Insulate fittings, joints, and valves with molded insulation of like material and thickness as adjacent pipe. Finish with glass cloth and vapor barrier adhesive or PVC fitting covers.

F. For hot water piping conveying fluids 140 degrees F or less, do not insulate flanges and unions at equipment, but bevel and seal ends of insulation.

G. Glass fiber insulated pipes conveying fluids above ambient temperature:

1. Provide standard jackets, with or without vapor barrier, factory-applied or field-applied. Secure with self-sealing longitudinal laps and butt strips with pressure sensitive adhesive. Secure with outward clinch expanding staples.
2. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe. Finish with glass cloth and adhesive or PVC fitting covers.

H. Inserts and Shields:

1. Provide shields (Piping 1 inch diameter or larger.): Galvanized steel between pipe hangers or pipe hanger rolls and inserts.
2. Provide inserts (Piping 1 inches diameter or larger.): Between support shield and piping and under the finish jacket.
    a. Insert configuration: Minimum 6 inches long, of same thickness and contour as adjoining insulation; may be factory fabricated.
    b. Insert material: Hydrous calcium silicate insulation or other heavy density insulating material suitable for the planned temperature range.

I. Continue insulation through walls, sleeves, pipe hangers, and other pipe penetrations. Finish at supports, protrusions, and interruptions. At fire separations, refer to Section 078400.

J. Exposed Insulated Pipe: (from finish floor level to 10 feet above finished floor): Provide with Stainless Steel jacket around entire pipe/insulation circumference

K. Provide UL listed plenum insulation on all piping not conforming to the 25/50 smoke and flame requirements for combustibility as required by the International Mechanical code, and installed within return air plenum spaces.

3.3 SCHEDULES

A. Plumbing Systems: (Provide insulation for piping and appurtenances of the following Plumbing systems as scheduled below)

1. Domestic Cold Water Supply:
   a. Glass Fiber Insulation (w/All-Service Jacket):
      1) Thickness:
         (a) All pipe sizes: 1-inch thick
   b. Flexible Elastomeric Cellular Insulation (underground piping, piping installed in masonry walls):
      1) Thickness:
         (a) All pipe sizes: 1-inch thick
2. Domestic Hot, Hot Return, 140F Hot, and 140F Return Water Supply:
   a. Glass Fiber Insulation (w/All-Service Jacket):
      1) Thickness:
         (a) Pipe sizes up to and including 1-1/4-inch: 1-inch thick
         (b) Pipe sizes 1-1/2"-inch - 6"-inch: 1-1/2 inch thick
   b. Flexible Elastomeric Cellular Insulation (underground piping, pipe installed in masonry walls):
      1) Thickness:
         (a) Pipe sizes up to and including 1-1/4-inch: 1-inch thick
         (b) Pipe sizes 1-1/2"-inch - 6"-inch: 1-1/2 inch thick
3. Tempered Domestic Water Supply:
   a. Glass Fiber Insulation (w/All-Service Jacket):
      1) Thickness::
         (a) All pipe sizes: 1-inch thick
4. Non-Potable Water:
   a. Glass Fiber Insulation (w/All-Service Jacket):
      1) Thickness::
         (a) All pipe sizes: 1-inch thick
   b. Flexible Elastomeric Cellular Insulation (underground piping, pipe installed in concrete walls):
      1) Thickness:
         (a) All pipe sizes: 1-inch thick
5. Roof Drain and Emergency Roof Drain Bodies:
   a. Glass Fiber Insulation:
      1) 1-inch thick for Glass Fiber
         (a) Where service is concealed Flexible Elastomeric insulation in factory color is adequate. In exposed, finished areas (i.e. gymnasium, auditorium, etc.) painted Glass Fiber with jacket is required (color selected by Architect).

6. Rainwater and Emergency Rainwater Drainage Piping Above Grade (all horizontal and all vertical piping):
    a. Glass Fiber Insulation (w/All-Service Jacket):
        1) Pipe Size Range:
            (a) all pipe sizes: 1 -inch thick
7. Cold Condensate Drains:
    a. Flexible Elastomeric Insulation:
        1) 1-inch for all pipe sizes.

END OF SECTION 22.0719

SECTION 22.1005 - PLUMBING PIPING

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Pipe, Pipe Fittings, Pipe Hangers and Supports, Valves, and Miscellaneous connections for piping systems.

1. Waste/Sanitary Sewer & Vent.
   a. Contractor shall provide complete Sanitary drainage and vent piping system as shown on plumbing drawings and specified herein including but not limited to all: piping, pipe fittings, pipe supports, pipe anchors, drains, and equipment/fixture connections including final coordination and connection to Site Sanitary system.
2. Pumped/Forced Waste and Rainwater
   a. Contractor shall provide complete Forced Main piping systems as shown on plumbing drawings and specified herein including but not limited to all: piping, pipe fittings, pipe supports, pipe anchors, drains, including final coordination and connection to Water/Sanitary or Storm piping system as indicated on drawings.
3. Domestic Potable Water.
   a. Contractor shall provide complete Domestic Cold, Hot, and Hot Water Return, & Tempered water piping systems as shown on plumbing drawings and specified herein including but not limited to all: equipment, piping, valves, fittings, supports, anchors, insulation, connections to equipment/fixtures and plumbing specialties including final coordination and connection to Site Water supply.
4. Rainwater/Storm Water & Emergency Rainwater.
   a. Contractor shall provide complete Rainwater/Storm water piping system as shown on plumbing drawings and specified herein including but not limited to all: piping, pipe fittings, pipe supports, pipe anchors, drains, and insulation including final connection to Site Storm water system.
5. Condensate Drain Piping
   a. Contractor shall provide complete condensate drainage piping system as shown on plumbing drawings and specified herein including but not limited to all: piping, pipe fittings, pipe supports, pipe anchors, drains, and insulation t including final connection to Site Storm water system or discharge point as noted on the drawings.
6. Natural Gas
   a. Contractor shall provide complete Natural gas distribution system as shown on plumbing drawings and specified herein including but not limited to all: equipment, regulators, piping, valves, fittings, supports, anchors, connections to equipment/fixtures and plumbing specialties beginning at the outlet of gas service meter.
7. Compressed Air
   a. Contractor shall provide complete Compressed Air piping system as shown on plumbing drawings and specified herein including but not limited to all: equipment, piping, pipe fittings, pipe supports, and pipe anchors.

1.2 RELATED REQUIREMENTS

A. Section 07 8413 - Penetration Fireproofing

B. Section 08 3100 - Access Doors and Panels.

C. Section 09 9000 - Painting and Coating.

D. Section 22 0100 - General Provisions

E. Section 22 0516 - Expansion Fittings and Loops for Plumbing Piping.

F. Section 22 0548 - Vibration Isolation and Seismic Mountings.

G. Section 22 0553 - Identification for Plumbing Piping and Equipment.

H. Section 22 0719 - Plumbing Piping Insulation.

I. Section 22 1006 - Plumbing Piping Specialties

1.3 REFERENCE STANDARDS

A. Work and products provided in conformance to referenced standards listed below shall be in conformance with the latest editions of the referenced standards where the standards have a revision more current than the edition noted below.

B. ASME B16.3 - Malleable Iron Threaded Fittings; The American Society of Mechanical Engineers; 1998 (R2006).

C. ASME B16.4 - Gray Iron Threaded Fittings; The American Society of Mechanical Engineers; 1998 (R2006).

D. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings; The American Society of Mechanical Engineers; 2001 (R2005) (ANSI B16.18).

E. ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings; The American Society of Mechanical Engineers; 2001 (R2005).

F. ASME B31.9 - Building Services Piping; The American Society of Mechanical Engineers; 2008 (ANSI/ASME B31.9).

G. ASTM A 53/A 53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2007.

H. ASTM A 74 - Standard Specification for Cast Iron Soil Pipe and Fittings; 2006.

I. ASTM B 32 - Standard Specification for Solder Metal; 2004.

J. ASTM B 88 - Standard Specification for Seamless Copper Water Tube; 2003.

K. ASTM B 306 - Standard Specification for Copper Drainage Tube (DWV); 2002.

L. ASTM C 564 - Standard Specification for Rubber Gaskets for Cast Iron Soil Pipe and Fittings; 2003a.

M. ASTM D 1785 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120; 2006.

N. ASTM D 2466 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40; 2006.

O. ASTM D 2513 - Standard Specification for Thermoplastic Gas Pressure Pipe, Tubing, and Fittings; 2007b.

P. ASTM D 2564 - Standard Specification for Solvent Cements for Poly(Vinyl Chloride) (PVC) Plastic Piping Systems; 2004.

Q. ASTM D 2665 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Drain, Waste, and Vent Pipe and Fittings; 2008.

R. ASTM D 2683 - Standard Specification for Socket-Type Polyethylene Fittings for Outside Diameter-Controlled Polyethylene Pipe and Tubing; 2004.

S. ASTM D 2729 - Standard Specification for Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings; 2003.

T. ASTM D 2855 - Standard Practice for Making Solvent-Cemented Joints with Poly(Vinyl Chloride) (PVC) Pipe and Fittings; 1996 (Reapproved 2002).

U. ASTM D 3034 - Standard Specification for Type PSM Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings; 2006.

V. AWWA C105/A21.5 - Polyethylene Encasement for Ductile-Iron Pipe Systems; American Water Works Association; 2005 (ANSI/AWWA C105/A21.5).

W. AWWA C151/A21.51 - Ductile-Iron Pipe, Centrifugally Cast, for Water; American Water Works Association; 2009 (ANSI/AWWA C151/A21.51).

X. AWWA C651 - Disinfecting Water Mains; American Water Works Association; 2005 (ANSI/AWWA C651).

Y. CISPI 301 - Standard Specification for Hubless Cast Iron Soil Pipe and Fittings for Sanitary and Storm Drain, Waste and Vent Piping Applications; Cast Iron Soil Pipe Institute; 2005.

Z. CISPI 310 - Specification for Coupling for Use in Connection with Hubless Cast Iron Soil Pipe and Fittings for Sanitary and Storm Drain, Waste, and Vent Piping Applications; Cast Iron Soil Pipe Institute; 2004.

AA. IBC - ICC - International Building Code

BB. IPC - ICC - International Plumbing Code

CC. IFGC - ICC - International Fuel Gas Code

DD. MSS SP-58 - Pipe Hangers and Supports - Materials, Design and Manufacture; Manufacturers Standardization Society of the Valve and Fittings Industry, Inc.; 2009.

EE. MSS SP-69 - Pipe Hangers and Supports - Selection and Application; Manufacturers Standardization Society of the Valve and Fittings Industry, Inc.; 2003.

FF. MSS SP-80 - Bronze Gate, Globe, Angle and Check Valves; Manufacturers Standardization Society of the Valve and Fittings Industry, Inc.; 2008.

GG. MSS SP-89 - Pipe Hangers and Supports - Fabrication and Installation Practices; Manufacturers Standardization Society of the Valve and Fittings Industry, Inc.; 2003.

HH. MSS SP-110 - Ball Valves Threaded, Socket-Welding, Solder Joint, Grooved and Flared Ends; Manufacturers Standardization Society of the Valve and Fittings Industry, Inc.; 1996.

1.4 SUBMITTALS

A. In addition to the requirements of Division 01 specifications, plumbing product submittals shall be in accordance with the following:

1. Piping & Pipe fitting Product Data: Provide manufacturer's data on pipe materials and pipe fittings specified herein. Submittals shall clearly indicate exact materials to be provided and applications where the submitted product is to be installed and associated specification section. Manufacturer data shall indicate, material of construction, applicable standards and listings, design pressure and ratings, etc.
2. Hangers & Supports, Valve, & Misc. Product Data: Provide manufacturer's data for Hangers & supports, valve, & miscellaneous piping products specified herein. Clearly indicate exact models/model number, options, and accessories to be provided for each product. Submittals shall clearly indicate applications where the submitted product is to be used. Manufacturer data shall indicate, material of construction, applicable standards and listings, design pressure and ratings, etc.
3. Project Record Documents: Record actual locations of valves. Provide valve schedule as required in Section 22 0553 "Identification for Plumbing Piping and Equipment".
4. Maintenance Data: Submit maintenance data and spare parts lists for each type of valve. Include this data in Maintenance Manual.
5. Maintenance Materials: Furnish the following for Owners use in maintenance of project.
    a. See Section 01 6000 - Product Requirements, for additional provisions.
    b. Valve Repacking Kits: One for each type and size of valve.

B. Review of submittals which do not clearly indicate the information noted below may be delayed or Rejected due to lack of clarity or information. Generic catalog sheets with no indication of options, accessories, or model to be provided will be Rejected without further review. P.C. is responsible to review plumbing product submittals provided by suppliers and coordinate and verify all submittal information prior to submission to Architect/Engineer.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with State of Pennsylvania, UCC standards.

1. Maintain one copy on project site.

B. Valves: Manufacturer's name and pressure rating marked on valve body.

C. Piping

1. Welding Materials and Procedures: Conform to ASME (BPV IX) and applicable state labor regulations.
2. Welder Qualifications: Certified in accordance with ASME (BPV IX) or ANSI B3l.I as applicable.
3. Identify pipe with marking including size, ASTM material classification, ASTM specification, potable water certification, water pressure rating.
4. Manufacturers: Firms regularly engaged in the manufacture of piping products of types and sizes required, and which have been in satisfactory use for not less than five years in similar service.
5. Welding: Certify welding procedures, welders and operators in accordance with ANSI B3l.I, paragraph 527.5 for shop and job site welding of piping work.

6. All grooved joint couplings, fittings, valves, and specialties shall be the products manufactured by Victaulic Co. or America. Grooving tools shall be of the same manufacturer as the grooved components.
7. Cast iron soil pipe and fittings shall be marked with the collective trademark of the Cast Iron Soil Pipe Institute.

D. Valves: Manufacturer's name and pressure rating marked on valve body.

1. Manufacturers: Firms regularly engaged in the manufacture of valves, of types and sizes required, whose products have been in satisfactory use in similar service for not less than five years.
2. Marking of Valves: Comply with MSS SP-25.
3. Valve Dimensions; For face-to-face and end-to-end dimensions of flanged or welding-end valve bodies, comply with ANSI B16.10. Grooved end valves shall comply with manufacturer's published dimensional data, with grooved ends complying with ANSI/AWWA C606.
4. Valve Types: Provide valves of same type by same manufacturer.

1.6 REGULATORY REQUIREMENTS

A. Perform Work and inspections/testing in accordance with State of Pennsylvania UCC building codes including but not limited to IPC, IFGC, IBC, and IFC (Latest editions).

B. Conform to International Plumbing Code and all requirements of the local authority having jurisdiction/local Water Authority for installation of backflow prevention devices, service valving, and metering.

C. Submit product data for backflow prevention devices, service valving, and meters to the Municipal Water Authority prior to submission to Architect/Engineer. Obtain approval for devices and installation details and submit written approval with product data submittal to Architect/Engineer.

D. When a meter pit is required, provide certificate of compliance from the local water authority having jurisdiction indicating approval of water meter pit construction plans prior to order/installation of water meter pit and all associated piping.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

B. Provide temporary protective coating on cast iron and steel valves.

C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

D. Provide factory applied plastic end caps on each length of pipe and tube. Maintain end caps through shipping, storage and handling as required to prevent pipe end damage and eliminate dirt and moisture from outside of pipe and tube..

E. Where possible, store pipe and tube inside and protected from weather. Where necessary to store outside, elevate well above grade and enclose with durable waterproof wrapping.

F. Protect steel flanges and fittings from moisture and dirt by inside storage and enclosure or packaging with durable, waterproof wrapping.

1.8 FIELD CONDITIONS

A. Do not install underground piping when bedding is wet or frozen.

1.9 EXTRA MATERIALS

A. See Section 01 6000 - Project Requirements, for additional provisions.

B. Provide two repacking kits for each size valve.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS

A. Except as otherwise indicated, provide factory fabricated products of the size, joint type, or class (thickness) indicated for each service. Where size, joint type, or class (thickness) is not indicated, provide products as determined by the installer for installation requirements and comply with the standards of the International Plumbing Code, International Fuel Gas Code, NFPA, Cast Iron Soil Pipe Institute (CISPI),and EPA as appropriate for each service.

B. Potable Water Supply Systems: Provide piping, pipe fittings, and solder and flux (if used), that comply with NSF 61 and NSF 372 for maximum lead content; label pipe and fittings.

2.2 WASTE/SANITARY SEWER & VENT PIPING, BELOW SLAB/GRADE AND BURIED WITHIN 5 FEET OF BUILDING

A. Epoxy Coated Cast Iron Soil Pipe: (High Temp drainage - Kitchens, Boiler rooms, etc.) ASTM A 74 service weight, Epoxy coated cast iron soil pipe, corrosion resistance from 2pH to 12pH, high temperature resistance to 250 degrees Fahrenheit, Epoxy coated cast iron soil pipe shall have a 5 year warranty.

1. Manufacturers:
   a. Charlotte Pipe and Foundry
   b. Tyler Pipe
2. Pipe Coating: Chemically deposited zinc-phosphate pretreatment layer followed by an electrically deposited, high performance cathodic epoxy coating, and finally an electrically deposited high performance anodic epoxy top coat.
3. Fittings: Cast iron, DWV, hub and spigot
   a. Fitting Coating: Chemically deposited zinc-phosphate pretreatment layer followed by an electrically deposited, high performance cathodic epoxy coating, and finally an epoxy acrylic powder top coat
4. Joints: Hub-and-spigot, CISPI HSN compression type with ASTM C 564 neoprene gaskets conforming to ASTM C 1563.

B. PVC Pipe: Schedule 40 ASTM D 2665 or ASTM D 3034. (No foam core permitted) - PVC Piping option for Sanitary Sewer and Waste piping systems shall not be permitted in areas with high temperature drainage discharge, these areas include but are not limited to: Kitchens, Boiler/Mechanical Rooms, etc. In areas with high temperature drainage discharge, Cast Iron Pipe shall be used in lieu of PVC piping. This cast iron pipe shall extend beyond the affected room/space to a minimum of 25ft. beyond the most downstream high temperature drain connection.

1. Manufacturers:
   a. Charlotte Pipe and Foundry
2. Fittings: PVC, DWV.

3. Joints: Solvent welded, with ASTM D 2564 solvent cement.

2.3 WASTE & VENT PIPING, ABOVE SLAB/GRADE

A. Cast Iron Pipe: CISPI 301, hubless.

1. Manufacturers:
   a. Charlotte Pipe and Foundry
   b. Tyler Pipe
2. Fittings: Cast iron, DWV, no-hub
3. Joints: Heavy Duty Couplings: ASTM C 1540/ASTM C 564/FM 1680 Class 1, neoprene gaskets and smooth 304 stainless steel clamp-and-shield assemblies with .010in minimum thickness corrugated shield, four clamps for sizes 1-1/2"-4", six clamps for sizes 5"-10", and worm gear drive clamps torqued to 80 inch pounds.

2.4 PUMPED WASTE/RAINWATER PIPING, ABOVE SLAB/GRADE

A. Steel Pipe: ASTM A 53/A 53M Schedule 40, galvanized, using one of the following joint types:

1. Flanged Joints: ASME B16.1 cast iron fittings.
2. Threaded Joints: ASME B16.3 malleable iron fittings.

2.5 DOMESTIC POTABLE AND NON-POTABLE WATER PIPING, ABOVE SLAB

A. Copper Tube: ASTM B 88 (ASTM B 88M), Type L (B), Drawn (H).

1. Fittings: Provide fittings from one of the options below. All fittings/components within the domestic potable water piping shall meet the Lead Free requirements of the Safe Drinking Water Act (Sec. 1417) amended 1-4-2011 (weighted average lead content = 0.25%) and other equivalent state regulations
   a. Soldered Fittings (all pipe sizes): ASME B16.18, cast copper alloy or ASME B16.22, wrought copper and bronze.
   b. Copper Press Fittings (all pipe sizes): Double-pressed type, NSF 61 and NSF 372 approved or certified, utilizing EPDM, nontoxic, synthetic rubber sealing elements. fittings shall conform to the material and sizing requirements of ASME B16.18 or ASME B16.22. Copper press fittings shall be manufactured by Viega and installed utilizing Rigid Tool Company as "Pro Press System" or equal system as approved by Engineer. Complete installation shall comply with manufacturers recommendations.
   c. Copper Plated Mechanical Grooved fittings (Pipe sizes larger than 2"): Mechanical grooved couplings for grooved piping as manufactured by Victaulic - No substitutions permitted.
2. Joints: Provide pipe joints from one of the options below.
   a. Solder Joints(All Sizes): ASTM B32, alloy Sn95 solder.
   b. Press Fit Joints(All Sizes): ProPress (as specified above)
3. Unions (Pipe Sizes 2" and Under):
   a. Copper tube and pipe: Class 150 bronze unions with soldered joints.
4. Flanges (Pipe Size Over 1 Inch):
   a. Copper tube and pipe: Class 150 slip-on bronze flanges; preformed neoprene gaskets.

B. **Pex (Pex-A) Piping: Alternate for 1/2" to 2". Refer to 22116.**

2.6 DOMESTIC POTABLE AND NON-POTABLE WATER SERVICE PIPING BURIED BELOW SLAB/GRADE

A. Copper Tube (2 in. and smaller): ASTM B 88 (ASTM B 88M), Type K (A).

1. Fittings: No fittings permitted below grade
2. Joints: Flared

B. Ductile Iron Pipe (3 in. and Larger): AWWA C151/A21.51 cement/mortar lined in accordance with AWWA C104/A21.4

1. Fittings: AWWA C110/A21.10 standard thickness.
2. Joints: AWWA C111/A21.11rubber gasket.
3. Mechanically Restrained Couplings: Shaped composition sealing gasket, steel bolts, nuts, and washers. Bolts, nuts, washers, and threaded rod in buried applications shall be ASTM A193 Grade B7 studs, ASTM A194 grade 2H nuts, AND ASTM F436 hardened washers in accordance with AWWA C207 and zinc plated for corrosion resistance.

2.7 DOMESTIC POTABLE AND NON-POTABLE WATER PIPING, BELOW SLAB

A. Copper Tube: ASTM B 88 (ASTM B 88M), Type K (A).

1. Fittings: No fittings or joints permitted below grade
2. Joints: No fittings or joints permitted below grade

2.8 STORM PIPING, BELOW SLAB AND BURIED WITHIN 5 FEET OF BUILDING

A. Cast Iron Pipe: ASTM A 74 service weight. (Provide extra heavy weight where required by local Authority Having Jurisdiction).

1. Manufacturers:
   a. Charlotte Pipe and Foundry
   b. Tyler Pipe
2. Fittings: Cast iron, DWV pattern
3. Joint Seals: Hub-and-spigot, CISPI HSN compression type with ASTM C 564 neoprene gaskets conforming to ASTM C 1563, or lead and oakum.

B. PVC Pipe: ASTM D 2665 or ASTM D 3034. (No Foam Core Permitted)

1. Manufacturers:
   a. Charlotte Pipe and Foundry
   b. Spears
   c. Cresline
2. Fittings: PVC, DWV pattern
3. Joints: Solvent welded, with ASTM D 2564 solvent cement.
4. Transition: Use appropriate transition joints as required for connection to dissimilar piping materials. Transition from PVC below grade piping to cast iron pipe above grade shall occur 6" -12" above slab.

2.9 RAINWATER & EMERGENCY RAINWATER PIPING, ABOVE GRADE

A. Cast Iron Pipe: CISPI 301, hubless.

1. Manufacturers:
   a. Charlotte Pipe and Foundry

b. Tyler Pipe

2. Fittings: Cast iron, DWV pattern
3. Joints: ASTMC-1540/ASTMC-564/FM 1680 Class 1, neoprene gaskets and smooth 304 stainless steel clamp-and-shield assemblies with .010in minimum thickness corrugated shield, four clamps for sizes 1-1/2"-4", six clamps for sizes 5"-10", and worm gear drive clamps torqued to 80 inch pounds.

2.10 NATURAL GAS PIPING, ABOVE SLAB

A. (Pipe Size 2" and Smaller) Steel Pipe: ASTM A 53/A 53M Schedule 40 black.

1. Fittings (threaded): ASME B16.3, malleable iron threaded
2. Fittings (Press Fit): Cold press mechanical joint fitting, ASTM A420 or ASME B16.3 and performance criteria of IAPMO PS117 and ASTM F3226, HNBR Sealing elements - Viega MegaPressG
3. Joints: NFPA 54, threaded
4. Unions: Class 150 malleable iron threaded unions.
5. Flanges: Class 150 malleable iron threaded or forged steel slip-on flanges; preformed neoprene gaskets.

B. (Pipe Size 2-1/2" and Larger) Steel Pipe: ASTM A 53/A 53M Schedule 40 black.

1. Fittings (welded): ASTM A 234/A 234M, wrought steel welding type.
2. Fittings (Press Fit): Cold press mechanical joint fitting, ASTM A420 or ASME B16.3 and performance criteria of IAPMO PS117 and ASTM F3226, HNBR Sealing elements - Viega MegaPressG
3. Joints: welded to ASME B31.1.
4. Flanges: Class 150 malleable iron threaded or forged steel slip-on flanges; preformed neoprene gaskets.

2.11 NATURAL GAS PIPING, BELOW SLAB

A. Pre-Sleeved Corrugated Stainless Steel Tube: Omegaflex, TracPipe PS-II

1. Fittings: Omegaflex, AutoFlare mechanical attachment fittings, yellow brass with sleeved vent connection extended to building exterior.

2.12 CONDENSATE DRAIN PIPING, BELOW SLAB

A. PVC Pipe: ASTM D 2665 or ASTM D 3034. (No Foam Core Permitted)

1. Fittings: PVC, DWV pattern
2. Joints: Solvent welded, with ASTM D 2564 solvent cement.

2.13 CONDENSATE DRAIN PIPING, ABOVE SLAB

A. Copper Pipe: Type DWV with soldered joints and fittings.

2.14 FLANGES, UNIONS, AND COUPLINGS

A. Unions (Pipe Sizes 2" and Under):

1. Ferrous pipe: Class 150 malleable iron threaded unions.
2. Copper tube and pipe: Class 150 bronze unions with soldered joints.

B. Flanges (Pipe Size Over 1 Inch):

1. Ferrous pipe: Class 150 malleable iron threaded or forged steel slip-on flanges; preformed neoprene gaskets.
2. Copper tube and pipe: Class 150 slip-on bronze flanges; preformed neoprene gaskets.

C. Dielectric Unions/Connections: Provide standard products recommended by manufacturer for use in service indicated which effectively isolate ferrous from non-ferrous piping (electrical conductance), prevent galvanic action, and stop corrosion.

1. Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier
2. Manufacturer: Subject to compliance with requirements, provide dielectric unions of one of the following:
   a. Atlas Products Co.
   b. Capital Mfg. Co., Div. of Harsco Corp.
   c. Eclipse, Inc.
   d. Epco Sales, Inc.
   e. PSI Industries.
   f. Stockham Valves and Fittings.

2.15 MISCELLANEOUS PIPING FABRICATION MATERIALS:

A. Forged Branch Connection Fittings: Except as otherwise indicated, provide the type as determined by the installer to comply with installation requirements.

B. Pipe Nipples: Fabricate from same pipe as used for connected pipe; except do not use less than schedule 80 pipe where length remaining Unthreaded is less than 1 1/2", and where pipe size is less than 1 1/4", and do not thread nipples full length (no close nipples.)

C. Copper Tube Unions: Provide standard products recommended by the manufacturer for use in the service indicated.

D. Welding Materials: Except as otherwise indicated, provide welding materials as determined by the installer to comply with installation requirements. Comply with Section 2-C, ASME Boiler Code for welding materials.

E. Soldering Materials: Except as otherwise indicated, provide lead free soldering materials as determined by the installer to comply with installation requirements.

F. Tin-Antimony Solder: ASTM B32, Grade 95YA.

G. Gaskets for Flanged Joints: ANSI B16.21 full faced for cast iron flanges; raised face for steel flanges, unless otherwise indicated.

H. Gaskets for Grooved Joints: Pressure responsive, ASTM D-2000. Gaskets shall be verified as suitable for the intended service prior to installation. Gaskets shall be molded and produced by the coupling manufacturer.

2.16 PIPE HANGERS AND SUPPORTS

A. HORIZONTAL PIPING HANGERS AND SUPPORTS:

1. General: Except as otherwise indicated, provide factory fabricated horizontal piping hangers and supports of the MSS type and size indicated, bolts (if any) and washers; comply with MSS SP-58 and the manufacturer's published product information. Where the MSS type or size is not indicated, provide proper selection determined by installer for installation requirements, and comply with MSS SP-69 and the manufacturer's published product information: size hangers and supports properly for piping including insulation, for insulated piping systems..
   a. Adjustable Clevis Hangers: MSS-SP-69 Type 1, fabricated from steel. (Insulated or Non-insulated - Stationary piping systems)
   b. Adjustable Swivel Band Hangers: MSS-SP-69 Type 10 fabricated from steel. (Non-insulated - Stationary piping systems)
   c. Adjustable Roller Hangers: MSS-SP-69 Type 43, including axle roller and clevis.(Insulated or Non-insulated - Non-Stationary piping systems)
   d. Steel Brackets: Welded structural steel shapes complying with one of the following:
      1) Light Duty: MSS Type 31.
      2) Medium Duty: MSS Type 32.
      3) Heavy Duty: MSS Type 33.

B. VERTICAL PIPING CLAMPS:

1. General: Except as otherwise indicated, provide factory fabricated vertical piping clamps of the MSS type and size indicated; comply with MSS SP-58 and the manufacturer's published product information. Where the MSS type or size is not indicated, provide proper selection as determined by the installer for installation requirements, and comply with MSS SP-69 and the manufacturer's published product information. Size clamps properly for piping, including insulation (if any).
   a. Two Bolt Riser Clamp: MSS-SP-69 Type 8.
   b. Four Bolt Riser Clamp: MSS-SP-69 Type 42, including pipe spacers at inner bolt holes.

C. HANGER ROD ATTACHMENTS:

1. General: Except as otherwise indicated, provide factory fabricated hanger rod attachments of the MSS type and size indicated; comply with MSS SP-58 and the manufacturer's published product information. Where MSS type or size is not indicated, provide proper selection as determined by installer for installation requirements, and comply with MSS AP-69 and the manufacturer's published product information. Size attachments properly for piping, including insulation (if any).
   a. Turnbuckles: MSS-SP-69 Type 13.
   b. Weldless Eye Nut: MSS-SP-69 Type 17.
   c. Malleable Eye Socket: MSS-SP-69 Type 16.
   d. Clevises: MSS-SP-69 Type 14.

D. BUILDING ATTACHMENTS:

1. General: Except as otherwise indicated, provide factory fabricated building attachments of the MSS type and load rating indicated; comply with MSS SP-58 and the manufacturer's published

product information. Where the MSS type or load rating is not indicated, provide proper selection determined by installer for installation requirements, and comply with MSS SP-69 and the manufacturer's published information. Size units properly for piping loading.

a. Concrete Inserts: MSS-SP-69 Type I8, steel.
b. Top Beam C-Clamps: MSS-SP-69 Type I9.
c. C-Clamps: MSS-SP-69 Type 23, steel
d. Top I-Beam Clamp: MSS-SP-69 Type 25.
e. Side Beam Clamp: MSS-SP-69 Type 20.
f. Beam Clamp/Eye Nut: MSS-SP-69 Type 28.
g. Wide Flange Beam Clamp/Eye Nut: MSS-SP-69 Type 29.
h. Beam Clamp/Extension Piece: MSS-SP-69 Type 30.

E. SADDLES AND SHIELDS:

1. General: Except as otherwise indicated, provide factory fabricated saddles and shields of the MSS type and size indicated; comply with MSS SP-58 and the manufacturer's published product information. Where the MSS type or size is not indicated, provide proper selection determined by installer for installation requirements, and comply with MSS SP-69 and the manufacturer's published product information. Size saddles and shields properly for insulation and vapor barriers (if any).
   a. Protection Saddles: MSS-SP-69 Type 39.
   b. Protection Shields: MSS-SP-69 Type 40.
   c. Wood Insulation Saddle: Provide products manufactured by Elcen Metal Products Company.

F. RESTRAINTS

1. General: Provide No-Hub Cast Iron Joint restraints as required by local Plumbing Codes, CISPI Designation 310-11, and the 2006 CISPI Installation Handbook. 24 ga. CRS, galvanized straps, stainless steel bands and worm gear drive clamps.
   a. HoldRite Series #117

G. MISCELLANEOUS HANGER AND SUPPORT MATERIALS:

1. Metal Framing: Provide products complying with NEMA STD ML 1. Contractor shall provide all miscellaneous steel required for support of work within his contract.
2. Steel Plates, Shapes and Bars: Provide products complying with ASTM A 36.
3. Cement Grout: Portland cement (ASTM C I50, Type I or Type III,) and cleaned uniformly graded, natural sand (ASTM C 404, Size No. 2). Mix at a ratio of I.0 part cement to 3.0 parts sand, by volume, with only the minimum amount of water required for placement and hydration.
4. Heavy Duty Steel trapezes: Fabricate from steel shapes selected for the loads required, weld steel in accordance with AWS Standards.
5. Pipe Guides: Provide factory fabricated guides of cast semi-steel or heavy fabricated steel, consisting of a bolted two-section outer cylinder and base with a two sections guiding spider bolted tightly to the pipe. Size guide and spiders to clear pipe and insulation (if any), and cylinder. Provide guides of the length recommended by the manufacturer to allow indicated travel.

2.17 VALVES:

A. General: Provide factory fabricated valves recommended by manufacturer for use in service indicated. Provide valves of types and pressure ratings indicated; provide proper selection as determined by installer to comply with installation requirements. Provide sizes as indicated, and connections which properly mate with pipe, tube, and equipment connections.

B. All valves and specialties within the domestic potable water piping shall meet the Lead Free requirements of the Safe Drinking Water Act (Sec. 1417) amended 1-4-2011 (weighted average lead content = 0.25%), NSF/ANSI-61-8 Commercial Hot 180°F (including Annex F and G) and NSF/ANSI-372, and other equivalent state regulations.

C. All shutoff valves 4" and smaller within the domestic potable water piping shall be full port ball valve type unless noted otherwise.

D. General Valve Features:

1. General: Provide valves with features indicated and where not otherwise indicated, provide proper valve features as determined by installer for installation requirements. Comply with ANSI B31.1
2. Flanged: Valve flanges complying with ANSI B16,1 (cast iron), ANSI B16.5 (steel), or ANSI P16.24 (bronze).
3. Threaded; Valve ends complying with ANSI P2.1.
4. Grooved; Valve ends complying with ANSI/AWWA C606.
5. Solder Joint: Valve ends complying with ANSI P16.18.
6. Trim: Fabricate pressure-containing components of valve, including stems (shafts) and seats from bronze materials, of standard alloy recognized in the valve manufacturing industry that resists dezincification and meets the Lead free requirements
7. Non-Metallic Discs: Non-metallic material selected for service indicated in accordance with the manufacturer's published literature.
8. Renewable Seat: Design seat of valve with removable disc, and assemble valve so disc can be replaced when worn,
9. Extended Stem: Increase stem length by 2" minimum, to accommodate insulation applied over valve.
10. Check Valve: Check valve designed with hinged disc which seals against seat machined in bridge wall of valve body and manufactured for automatic closure by flow reversal.

E. GATE VALVES:

1. Acceptable Manufacturers: Subject to compliance with requirements, provide valves of one of the following:
   a. Conbraco Industries, Inc.
   b. Jamesbury Corp.
   c. Milwaukee Valve Co., Inc.
   d. NIBCO, Inc.
2. Comply with the following standards:
   a. Cast Iron Valves: MSS SP-70
   b. Bronze Valves: MSS SP-80
3. For Domestic Water Service: Valves shall be rated 200 PSI non-shock CWP, non-rising stem, screw-in bonnet, solid wedge. Body, bonnet,external stuffing box and wedge are to be of lead-free* dezincification-resistant material. Stems shall be of dezincification-resistant

silicon bronze ASTM B 371 or low-zinc alloy B 99, non-asbestos packing and malleable or ductile iron hand wheel. Valve ends may be threaded or solder-type. Valves shall NSF/ANSI-61-8 Commercial Hot 180°F (including Annex F and G) and NSF/ANSI-372.

a. Basis of Design: NIBCO ® T113-LF (threaded); S113-LF (solder)

b. Basis of Design: Milwaukee UP105 (threaded) ; UP115 (solder)

4. For Domestic Water Service Entrance piping:

a. Flanged Ends 2-1/2" and Larger: Class 125, flanged, bronze body, bolted bonnet, rising stem, OS&Y, solid wedge.

F. DRAIN VALVES:

1. For Low Pressure Drainage Service:
2. Acceptable Manufacturers: Subject to compliance with requirements, provide valves of one of the following:

a. Conbraco Industries, Inc.

b. Jamesbury Corp.

c. NIBCO, Inc.

3. Threaded Ends 2" and Smaller: Class 125, bronze body, screwed bonnet, rising stem, composition disc, 3/4" hose outlet connection,
4. Soldered Ends 2" and Smaller Class 125, bronze body, screwed bonnet, rising stem, composition disc, 3/4" hose outlet connection,

G. BALL VALVES:

1. Acceptable Manufacturers: Subject to compliance with requirements, provide valves of one of the following:

a. Conbraco Industries, Inc.

b. Milwaukee Valve Co., Inc.

c. NIBCO, Inc.

2. General: Valves shall be rated 600 PSI non-shock CWP, valve ends shall have full depth ANSI threads or extended solder connections.
3. Comply with the following standards: MSS SP-110
4. Domestic Water: Valves shall be rated 600 PSI non-shock CWP and will have 2-pc. Lead-free bronze body and end piece, Stainless steel trim, stem and ball, PTFE seats, full port, separate pack nut with adjustable stem packing, anti-blowout stems and have the capability of accepting extended operating handles. Valve ends shall have full depth ANSI threads or extended solder connections. Valves shall be 3rd party certified to NSF/ANSI-61-8Commercial Hot 180°F (including Annex F and G) and NSF/ANSI-372. Valves for use in insulated piping systems shall be equipped with 2" extended handles of non-thermal conductive material. A protective sleeve shall allow operation of the valve without disturbing the installation and providing a vapor seal. Product shall be NIBCO NIB-SEAL or approved equal.

a. Threaded Valves:

1) Basis of Design: NIBCO T585HP-66-LF (1/4" to 4")

2) Basis of Design: Milwaukee UPBA400S (1/4" to 2")

b. Soldered Valves:Basis of Design (threaded ends): NIBCO T585HP-66-LF (1/4" to 4")

1) Basis of Design: NIBCO S585HP-66-LF (1/4" to 4")

2) Basis of Design: Milwaukee UPBA450S (3/8" to 2")

c. Press Fit Vavles:

1) Basis of Design: NIBCO PC-585HP-66-LF (1/4" to 4")
2) Basis of Design: Milwaukee UPBA400S P2 (1/2" to 2")

5. Natural Gas Service (Line Service Valve - up to 5psi. 1/2"-2"): Threaded Ends 2" and Smaller: 600#WOG, ASME B16.33, ASME B16.44-2G(2psig service), ASME B16.44-5G(5psig service), Full port, forged brass/bronze 2 piece body, hard chrome plated forged brass/bronze ball, blow-out proof stem.
   a. Basis of Design: NIBCO ® T-FP-600A-LF (threaded)
   b. Basis of Design: Milwaukee BA475B (threaded)
6. Natural Gas Service(Appliance Shutoff - up to 5psi, 1/2"-1"): Threaded Ends 1" and Smaller: 600# W.O.G., Full port, ANS Z21.15/CSA 9.1 listed for 1/2psig indoor appliance connections, lever handle, forged brass/bronze body, hard chrome plated forged brass/bronze ball, blow-out proof stem.
   a. Basis of Design : NIBCO GB Series
   b. Basis of Design: Milwaukee BA475B

H. ADJUSTABLE THERMAL BALANCING VALVE

1. Acceptable Manufacturers: Subject to compliance with requirements, provide valves of one of the following:
   a. Caleffi.
2. Adjustable Thermal Balancing Valve for domestic hot water recirculation circuits. Internal thermostatic balancing cartridge automatically modulates flow to ensure constant temperature which is adjustable from 95 degrees F to 140 degrees F. Sizes ½" and ¾" with NPT female connections. Provided with DZR low-lead brass valve, stainless steel and copper adjustable thermostatic cartridge, EPDM hydraulic seals, 302 stainless steel springs, ABS adjustment knob with temperature adjustment scale and tamper-proof adjustment locking screw, and 10 mm temperature gauge/probe dry-well port. Provide with optional check valve and pre-formed insulation shell. Provide with optional (model dependent) outlet temperature gauge, 30 degrees F to 180 degrees F scale, 1½ inch diameter.
   a. Maximum working pressure: 230 psi
   b. Maximum differential pressure: 15 psi
   c. Maximum inlet temperature: 195 degrees F.
   d. Flow rating: 2.1 Cv (1.8 Kv) maximum, 0.23 Cv (0.2 Kv) minimum, 0.52 Cv (0.45 Kv) design.
   e. Suitable fluid: water.
   f. Meets requirements of ANSI/NSF 372-2011. Certified to low-lead laws and listed by ICC-ES, file PMG-1360, for use in accordance with U.S. and Canadian plumbing codes.
   g. Basis of Design:
      1) Caleffi Code series 1161#0A, for domestic hot water recirculation circuits.
         (a) with inlet check valve 1161#0AC
         (b) with temperature gauge 1161#1A (1161#1AC - w/check valve)
      2) Caleffi Code series 1162#0A, for domestic hot water recirculation circuits with thermostatic by-pass cartridge for thermal disinfection function. Complete with outlet temperature gauge. Disinfection temperature 160 degrees F (70 degrees C), closing temperature 170 degrees F (75 degrees C) and disinfection flow rating 1.2 Cv (1.0 Kv).

(a) with inlet check valve 1162#0AC
(b) with temperature gauge 1162#1A (1161#1AC - w/check valve)

3) Caleffi Code series 1163#0A, for domestic hot water recirculation circuits with by-pass valve for thermal disinfection function with optional code 656 series thermo-electric actuator. Complete with outlet temperature gauge. Disinfection temperature 160 degrees F (70 degrees C), closing temperature 170 degrees F (75 degrees C) and disinfection flow rating 1.2 Cv (1.0 Kv).
(a) with inlet check valve 1163#0AC
(b) with temperature gauge 1163#1A (1161#1AC - w/check valve)

I. MANUAL BALANCING VALVES

1. Acceptable Manufacturers: Subject to compliance with requirements, provide valves of one of the following:
   a. Conbraco Industries, Inc.
   b. Milwaukee Valve Co., Inc.
   c. NIBCO, Inc.
2. Domestic Hot Water Service: Return branch balancing valves ½ " to 2" shall be Globe Style, . Valve shall have integral metering/test ports for flow balancing and flow measurement. Test ports shall have internal check valve and be equipped with caps. Valves shall be manufactured from lead free dezincification resistant brass or bronze rated 240 psi at 250 F. All balancing valves shall have position indication readout and built in memory stop for repeatable regulation and control.
   a. Basis of Design: NIBCO ® Series 1810-LF

J. CIRCUIT SETTER BALANCING VALVES

1. Acceptable Manufacturers: Subject to compliance with requirements, provide valves of one of the following:
   a. Bell & Gosset
2. Domestic Hot Water Service: Circuit Balancing Valves ½ " to 2" shall be Lead Free ball valve style. Valve shall have integral metering/test ports for flow balancing and flow measurement and be able to be pre-set to appropriate flow. Test ports shall have internal check valve and be equipped with caps. Valves shall be manufactured from dezincification resistant brass or bronze rated 240 psi at 250 F. All circuit balancing valves shall have calibrated nameplates with position indication readout and built in memory stop for repeatable regulation and control and designed for positive shutoff.
   a. Basis of Design: Bell & Gosset ® CB - LF Series

K. BUTTERFLY VALVES:

1. General: Comply with MSS SP-67. Where butterfly valves are used as shutoffs for terminal or equipment removal or repair, select lug type valves. Select wafer type valves for other applications. Grooved end butterfly valves shall be used in grooved joint piping systems. Provide gear operation on butterfly valves 8" and larger, Provide valve bodies with 2" necks where insulation is 2" thick or greater.

L. SWING CHECK VALVES:

1. Acceptable Manufacturers: Subject to compliance with requirements, provide valves of one of the following:
   a. Conbraco Industries, Inc.
   b. Milwaukee Valve Co., Inc.
   c. NIBCO, Inc.
2. Comply with MSS SP-71 and MSS SP-SO for design, workmanship, material and testing.
3. For Domestic Water Service: Valves shall be Y-pattern swing-type rated 200 PSI non-shock CWP. Body, bonnet, and disc hanger are to be of lead-free dezincification-resistant material and PTFE seat disc. Valve ends may be threaded or solder-type. Valves shall be 3rd party certified to NSF/ANSI-61-8 Commercial Hot 180°F (including Annex F and G) and NSF/ANSI-372.
   a. Threaded Valve:
      1) Basis of Design: NIBCO ® T413-Y-LF S413-Y-LF (solder)
      2) Basis of Design: Milwaukee UP509
   b. Solder Valve:
      1) Basis of Design: NIBCO ® S413-Y-LF
      2) Basis of Design: Milwaukee UP1509

2.18 LOW PRESSURE Y-TYPE STRAINERS:

A. Manufacturer: Subject to compliance with requirements, provide low pressure Y-Type strainers of one of the following:

1. Armstrong Machine Works.
2. Hoffman Specialty, ITT Fluid Handling Div.
3. Metraflex Co.
4. Crane Co., Valve Div.
5. Milwaukee Valve Co., Inc.
6. NIBCO, Inc-

B. General: Comply with FCI 73-1. Provide strainers full line size of connecting piping, with ends matching piping system materials. Select strainers for 125 psi working pressure, with Type 304 stainless steel screens, with 3/64" perforations @ 233 per sq. in.

C. All valves and specialties within the domestic potable water piping shall meet the Lead Free requirements of the Safe Drinking Water Act (Sec. 1417) amended 1-4-2011 (weighted average lead content = 0.25%) and other equivalent state regulations

1. Threaded Ends: 2" and Smaller: Lead Free Bronze body rated for 300 psi CWP, Y pattern with 1/32 inch stainless steel perforated screen, with centered blowdown fitted with threaded ball valve and pipe plug.
2. Threaded Ends: Class 150, threaded bronze body 300 psi CWP, Y pattern with 1/32 inch stainless steel perforated screen, with centered blowdown fitted with threaded ball valve and pipe plug.
3. Flanged Ends, 2-1/2" and Larger: Cast-iron body, bolted screen retainer with off-center blowdown fitted with threaded ball valve and pipe plug.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that excavations are to required grade, dry, and not over-excavated.

3.2 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.

B. Remove scale and dirt, on inside and outside, before assembly.

C. Prepare piping connections to equipment with flanges or unions.

3.3 INSTALLATION

A. PIPING INSTALLATION:

1. General: Install pipe, tube and fittings in accordance with recognized industry practices which will achieve permanently leakproof piping systems, capable of performing each indicated service without piping failure. Install each run with a minimum of joints and couplings, but with adequate and accessible unions for disassembly and maintenance/ replacement of valves and equipment. Reduce sizes (where indicated) by use of reducing fittings. Align piping accurately at connection, within 1/16" misalignment tolerance.
2. Install all piping in accordance with International Plumbing Code (IPC), International Fuel Gas Code(IFGC), and ANSI B31 Code for Pressure Piping requirements as applicable to each system.
3. Provide corrosion inhibiting epoxy paint and primer on all exterior gas piping. Clean and prep piping surface prior to application. Verify color to be used with architect prior to application.
4. Locate piping runs, except as otherwise indicated, vertically and horizontally (pitched to drain) and avoid diagonal runs wherever possible. Orient horizontal runs parallel with walls and column lines. Locate runs as shown or described by diagrams, details and notations or, if not otherwise indicated, run piping in the shortest route which does not obstruct usable space or block access for servicing the building and its equipment. Hold piping close to walls, overhead construction, columns and other structural and permanently enclosed elements of the building; limit clearance to 0.5" where furring is shown for enclosure or concealment of piping, but allow for insulation thickness, if any. Where possible, locate insulated piping for 1.0" clearance outside of insulation. Wherever possible in finished and occupied spaces, conceal piping from view by locating in column enclosures, in hollow wall construction or above suspended ceilings; do not encase horizontal runs in solid partitions, except as indicated.
5. Electrical Equipment Spaces: Do not run piping through transformer vaults and other electrical equipment spaces and enclosures including elevator machine rooms.
6. Piping System Joints: Provide joints of the type indicated in each piping system.
7. Thread pipe in accordance with ANSI B2.1; cut threads full and clean using sharp dies. Read threaded ends to remove burrs and restore full inside diameter. Apply pipe joint compound/tape on male threads at each joint and tighten joint to leave not more than 3 threads exposed.
8. Solder copper tube and fittings joints in accordance with recognized industry practice. Cut tube ends squarely, ream to full inside diameter, and clean outside of tube ends and inside of fittings. Apply solder flux to joint areas of both tubes and fittings. Insert tube full depth into fitting, and solder in a manner which will draw solder full depth and circumference of joint. Wipe excess solder from joint before it hardens.
9. Weld pipe joints in accordance with ANSI B31.

10. Flanged Joints: Match flanged within piping systems, and at connections with valves and equipment. Clean flange faces and install gaskets. Tighten bolts to provide uniform compression of gaskets.
11. Insulating Unions: Comply with manufacturer's instructions for installing unions. Install unions in a manner which will prevent galvanic action and stop corrosion when joining ferrous and non-ferrous piping.
12. Grooved Joints: Grooved ends shall be clean and free from indentations, projections, and roll marks in the area from pipe end to grooved. The grooved coupling manufacturer's factory trained representative shall provide on-site training for contractor's field personnel in the use of grooving tools, application of groove, and installation of grooved joint products. The manufacturer's representative shall periodically visit the job site and review and installation. Contractor shall remove and replace any joints deemed improperly installed.
13. Unless noted otherwise on the Plumbing drawings all Sanitary/Waste, Kitchen Sanitary/Kitchen Waste, Rainwater, Emergency Rainwater, and Storm piping shall be installed at a minimum continuous 2% slope (1/4" per foot).
14. Unless noted otherwise on the Plumbing drawings all Vent, Condensate Drainage, and Radon Remediation piping shall be installed at a minimum continuous 1% slope (1/8" per foot).
15. Provide penetration firestopping for all work of Div. 22 in accordance with Div. 07 specifications.

B. PIPING INSPECTION:

1. General: Clean exterior surfaces of installed piping systems of superfluous materials and prepare for application of specified coatings if any. Flush out piping systems with clean water before proceeding with required tests. Inspect each run of each system for completion of joints, supports and accessory items.
2. Disinfect water service piping in accordance with IPC or as required otherwise by local AHJ. Perform bacteriological and chemical contaminant testing in accordance with IPC and submit test results to Engineer and local AHJ.

C. PIPING TESTS:

1. General: Provide temporary equipment for testing, including pumps and gages. Test piping system before insulation is installed wherever feasible and remove control devices before testing.
2. Test each natural section of each piping system independently, but do not use piping system valves to isolate sections where test pressure exceeds valve pressure rating. Fill each section with water and pressurize for the indicated pressure and time.
3. Test piping installations and backflow preventers in accordance with IPC Section 312. Coordinate testing with local AHJ.
4. Repair piping systems sections which fail the required piping tests by disassembly and reinstallation, using new materials to the extent required to overcome leakage. Do not use chemicals, stop-leak compounds, mastics or other temporary repair methods.

D. PIPING DISINFECTION

1. Disinfect potable water supply piping in accordance with IPC Section 610 or as required otherwise by local AHJ. Perform bacteriological and chemical contaminant testing in accordance with IPC and submit test results to Engineer and local AHJ.

E. HANGERS AND SUPPORTS:

1. Proceed with the installation of hangers, supports and anchors only after the required building structural work has been completed in areas where work is to be installed. Correct inadequacies including (but not limited to) the proper placement of inserts, anchors and other building attachments.

F. BUILDING ATTACHMENTS INSTALLATION:

1. Install building attachments at the required locations within concrete or onto structural steel for proper piping support. Space attachments within the maximum piping span length indicated in MSS SP-69 and IPC. Install additional building attachments where support is required for additional concentrated loads, including valves, flanges, guides, strainers, expansion joints, and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten insert securely to forms. Where concrete with compressive strength less than 2500 psi is indicated, install reinforcing bars through the openings at the top of inserts. Prior to placing concrete, install nut in insert and screw threaded rod thru nut until rod is firmly against top of the insert body.

G. HANGERS AND SUPPORTS INSTALLATION:

1. General: Install hangers, supports, clamps and attachments to support piping properly from the building structure; comply with MSS SP-69. Arrange for grouping of parallel runs of horizontal piping to be supported together on trapeze type hangers where possible. Install supports with the maximum spacing complying with MSS SP-69. Where piping of various sizes is to be supported together with trapeze hangers, space hangers for smallest pipe size or install intermediate supports for smaller diameter pipe. Do not use wire of perforated metal to support piping, and do not support piping from other piping.
2. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers and other accessories. Except as otherwise indicated for exposed continuous pipe runs, install hangers and supports of the same type and style as installed for adjacent similar piping.
3. Provide additional steel as required to span structural members for intermediate support of piping required between structural framing members. ALL piping shall be supported from structural framing members only. Coordinate all work with other trades.
    a. Do not fasten or anchor work to concrete floor deck except where individually approved by Structural Engineer and Architect.
    b. Do not fasten or anchor any work directly to metal roof deck.
    c. Prevent electrolysis in support of copper tubing by the use of hangers and supports which are copper plated, or by other recognized industry methods.
    d. Provisions for movement:
        1) Install hangers and supports to allow controlled movement of piping systems and to permit freedom of movement between pipe anchors, and to facilitate the action of expansion joints, expansion loops, expansion bends and similar units.
        2) Load Distribution: Install hangers and supports so that piping live and dead loading and stresses from movement will not be transmitted to connected equipment.

3) Pipe Slopes: Install hangers and supports to provide the indicated pipe slopes, and so that maximum pipe deflections allowed by ANSI B3I are not exceeded.

e. Insulated Piping: Comply with the following installation requirements:

1) Saddles/Shields: Where low compressive strength insulation of vapor barriers are indicated on piping, install coated protective shields at all hanger locations.

H. PIPE GUIDE INSTALLATION:

1. Install pipe guides complying with the manufacturer's published product literature. Where not otherwise indicated, install pipe guides on each side of expansion loops.

I. PIPING ANCHORS INSTALLATION:

1. Install anchors at the proper location to prevent stresses from exceeding those permitted by ANSI B3I, and to prevent the transfer of loading and stresses to connection equipment.
   a. Fabricate and install anchor by welding steel shapes, plates and bars to the piping and to the structure. Comply with ANSI B3I and with AWS standards.
   b. Anchor Spacings: Where not otherwise indicated, install anchors at the ends of principal pipe runs, at intermediate points in pipe runs between expansion loops and bends. Make provisions for preset of anchors as required to accommodate both expansion and contraction of piping.

J. ADJUSTMENT OF HANGERS AND SUPPORTS:

1. Adjust hangers and supports and place grout as required under floor mounted supports to bring piping to proper levels and elevations.

K. VALVE INSTALLATION:

1. General: Except as otherwise indicated, comply with the following requirements:
   a. Install valves where required for proper operation of piping and equipment, including valves in branch lines where necessary to isolate sections of piping. Locate valves so as to be accessible and so that separate support can be provided when necessary.
   b. Install valves with stems pointed up, in the vertical position, where possible, but in no case with stems pointed downward from a horizontal plane unless unavoidable. Install valve drains with hose-end adapter for each valve that must be installed with stem below horizontal plane.
   c. Insulation: Where insulation is indicated, install extended stem valves, arranged in the proper manner co receive insulation.
   d. Applications Subject to Shock; Install valves with bodies of metal other than cast iron where thermal or mechanical shock is indicated or can be expected to occur.
   e. Applications Subject to Corrosion: Do not install bronze valves and valve components in direct contact with steel, unless the bronze and steel are separated by a dielectric insulator. Install bronze valves in steam and condensate service and in other services where corrosion is indicated or can be expected to occur.

f. OS&Y Valve Stem: Select and install gate valves with outside screw and yoke stems, except provide inside screw non-rising stem valves where headroom prevents full opening of OS&Y valves.

g. Non-Metallic Disc: Limit the selection and installation of valves with non-metallic discs to locations indicated and where foreign material in the piping system can be expected to prevent tight shut off of metal seated valves.

h. Renewable Seats: Select and install valves with renewable seats, except where frequent usage of the valves is indicated.

L. STRAINER INSTALLATION

1. Y-Type Strainers: Install Y-type strainers full size of pipeline, in accordance with manufacturer's installation instructions. Install pipe nipple and shutoff valve in strainer blow down connection, full size of connection, except for strainers 2" and smaller installed ahead of control valves feeding individual terminals. Where indicated, provide drain line from shutoff valve to plumbing drain, full size of blow down connection.
2. Locate Y-type strainers in supply line ahead of the following equipment, and elsewhere as indicated, if integral strainer is not included in equipment:
   a. Pumps.
   b. Temperature control valves.
   c. Pressure reducing valves.
   d. Temperature or pressure regulating valves.

M. Provide non-conducting dielectric connections wherever jointing dissimilar metals.

N. Route piping in orderly manner and maintain gradient. Route parallel and perpendicular to walls.

O. Install piping to maintain headroom, conserve space, and not interfere with use of space.

P. Group piping whenever practical at common elevations.

Q. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment. Refer to Section 22 0516.

R. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings. Refer to Section 22 0719.

S. Provide access where valves and fittings are not exposed. Coordinate size and location of access doors with Section 08 3100.

T. Establish elevations of buried piping outside the building to ensure not less than four ft of cover.

U. Install vent piping penetrating roofed areas to maintain integrity of roof assembly. Coordinate all requirements with roof installer. Install vent piping penetrations in existing roof assemblies in accordance with all requirements of the roof manufacturer to maintain existing roof warranty.

V. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding.

W. Provide support for utility meters in accordance with requirements of utility companies.

X. Prepare exposed, unfinished pipe, fittings, supports, and accessories ready for finish painting. Refer to Section 09 9000.

Y. Install bell and spigot pipe with bell end upstream.

Z. Install valves with stems upright or horizontal, not inverted.

AA. Pipe vents from gas pressure reducing valves to outdoors and terminate in weather proof hood.

BB. Install water piping to ASME B31.9 and IPC requirements.

CC. PVC Pipe: Make solvent-welded joints in accordance with ASTM D 2855.

DD. Sleeve pipes passing through partitions, walls and floors.

3.4 APPLICATION

A. Install unions downstream of valves and at equipment or apparatus connections.

B. Install brass male adapters each side of valves in copper piped system. Solder adapters to pipe.

C. Install ball valves for shut-off and to isolate equipment, part of systems, or vertical risers.

D. Provide spring loaded check valves on discharge of water pumps.

E. Provide plug valves in natural gas systems for shut-off service in piping systems larger than 2".

F. Provide ball valves with lever handles in natural gas systems for equipment shutoff valves.

G. Provide flow controls in water recirculating systems where indicated. Balance recirculation system to achieve timely delivery of hot water to all plumbing fixtures in accordance with IECC and local Health Department requirements.

3.5 DISINFECTION OF DOMESTIC WATER PIPING SYSTEM

A. Disinfect water distribution system in accordance with IPC, AWWA, or other method as directed by Local A.H.J. Where sanitizing procedure is not specified by local codes follow the procedure below.

1. Prior to starting work, verify system is complete, flushed and clean.
2. Ensure Ph of water to be treated is between 7.4 and 7.6 by adding alkali (caustic soda or soda ash) or acid (hydrochloric).
3. Inject disinfectant, free chlorine in liquid, powder, tablet or gas form, throughout system to obtain 50 to 80 mg/L residual.
4. Bleed water from outlets to ensure distribution and test for disinfectant residual at minimum 15 percent of outlets.
5. Maintain disinfectant in system for 24 hours.
6. If final disinfectant residual tests less than 25 mg/L, repeat treatment.
7. Flush disinfectant from system until residual equal to that of incoming water or 1.0 mg/L.
8. Take samples no sooner than 24 hours after flushing, from 10 percent of outlets and from water entry, and analyze in accordance with AWWA C651.

3.6 SERVICE CONNECTIONS

A. Provide new sanitary and storm sewer connections as noted on plans. Before commencing any work check invert elevations required for sewer connections, confirm inverts and ensure that these can be properly connected with slope for drainage and minimum cover as required by AHJ.

B. Provide new domestic water service complete with approved backflow preventer and pressure reducing valves. Provide water service entrance piping installations in accordance with all requirements of local municipal Water Authority.

C. Provide connection to new gas service from meter outlet and extend to equipment as noted on plans. P.C. shall provide 6"thick concrete meter base pad, required size shall be verified with gas utility company. P.C. shall arrange for and coordinate all details of gas service connection with G.C. and local gas utility company including verification of delivery pressure and total connected load of all submitted equipment. P.C. shall notify design team if delivery pressure is different than pressures documented on design drawings prior to installation of regulators and final service connection. P.C. shall verify all specific requirements of the gas utility and provide all requirements in accordance with utility requirements including but not limited to: line pressure gas regulator requirements, overpressure protection, testing, and identification of piping and specialties.

END OF SECTION 22.1005

SECTION 22.1006 - PLUMBING PIPING SPECIALTIES

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Automatic Clothes Washing Machine Connection
B. Backflow preventers.
C. Backwater Valves
D. Cleanouts.
E. Floor drains.
F. Floor Sinks
G. Fresh air inlet
H. Gas Pressure Regulators
I. Hose bibbs.
J. Hydrants.
K. Cold Water Hose Reels.
L. Pressure reducing valves
M. Roof Drains
N. Shock Absorbers/Water hammer arrestors.
O. Thermostatic mixing valves.
P. Trench Drains
Q. Washdown Connection Box
R. Water Outlet Connection Box

1.2 RELATED REQUIREMENTS

A. Section 22 0100 - General Provisions
B. Section 22 1005 - Plumbing Piping.
C. Section 22 3000 - Plumbing Equipment.
D. Section 22 4000 - Plumbing Fixtures.

1.3 REFERENCE STANDARDS

A. ASME A112.6.3 - Floor and Trench Drains; The American Society of Mechanical Engineers; 2001 (R2007).
B. ASME A112.6.4 - Roof, Deck, and Balcony Drains; The American Society of Mechanical Engineers; 2003.

C. ASSE 1011 - Hose Connection Vacuum Breakers; American Society of Sanitary Engineering; 2004 (ANSI/ASSE 1011).

D. ASSE 1012 - Backflow Preventer with Intermediate Atmospheric Vent; American Society of Sanitary Engineering; 2009 (ANSI/ASSE 1012).

E. ASSE 1013 - Reduced Pressure Principle Backflow Preventers and Reduced Pressure Principle Fire Protection Backflow Preventers; 2011

F. ASSE 1019 - Performance Requirements for Wall Hydrant with Backflow Protection and Freeze Resistance; 2011

G. IBC - ICC - International Building Code

H. IPC - ICC - International Plumbing Code

I. IFGC - ICC - International Fuel Gas Code

J. NSF 61 - Drinking Water System Components - Health Effects; 2014 (Errata 2015)

K. NSF 372 - Drinking Water System Components - Lead Content; 2011

L. PDI-WH 201 - Water Hammer Arresters; Plumbing and Drainage Institute; 2006.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's data for all Piping Specialty specified herein and on the Plumbing Drawings. Clearly indicate exact models/model number, options, and accessories to be provided for each product. Submittals shall clearly indicate applications where the submitted product is to be used. Manufacturer data shall indicate, material of construction, applicable standards and listings, design pressure and ratings, etc.

C. Maintenance Data: Submit maintenance data and spare parts lists for each Piping Specialty. Include this data in Maintenance Manual.

D. Review of submittals which do not clearly indicate the information noted above may be delayed or Rejected due to lack of clarity or information. Generic catalog sheets with no indication of options, accessories, or model to be provided will be Rejected without further review.

E. Manufacturer's Instructions: Indicate Manufacturer's Installation Instructions: Indicate assembly and support requirements.

F. Project Record Documents: Record actual locations of equipment, cleanouts, backflow preventers, water hammer arrestors .

G. Operation Data: Indicate frequency of treatment required for interceptors.

H. Maintenance Data: Include installation instructions, routine maintenance instructions, spare parts lists, exploded assembly views.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with not less than three years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Accept specialties on site in original factory packaging. Inspect for damage.

1.7 EXTRA MATERIALS

A. See Section 01 6000 - Product Requirements, for additional provisions.

B. Supply the following for Owner's use in maintenance of project:

1. Two loose keys for outside hose bibbs.
2. Two hose end vacuum breakers for hose bibbs.
3. One service kit for each type/style and size of backflow preventer.
4. One service kit for each type/style and size of pressure reducing valve.
5. Two service kits for each type/style and size of hydrant/washdown box, etc.
6. One replacement valve for every 10 of each type/style and size of point of use Thermostatic mixing valve
7. One service kit for each type/style and size of Master Mixing Thermostatic mixing valve
8. One replacement water hammer arrestor for every 10 of each type/style and size of water hammer arrestor
9. One service kit for each backwater valve.

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS

A. Specialties installed within Potable Water Supply Systems: Provide "Lead Free" products that comply with NSF 61 and NSF 372 for maximum lead content.

2.2 AUTOMATIC CLOTHES WASHING MACHINE CONNECTION

A. Box Manufacturers:

1. Guy Gray Corporation:
2. IPS Corporation/Water-Tite: www.ipscorp.com.
3. Oatey: www.oatey.com.
4. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. (AWC-1) Washing Machine Connection Box w/Water Hammer Arrestors and Preformed Drain Outlet

1. PVC preformed rough-in box with brass valves with single lever handle and water hammer arrestors, socket for 2 inch waste, slip in finishing cover.
2. Basis of Design: IPS Watertite 85708

2.3 BACKFLOW PREVENTERS

A. Manufacturers:

1. Ames Co. Fluid Control Systems: www.amesfirewater.com
2. Conbraco Industries: www.conbraco.com.
3. Watts Regulator Company: www.wattsregulator.com.
4. Wilkin/Zurn Industries, Inc: www.zurn.com.

5. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. Service Entrance - Double Check Assembly Backflow Preventer (2½"-10")

1. ASSE 1015, USC-Manual for Cross-Connection Control 8th Edition, UL Listed; FDA Epoxy coated cast iron body with stainless steel seats and stainless steel springs; two independently operating, spring loaded check valves; assembled with two OS&Y gate valves, inlet strainer, and four test cocks.
   a. Watts Model LF709-OSY-S or approved equal

C. Service Entrance - Reduced Pressure Zone Backflow Preventers (2-1/2"-10"):

1. ASSE 1013; FDA epoxy coated cast iron body with stainless steel internal parts and stainless steel springs; two independently operating, spring loaded check valves; diaphragm type differential pressure relief valve located between check valves; third check valve that opens under back pressure in case of diaphragm failure; non-threaded vent outlet; assembled with two OS&Y gate valves, strainer, air gap fitting, and four test cocks.
   a. Watts Model LF909- OSY/S-FDA (2-1/2"-10") w/series 909AG air gap fitting or approved equal.

D. Reduced Pressure Zone Backflow Preventers (3/4"-2"): Boiler makeup water, mechanical equipment, and irrigation water connections, etc.

1. ASSE 1013; Lead free, cast copper/bronze body with bronze internal parts and stainless steel check springs; two independently operating, spring loaded check valves; diaphragm type differential pressure relief valve located between check valves; third check valve that opens under back pressure in case of diaphragm failure; non-threaded vent outlet; assembled with two quarter turn ball valves, strainer, air gap fitting, and four test cocks.
   a. Watts Model LF909-QT-S (3/4"-1") w/series 909AG air gap fitting or approved equal
   b. Watts Model LF909-M1-QT-S (1¼"-2") w/series 909AG air gap fitting or approved equal

E. Double Check Backflow Preventers (1/4"-2"):

1. ASSE 1015; bronze body with bronze internal parts and stainless steel springs; two independently operating, spring loaded check valves; assembled with two quarter turn ball valves, strainer, and four test cocks.
   a. Watts Model S-QT-LF007 or approved equal

F. Beverage Dispenser Connection Backflow Preventers (1/4"-3/8"):

1. ASSE 1022; NSF; Dual Check w/atmospheric vent, 316SS body and adapters; two independently operating check valves w/atmospheric vent, strainer.
   a. Watts Model SD-3 w/strainer or approved equal
2. Pipe atmospheric vent to visible air gap discharge
3. All downstream piping to beverage dispenser shall be 316SS (no copper permitted)

G. Ice Machine Connection Backflow Preventers (1/4"-1")

1. Dual Check , straight line, poppet-type construction to minimize pressure drop, all copper construction, double unions for installation, chloramine resistant materials of construction.
   a. Watts Model LF7, or approved equal.

H. Refrigerator mounted Ice Maker/Water Dispenser Machine Connection Backflow Preventers (1/4"-1/2")

1. Dual Check , straight line, poppet-type construction to minimize pressure drop, all copper construction, double unions for installation, chloramine resistant materials of construction.
   a. Watts Model LF7, or approved equal.

2.4 BACKWATER VALVES

A. Manufacturers:

1. RectorSeal; www.rectorseal.com.
2. Mainline; www.backwatervalve.com
3. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. (BWV) Backwater Valve:

1. PVC body, extension collar, PVC flapper replaceable from grade
2. Extension collar length as required to extend to grade
3. Inspection cover and collar. provide manufacturers inspection lid/collar
4. H20 rated heavy duty cast iron access cover and frame in concrete collar. Refer to details.
5. Basis of Design: Rectorseal Clean Check backwater valve with Neenah Foundry Model 1815 cover.

2.5 CLEANOUTS

A. Manufacturers:

1. Jay R. Smith Manufacturing Company; www.jayrsmith.com.
2. Josam Company: www.josam.com.
3. Zurn Industries, Inc.: www.zurn.com.
4. Mifab Drainage Products: www.zurn.com.
5. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. (CTG) Cleanouts to Grade (exterior areas):

1. Round, flanged cast iron housing and heavy duty scoriated cast iron cover.
2. Refer to plans for locations and details of installation.
3. Basis of design J.R. Smith Model 4250/4261 series with top finish as required by Architect:
   a. Outlet Connection style/type to be determined by contractor.

C. (FCO) Cleanouts at Interior Finished Floor Areas:

1. Lacquered cast iron body with flashing flange, threaded ABS plug assembly, and round Nickel Bronze cover. Cover shall be scoriated in service areas, round recessed cover to accept floor finish in terrazzo and similar floor areas, and carpet marker type for units installed in carpeted areas (refer to Architectural floor finish plans for additional information).
2. Basis of design: J.R. Smith Model 4020/4031/4025 series with cover style/finish as required by final floor finish (Outlet connection type as determined by P.C)
3. Basis of design J.R. Smith Model 4100 series (Heavy Duty Traffic Areas)(Outlet connection type as determined by P.C)

D. (FCO) Cleanouts Boiler Room/Mechanical Room Floor Areas:

1. Lacquered cast iron body with anchor flange, threaded ABS plug assembly, and round Nickel Bronze cover. Cover shall be scoriated in service areas.

2. Basis of design: J.R. Smith Model 4100/4111/4105 series (Outlet connection type as determined by P.C)

E. (FCO) Cleanouts at Interior Finished Floor Area (Resilient Sheet Flooring)

1. Lacquered cast iron body with anchor flange, reversible clamping collar, threaded ABS plug assembly, and round gasketed cover with surface membrane clamp . (See documents for additional information).
2. Basis of Design: J.R. Smith Model: 4023

F. (WCO) Cleanouts at Interior Finished Wall Areas:

1. Provide Sanitary-T and extension to finish wall construction with Cleanout ferrule, threaded plug and cover. Refer to Plumbing Details for additional information.
2. Cover
   a. Finished Tile walls - Provide w/stainless steel cover
   b. Finished painted walls - Provide with prime coated paintable steel cover

G. Cleanouts at Interior Unfinished Accessible Areas: Calked or threaded type. Provide bolted stack cleanouts on vertical rainwater leaders.

2.6 FLOOR DRAINS

A. Manufacturers:

1. Jay R. Smith Manufacturing Company: www.jayrsmith.com.
2. Zurn Industries, Inc: www.zurn.com.
3. Josam Company: www.josam.com.
4. Mifab Drainage Products: www.zurn.com.
5. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. (CD-1) Floor Mounted Condensate Drain:

1. ASME A112.6.3; lacquered cast iron two piece body with double drainage flange, weep holes, reversible clamping collar, and round, adjustable nickel-bronze strainer with extended anti-splash rim (mount with strainer assembly rim above finished floor elevation to prevent grey water being introduced into condensate drain system.) Provide unit with backwater valve accessory.
   a. Deep Seal P-trap
2. Refer to drawings for locations and system sizes.
3. Basis of Design:
   a. J.R. Smith: Model 2005-F37NB-BFV

C. (FD-1) Floor Drain - General area floor drains, toilet rooms, showers, etc.:

1. ASME A112.6.3; lacquered cast iron two piece body with double drainage flange, weep holes, reversible clamping collar, and round, twist-to-floor adjustable nickel bronze strainer.
   a. Deep seal P-trap
   b. Pro-Set "trap-guard" sewer gas prevention system.
   c. Sediment bucket option in all shower floor drain
2. Refer to drawings for locations and system sizes.
3. Basis of Design:

a. J.R. Smith: Model 2005-NB with 6" round strainer, drain outlet size shall be as indicated on drawings.
b. Zurn: Model ZN415B with 6" round strainer, drain outlet size shall be as indicated on drawings.

D. (FD-2) Floor Drain - Boiler Room Floor Drain: Shallow Sump

1. ASME A112.6.3; lacquered cast iron two piece body with double drainage flange, weep holes, reversible clamping collar, and twist-to-floor adjustable 8" round ductile iron "safe-set" sediment bucket and grate.
   a. Deep Seal P-trap
   b. Pro-Set "trap-guard" sewer gas prevention system
2. Refer to drawings for locations and system sizes.
3. Basis of Design:
   a. J.R. Smith: Model 2350-MBG.

E. (FD-2A) Floor Drain - Boiler Room Equipment Drain - Deep Sump: (Boilers, Water Softener, Blowdown)

1. ASME A112.6.3; Deep body, lacquered cast iron two piece body with double drainage flange, weep holes, reversible clamping collar, and adjustable ductile iron "safe-set" sediment bucket and grate.
   a. Provide Pro-Set "trap-guard" sewer gas prevention system in all floor drains.
2. Refer to drawings for locations and system sizes.
3. Basis of Design:
   a. J.R. Smith: Model 2240 Series.

2.7 FRESH AIR INLET

A. Manufacturers:

1. Jay R. Smith Manufacturing Company: www.jayrsmith.com.
2. Josam Company: www.josam.com.
3. Mifab Drainage Products: www.zurn.com.
4. Zurn Industries, Inc: www.zurn.com.
5. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. (FAI) Fresh Air Inlet

1. Round perforated pipe cover with Polished Nickel Bronze finish and vandal proof screws, pipe clamp with set screw
2. Basis of Design:
   a. J.R. Smith: Model 9005.

2.8 GAS PRESSURE REGULATORS

A. Acceptable Manufacturer:

1. Fisher Controls - Proconex; Proconexdirect.com
2. Pietro Fiorentini - Accardi Companies; accardicompanies.com

B. Line Pressure Regulators General requirements

1. Type: Single stage, fast acting, lockup type, suitable for natural gas service, steel jacket, and corrosion resistant components.
2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
6. Orifice: Aluminum; interchangeable.
7. SealPlug: Ultraviolet-stabilized,mineral-fillednylon.
8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to regulator.
9. Pressure regulator shall maintain discharge pressure setting downstream during lockup no flow condition. Token relief valve to limit downstream pressure during no flow condition
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless steel screen in opening if exterior installation not connected to vent piping.
12. Approvals: Comply with ANSI 221.80. Comply with requirements of Gas Utility Company
13. Design Basis: Refer to Regulator Schedule on Plumbing drawings for additional requirements and design parameters.

2.9 HOSE BIBBS

A. Manufacturers:

1. Jay R. Smith Manufacturing Company: www.jayrsmith.com.
2. Josam Company: www.josam.com.
3. Woodford
4. Watts Regulator Company: www.wattsregulator.com.
5. Zurn Industries, Inc: www.zurn.com.
6. Mifab Drainage Products
7. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. (HB-1) Interior Hose Bibbs:

1. Chrome Plated Bronze or brass with integral wall flange, replaceable hexagonal disc, hose thread spout, interchangeable handwheel and loose key operation, dual check with atomospheric vent in conformance with ASSE 1052
2. Basis of Design: Woodford Model 26P

2.10 NON FREEZE WALL HYDRANT

A. Manufacturers:

1. Josam Company: www.josam.com.
2. Jay R. Smith Manufacturing Company: www.jayrsmith.com.
3. Zurn Industries, Inc: www.zurn.com.
4. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. (NFWH-1) Enclosed Non-Freeze Wall Hydrants (Cold Water):

1. ASSE 1019-B, ASSE 1052, ASSE 1053; freeze resistant, box type, self-draining type with bronze quarter turn Non-freeze automatic draining hydrant with Stainless Steel face, adjustable wall

clamp, hose connection, Integral vacuum Breaker and Dual check valve, "T" hnadle key, wheel handle and Stainless Steel Box with Full 180 deg. cover opening w/cylinder lock.

2. Installation Height: Approx.. 24" above grade (totally within same color masonry) Coordinate exact locations and elevations with architect prior to rough-in.
    a. Basis of Design: Jay R. Smith Manufacturing Company; Model 5519-WC-CL (barrel shall extend minimum 6" into heated side of exterior wall, verify wall thicknessand required barrel length in field)

2.11 COLD WATER HOSE REELS

A. Manufacturers:

1. Graco: www.graco.com
2. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. (HR-1) HOSE REEL AND ACCESSORIES – WATER

1. Ceiling or wall mounted hose reel: consists of a spring driven retractable hose reel with maximum 300 psi pressure, complete with 50 foot of 3/4" pressure hose and mounting bracket.
    a. Provide all required support steel for mounting. Coordinate in field with building structural steel supplier.
    b. Hose reel shall be GRACO XD30 Series Model HSLD5B or approved equal.
2. Accessories
    a. Connecting hose and swivel inlet fitting: GRACO Model 24E248
    b. Fluid hose label: GRACO (WATER)
3. Reel Mounting Hardware: - Reel mounting bracket
    a. GRACO Model: 204741 I beam channel mounting bracket

2.12 PRESSURE REDUCING VALVES

A. Manufacturers:

1. Watts
2. Wilkins
3. Zurn
4. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. (PRV-1) Water Pressure Reducing Valve shall be installed on the water service pipe near entrance to the building where supply main pressure exceeds 60 psi.

1. Enlarged diaphragm, spring cage and seat orfice, flanged inlet and flange outlet with strainer
2. Iron Body constrcuiont
3. Stainless Steel Piston
4. Basis of Design:
    a. Watts LFN223FS

C. (PRV-2) Water Pressure Reducing Valve

1. Sealed spring cage and stainless steel corrosion resistant adjusting & cage screws
2. Union inlet conneciton

3. Integral stainless steel strainer
4. Replaceable seat module
5. Lead free cas copper silicon alloy construction
6. Basis of Design:
    a. Watts LF25AUB-Z3

2.13 ROOF DRAINS AND ACCESSORIES

A. Manufacturers (for all drainage products):

1. Jay R. Smith Manufacturing Company: www.jayrsmith.com.
2. Josam Company: www.josam.com.
3. Mifab Drainage Products: www.zurn.com.
4. Zurn Industries, Inc: www.zurn.com.
5. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. (RD-1) Roof Drains - General Large Area Drains:

1. Refer to Architectural Drawings for locations and Plumbing drawings for connection sizes
2. Assembly: ASME A112.6.4.
3. Body: Lacquered cast iron with sump, outlet size as noted on plumbing drawings, connection style as required for connection to rainwater piping (Note: provide with threaded outlet in locations requiring quick turn outlet elbow)
4. Strainer: Removable cast iron dome with vandal proof screws.
5. Accessories: Coordinate with roofing type.
    a. Membrane flange and membrane clamp with integral gravel stop.
    b. Adjustable under deck clamp. (Top deck mount plate acceptable in lieu of sump reciever and under deck clamp - Contractor to indicate chosen options on submittals)
    c. Roof sump receiver. (Top deck mount plate acceptable in lieu of sump reciever and under deck clamp - Contractor to indicate chosen options on submittals)
    d. Waterproofing flange.
    e. Fixed Height non-puncturing extension sleeve for built up roof insulation.(verify required extension height in field)
    f. Quick turn elbow (where required for tight structural clearances, canopy areas etc.) JR Smith fig.# 2648S
6. Basis of Design:
    a. J.R.Smith: Model 1010-Extension-R-C-CID-1710.

C. (RD-2) Roof Drains - Terrace Low Profile Drains:

1. Refer to Architectural Drawings for locations and Plumbing drawings for connection sizes
2. Assembly: ASME A112.6.4.
3. Body: Lacquered cast iron with sump, outlet size as noted on plumbing drawings, connection style as required for connection to rainwater piping (Note: provide with threaded outlet in locations requiring quick turn outlet elbow)
4. Strainer: Removable 2-1/2 in. low profile cast iron dome with vandal proof screws.
5. Accessories: Coordinate with roofing type.
    a. Membrane flange and membrane clamp with integral gravel stop.

b. Adjustable under deck clamp. (Top deck mount plate acceptable in lieu of sump reciever and under deck clamp - Contractor to indicate chosen options on submittals)
c. Roof sump receiver. (Top deck mount plate acceptable in lieu of sump reciever and under deck clamp - Contractor to indicate chosen options on submittals)
d. Waterproofing flange.
e. Fixed Height non-puncturing extension sleeve for built up roof insulation.(verify required extension height in field)
f. Quick turn elbow (where required for tight structural clearances, canopy areas etc.) JR Smith fig.# 2648S

6. Basis of Design:
   a. J.R.Smith: Model 1010-LPDM-Extension-R-C-CID-1710.

D. (ERD-1) Emergency Roof Drains: Standpipe Type

1. Refer to Architectural Drawings for locations and Plumbing Drawings for connection sizes.
2. Lacquered cast iron body and clamp collar and bottom clamp ring; internal PVC dam extended to 4 inches above flood elevation, outlet size as noted on plumbing drawings, connection style as required for connection to rainwater piping
3. Assembly: ASME A112.6.4.
4. Body: Lacquered cast iron with sump.
5. Strainer: Removable cast iron dome with vandal proof screws.
6. Accessories: Coordinate with roofing type.
   a. Membrane flange and membrane clamp with integral gravel stop.
   b. Adjustable under deck clamp. (Top deck mount plate acceptable in lieu of sump reciever and under deck clamp - Contractor to indicate chosen options on submittals)
   c. Roof sump receiver. (Top deck mount plate acceptable in lieu of sump reciever and under deck clamp - Contractor to indicate chosen options on submittals)
   d. Waterproofing flange.
   e. Fixed Height non-puncturing extension sleeve for built-up roof insulation.(verify required extension height in field)
7. Basis of Design:
   a. J.R.Smith: Model 1070-Extension-R-C-CID-1710

E. (ERO-1) Emergency Rainwater Outlet Nozzles:

1. Nickel bronze round nozzle with spout and wall flange
2. Bird screen
3. Basis of Design:
   a. J.R. Smith Model 1770-BS, size to match pipe system.
4. Installation Note:
   a. Install Totally within the same type/color masonry, coordinate exact mounting height with architect in field prior to installation.

2.14 SHOCK ABSORBERS/WATER HAMMER ARRESTORS

A. Manufacturers:

1. Jay R. Smith Manufacturing Company: www.jayrsmith.com.

2. Josam Company: www.josam.com.
3. Sioux Chief: www.siouxchief.com.
4. Zurn Industries, Inc: www.zurn.com.
5. Mifab Drainage Products.
6. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. Water Hammer Arrestors:

1. Stainless steel construction, Bellows type or Piston type sized in accordance with PDI-WH 201, precharged suitable for operation in temperature range -100 to 300 degrees F and maximum 250 psi working pressure.

2.15 THERMOSTATIC MIXING VALVES

A. Manufacturers:

1. Acorn Engineering: T/P with Paraffin actuator.
2. Powers Valves: T/P with Paraffin actuator.
3. Zurn Industries/Wilkins: (Approved For Lavatory Tempering valves)
4. Watts: (Approved For Lavatory Tempering valves)
5. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.

B. Lavatory Mixing Valves:

1. Temperature and pressure regulating Under-the-Counter combination tempering valves for temperature control to ASSE 1070 down to 0.5gpm. Maximum temperature setting 110°F.
   a. Powers Series LFE480 must be rated for minimum flow of 0.5 gpm.
   b. Zurn; Aquaguard Model ZW3870XLT (single temp faucet), ZW3870XLT-4P (dual temp faucet)

C. (MMV) Master Mixing Valves for Larger Flow Capacities and Domestic Water Heaters:

1. Single Hi-Lo Temperature and pressure regulating combination tempering valves for temperature control to ASSE 1017, paraffin actuator, dirt resistance seat design rotatable triple duty checkstops on inlets, rough bronze finish, w/combination temperature/pressure gauge on outlet.
   a. (MMV-#) at DWH-1: Powers LFSH1432-11, 27 gpm capacity @ 10 psi. pressure drop. ASSE 1017 rated down to 1gpm

D. (ETV-1) Emergency Eyewash / Drench Hose Mixing Valves:

1. Advanced thermal actuators, internal cold water bypass (ensures cold water flow in the event of loss of hot water), meets ASSE 1071, vandal-resistant locking mechanism to secure temperature setting, factory tested, union triple-duty checkstops, rough bronze or chrome finishes, temperature gauge on outlet.
   a. Powers HydroGuard Series Emergency Tempering Valve with Dual Internal Cold Water Bypass: Model ES-150-11 Series

2.16 TRENCH DRAINS

A. Acceptable Manufacturers

1. Jay R. Smith Manufacturing Company: www.jayrsmith.com.

2. Josam Company: www.josam.com.
3. Zurn Industries, Inc: www.zurn.com.
4. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. (TD-1) Garage Drain

1. Channels: 6" wide x 1 meter long presloped Polypropylene channels w/interlocking channels, radiused bottom, integral rebar support, and ductile iron frame with concrete frame anchors and ductile iron grate - (continuous lengths exceeding 15 meters may use alternating sloped/non-sloping channels, total quantity of channels and channel models as required to achieve length indicated on Plumbing Floor Plans drawings and Plumbing Details drawings.)
   a. Basis of Design: J.R.Smith Model 9931 series Enviroflow Trench Drain System
2. Grate: Slotted Ductile Iron, ADA compliant, quicklock securing device, with steel rails
   a. Basis of Design: JR Smith Fig No. 9870-478-MADA
3. Catch Basin: Polypropylene molded catch basin with 4 inch and 6 inch preformed no hub outlet connection, ductile iron frame, galvanized concrete anchors, and secured grate, Plastic sediment bucket.
   a. Basis of Design: JR Smith Fig. No. 9936-BP
4. Required Accessories:
   a. Closing end caps (as required per layout drawing)
   b. Adjustable trench installation supports. (quantity as required for recommended installation procedure - all thread rod with nuts and washers secured to integral rebar support)
   c. P-Trap and floor cleanout on outlet of catch basin
5. Coordinated Drawing - Trench drain Manufacturer/Supplier shall provide dimensioned drawing of coordinated trench drain layout to be included in product submittal. Layout shall include coordinated outlet locations, channel layout construction, all required accessories including endcaps, etc., and installation guides.
6. Installation: P.C. shall install trench drains in accordance with all manufacturer's recommendations. P.C. shall employ the services of the manufacturers representative to assist in installation as required and to make a minimum of one site visit to inspect installation prior to concrete pour.

2.17 WASHDOWN CONNECTION BOX

A. Manufacturers:

1. Acorn Engineering: www.acorneng.com
2. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. (WB-1) Toilet Room/Locker Room Washdown Connection Box - Single Temperature

1. 304SS box, removable door with keyed cylinder lock, lead free stainless steel valve body and stop. 3/4in. Cold supply connection, 3/4" NPSH hose thread outlet connection with integral vacuum breaker, removable loose key wheel handle cartridge operated stop valve w/screwdriver stops.
2. Basis of Design: Acorn Engineering Model 8151-SSLF

2.18 WATER OUTLET CONNECTION BOX

A. Manufactures:

1. Guy Gray Corporation:
2. IPS Corporation/Water-Tite: www.ipscorp.com.
3. Oatey: www.oatey.com.
4. Substitutions: Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. (WCB-1) Water Connection Box (Refrigerator, Small Icemaker, Coffe, etc.)

1. Round ice maker outlet box with preloaded mounting nails and lead free valve with integral hammer arrester.
2. Valves comply with ASME A112.18.1.
3. Hammer arresters comply with ASSE 1010
   a. Basis of Design: IPS Model AB9200HA (SWEAT)
   b. Basis of Design: IPS Model AB9211HA (PEX-a)

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install all plumbing specialties in accordance with manufacturer's instructions.

B. Roof drains

1. Review Summary of Multiple Contracts for responsibilities for furnishing, and installing roof drains. Where not specifically noted otherwise in the Summary of Multiple Contract, P.C. shall furnish and install roof drains and coordinate roof drains and roof drain installation with roofing installer.
2. Install roof drains in accordance with manufacturers installation instructions and in accordance with roofing manufacturer's recommendations to maintain full warranty of finished roofing installation. Coordinate all requirements with roofing installer prior to order/installation of drains.

C. Emergency Rainwater Outlet Nozzles

1. Unless noted otherwise emergency rainwater drainage piping shall extend down within building and penetrate exterior wall approx. 18"-24" above finish grade, and terminate with emergency drain outlet nozzle as specified in this section. Coordinate exact mounting height with architect in field prior to installation.
2. Install emergency drain outlets totally within the same type/color of exterior finish material/masonry, coordinate exact mounting height with architect in field prior to installation.

D. Cleanouts

1. Extend cleanouts to finished floor or wall surface. Lubricate threaded cleanout plugs with mixture of graphite and linseed oil. Ensure clearance at cleanout for rodding of drainage system.
2. Encase exterior cleanouts in concrete flush with grade.
3. Install floor cleanouts and floor drains at elevation to accommodate finished floor with strainer or cover flush with finish floor.

E. Floor drains

1. Install floor drains at elevation to accommodate finished floor with strainer or cover flush with finish floor unless specifically noted otherwise.
2. Provide Mechanical trap seal protection similar to ProSet Trapguards at all floor drain locations. Where required by Authority Having Jurisdiction, provide trap primers, trap primer connection on drain, and all associated piping to connect trap primer to drain.

F. Floor Sinks

1. Install floor sinks at elevation to accommodate finished floor with strainer or cover flush with finish floor unless specifically noted otherwise or where required to be raised above the finish floor level by the local Health Department or Authority Having Jurisdiction.

G. Backflow preventers

1. Install approved potable water protection devices on plumbing lines as indicated on drawings and where contamination of domestic water may occur; including boiler makeup water lines, chemical mixers within janitor rooms, fire sprinkler systems, irrigation systems, flush valves, interior and exterior hose bibbs. Additional backflow prevention is not required when the connected equipment is provided with integral backflow prevention in accordance with the International Plumbing Code and the equipment is permanently/directly connected to the water supply.
2. Install all backflow preventers in easily accessible location to permit annual testing and maintenance max. 48" above finish floor.
3. Provide pressure gauges on inlet and outlet piping of all backflow preventers.
4. Pipe relief from all RPZ backflow preventers air gap drain fittings to nearest floor drain or approved discharge location.

H. Shock Absorbers / Water Hammer Arrestors

1. Provide water hammer arrestors complete with accessible isolation valve on water supply piping serving with fast closing valves with flow exceeding .5gpm and flush valves (including but not limited to washing machine connection, urinals, and water closet flush valves). Water hammer arrestors shall be sized and located in accordance with PDI guidelines.

I. Non-Freeze Wall Hydrants

1. Install Approx.. 24" above grade (totally within same color masonry) Coordinate exact locations and elevations with architect prior to rough-in.

J. Thermostatic Mixing Valves

1. Install all mixing valves in strict accordance with all manufacturers recommendations and piping installation requirements.
2. Install mixing valves at the proper ASSE rating and capacities where indicated on the drawings and details. Provide mixing valves as specified above at all lavatory and handwash sink locations.

K. Trench Drains

1. Contractor shall install trench drains in accordance with all manufacturer's recommendations. Contractor shall employ the services of the manufacturers representative to assist in installation as required and to make a minimum of one site visit to inspect installation prior to concrete pour.

2. Contractor shall provide all concrete encasement and expansion control as noted on plumbing details and manufacturers installation recommendations.

END OF SECTION 22.1006

SECTION 22.1116 - DOMESTIC WATER DISTRIBUTION PIPING (PEX-A)

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes: Potable hot and cold water distribution system, using crosslinked polyethylene (PEX) tubing and ASTM F1960 cold expansion fittings **as an alternate**.

1. PEX-a tubing only pertains to pipe sizes 2-inch and smaller **as an alternate**.

1.2 RELATED REQUIREMENTS

A. Division 07 - Firestopping

B. Division 09 - Access Doors and Panels

C. Division 09 - Painting

D. Division 31 - Excavation, Fill and Trenching

E. Section 220502 - Excavation, Backfill and Compaction of Utilities

F. Section 220553 - Identification for Plumbing Piping and Equipment.

G. Section 220719 - Plumbing Piping Insulation.

H. Section 220516 - Expansion Fittings and Loops for Plumbing Piping.

I. Section 221006 - Plumbing Piping Specialties

1.3 REFERENCE STANDARDS

A. General: Standards listed by reference, including revisions by issuing authority, form a part of this specification section to the extent indicated. Standards listed are identified by issuing authority, authority abbreviation, designation number, title or other designation established by issuing authority. Standards subsequently referenced herein are referred to by issuing authority abbreviation and standard designation.

B. ASTM International

1. ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials
2. ASTM E119 Standard Test Methods for Fire Tests of Building Construction and Materials
3. ASTM E814 Standard Test Method for Fire Tests of Through-Penetration Fire Stops
4. ASTM F876 Standard Specification for Cross-linked Polyethylene (PEX) Tubing
5. ASTM F877 Standard Specification for Cross-linked Polyethylene (PEX) Plastic Hot- and Cold-Water Distribution Systems
6. ASTM F1960 Standard Specification for Cold Expansion Fittings with PEX Reinforcing Rings for Use with Cross-linked Polyethylene (PEX) Tubing

C. American National Standards Institute (ANSI)/National Sanitation Foundation (NSF)

1. ANSI/NSF Standard 14 Plastics Piping System Components and Related Materials
2. ANSI/NSF Standard 61 Drinking Water System Components - Health Effects

3. ANSI/NSF Standard 359 Valves for Crosslinked Polyethylene (PEX) Water Distribution Tubing Systems

D. American National Standards Institute (ANSI)/Underwriters Laboratories, Inc. (UL)

1. ANSI/UL 263 Standard for Safety for Fire Tests of Building Construction and Materials

E. International Code Council (ICC)

1. International Plumbing Code (IPC)
2. ICC Evaluation Service (ES) Evaluation Report No. ESR 1099

F. International Association of Plumbing Officials (IAPMO)

1. Uniform Plumbing Code (UPC)
2. IAPMO Uniform Evaluation Service (ES) Report No. 0253

G. National Association of Plumbing, Heating and Cooling Contractors (NAPHCC)

1. National Standard Plumbing Code (NSPC)

H. Plastics Pipe Institute (PPI)

1. PPI Technical Report TR-4/06

I. Uponor, Inc.

1. Uponor Piping Pocket Guide, 2017

1.4 SYSTEM DESCRIPTION

A. Design Requirements

1. Standard grade hydrostatic pressure ratings from Plastics Pipe Institute (PPI) in accordance with TR-3 as listed in TR-4. The following three standard-grade hydrostatic ratings are required.
   a. 200°F (93°C) at 80 psi (551 kPa)
   b. 180°F (82°C) at 100 psi (689 kPa)
   c. 73.4°F (23°C) at 160 psi (1,102 kPa)
2. All PEX tubing shall be installed with Uponor PEX-a Pipe Support with a maximum distance of 10” between pipe support pieces. PEX-a Pipe Support shall terminate a maximum of 5” away from the centerline of the adjacent fitting. All PEX-a tubing provided on the project shall be insulated as follows:
   a. Refer to Specification Section 22 0719 Plumbing Piping Insulation

B. Performance Requirements: To provide a PEX tubing hot and cold potable water distribution system, which is manufactured, fabricated and installed to comply with regulatory agencies and to maintain performance criteria stated by the PEX tubing manufacturer without defects, damage or failure.

1. Comply with ANSI/NSF Standard 14.
2. Comply with ANSI/NSF Standard 61.
3. Show compliance with ASTM F877.
4. Show compliance with ASTM E119 and ANSI/UL 263 through certification listings with Underwriters Laboratories, Inc. (UL).
   a. UL Design No. L557 - 1 hour wood frame floor/ceiling assemblies
   b. UL Design No. K913 - 2 hour concrete floor/ceiling assemblies
   c. UL Design No. U372 - 1 hour wood stud/gypsum wallboard wall assemblies

d. UL Design No. V444 - 1 hour steel stud/gypsum wallboard wall assemblies

1.5 SUBMITTALS

A. General: Submit listed submittals in accordance with Conditions of the Contract and Division 1 Submittal Procedures Section.

B. Product Data: Submit manufacturer's product submittal data and installation instructions.

C. Samples: Submit selection and verification samples of tubing.

D. Quality Assurance/Control Submittals: Submit the following:

1. Test Reports: Upon request, submit test reports from recognized testing laboratories.

E. Certificates: Submit the following:

1. Manufacturer's certificate that products comply with specified requirements.
2. Certificate indicating that the installer is authorized to install the manufacturer's products

F. Closeout Submittals: Submit the following:

1. Warranty documents specified herein
2. Operation and maintenance data

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Use an installer with demonstrated experience on projects of similar size and complexity and possessing documentation proving successful completion of PEX plumbing installation training by the PEX tubing manufacturer.

B. Regulatory Requirements and Approvals: Provide domestic potable system that complies with requirements of the following:

1. International Code Conference (ICC) - International Plumbing Code (IPC)
   a. ICC Evaluation Service (ES) Evaluation Report No. ESR 1099

C. Certifications: Provide letters of certification as follows:

1. Installer is trained by the PEX tubing manufacturer to install the PEX potable water distribution system.
2. Installer will use skilled workers holding a trade qualification license or equivalent, or apprentices under the supervision of a licensed trades professional.

1.7 DELIVERY, STORAGE AND HANDLING

A. General: Comply with Division 1 Product Requirement Section.

B. Comply with manufacturer's ordering instructions and lead-time requirements to avoid construction delays.

C. Delivery: Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.

D. Storage and Protection: Store materials protected from exposure to harmful environmental conditions and at temperature and humidity conditions recommended by the manufacturer.

1. Store PEX tubing in cartons or under cover to avoid dirt or foreign material from being introduced into the tubing.
2. Do not expose PEX tubing to direct sunlight for more than 30 days. If construction delays are encountered, provide cover to portions of tubing exposed to direct sunlight.

1.8 WARRANTY

A. Uponor offers a limited warranty of up to 25 years for its AQUAPEX® tubing and ProPEX® Fittings when installed by an Uponor-trained contractor and certified plumbing professional. See www.uponor-usa.com <http://www.uponor-usa.com/> for details in the Customer Service section.

PART 2 - PRODUCTS

2.1 HOT AND COLD POTABLE WATER DISTRIBUTION SYSTEM

A. Manufacturer: Uponor

1. Contact: 5925 148th Street West, Apple Valley, MN 55124; Toll free (800) 321-4739, (952) 891-2000; Fax: (952) 891-2008; website: www.uponor-usa.com <http://www.uponor-usa.com/>
2. Local Representative / Contact: Rich Tomkins Company; (610) 859-3552

B. MATERIALS

1. Tubing
   a. Material: Crosslinked polyethylene (PEX) manufactured by PEX-a or Engel method
      1) Type: Uponor AQUAPEX
   b. Material Standard: Manufactured in accordance with ASTM F876 and ASTM F877 and tested for compliance by an independent third party agency
   c. Standard grade hydrostatic design and pressure ratings from PPI
   d. Fire-rated assembly listings in accordance with ANSI/UL 263
      1) UL Design No. L557 - 1-hour wood frame floor/ceiling assemblies
      2) UL Design No. K913 - 2-hour concrete floor/ceiling assemblies
      3) UL Design No. U372 - 1-hour wood stud/gypsum wallboard wall assemblies
      4) UL Design No. V444 - 1-hour steel stud/gypsum wallboard wall assemblies
   e. Minimum Bend Radius (cold bending): No less than six times the outside diameter. Use a bend support as supplied by the PEX tubing manufacturer for tubing with a bend radius less than stated.
      1) Uponor Metal Bend Support #A5110xxx
      2) Uponor Plastic Bend Support #A5xxxxxx (see installation notes below)
      3) Nominal Inside Diameter: Provide tubing with nominal inside diameter, in accordance with ASTM F876 as indicated.
         (a) ½ inch [12.7mm]
         (b) ¾ inch [19.05mm]
         (c) 1 inch [25.4mm]
         (d) 1¼ inch [31.75mm]
         (e) 1½ inch [38.1mm]

(f) 2 inch [50.8mm]

f. Fittings
1) Material: Fitting assembly is manufactured from material listed in paragraph 5.1 of ASTM F1960.
2) Material Standard: Comply with ASTM F1960.
3) Expansion Fitting: PEX-a cold expansion fitting.
(a) Assembly consists of the appropriate ProPEX insert with a corresponding ProPEX Ring.
(b) Install on all domestic hot, return and cold water piping every 50 feet (max.) of straight-length horizontal piping.
(c) Refer to manufacturer's Expansion Joint Installation and Data Sheets for necessary spacing, support, anchors, guides, etc.

g. Multiport Tees
1) Uponor ProPEX 1" Copper Multiport Tee - Type L copper body with UNS 3600 series brass ProPEX outlet connections
2) Uponor engineered plastic (EP) Multiport Tee - Engineered Plastic (EP) body with ProPEX outlet connections
3) All multiport Tees manufactured with the appropriate-sized ProPEX fittings on the supply inlets.

h. Accessories
1) Angle stops and straight stops that are compatible with PEX tubing are supplied by the PEX tubing manufacturer.
2) Bend supports designed for maintaining tight radius bends are supplied by the PEX tubing manufacturer. (For use in piping drops within walls to individual fixtures only. provide Armaflex flexible elastomeric insulation in lieu of specified fiberglass insulation to achieve insulated bend)
3) ProPEX expander tool to install the ASTM F1960 compatible fittings are supplied by -Milwaukee Tool.
4) The tubing manufacturer provides clips and/or PEX rails for supporting tubing runs.
5) All horizontal tubing hangers and riser clamps are epoxy-coated material.
6) Provide pipe hangers and supports in accordance with specifications, Pex-a pipe manufacturers recommendations, IPC, All local codes, Authorities having Jurisdiction, etc.
7) Straight-Through support: Uponor # F5140500
8) Plastic Drop Ear Bend Support: Uponor #F5200xxx
9) PEX Wall Support Bracket: Uponor #A5750500
10) Metal Drop Ear Bend Support: Uponor #F5120xxx
11) PEX-a Pipe Support: Uponor #F704xxxx
12) PEX-a Pipe Support: Uponor #F704xxxx
(a) Non-combustible, self-gripping, galvanized steel channel. Provides continuous, uninterrupted support of PEX-a pipe, allowing hanger

placement similar to that of metallic pipe. Pipe Supports MUST be used on all PEX-a pipe installations.

(b) Install on all vertical and horizontal piping.

(c) Refer to the Uponor Piping Pocket Guide for installation guidelines.

2.2 VALVES:

A. All valves shall be lead free

B. Provide factory fabricated valves recommended by manufacturer for use in service indicated. Provide valves of types and pressure ratings indicated; provide proper selection as determined by installer to comply with installation requirements. Provide sizes as indicated, and connections which properly mate with pipe, tube, and equipment connections. Where more than one type is indicated, selection is Installer's option.

C. Provide valves with features indicated and where not otherwise indicated, provide proper valve features as determined by installer for installation requirements. Comply with ANSI B31.1

D. BALL VALVES:

1. Acceptable Manufacturers: Subject to compliance with requirements, provide valves of one of the following:
   a. Conbraco Industries, Inc.
   b. Milwaukee Valve Co., Inc.
   c. NIBCO, Inc.
2. General: Valves shall be rated 600 PSI non-shock CWP, valve ends shall have full depth ANSI threads or extended solder connections.
3. Comply with the following standards: MSS SP-110
4. Domestic Water Service: Valves shall be rated 600 PSI non-shock CWP and will have 2-pc. lead-free * bronze body, end piece, stainless steel stem and ball, PTFE seats, full port, separate pack nut with adjustable stem packing, anti-blowout stems and have the capability of accepting extended operating handles. Valve ends shall have full depth ANSI threads or extended solder connections with Pex-A cold expansion adapter or integral Pex-A cold expansion end connections. Valves shall be 3rd party certified to NSF/ANSI-61-8Commercial Hot 180°F (including Annex F and G) and NSF/ANSI-372. Valves for use in insulated piping systems shall be equipped with 2" extended handles of non-thermal conductive material. A protective sleeve shall allow operation of the valve without disturbing the installation and providing a vapor seal. Product shall be NIBCO NIB-SEAL or approved equal.
   a. Basis of Design(threaded ends): NIBCO T585-66-LF (1/2" to 3")
   b. Basis of Design(Soldered): NIBCO S585-66-LF (1/2" to 3")

E. CHECK VALVES:

1. Check valve designed with hinged disc which seals against seat machined in bridgewall of valve body and manufactured for automatic closure by flow reversal.
2. Flanged:
   a. Valve flanges complying with ANSI B16,1 (cast iron), ANSI B16.5 (steel), or ANSI P16.24 (bronze).
3. Non-Metallic Discs:

a. Non-metallic material selected for service indicated in accordance with the manufacturer's published literature

4. Renewable Seat:
   a. Design seat of valve with removable disc, and assemble valve so disc can be replaced when worn.
5. Solder Joint:
   a. Valve ends complying with ANSI P16.18
6. Threaded:
   a. Valve ends complying with ANSI P2.1
7. Trim:
   a. Fabricate pressure-containing components of valve, including stems (shafts) and seats from brass or bronze materials, of standard alloy recognized in the valve manufacturing industry that resists dezincification.

F. CIRCUIT SETTER VALVES:

1. Construct pressure containing parts of valves as follows:
   a. Lead free construction
      1) Dezincification resistant Brass, minimum pressure rating of 300psi @ 200F
   b. Comply with ANSI B1.20.1 (NPT ends), ANSI B16.18 (soldered ends)
2. Manufacturer: Subject to compliance with requirements, provide valves of one of the following
   a. NIBCO, Inc. www.nibco.com
   b. Bell & Gosset, inc www.xyleminc.com
   c. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner. Refer to Division 01 specifications for additional information.
3. Domestic Hot Water Recirculation Service:
   a. Soldered Ends:
      1) 2” and Smaller: Nibco Series S1710/T1710L
   b. Threaded Ends
      1) 2” and Smaller: Nibco Series T1710/T1710L

G. DRAIN VALVES:

1. For Low Pressure Drainage Service:
2. Soldered Ends:
   a. 2" and Smaller Class 125, bronze body, screwed bonnet, rising stem, composition disc, 3/4" hose outlet connection.
3. Threaded Ends:
   a. 2" and Smaller: Class 125, bronze body, screwed bonnet, rising stem, composition disc, 3/4" hose outlet connection,
4. Manufacturer: Subject to compliance with requirements, provide drain valves of one of the following:
   a. NIBCO, Inc. www.nibco.com
   b. Watts, inc www.watts.com
   c. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner. Refer to Division 1 specifications for additional information.

H. SWING CHECK VALVES:

1. Construct pressure containing parts of valves as follows:
   a. Bronze Valves, 125 or 150 psi: ANST/ASTM B62.
   b. Comply with MSS SP-71 and MSS SP-SO for design, workmanship, material and testing. Construct valves of pressure casting free of any impregnating materials, Construct valves of bronze, regrinding, with seating angle 40 degrees to 45 degrees, unless composition disc is specified. Provide stop plug as renewable stop for disc hanger, unless otherwise specified. Construct disc and hanger as separate parts, with disc free to rotate. Support hanger pins on both ends by removable side plugs.
2. Manufacturer: Subject to compliance with requirements, provide valves of one of the following
   a. NIBCO, Inc. www.nibco.com
   b. Watts, inc www.watts.com
   c. Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

PART 3 - EXECUTION

3.1 MANUFACTURER'S INSTRUCTIONS

A. Comply with manufacturer's product data, including product technical bulletins, installation instructions, design drawings and the Uponor Piping Pocket Guide.

3.2 EXAMINATION

A. Site Verification of Conditions:

1. Verify that site conditions are acceptable for installation of the PEX potable water system.
2. Do not proceed with installation of the PEX potable water system until unacceptable conditions are corrected.

3.3 INSTALLATION

A. Uponor AQUAPEX Tubing

1. Install Wirsbo AQUAPEX tubing in accordance with the tubing manufacturer's recommendations and as indicated in the installation handbook.
2. Do not install PEX tubing within 6 inches [152 mm] of gas appliance vents or within 12 inches [305 mm] of any recessed light fixtures.
3. Do not solder within 18 inches [457 mm] of PEX tubing in the same waterline. Make sweat connections prior to making PEX connections.
4. Do not expose PEX tubing to direct sunlight for more than 30 days.
5. Ensure no glues, solvents, sealants or chemicals come in contact with the tubing without prior permission from the tubing manufacturer.
6. Use grommets or sleeves at the penetration for PEX tubing passing through metal studs.
7. Protect PEX tubing with sleeves where abrasion may occur.
8. Use strike protectors where PEX tubing penetrates a stud or joist and has the potential for being struck with a screw or nail.

9. Use manufacturer supplied 45 deg. or 90 deg. elbows for change of direction. Tubing bends shall be permitted for use in transition from horizontal piping to vertical piping drops within walls to serve individual fixtures only. Use tubing manufacturer supplied bend supports where bends are less than six times the outside tubing diameter. Provide Armaflex flexible elastomeric insulation in lieu of specified fiberglass insulation to achieve insulated bend.
10. Minimum horizontal supports are installed not less than 32 inches between hangers in accordance with model plumbing codes and the installation handbook.
11. PEX riser installations require riser clamps installed at the base of the deck (one per floor level).
12. A mid-story support is required for riser applications.
13. Pressurize UponorAQUAPEX tubing with air in accordance with applicable codes or in the absence of applicable codes to a pressure of 25 psi (173 kPa) above normal working pressure of the system.
14. Comply with safety precautions when pressure testing, including use of compressed air, where applicable. Do not use water to pressurize the system if ambient air temperature has the possibility of dropping below 32°F (0°C).

B. Through-penetration Firestop

1. Ensure compliance of one- and two-hour rated through penetration assemblies in accordance with ASTM E814.

C. A list of firestop manufacturers that list PEX tubing with their firestop systems is available from the PEX tubing manufacturer.

1. Related Products Installation: Refer to other sections listed in Related Sections paragraph herein for related products installation.

3.4 FIELD QUALITY CONTROL

A. Manufacturer's Field Services: Provide manufacturer's field service consisting of product use recommendations and periodic site visit for inspection of product installation in accordance with manufacturer's instructions. Manufacturer representative to provide written report of inspection findings.

1. Site Visits: minimum of (3) 6 hr. site visits plus one final inspection.

3.5 CLEANING

A. Remove temporary coverings and protection of adjacent work areas.

B. Repair or replace damaged installed products.

C. Clean installed products in accordance with manufacturer's instructions prior to owner's acceptance.

D. Remove construction debris from project site and legally dispose of debris.

3.6 SLEEVES

A. Each Contractor shall furnish and set all sleeves required for the installation of his work and shall be responsible for their final and permanent locations.

B. All pipes passing through masonry construction shall be fitted with sleeves. Each sleeve shall extend through its respective floor or wall and shall finish flush with each surface unless otherwise required. Sleeves shall be two pipe size larger than the overall outside diameter of the pipe when

insulated. Sleeves in bearing and masonry walls shall be made of standard weight steel pipe. Sleeves through concrete floor slabs and other partitions shall be No. 2 U.S.S. gauge sheet metal.

C. All sleeves shall be properly installed and securely cemented in place. Where pipes pass through waterproofed floor or walls, design of sleeves shall be such that the waterproofing can be properly flashed around the sleeves, and of such height that the water will be restrained from entering sleeves and dripping to any finished areas below.

D. Where pipes pass through fire resisting portions of the structure, the annular space between the sleeve and the pipe shall be filled with an approved fireproof material.

3.7 INSTALLATION

A. ALIGNMENT:

1. Where several valves, piping, devices, equipment, etc., are to be installed in a common location, this equipment shall be lined up in a vertical plane. It is the Contractor's responsibility to confer with the Architect on this alignment.
2. The Mechanical and Electrical Contractors shall carefully check all the Drawings and coordinate their work with all trades to provide for a symmetrical and coordinated ceiling. Ceiling T-bars, lights, registers, and other equipment shall all be symmetrically installed with provisions made for integrating the T-bars and this equipment. Failure to coordinate will result in relocation of ceiling components as directed by the Architect at the Contractor's expense.

B. BUILDING ATTACHMENTS INSTALLATION:

1. Install building attachments at the required locations onto structural steel for proper piping support. Space attachments within the maximum piping span length indicated in MSS SP-69. Install additional building attachments where support is required for additional concentrated loads, including valves, flanges, guides, strainers, expansion joints, and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten insert securely to forms. Where concrete with compressive strength less than 2500 psi is indicated, install reinforcing bars through the openings at the top of inserts. Prior to placing concrete, install nut in insert and screw threaded rod thru nut until rod is firmly against top of the insert body.

C. ESCUTCHEONS:

1. All exposed pipes, except as otherwise described, passing through walls, floors, ceilings, etc. in finished spaces, shall be provided with solid pattern heavy ceiling, floor or wall escutcheons with set screw. Escutcheons and plates shall be of steel or malleable iron with prime coat ready for painting. Escutcheons will not be provided where sleeves intentionally extend above finished floor.
2. All exposed plumbing short branch connections to fixtures and/or equipment passing through wall or floors shall be equipped with pressed brass, chromium plated, solid-type escutcheons.
3. Provide angle collars at ducts where they pass through finished walls, floors and ceilings.

D. PIPING ANCHORS INSTALLATION:

1. Install anchors at the proper location to prevent stresses from exceeding those permitted by ANSI B3l, and to prevent the transfer of loading and stresses to connection equipment.
   a. Fabricate and install anchor by welding steel shapes, plates and bars to the piping and to the structure. Comply with ANSI B3l and with AWS standards.

b. Anchor Spacing's: Where not otherwise indicated, install anchors at the ends of principal pipe runs, at intermediate points in pipe runs between expansion loops and bends. Make provisions for preset of anchors as required to accommodate both expansion and contraction of piping.

E. PIPE GUIDE INSTALLATION:

1. Install pipe guides complying with the manufacturer's published product literature. Where not otherwise indicated, install pipe guides near expansion loops.

F. PIPING HANGERS & SUPPORTS:

1. Proceed with the installation of hangers, supports and anchors only after the required building structural work has been completed in areas where work is to be installed. Correct inadequacies including (but not limited to) the proper placement of inserts, anchors and other building attachments.
2. General: Install hangers, supports, clamps and attachments to support piping properly from the building structure; comply with MSS SP-69. Arrange for grouping of parallel runs of horizontal piping to be supported together on trapeze type hangers where possible. Install supports with the maximum spacing complying with MSS SP-69. Where piping of various sizes is to be supported together with trapeze hangers, space hangers for smallest pipe size or install intermediate supports for smaller diameter pipe. Do not use wire of perforated metal to support piping, and do not support piping from other piping.
3. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers and other accessories. Except as otherwise indicated for exposed continuous pipe runs, install hangers and supports of the same type and style as installed for adjacent similar piping.
4. Prime coat exposed steel hangers and supports. Refer to Division 09 - Painting Hanger and supports located in crawl spaces, pipe shafts and suspended ceiling spaces are not considered exposed.
5. Provide hangers adjacent to motor driven equipment with vibration isolation; refer to Section 22054
6. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding.
7. Provide additional steel as required to span structural members for intermediate support of piping required between structural framing members. ALL piping shall be supported from structural framing members only. Coordinate all work with other trades.
   a. Do not fasten or anchor work to concrete floor deck except where individually approved by Structural Engineer and Architect.
   b. Do not fasten or anchor any work directly to metal roof deck.
   c. Prevent electrolysis in support of copper tubing by the use of hangers and supports which are copper plated, or by other recognized industry methods.
8. Provisions for movement:
   a. Install hangers and supports to allow controlled movement of piping systems and to permit freedom of movement between pipe anchors, and to facilitate the action of expansion joints, expansion loops, expansion bends and similar units.
9. Load Distribution: Install hangers and supports so that piping live and dead loading and stresses from movement will not be transmitted to connected equipment.

10. Clamps: Attach clamps, including spacers (if any), to piping with clamps projecting through the insulation; do not exceed pipe stresses allowed by ANSI B31.
11. Shields/shields: Where low compressive strength insulation of vapor barriers are indicated on cold water piping, install coated protective saddles and shields.

G. ADJUSTMENT OF HANGERS AND SUPPORTS:

1. Adjust hangers and supports and place grout as required under supports to bring piping to proper levels and elevations.

H. PIPING INSPECTION:

1. General: Clean exterior surfaces of installed piping systems of superfluous materials and prepare for application of specified coatings if any. Flush out piping systems with clean water before proceeding with required tests. Inspect each run of each system for completion of joints, supports and accessory items.

I. PIPING INSTALLATION:

1. Install all piping in accordance with International Plumbing Code (IPC), and ANSI B31 Code for Pressure Piping requirements as applicable.
2. Install pipe, tube and fittings in accordance with recognized industry practices which will achieve permanently leak proof piping systems, capable of performing each indicated service without piping failure. Install each run with a minimum of joints and couplings, but with adequate and accessible unions for disassembly and maintenance/ replacement of valves and equipment. Reduce sizes (where indicated) by use of reducing fittings. Align piping accurately at connection, within 1/16" misalignment tolerance.
3. Provide Nail Plate at Floor line where all PEX-a piping penetrates floor slab.
4. Install all piping in accordance with International Plumbing Code (IPC) and ANSI B31 Code for Pressure Piping requirements as applicable.
5. Locate piping runs, except as otherwise indicated, vertically and horizontally (pitched to drain) and avoid diagonal runs wherever possible. Orient horizontal runs parallel with walls and column lines. Locate runs as shown or described by diagrams, details and notations or, if not otherwise indicated, run piping in the shortest route which does not obstruct usable space or block access for servicing the building and its equipment. Hold piping close to walls, overhead construction, columns and other structural and permanently enclosed elements of the building; limit clearance to 0.5" where furring is shown for enclosure or concealment of piping, but allow for insulation thickness, if any. Where possible, locate insulated piping for 1.0" clearance outside of insulation. Wherever possible in finished and occupied spaces, conceal piping from view by locating in column enclosures, in hollow wall construction or above suspended ceilings; do not encase horizontal runs in solid partitions, except as indicated.
6. Electrical Equipment Spaces: Do not run piping through transformer vaults and other electrical equipment spaces and enclosures.
7. Provide non-conducting dielectric connections wherever jointing dissimilar metals.
8. Install piping to maintain headroom, conserve space, and not interfere with use of space.
9. Group piping whenever practical at common elevations.
10. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings. Refer to Section 220719
11. Provide access where valves and fittings are not exposed. Coordinate size and location of access doors with Division 08 - Access Doors and Panels
12. Sleeve all piping that passes through partitions, walls and floors.

J. PIPING TESTS:

1. General: Provide temporary equipment for testing, including pumps and gages. Test piping system before insulation is installed wherever feasible and removes control devices before testing.
2. Test each natural section of each piping system independently, but do not use piping system valves to isolate sections where test pressure exceeds valve pressure rating. Fill each section with water and pressurize for the indicated pressure and time.
3. Test all non-gas piping systems in accordance with all requirements of IPC Section 312.
   a. Repair piping systems sections which fail the required piping tests by disassembly and reinstallation, using new materials to the extent required to overcome leakage. Do not use chemicals, stop-leak compounds, mastics or other temporary repair methods.

K. PIPE GUIDE INSTALLATION:

1. Install pipe guides complying with the manufacturer's published product literature. Where not otherwise indicated, install pipe guides near expansion loops.

L. VALVE INSTALLATION:

1. General: Except as otherwise indicated, comply with the following requirements:
   a. Install valves where required for proper operation of piping and equipment, including valves in branch lines where necessary to isolate sections of piping. Locate valves so as to be accessible and so that separate support can be provided when necessary.
   b. Install valves with stems pointed up, in the vertical position, where possible, but in no case with stems pointed downward from a horizontal plane unless unavoidable. Install valve drains with hose-end adapter for each valve that must be installed with stem below horizontal plane.
   c. Insulation: Where insulation is indicated, install extended stem valves, arranged in the proper manner co receive insulation.
   d. Applications Subject to Shock; Install valves with bodies of metal other than cast iron where thermal or mechanical shock is indicated or can be expected to occur.
   e. Applications Subject to Corrosion: Do not install bronze valves and valve components in direct contact with steel, unless the bronze and steel are separated by a dielectric insulator. Install bronze valves in steam and condensate service and in other services where corrosion is indicated or can be expected to occur.
   f. Non-Metallic Disc: Limit the selection and installation of valves with non-metallic discs to locations indicated and where foreign material in the piping system can be expected to prevent tight shut off of metal seated valves.
   g. Renewable Seats: Select and install valves with renewable seats, except where frequent usage of the valves is indicated.

3.8 APPLICATION

A. Install unions downstream of valves and at equipment or apparatus connections.

B. Install ball valves for shut-off and to isolate equipment, part of system or vertical risers.

C. Install ball valves for shut-off and to isolate equipment, part of systems, or vertical risers.

D. Provide flow controls in water recirculating systems where indicated.

3.9 DISINFECTION OF DOMESTIC WATER PIPING SYSTEM

A. Prior to starting work, verify system is complete, flushed and clean.

B. Ensure Ph of water to be treated is between 7.4 and 7.6 by adding alkali (caustic soda or soda ash) or acid (hydrochloric).

C. Inject disinfectant, free chlorine in liquid, powder, tablet or gas form, throughout system to obtain 50 to 80 mg/L residual.

D. Bleed water from outlets to ensure distribution and test for disinfectant residual at minimum 15 percent of outlets.

E. Maintain disinfectant in system for 24 hours.

F. If final disinfectant residual tests less than 25 mg/L, repeat treatment.

G. Flush disinfectant from system until residual equal to that of incoming water or 1.0 mg/L.

H. Take samples no sooner than 24 hours after flushing, from 10 percent of outlets and from water entry, and analyze in accordance with AWWA C651.

3.10 PROTECTION

A. Protect installed work from damage due to subsequent construction activity on the site.

END OF SECTION 22.1116

SECTION 22.1500 - COMPRESSED AIR SYSTEMS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Aftercooler.

B. Air Compressor

C. Refrigerated Air Dryer.

D. Hose Reels and Accessories

E. Pipe and Pipe Fittings.

F. Pressure Reducing Station

1.2 RELATED REQUIREMENTS

A. Section 22 05 13 - Common Motor Requirements for Plumbing Equipment.

B. Section 22 05 48 - Vibration and Seismic Controls for Plumbing Piping and Equipment.

C. Section 22 05 53 - Identification for Plumbing Piping and Equipment:

D. Section 26 27 17 - Equipment Wiring: Electrical characteristics and wiring connections.

1.3 REFERENCE STANDARDS

A. ASME B16.3 - Malleable Iron Threaded Fittings; The American Society of Mechanical Engineers; 1998 (R2006).

B. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2010.

C. ASTM A234/A234M - Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service; 2011.

D. MSS SP-80 - Bronze Gate, Globe, Angle and Check Valves; Manufacturers Standardization Society of the Valve and Fittings Industry, Inc.; 2008.

E. MSS SP-110 - Ball Valves Threaded, Socket-Welding, Solder Joint, Grooved and Flared Ends; Manufacturers Standardization Society of the Valve and Fittings Industry, Inc.; 1996.

F. NFPA 70 - National Electrical Code; National Fire Protection Association; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.4 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturers catalog literature with capacity, weight, and electrical characteristics and connection requirements.

C. Shop Drawings: Indicate piping system schematic with electrical characteristics and connection requirements.

D. Manufacturer's Instructions: Indicate manufacturer's installation instructions, hoisting and setting requirements, starting procedures.

E. Project Record Documents: Record actual locations of equipment and components. Modify shop drawings to indicate final locations.

F. Maintenance Data: Submit for air compressor, air receiver and accessories, after cooler, refrigerated air dryer, and pressure reducing station.

G. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

B. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Accept air compressors and piping on site in factory fabricated containers with shipping skids and plastic pipe end protectors in place. Inspect for damage.

B. Protect piping and equipment from weather and construction traffic.

1.7 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer warranty for reciprocating air compressors.

PART 2 PRODUCTS

2.1 AIR COMPRESSORS

A. Manufacturers:

1. Ingersoll Rand Compressed Air Solutions: http://air.ingersollrand.com.
2. Substitutions: See Section 01 60 00 - Product Requirements.

B. I-R Model 2475N7.5-P or equal, two stage unit with the following features:

1. Cast iron two stage pump with Air Cooled Aftercooler Unit
2. 7.5hp, 200 volt, 3 phase motor with factory mounted starter.
3. 24 cfm with a maximum of 175 psi.
4. 80V, 80 gallon vertical tank mounting of compressor.
5. Unloading pressure switch w/unloaded start.
6. Splash lubrication system.
7. Stainless steel valves
8. ASME tank with electronic drain valve, discharge isolation valve, relief valve.
9. Baked on powder gray coat enamel
10. Provide unit with "all Season T30" lubricant.

11. Dry Clean Air Treatment package including type G & H Filter.

C. Provide new air dryer and install on outlet side of new air compressor unit.

D. Provide Intelliflow Pneumatic Flow Controller/Pressure Regulator on main supply to building.

E. Provide Filter/regulator/lubricator on each compressed air outlet: Wilkerson Model C28-06-FLG0, with the following features: Refer to plans/details for locations

1. 5 micron filter element
2. Metal bowl, polycarbonate body
3. 130 cfm rating
4. Manual drain
5. Adjustable pressure range, 0-125 psi
6. Pressure gauge
7. Integral sight dome and adjustable knob
8. Metal bowl lubricator

F. Contractor is to provide one I-R 32305898 start up kit and two 38485330 compressor maintenance kits.

2.2 AIR DRYER

A. Manufacturers:

1. Ingersoll Rand Compressed Air Solutions: http://air.ingersollrand.com.
2. Substitutions: See Section 01 60 00 - Product Requirements.

B. Type: Self contained mechanical refrigeration type complete with heat exchanger, refrigeration compressor, automatic controls, moisture removal trap, internal wiring and piping, and full R-134a refrigerant charge, NEM 12 IP/42 Protection.

C. Air Connections: Inlet and outlet connections at same level, factory insulated.

D. Heat Exchangers: Aluminum brazed plate. Provide heat exchangers with automatic control system to bypass refrigeration system on low or no load condition.

E. Moisture Separator: Centrifugal type located at discharge of heat exchanger.

F. Refrigeration Unit: Hermetically sealed type to operate continuously to maintain specified 21 degrees F dew point. House unit in steel cabinet provided with access door and panel for maintenance and inspection.

G. Accessories: Air inlet temperature gage, air inlet pressure gage, on/off switch, high temperature light, power on light, refrigerant gage, air outlet temperature gage, air outlet pressure gage, electric timer Darin valve.

H. Capacity:

1. Provide unit to meet the following criteria.
   a. Discharge Air: 38 to 50 degrees F atmospheric dew point.
   b. Rated Air Flow: 25 cfm.
   c. Inlet Air Pressure: 120 psi.

I. Electrical Characteristics:

1. 1/6 hp, 3.6 amps120 volts, single phase, 60 Hz.

J. Basis of Design: Ingersoll Rand; Model D42IN or approved equal.

2.3 PIPE AND PIPE FITTINGS

A. Steel Pipe: ASTM A53/A53M, Schedule 40 black.

1. Fittings: ASME B16.3, malleable iron, or ASTM A234/A234M, wrought steel welding type.
2. Joints: Threaded or welded to ASME B31.1.

2.4 VALVES

A. Ball Valves:

1. MSS SP-110, Class 150, 400 psi CWP, bronze, two piece body, chrome plated brass ball, regular port, teflon seats and stuffing box ring, blow-out proof stem, lever handle with balancing stops, solder ends with union.

B. Swing Check Valves:

1. MSS SP-80, Class 125, bronze body and cap, bronze swing disc with rubber seat, solder ends.

2.5 UNIONS AND COUPLINGS

A. Unions:

1. Ferrous Pipe: 150 psi malleable iron threaded unions.

B. Flexible Connector: Neoprene with brass threaded connectors.

2.6 PRESSURE REDUCING VALVE

A. Pressure Reducing Station: Consisting of automatic reducing valve and bypass, and low pressure side relief valve and gage. Provide oil separator where indicated.

B. Valve Capacity: Reduce pressure from 200 psi to 30 psi, adjustable upwards from reduced pressure.

2.7 HOSE REEL AND ACCESSORIES

A. (HR-2) Ceiling mounted hose reel: consists of a spring driven hose reel with maximum 300 psi pressure, complete with 50 foot of 1/2" pressure hose and mounting bracket.

1. Provide approved quick disconnect fitting on hose outlet (fittings to match Owner's standards).
2. Provide all required support steel for mounting. Coordinate in field with building structural steel supplier.
3. Hose reel shall be Reelcraft Model A5850 OLP or approved equal.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install equipment in accordance with manufacturer's instructions.

B. Install compressor unit on vibration isolators. Level and bolt in place. Refer to Section 22 05 48.

C. Make air cock and drain connection on horizontal casing.

D. Install replaceable cartridge type filter silencer of adequate capacity for each compressor.

E. Connect condensate drains to nearest floor drain.

F. Install valved drip connections at low points of piping system.

G. Install takeoffs to outlets from top of main, with shut off valve after take off. Slope take off piping to outlets.

H. Install compressed air couplings, female quick connectors, and pressure gages where outlets are indicated.

I. Install tees instead of elbows at changes in direction of piping. Fit open end of each tee with plug.

J. Identify piping system and components. Refer to Section 22 05 53.

3.2 FIELD QUALITY CONTROL

A. Compressed Air Piping Leak Test: Prior to initial operation, clean and test compressed air piping in accordance with ASME B31.1.

B. Repair or replace compressed air piping as required to eliminate leaks, and retest to demonstrate compliance.

C. Cap and seal ends of piping when not connected to mechanical equipment.

END OF SECTION 22.1500

SECTION 22.3000 - PLUMBING EQUIPMENT

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Domestic Hot Water Circulators.

B. Elevator Sump Pumps

C. Oil Separators

1.2 SUBMITTALS

A. Product Data:

1. Indicate pump type, capacity, power requirements.
2. Provide certified pump curves showing pump performance characteristics with pump and system operating point plotted. Include NPSH curve when applicable.
3. Provide electrical characteristics and connection requirements.

B. Operation and Maintenance Data: Include operation, maintenance, and inspection data, replacement part numbers and availability, and service depot location and telephone number.

C. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.3 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

B. Identification: Provide pumps with manufacturer's name, model number, and rating/capacity identified by permanently attached label.

C. Performance: Ensure pumps operate at specified system fluid temperatures without vapor binding and cavitation, are non-overloading in parallel or individual operation, operate within 25 percent of midpoint of published maximum efficiency curve.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Provide temporary inlet and outlet caps. Maintain caps in place until installation.

1.5 EXTRA MATERIALS

A. See Div. 01 specifications, for additional provisions.

B. Provide all required maintenance parts for up to 1 yr. for all required regular maintenance

1.6 OWNER INSTRUCTION/DEMONSTRATION

A. Provide owner instruction and demonstration for all pieces of installed equipment. Demonstration shall include: regular operating instructions, required regular maintenance, regular required maintenance

schedule for each piece of equipment. P.C. shall employ the service of a manufacturers representative where necessary or where otherwise noted in these specifications.

PART 2 PRODUCTS

2.1 DOMESTIC HOT WATER CIRCULATOR PUMPS - IN LINE

A. Manufacturers:

1. Armstrong
2. Grundfos
3. Thrush
4. Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. Casing: Lead Free Bronze or Stainless Steel rated for 125 psig working pressure, with stainless steel rotor assembly.

C. Impeller: 30% glass-filled Noryl or Bronze.

D. Shaft: Stainless steel w/permanently lubricated stainless steel bearings

E. Seal: Silicon-Carbide rotating against a stationary ceramic seat.

F. Gaskets: EPDM

G. Controls: Programmable timer and Aquastat(provide programmable timer only as required by local AHJ)

H. Performance:

1. Refer to Plumbing Detail drawings for pump sizes and requirements

2.2 ELEVATOR SUMP PUMP

A. Manufacturers:

1. Stancor Inc: www.stancorpumps.com
2. Liberty Pumps: www.libertypumps.com
3. Zoeller: www.zoeller.com
4. Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. Oil Minder Pump and Controller System

1. Pump
   a. 1/2 hp, 115v/1ph., 2" discharge, 50gpm@20ft head
   b. cast iron body with powder coated epoxy finish, stainless steel fittings
2. Stainless Steel Probes with oil detection shutdown
3. NEMA 4X simplex control panel, w/audible and visual alarm and dry alarm contacts including the following:
   a. Oil Smart ® liquid alarm switch
   b. Oil Smart ® pump switch (10-2282)
   c. 115 volts, single phase

d. NEMA 4X watertight enclosure with lockable latch
e. 30 amp motor start relay
f. Pump HOA switch
g. Top-mounted red alarm beacon light
h. 81 - 84 decibel rated alarm horn
i. Horn silence and alarm test switches
j. Alarm automatically resets
k. Dry auxiliary alarm contacts
l. Separate circuit protection for alarm
m. Circuit breaker protection
n. Pump “Run” indicator light
o. Dry pump run contact option "DPR"

4. Basis of Design: Zoeller model 153 pump and 10-2149 simplex control panel with DPR option

2.3 OIL INTERCEPTORS/SEPARATORS

A. Acceptable Manufacturers

1. Striem - striemco.com
2. Zurn/Green Turtle - zurn.com

B. (OS-1) Striem Oil Tanker Series OT-750

1. Description: seamless, rotationally-molded Polyethylene with minimum 1” uniform wall thickness, lifetime guaranteed and made in USA, furnished for above or below grade installation, integral baffle, with field adjustable riser system, built-in flow control and vent connections. Cover shall provide water/gas-tight seal and have H20 rated minimum 16,000 lbs load capacity.
2. Capacities and Characteristics:
   a. Unit Dimensions: 55 in. (dia.) x 105 in. L
   b. Max. Flow rate: 314 gpm
   c. Liquid Capacity: 750 gal.
   d. Oil Retention Capacity: 323 gal.
   e. Solids Retention Capacity: 295 gal.
   f. Inlet and Outlet Pipe Size: 4 in. (Optional 4", 6", 8" - Coordinate with size as indicated on plans)
   g. Vent Pipe Size: 3 in.(Optional 2", 3" or 4"- Coordinate with size as indicated on plans)
   h. Installation Position: Underground with accessway collar risers to grade.
   i. Options to be provided:
      1) SR/LR Teleglide Risers (Verify required length in field prior to order)
      2) C24-HP (2) - H20 Rated Pickable Cast Iron Covers
      3) CS3 - Clean Sweep Coalescing media
      4) HDK-1 - High Water Table Hold Down Kit with deadman anchors as recommended by manufacturer installation instructions.
      5) Alarm for high oil accumulation. Includes alarm probe to be installed in top of tank accessway and alarm panel with buzzer and light for indoor wall mount.

6) Oil level monitoring system oil sensorprobe and UL listed, lockable Nema 4X alarm panel with high oil level alarm light and buzzer, test button, power on light, dry contacts for BAS connection.

3. Basis of Design: Striem Oil Reserve™ oil/sand separator with Slick Stick oil level monitoring system Model No. OS-750-CS3
4. Contractor shall provide concrete reinforced relieving slab over top of entire unit, refer to details and manufacturer's recommendations for specifics on slab construction.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install plumbing equipment in accordance with manufacturer's instructions, as required by code, and complying with conditions of certification, if any.

B. Coordinate with plumbing piping and related electrical work/fuel piping for each piece of equipment to achieve operating system

C. Provide Concrete housekeeping base of sufficient size for all floor mounted equipment. Concrete bases shall be dowelled into floor decking. Coordinate all work with G.C. in field.

D. Elevator Sump Pump

1. Install elevator sump pump in accordance with all PA L&I regulations and in accordance with all requirements of the local Authority Having Jurisdiction.
2. Provide conduit from elevator sump to control panel to contain wiring from sump pump to control panel. Verify required conduit size per manufacture's installation instructions prior to beginning work.

E. Domestic Hot Water Recirculation Pumps

1. Refer to Plumbing details for pump installation information and associated piping accessories.
2. Provide main circuit setter valve set to specified flow for each hot water recirculation system. Balance hot water recirculation system at all balancing valve and circuit setter valve locations to achieve timely delivery of hot water to all fixtures in accordance with IECC and local Health Department requirements.
3. Install circulation pumps in orientation as required by manufacturers recommendations.
4. Coordinate power wiring to pump and aquastat controls with E.C. in field.

F. Pumps:

1. Ensure pumps operate at specified system fluid temperatures without vapor binding and cavitation, are non-overloading in parallel or individual operation, and operate within 25 percent of midpoint of published maximum efficiency curve.
2. Provide vibration isolation/flexible connectors on inlet and outlet piping

G. Oil Interceptors/Separators

1. Install Oil Interceptor/Separator in accordance with manufacturer's instructions, as required by code, and complying with conditions of certification.
2. Install in accordance with all requirements of local AHJ.
3. Exterior Installations:

a. Verify inverts for all below grade/below slab Oil interceptors/separators prior to beginning any work.
b. Provide H-20 rated concrete relieving pad and heavy duty rated access covers as noted on plumbing drawings, details, and specifications.
c. Provide access covers extended to grade. Verify required height of access cover extensions in field prior to order of oil interceptor/separator unit. Final height of access covers shall allow grade to slope away from access covers and prevent ponding of water at access covers. Coordinate grades and slopes with site contractor to prevent ponding of water prior to beginning any work.
d. Provide manufacturers recommended anti-flotation device
e. Provide buried detectable green warning tape warning tape directly over piping and at outside edges of underground interceptors.

END OF SECTION 22.3000

SECTION 22.3400 - FUEL-FIRED WATER HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Gas water heaters.
2. Water heater accessories.

B. Related Section: Following Division 220000 Sections contain requirements that relate to this Section:

1. Section 220519, “Meters and Gages for Plumbing Piping”
2. Section 220548, “Vibration and Isolation for Plumbing Piping and Equipment"
3. Section 220553, “Identification for Plumbing Piping and Equipment”
4. Section 220719, “Plumbing Piping Insulation”
5. Section 221005, “Plumbing Piping”
6. Section 221006, “Plumbing Piping Specialties”

1.3 SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and Division 01 Specification Sections.

B. Product Data including rated capacities of selected models, weights (shipping, installed, and operating), furnished specialties, and accessories. Indicate dimensions, finishes and coatings, required clearances, methods of assembly of components, and piping and wiring connections.

C. Product Options: Drawings indicate size, profiles, connections, dimensional requirements, and characteristics of water heaters and accessories and are based on specific types and models indicated.

D. Setting Drawings with templates and directions for installing foundation bolts, anchor bolts, and other anchorages.

E. Wiring diagrams from manufacturers detailing electrical requirements for electrical power supply wiring to water heaters. Include ladder-type wiring diagrams for interlock and control wiring required for final installation of water heaters and controls. Differentiate between factory-installed and field-installed wiring.

F. Product certificates signed by manufacturers of water heaters certifying that their products comply with specified requirements.

G. Certificates of shop inspection and data report as required by provisions of ASME Boiler and Pressure Vessel Code, when ASME construction is indicated.

H. Maintenance data for water heaters to include in operation and maintenance manuals specified in Division 01. Include startup instructions.

1.4 CERTIFICATIONS

A. AGA Standards: Comply with AGA standards and bear AGA (CSA International) certification label.

B. NFPA Standard: Comply with NFPA 70, "National Electrical Code," for electrical components.

C. Listing and Labeling: Provide electrically operated water heater controls and components specified in this Section that are listed and labeled.

D. The Terms "Listed" and "Labeled": As defined in National Electrical Code, Article 100.

E. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in OSHA Regulation 1910.7.

1.5 WARRANTY

A. Manufacturer's Warranty: The Pressure vessel/tank shall carry an unconditional 5 year warranty against leakage due to defects in materials or workmanship or corrosion. The heat exchanger tubes/combustion chamber assembly shall be warranted against failure due to thermal stress failure or condensate corrosion for a prorated five year period. Component parts shall carry a limited 1 year warranty against defects in materials or workmanship. A Warranty Certificate must be issued to the Owner from the manufacturer and a copy of warranty be submitted for Engineers approval.

B. Warranty period shall begin upon turnover of equipment to owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Commercial, High-Efficiency, Down-Fired Powered-Burner Design, Low-NOx, Power Vent, Gas Water Heaters:

1. Bradford-White Corp.
2. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 1 specifications for additional information.

2.2 WATER HEATERS, GENERAL

A. Specified manufacturer's standard components and features are acceptable where specific product requirements are not indicated.

B. Temperature Control: Adjustable thermostat, except for units where other arrangement is indicated or temperature is regulated by flow-control fitting.

C. Safety Control: Automatic, high-temperature-limit cutoff device or system on commercial units and where indicated. Include automatic low-water cutoff device or system on commercial units where indicated.

D. Interior Finish: Materials that comply with requirements of applicable NSF, AWWA, or FDA and EPA regulatory standards for tasteless and odorless, potable-water-tank linings.

E. Tappings: Factory fabricated of materials compatible with tank. Include tappings for piping connections, relief valves, pressure gage, thermometer, blow down, CPVC vent, and controls as required and others as indicated. Attach tappings to tank before testing and labeling. Include tappings and connections as follows:

1. 2-Inch NPS (DN50) and Smaller: Threaded ends.
2. 2-1/2-Inch NPS (DN65) and Larger: Flanged ends.

F. Insulation: Fiberglass, polyurethane foam, or manufacturer's standard that is suitable for operating temperature and required insulating value. Include insulation material that surrounds entire tank except connections and controls.

G. Jacket: Steel, with baked-on enamel finish, except where otherwise specified.

H. Anode Rods: Factory installed, magnesium.

2.3 COMMERCIAL, HIGH-EFFICIENC Y , CONDENSING, POWER DIRECT VENT , GAS FIRED WATER HEATERS:

A. Description: ASHRAE/IES 90.1-1999, commercial, storage, powered-vent, high efficiency gas water heater; with capacity more than 40 gal. and natural-gas input more than 75,000 Btuh.

B. Storage Tank Construction: ASME labeled, steel with 150-psig working-pressure rating.

C. Meets or exceeds SCAQMD R1146.2 low NOx requirements.

D. Burner: Manufacturer's standard, for use with powered-vent water heaters and natural-gas fuel.

E. Gas Shutoff Valve: ANSI Z21.15, manually operated. Furnish for installation in piping.

F. Pressure Regulator: ANSI Z21.18, factory or field installed, for gas appliances. Provide regulators with pressure rating, capacity, and pressure differential required for water heater and gas supply.

G. Automatic Ignition: ANSI Z21.20, automatic gas-ignition system and components.

H. Automatic Valve: ANSI Z21.21, appliance, automatic gas valve.

I. Combination Temperature and Pressure Relief Valve: ASME rated and stamped and complying with ASME PTC 25.3 and ANSI Z21.22. Include relieving capacity at least as great as heat input and pressure setting less than water heater working-pressure rating. Select relief valve with sensing element that extends into tank.

J. Inlet and Outlet Manifolds: Fabricated by water heater manufacturer and capable of providing balanced flow through water heaters, for multiple-unit installation.

K. Combination Temperature and Pressure Relief Valve: ASME rated and stamped and complying with ASME PTC 25.3 and ANSI Z21.22. Include relieving capacity at least as great as heat input and pressure setting less than water heater working-pressure rating. Select relief valve with sensing element that extends into tank.

L. Advanced Electronic Controls: Microprocessor controls ignition and thermostat, with adjustment of water temperature from 100 deg. F to 180 deg. F.

M. Basis of Design: Bradford White EF Series Ultra High Efficiency Water Heaters

1. DWH-1, DWH-2 (Building Hot Water Supply): EF-100T-199E-5NA
   a. Storage capacity: 100 gal.
   b. Gas input: 199,999 BTU
   c. Recovery: 223 gal./hr@100F
   d. First Hour Delivery: 309gal.
   e. Vent Piping: Polypropylene - Duravent or equal listed for Cat. IV fuel burning appliances
   f. Air Intake Piping: Sch. 40 PVC

g. BACnet connection kit
h. Accessories:
   1) Concrete Base Pad
   2) Gas pressure regulator to accept 2psi delivery pressure
   3) Expansion Tank - Amtrol Model ST-12-C, 4.7gal., ASME

PART 3 - EXECUTION

3.1 CONCRETE BASES

A. Install concrete bases minimum of 4 in thick, and of adequate dimensions for indicated water heaters and accessories. Refer to Division 03 Section "Cast-in-Place Concrete" and Division 220000 Sections.

3.2 WATER HEATER INSTALLATION

A. General: Install water heaters on concrete bases. Set and connect units according to manufacturer's written instructions. Install units plumb, level, and firmly anchored in locations indicated. Maintain manufacturer's recommended clearances. Install so controls and devices are accessible for service.

B. Anchor water heaters and storage tanks to substrate.

C. Install seismic restraints as required by IBC and as specified.

D. Install and connect gas water heaters according to NFPA 54.

1. Install appropriately sized gas pressure regulator on gas-burner inlets. Coordinate gas inlet pressure with plumbing drawings and water heater gas supply pressure with manufacturer prior to order/installation.
2. Install vent piping from gas burner pressure regulators and valves to building exterior in accordance with IFGC. Terminate vent piping with manufacturers recommended termination fitting including brass-screened vent cap fitting. Do not combine vents except with approval of water heater manufacturer and authorities having jurisdiction.

E. Install temperature and pressure relief valves in top portion of storage water heater tanks and hot-water storage tanks. Use relief valves with sensing elements that extend into tanks. Extend relief valve outlet with water piping in continuous downward pitch and discharge to closest floor drain.

F. Install pressure relief valves in hot-water-outlet piping for water heaters without storage. Extend relief valve outlet with water piping in continuous downward pitch and discharge to closest floor drain.

G. Install vacuum relief valves in cold-water-inlet piping.

H. Install vacuum relief valves in water heaters and hot-water storage tanks that have copper lining.

I. Install water heater drain piping as indirect waste to spill into open drains or over floor drains. Install hose-end drain valves at low points in water piping for water heaters that do not have tank drains. Refer to Section 221006 "Plumbing Piping Specialties" for drain valves.

J. Install thermometers on water heater inlet and outlet piping. Thermometers are specified in Section 220519 "Meters and Gages for Plumbing Piping"

K. Install pressure gages on water heater piping when and as indicated. Pressure gages are specified in Section 220519 "Meters and Gages for Plumbing Piping"

L. Install piping adjacent to water heaters to allow service and maintenance.

M. Arrange for field-applied insulation on equipment and piping not furnished with factory-applied insulation.

N. Install gas pressure regulator and make final connection to water heater. extend gas regulator vent to building exterior. Coordinate exact location with Architect in field. Provide downturn elbow with screened vent termination and paint exposed piping in color selected by Architect.

3.3 CONNECTIONS

A. Piping installation requirements are specified in other Division 220000 Sections. Drawings indicate general arrangement of piping, fittings, and specialties. The following are specific connection requirements:

1. Connect hot- and cold-water piping to units with shutoff valves and unions. Where indicated, connect hot-water circulating piping to unit with shutoff valve, check valve, and union.
2. Connect gas piping to gas burner with drip leg, tee, shutoff valve, and union; minimum size same as inlet connection. Gas piping is specified in Section 221006 "Plumbing Piping."
3. Make connections with dielectric fittings where piping is made of dissimilar metals. Dielectric fittings are specified in Section 221006 "Plumbing Piping Specialties."

B. Electrical Connections: Power wiring and disconnect switches are specified in Division 26 Sections. Arrange wiring to allow unit servicing.

C. Grounding: Ground equipment. Tighten electrical connectors and terminals, including grounding connections, according to manufacturer's published torque-tightening values. Where manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 COMMISSIONING

A. Startup Services: Engage a factory-authorized service representative to provide startup service and to demonstrate and train Owner's maintenance personnel as specified below.

1. Test/adjust operating/safety controls. Replace damaged/malfunctioning controls/equipment.

B. Owner Training: Provide training for Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, and preventive maintenance.

1. Review data in the operation and maintenance manuals. Refer to Division 01 Section "Contract Closeout".
2. Review data in the operation and maintenance manuals. Refer to Division 01 Section "Operation and Maintenance Data."
3. Schedule training with the Owner with at least 7 days advance notice.
4. Document and Record training. Provide video recording of training to Owner for record.

C. Perform the following final checks before startup:

1. Fill water heaters with water.
2. Charge expansion tanks with air.
3. Check that piping system tests are complete.
4. Check for piping connection leaks.
5. Check for adequate combustion air.
6. Check for clear vents and devices.
7. Check for clear relief valve inlets, outlets, and drain piping.

8. Check operation of pumps and circulators.
9. Test operation of safety controls, relief valves, and devices.

D. Perform the following startup procedures:

1. Adjust operating controls.
    a. Adjust hot-water-outlet temperature settings.

END OF SECTION 22.3400

SECTION 22.4000 - PLUMBING FIXTURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. (EEW) Emergency Eye Wash

B. (ES) Emergency Station

C. (EWC) Electric Water Coolers

D. (LAV) Lavatories.

E. (LT) Laundry Tub

F. (MR) Mop Receptors

G. (SH) Showers.

H. (SINK) Sinks.

I. (UR) Urinals

J. (WC) Water closets.

1.2 RELATED REQUIREMENTS

A. Division 01 Specifications

B. Section 07 9005 - Joint Sealers: Seal fixtures to walls and floors.

C. Section 22 1005 - Plumbing Piping.

D. Section 22 1006 - Plumbing Piping Specialties.

E. Section 22 3000 - Plumbing Equipment.

1.3 REFERENCE STANDARDS

A. ANSI Z358.1 - American National Standard for Emergency Eyewash and Shower Equipment; 2004.

B. ASHRAE Std 18 - Methods of Testing for Rating Drinking-Water Coolers with Self-Contained Mechanical Refrigeration; 2006.

C. ARI 1010 - Self-Contained, Mechanically-Refrigerated Drinking-Water Coolers; Air-Conditioning and Refrigeration Institute; 2002.

D. ASME A112.6.1M - Supports for Off-the-Floor Plumbing Fixtures for Public Use; The American Society of Mechanical Engineers; 1997 (Reaffirmed 2002).

E. ASME A112.18.1 - Plumbing Supply Fittings; The American Society of Mechanical Engineers; 2005.

F. ASME A112.19.2 - Vitreous China Plumbing Fixtures and Hydraulic Requirements for Water Closets and Urinals; The American Society of Mechanical Engineers; 2008.

G. ASME A112.19.3 - Stainless Steel Plumbing Fixtures; The American Society of Mechanical Engineers; 2008.

H. ASME A112.19.5 - Trim for Water-Closet Bowls, Tanks and Urinals; The American Society of Mechanical Engineers; 2005.

I. IBC - ICC - International Building Code

J. IPC - ICC - International Plumbing Code

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide catalog illustrations of fixtures, sizes, rough-in dimensions, utility sizes, trim, and finishes.

C. Samples: Submit two lavatory supply fittings.

D. Manufacturer's Instructions: Indicate installation methods and procedures.

E. Maintenance Data: Include fixture trim exploded view and replacement parts lists.

F. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owners's name and registered with manufacturer.

G. Maintenance Materials: Furnish the following for Owners use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Supply two sets of faucet washers.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

1.6 REGULATORY REQUIREMENTS

A. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc., as suitable for the purpose specified and indicated.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Accept fixtures on site in factory packaging. Inspect for damage.

B. Protect installed fixtures from damage by securing areas and by leaving factory packaging in place to protect fixtures and prevent use.

1.8 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer warranty for electric water cooler.

C. EXTRA MATERIALS

1. See Section 01 6000 - Project Requirements, for additional provisions.
2. Supply two sets of faucet washers, flush valve service kits, lavatory supply fittings, and toilet seats.
3. Supply two

PART 2 PRODUCTS

2.1 (EEW-#) EMERGENCY EYEWASH

A. Manufacturers:

1. Acorn Safety: www.acorneng.com
2. Guardian Equipment: gesafety.com
3. Haws Co.: www.hawsco.com
4. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 1 specifications for additional information.

B. (EEW-1) WALL MOUNTED EYEWASH/DRENCH HOSE - Janitor's Closet

1. Unit shall meet the provisions of ANSI Z358.1-2014 as both an eyewash and a drench hose.
   a. Two spray heads mounted side-by-side w/ “flip top” dust covers, internal flow control and filter
   b. 1/2" IPS chrome plated brass stay-open ball valve w/flag handle.
   c. 12' retractable coiled PVC hose(Max working pressure 180 psi)
   d. Wall mounting bracket
   e. Inline backflow preventer
2. Provide signage and test/inspection record tag in accordance with ANSI Z358.1.
3. Water Supply:
   a. 1/2" Tempered supply from Tempering Valve (ETV-1)
4. Basis of Design:
   a. Guardian Safety Model: G5014-BP

2.2 (ES-#) EMERGENCY STATION (COMBINATION SHOWERS/EYEWASH)

A. Manufacturers:

1. Acorn Safety: www.acorneng.com
2. Guardian Equipment: gesafety.com
3. Haws Co.: www.hawsco.com
4. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 1 specifications for additional information.

B. (ES-1) EYE/FACEWASH w/DRENCH HOSE - Mech/Boiler Room

1. ANSI Z358.1, Wall mounted, Eye/Facewash, SS bowl, four ABS spray heads w/ “flip top” dust covers, internal flow control and filter. annodized aluminum wall bracket
2. Provide with wall mounted drench hose unit, stay open squeeze handle, 8' hose(Max working pressure 200 psi), mounting bracket, in-line backflow preventer, and installation kit to install in combination with eyewash unit
3. Provide signage and test/inspection record tag in accordance with ANSI Z358.1.
4. Water Supply:
   a. 1/2" Tempered supply from Tempering Valve (ETV-1). Refer to specification section 22 1006 Plumbing Piping Specialties" for additional information. Locate tempering valve visible and accessible location.
5. Basis of Design: Guardian Safety Model: G1724-HS-BP

2.3 (EWC-#) ELECTRIC WATER COOLERS - REFER TO DRAWINGS FOR LOCATIONS.

A. Electric Water Cooler Manufacturers:

1. Elkay Manufacturing Company: www.elkay.com.
2. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.

B. (EWC-1) SURFACE MOUNTED, BI-LEVEL - BARRIER FREE, **FILTERED**, ELECTRIC WATER COOLER w/BOTTLE FILLER (VANDAL RESISTANT) - Refer to Drawings for locations.

1. Water Cooler: Electric, mechanically refrigerated. Bi-level surface mounted with; stainless steel top, stainless steel body panels with #4 finish, elevated anti-squirt Chrome vandal resistant bubbler with flexible stream guard, automatic stream regulator, vandal resistant front push button activation, integral air cooled chiller, water filter accessible from top of unit.
2. Bottle Filler: touchless sensor activation, visual filter monitor, green ticker bottle counter, Stainless steel alcove
3. Filter: 6000gal. High capacity Lead and Microplastics filter
4. Chiller Capacity: 8 gallons per minute of 50 degrees F water with inlet at 80 degrees F and room temperature of 90 degrees F, when tested in accordance with ASHRAE Std 18.
5. Electrical: 115V, 60Hz, 260 watts, 3.8 FLA, manufacturer provided cord and plug electrical connection
6. Compliance Standards:
   a. ADA/ANSI A117.1
   b. NSF/ANSI 61 & 372
   c. NSF 42 & 53 (Filter)
   d. UL 399
7. Accessories
   a. In wall carrier
   b. Cane apron (where required for ANSI A117.1 protruding objects)
8. Basis of Design:
   a. Elkay: LVRCTL8WSPRO- LKAPRVRS - MLP200

2.4 (LAV-#) LAVATORIES

A. Manufacturers:

1. Basin: (Vitreous China)
   a. American Standard Inc: www.americanstandard.com.
   b. Sloan Valve Company: www.sloanvalve.com.
   c. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.
2. Electronic Sensor Faucets:
   a. Sloan Valve Company: www.sloanvalve.com.
   b. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.
3. Manual Faucets:
   a. Chicago: www.chicagofaucets.com.

b. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.

4. Carriers:
   a. JOSAM Company: www.josam.com.
   b. J.R. Smith Company: www.jrsmith.com.
   c. Mifab Drainage Products
   d. Zurn Industries, Inc: www.zurn.com.
   e. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.

B. (LAV-1) LAVATORY, VITREOUS CHINA, WALL HUNG - Refer to Drawings for locations.

1. Vitreous China Wall Hung Basin: ASME A112.19.2; vitreous china wall hung lavatory, 20 by 18 inch minimum, with 4 inch high backsplash, rectangular basin with splash lip, front overflow, and soap depression. Provide standard and ADA height units as designated on the Architectural Interior Elevation Plans.
   a. Drilling Centers: 4 inch.
   b. Color: White
   c. Basis of Design: American Standard: Lucerne 0355.012, 20-1/2" x 18-1/4", wall hung, drilled for concealed arm carrier system
2. Sensor Operated Faucet(EBF): Cast brass, chrome plated, deck mounted with sensor located on neck of spout.
   a. Spout Style: Standard.
   b. Power Supply: 24 VAC hardwired with Battery backup
      1) Direct wired to junction box.
      2) For 24V applications, provide transformer and low voltage wiring in accordance with all manufacturers requirements
   c. Water Supply: 3/8 inch compression connections.
   d. Aerator: Vandal resistant, 0.5 GPM, laminar flow device.
   e. Finish: Polished chrome.
   f. Basis of Design: Sloan Optima Series EBF-650-BDT-EL154 w/.5gpm VR aerator
3. Accessories:
   a. Mixing Valve: Below deck thermostatic tempering valve conforming to ASSE 1070 standard.
   b. Chrome plated 17 gage brass P-trap with clean-out plug and arm with escutcheon.
   c. Chrome plated perforated grid strainer.
   d. Commercial Grade, Loose key operated, 1/4 turn, chrome plated angle stops.
   e. Flexible chrome plated copper supplies.
   f. LavShield Drain and Supply shield, conforming to IAPMO standard PS94-2008 Section 3.5, ASTM E84, ANSI A117.1/ADA compliant. Custom manufactured to fit underside of lavatory basin. Stainless steel fasteners. Truebro LavShield or equal.
4. Carrier:
   a. ASME A112.6.1M; cast iron and steel frame with tubular legs, lugs for floor and wall attachment, concealed arm supports, bearing plate and studs.

C. (LAV-2) LAVATORY, VITREOUS CHINA, WALL HUNG - Refer to Drawings for locations.

1. Vitreous China Wall Hung Basin: ASME A112.19.2; vitreous china wall hung lavatory, 20 by 18 inch minimum, with 4 inch high backsplash, rectangular basin with splash lip, front overflow, and soap depression. Provide standard and ADA height units as designated on the Architectural Interior Elevation Plans.
   a. Drilling Centers: 4 inch.
   b. Color: White
   c. Basis of Design: American Standard: Lucerne 0355.012, 20-1/2" x 18-1/4", wall hung, drilled for concealed arm carrier system
2. Manual Faucet(Wrist Blade Handle): Solid cast brass, chrome plated, deck mounted
   a. Mounting: 4"centers
   b. Spout Style: Standard.
   c. Valve: ceramic cartridge with rotation limit stop
   d. Handles: Dual wrist blade handles with H&C color coded indicators
   e. Water Supply: 1/2 inch IPS connections.
   f. Aerator: Vandal resistant, 0.5 GPM
   g. Finish: Polished chrome.
   h. Basis of Design: Moen Commercial: Model 8215F05
      1) Chicago Faucets: Model 802-E70-317XKABCP
3. Accessories:
   a. Mixing Valve: Below deck thermostatic tempering valve conforming to ASSE 1070 standard.
   b. Chrome plated 17 gage brass P-trap with clean-out plug and arm with escutcheon.
   c. Chrome plated perforated grid strainer.
   d. Commercial Grade, Loose key operated, 1/4 turn, chrome plated angle stops.
   e. Flexible chrome plated copper supplies.
   f. LavShield Drain and Supply shield, conforming to IAPMO standard PS94-2008 Section 3.5, ASTM E84, ANSI A117.1/ADA compliant. Custom manufactured to fit underside of lavatory basin. Stainless steel fasteners. Truebro LavShield or equal.
4. Carrier:
   a. ASME A112.6.1M; cast iron and steel frame with tubular legs, lugs for floor and wall attachment, concealed arm supports, bearing plate and studs.

2.5 (MR-#) MOP RECEPTORS - REFER TO DRAWINGS FOR LOCATIONS.

A. Service Sink Manufacturers:

1. Acorn:
2. Other acceptable manufacturers offering equivalent products as approved by Architect/Engineer/Owner. Refer to Division 01 specifications for additional information.

B. (MR-1) MOP RECEPTOR - NEO-CORNER, FLOOR MOUNTED, TERAZZO

1. Basin:
   a. 24 x 24 inch x 12 inch high, terrazzo, floor mounted, neo corner style with drop front, 1 inch wide shoulders, stainless steel shoulder guard, and tiling flange.

b. Basis of design: Acorn: Model TNC-24

2. Faucet: Chrome plated cast Brass, integral vacuum breaker, pail hook, wall support
   a. Basis of design: Chicago Faucets: 897CCP
   b. Install check valves on hot and cold water supplies to faucet.
3. Accessories:
   a. KH36 hose and clamp hanger bracket, 3 feet of 5/8 inch diameter plain end reinforced rubber hose.
   b. KMH Mop hanger.
   c. KWG2-36 Stainless steel wall guards
   d. KF36 tiling flange
   e. KDG3 Drain Gasket
4. Refer to Mop Receptor Detail for additional accessories and installation. Provide HB-1 hose bibb with 3/4"C connection and provide EEW-1 Eyewash/Drench hose assembly. Refer to section 22 1006 Plumbing Piping Specialties" for additional information.

2.6 (LT-#) LAUNDRY TUB - REFER TO DRAWINGS FOR LOCATIONS.

A. Manufacturers:

1. Sink:
   a. Elkay Corporation: www.elkayusa.com.
   b. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.
2. Supply Faucet:
   a. Chicago Faucet, Inc Commerical Faucets:
   b. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.

B. (LT-1) - Single Compartment Laundry Tub - Laundry

1. Sink: ASME A112.19.3; 24 in.(front to back) by 27 in. (side to side) by 14 in. deep, nominal outside dimensions 14 gage thick, Type 304 stainless steel, tubular 16 ga. stainless steel legs w adjustable feet, with backsplash ledge drilled for trim (2-hole punch).
   a. Drain: 3-1/2 inch rotary lever, with grid strainer and 1-1/2" 17 ga. tailpiece.
   b. Basis of Design:
      1) Elkay; Model SS8124 w LK24RT drain outlet
2. Faucet: ASME A112.18.1; chrome plated solid brass supply with high rise 8" swivel gooseneck spout, vandal proof water economy aerator with maximum 1.5 gpm flow, 1/4 turn ceramic cartridge, 4-inch wrist blade indexed lever handles, wall mount style, two holes on 8" centers.
   a. Basis of Design:
      1) Chicago: 631-GN8AE35ABCP, w/8" gooseneck swivel spout and 1.5gpm vandal resistant aerator)
3. Accessories: Chrome plated 17 gage brass P-trap with clean-out plug and arm with escutcheon, screwdriver/loose key chrome plated 1/4 turn angle stops, rigid chrome plated copper or flexible woven stainless steel supplies.

2.7 (SH-#) SHOWERS

A. Manufacturers

1. Controls/Valving
   a. Chicago Faucet, Inc Commerical Faucets: chicagofaucets.com
   b. Powers Controls: www.powerscontrols.com
   c. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.

B. (SH-1) SHOWER UNIT w/MANUAL CONTROL - ADA

1. Surround/Base - By others
2. Control Valve and Accessories
   a. All Chrome Plated Metal Construction control valve, handshower and slide bar
   b. Thermostatic/Pressure balancing mixing valve(ASSE 1016) with brass cartridge, deluxe chrome plated metal handle, high temperature limit stop, integral service staops w/checks
   c. 1/2" hot and cold water supply.
   d. ANSI A117.1 compliant, 1.5gpm hand shower with pause button 59"-69" metal hose, and slide bar.
   e. Basis of Design:
      1) Chicago: SH-TP4-00-021 (provide with 1.5-2.0 gpm handshower)

2.8 (SINK-#) SINKS - REFER TO DRAWINGS FOR LOCATIONS.

A. CONTRACTOR SHALL COORDINATE SPECIFIED SINK TYPE, SIZE, AND DIMENSIONAL REQUIREMENTS **WITH CASEWORK SUPPLIER IN FIELD PRIORTO RELEASE OF ORDER**. Contractor is responsible for final verification of size and type.

B. Manufacturers:

1. Sink:
   a. Elkay Corporation: www.elkayusa.com.
   b. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.
2. Supply Faucet:
   a. Chicago Faucet, Inc Commerical Faucets:
   b. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.

C. (SINK-1) - Single Compartment Bowl - ADA - General Sink.

1. Undermount Sink: ASME A112.19.3; 16 in.(front to back) by 18-1/2 in. (side to side) by 5-3/8 in. (ADA) nominal outside dimensions 18 gage thick, Type 304 stainless steel, undermount, undercoated.
   a. Drain: 3-1/2 inch all metal crumb cup with strainer and 17 ga.tailpiece.(ADA units shall be provided with drain outlet centered-rear in bowl
   b. Basis of Design: Elkay; Model ELUHAD 131655

2. Faucet: ASME A112.18.1; chrome plated brass supply with high rise 8" rigid gooseneck spout, vandal proof water economy aerator with maximum 1.5 gpm flow, 1/4 turn ceramic cartridge, 4-inch wrist blade indexed lever handles.
    a. Basis of Design:
        1) Chicago Faucets: 201-G8AE35-317XKA
3. Accessories: Chrome plated 17 gage brass P-trap with clean-out plug and arm with escutcheon, screwdriver/loose key chrome plated 1/4 turn angle stops, rigid chrome plated copper or flexible woven stainless steel supplies.
4. Below deck thermostatic mixing valve, ASSE-1070 compliant. Provide on Hot supply to faucet. Zurn Aquaguard 38-ZW1070XLCOMP
5. Drain and Supply Insulating covers, conforming to IAPMO standard PS94-2008 Section 3.5, ASTM E84

D. (SINK-2) - Single Compartment Bowl - ADA - Community Pantry

1. Undermount Sink: ASME A112.19.3, ANSI A117.1/ADA; 18 gage thick, Type 304 stainless steel, undercoated.
    a. Bowl Size: 15-3/4 in.(front to back) by 21 in. (side to side) by 5-1/2 in. deep
    b. Overall dimension: 18-1/4 in.(front to back) by 23-1/2 in. (side to side) by 5-1/2 in. deep
    c. Drain: 3-1/2 inch all metal crumb cup with strainer and 17 ga.tailpiece.(ADA units shall be provided with drain outlet centered-rear in bowl
    d. Basis of Design:
        1) Elkay; Model ELUHAD211555 (5.5" Deep, Center-Rear Drain)
2. Faucet: ASME A112.18.1; chrome plated metal construction, high arc swivel spout with pulldown spray, lever style handle w/duralast cartridge, 1.5 gpm.
    a. Basis of Design:
        1) Chicago 434-ABCP
3. Accessories: Chrome plated 17 gage brass P-trap with clean-out plug and arm with escutcheon, screwdriver/loose key chrome plated 1/4 turn angle stops, rigid chrome plated copper or flexible woven stainless steel supplies.
4. Drain and Supply Insulating covers, conforming to IAPMO standard PS94-2008 Section 3.5, ASTM E84

E. (SINK-3) - Double Bowl - Dayroom Kitchen Sink

1. Undermount Sink: ASME A112.19.3; 16 gage thick, Stainless steel, undercoated.
    a. Bowl Size: 14in.(front to back) by 15 in. (side to side) by 8 in. deep
    b. Drain: 3-1/2 inch all metal crumb cup with strainer and 17 ga.tailpiece. (ADA units shall be provided with drain outlet centered-rear in bowl
    c. Basis of Design:
        1) Elkay Dayton DXUH3118
2. Faucet: ASME A112.18.1; chrome plated metal construction, high arc swivel spout with pulldown spray, lever style handle w/duralast cartridge, 1.5 gpm.
    a. Basis of Design:
        1) Chicago 434-ABCP
3. Accessories: Chrome plated 17 gage brass P-trap with clean-out plug and arm with escutcheon, screwdriver/loose key chrome plated 1/4 turn angle stops, rigid chrome plated copper or flexible woven stainless steel supplies.

4. Below deck thermostatic mixing valve, ASSE-1070 compliant. Provide on Hot supply to faucet. Zurn Aquaguard 38-ZW1070XLCOMP
5. Drain and Supply Insulating covers, conforming to IAPMO standard PS94-2008 Section 3.5, ASTM E84

F. (SINK-4) - Triple Bowl - Decon

1. Sink: Triple bowl ASME A112.19.3; 14 gage thick, Type 300 stainless steel, tubular 16 ga. stainless steel legs w adjustable feet, with backsplash ledge drilled for trim (2-hole punch).
   a. Bowl Size: 20in. by 20 in. by 14 in.
   b. Overall dimension: 104-1/2 in. by 25 in. by 43 in.
   c. Drain: 3-1/2 inch all metal crumb cup with strainer and 17 ga.tailpiece.(ADA units shall be provided with drain outlet centered-rear in bowl
   d. Basis of Design:
      1) Elkay; Model 14-3C20X20-0X
2. Faucet: ASME A112.18.1; chrome plated solid brass supply with high rise 8" swivel gooseneck spout, vandal proof water economy aerator with maximum 1.5 gpm flow, 1/4 turn ceramic cartridge, 4-inch wrist blade indexed lever handles, wall mount style, two holes on 8" centers.
   a. Basis of Design:
      1) Chicago: 631-GN8AE35ABCP, w/8" gooseneck swivel spout and 1.5gpm vandal resistant aerator)
3. Accessories: Chrome plated 17 gage brass P-trap with clean-out plug and arm with escutcheon, screwdriver/loose key chrome plated 1/4 turn angle stops, rigid chrome plated copper or flexible woven stainless steel supplies.
4. Below deck thermostatic mixing valve, ASSE-1070 compliant. Provide on Hot supply to faucet. Zurn Aquaguard 38-ZW1070XLCOMP
5. Drain and Supply Insulating covers, conforming to IAPMO standard PS94-2008 Section 3.5, ASTM E84

2.9 (UR-#) URINALS

A. Manufacturers:

1. Urinal
   a. American Standard Inc: www.americanstandard.com.
   b. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.
2. Flush Valves:
   a. Sloan Valve Company: www.sloanvalve.com.
   b. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.
3. Carriers:
   a. JOSAM Company: www.josam.com.
   b. J.R. Smith Company: www.jrsmith.com.
   c. Mifab Drainage Products
   d. Zurn Industries, Inc: www.zurn.com.

e. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.

B. (UR-1) URINAL - WALL HUNG

1. Urinal: Vitreous china, white, stain resistant antimicrobial finish; ASME A112.19.2, washout style, wall hung with side shields and concealed carrier. Mount at standard and ADA height units as designated on Architectural Interior Elevation Plans.
   a. Flush Volume: 0.125 gpf - 1.0 gpf
   b. Flush Style: Washout.
   c. Supply Connection: Exposed (top spud).
   d. Trap: Integral.
   e. Removable stainless steel strainer.
   f. Supply Size: 3/4 inch.
   g. Outlet Size: 2 inches.
   h. Basis of Design:
      1) American Standard Inc; Model Washbrook 6590.001EC, wall hung, top spud, with everclean
2. Flush Valves(Hardwired): ASME A112.18.1, diaphragm type, complete with vacuum breaker stops and accessories.
   a. Sensor-Operated Type: Solenoid operator, low voltage hard-wired, infrared sensor and True Mechanical Over-ride push button on valve body..
   b. Exposed Type: Chrome plated, escutcheon, integral screwdriver stop.
   c. Flush Volume: .5 gpf
   d. Basis of Design:
      1) Sloan Valve Company; Model Optima Royal Series 186 ESS-0.5-TMO, EL-154 transformer and all necessary low voltage cables for complete installation.
3. Carriers:
   a. ASME A112.6.1M; compact adjustable cast iron and steel frame with tubular legs, lugs for floor and wall attachment, threaded fixture studs for fixture hanger, bearing studs.

2.10 (WC-#) WATER CLOSETS

A. Manufacturers(All Water Closets)

1. Bowl:
   a. American Standard Inc: www.americanstandard.com.
   b. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.
2. Flush Valves:
   a. Sloan Valve Company: www.sloanvalve.com.
   b. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.
3. Seats:
   a. American Standard: www.americanstandard.us.com
   b. Kohler Company: www.kohler.com.

c. Bemis Manufacturing Company: www.bemismfg.com.
d. Olsonite: www.olsonite.com.
e. Kohler Company: www.kohler.com.
f. Zurn industries, Inc: www.zurn.com.
g. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.

4. Carriers:
   a. JOSAM Company: www.josam.com.
   b. J.R. Smith Company: www.jrsmith.com.
   c. Mifab Drainage Products
   d. Zurn Industries, Inc: www.zurn.com.
   e. Other acceptable manufacturers offering equivalent products as approved by Architect/Owner prior to Bid. Refer to Division 01 specifications for additional information.

B. (WC-1) WATER CLOSET, WALL HUNG (Public Toilet Rooms) Refer to Drawings for locations.

1. Bowl: Vitreous china w/stain resistant antimicrobial finish, White, ASME A112.19.2, ANSI A117.1/ADA compliant, elongated rim, wall hung, siphon jet flush action, china bolt caps. Provide standard and ADA height units as designated on the Architectural Interior Elevation Plans.
   a. Flush Volume: 1.1 - 1.6 gallon per flush
   b. Supply Connection: 1-1/2 inch Top Spud
   c. Outlet Size: 4 in.
   d. Basis of Design:
      1) American Standard Inc; Model Afwall Millenium FloWise 3351.101 (wall hung, elongated, top spud)
2. Flush Valve (Hardwired): ASME A112.18.1, diaphragm type, complete with vacuum breaker stops and accessories.
   a. Sensor-Operated Type: Solenoid operator, low voltage hard-wired, infrared sensor and True Mechanical Over-ride push button on valve body.
   b. Exposed Type: All Chrome plated, sweat solder adapter with cover tube and cast wall flange, 1" screwdriver angle stop w/vandal resistant stop cap.
   c. Power Supply: 24 VAC.
      1) Direct wired to junction box.
      2) For 24V applications, provide transformer and all low voltage wiring from transformer to faucets/flush valves. Power wirng to transformer shall be provided by the E.C.
   d. Flush Volume: 1.6gpf
   e. Basis of design:
      1) Sloan Valve Company; Model Royal 111 ESS-1.28-TMO, EL-154 tansformer and all necessary low voltage cables for complete installation
3. Seats:
   a. Solid white plastic, elongated, open front, extended back, stainless steel self-sustaining hinge, stainless steel or brass bolts, without cover and anti-microbial finish.

4. Water Closet Carriers:
   a. ASME A112.6.1M; adjustable compact cast iron frame, minimum 500 lbs static load rating, integral drain hub and vent, metal nipple assembly, adjustable spud, lugs for floor and wall attachment, threaded fixture studs with nuts and washers. Provide horizontal and vertical drain units as required by installation methods.

C. (WC-2) WATER CLOSET, WALL HUNG (Single Toilet Rooms) Refer to Drawings for locations.

1. Bowl: Vitreous china w/stain resistant antimicrobial finish, White, ASME A112.19.2, ANSI A117.1/ADA compliant, elongated rim, wall hung, siphon jet flush action, china bolt caps. Provide standard and ADA height units as designated on the Architectural Interior Elevation Plans.
   a. Flush Volume: 1.1 - 1.6 gallon per flush
   b. Supply Connection: 1-1/2 inch Top Spud
   c. Outlet Size: 4 in.
   d. Basis of Design:
      1) American Standard Inc; Model Afwall Millenium FloWise 3351.101 (wall hung, elongated, top spud)
2. Flush Valve (Hardwired): ASME A112.18.1, diaphragm type, complete with vacuum breaker stops and accessories.
   a. Sensor-Operated Type: Solenoid operator, low voltage hard-wired, infrared sensor and True Mechanical Over-ride push button on valve body.
   b. Exposed Type: All Chrome plated, sweat solder adapter with cover tube and cast wall flange, 1" screwdriver angle stop w/vandal resistant stop cap.
   c. Power Supply: 24 VAC.
      1) Direct wired to junction box.
      2) For 24V applications, provide transformer and all low voltage wiring from transformer to faucets/flush valves. Power wirng to transformer shall be provided by the E.C.
   d. Flush Volume: 1.6gpf
   e. Basis of design:
      1) Sloan Valve Company; Model Royal 111 ESS-1.28-TMO, EL-154 tansformer and all necessary low voltage cables for complete installation
3. Seats:
   a. Solid white plastic, elongated, open front, extended back, stainless steel self-sustaining hinge, stainless steel or brass bolts, without cover and anti-microbial finish.
4. Water Closet Carriers:
   a. ASME A112.6.1M; adjustable compact cast iron frame, minimum 500 lbs static load rating, integral drain hub and vent, metal nipple assembly, adjustable spud, lugs for floor and wall attachment, threaded fixture studs with nuts and washers. Provide horizontal and vertical drain units as required by installation methods.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that walls and floor finishes are prepared and ready for installation of fixtures.

B. Verify that electric power is available and of the correct characteristics.

C. Confirm that millwork is constructed with adequate provision for the installation of counter top lavatories and sinks.

3.2 PREPARATION

A. Rough-in fixture piping connections in accordance with minimum sizes indicated in fixture rough-in schedule for particular fixtures.

3.3 INSTALLATION

A. Install each fixture with trap, easily removable for servicing and cleaning.

B. Provide chrome plated rigid or flexible supplies to fixtures with loose key stops, reducers, and escutcheons.

C. Install components level and plumb.

D. Install and secure fixtures in place with wall carriers and bolts.

E. Seal fixtures to wall and floor surfaces with sealant as specified in Section 07 9005, color to match fixture.

F. Solidly attach water closets to floor with lag screws. Lead flashing is not intended hold fixture in place.

G. Provide all transformers and low voltage wiring required for connection of plumbing fixtures. Install transformers and low voltage wiring in accordance with all manufacturers' requirements and recommendations. Line voltage power supply to the transformer shall be provided by the E.C.

3.4 INTERFACE WITH WORK OF OTHER SECTIONS

A. Review millwork shop drawings. Confirm location and size of fixtures and openings before rough-in and installation.

3.5 ADJUSTING

A. Adjust stops or valves for intended water flow rate to fixtures without splashing, noise, or overflow.

3.6 CLEANING

A. Clean plumbing fixtures and equipment.

3.7 SCHEDULES

A. Fixture Heights: Install fixtures to heights above finished floor as scheduled below, where not indicated otherwise on Achitectural Interior Elevations and Drawings.

1. Water Closet:
    a. Standard: 15 inches to top of bowl.
    b. Accessible: 18 inches (17 inches min. - 19 inches max.) to top of seat.

c. Accessible (Childerens Use - age 12 and younger): 15 inches (11 inches - 17 inches)

2. Water Closet Flush Valves:
   a. Standard: 11 inches min. above bowl rim. (coordinate installation at Accessible locations with manufacturers reccomendations.)
   b. Accessible: 11 inches min. above bowl rim. max 44 inches above floor (field coordinate installation at Accessible locations with manufacturers reccomendations and grab bar installation.)
3. Urinal:
   a. Standard: 24 inches to top of bowl rim.
   b. Accessible: 16 inches (17 inches max.) to top of bowl rim.
4. Lavatory:
   a. Standard: 31 inches - 34 inches to top of basin rim.
   b. Accessible: 34 inches(max.) to top of basin rim.
5. Drinking Fountain:
   a. Standard Adult: 40 inches (38 inches - 43 inches) to spout.
   b. Accessible: wheelchair (lower bowl) - 36 inches max. to top of spout.
   c. Accessible: standing persons (upper bowl) - (38 inches min.- 43 inches max.) to spout
6. Emergency Eye and Face Wash:
   a. Standard: 36 inches to receptor rim
   b. Accessible: 36 inches max. to spray heads
7. Showers:
   a. Standard: Male - 80 inches to showerhead, Female - 80 inches to showerhead.
   b. Accessible: Locate all controls 38 inches minimum-48 inches max above floor (measured from floor to highest point of control)

B. Fixture Rough-In Minimum rough in connection sizes indicated. Refer to plans for branch piping and DWV system connections)

1. Drinking Fountain/EWC:
   a. Cold Water: 1/2 Inch.
   b. Waste: 1-1/4 Inch.
2. Lavatory:
   a. Hot Water: 1/2 Inch.
   b. Cold Water: 1/2 Inch.
   c. Waste: 1-1/2 Inch.
3. Sink:
   a. Hot Water: 1/2 Inch.
   b. Cold Water: 1/2 Inch.
   c. Waste: 1-1/2 inch.
4. Mop Basin:
   a. Hot Water: 1/2 Inch.
   b. Cold Water: 1/2 Inch.
   c. Waste: 3 Inch.
5. Showers (refer to plans and product specifications for supplies required)
   a. Hot Water: 1/2 Inch.

b. Cold Water: 1/2 Inch.
c. Tempered Water: 1/2 Inch.

6. Urinal (Flush Valve Type):
   a. Cold Water: 3/4 Inch.
   b. Waste: 2 Inch.
7. Water Closet (Flush Valve Type):
   a. Cold Water: 1 Inch.
   b. Waste: 4 Inch.

END OF SECTION 22.4000

SECTION 23.0501 – HVAC GENERAL REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. Drawings and General Provisions of Contract, including General and Supplementary Conditions and Division 01 Specification sections, apply to work specified in this section. These General Provisions are in addition to all requirements of Division 01 specifications. Where requirements of this section are in conflict with the requirements of Division 01 specification requirements, the requirements of Division 01 take precedence.

1.2 CONTRACTOR:

A. The term Contractor as used in the Specifications shall be understood to mean the people or firm awarded the Contract for the respective phases of work - Heating, Ventilating and/or Air Conditioning.

1.3 DRAWINGS:

A. Drawings are part of the bid documents and are intended to show approximate and relative locations of services and equipment. They shall not be scaled to determine exact positions, locations, and clearances.

B. Due to the diagrammatic layout and small scale of the drawings, certain piping and duct rises, drops, offsets, valves, and related specialties are not shown. The contractor shall provide all ductwork, piping, fittings, valves, and specialties required to insure a complete installation without additional cost to the owner.

C. All drawings and specifications pertaining to general construction, plumbing, HVAC, electrical, and other work shall be carefully examined. Where physical interferences with his work occur because of his failure to consult other trades, this Contractor shall rearrange his work at his own expense.

1.4 TRUE INTENT:

A. The Drawings and Specifications are intended to provide a complete and perfectly operating system. Therefore, it is specifically agreed and understood by the Contractor that anything, be it labor, material or equipment, which is not described in the Specifications or specifically shown on the Drawings, but is necessary for the operation and completion of a perfectly operating system, according to the true intent of the Specifications and Drawings and as interpreted by the Architect, shall be furnished by the Contractor as a part of his Contract, at no extra charge, as though it were specifically detailed and described.

1.5 DEFINITIONS:

A. Where the word "provide" is used in connection with a system, equipment, or an item it shall be understood to mean the furnishing and installing of the system, equipment or item on this project.

B. Where the phrase "as directed" is used, it shall be understood to mean as directed or instructed by the Architect or his authorized representative.

C. Where the word "shall" appears in these Specifications, it shall be understood to mean that the labor, material or performance which it describes, or is associated, is mandatory.

D. Where the words "to be" appear in these Specifications, it shall be understood to have the same interpretation as if the word "shall be" were inserted in their place.

E. Where the word "comparable" appears in these Specifications, it shall be understood to mean that any item of equipment or material which is specified with an absolute minimum of differences.

1.6 SCOPE:

A. Provide a complete and operating HVAC system in accordance with these specifications and accompanying contract drawings. This shall include all required labor, materials, equipment, and supervision.

B. Work shall include but is not limited to the following systems, equipment, materials, and labor for a complete system including the following:

1. Ductwork
2. Air Handling Units
3. Diffusers, grilles, and registers
4. Exhaust fans and relief vents
5. Air terminal units
6. Hot water, refrigerant, and condensate piping systems
7. Terminal heating equipment
8. Automatic temperature control system
9. Boilers
10. Pumps
11. Split system cooling units

1.7 PHASING:

A. All work shall be undertaken to accomplish the work in phases as indicated on the phasing drawings and descriptions.

B. All work required to accomplish the work in the phases shall be included.

1.8 VISIT TO THE SITE

A. Prior to submission of his bid, the Contractor shall visit the site to acquaint himself with the existing conditions. Bids as submitted will be interpreted to include all cost and change made necessary by such conditions.

1.9 RULES AND REGULATIONS

A. All work shall be performed in accordance with the rules and regulations of Pennsylvania Department of Labor and Industry, Federal Department of Labor (Occupational Safety and Health Administration), the Department of Education, the Department of Environmental Protection, and all codes and agencies having jurisdiction.

B. All construction, design fabrication, tests, rating and installation shall comply with the rules and regulations of all local, state or national codes and agencies having jurisdiction over this project. Any costs involved in complying to these rules and regulations shall be included in original bid of this Contractor.

C. The Owner will obtain the building permit. Any other fees relative to the contractors work shall be paid by the contractor as part of his Bid.

1.10 FOREMAN

A. Each contractor must provide a competent foreman, subject to approval of the Construction Manager and Architect. The foreman shall be deemed the agent of the Contractor and must be on duty at the building during all working hours. If work is occurring in more than one shift, provide a foreman for each shift.

B. Any instructions or notices given to the foreman shall have the same force as if given to the Contractor in person.

1.11 WORKMANSHIP

A. All workmanship shall be done according to the best practices of the trade by qualified and competent tradesmen.

1.12 WORK RESPONSIBILITY:

A. All base flashing shall be provided by the General Contractor, with all counterflashing by this contractor.

B. All structural supports required for the installation of equipment and materials shall be furnished by this contractor unless specifically shown on the structural drawings.

C. All concrete work and pads for the installation of equipment and materials shall be furnished by this contractor unless specifically shown on the general construction drawings.

1.13 COORDINATION OF WORK

A. Contractor shall coordinate his work with the other trades. In case of interference or problems the Architect shall decide which work is to be relocated, regardless of which is installed first.

1.14 ALIGNMENT:

A. Where several receptacles, devices, bells, alarms, thermostats, switches, handles, etc., are to be installed in a common location, this equipment shall be lined up in a vertical plane. It is the Contractor's responsibility to confer with the Architect on this alignment.

B. The Mechanical and Electrical Contractors shall carefully check all the Drawings and coordinate their work with all trades to provide for a symmetrical and coordinated ceiling. Ceiling T-bars, lights, registers, and other equipment shall all be symmetrically installed with provisions made for integrating the T-bars and this equipment. Failure to coordinate will result in relocation of ceiling components as directed by the Architect at the Contractor's expense.

1.15 LOCATION OF EQUIPMENT

A. All locations of plumbing, HVAC and fire protection equipment and pipe connections there to shall be verified by the Engineer and Architect. The contractor shall verify locations sufficiently in advance of the installation to allow uninterrupted progress of the work of all trades.

B. The Mechanical Contractor shall prepare dimensioned coordination/arrangement drawings at a scale of (1/4" = 1'0"). Layouts represented by these drawings shall be coordinated with all other trades. Refer to Division 1 requirements for project coordination.

C. This Contractor shall obtain Architect approval of all arrangement drawings before continuing his work.

1.16 MATERIALS AND EQUIPMENT

A. All materials and equipment, unless otherwise specified, shall be new and of the best quality, approved for their specific application.

B. This Contractor shall provide, when required by the Architect, labeled samples of materials to be used on this project. Samples shall be submitted for approval to the Architect prior to their installation.

C. All materials and equipment installed by the Contractor shall be securely and rigidly supported from or attached to the building structure.

1.17 FIRE UNDERWRITER SEAL:

A. Where applicable, all material shall bear the National Board of Fire Underwriters' Seal of Approval. Certificates to this effect to be furnished to Architect upon request.

1.18 SUBMISSION OF SHOP DRAWINGS, EQUIPMENT, AND MATERIALS

A. The Contractor shall submit, with a letter of transmittal to the Architect, 6 sets of shop drawings containing all capacities, performances, features, options, accessories and technical data of all materials and equipment listed herein. All submittals shall be made within 45 days after awarding of the contract.

B. Refer to Division 1.

C. All disapproved submittals shall be corrected as directed by the Architect and resubmitted in 6 sets until approved within 30 days after the original submittal was disapproved. No work involving any materials or equipment covered by shop drawings shall be started until the respective shop drawings are approved.

D. Submit electric copies of all submittals to the Construction Manager.

E. No equipment or materials shall be installed until final approval has been given by the Architect.

F. Identify Project, Contractor, Subcontractor or supplier; pertinent drawing and detail number and specification section number, as appropriate on shop drawings.

G. On shop drawings, apply Contractor's stamp, signed or initialed certifying that review, approval, verification of Products required, field dimensions, adjacent construction work, and coordination of information is in accordance with the requirements of the Work and Contractor Documents.

H. On shop drawings, provide space for Contractor and Architect/Engineer review stamps.

I. Contractors shall include with each submittal/shop drawing, a matrix outlining all items that do not match the specified unit. If an item is not listed on the matrix, the submitted unit will be assumed to meet all parts of the specification. Contractors will be responsible to ensure that the specifications are met in full. Items in matrix shall include schedule performance data vs submitted performance data, specified components vs submitted unit components, specified construction weight, warranty, etc. vs submitted construction, weight, warranty, etc.

1.19 APPROVED SUBSTITUTIONS:

A. Various items of equipment and materials that have been used as the basis for mechanical system design have been specified by a manufacturer's name and model number. Another manufacturer's product may listed within the specifications as an approved substitution. The Architect shall be the sole judge as to the comparability of an item of equipment that is submitted for approval as a substitute for that which is specified. Each of the Contractor's substitute proposals shall include all labor and materials that will be required to install the equipment and make it operate satisfactorily in accordance with the original design concept. He shall include such things as changes in piping, valves, supports, fittings, ductwork, motors, controls, electrical wiring, and thermal insulation. It shall be the responsibility of the Contractor to make certain that substitute equipment, which has been accepted by the Architect will fit into the designated spaces. He shall make the necessary field measurements in order to determine that there is adequate space for the equipment, taking into consideration the clearances that are required for connections and servicing. All equipment other than the basis of design shall be considered a substitution.

1.20 ALTERNATES:

A. Various items of equipment and materials that have been used as a basis for mechanical system design have been specified by a manufacturer's name and model number. Where another manufacturer's product has been specified as an alternate to this equipment the proposed cost for this alternate shall include all labor and materials that will be required to install the equipment and make it operate satisfactorily in accordance with the original design concept. He shall include such things as changes in piping, valves, supports and supporting structure, fittings, ductwork, motors, controls, electrical wiring and thermal insulation. It shall be the responsibility of the contractor to make certain the alternate equipment will fit into the designated spaces. He shall make the necessary field measurements in order to determine that there is adequate space for the equipment, taking into consideration the clearances that are required for connections and servicing.

1.21 PROTECTION OF EQUIPMENT

A. The Contractor shall protect all material and equipment from damage until final acceptance as installed. He shall close all openings during construction with temporary plugs and replace all damaged items with ones of exact sameness at his expense.

B. The Contractor shall schedule material and systems for delivery in such a pattern that critical pieces of equipment may be stored within the building, protected from weather. Where materials are stored outside, they must be protected from the elements and damage.

C. This Contractor shall be responsible for coordinating the procurement of specified materials and equipment being supplied by his sub-contractors and suppliers.

1.22 SCAFFOLDING AND HOISTING

A. The Contractor shall furnish and erect all scaffolding, hoists, shoring, platforms, railings, ladders, and other devices required by local, state, and federal laws to install his systems and equipment. Scaffolding and all other equipment shall be removed at completion of the work.

B. The Contractor shall hoist or rig his own material and equipment into place, or arrange for the rigging of it by others at his expense.

1.23 CONCRETE AND MASONRY WORK:

A. The Contractor shall furnish and install all concrete bases, reinforcing, etc. required to install the Mechanical Work, unless otherwise noted.

B. The Contractor, prior to installing any forms, reinforcing or concrete, shall notify all other Contractors or subcontractors, in ample time for them to install any portion of their work which is to be concealed in the concrete. No such work shall be placed in a manner to interfere with the proper placing of the reinforcement unless so authorized by the Architect.

1.24 ANCHOR BOLTS:

A. Each Contractor shall provide and set in place at the time the foundations, bases, or curbs are poured, all necessary anchor bolts as required for the various equipment specified herein, to be furnished by him under these Specifications. Anchor bolts must be of the hook type and of the proper sizes and length to suit the apparatus. The bolts shall be set in pipe sleeves of approximately twice the bolt diameter and as long as the imbedded length of the bolt.

B. When the equipment is set in its proper position, the bolt sleeves and the space between the rough foundations, bases or curbs of the equipment shall be completely filled with one inch of non- shrinking cement grout.

C. Each Contractor shall assume all responsibility for the location of all anchor bolts for the equipment furnished by him under these Specifications, and must have a man present at the time the foundation, bases, or curbs are poured.

1.25 SLEEVES:

A. Each Contractor shall furnish and set all sleeves required for the installation of his work and shall be responsible for their final and permanent locations.

B. All pipes passing through masonry construction shall be fitted with sleeves. Each sleeve shall extend through its respective floor or wall and shall finish flush with each surface unless otherwise required. Unless otherwise specified or shown, sleeves shall be one pipe size larger than the overall outside diameter of the pipe when insulated. Sleeves in bearing and masonry walls shall be made of standard weight steel pipe.

C. Sleeves for pipes passing through non-fire rated floors: 18 gage galvanized steel.

D. Sleeves for pipes passing through non-fire rated beams, walls, footings, and potentially wet floors: Steel pipe or 18 gage galvanized steel.

E. Sleeves for rectangular ductwork: Galvanized steel and framing as shown on details.

F. Firestopping for non-plastic piping, ductwork shall be 3M, Dow, Corning fire caulk/packing or accepted equivalent. Install steel angles around duct penetrations. Refer to Section 07 8400. All fire stopping furnished by all contractors on the project shall have the same manufacturer.

G. All sleeves shall be properly installed and securely cemented in place. Where pipes pass through waterproofed floor or walls, design of sleeves shall be such that the waterproofing can be properly flashed around the sleeves, and of such height that the water will be restrained from entering sleeves and dripping to any finished areas below.

H. Where pipes pass through fire resisting portions of the structure, the annular space between the sleeve and the pipe shall be filled with an approved fireproof material.

1.26 ESCUTCHEONS:

A. All exposed pipes, except as otherwise described, passing through walls, floors, ceilings, etc. in finished spaces, shall be provided with solid pattern heavy ceiling, floor or wall escutcheons with set screw. Escutcheons and plates shall be of steel or malleable iron with prime coat ready for painting. Escutcheons will not be provided where sleeves intentionally extend above finished floor.

1.27 ACCESS DOORS AND PANELS:

A. All ceiling and wall access panels required shall be furnished by this Contractor and set by the General Contractor. The location of these access panels must be approved by the Architect prior to their installation. The Contractor shall furnish an access panel where fire dampers, valves, specialties, junction boxes, and other serviceable items are installed behind plaster, tile, or similar type non-removable surfaces.

B. Panels shall be of suitable size and construction for each specific location. Doors shall be flush and shall open 175 degrees on concealed hinges. All assemblies shall be rustproof and exposed finished edges and surfaces shall be prime-coated with rust inhibitive paint. Doors to be installed in ceilings shall be with screw driver operated cam locks. Doors for wall installation shall have master-keyed cylinder locks. Doors shall be Milcor, or equal, as follows:

1. Construction Milcor Model

    a. Masonry Style M
    b. Plaster Style K

1.28 CUTTING AND PATCHING:

A. Each Contractor shall give the General Contractor complete information as to size of openings to be provided by the General Contractor in new floors, and walls, etc., so that such openings may be provided as the project progresses.

B. If openings are omitted or are incorrect through failure of Mechanical Contractors to follow these instructions, the respective Contractors shall, at their own expense, engage the trade which originally installed the work, to cut and patch to the satisfaction of the Architect.

C. All cutting and patching of every nature required in connection with these Contracts shall be done by each Contractor with mechanics experience in their respective lines of work. All patching shall match adjacent finishes.

D. All cutting in the building shall be done with great care so as not to leave an unsightly surface which may not be concealed by plates, escutcheons, or other normal concealing construction. If such unsightly conditions occur through the fault of the Contractor, he shall be required at his own expense, to engage the General Contractor to replace the damaged materials with new materials.

E. Cutting and patching of the existing building shall be done by this Contractor. All holes cut shall be in a manner approved by the Architect and all patching shall be done so as to match the existing construction and finish. The Contractor shall patch all openings left in present walls, floors and ceilings when ductwork, piping and other materials are removed.

F. Where it becomes necessary to cut out any portions of walls, floors, ceilings, roof or other portions of the building for the installation of work as may be required to perform and complete the work under this Contract, the Contractor shall do all necessary cutting and fitting, shall remove all excess material, and shall replace all work damaged so as to leave the entire premises in a finished condition.

G. No cutting shall be done which may in any way affect the building structurally or architecturally. Any damage incident to cutting or other causes in the performance of this Contract shall be made good by replacement or repairs to the Owner's satisfaction. Cutting shall be done only with the prior approval of the Architect.

H. Patches in fire rated walls, ceilings and floors shall maintain the fire rating of these barriers by the use of approved materials including special fire rated sealing compounds or material identical to the barrier materials. Refer to the Architectural Specifications for approved methods and materials.

I. Contractor shall seal all ductwork and piping penetrations through walls and floors even if not fire rated.

1.29 PAINTING:

A. Provide corrosion inhibiting prime coating on all ferrous materials. Comply with Division 9 of the specifications

B. All exposed piping, iron work, and equipment installed in the mechanical equipment rooms under this contract shall be painted 1 prime coat and 2 coats of best quality oil paint of color as selected by the Architect.

C. Unless specifically noted, insulation and galvanized piping in ceiling cavity area shall not be painted.

D. All grilles, louvers, etc. unless otherwise indicated shall be either furnished in or painted in a color selected by the Architect. When requested by the Architect, the equipment shall be finished with a prime coat and then professionally painted in the field in a color selected by the Owner. The Contractor shall assume responsibility for all costs involved.

E. Note that all exposed ductwork and exposed piping systems shall be painted by the G.C. See Division 9 of the specifications for requirements. Ductwork or piping in rooms without continuous ceilings shall be considered exposed.

1.30 TEMPORARY HEAT:

A. Requirements for providing temporary heat are stated in the General Conditions of the Specifications. New HVAC equipment furnished under this Contract may be used for temporary heat provided all of the following conditions are met:

1. The HVAC equipment is installed as part of the permanent HVAC systems as indicated on the Drawings.
2. The Contractor unconditionally extends the manufacturer's warranty one year from the date of final acceptance by the Owner.
3. Air Handling systems, including air handlers, fan-powered boxes, etc. and duct distribution systems are not to be utilized for temporary heat until interior construction is substantially complete as determined by the Engineer. Obtain approval in writing.
4. The manufacturers of units with compressors extend the 5 year compressor warranty to start from the date of final acceptance by the owner.
5. All energy recovery wheels must be removed from the units utilized for temporary conditioning, sealed and stored by the Contractor. They shall be reinstalled by the Contractor at final acceptance.

1.31 CLEANING OF SYSTEMS:

A. The Contractors shall thoroughly clean all pipe and ductwork systems to remove all grease, oil scale, core, sand and other foreign material after tests have been made and before the building is turned over to the Owner. Flush and treat all systems in each phase as required to meet phasing requirements. See Section 23 2500.

B. All strainers shall be opened and cleaned thoroughly.

C. The interior of all air handling equipment, ductwork and all filters shall be cleaned thoroughly before the building is accepted by the Owner. Refer to Section 23 3100.

D. Should the Contractor put any substance into any system to aid in the cleaning of it, all trace of such material shall be removed before the system is considered clean. All such substances, if used, shall be free from any acid that will set or injure valve seats in any way.

E. Wash all fixtures with soap and water, remove labels and protective covering and clean all grease and cutting from plates or polished piping and trim.

F. Where damage to finish, furnishing or parts of the building results from pipe stoppage or from failure to clear and flush piping systems properly, the Contractor shall at his own expense, employ qualified skilled labor to make repairs.

G. After all tests have been made and the system proven satisfactory to the Architect, the Contractor shall go over the entire project, clean all equipment and material installed by him, and leave in a clean and working condition.

1.32 INSTRUCTION TO EMPLOYEES:

A. At the completion of the work, and before final acceptance of the building by the Owner, each Contractor, together with the representatives of the manufacturers of the equipment installed by the Contractor, shall instruct the designated employees of the Owner in the care, adjustment, maintenance and operation of equipment installed by him.

B. Three copies of factory installation and maintenance schedules shall be furnished for each piece of equipment. Acceptance of materials and equipment is conditional upon receipts of maintenance manuals.

C. A representative of the manufacturer of each piece of equipment shall inspect his respective pieces of equipment, make final adjustments, and put them in a satisfactory working condition.

1.33 OPERATION AND MAINTENANCE INSTRUCTIONS:

A. Upon the completion of this project, the Contractor shall deliver to the Architect for approval, three copies of an operating and maintenance manual consisting of the items outlined hereinafter.

B. The purpose of this manual is to assist the Owner in routine operation, maintenance, servicing, troubleshooting and procurement of replacement parts. All information in the manual shall be as-built and only material pertinent to the project shall be included.

C. The operating manual shall be considered a part of the final inspection and shall be submitted for review and approval at least 30 days in advance of a request for final inspection. The manual shall include:

1. A copy of all final corrected equipment submittals, control diagrams, descriptive brochures, and a list of all parts of each piece of mechanical and electrical equipment which has been furnished and installed.

D. Complete and detailed typewritten operating and maintenance instructions for all major operating equipment. The operating and start-up instructions shall be written in a concise, step by step manner. Maintenance instructions shall include such things as periodic checks, adjustments and troubleshooting techniques. Specifications for lubricants and other required fluids shall be included.

E. A listing of all items of mechanical and electrical equipment, a compilation of the nameplate data for this same equipment, the name, address and telephone number of the nearest service organization.

1. Copies of all A.S.M.E. pressure vessel certifications, state approved tank permits, complete additional valve tag schedules, all electrical inspection permits and all additional mechanical and electrical permits required for occupancy by the Owner.
2. All of the materials shall be indexed by specification section, arranged categorically and be bound in a rigid, plastic covered, three ring binder.

1.34 GUARANTEE:

A. Each Contractor shall unconditionally guarantee in writing all materials, equipment, and workmanship for a period of one year from date of final acceptance. The Contractor shall provide free service including parts replacement for all equipment involved in his Contract during this guarantee period.

B. The guarantee shall include restoration to its original condition of all adjacent work that must be disturbed in fulfilling this guarantee.

C. All such repairs and/or replacements shall be made without delay and at the convenience of the Owner.

D. Refrigeration compressors and heat exchanger circuits shall have a five year guarantee.

E. All warranties shall include parts and labor. Durations of equipment warranties shall begin when the building has been accepted by the Owner.

PART 2 – PRODUCTS - NOT USED

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install equipment to permit removal of components and parts which require periodic replacement or maintenance. Arrange pipes, ducts, and equipment to permit access to valves, gauges, starters, motors, doors and access panels.

B. Provide access panels in equipment, ducts, etc. as required for inspection and maintenance.

3.2 PIPING INSTALLATION

A. In general, piping shall be exposed in equipment rooms, and concealed in all finished rooms. Where piping is exposed, it shall be run so as to allow maximum headroom consistent with proper pitch. No piping or ductwork shall cross below the head of any window or door.

B. Exposed piping, ducts, conduits, and/or appurtenances indicated on the inside of buildings, shall be installed parallel to the building lines. All piping shall be kept as close as possible to the ceilings, walls, and columns, to take up the minimum amount of space.

C. All work shall be arranged and installed as high as possible to prevent obstruction of window areas, and to give adequate clearance and access for operation and maintenance.

3.3 SLEEVES

A. Where pipes pass through concrete or masonry walls or concrete floors, they shall be protected through the full depth of the construction with galvanized sleeves; same to be at least one size larger than the pipe plus insulation.

B. Where sleeves occur in concrete floors, the top of sleeve shall be 2" above the finished floor line, and the end shall be filed to a smooth round finish.

C. This Contractor shall supply all pipe sleeves and shall inform general contractor of exact sleeve locations in time for their incorporation onto the concrete forms or masonry work.

D. Any cutting and patching in masonry or concrete made necessary by failure to adequate coordinate with the general contractor shall be done by the general contractor at the expense of this contractor.

E. The space between pipes and sleeves shall be caulked air tight with a non-combustible inorganic material.

3.4 UNIONS

A. Unions shall be provided at all connections to each piece of equipment and on both sides of all automatic valves, and devices which requires removal for maintenance. No unions are to be placed in a location which will be inaccessible after the completion of the project.

B. Unions of copper tubing shall be 200 lbs. SWP brass ground joint.

C. Unions for steel pipe shall be 250 lbs. SWP, malleable iron with brass to iron seat.

3.5 CLEARANCE

A. All piping, including valves and fittings shall be installed to provide the following minimum clearances between the finish coverings, adjacent pipe and/or conduits: 4" between for piping services and 6" between piping services and electrical conduits.

3.6 ESCUTCHEON PLATES

A. All piping passing through walls, ceilings, and floors shall be provided with escutcheon plates securely fastened in place. Where installed on piping in finished areas they shall be chrome plated.

3.7 ACCESS PANELS

A. Removable panels shall be located so as to provide easy access to all concealed plumbing accessories that may require adjustments or maintenance, such as valves, water hammer arresters, traps, strainers, cleanouts or others.

B. Access panels in finished wall or ceiling surfaces shall be furnished by this Contractor for installation by the General Contractor.

C. This Contractor shall pay for any work made necessary by his failure to inform other trades of access panel locations.

3.8 APPLICATIONS OF INSULATION AND COVERING

A. No covering shall be installed by the Contractor until the piping and ducts have been approved by the Architect/Engineer/Construction/Owner.

3.9 INSERTS

A. Except as noted, provide box type inserts for all hangers and supports intended to suspend piping or light weight equipment from new concrete construction. Fasten all inserts of the form work before concrete is poured. Inserts to be Grinnell Figure No. 282 or Figure No. 279 depending upon the maximum load to be carried.

B. No toggle bolts, expansion screw anchors or similar imbedded hanger supports shall be used in new construction.

3.10 CHASES AND OPENINGS IN FLOORS AND WALLS

A. It shall be the duty of the Contractor requiring chases, openings or the placement of any sleeves, anchors, and supports required for his work, whether or not shown on the drawings, to advice the General Contractor accordingly, prior to or at the time of pouring concrete slabs, beams or the building of walls, etc. He shall furnish all such sleeves, anchors, and supports in place, and all necessary information for the proper location of said chases or openings. Show all information on the coordination drawings.

B. If a contractor shall fail to observe and comply with those requirements, he shall cut, at his own expense, after receiving the consent of the Architect, such chases or opening as may be necessary and proper, providing and building in place all lintels required by these openings, doing the necessary patching and rebuilding of the work required under the direction of the General Contractor and he hall be responsible for all loss or delay resulting therefrom.

3.11 EQUIPMENT BASES AND SUPPORTS:

A. Provide housekeeping pads of concrete, minimum 4” thick and extending 4” beyond supported equipment.

B. Provide templates, anchor bolts, and accessories for mounting and anchoring equipment.

C. Construct supports of steel members. Brace and fasten and flanges bolted to structure.

D. Provide rigid anchors for pipes after vibration isolation components are installed.

END OF SECTION 23.0501

SECTION 23.0513 - COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Single phase electric motors.

B. Three phase electric motors.

1.2 RELATED SECTIONS

A. Section 23 0514 - Variable Frequency Drives.

1.3 REFERENCES

A. ABMA STD 9 - Load Ratings and Fatigue Life for Ball Bearings; American Bearing Manufacturers Association, Inc.; 1990 (Reapproved 2000).

B. IEEE 112 - IEEE Standard Test Procedure for Polyphase Induction Motors and Generators; Institute of Electrical and Electronic Engineers; 2004.

C. NEMA MG 1 - Motors and Generators; National Electrical Manufacturers Association; 2009, Revision 1 - 2010.

D. ASHRAE (American Society of Heating, Refrigeration, and Air-Conditioning Engineers) Standard 90.1 Energy Standard for Buildings Except Low-Rise Residential Buildings.

E. NFPA 70 - National Electrical Code; National Fire Protection Association; 2017.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide wiring diagrams with electrical characteristics and connection requirements.

C. Test Reports: Indicate test results verifying nominal efficiency and power factor for three phase motors larger than 1/2 horsepower.

D. Manufacturer's Installation Instructions: Indicate setting, mechanical connections, lubrication, and wiring instructions.

E. Operation Data: Include instructions for safe operating procedures.

F. Maintenance Data: Include assembly drawings, bearing data including replacement sizes, and lubrication instructions.

1.5 QUALITY ASSURANCE

A. Conform to NFPA 70.

B. Motors shall comply with ASHRAE Standard 90.1 Energy Standard for Buildings Except Low-Rise Residential Buildings current edition.

C. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect motors stored on site from weather and moisture by maintaining factory covers and suitable weather-proof covering. For extended outdoor storage, remove motors from equipment and store separately.

1.7 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Century

B. Baldor

C. Lincoln Motors

D. A. O. Smith Electrical Products Company

2.2 GENERAL CONSTRUCTION AND REQUIREMENTS

A. Construction:

1. TEFC type except where specifically noted otherwise.
2. Design for continuous operation in 40 degrees C environment.
3. Design for temperature rise in accordance with NEMA MG 1 limits for insulation class, service factor, and motor enclosure type.
4. All motors shall be high efficiency type.

B. Provide motors with phase loss protection.

C. Motors for use with VFD's shall be designed and approved by the manufacturer for use with VFD's.

D. Mechanical Contractor shall provide all motors that are required. Each motor shall be the correct service type and have a horsepower rating that is adequate for the device it is intended to drive. Motors shall not exceed their full load rating, including the service factor rating, whenever the driven equipment is operating at the specified capacity under normal operating conditions.

E. Insulation shall be Class B. Motors shall be dripproof in dry, non-hazardous locations, weather protected where exposed to the weather or dampness, and totally enclosed, fan cooled where specified. Dripproof and totally enclosed fan cooled motors, fractional and integral horsepower, shall have service factor ratings of 1.15 and 1.0 respectively. Fractional horsepower motors shall have sealed, permanently lubricated, ball bearings unless sleeve bearings are standard with a manufacture of equipment which utilized direct driven fans. Integral horsepower motors shall have ball bearings with grease zerk fittings and drain ports. All motors shall be rated for continuous duty. Maximum temperature rise shall not exceed 40 degrees C. for dripproof frame motors and 55 degrees C. for totally enclosed motors in a 40 degree C. ambient condition. Motors shall be suitable for the electrical service specified, scheduled or shown.

F. Motors shall have been tested and approved by the Underwriters' Laboratories, Inc. Motors shall be manufactured and classified in accordance with the current NEMA Standard Publication No. Mg 1 entitled "Motors and Generators."

G. Motors shall be dynamically balanced and tested at the factory before shipment. They shall be relatively quiet while running. Connections to direct driven devices shall be made with a flexible coupling. Motors for V-belt drive service shall be furnished with a steel base and a screw device for adjusting belt tension.

H. Motors shall be mounted so that they are readily accessible for maintenance. Motor terminal boxes shall be accessible. Covers shall not be blocked by other equipment. Watertight terminal boxes shall be provided on those motors in wet locations or where they are exposed to the weather. Motor mounting arrangement shall be such that the motor mounting bolts are accessible in order to facilitate its removal.

I. Explosion-Proof Motors: UL approved and labelled for hazard classification, with over temperature protection.

J. Visible Nameplate: Indicating motor horsepower, voltage, phase, cycles, RPM, full load amps, locked rotor amps, frame size, manufacturer's name and model number, service factor, power factor, efficiency.

K. Wiring Terminations:

1. Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated. Enclose terminal lugs in terminal box sized to NFPA 70, threaded for conduit.
2. For fractional horsepower motors where connection is made directly, provide threaded conduit connection in end frame.

2.3 ELECTRICAL CONNECTIONS

A. All electrical connections shall be made by the Electrical Contractor. Motors and controls for equipment furnished by each Contractor shall be furnished and set by the Contractor furnishing the equipment. Where electrical work is specifically indicated to be performed by the Plumbing, Fire Protection or Heating Contractor, this Contractor shall perform the work in conformance with Electrical Specifications for this project.

2.4 MOTOR CONTROLLERS

A. Mechanical Contractor shall provide motor controllers. The items shall be products of one manufacturer, Allen-Bradley, Square D, General Electric or Westinghouse, and shall meet latest N.E.M.A. and IEEE Specifications. Starters and contactors shall be horsepower rated. Starters shall include the proper size heater elements

B. Magnetic starters shall be provided with "On-Off-Auto" switches on the starter.

C. Unless otherwise noted, control and pilot devices such as electric thermostats, alternators, float controls, aquastats, etc., shall be furnished and installed by the Mechanical Contractor. Each device shall be provided with all auxiliary features and accessories which may be required for correct operation of the associated equipment.

D. Magnetic starters shall be provided with start-stop pushbuttons on the starters unless remote control pushbuttons or other methods of starting are specified elsewhere.

E. Unless otherwise noted elsewhere, all magnetic motor starters controlled with a remote pilot device shall contain a control circuit transformer, as an integral part of the controller, providing control power at a maximum 120 volts for the pilot device. The exact control circuit voltage shall be coordinated with the ATC supplier prior to the purchase of any motor controllers.

F. Starters and protective devices which are provided as an integral part of the equipment furnished under the Mechanical Contracts, shall be supplied.

G. For use in manual starting of fractional horsepower motors up to but not including 1/2 horsepower, the Mechanical Contractor shall furnish a thermal manual toggle switch type starter with pilot light specifically designed for this purpose. Each starter shall be provided with proper size heater element for the motor to be controlled. Heater elements shall be readily removable and interchangeable. Starters shall be arranged for flush or surface mounting as indicated or as required.

H. Controllers and wiring diagrams shall be delivered to the Electrical Contractor.

2.5 MOTOR DISCONNECTS:

A. Unless otherwise noted, motors located out of sight of their respective electric panels shall be provided with disconnect switches at the motors by the Mechanical Contractor.

B. All exhaust and supply fans on the roof shall be provided with disconnecting means at the motors as an integral part of the equipment.

2.6 ENCLOSURES:

A. Motor controllers and disconnects shall be provided with standard approved enclosures to suit the locations in which they are installed and the conditions under which they are to operate.

2.7 MOTOR CONTROL WIRING:

A. The Electrical Contractor shall run the power wiring system from the various supply panels indicated, to the motors and motor controllers and shall make final connections unless otherwise noted on the Drawings. The Mechanical Contractors shall run all control wiring from the motor controllers to the pilot devices.

B. Starters, and protective control devices which are provided as integral part of the motors or motor-operated equipment shall be prewired at the factory.

C. After final connections are completed, the Mechanical Contractor shall test each motor for proper rotation. Before applying current to the motor, the Mechanical Contractor shall check the motor for alignment, oil, etc. The Mechanical Contractor shall make any necessary adjustments to the starter and control equipment for proper starting and overload protection.

END OF SECTION 23.0513

SECTION 23.0514 - VARIABLE FREQUENCY DRIVES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. The General Provisions of the Contract, including General and Supplementary Conditions apply to the Work of this Section.

B. Section 23 0993 - HVAC Control Sequence.

C. Section 23 0923 – Direct Digital Control (DDC) System

1.2 DESCRIPTION OF WORK:

A. Extent of work is hereby defined as the furnishing and installation of variable frequency drives of the types and sizes as indicated on the Drawings and as specified herein.

1.3 QUALITY ASSURANCE:

A. Manufacturers: Subject to compliance with the requirements of this section, provide variable frequency drives as manufactured by Square D, Cutler Hammer, Danfoss, or ABB.

B. NFPA Compliance: Comply with applicable provisions of ANSI/NFPA 70 "National Electric Code", pertaining to the construction and installation of electrically operated components.

C. NEMA Compliance: Comply with applicable provisions of NEMA Standards pertaining to motor starters, control panels, and wiring devices.

D. UL Compliance: Provide electrical components which have been tested, approved, and labeled by Underwriters Laboratories.

1.4 SUBMITTALS:

A. Section 01 3000 contains definitions, requirements and procedures for the following submittals:

1. Shop Drawings
2. Guarantees
3. Product Data

1.5 WARRANTY:

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

PART 2 - PRODUCTS

2.1 ADJUSTABLE FREQUENCY DRIVES:

A. General: Provide variable frequency drives (VFD) for equipment as scheduled and as shown on the drawings to vary the speed of the three phase AC motors to proportionately control the air or water flow of each system. The VFD shall utilize a 16-bit microprocessor for sine-coded pulse width modulation of AC induction or synchronous motors.

B. Input Power: The VFD shall accept 460V/3P/60Hz input voltage within a ±10% variation.

C. Output Power: The VFD output power shall vary frequency to the motor from 0 to 400 Hz with resultant motor speed varying at the motor nameplate rated speed, with output voltage variation from zero to motor rated voltage for optimum volts per hertz (V/Hz) ratio for fan loads. Output currents shall be rated 125% of motor full load amps for 1 minute based upon VFD's variable torque rating. The output shall be a voltage source type generating a sine coded PWM waveform utilizing an asynchronous carrier frequency up to 15000 Hz. The carrier frequency shall be adjustable to minimize harmonically induced noise or vibration.

D. Power Structure: The VFD power input stage shall convert three phase AC line power to a fixed DC bus voltage by using a full-wave diode rectifier with three phase protection. Power factor shall be.98 or corrected with capacitors. The VFD shall have power component monitoring/protection, short circuit power protection, and capacitive filtering of DC power. Switching transistors shall convert DC power to sine coded pulse width modulation voltage for motor control. Current transformers shall monitor output current and be used by the microprocessor for: thermal overload protection, three phase current limit, ground fault and short circuit protection, and motor restart with speed search. Insulated Gate Bipolar Transistors shall be utilized for a fixed carrier frequency of 15,000 Hz.

E. Operation and Protective Functions: The VFD shall be capable of performing the following operational functions in addition to providing built-in protective features:

1. DC injection braking with adjustable start frequency, current limit and time duration to provide braking before fan start-up.
2. Programmable critical frequency interruptive to lock-out up to 3 frequency ranges, 0 to 10 Hz, to avoid motor operation at resonant speeds.
3. Speed search to restart motor while fan is still rotating.
4. Reference speed loss detection to continue fan operation if the reference frequency is interrupted. Motor shall be operated at 80% of last reference valve.
5. Programmable auto restart and stall prevention to adjust output frequency to avoid overload or overcurrent conditions.
6. Power-loss ride through to automatically restart the motor after a power interruption less than two seconds duration.

7. Reverse rotation prevention.

F. Control Terminal Functions: A control terminal strip shall be provided to accept the following external control commands:

1. Forward Run/Stop to initiate or stop VFD operation.
2. Speed Reference Input to accept an instrument follower signal of either a) 0 to 10 VDC, b) 4 to 20mA, or c) 1 to 5 VDC as determined by the Automatic Temperature Control Contractor.

G. Multi-function output contacts programmable for any of the following indications:

1. Run mode
2. Zero speed detect
3. Overtorque detect
4. Coast to stop detect
5. Run reference mode
6. Speed reference mode
7. Speed synchronization
8. Output frequency detect
9. Low voltage detect
10. Operation ready
11. Speed reference loss detect
12. Braking resistor fault
13. Drive fault
14. Output fault relay contact to indicate AFD diagnostic fault detection.
15. Terminal for HOA switching.
16. Input terminal to shut down motor operation on smoke detection signal or other external fault signals.
17. Analog output signal, 0 to 10 VDC, proportional to output frequency or output covered.

H. Local Operator Control: The VFD shall have a front mounted sealed touch-pad operator to include:

1. Local run/stop keys
2. Local speed command
3. Reset push button
4. Digital output frequency meter and speed reference meter which both can be reprogrammed for other speed related indications, including RPM, CFM, FPM, etc.
5. Digital voltmeter.
6. Digital kilowattmeter.
7. Digital ammeter.
8. Input and output terminal status indication.
9. Ability to program various control functions without necessity of stopping drive while in Run mode, including but not limited to the following:
    a. Acceleration and deceleration
    b. Frequency command bias and gain
    c. Torque compensation
    d. Slip compensation

e. Energy savings gain
f. Multi-step speed references
g. Digital diagnostic indication and protection for:

1) DC bus undervoltage
2) DC bus over voltage
3) Load over torque
4) Fuse blown
5) Motor overload
6) AFD overload
7) Heatsink over temperature
8) Instantaneous over current
9) Operator error
10) Central processor fault
11) External fault
12) Dynamic braking fault

I. VFD Adjustments: The microprocessor control AFD logic shall include the following adjustments:

1. Maximum output frequency - 0 to 400 Hz.
2. Minimum output frequency - 0 to 400 Hz.
3. Acceleration time -.1 to 6000 seconds.
4. Deceleration time -.1 to 6000 seconds.
5. Current limit - 0 to 170%.
6. 15V/Hz pre-set selection patterns.
7. Capability to program a totally customized V/Hz pattern.
8. Auto speed reference (instrument follower) input adjustable for bias and gain.
9. Stall prevention accomplished by reducing output voltage and frequency during momentary overload. When overload clears, drive will automatically resume normal operation.
10. Adjustable torque and/or current limit.
11. Ramp to stop or coast to stop selection.
12. Capability to set upper and lower frequency limits independent of min and max V/Hz frequency patterns.
13. Linear or S-curve function for soft start.
14. Two independent, selectable accel/decel ramp functions.
15. A minimum of 4 programmable multi-function inputs.
16. External start/stop shall be programmable for either 2 wire or 3 wire control. 3 wire option should not require a holding contact.
17. There shall be a programmable lock out code available to prevent operator access to parameter setting.
18. A selectable/adjustable energy saving gain shall be available that can be activated during frequency command synchronization.
19. Minimum of 9 preset speeds.
20. Up/down frequency setting.

J. Bypass: The VFD shall have a bypass to allow operating the connected motor in the event of VFD failure.

K. Systems Integration: VFD manufacturer shall provide BACNET network card to interface with BAS system. Verify protocol with BAS manufacturer.

PART 3 - EXECUTION

3.1 INSTALLATION:

A. Install all equipment listed in this section in accordance with the manufacturer's written instructions and wiring diagrams or as directed by factory service personnel.

3.2 START-UP:

A. Do not place VFD's into start-up until mechanical and electrical systems are fully operational including installation of terminal equipment and automatic temperature controls.

B. The VFD manufacturer's factory trained service personnel shall perform all programming and start-up procedures.

C. Instruct Owner on operation of unit. Provide minimum 4 hours instruction.

3.3 TESTING AND ADJUSTING:

A. The manufacturer’s factory trained service personnel shall test each unit through the full range of operation including checking all input/output signals, and fault conditions.

B. Manufacturer shall validate system is fully functional and operation perfectly upon completion of testing and adjusting.

3.4 SCHEDULE:

A. Energy Recovery Units:

1. Provide variable frequency drives for the supply fan, exhaust fan, and energy recovery wheel (by the unit manufacturer).

B. Rooftop Units:

1. Provide variable frequency drives for the supply fan (by the unit manufacturer).

C. Pumps:

1. Provide variable frequency drives for all hot water pumps.

D. Exhaust fans:

1. Provide variable frequency drives for any exhaust fan as noted on the fan schedule.

END OF SECTION 23.0514

SECTION 23.0516 - EXPANSION FITTINGS AND LOOPS FOR HVAC PIPING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Flexible pipe connectors.

B. Expansion joints and compensators.

C. Pipe loops, offsets, and swing joints.

1.2 RELATED REQUIREMENTS

A. Section 23 2113 - Hydronic Piping.

1.3 PERFORMANCE REQUIREMENTS

A. Provide structural work and equipment required to control expansion and contraction of piping. Verify that anchors, guides, and expansion joints provided adequately protect systems.

B. Expansion Calculations:

1. Installation Temperature: 50 deg F
2. Hot water heating: 200 deg F
3. Safety factor: 30%

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data:

1. Flexible Pipe Connectors: Indicate maximum temperature and pressure rating, face-to-face length, live length, hose wall thickness, hose convolutions per foot and per assembly, fundamental frequency of assembly, braid structure, and total number of wires in braid.
2. Expansion Joints: Indicate maximum temperature and pressure rating, and maximum expansion compensation.

C. Design Data: Indicate selection calculations.

D. Manufacturer's Instructions: Indicate manufacturer's installation instructions, special procedures, and external controls.

E. Project Record Documents: Record installed locations of flexible pipe connectors, expansion joints, anchors, and guides.

F. Maintenance Data: Include adjustment instructions.

G. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Packing for Packed Expansion Joints: One set for each joint.

1.5 REGULATORY REQUIREMENTS

A. Conform to UL requirements.

PART 2 PRODUCTS

2.1 FLEXIBLE PIPE CONNECTORS - STEEL PIPING

A. Manufacturers:

1. Metraflex Company.
2. Mason Industries, Inc..
3. Flexonics.

B. Inner Hose: For pipes over 2" size, Carbon Steel. Bronze for pipes 2" and smaller.

C. Exterior Sleeve: Single braided, stainless steel.

D. Pressure Rating: 125 psi and 450 degrees F.

E. Joint: As specified for pipe joints.

F. Size: Use pipe sized units.

G. Maximum offset: 3/4 inch on each side of installed center line.

2.2 FLEXIBLE PIPE CONNECTORS - COPPER PIPING

A. Manufacturer:

1. Metraflex Company.
2. Mason Industries, Inc..
3. Flexonics.

B. Inner Hose: Bronze.

C. Exterior Sleeve: Braided bronze.

D. Pressure Rating: 125 psi and 450 degrees F.

E. Joint: As specified for pipe joints.

F. Size: Use pipe sized units.

G. Maximum offset: 3/4 inch on each side of installed center line.

2.3 EXPANSION LOOPS

A. Manufacturer:

1. Metraflex Company.
2. Mason Industries, Inc..
3. Flexonics.

B. Metraloop with two sections of hose and brand, two 90 degree elbows and 180 degree return.

C. Install within 4 pipe diameters of alignment guide.

D. Pipe material shall match service pipe.

2.4 GROOVED PIPING EXPANSION JOINTS

A. Manufacturer:

1. Victaulic; Style 155 Expansion Joint
2. Anvil; 7240 Expansion Joint.

B. Housing: Ductile iron conforming to ASTM A536, Grade 65-45-12.

C. Gasket: Grade “E” EPDM.

2.5 ACCESSORIES

A. Pipe Alignment Guides:

1. Manufacturers:
2. Two piece welded steel with enamel paint, bolted, with spider to fit standard pipe, frame with four mounting holes, clearance for minimum 1 inch thick insulation, minimum 3 inches travel.

B. Swivel Joints:

1. Fabricated steel body, double ball bearing race, field lubricated, with rubber (Buna-N) o-ring seals.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Construct spool pieces to exact size of flexible connection for future insertion.

C. Install in accordance with EJMA (Expansion Joint Manufacturers Association) Standards.

D. Install flexible pipe connectors on pipes connected to vibration isolated equipment. Provide line size flexible connectors.

E. Install flexible connectors at right angles to displacement. Install one end immediately adjacent to isolated equipment and anchor other end. Install in horizontal plane unless indicated otherwise.

F. Anchor pipe to building structure where indicated. Provide pipe guides so movement is directed along axis of pipe only. Erect piping such that strain and weight is not on cast connections or apparatus.

G. Provide support and equipment required to control expansion and contraction of piping. Provide loops, pipe offsets, and swing joints, or expansion joints where indicated.

H. Provide expansion loops, pipe guides and anchors as indicated on the drawings if welded or threaded piping is used.

I. Provide grooved piping expansion joints if grooved piping and couplings are used. Consult grooved piping/coupling manufacturer's engineering services for quantity and locations of expansion joints.

END OF SECTION 23.0516

SECTION 23.0519 - METERS AND GAGES FOR HVAC PIPING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Pressure gages and pressure gage taps.

B. Thermometers and thermometer wells.

1.2 RELATED REQUIREMENTS

A. Section 23 2113 - Hydronic Piping.

1.3 REFERENCE STANDARDS

A. ASME B40.100 - Pressure Gauges and Gauge Attachments; The American Society of Mechanical Engineers; 2013.

B. ASTM E1 - Standard Specification for ASTM Thermometers; 2013.

C. ASTM E77 - Standard Test Method for Inspection and Verification of Thermometers; 2007.

D. UL 393 - Indicating Pressure Gauges for Fire-Protection Service; Underwriters Laboratories Inc.; Current Edition, Including All Revisions.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop drawings: Provide manufacturer's cut sheets for all devices.

C. Product Data: Provide list that indicates use, operating range, total range and location for manufactured components.

D. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements for additional provisions.

1.5 FIELD CONDITIONS

A. Do not install instrumentation when areas are under construction, except for required rough-in, taps, supports and test plugs.

PART 2 PRODUCTS

2.1 PRESSURE GAGES

A. Manufacturers:

1. Dwyer Instruments, Inc
2. Moeller Instrument Co.
3. Omega Engineering, Inc.
4. Weksler

B. Pressure Gages: ASME B40.100, UL 393 drawn steel case, phosphor bronze bourdon tube, rotary brass movement, brass socket, with front recalibration adjustment, black scale on white background.

1. Case: Steel with brass bourdon tube.
2. Size: 4-1/2 inch diameter.
3. Mid-Scale Accuracy: One percent.
4. Scale: Psi.

2.2 PRESSURE GAGE TAPPINGS

A. Gage Cock: Tee or lever handle, brass for maximum 150 psi.

2.3 STEM TYPE THERMOMETERS

A. Manufacturers:

1. Dwyer Instruments, Inc.
2. Omega Engineering, Inc.
3. Weksler Glass Thermometer Corp.

B. Thermometers - Adjustable Angle: Red- or blue-appearing non-toxic liquid in glass; ASTM E1; lens front tube, cast aluminum case with enamel finish, cast aluminum adjustable joint with positive locking device; adjustable 360 degrees in horizontal plane, 180 degrees in vertical plane.

1. Size: 9 inch scale.
2. Window: Clear Lexan.
3. Stem: 3/4 inch NPT brass.
4. Accuracy: 2 percent, per ASTM E77.

5. Calibration: Degrees F.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide one pressure gage per pump, installing taps before strainers and on suction and discharge of pump. Pipe to gage.

C. Install pressure gages with pulsation dampers. Provide gage cock to isolate each gage. Extend nipples to allow clearance from insulation.

D. Install thermometers in piping systems in sockets in short couplings. Enlarge pipes smaller than 2-1/2 inch for installation of thermometer sockets. Ensure sockets allow clearance from insulation.

E. Provide instruments with scale ranges selected according to service with largest appropriate scale.

1. 40 F to 240 F for hot water thermometers.

F. Install gages and thermometers in locations where they are easily read from normal operating level. Install vertical to 45 degrees off vertical.

G. Adjust gages and thermometers to final angle, clean windows and lenses, and calibrate to zero.

END OF SECTION 23.0519

SECTION 23.0549 – VIBRATION ISOLATION

PART 1 GENERAL

1.1 SUMMARY:

A. The extent of vibration isolation and seismic restraints work is indicated by Drawings and schedules and by requirements of this Section.

B. The Contractor shall employ the services of a licensed Professional Engineer registered in the State of Pennsylvania to design, submit, and supervise the installation of seismic restraining products applicable to all equipment, ductwork, and piping systems installed by the Contractor.

C. The types of vibration isolation and seismic restraint is specified in this Section include the following:

1. Support isolation for motor driven Mechanical Equipment.
2. Support isolation and restraints for ductwork and ductwork riser.
3. Support isolation for piping and piping risers.
4. Flexible connections for piping at Equipment.
5. Flexible ductwork connections.

1.2 SUBMITTALS:

A. The Manufacturer of vibration isolation and seismic control products shall submit the following data clearly marked on the submittal drawing. Each piece of isolated equipment shall be clearly identified, as well as the quantity and type of vibration isolators.

1. Weight and center of gravity of each piece of isolation equipment, and RPM of each piece of rotating isolated equipment. When equipment center of gravity is not available, assumed locations for center of gravity shall be identified in submittals.
2. Calculated static load on each isolator.
3. Calculated deflection for each piece of isolated equipment.
4. Calculated seismic loads for each restraint including horizontal and vertical forces and overturning moments.

B. Submittals for mountings and hangers incorporating springs shall include spring diameters, rated deflections, spring free height, solid spring height and spring color code.

C. Submittals for bases shall clearly identify locations for all mountings, as well as all locations for attachment points of the equipment to be mounting base. Installation instructions shall be included.

D. Submittals shall include seismic calculations signed and checked by qualified licensed Engineers in the employ of the Manufacturer of the vibration isolators. Catalog cut sheets shall be included for each type of mounting used on equipment being isolated.

1. Manufacturer's certification of components seismic acceleration operational capacity and attachment.
2. Submit detailed seismic drawings, drawn to the scale indicated, for each of the following installations. All seismic drawings shall be based on the Architectural and Structural Contract Drawings. All seismic drawings shall bear the stamp of a Professional Engineer licensed in the state of the Project site:
3. Mechanical Equipment rooms depicting size and location of concrete housekeeping pads and the location and type of seismic restraints. Minimum Scale: 1/4"=1'-0".
4. Piping Plans depicting location and type of seismic restraints. Minimum Scale: 1/8"=1'-0".
5. Concrete pad details depicting location and size of reinforcing, doweling, and anchor bolts for each specific piece of mechanical equipment. Minimum Scale: 1/2"=1'-0".
6. Suspended mechanical equipment and roof mounted mechanical equipment depicting restraint locations, types, and methods of attachment. Minimum Scale: 1/8"=1'-0".
7. Miscellaneous Attachment Details depicting size, locations, and types of attachment (i.e., bolts, welds, anchors, cables) for securing equipment to seismic mountings and for securing seismic mountings to the building structure.

E. Submit a seismic design errors and omissions insurance certificate. (Manufacturers product liability insurance certificates are not acceptable.

1.3 QUALITY ASSURANCE:

A. Product Qualification: Provide each type of vibration isolation unit produced by a specialized manufacturer, with not less than 5 years successful experience in the production of units similar to those for the project.

1. Except as otherwise indicated obtain support isolation units from a single manufacturer.
2. Engage the manufacturer to provide technical supervision of the installation of support isolation units produced by him, and of associated inertia bases.

B. Manufacturer: Provide vibration isolation and seismic mounting units manufactured by the following:

1. Amber/Booth
2. Consolidated Kinetics Corp.
3. Vibration Mountings and Controls, Inc./Korfund Dynamics
4. Mason Industries
5. Vibration Eliminator Co.
6. BRD Noise and Vibration Control, Inc.

C. After installation is complete and while the system is operating, the vibration isolation and seismic control Manufacturer and/or his qualified Representative shall conduct an inspection of the installation with the Contractor. The Representative will submit a written inspection report detailing any discrepancies, the Representative shall submit a report so stating. If there are discrepancies, the report shall detail corrective work to be done.

1.4 DESIGN - VIBRATION ISOLATION SYSTEMS:

A. Vibration isolators shall be selected based on known or estimated operating weight distributions of the isolated equipment, with the quantity and location as shown on the components drawings. Isolator type shall be tabulated for each isolated piece of equipment.

B. Isolators shall have either known non-deflected heights of spring element or calibration markings so that, after adjustment, when carrying their load, the deflection under load can be verified to determine if the load is within the proper range of the isolator and if the correct degree of vibration isolation is being provided.

C. Isolators shall function in the linear portion of the load versus deflection curve. Theoretical vertical natural frequency shall not differ from the design objectives by more than +10%.

D. Vibration isolation available internal to the equipment shall not be considered equivalent, and may only be used where it can be shown not to compromise the strength or performance of the entire system.

E. Unless otherwise specified, all isolated equipment and all piping and ductwork shall be seismically restrained in accordance with requirements contained herein. All unisolated mechanical equipment shall be adequately secured to the structure.

F. Unless the equipment incorporates unit construction using an integral unit frame or is specified otherwise, each item of mechanical equipment, along with its drive unit, shall be mounted on a rigid steel or steel and concrete base. The equipment, including the base, shall be mounted on, or suspended from, vibration isolators to prevent the transmission of vibration and mechanically transmitted structureborne sound to the supporting structure.

G. Isolation hangers shall be used for all piping in equipment rooms or for 50 ft. from vibration equipment, whichever is greater. To avoid reducing the effectiveness of equipment isolators, at least three of the first hangers from the equipment should provide the same deflection as the equipment isolators, with a maximum limitation of 2 inch deflection. The remaining hangers shall be spring or combination spring and rubber with a minimum of 0.75 in deflection. To prevent load transfer to the equipment flanges when the piping system is filled, the first three hangers adjacent to the equipment shall be the positioning type (specification type 5). Floor supports for piping in equipment rooms and adjacent to isolated equipment shall use restrained vibration isolators. They should be selected according to the guidelines for hangers.

1.5 DESIGN - SEISMIC RESTRAINTS

A. Internally isolated equipment in lieu of specified isolation and restraint system must include certification by the equipment manufacturer that the internal isolation system meets the specified isolation and system restraint criteria. Equipment resiliently mounted on spring or pad type isolators, except for curb mounted equipment shall be provided with seismic restraints or snubbers. Where required by code, seismic restraints for equipment mounted on vibration isolated curbs shall consist of slack galvanized or stainless steel cables (Type 16), attached to a structurally sound element of the equipment.

B. Each piece of isolated equipment shall receive a minimum of four all-directional restraint/snubbers, located as close to the equipment corners as practical. These shall consist of either restrained isolators or free standing isolators with separate snubbers. All snubbers shall have an impact surface consisting of a high quality elastomer. The elastomer shall be easy to inspect for damage, shall be replaceable and shall be a minimum of 3/4 inch thick.

C. Calculations by the Manufacturer's qualified licensed Engineer substantiating the mounting system, seismic restraints and recommended anchor bolts shall be submitted for approval along with the mechanical drawings. Minimum spacing of anchor bolts, as well as location from edges of structure or concrete, shall be identified.

D. Unless otherwise specified, all equipment piping and ductwork shall be restrained to resist seismic forces. Restraints shall maintain mechanical equipment, piping or ductwork in a captive position. Restraint devices shall be designed and selected to meet seismic requirements as defined in the latest issue of IBC.

E. Seismic restraint shall be required for the following installations:

1. Pumps
2. Roof Mounted Energy Recovery and Rooftop Units
3. Fans
4. In line fans suspended
5. VAV Boxes
6. Heating Hot Water Piping
7. Ductwork

F. The site is classified as follows: Seismic Design Category C, Site Classification C and Importance Factor 1.5 of the 2021 International Building Code. All mechanical components have an Ip (Importance Factor) of 1.5.

G. Anchor bolt calculations, signed by a qualified licensed Engineer, shall be submitted showing adequacy of bolt sizing and type. Calculations shall be furnished for anchors on restraint devices, cables, isolated and rigidly mounted equipment. Calculations shall specify anchor bolt type, embedment, concrete compressive strength, minimum spacing between anchors, and minimum distances of anchors from concrete edges. Concrete anchor locations shall not be near edges, stress joints, or an existing fracture. Embedded bolt locations and spacing shall conform to Table 26-E of 1991 Uniform Building Code. All bolt shall be ASTM A307 or better.

PART 2 - PRODUCTS

2.1 Unless otherwise specified, all hardware shall be stainless steel or zinc plated. Springs with a deflection of up to 2 inches shall be zinc plated, or coated with a polyester epoxy powder. Springs with a rated deflection capability greater than 2 inches may be painted. Zinc plating shall conform to ASTM B633, Class 2 SC2, minimum.

2.2 TYPE 1 MOUNTINGS - DOUBLE DEFLECTION NEOPRENE:

A. Double deflection neoprene mountings shall have a minimum rated static deflection of 0.40 inches. Steel top plate and base plate shall be completely bonded and embedded in oil-resistant elastomer. Mountings shall be molded in color for ease of identification of load capacity, and shall have ribbed neoprene surfaces on top and bottom to provide friction pads for those applications which do not need to be bolted to the floor or to equipment. Bolt holes shall be provided on the bottom plate, and a tapped hole on the top, for applications requiring positive tie down.

B. Mountings may be combined with steel rails for ease of installation, to compensate for overhung components or for equipment which lack sufficient rigidity for point support.

C. Neoprene mountings shall be type RD and steel channel rails type DRB as manufactured by Vibration Mountings and Controls, Inc.

2.3 TYPE 2 MOUNTINGS - FLOOR MOUNTED SPRING ISOLATORS:

A. Free standing spring-type isolators, shall be laterally stable without housing, snubbers, or guides, and shall include a steel reinforced, ribbed neoprene cup (1/4-inch minimum thickness) between the baseplate and the support.

B. Mountings shall have leveling bolts on the top, consisting of an adjusting bolt, cap screw and washer. Mountings shall include a bolt hole in the bottom cup or a two hole rectangular steel baseplate for bolting to the structure. Springs shall not be welded to the baseplate or cup.

C. Spring diameters shall be no less than 0.8 times the compressed height of the spring at rated load. Springs shall also have a minimum additional travel to solid equal to 50% of the rated deflection.

D. Springs shall have a ratio of horizontal stiffness to vertical stiffness of .75 to 1.25.

E. Springs shall be color coded for proper identification of rated load capacity. Springs shall be coated with a polyester epoxy powder. Springs having rated deflection greater than 2 inches may be painted. Hardware shall be stainless steel, or zinc plated.

F. Housed floor isolators shall consist of a telescoping housing containing one or more steel springs as the isolating medium. Isolators shall include resilient inserts to act as upper and lower housing guides, and to prevent metal-to-metal contact providing elastomeric snubbing for side loads. A replaceable neoprene acoustical non-skid pad shall be attached to the bottom of the housing. Mountings shall have built-in leveling bolts and a minimum additional travel to solid equal to 50% of the rated deflection.

G. Free standing Spring-Flex Mountings shall be Series AC, Series ACB, or Series AWHC as manufactured by Vibration Mountings and Controls, Inc. Housed Spring-Flex Mountings shall be Series B, C, or D as manufactured by Vibration Mountings and Controls, Inc.

2.4 TYPE 3 MOUNTINGS - HOUSED SPRINGS WITH LIMIT STOPS:

A. Free standing, laterally stable spring-type isolators. Isolators is the same as described in Specification Type 2, except that it includes a housing to provide vertical limit stops to prevent spring extension during weight changes (e.g., draining of fluid from cooling towers and boilers), or when equipment (such as cooling towers) are exposed to uplift loads such as wind loading.

B. The housing serves as blocking during erection, and shall be located between the equipment and supporting structure. Housing shall be painted or hot dip galvanized. There shall be a minimum clearance of 1/2 inch between the restraining bolts and the housing and spring to prevent interference with spring performance. Limit stops shall be out of contact during normal operation.

C. Mountings shall have an adjusting bolt on the top of the spring compression plate. Neoprene acoustical non skid pads (1/4 inch minimum thickness) shall be attached to the bottom plate.

D. Spring diameters shall be no less than 0.8 times the compressed height of the spring at rated load. Springs shall also have a minimum additional travel to solid equal to 50% of the rated deflection.

E. Springs shall be color coded for proper identification of rated load capacity. Springs shall be coated with a polyester epoxy powder. Springs having rated deflection greater than 2 inches may be painted. Hardware shall be stainless steel or zinc plated. Springs shall not be welded to the cups or housings.

F. Spring-Flex Mountings shall be Series AWR as manufactured by Vibration Mountings and Controls, Inc.

2.5 TYPE 4 MOUNTINGS - SPRING AND RUBBER HANGERS:

A. Spring-Flex hangers shall consist of a steel spring in series with a .2 inch (minimum) deflection neoprene element. Springs shall be color coded, and elastomer element molded in specific colors for proper identification of rated load capacity. The total static deflection at rated load shall be 1.20 inches.

B. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection.

C. Springs shall be coated with a polyester epoxy powder. Hardware shall be stainless steel, or zinc plated. Steel housings shall be painted or galvanized.

D. Spring-Flex hangers shall be series RSH as manufactured by Vibration Mountings and Controls, Inc.

2.6 TYPE 5 MOUNTINGS - SPRING AND RUBBER PRE-POSITIONING HANGERS:

A. Spring-Flex hangers shall consist of color-coded steel spring in series with a neoprene element molded in specific colors for proper identification of rated load capacity. Hanger design shall incorporate a means for supporting the suspended equipment or piping at a fixed elevation during installation regardless of load changes as well as a means for transferring the load to the spring.

B. Springs shall be coated with a polyester epoxy powder. Hardware shall be stainless steel, or zinc plated. Steel housings shall be painted or galvanized.

C. Spring-Flex hangers shall be series RSHP positioning hangers as manufactured by Vibration Mountings and Controls, Inc.

2.7 TYPE 6 MOUNTINGS - SPRING AND RUBBER HANGERS WITH 30 DEGREE MISALIGNMENT CAPABILITY:

A. Spring-Flex hangers shall consist of a color coded steel spring in series with a neoprene element molded in specific colors for proper identification of rated load capacity. Spring diameters and hanger box lower hole sizes shall be of sufficient size to permit the hanger rod to swing approximately 30 degrees before contacting the box. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. Hangers which are to be used with flat iron duct straps will be provided with eye bolts on both ends.

B. Springs shall be coated with a polyester epoxy powder. Hardware shall be stainless steel, or zinc plated. Steel housings shall be painted or galvanized.

C. Spring-Flex hangers shall be Series RSH-30A as manufactured by Vibration Mountings and Controls, Inc. Hangers with eyebolts to be type RSHSC as manufactured by Vibration Mountings and Controls, Inc. Hangers with eyebolts to be type RSHSC as manufactured by Vibration Mountings and Controls, Inc.

2.8 TYPE 7 MOUNTINGS - PRE-COMPRESSED HANGERS:

A. Spring-Flex hangers shall consist of a color coded steel spring in series with a neoprene element molded in specific colors for proper identification of rated load capacity. Springs shall be pre-compressed to the rated deflection so as to support the suspended equipment or piping at a fixed elevation during installation regardless of load changes. For 30 degree misalignment capability, spring diameters and hanger box lower hole sizes shall be of sufficient size to permit the hanger rod to swing approximately 30 degrees before contacting the box.

B. Springs shall be coated with a polyester epoxy powder. Hardware shall be stainless steel, or zinc plated. Steel housings shall be painted or galvanized.

C. Spring-Flex hangers shall be Series RSHPR or RSHPR-30A for 30 degree misalignment capability, as manufactured by Vibration Mountings and Controls, Inc.

2.9 TYPE 8 MOUNTINGS - SPRING HANGERS:

A. Spring-Flex hangers shall consist of a color coded steel spring with a neoprene and steel washer which will properly distribute the load on the spring. For 30 degree misalignment capability, spring diameters and hanger box lower hole sizes shall be of sufficient size to permit the hanger rod to swing approximately 30 degrees before contacting the box. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. Hangers where are to be used with flat iron duct straps will be provided with eye bolts on both ends.

B. Springs shall be coated with a polyester epoxy powder. Hardware shall be stainless steel, or zinc plated. Steel housings shall be painted or galvanized.

C. Spring-Flex hangers shall be Series SH or SH-30A for 30 degree misalignment capability, as manufactured by Vibration Mountings and Controls, Inc. Hangers with eyebolts to be Type SHSC or SHSC-30A for 30 degree misalignment capability, as manufactured by Vibration Mountings and Controls, Inc.

2.10 TYPE 9 MOUNTINGS - HORIZONTAL THRUST RESTRAINTS:

A. Horizontal Thrust Restraints shall be provided to prevent excessive movement of air handling equipment having air thrust which exceeds 10% of the unit weight. The horizontal thrust restraint shall consist of a steel housing containing a steel spring in series with a neoprene pad. The restraint assembly shall be designed to be pre-adjusted by the manufacturer and permit further adjustment in the field to limit horizontal movement to a maximum of 1/4 inch. Assembly shall be furnished with back up plates and hardware for attachment to both the equipment and ductwork or structure. Horizontal restraints shall be attached on the centerline of thrust on each side of the unit.

B. Springs shall be color coded for proper identification of rated load capacity. Springs shall be coated with a polyester epoxy powder. Hardware shall be stainless steel, or zinc plated. Steel housings shall be painted or galvanized.

C. Springs shall be color coded for proper identification of rated load capacity. Springs shall be coated with a polyester epoxy powder. Hardware shall stainless steel, or zinc plated. Steel housings shall be painted or galvanized.

D. Horizontal thrust restrains shall be Series HTR as manufactured by Vibration Mountings and Controls.

2.11 TYPE 10 MOUNTINGS - FLOOR, WALL, AND CEILING SLEEVES:

A. Where piping passes through walls, floors, or ceilings, a vibration control sleeve shall be provided to reduce the transmission of vibration. The sleeve shall consist of two pipe halves with neoprene sponge material bonded to the inside and a bolting arrangement for secure fit around piping. Where temperature exceeds 240 degrees F., an appropriate density fiberglass shall be used in place of neoprene material.

B. Sleeve shall be type VCS as manufactured by Vibration Mountings and Controls, Inc.

2.12 TYPE 11 MOUNTINGS - RESILIENT PIPE GUIDES:

A. Where vertical piping runs between support points, a resilient pipe guide shall be provided. The guide shall consist of an angle frame and four double deflection neoprene mountings molded in specific colors for proper identification of rated load capacity.

B. Resilient Pipe Guide shall be type RPG as manufactured by Vibration Mountings and Controls, Inc.

2.13 TYPE 12 MOUNTINGS - PIPE ANCHORS:

A. Multi-directional pipe anchor shall consist of suitable steel sections in series with heavy duty duck and neoprene material assembled in a telescopic housing to provide the necessary restraint in both the vertical and horizontal directions. Pipe anchor shall be sized to limit load on neoprene and duck material to 500 psi.

B. Multi-directional Pipe Anchor shall be type MDPA as manufactured by Vibration Mountings and Controls, Inc.

C. Pipe anchors are not required for grooved piping with flexible couplings.

2.14 TYPE 13 - FLEXIBLE CONNECTORS:

A. Install Quiet-Sphere Flexible Connectors at the suction and discharge of each pump and inlet and outlet of each chiller, condenser, boiler, cooling tower, and all floor mounted and inline pumps. The connectors shall be molded in spherical design of multiple layers of neoprene and synthetic fiber with integral corrosion resistant plate steel flanges. The connectors shall be suitable for pressures up to 214 psi and temperatures up to 240 degrees F. Where piping is not anchored, control rods must be installed at each connector to limit movement within their specified limits.

B. Flexible connectors shall be Quiet-Sphere Type VMT, or VMU as manufactured by Vibration Mountings & Controls, Inc.

2.15 TYPE 14 - SEISMIC SPRINGS WITH INTERNAL RESTRAINTS:

A. Steel spring isolator incorporating elastomeric snubbing in all directions. The snubber shall be adjustable in the vertical direction and allow a maximum of 1/4 inch travel in all directions before contacting the elastomer cushion.

B. Spring diameter shall be no less than 0.8 times the compressed height of the spring at rated load. Springs shall also have a minimum additional travel to solid equal to 50% of the rated deflection.

C. Housing shall have provision to adjust the rebound plate and to inspect the spring. Housing shall be of cast ductile iron, malleable cast iron or of welded steel construction. Gray iron castings are not permitted.

D. Springs shall be color coded for proper identification of rated load capacity. Springs shall be coated with a polyester epoxy powder. Hardware shall be stainless steel, or zinc plated.

E. Mounting shall be Series AEQM or AWMR as manufactured by Vibration Mountings & Controls, Inc.

2.16 TYPE 15 - SEISMIC SNUBBERS/RESTRAINTS:

A. All-directional Seismic Snubbers shall include all directional elastomer elements, having a minimum elastomer thickness of 3/4 inch in all directions. Elastomers shall be easy to inspect and shall consist of replaceable elastomer inserts. Elastomer shall be neoprene or a high quality rubber including anti-ozone and anti-oxidant materials. For installations where the expected temperature range is -20 degrees F. to +180 degrees F., the elastomer shall be neoprene conforming to either:

1. ASTM D2000 Grade 2BC; or Bridge Bearing Neoprene.

B. For installations where the expected operating temperature range can be as low as -65 degrees F. or a high as +300 degrees F., the elastomer shall be Ethylene Propylene Diene Monomer (EPDM) conforming to ASTM D2000.

C. Snubbers shall be manufactured with an air gap between steel and elastomer of 1/8 inch to 1/4 inch. Snubbers shall be installed with factory set clearances.

D. Snubber must have at least two anchor bolt holes and shall have an ultimate load capacity of at least four times the rated static load capacity.

E. Seismic Snubber shall be Seismic Restraint Series SR/SRD as manufactured by Vibration Mountings & Controls, Inc.

2.17 TYPE 16 - CABLE RESTRAINTS:

A. Steel aircraft cable restraints are designed and installed to limit motion on suspended isolated equipment, piping or ducting. Cables are installed with enough slack to engage only when 1/4 movement occurs. On suspended equipment, cables are installed in sets of four, located at 45 degree angles to all three axes. Where required at pipe hangers, cables are placed two at each location, alternating orientation at successive locations.

B. Cables shall be 7 x 19 galvanized or stainless steel aircraft cable conforming to FED-STD-RR-W-410D. Cable diameters shall be available in at least three sizes to provide cost effective method of support for a wide range of supported loads.

C. Seismic cable restraints shall be Series SCR as manufactured by Vibration Mountings & Controls, Inc.

2.18 TYPE 17 - ELASTOMER MOUNTINGS:

A. Consists of a captive elastomeric mount molded from neoprene or EPDM compound conforming to the requirements of ASTM D2000. Load bearing elastomer element shall be housed in either a heat treated cast aluminum housing or machined structural plate.

B. Mount shall incorporate a fail-safe captive design, and shall provide a vertical natural frequency of 15 Hz to 25 Hz, depending upon the static load. Mount shall be capable of providing dynamic deflections of up to .12 inches.

C. Use Vibration Mountings & Controls Series RB1, RB3 or RB4 with structural plate or MB1 or MB3 (aluminum housing).

2.19 BASES AND RAILS:

A. TYPE A - STRUCTURAL BASES:

1. Integral structural steel bases shall be rectangular in shape. All structural members shall be of wide flange, angle or channel steel with depth equal to a minimum of 1/10 of the longest span of equipment, but not less than 6 inches. Built-in adjustable motor slide rails and height saving brackets shall be supplied as an integral part of the base.
2. Integral structural steel bases shall be type WFB as manufactured by Vibration Mountings & Controls, Inc.

B. TYPE B - STRUCTURAL RAILS:

1. Structural steel rails shall be of the wide flange, angle or channel steel with depth equal to a minimum of 1/10 of the longest span of equipment, but not less than 6 inches. Height saving brackets shall be supplied as an integral part of the rails. For seismic applications rails must be structurally attached to one another.
2. Structural steel rails shall be Type WFR as manufactured by Vibration Mountings & Controls, Inc.

C. TYPE C - CONCRETE INERTIA BASE:

1. Concrete Inertia Base Pouring Forms shall be of formed steel members with a depth not less than 1/12 of the longest base dimension, but not less than 6 inches. Height saving isolator mounting brackets shall be bolted or welded to the members. Pouring forms shall include minimum 3/8 inch concrete reinforcing steel (rebar) on 8 inch centers running the length and width of the base. Pouring forms for Split Case Pumps shall be wide enough to support suction and discharge elbows. Anchor bolt templates shall be provided to accept mounting hole location of the supported equipment. Bolted modular designs may be supplied for bases 6" or 10" thick.
2. Bases shall be Type MPF for Modular style or Type WPF for Welded style, as manufactured by Vibration Mountings & Controls, Inc.

D. TYPE D - ROOF CURB:

1. Provide welded 14 gauge galvanized steel shell and base plate curb with 1 1/2" thick 3 pound density rigid insulation and factory installed wood nailer. All plumbing and electrical connections to the equipment shall be flexible with water connections provided by double sphere neoprene union type flexible connections. Curb shall accommodate sloping steel where required.
2. Curb shall be as manufactured by Thybar, Pate, or approved equal.
3. Provide curb with acoustical treatments.

    (a) Curb shall have 1” fiberglass absorber along inside perimeter of curb.
    (b) Provide 2” fiber glass absorber in bottom of curb.
    (c) Steel roof deck and roof insulation shall not be removed from inside of curb.

(d) Rails to support rooftop equipment shall be designed to provide isolation against the transmission of fabrications to the building structure. Rail assembly shall consist of extruded of roll-formed top and bottom members with spring isolators incorporated and with a continuous air and water seal provided for the entire rail perimeter. Spring isolators shall be selected and spaced according to weight distribution.

(e) Roof Curb Rails designed to be mounted atop curb systems shall be Model ESR, as manufactured by Kinetics Noise Control (or approved equal).

PART 3 - EXECUTION

3.1 PERFORMANCE OF VIBRATION ISOLATORS AND SEISMIC RESTRAINTS:

A. The manufacturer shall warrant the selection, sizing, and application of all vibration isolators and seismic restraints for each application.

B. The seismic engineer shall supervise and review the installation of all seismic restraints.

3.2 APPLICATIONS:

A. General: Except as otherwise indicated, apply the following types of vibration isolators and seismic restraints for the indicated items of Equipment.

3.3 VIBRATION ISOLATOR/SEISMIC RESTRAINT SCHEDULE

	EQUIPMENT	TYPE	DEFLECTION
1.	Pumps	13 and 16	---
2.	Roof Mounted ERUs and RTUs	D and 13	1
3.	Fans		
	Centrifugal set on roof curbs	14	1
	In line fans suspended	4 and 16	1/2
4.	Air Cooled Refrigerant Compressor and		
(a)	VAV Boxes	16	---
(b)	Heating Hot Water Piping	16	---
(c)	Ductwork	16	---

B. Piping Restraints: Applicable for threaded, welded, soldered, and grooved piping; schedule 10, 20, 40 and 80: Install cable restraints at maximum intervals of 40 ft. for transverse bracing and 80 ft. for longitudinal bracing, and at each change in direction. Actual spacing shall be determined by the seismic engineer.

C. Ductwork Restraints: Applicable for galvanized, carbon, and stainless steel ductwork systems: Install cable restraints at maximum intervals of 30 ft. for transverse bracing and 60 ft. for longitudinal bracing and at each change in direction. Actual spacing shall be determined by the Seismic Engineer.

D. Flexible Duct Connectors: Install at the following ductwork connections:

1. Connections with vibration-isolation-mounted air handling equipment.

2. Connections with fixed wall louvers for air intake and exhausts.

E. Flexible Pipe Connectors: Install in piping systems at the following locations:

1. Connections, 3/4" pipe size and larger, with vibration isolation mounted equipment.

3.4 INSTALLATION:

A. Isolation systems shall be installed in strict accordance with the Manufacturer's written instructions and submittal data. Locations of all vibration isolation products shall be selected for ease of inspection and adjustment, as well as for proper operation. Electrical and plumbing connections to vibration isolated equipment shall be flexible.

B. All vibration isolators shall be leveled and aligned squarely below the mounting points of the supported equipment. Isolators for equipment with bases shall be located on the sides of the bases which are parallel to the equipment shaft (generally, the long axis) unless this is not possible because of physical restraints.

C. Unless otherwise indicated, there shall be a minimum operating clearance of 1 inch between inertia bases or structural steel frames and the concrete housekeeping pad or floor beneath the equipment. The clearance space shall be checked by the Contractor to ensure that no construction debris has been left to short circuit or restrict the proper operation of the vibration isolation system.

D. Vibration isolation hangers shall be positioned as high as possible in the hanger rod assembly, and so that the hanger housings may rotate a full 360 degrees without touching any object. Hanger rods shall not contact any object which would short out the vibration isolation systems. Parallel running pipes may be hung together on a trapeze which is isolated from the building. Do not mix vibration isolated and non-vibration isolated pipes on the same trapeze.

E. Attention must be paid to movements of piping caused be expansion and contraction.

F. For Seismic installations, all floor mounted equipment, whether isolated or not, shall be bolted or welded to the structure to resist seismic forces. Bolt attachments, diameter of inserts, embedment depth and weld length as shown on approved submittal drawings, shall be followed in all respects.

G. Seismic restraints shall be installed after equipment is in operating position to assure design clearances are maintained.

3.5 EXAMINATION OF RELATED WORK:

A. Installer of vibration isolation work shall observe the installation of other Work related to vibration isolation work, including work connected to vibration isolation work; and after completion of other related Work (but before Equipment startup), shall furnish a written report to the Engineer listing observed inadequacies for proper operation and performance of vibration isolation work. Report shall cover, but not necessarily be limited to the following:

1. Equipment installations (performed as Work of other Sections) on vibration isolators.
2. Piping connections including flexible connections.

B. Do not start up Equipment until inadequacies have been corrected in a manner acceptable to vibration isolation installer.

3.6 INSPECTION:

A. Upon completion of installation of all vibration isolation and seismic restraint devices, a certification report prepared by the Seismic Engineer shall be submitted in writing to the contractor indicating that all systems are installed properly and in compliance with the specifications. The report must identify those areas that require corrective measures or certify that none exists. Any field coordination type changes to the originally submitted seismic restraint designs must be clearly defined and detailed in the report.

END OF SECTION 23.0549

SECTION 23.0554 - MECHANICAL IDENTIFICATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. Drawings and General Provisions of Contract, including General and Supplementary Conditions and Division-1 Specification sections, apply to work of this section.

1.2 DESCRIPTION OF WORK:

A. In addition to this section, refer to drawings and/or other sections for complete extent of mechanical identification work required.

1.3 QUALITY ASSURANCE:

A. Manufacturers: Firms regularly engaged in manufacture of identification devices of types and sizes required, whose products have been in satisfactory use in similar service for not less than 5 years.

B. ANSI Standards: Comply with ANSI A13.1 for lettering size, colors, and viewing angles of identification devices.

1.4 SUBMITTALS:

A. Product Data: Submit product specifications and installation instructions for each identification material and device required.

B. Samples: Submit samples of each color, lettering style and other graphic representation required for each identification materials or system.

C. Schedules: Submit valve schedule for each piping system, typewritten and reproduced on 8-1/2" x 11" bond paper. Tabulate valve number, piping system, system abbreviation (as shown on tag), location of valve (room or space), and variations for identification (if any). Mark valves which are intended for emergency shut-off and similar special uses, by special "flags" in margin of schedule. In addition to mounted copies, furnish extra copies for Maintenance Manuals as specified in Division 1.

D. Provide AutoCad floor plans showing locations and number designations for valves.

PART 2 - PRODUCTS

2.1 MECHANICAL IDENTIFICATION MATERIALS:

A. General: Provide manufacturer's standard products of categories and types required for each application as referenced in other Division-23 sections. Where more than single type is specified for application, selection is Installer's option, but provide single selection for each product category.

B. Plastic Pipe Markers:

1. General: Provide manufacturer's standard pre-printed, flexible or semi-rigid, permanent, color coded, plastic-sheet pipe markers, complying with ANSI A13.1.
    a. Small Pipes: For external diameters 2" and smaller (including insulation if any), provide full-bank pipe markers, extending 360 degrees around pipe at each location, fastened by one of the following methods:
        1) Snap-on application of pre-tensioned semi-rigid plastic pipe marker.
    b. Lettering: Manufacturer's standard pre-printed nomenclature which best describes piping system in each instance, as selected by Architect/Engineer in cases of variance with names as shown or specified.
    c. Arrows: Print each pipe marker with arrows indicating direction of flow, either integrally with piping system service lettering (to accommodate both directions), or as separate unit of plastics.

C. Stencils:

1. Provide with clean cut symbols and letters of following sizes:
    a. 2-1/2" to 6" outside diameter of pipe or insulation: 12" long color field, 1-1/4" high letters.
    b. 8" to 12" outside diameter of pipe or insulation: 24" long color field, 2-1/2" high letters.

D. Valve Tags:

1. Engraved plastic tags: Provide laminated three-layer with engraved black letters on light contrasting background color. Piping system abbreviation in 1/4" high letters and sequenced valve numbers 1/2" high, and with 5/32" hole for fastener.
2. Provide 1-1/2" diameter tags, except as otherwise indicated.

E. Valve Tag Fasteners: Manufacturer's standard solid brass chain (wire link or beaded type), or solid brass S-hooks of the sizes required for proper attachment of tags to valves, and manufactured specifically for that purpose.

F. Valve Schedule Frames:

1. General: For each page of the valve schedule, provide a glazed display frame, with screws for removable mounting on masonry walls. Provide frames of finished hardwood or extruded aluminum, with SSB-grade sheet glass.

G. Engraved Plastic-Laminate Signs:

1. General: Provide engraving stock melomine plastic laminate, complying with FS L-P-387, in the sizes and thicknesses indicated, engraved with engraver's standard letter style of the sizes and working indicate, black with white core (letter color) except as otherwise indicated, punched for mechanical fastening except where adhesive mounting is necessary because of substrate.
2. Thickness: 1/16" for units up to 20 sq. in. or 8" length; 1/8" for larger units.
   a. Fasteners: Self-tapping stainless steel screws, except contact-type permanent adhesive where screws cannot or should not penetrate the substance.
3. Letter Size: 3"

H. Manufacturer:

1. General: Subject to compliance with requirements, provide mechanical identification materials of one of the following:
   a. Brady (W.H.) Company, Signmark Div.
   b. Seton Name Plate Corp.

2.2 LETTERING AND GRAPHICS:

A. General: Coordinate names, abbreviations and other designations used in mechanical identification work, with corresponding designations shown, specified or schedule. Provide numbers, lettering and working as indicated or, if not otherwise indicated, as recommended by manufacturers or as required for proper identification and operation/maintenance of mechanical systems and equipment.

1. Multiple Systems: Where multiple systems of same generic name are shown and specified, provide identification which indicates individual system number as well as service (as examples: Boiler No. 3, Air Supply No. 1H, Standpipe F12).

2.3 APPLICATION AND INSTALLATION:

A. General Installation Requirements:

1. Coordination: Where identification is to be applied to surfaces which require insulation, painting or other covering or finish, including valve tags in finished mechanical spaces, install identification after completion of coverings and painting. Install identification prior to installation of acoustical ceilings and similar removable concealment.

B. Piping System Identification:

1. General: Install pipe markers of one of the following types on each system indicated to receive identification, and include arrows to show normal direction of flow:
   a. Stenciled markers, including color-coded background band or rectangle, and contrasting lettering of black or white. Extend color band or rectangle 2" beyond ends of lettering.
   b. Plastic pipe markers, with application system as indicated under "Materials" in this section. Install on pipe insulation segment where required for hot non-insulated pipes.
2. Locate pipe markers and color bands as follows wherever piping is exposed to view in occupied spaces, machine rooms, accessible maintenance spaces.
3. Near each valve and control device.
   a. Near each branch, excluding short take-offs for fixtures and terminal units; mark each pipe at branch, where there could be question of flow pattern.
4. Near locations where pipes pass through walls or floors/ceilings, or enter non-accessible enclosures.
5. At access doors, manholes and similar access points which permit view of concealed piping.
6. Near major equipment items and other points of origination and termination.
   a. Spaced intermediately at maximum spacing of 50' along each piping run, except reduce spacing to 25' in congested areas of piping and equipment.
7. On piping above removable acoustical ceilings, except omit intermediately spaced markers.
8. For HVAC piping, use green background with white letters. Submit all designations prior to installation for approval and the following designations.
   a. Hot water supply HWS
   b. Hot water Return HWR

C. Valve Identification:

1. General: Provide valve tag on every valve, cock and control device in each piping system; exclude check valves, valves within factory-fabricated equipment units, and HVAC terminal devices. List each tagged valve in valve schedule for each piping system.
2. Mount valve schedule frames and schedules in machine rooms where indicated or, of not otherwise indicated, where directed by Architect/Engineer.

D. Mechanical Equipment Identification: Provide marker on ceiling grid below VAV boxes, fan coils, etc. with equipment ID numbers.

1. General: Install engraved plastic laminate sign on or near each major item of mechanical equipment and each operational device, as specified herein if not otherwise specified for each item or device. Provide signs for the following general categories of equipment and operational devices:
   a. Main control and operating valves, including safety devices and hazardous units such as gas outlets.
   b. Pumps
   c. Exhaust Fans.
   d. Rooftop Units.
   e. Energy Recovery Units.

f. Expansion Tanks.
g. Boilers.
h. VAV boxes.
i. Terminal Heating Equipment.
j. Condensing Units.

PART 3 - EXECUTION

3.1 MECHANICAL IDENTIFICATION:

A. Install plastic nameplates with corrosive-resistant mechanical fasteners, or adhesive. Apply with sufficient adhesive to ensure permanent adhesion and seal with clear lacquer.

B. Install tags with corrosion resistant chain.

C. Install plastic pipe markers in accordance with manufacturer's instructions.

D. Install plastic tape pipe markers complete around pipe in accordance with manufacturer's instructions.

E. Install underground plastic pipe markers 6 to 8” below finished grade, directly above buried pipe.

F. Identify air handling units, pumps, heat transfer equipment, tanks, and water treatment devices with stencil painting. Small devices, such as in-line pumps, may be identified with tags.

G. Identify control panels and major control components outside panels with plastic nameplates.

H. Identify thermostats relating to terminal boxes or valves with nameplates.

I. Identify valves in main and branch piping with tags.

J. Identify air terminal units and radiator valves with numbered tags.

K. Tag automatic controls, instruments, and relays. Key to control schematic.

L. Identify piping, concealed or exposed, with plastic pipe markers. Use tags on piping 3/4" diameter and smaller. Identify service, flow direction, and pressure. Install in clear view and align with axis of piping. Locate identification not to exceed 20' on straight runs including risers and drops, adjacent to each valve and tee, at each side of penetration of structure or enclosure, and at each obstruction.

M. Identify ductwork with stenciled painting. Identify with air handling unit identification number and areas served.

N. Provide ceiling tacks to locate valves or dampers above T-bar type panel ceilings. Locate in corner of panel closest to equipment.

O. Provide Valve Identification Chart. Post framed chart in Boiler Room.

END OF SECTION 23.0554

SECTION 23.0593 - TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Testing, adjustment, and balancing of air systems.

B. Testing, adjustment, and balancing of hydronic and refrigerating systems.

C. Measurement of final operating condition of HVAC systems.

D. Sound measurement of equipment operating conditions.

E. Vibration measurement of equipment operating conditions.

1.2 REFERENCES

A. AABC MN-1 - AABC National Standards for Total System Balance; Associated Air Balance Council; 2002.

B. ASHRAE Std 111 - Practices for Measurement, Testing, Adjusting and Balancing of Building Heating, Ventilation, Air-Conditioning, and Refrigeration Systems; American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.; 2008.

C. NEBB (TAB) - Procedural Standards for Testing Adjusting Balancing of Environmental Systems; National Environmental Balancing Bureau; 2015, Seventh Edition.

D. SMACNA (TAB) - HVAC Systems Testing, Adjusting, and Balancing; Sheet Metal and Air Conditioning Contractors' National Association; 2002.

1.3 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Qualifications: Submit name of adjusting and balancing agency and TAB supervisor for approval within 30 days after award of Contract.

C. TAB Plan: Submit a written plan indicating the testing, adjusting, and balancing standard to be followed and the specific approach for each system and component.

1. Submit to Architect.
2. Submit six weeks prior to starting the testing, adjusting, and balancing work.

3. Include certification that the plan developer has reviewed the contract documents, the equipment and systems, and the control system with the Architect and other installers to sufficiently understand the design intent for each system.
4. Include at least the following in the plan:

    a. Preface: An explanation of the intended use of the control system.
    b. List of all air flow, water flow, sound level, system capacity and efficiency measurements to be performed and a description of specific test procedures, parameters, formulas to be used.
    c. Copy of field checkout sheets and logs to be used, listing each piece of equipment to be tested, adjusted and balanced with the data cells to be gathered for each.
    d. Identification and types of measurement instruments to be used and their most recent calibration date.
    e. Discussion of what notations and markings will be made on the duct and piping drawings during the process.
    f. Final test report forms to be used.
    g. Detailed step-by-step procedures for TAB work for each system and issue, including:

        1) Terminal flow calibration (for each terminal type).
        2) Diffuser proportioning.
        3) Branch/submain proportioning.
        4) Total flow calculations.
        5) Rechecking.
        6) Diversity issues.

    h. Expected problems and solutions, etc.
    i. Criteria for using air flow straighteners or relocating flow stations and sensors; analogous explanations for the water side.
    j. Details of how TOTAL flow will be determined; for example:
        1) Air: Sum of terminal flows via control system calibrated readings or via hood readings of all terminals, supply (SA) and return air (RA) pitot traverse, SA or RA flow stations.
        2) Water: Pump curves, circuit setter, flow station, ultrasonic, etc.

    k. Specific procedures that will ensure that both air and water side are operating at the lowest possible pressures and methods to verify this.
    l. Confirmation of understanding of the outside air ventilation criteria under all conditions.
    m. Method of verifying and setting minimum outside air flow rate will be verified and set and for what level (total building, zone, etc.).
    n. Method of checking building static and exhaust fan and/or relief damper capacity.
    o. Proposed selection points for sound measurements and sound measurement methods.
    p. Methods for making coil or other system plant capacity measurements, if specified.
    q. Time schedule for TAB work to be done in phases (by floor, etc.).
    r. Description of TAB work for areas to be built out later, if any.
    s. Time schedule for deferred or seasonal TAB work, if specified.

t. False loading of systems to complete TAB work, if specified.
u. Exhaust fan balancing and capacity verifications, including any required room pressure differentials.
v. Interstitial cavity differential pressure measurements and calculations, if specified.
w. Procedures for field technician logs of discrepancies, deficient or uncompleted work by others, contract interpretation requests and lists of completed tests (scope and frequency).
x. Procedures for formal progress reports, including scope and frequency.
y. Procedures for formal deficiency reports, including scope, frequency and distribution.

D. Control System Coordination Reports: Communicate in writing to the controls installer all setpoint and parameter changes made or problems and discrepancies identified during TAB which affect the control system setup and operation.

E. Final Report: Indicate deficiencies in systems that would prevent proper testing, adjusting, and balancing of systems and equipment to achieve specified performance.

1. Revise TAB plan to reflect actual procedures and submit as part of final report.
2. Submit draft copies of report for review prior to final acceptance of Project. Provide final copies for Architect and for inclusion in operating and maintenance manuals.
3. Provide reports in soft cover, letter size, 3-ring binder manuals, complete with index page and indexing tabs, with cover identification at front and side. Include set of reduced drawings with air outlets and equipment identified to correspond with data sheets, and indicating thermostat locations.
4. Include actual instrument list, with manufacturer name, serial number, and date of calibration.
5. Form of Test Reports: Where the TAB standard being followed recommends a report format use that; otherwise, follow ASHRAE Std 111.
6. Test Reports: Indicate data on AABC MN-1 forms, forms prepared following ASHRAE Std 111, or NEBB forms.
7. Include the following on the title page of each report:

a. Name of Testing, Adjusting, and Balancing Agency.
b. Address of Testing, Adjusting, and Balancing Agency.
c. Telephone number of Testing, Adjusting, and Balancing Agency.
d. Project name.
e. Project location.
f. Project Architect.
g. Project Engineer.
h. Project Contractor.
i. Report date.

1.4 QUALITY ASSURANCE

A. Perform total system balance in accordance with AABC MN-1, ASHRAE Std 111, or NEBB Procedural Standards for Testing, Balancing and Adjusting of Environmental Systems.

1. Maintain one copy of each document on site.

B. TAB Agency Qualifications: Company specializing in the testing, adjusting, and balancing of systems specified in this Section with minimum three years documented experience certified by AABC or NEBB.

C. Perform Work under supervision of AABC Certified Test and Balance Engineer or NEBB Certified Testing, Balancing and Adjusting Supervisor experienced in performance of this Work and licensed at the Pennsylvania.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION

3.1 GENERAL REQUIREMENTS

A. Perform total system balance in accordance with one of the following:

1. AABC MN-1, AABC National Standards for Total System Balance.
2. ASHRAE Std 111, Practices for Measurement, Testing, Adjusting and Balancing of Building Heating, Ventilation, Air-Conditioning, and Refrigeration Systems.
3. NEBB Procedural Standards for Testing Adjusting Balancing of Environmental Systems.
4. SMACNA HVAC Systems Testing, Adjusting, and Balancing.

B. Begin work after completion of systems to be tested, adjusted, or balanced and complete work prior to Substantial Completion of the project.

C. Where HVAC systems and/or components interface with life safety systems, including fire and smoke detection, alarm, and control, coordinate scheduling and testing and inspection procedures with the authorities having jurisdiction.

D. TAB Agency Qualifications:

1. Company specializing in the testing, adjusting, and balancing of systems specified in this section.
2. Having minimum of three years documented experience.
3. Certified by one of the following:

a. AABC, Associated Air Balance Council: www.aabchq.com; upon completion submit AABC National Performance Guaranty.

E. TAB Supervisor and Technician Qualifications: Certified by same organization as TAB agency.

3.2 TESTING, ADJUSTING, AND BALANCING AGENCIES

A. H.T. Lyons.

B. Optimum Performance Balancing.

C. Associated Air Balance Engineers.

D. Eastern Air Balancing

E. Mountain Air Balancing.

3.3 EXAMINATION

A. Verify that systems are complete and operable before commencing work. Ensure the following conditions:

1. Systems are started and operating in a safe and normal condition.
2. Temperature control systems are installed complete and operable.
3. Proper thermal overload protection is in place for electrical equipment.
4. Final filters are clean and in place. If required, install temporary media in addition to final filters.
5. Duct systems are clean of debris.
6. Fans are rotating correctly.
7. Fire and volume dampers are in place and open.
8. Air coil fins are cleaned and combed.
9. Access doors are closed and duct end caps are in place.
10. Air outlets are installed and connected.
11. Duct system leakage is minimized.
12. Hydronic systems are flushed, filled, and vented.
13. Pumps are rotating correctly.
14. Proper strainer baskets are clean and in place.
15. Service and balance valves are open.

B. Submit field reports. Report defects and deficiencies noted during performance of services which prevent system balance.

C. Beginning of work means acceptance of existing conditions.

3.4 INSTALLATION TOLERANCES

A. Air Handling Systems: Adjust to within plus or minus 5 percent of design for supply systems and plus or minus 10 percent of design for return and exhaust systems.

B. Air Outlets and Inlets: Adjust total to within plus 10 percent and minus 5 percent of design to space. Adjust outlets and inlets in space to within plus or minus 10 percent of design.

C. Hydronic Systems: Adjust to within plus or minus 10 percent of design.

3.5 RECORDING AND ADJUSTING

A. Field Logs: Maintain written logs including:

1. Running log of events and issues.
2. Discrepancies, deficient or uncompleted work by others.
3. Contract interpretation requests.
4. Lists of completed tests.

B. Ensure recorded data represents actual measured or observed conditions.

C. Permanently mark settings of valves, dampers, and other adjustment devices allowing settings to be restored. Set and lock memory stops.

D. Mark on the drawings the locations where traverse and other critical measurements were taken and cross reference the location in the final report.

E. After adjustment, take measurements to verify balance has not been disrupted or that such disruption has been rectified.

F. Leave systems in proper working order, replacing belt guards, closing access doors, closing doors to electrical switch boxes, and restoring thermostats to specified settings.

G. Check and adjust systems approximately six months after final acceptance and submit report.

3.6 AIR SYSTEM PROCEDURE

A. Adjust air handling and distribution systems to provide required or design supply, return, and exhaust air quantities at site altitude.

B. Make air quantity measurements in ducts by Pitot tube traverse of entire cross sectional area of duct.

C. Measure air quantities at air inlets and outlets.

D. Adjust distribution system to obtain uniform space temperatures free from objectionable drafts and noise.

E. Use volume control devices to regulate air quantities only to extend that adjustments do not create objectionable air motion or sound levels. Affect volume control by duct internal devices such as dampers and splitters.

F. Vary total system air quantities by adjustment of fan speeds. Provide drive changes required. Vary branch air quantities by damper regulation.

G. Provide system schematic with required and actual air quantities recorded at each outlet or inlet.

H. Measure static air pressure conditions on air supply units, including filter and coil pressure drops, and total pressure across the fan. Make allowances for 50 percent loading of filters.

I. Adjust outside air automatic dampers, outside air, return air, and exhaust dampers for design conditions.

J. Measure temperature conditions across outside air, return air, and exhaust dampers to check leakage.

K. Where modulating dampers are provided, take measurements and balance at extreme conditions.

L. For variable air volume system powered units set volume controller to air flow setting indicated. Confirm connections properly made and confirm proper operation for automatic variable air volume temperature control.

3.7 WATER SYSTEM PROCEDURE

A. Adjust water systems to provide required or design quantities.

B. Use calibrated Venturi tubes, orifices, or other metered fittings and pressure gauges to determine flow rates for system balance. Where flow metering devices are not installed, base flow balance on temperature difference across various heat transfer elements in the system.

C. Adjust systems to provide specified pressure drops and flows through heat transfer elements prior to thermal testing. Perform balancing by measurement of temperature differential in conjunction with air balancing.

D. Effect system balance with automatic control valves fully open to heat transfer elements.

E. Effect adjustment of water distribution systems by means of balancing cocks, valves, and fittings. Do not use service or shut-off valves for balancing unless indexed for balance point.

F. Where available pump capacity is less than total flow requirements or individual system parts, full flow in one part may be simulated by temporary restriction of flow to other parts.

3.8 MINIMUM DATA TO BE REPORTED

A. Electric Motors:

1. Manufacturer
2. Model/Frame
3. HP/BHP
4. Phase, voltage, amperage; nameplate, actual, no load
5. RPM
6. Service factor

7. Starter size, rating, heater elements
8. Sheave Make/Size/Bore

B. V-Belt Drives:

1. Identification/location
2. Required driven RPM
3. Driven sheave, diameter and RPM
4. Belt, size and quantity
5. Motor sheave diameter and RPM
6. Center to center distance, maximum, minimum, and actual

C. Pumps:

1. Identification/number
2. Manufacturer
3. Size/model
4. Impeller
5. Service
6. Design flow rate, pressure drop, BHP
7. Actual flow rate, pressure drop, BHP
8. Discharge pressure
9. Suction pressure
10. Total operating head pressure
11. Shut off, discharge and suction pressures
12. Shut off, total head pressure

D. Combustion Equipment:

1. Boiler manufacturer
2. Model number
3. Serial number
4. Firing rate
5. Overfire draft
6. Gas meter timing dial size
7. Gas meter time per revolution
8. Gas pressure at meter outlet
9. Gas flow rate
10. Heat input
11. Burner manifold gas pressure
12. Percent carbon monoxide (CO)
13. Percent carbon dioxide (CO2)
14. Percent oxygen (O2)
15. Percent excess air
16. Flue gas temperature at outlet
17. Ambient temperature
18. Net stack temperature

19. Percent stack loss
20. Percent combustion efficiency
21. Heat output

E. Air Cooled Condensers:

1. Identification/number
2. Location
3. Manufacturer
4. Model number
5. Serial number
6. Entering DB air temperature, design and actual
7. Leaving DB air temperature, design and actual
8. Number of compressors

F. Cooling Coils:

1. Identification/number
2. Location
3. Service
4. Manufacturer
5. Air flow, design and actual
6. Entering air DB temperature, design and actual
7. Entering air WB temperature, design and actual
8. Leaving air DB temperature, design and actual
9. Leaving air WB temperature, design and actual
10. Water flow, design and actual
11. Water pressure drop, design and actual
12. Entering water temperature, design and actual
13. Leaving water temperature, design and actual
14. Saturated suction temperature, design and actual
15. Air pressure drop, design and actual

G. Heating Coils:

1. Identification/number
2. Location
3. Service
4. Manufacturer
5. Air flow, design and actual
6. Water flow, design and actual
7. Water pressure drop, design and actual
8. Entering water temperature, design and actual
9. Leaving water temperature, design and actual
10. Entering air temperature, design and actual
11. Leaving air temperature, design and actual
12. Air pressure drop, design and actual

H. Air Moving Equipment:

1. Location
2. Manufacturer
3. Model number
4. Serial number
5. Arrangement/Class/Discharge
6. Air flow, specified and actual
7. Return air flow, specified and actual
8. Outside air flow, specified and actual
9. Total static pressure (total external), specified and actual
10. Inlet pressure
11. Discharge pressure
12. Sheave Make/Size/Bore
13. Number of Belts/Make/Size
14. Fan RPM

I. Return Air/Outside Air:

1. Identification/location
2. Design air flow
3. Actual air flow
4. Design return air flow
5. Actual return air flow
6. Design outside air flow
7. Actual outside air flow
8. Return air temperature
9. Outside air temperature
10. Required mixed air temperature
11. Actual mixed air temperature
12. Design outside/return air ratio
13. Actual outside/return air ratio

J. Exhaust Fans:

1. Location
2. Manufacturer
3. Model number
4. Serial number
5. Air flow, specified and actual
6. Total static pressure (total external), specified and actual
7. Inlet pressure
8. Discharge pressure
9. Sheave Make/Size/Bore
10. Number of Belts/Make/Size
11. Fan RPM

K. Duct Traverses:

1. System zone/branch
2. Duct size
3. Area
4. Design velocity
5. Design air flow
6. Test velocity
7. Test air flow
8. Duct static pressure
9. Air temperature
10. Air correction factor

L. Duct Leak Tests:

1. Description of ductwork under test
2. Duct design operating pressure
3. Duct design test static pressure
4. Duct capacity, air flow
5. Maximum allowable leakage duct capacity times leak factor
6. Test apparatus

    a. Blower
    b. Orifice, tube size
    c. Orifice size
    d. Calibrated

7. Test static pressure
8. Test orifice differential pressure
9. Leakage

M. Terminal Unit Data:

1. Manufacturer
2. Type(constant, variable, fan powered, single, dual duct)
3. Identification/number
4. Location
5. Model number
6. Size
7. Minimum static pressure
8. Minimum design air flow
9. Maximum design air flow
10. Maximum actual air flow
11. Inlet static pressure

N. Air Distribution Tests:

1. Air terminal number
2. Room number/location
3. Terminal type
4. Terminal size
5. Area factor
6. Design velocity
7. Design air flow
8. Test (final) velocity
9. Test (final) air flow
10. Percent of design air flow

O. Sound Level Reports:

1. Location
2. Octave bands - equipment off
3. Octave bands - equipment on

P. Vibration Tests:

1. Location of points:

    a. Fan bearing, drive end
    b. Fan bearing, opposite end
    c. Motor bearing, center (if applicable)
    d. Motor bearing, drive end
    e. Motor bearing, opposite end
    f. Casing (bottom or top)
    g. Casing (side)
    h. Duct after flexible connection (discharge)
    i. Duct after flexible connection (suction)

2. Test readings:

    a. Horizontal, velocity and displacement
    b. Vertical, velocity and displacement
    c. Axial, velocity and displacement

3. Normally acceptable readings, velocity and acceleration
4. Unusual conditions at time of test
5. Vibration source (if non-complying)

END OF SECTION 23.0593

SECTION 23.0714 - HVAC DUCT INSULATION

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Duct insulation.

B. Duct Liner.

C. Exterior duct insulation.

1.2 RELATED SECTIONS

A. Section 23 0554 – Mechanical Identification.

1.3 REFERENCES

A. ASTM C 553 - Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications; 2002.

B. ASTM C 612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation; 2004.

C. ASTM C 1071 - Standard Specification for Fibrous Glass Duct Lining Insulation (Thermal and Sound Absorbing Material); 2005.

D. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2005.

E. ASTM E 96/E 96M - Standard Test Methods for Water Vapor Transmission of Materials; 2005.

F. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials; National Fire Protection Association; 2006.

G. SMACNA (DCS) - HVAC Duct Construction Standards - Metal and Flexible; Sheet Metal and Air Conditioning Contractors' National Association; 2005.

H. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials; Underwriters Laboratories Inc.; 2003.

I. IECC 2021 - International Energy Conservation Code.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide product description, thermal characteristics, list of materials and thickness for each service, and locations.

C. Manufacturer's Instructions: Indicate installation procedures which ensure acceptable workmanship and installation standards will be achieved.

D. Submit MSS information for all products.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section with not less than five years of documented experience.

B. Applicator Qualifications: Company specializing in performing the type of work specified in this section, with minimum 5 years of experience and approved by manufacturer.

1.6 DELIVERY, STORAGE, AND PROTECTION

A. Accept materials on site in original factory packaging, labelled with manufacturer's identification, including product density and thickness.

B. Protect insulation from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original wrapping.

C. Store indoors or in suitable storage facilities. Do not store outdoors.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Maintain ambient temperatures and conditions required by manufacturers of adhesives, mastics, and insulation cements.

B. Maintain temperature during and after installation for minimum period of 24 hours.

C. All insulation and adhesives shall be formaldehyde free.

PART 2 - PRODUCTS

2.1 REQUIREMENTS FOR ALL PRODUCTS OF THIS SECTION

A. Surface Burning Characteristics: Flame spread/Smoke developed index of 25/50, maximum, when tested in accordance with ASTM E 84, NFPA 255, or UL 723.

2.2 GLASS FIBER, FLEXIBLE

A. MANUFACTURER:

1. Johns Manville Corporation: www.jm.com. Microlite XG.

    a. Approved formaldehyde-free equal.

2. Insulation: ASTM C 553-92; formaldehyde-free, flexible glass fiber, noncombustible blanket.

    a. 'K' ('Ksi') value: 0.29 at 75 degrees F (0.042 at 24 degrees C), when tested in accordance with ASTM C 518.

        1) Maximum Service Temperature: 250 degrees F (232 degrees C).
        2) Maximum Water Vapor Sorption: 5.0 percent by weight.

3. Vapor Barrier Jacket:

    a. Porous interior sealant primers shall not have VOC content in excess of 775 grams/liter, less water and compounds exempt by the applicable LEED standard.
    b. Kraft paper with glass fiber yarn and bonded to aluminized film.
    c. Moisture Vapor Permeability: 0.058 ng/Pa s m, when tested in accordance with ASTM E 96/E 96M.
    d. Secure with pressure sensitive tape.

4. Vapor Barrier Tape:

    a. Kraft paper reinforced with glass fiber yarn and bonded to aluminized film, with pressure sensitive formaldehyde-free rubber based adhesive.

2.3 GLASS FIBER, RIGID

A. Manufacturer:

1. Knauf Fiber Glass: www.knauffiberglass.com.
2. Johns Manville Corporation: www.jm.com.
3. Owens Corning Corp: www.owenscorning.com.
4. CertainTeed Corporation: www.certainteed.com.

B. Insulation: ASTM C 612; rigid, noncombustible blanket.

1. 'K' ('Ksi') value: 0.24 at 75 degrees F (0.036 at 24 degrees C), when tested in accordance with ASTM C 518.
2. Maximum service temperature: 450 degrees F (232 degrees C).
3. Maximum Water Vapor Sorption: 5.0 percent.
4. Maximum Density: 8.0 lb/cu ft (128 kg/cu m).
5. Vapor Barrier Jacket:

    a. Kraft paper with glass fiber yarn and bonded to aluminized film.
    b. Moisture Vapor Permeability: 0.058 ng/Pa s m, when tested in accordance with ASTM E 96/E 96M.
    c. Secure with pressure sensitive tape.

2.4 DUCT LINER

A. Manufacturers:

1. Knauf Fiber Glass: www.knauffiberglass.com.
2. Approved equal.

B. Flexible, mat-faced bonded insulation with encapsulated edge coating.

1. Thermal Performance: 1.5" thickness; R-value 6.0 (hr-sqft-F/Btu) or 0.17 conductness.
2. Service temperature: up to 250 degrees F.
3. Rated velocity on coated side for air erosion: 6,000 fpm minimum.
4. Minimum noise reduction coefficients: 1.5 inch thickness; 0.80.

C. Liner Fasteners: Galvanized steel, welded with integral head.

2.5 EXTERIOR DUCTWORK INSULATION

A. Externally insulated ductwork:

1. Insulate ducts outside with 3" thick rigid polyisocyanurate with a minimum R value of 14.
2. Cover insulation with "VentureClad 1579CW-E" as manufactured by 3M.

B. Pre-manufactured system:

1. Insulation: Pre-manufactured, interlocking, insulated panel system.
2. “Techna-Duct” as manufactured by P.T.M. Manufacturing, L.L.C.
3. 2” thick with R-16 rating.
4. System shall be shop fabricated with laminated polyisocyanurate to a finish of 2” thick and encased with 1.25 mil aluminum.
5. Field measure duct prior to off-site fabrication.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that ducts have been tested before applying insulation materials.

B. Verify that surfaces are clean, foreign material removed, and dry.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install in accordance with NAIMA National Insulation Standards.

C. Insulated ducts conveying air below ambient temperature:

1. Provide insulation with vapor barrier jackets.
2. Finish with tape and vapor barrier jacket.
3. Continue insulation through walls, sleeves, hangers, and other duct penetrations.
4. Insulate entire system including fittings, joints, flanges, fire dampers, flexible connections, and expansion joints.
5. Insulated ducts conveying air above ambient temperature:
    a. Insulate fittings and joints. Where service access is required, bevel and seal ends of insulation.

D. External Duct Insulation Application:

1. Install without sag on underside of duct. Use welded pin mechanical fasteners where necessary to prevent sagging. Lift duct off trapeze hangers and insert spacers.
2. Seal vapor barrier penetrations by mechanical fasteners with vapor barrier adhesive.
3. Stop and point insulation around access doors and damper operators to allow operation without disturbing wrapping.
4. Install Insulation materials with smooth and even surfaces.
5. Maintain integrity of vapor barrier on ductwork insulation, and protect it to prevent puncture and other damage.
6. Extend ductwork insulation without interruption through walls, floors, and similar ductwork penetrations except where otherwise indicated.

E. Duct and Plenum Liner Application:

1. Adhere insulation with adhesive for 100 percent coverage.
2. Secure insulation with mechanical liner fasteners. Refer to SMACNA HVAC Duct Construction Standards - Metal and Flexible for spacing.
3. Seal and smooth joints. Seal and coat transverse joints.
4. Seal liner surface penetrations with adhesive.

5. Duct dimensions indicated are net inside dimensions required for air flow. Increase duct size to allow for insulation thickness.

3.3 PROTECTION AND REPLACEMENT:

A. Replace damaged insulation, which cannot be repaired satisfactorily, including units with vapor barrier damage and moisture saturated units.

B. Protection: The installer of the ductwork insulation shall advise the contractor of required protection for the insulation work during the remainder of the construction period to avoid damage and deterioration.

3.4 SCHEDULES

A. All fresh air intake ducts from the outside intake louver or vent to the unit casing shall be externally insulated with 2” thick fiberglass.

B. All exhaust and relief air ducts from the backdraft device to the louver shall be externally insulated with 1.5" thick fiberglass.

C. Transfer air ducts shall be acoustically (internally) lined with 1" thick liner where indicated on the plans.

D. All supply and return air ductwork of air conditioning systems shall be externally insulated unless noted to be internally lined (except where ductwork is installed exposed in a conditioned space). Exposed and partially exposed ductwork shall be lined unless noted otherwise.

E. All exhaust air ductwork of energy recovery units shall be externally insulated with 1.5” fiberglass (except where ductwork is installed exposed in a conditioned space).

F. Where interior ducts are internally lined for acoustical treatment, no additional outside duct insulation shall be required.

G. Dual Temperature Ductwork:

1. Application Requirements: Where leaving air temperature is alternately above and below ambient temperature insulate and vapor seal ductwork, except where ductwork is indicated to be acoustically lined.
2. Externally Insulated Ductwork: Provide with one of the following types and thicknesses of insulation, except as otherwise indicated:

    a. Insulation: Rigid mineral fiber, 6 PCF in exposed areas, 1.5” thick with a minimum installed “R” value of 6.0.
    b. Insulation: Flexible mineral fiber, 2" thick, application limited to concealed locations. Density shall be 1.5 pounds/cubic foot with a minimum installed “R” value of 6.0.

H. Lined Ductwork:

1. 1.5” thick duct liner for supply and return air ductwork where duct liner is indicated on the drawings.
2. All transfer ducts shall be lined with 1" thick liner.

I. Exterior Ductwork:

1. Provide either specified product for all dual temperature ductwork located outside of building envelope. Insulation shall be in addition to any internal lining.

END OF SECTION 23.0714

SECTION 23.0716 - HVAC EQUIPMENT INSULATION

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Equipment insulation.

B. Covering.

1.2 RELATED SECTIONS

A. Section 23 0554 – Mechanical Identification.

P. IECC 2021 - International Energy Conservation Code.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide product description, thermal characteristics, list of materials and thickness for equipment scheduled.

C. Manufacturer's Instructions: Indicate installation procedures that ensure acceptable workmanship and installation standards will be achieved.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with not less than five years of documented experience.

B. Applicator Qualifications: Company specializing in performing the type of work specified in this section with minimum 5 years of experience.

1.6 DELIVERY, STORAGE, AND PROTECTION

A. Accept materials on site in original factory packaging, labeled with manufacturer's identification, including product density and thickness.

B. Protect insulation from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original wrapping.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Maintain ambient temperatures and conditions required by manufacturers of adhesives, mastics, and insulation cements.

B. Maintain temperature during and after installation for minimum period of 24 hours.

PART 2 - PRODUCTS

2.1 REQUIREMENTS FOR ALL PRODUCTS OF THIS SECTION

A. Surface Burning Characteristics: Flame spread/Smoke developed index of 25/50, maximum, when tested in accordance with ASTM E 84, NFPA 255, or UL 723.

2.2 GLASS FIBER, FLEXIBLE

A. Manufacturers:

1. Knauf Insulation
2. Johns Manville Corporation
3. Owens Corning Corporation
4. CertainTeed Corporation

B. Insulation: ASTM C 553; flexible, noncombustible.

1. 'K' Value: 0.36 at 75 degrees F, when tested in accordance with ASTM C177 or ASTM C518.
2. Maximum Service Temperature: 450 degrees F.
3. Maximum Water Vapor Sorption: 5.0 percent by weight.

C. Vapor Barrier Jacket: Kraft paper reinforced with glass fiber yarn and bonded to aluminized film.

1. Moisture Vapor Permeability: 0.029 ng/Pa s m (0.02 perm inch), when tested in accordance with ASTM E 96/E 96M.
2. Secure with self-sealing longitudinal laps and butt strips.

2.3 GLASS FIBER, RIGID

A. Manufacturer:

1. Knauf Insulation
2. Johns Manville Corporation
3. Owens Corning Corporation
4. CertainTeed Corporation

B. Insulation: ASTM C 612 or ASTM C 592; rigid, noncombustible.

1. 'K' Value: 0.25 at 75 degrees F, when tested in accordance with ASTM C177 or ASTM C518.
2. Maximum Service Temperature: 850 degrees F.
3. Maximum Water Vapor Sorption: 5.0 percent by weight.
4. Maximum Density: 8.0 lb/cu ft.

C. Vapor Barrier Jacket:

1. Kraft paper reinforced with glass fiber yarn and bonded to aluminized film.
2. Moisture Vapor Permeability: 0.029 ng/Pa s m (0.02 perm inch), when tested in accordance with ASTM E 96/E 96M.
3. Secure with self-sealing longitudinal laps and butt strips.

2.4 FLEXIBLE ELASTOMERIC CELLULAR INSULATION

A. Manufacturer:

1. Armacell International
2. Aeroflex USA

B. Insulation: Preformed flexible elastomeric cellular rubber insulation complying with ASTM C 534 Grade 3, in sheet form.

1. Minimum Service Temperature: -40 degrees F.
2. Maximum Service Temperature: 220 degrees F.
3. Connection: Waterproof vapor barrier adhesive.

C. Elastomeric Foam Adhesive: Air dried, contact adhesive, compatible with insulation.

2.5 JACKETS

A. PVC Plastic:

1. Manufacturers:

a. Johns Manville Corporation

2. Jacket: Sheet material, off-white color.

a. Minimum Service Temperature: -40 degrees F.
b. Maximum Service Temperature: 150 degrees F.
c. Moisture Vapor Permeability: 0.029 ng/Pa s m (0.02 perm inch), when tested in accordance with ASTM E 96/E 96M.
d. Thickness: 10 mil.

e. Connections: Brush on welding adhesive.

B. Aluminum Jacket: ASTM B209 (ASTM B209M) formed aluminum sheet.

1. Thickness: 0.016 inch sheet.
2. Finish: corrugated.
3. Joining: Longitudinal slip joints and 2 inch laps.
4. Metal Jacket Bands: 3/8 inch wide; 0.015 inch thick aluminum.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that equipment has been tested before applying insulation materials.

B. Verify that surfaces are clean and dry, with foreign material removed.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Factory Insulated Equipment: Do not insulate.

C. Exposed Equipment: Locate insulation and cover seams in least visible locations.

D. Apply insulation close to equipment by grooving, scoring, and beveling insulation. Fasten insulation to equipment with studs, pins, clips, adhesive, wires, or bands.

E. Insulated equipment containing fluids below ambient temperature: Insulate entire system.

F. Fiber glass insulated equipment containing fluids below ambient temperature: Provide vapor barrier jackets, factory-applied or field-applied. Finish with glass cloth and vapor barrier adhesive.

G. For hot equipment containing fluids over 140 degrees F, insulate flanges and unions with removable sections and jackets.

H. Fiber glass insulated equipment containing fluids above ambient temperature: Provide standard jackets, with or without vapor barrier, factory-applied or field-applied. Finish with glass cloth and adhesive.

I. Inserts and Shields:

1. Application: Equipment 1-1/2 inches diameter or larger.
2. Shields: Galvanized steel between hangers and inserts.
3. Insert location: Between support shield and equipment and under the finish jacket.

4. Insert configuration: Minimum 6 inches long, of same thickness and contour as adjoining insulation; may be factory fabricated.
5. Insert material: Hydrous calcium silicate insulation or other heavy density insulating material suitable for the planned temperature range.

J. Finish insulation at supports, protrusions, and interruptions.

K. Nameplates and ASME Stamps: Bevel and seal insulation around; do not insulate over.

L. Equipment Requiring Access for Maintenance, Repair, or Cleaning: Install insulation so it can be easily removed and replaced without damage.

M. Replace damaged insulation which cannot be repaired satisfactorily including units with vapor barrier damage and moisture saturated units.

N. Protection: Insulation Installer shall advise the Contractor of required protection for the insulation work during the remainder of the construction period to avoid damage and deterioration.

3.3 SCHEDULE

A. Heating Systems:

1. Air Separators: 2" thick flexible unicellular.
2. Expansion Tanks: 2" thick flexible unicellular.

B. Dual Temperature Systems:

1. VAV Box Re-heat Coil: 1.5" thick fiberglass (except where unit is installed exposed in a conditioned space)

END OF SECTION 23.0716

SECTION 23.0719 - HVAC PIPING INSULATION

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Piping insulation.

B. Jackets and accessories.

1.2 RELATED SECTIONS

A. Section 07 8400 - Firestopping.

B. Section 23 2113 - Hydronic Piping: Placement of hangers and hanger inserts.

C. Section 23 2300 - Refrigerant Piping: Placement of inserts.

1.3 REFERENCES

A. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2007.

B. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate [Metric]; 2007.

C. ASTM C 177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded Hot Plate Apparatus; 2004.

R. ASTM E 96/E 96M - Standard Test Methods for Water Vapor Transmission of Materials; 2005.

S. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials; National Fire Protection Association; 2006.

T. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials; Underwriters Laboratories Inc.; Current Edition, Including All Revisions.

U. IECC 2021 - International Energy Conservation Code.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide product description, thermal characteristics, list of materials and thickness for each service, and locations.

C. Manufacturer's Instructions: Indicate installation procedures that ensure acceptable workmanship and installation standards will be achieved.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with not less than five years of documented experience.

B. Applicator Qualifications: Company specializing in performing the type of work specified in this section with minimum 5 years of experience.

1.6 DELIVERY, STORAGE, AND PROTECTION

A. Accept materials on site, labeled with manufacturer's identification, product density, and thickness.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Maintain ambient conditions required by manufacturers of each product.

B. Maintain temperature before, during, and after installation for minimum of 24 hours.

PART 2 - PRODUCTS

2.1 REQUIREMENTS FOR ALL PRODUCTS OF THIS SECTION

A. Surface Burning Characteristics: Flame spread/Smoke developed index of 25/50, maximum, when tested in accordance with ASTM E 84, NFPA 255, or UL 723.

2.2 GLASS FIBER

A. Manufacturers:

1. Knauf Insulation: www.knaufusa.com.
2. Johns Manville Corporation: www.jm.com.
3. Owens Corning Corp: www.owenscorning.com.
4. CertainTeed Corporation: www.certainteed.com.

B. Insulation: ASTM C 547 and ASTM C 795; rigid molded, noncombustible.

1. 'K' value: ASTM C177, 0.24 at 75 degrees F.
2. Maximum service temperature: 850 degrees F.
3. Maximum moisture absorption: 0.2 percent by volume.

C. Insulation: ASTM C 547 and ASTM C 795; semi-rigid, noncombustible, end grain adhered to jacket.

1. 'K' value: ASTM C177, 0.24 at 75 degrees F.
2. Maximum service temperature: 650 degrees F.
3. Maximum moisture absorption: 0.2 percent by volume.

D. Vapor Barrier Jacket: White kraft paper with glass fiber yarn, bonded to aluminized film; moisture vapor transmission when tested in accordance with ASTM E 96/E 96M of 0.02 perm-inches.

2.3 FLEXIBLE ELASTOMERIC CELLULAR INSULATION

A. Manufacturer:

1. Armacell International: www.armacell.com.
2. Aeroflex USA: www.aeroflexusa.com.

B. Insulation: Preformed flexible elastomeric cellular rubber insulation complying with ASTM C 534 Grade 1; use molded tubular material wherever possible.

1. Minimum Service Temperature: -40 degrees F.
2. Maximum Service Temperature: 220 degrees F.
3. Connection: Waterproof vapor barrier adhesive.

2.4 JACKETS

A. PVC Plastic.

1. Manufacturers:

a. Johns Manville Corporation: www.jm.com.
b. Owens Corning Corp..
c. Knauf Insulation.

2. Jacket: One piece molded type fitting covers and sheet material, off-white color.

a. Minimum Service Temperature: 0 degrees F.
b. Maximum Service Temperature: 220 degrees F.
c. Moisture Vapor Permeability: 0.002 perm inch, maximum, when tested in accordance with ASTM E 96/E 96M.
d. Thickness: 10 mil.
e. Connections: Brush on welding adhesive. Tape all joints in addition to adhesive.
f. Match

B. Aluminum Jacket: ASTM B209 (ASTM B209M) formed aluminum sheet.

1. Thickness: 0.016 inch sheet.
2. Finish: Smooth.
3. Joining: Longitudinal slip joints and 2 inch laps.
4. Fittings: 0.016 inch thick die shaped fitting covers with factory attached protective liner.
5. Metal Jacket Bands: 3/8 inch wide; 0.015 inch thick aluminum.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that piping has been tested before applying insulation materials.

B. Verify that surfaces are clean and dry, with foreign material removed.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Exposed Piping: Locate insulation and cover seams in least visible locations.

C. Insulated pipes conveying fluids below ambient temperature: Insulate entire system including fittings, valves, unions, flanges, strainers, flexible connections, and expansion joints.

D. For hot piping conveying fluids over 140 degrees F, insulate flanges and unions at equipment.

E. Inserts and Shields:

1. Application: Piping 1-1/2 inches diameter or larger.
2. Shields:

    a. Galvanized steel (minimum 18 gauge) between pipe hangers or pipe hanger rolls and inserts.
    b. Single-piece Molded Polypropylene Copolymer pipe saddle such as Armacell Insuguard or approved equal.

3. Insert location: Between support shield and piping and under the finish jacket.
4. Insert configuration: Minimum 6 inches long, of same thickness and contour as adjoining insulation; may be factory fabricated.
5. Insert material:

    a. Flexible elastomeric foam, with thickness equal to or greater than the pipe insulation such as ArmaFiix EcoLight Pipe Support.
    b. Hydrous calcium silicate insulation or other heavy density insulating material suitable for the planned temperature range.

F. Continue insulation through walls, sleeves, pipe hangers, and other pipe penetrations. Finish at supports, protrusions, and interruptions. At fire separations, refer to Section 07 8400.

G. Pipe Exposed in Mechanical Equipment Rooms or Finished Spaces (less than 10 feet above finished floor): Finish with PVC jacket and fitting covers.

H. General: Install insulation products in accordance with the manufacturer's written instructions, and in accordance with the recognized industry practices to ensure that the installation serves its intended purpose.

I. Install insulation of pipe systems subsequent to testing and acceptance of tests.

J. Install insulation materials with smooth and even surfaces. Insulate each continuous run of piping with full length units of insulation, with a single cut piece to complete the run. Do not cut pieces of scraps abutting each other.

K. Clean and dry pipe surfaces prior to insulating. Butt insulation joints firmly together to ensure a complete and tight fit over surfaces to be covered.

L. Cover valves, fittings and similar items in each piping system with equivalent thickness and composition of insulation as applied to adjoining pipe run. Install factory molded, precut or job fabricated units (at installer's option) except where a specific form or type is indicated. Valves in chilled water systems shall be insulated with removable factory pre-molded insulators. Any condensation problems shall be corrected by the Contractor. Damage to finishes caused by condensation shall be corrected by this Contractor.

M. Extend piping insulation without interruption through walls, floors and similar piping penetrations, except where otherwise indicated.

N. Pipe Hanger Insulation Inserts: Butt pipe insulation against pipe hanger insulation inserts. For hot pipes, apply 3 inch wide vapor barrier stage or band over the butt joints. For cold piping apply wet coat of vapor barrier lap cement on butt joints and seal joints with 3 inch wide vapor barrier tape or band.

O. Replace damaged insulation which cannot be repaired satisfactorily including units with vapor barrier damage and moisture saturated units.

P. Protection: Insulation Installer shall advise the Contractor of required protection for the insulation work during the remainder of the construction period to avoid damage and deterioration.

3.3 SCHEDULE

A. HVAC Systems:

1. HVAC PIPING SYSTEM INSULATION:

a. Sub-Freezing Piping (0 to 39 Deg. F.) (-18 to 4 Deg. C.):

1) Application Requirements: Insulate the following sub-freezing HVAC piping systems:

(a) Refrigerant suction and liquid lines between evaporators and condensing units.

2) Insulate each piping system specified above with one of the following types and thickness of insulation:

(a) Insulation: Flexible Closed Cell Elastomeric; 1.0” thick.
(b) Outdoor Application: Cover with 22 gauge corrugated aluminum with all joints sealed watertight.

b. Cold Piping (40 Deg. F. (4.4 Deg. C. to ambient):

1) Application Requirements: Insulate the following cold HVAC piping systems:

(a) Copper air conditioning condensate piping. Insulation not required on PVC condensate piping.

2) Insulate each piping system specified above with one of the following types and thicknesses of insulation:

(a) Insulation: Flexible Closed Cell Elastomeric; 1.5" thick.
(b) Outdoor Application: Increase insulation thickness by 1 inch. Where pipes are heat traced, increase size to accommodate the heat tracing. Cover with 22 gauge corrugated aluminum with all joints sealed watertight.

c. Hot Low Pressure Piping (to 200 Deg. F. (121 Deg. C.):

1) Application Requirements: Insulate the following hot low pressure HVAC piping systems.

(a) HVAC hot water supply and return piping.

2) Insulate each piping system specified above with one of the following types and thickness of insulation:

(a) Insulation: Fiberglass or Flexible Closed Cell Elastomeric; 1 1/2" thick for pipe sizes up to and including 1 1/4” in diameter. 2" thick for pipe sizes 1 1/2" in diameter and larger.

END OF SECTION 23.0719

SECTION 23.0923 – DIRECT DIGITAL CONTROL (DDC) SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes control equipment and installation for HVAC systems and components, including control components for terminal heating and cooling units not supplied with factory-furnished controls.

B. See "Sequences of Operation" for requirements that relate to this Section.

1.2 SYSTEM DESCRIPTION

A. The Building Automation System (BAS) contractor shall furnish and install a networked system of HVAC controls. The contractor shall incorporating direct digital control (DDC) for central plant equipment, building ventilation equipment, supplemental heating and cooling equipment, and terminal units.

B. Provide networking to new DDC equipment using communication standards. System shall be capable of BACnet communication according to ASHRAE standard ANSI/ASHRAE 135-2010 for interoperability with smart equipment and for the main IP communication trunk to the BAS Server.

1.3 DEFINITIONS

A. DDC: Direct digital controls

B. IP: Internet Protocol

C. I/O: Input/Output

D. LAN: Local area network.

E. TCP: Transfer Control Protocol

F. Scope Terminology

1. Provide = Furnish equipment, engineer, program and install
2. Furnish = Furnish equipment, engineer and program
3. Mount = securely fasten or pipe
4. Install = mount and wire
5. Wire = wire only

1.4 WORK INCLUDED

A. The installation of the control system shall be performed under the direct supervision of the controls manufacturer with the shop drawings, flow diagrams, bill of materials, component designation, or identification number and sequence of operation all bearing the name of the manufacturer.

B. Furnish a complete distributed direct digital control system in accordance with this specification section. This includes all system controllers, logic controllers, and all input/output devices. Items of work included are as follows:

1. Provide a submittal that meets the requirements below for approval.
2. Coordinate installation schedule with the mechanical contractor and general contractor.
3. Provide installation of all panels and devices unless otherwise stated.
4. Provide power for panels and control devices.
5. Provide all low voltage control wiring for the DDC system.
6. Provide miscellaneous control wiring for HVAC and related systems regardless of voltage.
7. Provide engineering and technician labor to program and commission software for each system and operator interface. Submit commissioning reports for approval.
8. Participate in commissioning for all equipment that is integrated into the BAS (Refer to Commissioning sections of the equipment or systems in other parts of this specification.)
9. Provide testing, demonstration and training as specified below.

1.5 SUBMITTALS

A. Provide submittals for fast track items that need to be approved and released to meet the schedule of the project. Provide submissions for the following items separately:

1. Valve schedule and cut sheets
2. Factory mounting and wiring diagrams and cut sheets
3. Thermostat locations

B. Provide a complete submittal with all controls system information for approval before construction starts. Include the following:

1. Schematic flow diagrams showing fans, pumps, coils, dampers, valves, and control devices.
2. Wiring Diagrams: Power, signal, and control wiring.
3. Details of control panel faces, including sizes, controls, instruments, and labeling.
4. Schedule of dampers and actuators including size, leakage, and flow characteristics.
5. If dampers are furnished by other, submit a damper actuator schedule coordinating actuator sizes with the damper schedule.
6. Schedule of valves including leakage and flow characteristics.
7. Written description of the Sequence of Operations.

8. Network riser diagram showing wiring types, network protocols, locations of floor penetrations and number of control panels. Label control panels with network addresses. Show all routers, switches, hubs and repeaters.
9. Point list for each system controller including both inputs and outputs (I/O), point numbers, controlled device associated with each I/O point, and location of I/O device.
10. Starter and variable frequency drive wiring details of all automatically controlled motors.
11. Reduced size floor plan drawings showing locations of control panels, thermostats and any devices mounted in occupied space.

C. Product Data: Include manufacturer's technical literature for each control device indicated, labeled with setting or adjustable range of control. Indicate dimensions, capacities, performance characteristics, electrical characteristics, finishes for materials, and installation and startup instructions for each type of product indicated.

D. Wiring Diagrams: Detail the wiring of the control devices and the panels. Show point-to-point wiring from field devices to the control panel. Show point-to-point wiring of hardwired interlocks. Show a ladder diagram or schematic of wiring internal to the panels, including numbered terminals. Clearly designate wiring that is done at a factory, at a panel shop or in the field.

1.6 QUALITY ASSURANCE

A. Codes

1. Perform all wiring in accordance with Division 26, NEC, local codes and Owner’s requirements.
2. Uniform Building Code (UBC)
3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
4. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilation Systems."
5. All equipment shall be UL listed and approved and shall meet with all applicable NFPA standards, including UL 916 - PAZX Energy Management Systems,
6. Provide UL 864 – UUKL Smoke Control, where controllers and networks are used for that purpose.

    a. Provide written approvals and certifications after installation has been completed.

7. All electronic equipment shall conform to the requirements of FCC Regulation, Part 15, Governing Radio Frequency Electromagnetic Interference and be so labeled.
8. The manufacturer of the building automation system shall provide documentation supporting compliance with ISO-9002 (Model for Quality Assurance in Production, Installation, and Servicing) and ISO-140001 (The application of well-accepted business management principles to the environment). The intent of this specification requirement is to ensure that the products from the manufacturer are

delivered through a Quality System and Framework that will assure consistency in the products delivered for this project.

B. Qualifications

1. Installing contractor shall be in the business of installing and servicing DDC controls for mechanical systems, temperature and ventilation control, environmental control, lighting control, access and security controls, and energy automation as their primary business. Installer Qualifications: An experienced installer who is the authorized representative of the automatic control system manufacturer for both installation and maintenance of controls required for this Project.
2. Engineering, drafting, programming, and graphics generation shall be performed by the local branch engineers and technicians directly employed by the Building Automation System Contractor.
3. Supervision, checkout and commissioning of the system shall be by the local branch engineers and technicians directly employed by the Building Automation System Contractor. They shall perform commissioning and complete testing of the BAS system.

C. Final determination of compliance with these specifications shall rest solely with the Engineers and Owner who will require proof of prior satisfactory performance.

1.7 COORDINATION

A. Coordinate location of thermostats, humidistats, panels, and other exposed control components with plans and room details before installation.

B. Coordinate power for control units and operator workstation with electrical contractor.

C. Coordinate equipment with provider of starters and drives to achieve compatibility with motor starter control coils and VFD control wiring.

D. Coordinate scheduling with the mechanical contractor and general contractor. Submit a schedule for approval based upon the installation schedule of the mechanical equipment.

E. Products Furnished but Not Installed Under This Section

1. Sheetmetal accessories

a. Dampers
b. Airflow Stations

1.8 WARRANTY

A. Conform to the warranty requirement of the Contract Documents, General Requirements and this section or a minimum of 12 months. This warranty shall apply equally to both hardware and software.

B. Warranty shall cover all costs for parts, labor, associated travel, and expenses for a period of one year from completion of system demonstration.

C. Hardware and software personnel supporting this warranty agreement shall provide on-site or off-site service in a timely manner after failure notification to the vendor. The maximum acceptable response time to provide this service at the site shall be 24 hours.

PART 2 - PRODUCTS

2.1 ACCEPTABLE SYSTEM MANUFACTURERS AND CONTRACTORS

A. Distech Controls as installed by Conexus.

B. Schnider Electric as installed by NRG.

C. Facility Explorer as installed by Eccotrol.

2.2 QUALITY ASSURANCE

A. All new building automation system products on this project shall be provided by a firm that is a registered ISO 9001:2015 manufacturer, for a minimum duration of 5 years, at time of bid.

2.3 COMPUTER HARDWARE

A. Provide the following computer hardware for this project:

1. Onsite Server(s) - Contractor shall utilize existing customer VM
2. Workstation Computer(s) - Contractor shall provide qty. of 1 in this building
3. Local Touchscreen Display(s) - Contractor shall provide as needed
4. Uniterruptable Power Supplies

B. Server Hardware Requirements

1. Utilize existing owner VM

C. Workstation Hardware Requirements

1. The Workstation shall adhere to the following minimum requirements: the latest generation Intel Core i5 processor, 8 GB RAM, and a 500GB solid state hard drive. It shall include the latest Windows 64-bit operating system (Windows 10 pro or newer), Microsoft Office programs, VM support, an ethernet adapter (10/100MB with RJ45 connector), 32X CD-ROM drive, and 2-USB ports.

2. A minimum 21", HDMI, DVI-D video interfaces, minimum 1024 x 768 resolution, 4x3 Widescreen, LED color monitor with a minimum 60 Hz refresh rate shall also be included.
3. A mouse and keyboard shall be provided.
4. Connection to the BAS LAN network shall be via an Ethernet network interface card, 100 Mbps.
5. Workstation(s) should be loaded with Programming Tools
6. Acceptable Manufacturers are:

    a. Dell
    b. Lenovo
    c. HP (Hewlett Packard)

D. Local Touchscreen Display Requirements

1. The Local Touchscreen Display shall be a LCD capacitive touchscreen with a minimum quad core 1.44 GHz processor and support for user authentication via credential entry. It shall be capable of connecting to the BAS either through Wi-Fi or IP connection.
2. Pre-loaded visual interface for simplified commissioning, operations and troubleshooting; including real time notification of alarms, trend viewing, schedule / calendar adjustment, point data view and override, and graphical displays.
3. The local touchscreen display shall be associated with a single BACnet/IP controller such as a mechanical room display for a chilled water controller.
4. Acceptable Manufacturers are:

    a. Distech Horizon-C or Horizon-R
    b. Microsoft Surface Pro

E. Uninterruptable Power Supplies

1. Provide the OWS, Server, and each network/building controller with individual UPS to provide clean, reliable, noise-filtered power at all times and to protect and maintain systems operation throughout short term power interruptions of up to 15 minutes duration.
2. Acceptable Manufacturer is APC.

2.4 REMOTE ACCESS AND CYBER SECURITY BEST PRACTICES

A. Remote Access

1. The BAS contractor shall comply with owner IT infrastructure security policies for remote access. The owner IT team shall provide VPN, firewalls, etc. as needed for secure remote access.
2. A VPN and firewall must be used for secure remote access.

B. Cyber Security Best Practices

1. Unless predetermined by the owner IT team the BAS network shall be separate from the owners IT infrastructure besides a single point connection for remote access (owner provided internet access). All ethernet switches and communication backbone required for a fully operational BAS shall be provided by the BAS contractor.
2. Refer to "Communication Backbone" section of this specification for further details on segmenting the network (VLANs, subnets) and when edge or managed switches are required based on building size / type.
3. Do not use factory provided usernames and passwords. Update passwords and usernames regularly for strong system security.
4. Update software and firmware regularly.
5. Adhere to controls manufacturer hardening guidelines where applicable.

2.5 OPERATOR SOFTWARE

A. Real-Time Displays

1. Provide a visual graphical representation of buildings, floor layouts, each piece of mechanical equipment and/or mechanical system that duplicates the represented system, presented as a web page via any industry standard web browser, where applicable.
2. Graphics shall include at a minimum the value of each input, each output, each setpoint, alarms and graphical representation of trend logs.

B. On-Line Help

1. Provide a context sensitive, on-line help system to assist the operator in operation and editing of the system.

C. Security

1. Each operator shall be required to log on to that system with a user name and password in order to view, edit, add, or delete data.
2. System security shall be selectable for each operator.
3. The system administrator shall have the ability to set passwords and security levels for all other operators.
4. Each operator password shall be able to restrict the operators' access for viewing and/or changing each system application, full screen editor, and object.
5. Each operator shall automatically be logged off of the system if no keyboard or mouse activity is detected.
6. This auto log-off time shall be set per operator password.
7. All system security data shall be stored in an encrypted format.

D. System Diagnostics.

1. The system shall automatically monitor the operation of all workstations, printers, modems, network connections, building management panels, and controllers.
2. The failure of any device shall be annunciate to the operator.

E. Third-Party Windows-Based Programs

1. The system shall be capable of utilizing third-party Windows-based programs for such things as spreadsheet analysis, graphing, charting, custom report generation, and graphics design packages.
2. Graphics generation shall be done using standard Windows packages.
3. No proprietary graphics generation software shall be needed.

F. Overrides

1. It shall be possible for the operator to override automatic analog and digital output commands.
2. Where the BAS software normally originates these outputs, the provision shall exist for the operator to terminate automatic BAS control of any particular output and to originate a manual analog or digital output command.
3. The provision shall exist for the operator to return analog or digital output command functions to automatic BAS software control.

G. Password Protection

1. Provide security system that prevents unauthorized use unless operator is logged on.

H. Trend Data

1. System shall periodically gather historically recorded selected samples of object data stored in the field equipment (global controllers, field controllers) and archive the information on the operator's workstation (server) hard disk.

    a. Archived files shall be appended with new sample data, allowing samples to be accumulated over 3 years.
    b. Systems that write over archived data shall not be allowed, unless limited file size is specified.
    c. Samples may be viewed at the operator's terminal in a trend log.
    d. Logged data shall be stored in spreadsheet format.
    e. Operator shall be able to scroll through all trend log data.

2. Software shall be included that is capable of graphing the trend logged object data. Software shall be capable of creating two-axis (x,y) graphs that display up to six object types at the same time in different colours and these Graphs shall show object type value relative to time.
3. Operator shall be able to change trend log setup information such as time intervals and objects logged

I. Graphics

1. The operator's workstation shall display all data associated with the project.

    a. Operator's workstation shall display all data using 3-D graphic representations of all mechanical equipment.

2. System shall be capable of displaying graphic file, text, and dynamic object data together on each display.

    a. Information shall be labelled with descriptors and shall be shown with the appropriate engineering units.
    b. All information on any display shall be dynamically updated without any action by the user.
    c. Terminal shall allow user to change all field-resident BAS functions associated with the project, such as setpoints, weekly schedules, exception schedules, etc. from any screen no matter if that screen shows all text or a complete graphic display.

3. Animated graphic objects shall be displayed as a sequence of multiple bitmaps to simulate motion.
4. Analog objects may also be assigned to an area of a system graphic, where the colour of the defined area would change based on the analog objects value.

    a. For example, an area of a floor-plan graphic served by a single control zone would change colour with respect to the temperature of the zone or its deviation from setpoint.

5. Separate Displays shall be supplied, specific to the project, to form the following overall presentation style.
6. All Displays will be linked in a logical fashion using hyperlink style (single left mouse click on text/display object/dynamic to load linked display if programmed)
7. Entire system shall operate without dependency on the operator's terminal. Provide graphic generation software at each workstation.

J. Alarms

1. Operator's terminal shall provide audible, visual, electronic and printed means of alarm indication.
2. Any alarm may be handled based on its individual or assigned class actions.

    a. Displayed on the Alarm console.

        1) The system shall be provided with a dedicated alarm window or console.
        2) This window will notify the operator of an alarm condition, and allow the operator to view details of the alarm and acknowledge the alarm.

b. Alarm reports shall be viewable via the BAS system and available for delivery by electronic mail (e-mail) or printing.

3. System shall provide log of alarm messages. Alarm log shall be archived to the hard disk of the system operator's terminal.

a. Each entry shall include a description of the event-initiating object generating the alarm, time and date of alarm occurrence, time and date of object state return to normal, and time and date of alarm acknowledgement.

K. Scheduling

1. Operator's terminal display of weekly schedules shall show all information in easy-to-read 7-day (weekly) format for each schedule.
2. Exception schedules (non-normal schedules, such as holidays or special events) shall display all dates that are an exception to the weekly schedules.
3. At the operator's terminal, the system user shall be able to change all information for a given weekly or exception schedule if logged on with the appropriate security access.

L. Archiving

1. Store back-up copies of all controller databases in at least one OWS and the server.
2. Provide continuous supervision of integrity of all controller databases.
3. Data base back up and downloading to occur over LAN without operator intervention.
4. Operator to be able to manually download entire controller database or parts thereof.

M. Reports

1. Provide a report facility to generate and format for display, printing, or permanent storage, as selected by the operator, the reports as specified in this section.
2. Provide the software to automatically generate any report specified; the user will be able to specify the type of report, start time and date, interval between reports (hourly, daily, weekly, monthly) and output device.
3. As a minimum, the following reports shall be configured on the system:

a. Dynamic Reports: To allow operator to request a display of the dynamic value for the user specified points which shall indicate the status at the time the request was entered and updated at an operator modifiable scan frequency.
b. Summary Report: To permit the display or printing of the dynamic values for the user specified points.
c. Trend Reports: To permit the trending of points selected by the operator, including as a minimum digital input and output, analog input and output, set points, and calculated values.
d. Historical Data Collection: Provision shall be made to ensure historical data is not lost.

e. Alarm Summary: Provide a summary of all points in alarm and include as a minimum; point acronym, point description, current value, alarm type, limit exceeded, and time and date of occurrence.
f. Disable Point Summary: Provide a summary of all points in the disabled state and include as a minimum point acronym and point description.
g. Run Time Summary: Provide a summary of the accumulated running time of selected pieces of equipment with point acronym and description, run time to date, alarm limit setting. The run time shall continue to accumulate until reset individually by means of suitable operator selection.
h. Schedule Summary: Provide a summary of all schedules and indicate as a minimum, which days are holidays and, for each section, the day of the week, the schedule times and associated values; for digital schedules value will be on or off; for analog schedules value will be an analog value.
i. User Record Summary: Provide a summary of all user records to include as a minimum; user name, password, initials, command access level and point groups assigned.

2.6 BAS CONTROLLERS

A. All controllers on the job shall have the following minimum requirements:

1. IP Communication (BACnet/IP)

a. BACnet/IP communication protocol shall be used for all BAS manufacturer provided controllers (including terminal devices such as VAVs, FCUs, etc.)
b. Support for IPv4 addressing
c. DHCP support and Auto DNS
d. Baud rate of not less than 100 Mbps
e. 2 - RJ45 ports each capable of supporting 10/100 Base-T.

1) Supporting controller daisy chaining on the Ethernet network via integral switch functionality.
2) Integrated fail-safe should allow for communication when the controller is powered down.

f. All controllers shall be able to communicate peer-to-peer without the need for a Network Control Unit (such as JACE, NAE, etc.) and shall be capable of assuming all responsibilities typically assumed by a Network Control Unit.

1) Any controller on the Ethernet Data Link/Physical layer shall be able to act as a Master to allow for the exchange and sharing of data variables and messages with any other controller connected on the same communication cabling. Slave controllers are not acceptable.
2) The resulting network will be a 'Flat' topology with all devices (controllers, workstations, …) connecting at the same physical network level

2. Memory and Processing

    a. 512MB of RAM and 4GB of non-volatile flash memory.
    b. 32-bit microprocessor operating at a minimum of 600 MHz

3. Each individual controller shall have an embedded web-based HTML5 visual interface with the following functionality without reliance on any other controller for access:

    a. Typical and custom control processes
    b. Scheduling
    c. Energy management applications
    d. Alarm management applications
    e. Historical/trend data for points specified
    f. Maintenance support applications
    g. Graphical interface

4. Shall be capable of monitoring/controlling the following types of inputs/outputs:

    a. Digital inputs from dry contact closure, pulse accumulators, voltage sensing.
    b. Analog inputs of 4-20 mA, 0-10 Vdc, thermistor and RTD in the range 0 to 350,000 ohm.
    c. Digital outputs including Form C relay outputs and Triac outputs
    d. Analog outputs of 4-20 mA and 0-10 Vdc.

5. A minimum of 10% spare capacity shall be provided for each point type for future point connection.
6. Any software required for programming shall be unlicensed and openly available
7. Auto commissioning features shall be available for VAVs and FCUs to schedule automatic testing and record values (air flows, pressures, temperatures, etc.) for different operating modes. The auto commissioning feature shall be able to email reports and run commissioning on a specified schedule.
8. Power and Environmental Requirements:

    a. 24 VAC with local transformer power
    b. The controllers shall also function normally under ambient conditions of 32 ˚F [0 ˚C] to 122 ˚F [50 ˚C] and 0% to 90% RH (non-condensing).
    c. Provide each controller with a suitable cover or enclosure to protect the intelligence board assembly.

9. Code Compliance:

    a. “FIPS 140-2 Level 1 Compliant” cryptographic module
    b. BACnet Testing Laboratory (BTL listed) using Device Profile BACnet Building Controller (B-BC) with outlined enhanced features.
    c. UL916 Energy management equipment
    d. FCC rules part 15, subpart B, class B
    e. UL94-V0 flammability rating

2.7 CONTROL PANELS

A. Indoor control cabinets located in offices or dry/dust free environments shall be fully enclosed NEMA 1 Type construction with hinged door, and removable sub-panels or electrical sub-assemblies.

B. All outdoor control cabinets and control cabinets located in mechanical/electrical rooms shall be NEMA 4.

C. Control panels containing more than 4 controllers shall be provided with a terminal strip for field wiring. All control wiring inside the panel shall be between a terminal strip and controller inputs/outputs. All field control wiring shall be terminated at the terminal strip. Field control wiring inputs/outputs shall not be run directly to inputs/outputs of controller.

2.8 AUTOMATIC CONTROL DAMPERS

A. Provision of dampers shall be provided by another section of this specification (the BAS contractor shall only be responsible for providing actuators/end switches for control dampers).

2.9 VARIABLE FREQUENCY DRIVES (VFDS)

A. Provision of variable frequency drives shall be provided by another section of this specification (the BAS contractor shall only be responsible for providing associated low voltage wiring and controls programming for the VFDs).

2.10 AUXILIARY CONTROL DEVICES, SENSORS, AND TRANSMITTERS

A. Air Flow Measuring Station

1. Features:
    a. Duct Air Flow Measuring Station: Highly accurate thermal dispersion airflow and temperature measuring probe(s) designed for duct sizes 8 – 120”. Multiple velocity and temperature points on one or more probes installed in the duct or plenum are averaged to arrive at air measurements. Capable of displaying the flow and temperature at each sensing point. Moisture resistant flex sensors protected from the elements with a thin conformal coating. Includes airfoil-Shaped aluminum probes with LCD screen digital display controller and the correct number of ancillary probes based on the size of the duct.
    b. Fan Inlet Air Flow Measuring Station: Shall be capable of monitoring and reporting the airflow and temperature at each fan inlet location scheduled through two or four sensing circuits and a control transmitter that communicates with the building automation system (BAS). Includes aerodynamically shaped, surface mount fan inlet sensors and LCD screen control transmitter.

2. Operating Temperature: -20° F to 120° F (-29° C to 49° C)
3. Protection / Rating: U.L. 94 flame rated, high impact ABS
4. Input/Output:

    a. Velocity Output : 4-20mA or 2-10 VDC with 500 ohm resistor
    b. Temperature Output : 4-20mA or 2-10 VDC with 500 ohm resistor
    c. BACnet MS/TP (for duct air flow measurement stations)

5. Power: 24 VAC (+/- 15%); 15 VA
6. Accuracy: ±3% of reading with ±0.25% repeatability and ±0.10° F (0.06˚ C)
7. Range: 0-5000 FPM for ducts and 0-10,000 FPM for fan-inlet
8. Agency Approvals: All components are U.L. Listed and compliant with RoHS directive 2002/95/EC, AMCA, and ISO 9001. In addition duct airflow measuring stations are compliant with Part 15 of the FCC rules and BTL.
9. Approved Manufacturer / Model:

    a. Duct Air Flow Measuring Station: Ebtron
    b. Fan Inlet Air Flow Measuring Station: Ebtron
    c. Other Approved Manufacturers: Upon Request

B. Air Pressure Sensor – Duct / Space / Air Differential (Filter/Coil Monitoring)

1. Features: Provide air pressure sensors as indicated within the sequences of operations and/or controls diagrams suitable for application. Select range as detailed below based on application type. Sensor shall include over pressure input protection of a minimum two times rated input or 20 psi (whichever is greater).

    a. Duct Mounted Static Pressure Sensor: Select range such that it covers from zero duct static pressure relative to the exterior of the duct up to a static pressure of between 20% and 50% in excess of the maximum static pressure that could be encountered in the duct relative to the duct exterior. Typically, for low pressure commercial duct consider using a range of 0 to 2” wc. (0 to 500Pa), for medium pressure duct use a range of 0 to 6” wc. (0 to 1500Pa) and for high-pressure duct use a range of 0 to 10” wc (0 to 2500 Pa).
    b. Space Static Pressure Sensor: Input range of -0.2” to + 0.2” wc (–50 to +50 Pa).
    c. Air Differential Pressure Sensor: Select range as required, taking into consideration pressure drop across filter or coil. Typically 0-2” wc (0 to 500 Pa) range for low-pressure commercial duct.

2. Operating Temperature: 32° F to 140° F (0° C to 60° C)
3. Protection / Rating: Polycarbonate (UL 94 V-0 Approved)
4. Input/Output: 4-20 mA, 0-5V, or 0-10V output proportional to pressure sensed
5. Power: 24VAC or 24VDC
6. Accuracy: ± 1% of full scale
7. Range: selectable pressure range 0- 20” w.c.
8. Agency Approvals: UL listed
9. Approved Manufacturer / Model:

a. Setra
b. Distech Controls

C. Air Pressure Switch

1. Features: Provide air pressure switches as indicated within the sequences of operations and/or controls diagrams suitable for application. Select range as required, taking into consideration pressure drop across filter or coil. Typically 0.2-2" wc (0 to 500pa) range for low-pressure commercial duct. Sensor shall include over pressure input protection of a minimum two times rated input or 20 psi (whichever is greater).
2. Operating Temperature: -4° F to 140° F (-20° C to 60° C)
3. Protection / Rating: IP54 (NEMA 13) polycarbonate
4. Input/Output: SPDT switch digital input from dry contact closure
5. Power: N/A
6. Accuracy: ± 1% of full scale
7. Range: selectable pressure range 0- 12" w.c.
8. Agency Approvals: N/A
9. Approved Manufacturer / Model:

a. Setra
b. Distech Controls

D. Carbon Dioxide (CO2) Sensor

1. Features: Provide a space or duct carbon dioxide gas detection sensor as indicated within the sequences of operations and/or control diagrams. Optional features include BACnet communication, LCD display, setpoint adjustment, or integral temperature/humidity sensors (optional features shall be provided if necessary based on project scope).
2. Operating Temperature: 32° F to 122° F (0° C to 50° C)
3. Input/Output: 4-20 mA, 0-10 or 0-5 Vdc output compatible with BMS proportional to carbon dioxide concentration
4. Power: 24VAC or 24VDC
5. Accuracy: ± 3% of full scale
6. Range: 0 to 2000 ppm

E. Duct / Immersion / Outdoor Temperature Sensors

1. Features: Provide Thermistor or RTD temperature sensors as indicated within the sequences of operations and/or control diagrams. Install sensor as detailed below.

a. Outside Air Temperature Sensor: Provide outside air temperature sensors with Aluminum LB with PVC sun and windscreen weatherproof enclosure with conduit entrance. Install in an area where exhaust or roof heat will not affect readings.

b. Duct Mounted Temperature Sensor (ducts less than $10ft^2$ [$1m^2$] in cross-sectional area): Provide duct mounted, single point probe temperature sensor with 0.25" [6.35 mm] stainless steel probe of length between one-third and two-thirds of the duct width.
c. Duct Mounted Averaging Temperature Sensor (ducts greater than $10ft^2$ [$1m^2$] in cross-sectional area): Provide duct mounted, averaging, temperature sensor with probe length of 12 feet [3.66m] minimum or 1ft per ft^2 (3.25m per m^2) of duct cross-sectional area, whichever is greater. Copper sheathed or plenum rated flexible construction.
d. Liquid Temperature Sensor: Provide immersion thermowell mounted temperature sensors for liquid temperature sensing. Rigid 0.25" [6.35mm] stainless steel probe of length, which is, at minimum, 20% of the pipe width. Provide Brass or Stainless steel thermowell (316 or 304) with thermal grease to aid temperature sensing.
e. Strap-on Temperature Sensor: Provide strap-on mounted temperature sensors where thermo well mounted sensors cannot be mounted.

2. Operating Temperature: -58° F to 212° F (-50° C to 100° C) dependent upon application
3. Input/Output: thermistor or RTD compatible with BAS
4. Power: dependent upon sensor type – provide as per manufacturers recommendations
5. Accuracy: ± 1.0°F (0.5 °C)
6. Range: -58° F to 212° F (-50° C to 100° C) dependent upon application

F. Duct / Outdoor Humidity Sensors

1. Features: Provide duct / outdoor humidity sensors as indicated within the sequences of operations and/or control diagrams. Outside air humidity sensors shall have ABS hinged weatherproof housing with conduit entrance and shall be installed in an area where exhaust or roof heat will not affect readings. Duct humidity sensors shall have ABS housing with conduit entrance. In addition all humidity sensors shall have 9" probe length, 60 micron HDPE filter, reverse voltage protection, and be output limited.
2. Operating Temperature: 32° F to 122° F (0° C to 50° C)
3. Input/Output: 4-20 mA two wires, 0-10 Vdc and/or 0-5 Vdc output proportional to relative humidity range of 0% to 100%
4. Power: 24VAC or 24VDC
5. Accuracy: ± 3% of full scale
6. Range: 5-95%RH

G. Space Temperature Sensors

1. Features: Provide space temperature sensors as indicated within the sequences of operations and/or control diagrams. Shall consist of an element within a ventilated cover. Space sensors located in mechanical rooms and large public spaces shall have no ability to adjust temperature setpoint (Set Point Adjustment). Space sensors located in other spaces shall include options (setpoint adjustment, network jack, fan speed selection, override switch, and/or digital display) in accordance with the drawings and sequences of operations.
2. Operating Temperature: 32° F to 122° F (0° C to 50° C)
3. Input/Output: dependent upon sensor type – provide as per manufacturers recommendations
4. Power: dependent upon sensor type – provide as per manufacturers recommendations
5. Accuracy: ± 1.0°F (0.5 °C)
6. Range: 32° F to 122° F (0° C to 50° C)

H. Space Humidity Sensors

1. Features: Provide space humidity sensors as indicated within the sequences of operations and/or control diagrams. Sensor shall have reverse voltage protection and be output limited.
2. Operating Temperature: 32° F to 122° F (0° C to 50° C)
3. Input/Output: dependent upon sensor type – provide as per manufacturers recommendations
4. Power: dependent upon sensor type – provide as per manufacturers recommendations
5. Accuracy: ± 3% of full scale
6. Range: 5-95%RH

I. Combination Relative Humidity And Temperature Sensors

1. Where there is a requirement for the monitoring of both relative humidity and temperature at the same location, the BMS Contractor shall provide a combination relative humidity sensor and temperature sensor. The individual sensors must each meet the specifications details above.

J. Low Limit Thermostats

1. Features: Provide low limit thermostats as indicated within the sequences of operations and/or control diagrams. Safety low limit thermostats shall be vapor pressure type with an element 20 ft [6.1 m] minimum length. Element shall respond to the lowest temperature sensed by any one foot section. Low limit shall be manual reset only.
2. Operating Temperature: -60° F to 160° F (-51° C to 71° C)
3. Input/Output: 2 SPDT switches, digital inputs from dry contact closure
4. Power: N/A
5. Accuracy: ± 1.0°F (0.5 °C)
6. Range: adjustable range 34° F to 70° F (1° C to 21° C)

K. Current Relay/Switch

1. Features: Provide current sensing relays as indicated within the sequences of operations and/or control diagrams. The current sensing relay shall be rated for the applicable load, shall have input and output isolation via current transformer, and the output relay shall have an accessible trip adjustment over its complete operating range. Whenever the status of a single speed motor is monitored it shall be done via a current sensing relay. The BAS contractor shall provide current sensing relays at the MCC starters (or at the local starter for motors without a MCC starter).
2. Operating Temperature: 5° F to 140° F (-15° C to 60° C)
3. Input/Output:digital input from dry contact closure
4. Power: Current relay shall be self-powered with no insertion loss
5. Accuracy: ± 2% of full scale

L. Current Sensor

1. Features: Provide current sensors as indicated within the sequences of operations and/or control diagrams. The current sensors shall be rated for the applicable load and shall be reverse polarity protected and output limited.
2. Operating Temperature: -20° F to 120° F (-29° C to 49° C)
3. Input/Output:4-20 mA, 0-10 or 0-5 Vdc output proportional to current draw
4. Power: Current sensor shall be self-powered with no insertion loss
5. Accuracy: ± 1% of full scale

M. Damper End Switch

1. Features: Provide damper end switches as indicated within the sequences of operations and/or control diagrams. End switches shall prove a damper has reached the position specified. End switches shall be integral to damper actuator unless otherwise specified.
2. Input/Output: SPDT switch, digital input from dry contact closure

N. Wireless Space Sensors / Switches

1. Provide for wireless sensing of the designated sensors and or switches as shown on the Point List Chart.
2. Wireless sensors shall be able to operate at a designated frequency of 315 MHz or 868 MHz, to be determined local regulation.
3. Controllers shall be field upgradable to receive wireless communications from switches and sensors (become wireless-enabled) by connecting a plug-in wireless transceiver.
4. Wireless temperature sensor/switch – the wireless sensing technology provided shall transmit a RF message indicating the value or position of the sensor. The transmission range shall be a minimum of 305 ft. [100 m] unobstructed line of sight and 100 ft. [30 m] in buildings.

5. Each sensor or switch shall be provided with energy harvesting technology such that no battery will be required to maintain normal operations. If using a Solar Cell for energy harvesting, normal operation parameters shall be defined as a minimum of 4 hours of 200lx of light to produce an operation of the sensor for a period of no less than 20 hours in total darkness. In sufficient light levels are not available, provide a battery backup.
6. All sensor locations shall be verified to be in compliance with manufacturer's installation requirements and be tested for acceptable signal strength.

PART 3 - EXECUTION

3.1 EXAMINATION

A. The contractor shall inspect the site to verify that equipment may be installed as shown. Any discrepancies, conflicts, or omissions shall be reported to the engineer for resolution before rough-in work is started.

3.2 INSTALLATION

A. Install controls so that adjustments and calibrations can be readily made. Controls are to be installed by the control equipment manufacturer.

B. Unless otherwise noted, install wall mounted thermostats and humidistat 60" above the floor measured to the center line of the instrument, or as otherwise directed by the Architect.

C. Install averaging elements in ducts and plenums in horizontal crossing or zigzag pattern.

D. Install damper motors on outside of duct in protected areas, not in locations exposed to outdoor temperatures.

E. Furnish hydronic instrument wells, valves, and other accessories to the mechanical contractor for installation.

F. Furnish automatic dampers to mechanical contractor for installation.

3.3 ELECTRICAL WIRING AND CONNECTION INSTALLATION

A. BAS manufacturer shall be responsible for all BAS and Temperature Control wiring for a complete and operable system. All wiring shall be provided in accordance with all local and national codes and as described below:

1. All wiring associated with the installation will be the responsibility of this Contractor, unless otherwise directed herein.. The term "wiring" is construed to include furnishing of wire, conduit, miscellaneous material and labor as required, to install a total working system.
2. All low voltage (30V and below) wiring above accessible, concealed and dry locations may be run in plenum-rated cable without conduit (must be independently supported every 5 feet with bridle rings or other method approved by the consulting engineer). All low voltage wiring in mechanical spaces or electric/telephone closets must be run in electric metallic tubing (EMT), 3/4-inch or greater. All indoor wiring 30vac or greater shall be run in EMT conduit. All outdoor wiring shall be run in rigid metallic conduit. Seal tight may be used within 6 feet of the final connection to the device or panel.
3. This contractor shall be responsible for power that is not shown on the electrical drawings, to controls furnished by this contractor.
4. Wiring for controls furnished by others:

    a. Provide control wiring for HVAC controls furnished by others. Wiring may include, but not limited to, the following items:

        1) Thermostats
        2) Interlock wiring between split system AC units and their associated condensing unit
        3) Boiler control devices shipped loose

3.4 START-UP AND COMMISSIONING

A. When installation of the system is complete, calibrate equipment and verify transmission media before system is placed on-line. All testing, calibrating, adjusting, and final field tests shall be completed by the BAS contractor.

B. Perform a two-phase commissioning procedure consisting of field I/O calibration and overall system sequence of operation commissioning. Document that each point was verified and operating correctly on commissioning sheets, which shall be submitted prior to acceptance testing. The commissioning must be coordinated with the owner and construction manager to ensure systems are available when needed.

3.5 PROJECT RECORD DOCUMENTS

A. Operating manual to serve as training and reference manual for all aspects of day-to-day operation of the system. As a minimum include the following:

1. Complete as-built installation drawings for each building system.
2. Parts list with manufacturer's catalog numbers and ordering information.
3. Manufacturer's catalog literature for each piece of equipment.
4. Sequence of operation for automatic and manual operating modes for all building systems.

3.6 TRAINING

A. During System commissioning and at such time as acceptable performance of the Building Automation System hardware and software has been established, the BAS contractor shall provide on-site operator instruction to the owner's operating personnel. Operator instruction during normal working hours shall be performed by a competent building automation contractor representative familiar with the Building Automation System's software, hardware and accessories.

B. At a time mutually agreed upon, during System commissioning as stated above, the BAS contractor shall give 8-hours of onsite training on the operation of all BAS equipment. Describe its intended use with respect to the programmed functions specified. Operator orientation of the automation system shall include, but not be limited to:

1. Explanation of drawings and operator's maintenance manuals.
2. Walk-through of the job to locate all control components.
3. DDC Controller operation/sequence.
4. Operator control functions including scheduling, alarming, and trending.
5. Explanation of adjustment, calibration and replacement procedures.

END OF SECTION 23.0923

SECTION 23.0993 - HVAC CONTROL SEQUENCE

PART 1 - GENERAL

1.1 DESCRIPTION OF THE WORK:

A. Control Sequence is hereby defined to mean the manner in which, and methods by which, the automatic temperature controls function. The requirements for each type of operation are specified in this section.

B. The operation equipment, devices and system components required for the automatic temperature control system are specified in Section 230923 of these specifications.

1.2 SUBMITTALS:

A. Refer to Submittal Section in Section 230923 for additional information.

B. General: Submittals on temperature control work are required for shop drawings, manufacturer's data, operating instructions, maintenance manuals, wiring diagrams and the system guarantee and product warranties.

1.3 RELATED SECTIONS:

A. Section 230923 – Direct Digital Control (DDC).

B. Refer to the requirements of Division 1 and coordinate the division of responsibility of the work with Section 01 1000 – Summary of the Project.

PART 2 – CONTROLS

2.1 HIGH EFFICIENCY GAS-FIRED BOILER HEATING PLANT:

A. General: The boilers shall be fired in sequence by the boiler control system provided by the boiler manufacturer. The BAS shall integrate to the boiler control system so that all available points are displayed on the BAS.

B. The hot water plant shall be enabled by the BAS and shall run continuously.

C. When the heating plant is enabled, the lead pump shall energize and operate continuously. The BAS shall modulate the speed of the lead pump to maintain the differential pressure setpoint as determined during balancing. Differential pressure shall be monitored at (1) location in the building.

D. The boilers shall modulate to maintain a supply water temperature of 140°F (adj.) when the outside air temperature is below 30°F (adj.) and a temperature of 110°F (adj.) when the outside air temperature is above 60°F (adj.). If outside air temperature is between 30°F (adj.) and 60°F (adj.) the supply water temperature shall be ramped linearly between 140°F (adj.) and 110°F (adj.).

E. Whenever a boiler module fires, its associated boiler circulator pump shall energize.

F. In addition to the information available from the boiler control system. The hot water system supply water temperature, return water temperature, and pump speeds shall be displayed on the BAS.

2.2 CARBON MONOXIDE SENSOR:

A. Provide a carbon monoxide sensor in the boiler room. Sensor shall generate a local audible and visual alarm. Generate an alarm on the BAS should carbon monoxide be sensed.

2.3 NATURAL GAS SENSOR:

A. Provide a natural gas sensor in the boiler room. Sensor shall generate a local audible and visual alarm. Generate an alarm on the BAS should natural gas be sensed. Shut down all gas fired equipment if a leak is detected.

2.4 BURNER KILL SWITCHES:

A. Provide one (2) burner kill switches. When switch is switched to the off position the boilers shall be de-energized and an alarm shall be generated on the BAS.

2.5 LEAD/LAG SELECTION OF HOT WATER PUMP PAIRS:

A. Upon lead pump failure as sensed by the sensor for pump status, and after an adjustable time delay, the lag pump shall be energized and the lead pump shall be locked out through the VFD. An alarm message shall be generated on the BAS. Pump commands and lead pump selection shall be available throughout the network. Lead/lag selection shall be alternated by the Building Automation System on a weekly basis.

2.6 OCCUPIED-UNOCCUPIED CYCLES:

A. A direct digital controller shall provide the automatic signals for occupied or unoccupied control. For each zone listed below, provide a software graphical user interface that allows authorized maintenance personnel to select or override the automatic signals for occupied or unoccupied control on the Building Automation System (BAS) user interface. An alarm shall be generated on the BAS when the Zone is selected as "Override". Provide a separate zone for each energy recovery unit and rooftop air handling unit. Zone names to be coordinated with the Owner and Engineer.

B. Whenever any zone is indexed to occupied cycle, the unit or units shall run continuously and shall be controlled as specified hereinafter. In addition, any exhaust fans within the zone shall be indexed to occupied cycle. When indexed to the unoccupied cycle, the room sensors shall be reset to night temperature and shall cycle their respective units to maintain the setback or setup setpoints. During this cycle all associated exhaust fans shall be stopped and all associated outdoor and relief dampers shall be closed.

C. The automatic occupied - unoccupied signals shall incorporate an adaptive optimum start algorithm that shall utilize both the zone temperature and the outside air temperature to start the mechanical equipment to reach occupied temperature targets just in time for occupancy.

2.7 WARM-UP OR COOL-DOWN CYCLE:

A. For all air handlers, provide the necessary devices required to keep the outside air dampers closed during the warm-up and cool-down cycles prior to occupancy as determined by the optimum start algorithm.

2.8 PACKAGED MULTIPLE ZONE ENERGY RECOVERY UNIT

A. Units are equipped with supply air fans, exhaust fans, energy recovery w/ bypass dampers, outside air/return air dampers, DX cooling, hot gas reheat, natural gas furnace, and airflow monitoring.

B. Units shall be equipped with a factory provided controller with built-in sequences of operation. The controller shall be capable of the following modes of operation:

1. Occupied/Unoccupied Mode
2. Warm-Up/Cool-Down Mode
3. Cooling Mode
4. Heating Mode
5. Economizer Mode via Comparative Enthalpy
6. Dehumidification

C. The Building Automation System (BAS) shall interface with the controller so that all available points (including alarms) are on the BAS. The following points shall be displayed on the BAS: outside airflow, return air temperature/humidity, energy recovery bypass damper positions, outside/return damper positions, filter status, mixed air temperature/humidity, compressor status, hot gas reheat status, gas heating status and stage, exhaust fan status and speed, supply fan status and speed, and supply air temperature/humidity.

D. The BAS shall command the unit to occupied or unoccupied modes and shall control the discharge supply air temperature. The BAS shall monitor and reset the unit discharge supply air temperature to satisfy the room with the largest cooling demand.

E. Discharge Air Temperature Reset Control:

1. At a frequency of once every 10 minutes, the BAS shall monitor the outdoor dry-bulb temperature, as well as the zone temperature and damper position of all VAV terminal units.
2. The BAS shall calculate a new SAT set-point based on current outdoor air (OA) temperature, and send this newly-calculated SAT setpoint to the AHU controller.
3. When the OA temperature is warmer than 65°F (adj), the SAT set-point shall be 55°F (adj).
4. When the OA temperature is colder than 55°F (adj), the SAT set-point shall be 65°F (adj).
5. When the OA temperature is between 55°F (adj) and 65°F (adj), the SAT set-point shall be reset proportionally between 55°F (adj) and 65°F (adj).
6. If at least two (adj) zones have both 1) a VAV damper that is more than 75% open, and 2) a current zone temperature that is higher than the current cooling set-point, then the SAT set-point shall return to 55°F (adj).
7. If the outdoor dew point is higher than 60°F (adj), this SAT Reset sequence shall be suspended and the SAT set-point shall be reset to 55°F (adj) until outdoor dew point drops below 57°F (adj).
8. If return humidity rises above 50% (adj.), the unit will ignore any discharge air temperature reset sequence and discharge a constant 55°F (adj.).
9. Once return air humidity drops 5% below set-point the unit can follow the discharge air temperature reset sequences that are outlined.

F. Safeties: For units with capacity greater than or equal to 2000 CFM, duct smoke detector(s) shall be provided. Power wiring to duct detector(s) shall be provided by the Electrical Contractor and control shutdown wiring shall be provided by this contractor. Upon sensing the products of combustion, the fan shall be de-energized, the outside air damper shall be closed, the heating and cooling shall be off and an alarm message shall be generated on the Building Automation System.

2.9 PACKAGED MULTIPLE ZONE VAV ROOFTOP UNIT:

A. Units are equipped with supply air fans, outside air/return air dampers, DX cooling, hot gas reheat, natural gas furnace, and airflow monitoring.

B. Units shall be equipped with a factory provided controller with built-in sequences of operation. The controller shall be capable of the following modes of operation:

1. Occupied/Unoccupied Mode
2. Warm-Up/Cool-Down Mode
3. Cooling Mode
4. Heating Mode
5. Economizer Mode via Comparative Enthalpy
6. Dehumidification

C. The Building Automation System (BAS) shall interface with the controller so that all available points (including alarms) are on the BAS. The following points shall be displayed on the BAS: outside airflow, return air temperature/humidity, outside/return damper positions, filter status, mixed air temperature/humidity, compressor status, hot gas reheat status, gas heating status and stage, supply fan status and speed, and supply air temperature/humidity.

D. The BAS shall command the unit to occupied or unoccupied modes and shall control the discharge supply air temperature. The BAS shall monitor and reset the unit discharge supply air temperature to satisfy the room with the largest cooling demand.

E. Discharge Air Temperature Reset Control:

1. At a frequency of once every 10 minutes, the BAS shall monitor the outdoor dry-bulb temperature, as well as the zone temperature and damper position of all VAV terminal units.
2. The BAS shall calculate a new SAT set-point based on current outdoor air (OA) temperature, and send this newly-calculated SAT setpoint to the AHU controller.
3. When the OA temperature is warmer than 65°F (adj), the SAT set-point shall be 55°F (adj).
4. When the OA temperature is colder than 55°F (adj), the SAT set-point shall be 65°F (adj).
5. When the OA temperature is between 55°F (adj) and 65°F (adj), the SAT set-point shall be reset proportionally between 55°F (adj) and 65°F (adj).
6. If at least two (adj) zones have both 1) a VAV damper that is more than 75% open, and 2) a current zone temperature that is higher than the current cooling set-point, then the SAT set-point shall return to 55°F (adj).
7. If the outdoor dew point is higher than 60°F (adj), this SAT Reset sequence shall be suspended and the SAT set-point shall be reset to 55°F (adj) until outdoor dew point drops below 57°F (adj).
8. If return humidity rises above 50% (adj.), the unit will ignore any discharge air temperature reset sequence and discharge a constant 55°F (adj.).
9. Once return air humidity drops 5% below set-point the unit can follow the discharge air temperature reset sequences that are outlined.

F. Safeties: For units with capacity greater than or equal to 2000 CFM, duct smoke detector(s) shall be provided. Power wiring to duct detector(s) shall be provided by the Electrical Contractor and control shutdown wiring shall be provided by this contractor. Upon sensing the products of combustion, the fan shall be de-energized, the outside air damper shall be closed, the heating and cooling shall be off and an alarm message shall be generated on the Building Automation System.

2.10 PACKAGED SINGLE ZONE ROOFTOP UNIT

A. Units are equipped with supply air fans, outside air/return air dampers, DX cooling, hot gas reheat, natural gas furnace, and airflow monitoring.

B. Units shall be equipped with a factory provided controller with built-in sequences of operation. The controller shall be capable of the following modes of operation:

1. Occupied/Unoccupied Mode
2. Warm-Up/Cool-Down Mode
3. Cooling Mode
4. Heating Mode
5. Economizer Mode via Comparative Enthalpy
6. Dehumidification

C. The Building Automation System (BAS) shall interface with the controller so that all available points (including alarms) are on the BAS. The following points shall be displayed on the BAS: outside airflow, return air temperature/humidity, outside/return damper positions, filter status, mixed air temperature/humidity, compressor status, hot gas reheat status, gas heating status and stage, supply fan status and speed, and supply air temperature/humidity.

D. The BAS shall command the unit to occupied or unoccupied modes.

E. Safeties: For units with capacity greater than or equal to 2000 CFM, duct smoke detector(s) shall be provided. Power wiring to duct detector(s) shall be provided by the Electrical Contractor and control shutdown wiring shall be provided by this contractor. Upon sensing the products of combustion, the fan shall be de-energized, the outside air damper shall be closed, the heating and cooling shall be off and an alarm message shall be generated on the Building Automation System.

2.11 SHUTOFF VAV BOX CONTROL (VAV):

A. The VAV box is to be controlled independent of system pressure fluctuations by an application specific DDC controller using electric actuation. The space served by the VAV box is controlled in Occupied and Unoccupied as indexed by the BAS according to its respective zone signal.

B. During the Occupied cycle, the VAV box primary air damper is controlled within user defined occupied maximum and minimum supply air volume settings. The controller monitors the room temperature sensor and air velocity sensor and modulates the primary supply air damper in sequence with the reheat valve to maintain the room temperature at setpoint. While the reheat coil is being utilized for heating, the box primary supply damper shall remain at the minimum design CFM. Where a terminal heating unit (radiation, cabinet heaters, etc.) occurs in the same space, the terminal heating unit shall serve as the first stage of heat and the VAV box shall discharge room neutral air at the minimum supply air volume setpoint.

C. During the unoccupied cycle the VAV box primary air damper shall be allowed to be fully closed.

D. Room Sensors:

1. All sensor inputs and actuator outputs from the controller shall be available throughout the Building Automation System.

2.12 EXHAUST FAN:

A. Those exhaust fans noted "ATC" on the Exhaust Fan schedule shall run during occupied cycle and remain off during unoccupied cycle of their respective zone. The exhaust fans shall be controlled via spare binary outputs of local DDC controllers such that they can be overridden on/off through the Building Automation System.

B. Those exhaust fans noted "T-STAT" on the schedule shall be controlled based upon a space temperature sensor via the DDC system. Upon a rise in space temperature, the exhaust fan shall run and any associated intake or exhaust dampers shall open (where applicable). On a fall in space temperature, the reverse shall occur.

C. Those exhaust fans noted "CO / NO2" on the schedule shall be controlled based upon a space carbon monoxide and nitrogen dioxide sensors via the DDC system. Upon a rise in acceptable levels, the exhaust fan shall run and any associated intake or exhaust dampers shall open (where applicable). On a fall in CO & NO2 levels, the reverse shall occur.

2.13 CEILING FAN:

A. BAS shall interface with fan controller. Fans shall be indexed to the occupied/ unoccupied modes from the BAS along with its respective zone. In occupied mode the fan shall run continuously at its minimum speed. In unoccupied mode the fan shall remain off.

2.14 CABINET UNIT HEATER AND UNIT HEATER:

A. Provide a space temperature sensor for control of each cabinet unit heater. The sensor shall be controlled through the BAS and be indexed to occupied or unoccupied cycle based upon its respective zone signal. The sensor shall cycle the cabinet heater fan to maintain the day or night temperature setpoint. Any time that the unit fan is energized, the two position hot water control valve shall open.

2.15 CONVECTOR:

A. Provide a space temperature sensor for control of each convector. The sensor shall be indexed to occupied or unoccupied cycle from the BAS based upon its respective zone signal. The sensor shall modulate the heating valve to maintain the day or night temperature setpoint.

2.16 ELECTRIC BASEBOARD RADIATION:

A. Unit shall be controlled through manufacturer integral thermostat.

2.17 DUCTLESS SPLIT SYSTEM AIR CONDITIONING UNIT:

A. Unit shall be controlled through manufacturer supplied remote thermostat. Install and wire the thermostat provided by the unit manufacturer.

B. Provide a space temperature sensor in each space and indicate an alarm on the BAS if abnormal temperatures are sensed.

2.18 INFRARED TUBE HEATER:

A. Each heater shall be controlled through a remote thermostat. Upon a drop in space temperature, below setpoint, the 1st stage of heating shall be energized. On a continued drop is space temperature, after a time delay, the 2nd stage of heating shall be energized. The heater shall be de-energized when the space temperature is about the temperature setpoint.

2.19 EMERGENCY GENERATOR:

A. Interface with the generator system via BACnet gateway supplied by ATC contractor and indicate status and any failure or trouble alarms on the BAS.

B. Interface with the (2) automatic transfer switches (ATS) and indicate position on the BAS.

2.20 DOMESTIC HOT WATER HEATER:

A. Interface with the water heater via BACnet gateway supplied by ATC contractor and indicate storage temperature and any failure or trouble alarms on the BAS.

2.21 DOMESTIC WATER RECIRCULATION PUMP:

A. Domestic water recirculation pumps shall be monitored and controlled by the BAS. Pumps shall be commanded on/off based on the building occupancy schedule. The pump shall energize 2 hours (adj.) before the occupancy start time and de-energize when the building is unoccupied. An alarm shall be generated on the BAS if a pump fails to start.

2.22 ELEVATOR SUMP PIT HIGH WATER LEVEL ALARM:

A. Provide a water level sensor or float switch to monitor the elevator sump pit water levels and indicate an alarm on the BAS upon sensing a high water condition.

2.23 ENERGY MONITORING:

A. Interface with KWH meter within the switchboard via BACnet gateway supplied by ATC contractor. BAS shall indicate instantaneous power consumption and cumulative daily power consumption for a period of 1 year.

2.24 LIGHTING CONTROLS:

A. Interface with the lighting control panel via BACnet IP. BAS shall display status and be able to write/override schedules for interior corridor and exterior lighting zones.

2.25 HEAT TRACE:

A. Provide a current sensing relay on each heat trace circuit to indicate status on the BAS.

2.26 THERMOSTAT GUARDS:

A. Provide stainless steel covers over temperature sensors located in Engine and EMS Bays.

2.27 ALARMING:

A. Any alarm that the Owner defines as critical shall initiate an alarm to the remote Operator Workstation and shall generate an alarm message there. Utilize the Building's Ethernet communications and data system.

PART 3 - EXECUTION

3.1 INSTALLATION:

A. Refer to the 230923 section of these specifications.

3.2 TEST-ADJUST-BALANCE (TAB) COORDINATION AND ASSIST:

A. Include all labor for coordination and assistance to the TAB contractor for final system testing, adjusting and balancing.

END OF SECTION 23.0993

SECTION 23.2113 - HYDRONIC PIPING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Hydronic system requirements.

B. Heating water piping, above grade.

C. Equipment drains and overflows.

D. Pipe hangers and supports.

E. Unions, flanges, mechanical couplings, and dielectric connections.

F. Valves:

1. Gate valves.
2. Ball valves.
3. Butterfly valves.
4. Check valves.

1.2 RELATED REQUIREMENTS

A. Section 07 8400 - Firestopping.

B. Section 08 3100 - Access Doors and Panels.

C. Section 09 9000 - Painting and Coating.

D. Section 23 0516 - Expansion Fittings and Loops for HVAC Piping.

E. Section 23 0553 - Identification for HVAC Piping and Equipment.

F. Section 23 0719 - HVAC Piping Insulation.

G. Section 23 2114 - Hydronic Specialties.

H. Section 23 2500 - HVAC Water Treatment: Pipe cleaning.

1.3 REFERENCE STANDARDS

A. ASME (BPV IX) - Boiler and Pressure Vessel Code, Section IX - Welding and Brazing Qualifications; The American Society of Mechanical Engineers; 2010.

B. ASME B16.3 - Malleable Iron Threaded Fittings: Classes 150 and 300; The American Society of Mechanical Engineers; 2011.

C. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings; The American Society of Mechanical Engineers; 2012 (ANSI B16.18).

D. ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings; 2001 (R2010).

E. ASME B31.5 - Refrigeration Piping and Heat Transfer Components; 2010.

F. ASME B31.9 - Building Services Piping; 2011 (ANSI/ASME B31.9).

G. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2012.

H. ASTM A234/A234M - Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service; 2011a.

I. ASTM A312/A 312M; - Standard specification for Seamless, Welded, and Heavily Cold Worked Austenitic Stainless Steel Pipe 2006.

J. ASTM A536 - Standard Specification for Ductile Iron Castings; 1984 (Reapproved 2009).

K. ASTM B32 - Standard Specification for Solder Metal; 2008.

L. ASTM B88 - Standard Specification for Seamless Copper Water Tube; 2009.

M. ASTM B88M - Standard Specification for Seamless Copper Water Tube (Metric); 2005 (Reapproved 2011).

N. ASTM D1785 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120; 2012.

O. ASTM D2000 - Standard Classification System for Rubber Products in Automotive Applications; 2012.

P. ASTM D2241 - Standard Specification for Poly (Vinyl Chloride) (PVC) Pressure-Rated Pipe (SDR Series); 2009.

Q. ASTM D2466 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40; 2006.

R. ASTM D2467 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 80; 2006.

S. ASTM D2855 - Standard Practice for Making Solvent-Cemented Joints with Poly(Vinyl Chloride) (PVC) Pipe and Fittings; 1996 (Reapproved 2010).

T. ASTM F708 - Standard Practice for Design and Installation of Rigid Pipe Hangers; 1992 (Reapproved 2008).

U. ASTM F1476 - Standard Specification for Performance of Gasketed Mechanical Couplings for Use in Piping Applications; 2007.

V. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2010.

W. AWWA C606 - Grooved and Shouldered Joints; 2011 (ANSI/AWWA C606).

X. MSS SP-58 - Pipe Hangers and Supports - Materials, Design and Manufacture, Selection, Application, and Installation; Manufacturers Standardization Society of the Valve and Fittings Industry, Inc.; 2009.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Welders Certificate: Include welders certification of compliance with ASME (BPV IX).

1. Provide weld test results.

C. Product Data:

1. Include data on pipe materials, pipe fittings, valves, and accessories.
2. Provide manufacturers catalogue information.
3. Indicate valve data and ratings.
4. Show grooved joint couplings, fittings, valves, and specialties on drawings and product submittals, specifically identified with the manufacturer's style or series designation.

D. Manufacturer's Installation Instructions: Indicate hanging and support methods, joining procedures.

E. Project Record Documents: Record actual locations of valves.

F. Maintenance Data: Include installation instructions, spare parts lists, exploded assembly views.

G. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Valve Repacking Kits: One for each type and size of valve.

3. 1 spare valve handle for each type valve.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with minimum three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified in this section, with minimum three years of experience.

C. Provide all grooved joint couplings, fittings, valves, specialties, and grooving tools from a single manufacturer.

D. Date stamp all castings used for coupling housings, fittings, valve bodies, etc. for quality assurance and traceability.

E. Coupling Manufacturer:

1. Perform on-site training by factory-trained representative to the Contractor's field personnel in the proper use of grooving tools and installation of grooved joint products.
2. Periodic job site visits by factory-trained representative to ensure best practices in grooved joint installation.

F. Welder Qualifications: Certify in accordance with ASME (BPV IX).

1. Provide certificate of compliance from authority having jurisdiction, indicating approval of welders.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

B. Provide temporary protective coating on cast iron and steel valves. Coating shall be as recommended and supplied by the valve manufacturer.

C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

D. Protect piping systems from entry of foreign materials by temporary plugs, completing sections of the work, and isolating parts of completed system. Temporarily cap or plug incomplete piping sections at the end of each day.

PART 2 PRODUCTS

2.1 HYDRONIC SYSTEM REQUIREMENTS

A. Comply with ASME B31.9 and applicable federal, state, and local regulations.

B. Piping: Provide piping, fittings, hangers and supports as required, as indicated, and as follows:

1. Where more than one piping system material is specified, provide joining fittings that are compatible with piping materials and ensure that the integrity of the system is not jeopardized.
2. Use non-conducting dielectric connections whenever jointing dissimilar metals.
3. Grooved mechanical joints may be used in accessible locations only.

    a. Accessible locations include those exposed on interior of building, in pipe chases, and in mechanical rooms, aboveground outdoors, and as approved by Architect.
    b. Grooved mechanical connections and joints comply with AWWA C606.

        1) Ductile Iron: Comply with ASTM A536, Grade 65-45-12.

    c. Use rigid joints unless otherwise indicated.

4. Provide pipe hangers and supports in accordance with ASME B31.9 or MSS SP-58 unless indicated otherwise. Indicate all drawings and supports on the coordination drawings.

C. Valves: Provide valves where indicated:

1. Provide OS & Y gate valves for boiler isolation valves.
2. Provide drain valves where indicated, and if not indicated provide at least at main shut-off, low points of piping, bases of vertical risers, and at equipment. Use 3/4 inch ball valves with cap; pipe to nearest floor drain.
3. On discharge of condenser water pumps, use spring loaded check valves.
4. Isolate equipment using butterfly valves with lug end flanges or grooved mechanical couplings.

D. Welding Materials and Procedures: Conform to ASME (BPV IX).

2.2 HEATING WATER PIPING, ABOVE GRADE

A. Steel Pipe: ASTM A53/A53M, Schedule 40, black, using one of the following joint types. Use for piping diameters greater than 2":

1. Welded Joints: ASTM A234/A234M, wrought steel welding type fittings; AWS D1.1 welded.
2. Grooved Joints: AWWA C606 grooved pipe, fittings of same material, and mechanical couplings.

B. Copper Tube: ASTM B88 (ASTM B88M), Type L (B), drawn, using one of the following joint types. Use up to 2" size only:

1. Solder Joints: ASME B16.18 cast brass/bronze or ASME B16.22 solder wrought copper fittings.

a. Solder: ASTM B32 lead-free solder, HB alloy (95-5 tin-antimony) or tin and silver.

2. Copper Press Fittings (all pipe sizes): Shall conform to the material and sizing requirements of ASME B16.18 or ASME B16.22. O-rings for copper press fittings shall be EPDM. Copper press fittings shall be EPDM. Copper press fittings shall be manufactured by Viega and installed utilizing Rigid Tool Company as "Pro Press System". Complete installation shall comply with manufacturers recommendations.
3. Tee Connections: Mechanically extracted collars with notched and dimpled branch tube.

2.3 EQUIPMENT DRAINS AND OVERFLOWS

A. Copper Tube: ASTM B88 (ASTM B88M), Type L (B), drawn; using one of the following joint types:

1. Solder Joints: ASME B16.18 cast brass/bronze or ASME B16.22 solder wrought copper fittings; ASTM B32 lead-free solder, HB alloy (95-5 tin-antimony) or tin and silver.

B. PVC Pipe: ASTM D1785, Schedule 40, or ASTM D2241, SDR 21 or 26.

1. Fittings: ASTM D2466 or D2467, PVC.
2. Joints: Solvent welded in accordance with ASTM D2855.
3. Do not use PVC in air plenums.

2.4 PIPE HANGERS AND SUPPORTS

A. Provide hangers and supports that comply with Section 23 2117.

2.5 UNIONS, FLANGES, MECHANICAL COUPLINGS, AND DIELECTRIC CONNECTIONS

A. Unions for Pipe 2 Inches and Under:

1. Ferrous Piping: 150 psig malleable iron, threaded.
2. Copper Pipe: Bronze, soldered joints.
3. Unions are not required in installations using grooved mechanical joint couplings. (The couplings shall serve as unions and disconnect points.)

B. Flanges for Pipe Over 2 Inches:

1. Ferrous Piping: 150 psig forged steel, slip-on.

C. Mechanical Couplings for Grooved and Shouldered Joints: Two or more curved housing segments with continuous key to engage pipe groove, circular C-profile gasket, and bolts to secure and compress gasket.

1. Dimensions and Testing: In accordance with AWWA C606.
2. Mechanical Couplings: Comply with ASTM F1476.
3. Housing Material: Ductile iron, galvanized or enamel coated complying with ASTM A536.
4. Gasket Material: EPDM suitable for operating temperature range from -30 degrees F to 230 degrees F.
5. Bolts and Nuts: Hot dipped galvanized.
6. When pipe is field grooved, provide coupling manufacturer's grooving tools.
7. Sizes through 12 Inches (300 mm):
    a. Rigid Type: Housings shall be cast with bolt pads to provide rigidity and system support and hanging in accordance with ANSI B31.1 and B31.9.

        1) 2 (50 mm) through 12 Inches (300 mm): Installation-Ready, for direct stab installation without field disassembly, with grade EHP gasket rated to +250 deg F (+120 degrees C).

    b. Flexible Type: For use in locations where vibration attenuation and stress relief are required. Three flexible couplings may be used in lieu of a flexible connector. The couplings shall be placed in close proximity to the source of the vibration.

8. Manufacturers:

    a. Victaulic Company: www.victaulic.com.
    b. Anvil International: www.anvilintl.com.

D. Dielectric Connections:

1. Waterways:

    a. Water impervious insulation barrier capable of limiting galvanic current to 1 percent of short circuit current in a corresponding bimetallic joint.
    b. Dry insulation barrier able to withstand 600 volt breakdown test.
    c. Construct of galvanized steel with threaded end, cast bronze with solder joint end, or grooved end connections to match connecting piping.
    d. Suitable for the required operating pressures and temperatures.

2.6 GATE VALVES

A. Manufacturers:

1. Conbraco Industries: www.conbraco.com.
2. Milwaukee Valve Company: www.milwaukeevalve.com.
3. Nibco, Inc: www.nibco.com.

4. Tyco Flow Control: www.tycoflowcontrol.com.
5. Jomar Valve: https://www.jomarvalve.com.

B. Over 2 Inches:

1. Iron body, bronze trim, bolted bonnet, rising stem, handwheel, outside screw and yoke, solid wedge disc with bronze seat rings, flanged ends.

2.7 BALL VALVES

A. Manufacturers:

1. Conbraco Industries: www.conbraco.com.
2. Grinnell Mechanical Products, a Tyco International Co: www.grinnell.com.
3. Milwaukee Valve Company: www.milwaukeevalve.com.
4. Nibco, Inc: www.nibco.com.
5. Tyco Flow Control: www.tycoflowcontrol.com.
6. Victaulic Company: www.victaulic.com.
7. Anvil International: www.anvilintl.com.
8. Jomar Valve: https://www.jomarvalve.com.

B. Up To and Including 2 Inches:

1. Bronze one piece body, chrome plated brass ball, teflon seats and stuffing box ring, lever handle with balancing stops, solder ends with union. Extended insulated handle for use with insulated piping.

2.8 BUTTERFLY VALVES

A. Manufacturers:

1. Crane Co.: www.cranevalve.com.
2. Grinnell Mechanical Products, a Tyco International Co: www.grinnell.com.
3. Hammond Valve: www.hammondvalve.com.
4. Milwaukee Valve Company: www.milwaukeevalve.com.
5. Tyco Flow Control: www.tycoflowcontrol.com.
6. Victaulic Company: www.victaulic.com.
7. Anvil International: www.anvilintl.com.
8. Jomar Valve: https://www.jomarvalve.com.

B. Body: Cast or ductile iron with resilient replaceable EPDM seat, lug or grooved ends, extended insulated neck for use with insulated piping.

C. Disc: Construct of ductile iron with EPDM enscapsulation.

D. Stem: Stainless steel with stem offset from the centerline to provide full 360 degree circumferential setting.

E. Operator: Infinite position lever handle with memory stop or gear operator. Provide gear operator for valves 6" size and larger.

2.9 SWING CHECK VALVES

A. Manufacturers:

1. Grinnell Mechanical Products, a Tyco International Co: www.grinnell.com.
2. Hammond Valve: www.hammondvalve.com.
3. Milwaukee Valve Company: www.milwaukeevalve.com.
4. Nibco, Inc: www.nibco.com.
5. Tyco Flow Control: www.tycoflowcontrol.com.
6. Victaulic Company: www.victaulic.com.
7. Anvil International: www.anvilintl.com.
8. Jomar Valve: https://www.jomarvalve.com.

B. Up To and Including 2 Inches:

1. Bronze body, bronze trim, bronze rotating swing disc, with composition disc, solder ends.

C. Over 2 Inches:

1. Iron body, bronze trim, stainless steel swing disc, renewable disc and seat, flanged or grooved ends.

2.10 SPRING LOADED CHECK VALVES

A. Manufacturers:

1. Crane Co.: www.cranevalve.com.
2. Hammond Valve: www.hammondvalve.com.
3. Milwaukee Valve Company: www.milwaukeevalve.com.
4. Tyco Flow Control: www.tycoflowcontrol.com.
5. Victaulic Company: www.victaulic.com.
6. Anvil International: www.anvilintl.com.
7. Jomar Valve: https://www.jomarvalve.com.

B. Iron body, bronze trim, split plate, hinged with stainless steel spring, resilient seal bonded to body, wafer or threaded lug ends.

C. Grooved End Valves:

1. Iron body through 12 Inches (300 mm), stainless steel spring and shaft, single-disc with elastomer coated ductile iron disc and welded-in nickel seat, or aluminum-bronze disc with EPDM seal and PPS coated seat.

PART 3 EXECUTION

3.1 PREPARATION

A. Ream pipe and tube ends. Remove burrs.

B. Prepare pipe for grooved mechanical joints as required by coupling manufacturer.

C. Prepare piping connections to equipment using jointing system specified.

D. Keep open ends of pipe free from scale and dirt. Protect open ends with temporary plugs or caps.

E. After completion, fill, clean, and treat systems. Refer to Section 23 2500 for additional requirements.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install heating water to ASME B31.9 requirements. Install chilled water piping to ASME B31.5 requirements.

C. PVC Pipe: Make solvent-welded joints in accordance with ASTM D2855.

D. Route piping in orderly manner, parallel to building structure, and maintain gradient.

E. Install piping to conserve building space and to avoid interfere with use of space.

F. Group piping whenever practical at common elevations.

G. Sleeve pipe passing through partitions, walls and floors. Refer to Section 23 0501 and details.

H. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 07 8400.

I. Slope piping and arrange to drain at low points.

J. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment. Refer to Section 23 0516.

1. For water systems, use adequate numbers of flexible couplings in header piping to accommodate thermal growth and contraction, and for the elimination of expansion loops. (In accordance with manufacturer's instructions and as approved by the engineer.) Where expansion loops are required, use couplings on the loops. Submit Calculations from manufacturer to confirm deletion of expansion loops.
2. Flexible couplings may be used in header piping to accommodate thermal growth, thermal contraction in lieu of expansion loops.
3. Use flexible couplings in expansion loops.

K. Grooved Joints:

1. Grooved joints shall be installed in accordance with the manufacturer's latest published installation instructions. Grooved ends shall be clean and free from indentations, projections, and roll marks in the area from pipe end to groove. Gaskets shall be of an elastomer grade suitable for the intended service, and shall be molded and produced by the coupling manufacturer. The grooved coupling manufacturer's factory trained representative shall provide on-site training for contractor's field personnel in the use of grooving tools and installation of grooved joint products. The representative shall periodically visit the jobsite and review contractor is following best recommended practices in grooved product installation. (A distributor's representative is not considered qualified to conduct the training or jobsite visit(s).)

L. Pipe Hangers and Supports:

1. Refer to Section 23 2117.
2. Install in accordance with ASME B31.9, ASTM F708, or MSS SP-89.
3. Support horizontal piping as scheduled.
4. Install hangers to provide minimum 1/2 inch space between finished covering and adjacent work.
5. Place hangers within 12 inches of each horizontal elbow.
6. Use hangers with 1-1/2 inch minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.
7. Support vertical piping at every other floor. Support riser piping independently of connected horizontal piping.
8. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers.
9. Provide copper plated hangers and supports for copper piping.
10. Prime coat all steel hangers and supports. Refer to Section 09 9000.

M. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings. Refer to Section 23 0719.

N. Provide access where valves and fittings are not exposed. Coordinate size and location of access doors with Section 08 3100.

O. Use eccentric reducers to maintain top of pipe level.

P. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welds.

Q. Prepare unfinished pipe, fittings, supports, and accessories, ready for finish painting. Refer to Section 09 9000.

R. Install valves with stems upright or horizontal, not inverted.

3.3 INSPECTION:

A. General: Clean exterior surfaces of installed piping systems of superfluous materials and prepare for application of specified coatings if any. Flush out piping systems with clean water before proceeding with required tests. Inspect each run of each system for completion of joints, supports and accessory items.

3.4 VALVE INSTALLATION:

A. General: Except as otherwise indicated, comply with the following requirements:

1. Install valves where required for proper operation of piping and equipment, including valves in branch lines where necessary to isolate sections of piping. Locate valves so as to be accessible and so that separate support can be provided when necessary.
2. Install valves with stems pointed up, in the vertical position, where possible, but in no case with stems pointed downward from a horizontal plane unless unavoidable. Install valve drains with hose-end adapter for each valve that must be installed with stem below horizontal plane.

B. Insulation: Where insulation is indicated, install extended stem valves, arranged in the proper manner to receive insulation.

3.5 SCHEDULES

A. Hanger Spacing for Copper Tubing.

1. 1/2 inch and 3/4 inch: Maximum span, 5 feet; minimum rod size, 1/4 inch.
2. 1 inch: Maximum span, 6 feet; minimum rod size, 1/4 inch.
3. 1-1/2 inch and 2 inch: Maximum span, 8 feet; minimum rod size, 3/8 inch.
4. 2-1/2 inch: Maximum span, 9 feet; minimum rod size, 3/8 inch.

B. Hanger Spacing for Steel Piping.

1. 1/2 inch, 3/4 inch, and 1 inch: Maximum span, 7 feet; minimum rod size, 1/4 inch.
2. 1-1/4 inches: Maximum span, 8 feet; minimum rod size, 3/8 inch.
3. 1-1/2 inches: Maximum span, 9 feet; minimum rod size, 3/8 inch.
4. 2 inches: Maximum span, 10 feet; minimum rod size, 3/8 inch.
5. 2-1/2 inches: Maximum span, 11 feet; minimum rod size, 3/8 inch.

6. 3 inches: Maximum span, 12 feet; minimum rod size, 3/8 inch.
7. 4 inches: Maximum span, 14 feet; minimum rod size, 1/2 inch.
8. 6 inches: Maximum span, 17 feet; minimum rod size, 1/2 inch.
9. 8 inches: Maximum span, 19 feet; minimum rod size, 5/8 inch.

C. Hanger Spacing for Plastic Piping.

1. 3/4 inch: Maximum span, 45 inches; minimum rod size, 1/4 inch.
2. 1 inch: Maximum span, 51 inches; minimum rod size, 1/4 inch.
3. 1-1/4 inches: Maximum span, 57 inches; minimum rod size, 3/8 inch.
4. 1-1/2 inches: Maximum span, 63 inches; minimum rod size, 3/8 inch.
5. 2 inches: Maximum span, 69 inches; minimum rod size, 3/8 inch.

END OF SECTION 23.2113

SECTION 23.2114 - HYDRONIC SPECIALTIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Expansion tanks.

B. Air vents.

C. Air separators.

D. Strainers.

E. Combination pump discharge valves.

F. Balancing valves.

G. Valve Installation Kits.

H. Relief valves.

I. Pressure reducing valves.

1.2 RELATED REQUIREMENTS

A. Section 23 2113 - Hydronic Piping.

B. Section 23 2500 - HVAC Water Treatment: Pipe Cleaning.

1.3 REFERENCE STANDARDS

A. ASME (BPV VIII, 1) - Boiler and Pressure Vessel Code, Section VIII, Division 1 - Rules for Construction of Pressure Vessels; 2010.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide product data for manufactured products and assemblies required for this project. Include component sizes, rough-in requirements, service sizes, and finishes. Include product description, model and dimensions.

C. Manufacturer's Installation Instructions: Indicate hanging and support methods, joining procedures.

D. Maintenance Data: Include installation instructions, assembly views, lubrication instructions, and replacement parts list.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

B. Provide temporary protective coating on cast iron and steel valves.

C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

D. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

PART 2 PRODUCTS

2.1 See Section 01 6000 for additional requirements.

2.2 EXPANSION TANKS

A. Manufacturers:

1. Amtrol Inc: www.amtrol.com.
2. Bell & Gossett: www.bellgossett.com.
3. Taco, Inc: www.taco-hvac.com.

B. Construction: Welded steel, tested and stamped in accordance with ASME (BPV VIII, 1); supplied with National Board Form U-1, rated for working pressure of 125 psi, with replaceable flexible butyl diaphragm, and steel support stand.

C. Accessories: Pressure gage and air-charging fitting, tank drain; precharge to 12 psi.

D. Automatic Cold Water Fill Assembly: Pressure reducing valve, reduced pressure double check back flow preventer, test cocks, strainer, vacuum breaker, and valved by-pass.

2.3 AIR VENTS

A. Manufacturers:

1. Armstrong International, Inc: www.armstronginternational.com.
2. Bell & Gossett: www.bellgossett.com.
3. Taco, Inc: www.taco-hvac.com.

B. Float Type:

1. Brass or semi-steel body, copper, polypropylene, or solid non-metallic float, stainless steel valve and valve seat; suitable for system operating temperature and pressure; with isolating valve.
2. Cast iron body and cover, float, bronze pilot valve mechanism suitable for system operating temperature and pressure; with isolating valve.

2.4 AIR SEPARATORS

A. Combination Air Separators/Strainers:

1. Manufacturers:

a. Armstrong International, Inc: www.armstronginternational.com.
b. Bell & Gossett: www.bellgossett.com.
c. Taco, Inc: www.taco-hvac.com.

2. Steel, tested and stamped in accordance with ASME (BPV VIII, 1); for 125 psi operating pressure, with integral bronze strainer, tangential inlet and outlet connections, and internal stainless steel air collector tube.
3. Provide internal corrosion resistant coating.

2.5 STRAINERS

A. Manufacturers:

1. Armstrong International, Inc: www.armstronginternational.com.
2. Flexicraft Industries: www.flexicraft.com.
3. Grinnell Mechanical Products, a Tyco International Co: www.grinnell.com.
4. The Metraflex Company: www.metraflex.com.
5. Victaulic Company: www.victaulic.com.
6. Anvil International: www.anvilintl.com.

B. Size 2 inch and Under:

1. Screwed brass or iron body for 175 psi working pressure, Y pattern with 1/32 inch stainless steel perforated screen.

C. Size 2-1/2 inch to 8 inch:

1. Provide flanged or grooved iron body for 175 psi working pressure, Y pattern with 3/64 inch stainless steel perforated screen.

2.6 COMBINATION PUMP DISCHARGE VALVES

A. Manufacturers:

1. Bell & Gossett Model 3DS: www.bellgossett.com.
2. Crane Co.: www.cranevalve.com.
3. Taco, Inc: www.taco-hvac.com.
4. Victaulic Company: www.victaulic.com.
5. Anvil International: www.anvilintl.com.

B. Valves: Straight or angle pattern, flanged cast-iron valve body with bolt-on bonnet for 175 psi operating pressure, non-slam check valve with spring-loaded bronze disc and seat, stainless steel stem, and calibrated adjustment permitting flow regulation.

2.7 BALANCING VALVES

A. Manufacturers:

1. Armstrong International, Inc: www.armstronginternational.com.
2. Bell & Gossett: www.bellgossett.com.
3. Oventrop Corporation: www.oventrop.com.
4. Victaulic Company: www.victaulic.com.
5. Anvil International: www.anvilintl.com.

B. Size 2 inch and Smaller:

1. Provide ball or globe style with flow balancing, flow measurement, and shut-off capabilities, memory stops, minimum of two metering ports and NPT threaded or soldered connections.
2. Metal construction materials consist of bronze or brass.
3. Non-metal construction materials consist of Teflon, EPDM, or engineered resin.

C. Size 2.5 inch and Larger:

1. Provide ball or butterfly style with flow balancing, flow measurement, and shut-off capabilities, memory stops, minimum of two metering ports and flanged, grooved, or weld end connections.
2. Valve body construction materials consist of cast iron or ductile iron.
3. Internal components construction materials consist of brass, aluminum bronze, bronze, Teflon, EPDM, NORYL, or engineered resin.

2.8 VALVE INSTALLATION KITS:

A. In lieu of individual valves, strainers, and balancing valves, valve installation kits are acceptable for use for pipe sizes up to 2".

B. Valve kits shall be as supplied by Bell & Gossett, Oventrop, Nexus, Nutech, Meleney Equipment, Inc. or approved equal.

C. Supply valve kits shall include combination wye strainer and shutoff valve with pressure temperature test port, drain valve, tailpiece, and union end.

D. Return valve kits shall include calibrated balance and shut off valve with two pressure temperature test ports, tail piece, and union end.

2.9 RELIEF VALVES

A. Manufacturers:

1. Tyco Flow Control: www.tycoflowcontrol.com.
2. Armstrong International, Inc: www.armstronginternational.com.
3. Bell & Gossett: www.bellgossett.com.
4. Conbraco Industries, Inc: www.conbraco.com.

B. Bronze body, teflon seat, stainless steel stem and springs, automatic, direct pressure actuated, capacities ASME certified and labelled.

2.10 PRESSURE REDUCING VALVES

A. Manufacturers:

1. Armstrong International, Inc: www.armstronginternational.com.
2. ITT Bell & Gossett: www.bellgossett.com.
3. Taco, Inc: www.taco-hvac.com.
4. Victaulic Company: www.victaulic.com.
5. Anvil International: www.anvilintl.com.

B. Operation: Automatically feeds make-up water to the hydronic system whenever pressure in the system drops below the pressure setting of the valve. Refer to Section 23 2113.

C. Materials of Construction:

1. Valve Body: Constructed of bronze.
2. Internal Components: Construct of stainless steel or brass and engineered plastics.

D. Provide integral check valve and strainer.

E. Maximum Inlet Pressure: 100 psi.

F. Maximum Fluid Temperature: 180 degrees F.

G. Operating Pressure Range: Between 10 psi and 50 psi.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install specialties in accordance with manufacturer's instructions.

B. Where large air quantities can accumulate, provide enlarged air collection standpipes. Provide in boiler room, chiller room, and pump rooms at air separators, and air handling mechanical equipment rooms at high points of piping systems.

C. Provide manual air vents at system high points and as indicated.

D. For automatic air vents in ceiling spaces or other concealed locations, provide vent tubing to nearest drain.

E. Provide valved drain and hose connection on strainer blow down connection. Provide caps with gaskets on discharge.

F. Provide combination pump discharge valve on discharge side of centrifugal pumps where indicated.

G. Support pump fittings with floor mounted pipe and flange supports.

H. Provide relief valves on pressure tanks, low pressure side of reducing valves, heat exchangers, and expansion tanks.

I. Select system relief valve capacity so that it is greater than make-up pressure reducing valve capacity. Select equipment relief valve capacity to exceed rating of connected equipment.

J. Pipe relief valve outlet to nearest floor drain.

3.2 MAINTENANCE

A. See Section 01 7000 - Execution Requirements, for additional requirements relating to maintenance service.

B. Explain corrective actions to Owner's maintenance personnel in person.

END OF SECTION 23.2114

SECTION 23.2117 - PIPE HANGERS, SUPPORTS AND ANCHORS

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK:

A. This section specified hangers, supports and anchors for use in piping systems installed in other sections of these specifications.

PART 2 - PRODUCTS

2.1 MANUFACTURERS:

A. Grinnell

B. Approved Equal.

2.2 HORIZONTAL PIPING HANGERS AND SUPPORTS:

A. General: Except as otherwise indicated, provide factory fabricated horizontal piping hangers and supports of the MSS type and size indicated, bolts (if any) and washers; comply with MSS SP-58 and the manufacturer's published product information. Where the MSS type or size is not indicated, provide proper selection determined by installer for installation requirements, and comply with MSS SP-69 and the manufacturer's published product information: size hangers and supports properly for piping including insulation, if any.

B. Adjustable Band Hangers: MSS Type 7, fabricated from steel.

C. Adjustable Swivel Band Hangers: MSS Type 10.

D. Clamp: MSS Type 4.

E. Double Bolt Clamp: MSS Type 3, including pipe spacers.

2.3 VERTICAL PIPING CLAMPS:

A. General: Except as otherwise indicated, provide factory fabricated vertical piping clamps of the MSS type and size indicated; comply with MSS SP-58 and the manufacturer's published product information. Where the MSS type or size is not indicated, provide proper selection as determined by the installer for installation requirements, and comply with MSS SP-69 and the manufacturer's published product information. Size clamps properly for piping, including insulation (if any).

B. Two Bolt Riser Clamp: MSS Type 8.

2.4 HANGER ROD ATTACHMENTS:

A. General: Except as otherwise indicated, provide factory fabricated hanger rod attachments of the MSS type and size indicated; comply with MSS SP-58 and the manufacturer's published product information. Where MSS type or size is not indicated, provide proper selection as determined by installer for installation requirements, and comply with MSS AP-69 and the manufacturer's published product information. Size attachments properly for piping, including insulation (if any).

B. Turnbuckles: MSS Type 13.

C. Weldless Eye Nut: MSS Type 17.

D. Malleable Eye Socket: MSS Type 16.

E. Clevises: MSS Type 14.

2.5 BUILDING ATTACHMENTS:

A. General: Except as otherwise indicated, provide factory fabricated building attachments of the MSS type and load rating indicated; comply with MSS SP-58 and the manufacturer's published product information. Where the MSS type or load rating is not indicated, provide proper selection determined by installer for installation requirements, and comply with MSS SP-69 and the manufacturer's published information. Size units properly for piping loading.

B. Concrete Inserts: MSS Type 18, steel.

C. Top Beam C-Clamps: MSS Type 19.

D. C-Clamps: MSS Type 23, steel

E. Top I-Beam Clamp: MSS Type 25.

F. Side Beam Clamp: MSS Type 20.

G. Beam Clamp/Eye Nut: MSS Type 28.

H. Wide Flange Beam Clamp/Eye Nut: MSS Type 29.

I. Beam Clamp/Extension Piece: MSS Type 30.

2.6 SADDLES AND SHIELDS:

A. General: Except as otherwise indicated, provide factory fabricated saddles and shields of the MSS type and size indicated; comply with MSS SP-58 and the manufacturer's published product information. Where the MSS type or size is not indicated, provide proper selection determined by installer for installation requirements, and comply with MSS SP-69 and the manufacturer's published product information. Size saddles and shields properly for insulation and vapor barriers (if any).

B. Protection Saddles: MSS Type 39.

C. Protection Shields: MSS Type 40.

D. High Density Insert Insulation Saddles: Provide products manufactured by Elcen Metal Products Company or Armacell International.

2.7 MISCELLANEOUS MATERIALS:

A. Metal Framing: Provide products complying with NEMA STD ML 1.

B. Steel Plates, Shapes and Bars: Provide products complying with ASTM A 36.

PART 3 - EXECUTION

3.1 PREPARATION:

A. Proceed with the installation of hangers, supports and anchors only after the required building structural work has been completed in areas where work is to be installed. Correct inadequacies including (but not limited to) the proper placement of inserts, anchors and other building attachments.

3.2 INSTALLATION OF BUILDING ATTACHMENTS:

A. Install building attachments at the required locations within concrete or onto structural steel for proper piping support. Space attachments within the maximum piping span length indicated in MSS SP-69. Install additional building attachments where support is required for additional concentrated loads, including valves, flanges, guides, strainers, expansion joints, and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten insert securely to forms. Where concrete with compressive strength less than 2500 psi is indicated, install reinforcing bars through the openings at the top of inserts. Prior to placing concrete, install nut in insert and screw threaded rod thru nut until rod is firmly against top of the insert body.

3.3 INSTALLATION OF HANGERS AND SUPPORTS:

A. General: Install hangers, supports, clamps and attachments to support piping properly from the building structure; comply with MSS SP-69. Arrange for grouping of parallel runs of horizontal piping to be supported together on trapeze type hangers where possible. Install supports with the maximum spacing complying with MSS SP-69. Where piping of various sizes is to be supported together with trapeze hangers, space hangers for smallest pipe size or install intermediate supports for smaller diameter pipe. Do not use wire of perforated metal to support piping, and do not support piping from other piping.

B. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers and other accessories. Except as otherwise indicated for exposed continuous pipe runs, install hangers and supports of the same type and style as installed for adjacent similar piping.

C. Prevent electrolysis in support of copper tubing by the use of hangers and supports which are copper plated, or by other recognized industry methods.

3.4 PROVISIONS FOR MOVEMENT:

A. Install hangers and supports to allow controlled movement of piping systems and to permit freedom of movement between pipe anchors, and to facilitate the action of expansion joints, expansion loops, expansion bends and similar units.

B. Load Distribution: Install hangers and supports so that piping live and dead loading and stresses from movement will not be transmitted to connected equipment.

1. Pipe Slopes: Install hangers and supports to provide the indicated pipe slopes, and so that maximum pipe deflections allowed by ANSI B31 are not exceeded.

C. Insulated Piping: Comply with the following installation requirements:

1. Clamps: Attach clamps, including spacers (if any), to piping with clamps projecting through the insulation; do not exceed pipe stresses allowed by ANSI B31.
2. Shields: Where low compressive strength insulation of vapor barriers are indicated on chilled water piping, install coated protective shields.
3. Saddles: Where insulation without vapor barrier is indicated (hot water piping), install protection saddles.

3.5 HYDRONIC PIPING

A. Conform to ASTM F708, MSS SP58, MSS SP69, MSS SP 89.

B. Hangers for Pipe Sizes 1/2 to 1-1/2”. Malleable iron adjustable swivel, split ring.

C. Hangers for Cold Pipe Sizes 2” and Over: Carbon steel, adjustable, clevis.

D. Hangers for Hot Pipe Sizes 2 to 4”. Carbon steel, adjustable, clevis.

E. Hangers for Hot Pipe Sizes 6” and Over: Adjustable steel yoke, cast iron roll, double hanger.

F. Multiple or Trapeze Hangers. Steel channels with welded spacers and hanger rods.

G. Multiple or Trapeze Hangers for Hot Pipe Sizes 6” and Over: Steel channels with welded spacers and hanger rods, cast iron roll.

H. Wall Support for Pipe Sizes to 3”. Cast iron hook.

I. Wall Support for Pipe Sizes 4” and Over: Welded steel bracket and wrought steel clamp.

J. Wall Support for Hot Pipe Sizes 6” and Over: Welded steel bracket and wrought steel clamp with adjustable steel yoke and cast iron roll.

K. Vertical Support: Steel riser clamp.

L. Floor Support for Cold Pipe: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.

M. Floor Support for Hot Pipe Sizes to 4”: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.

N. Floor Support for Hot Pipe Sizes 6” and Over: Adjustable cast iron roll and stand, steel screws, and concrete pier or steel support.

O. Copper Pipe Support: Carbon steel ring, adjustable, copper plated.

3.6 ADJUSTMENT OF HANGERS AND SUPPORTS:

A. Adjust hangers and supports and place grout as required under supports to bring piping to proper levels and elevations.

END OF SECTION 23.2117

SECTION 23.2123 - HYDRONIC PUMPS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. In-Line Pumps.

1.2 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete.

B. Section 23 0513 - Common Motor Requirements for HVAC Equipment.

C. Section 23 0716 - HVAC Equipment Insulation.

D. Section 23 2113 - Hydronic Piping.

E. Section 23 2114 - Hydronic Specialties.

1.3 REFERENCE STANDARDS

A. NEMA MG 1 - Motors and Generators; National Electrical Manufacturers Association; 2011.

B. NEMA OS 1 - Sheet-Steel Outlet Boxes, Device Boxes, Covers, and Box Supports; National Electrical Manufacturers Association; 2008 (Revised 2010) (ANSI/NEMA OS 1).

C. UL 778 - Standard for Motor-Operated Water Pumps; Underwriters Laboratories Inc.; Current Edition, Including All Revisions.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide certified pump curves showing performance characteristics with pump and system operating point plotted. Include NPSH curve when applicable. Include electrical characteristics and connection requirements.

C. Manufacturer's Installation Instructions: Indicate hanging and support requirements and recommendations.

D. Millwright's Certificate: Certify that base mounted pumps have been aligned.

E. Operation and Maintenance Data: Include installation instructions, assembly views, lubrication instructions, and replacement parts list.

F. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Pump Seals: One set for each type and size of pump.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacture, assembly, and field performance of pumps, with minimum three years of documented experience.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Armstrong Pumps Inc.

B. Bell & Gossett.

C. Taco.

D. Grundfos.

2.2 HVAC PUMPS - GENERAL

A. Provide pumps that operate at specified system fluid temperatures without vapor binding and cavitation, are non-overloading in parallel or individual operation, and operate within 25 percent of midpoint of published maximum efficiency curve.

B. Minimum Quality Standard: UL 778.

C. Products Requiring Electrical Connection: Listed and classified by UL or testing agency acceptable to authority having jurisdiction as suitable for the purpose specified and indicated.

2.3 IN-LINE CIRCULATORS

A. Type: Horizontal shaft, single stage, direct connected, with resiliently mounted motor for in-line mounting, oil lubricated, for 125 psi maximum working pressure.

B. Casing: Cast iron, with flanged pump connections.

C. Impeller: Non-ferrous keyed to shaft.

D. Bearings: Oil-lubricated bronze sleeve.

E. Shaft: Alloy steel with bronze sleeve, integral thrust collar.

F. Seal: Mechanical seal, 225 degrees F maximum continuous operating temperature.

G. Drive: Flexible coupling.

PART 3 EXECUTION

3.1 PREPARATION

A. Verify that electric power is available and of the correct characteristics.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide access space around pumps for service. Provide no less than minimum space recommended by manufacturer.

C. Decrease from line size with long radius reducing elbows or reducers. Support piping adjacent to pump such that no weight is carried on pump casings. For close coupled or base mounted pumps, provide supports under elbows on pump suction and discharge line sizes 4 inches and over. Refer to Section 23 0549.

D. Check, align, and certify alignment of base mounted pumps prior to start-up.

E. Lubricate pumps before start-up.

F. The contractor and manufacturer shall perform and document checks of the pumps including, but not limited to start-up, shaft alignment and adjustments, VFD operation, motor rotation, strainer cleaning, and vibration isolator adjustments.

END OF SECTION 23.2123

SECTION 23.2300 - REFRIGERANT PIPING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Piping.

B. Refrigerant.

C. Moisture and liquid indicators.

D. Valves.

E. Strainers.

F. Filter-driers.

1.2 RELATED REQUIREMENTS

A. Section 23 0719 - HVAC Piping Insulation.

1.3 REFERENCE STANDARDS

A. ASHRAE Std 15 - Safety Standard for Refrigeration Systems; American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.; 2013 (ANSI/ASHRAE Std 15).

B. ASHRAE Std 34 - Designation and Safety Classification of Refrigerants; American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.; 2013.

C. ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings; The American Society of Mechanical Engineers; 2013.

D. ASME B31.5 - Refrigeration Piping and Heat Transfer Components; The American Society of Mechanical Engineers; 2013.

E. ASME B31.9 - Building Services Piping; The American Society of Mechanical Engineers; 2011 (ANSI/ASME B31.9).

F. ASTM B280 - Standard Specification for Seamless Copper Tube for Air Conditioning and Refrigeration Field Service; 2013.

G. AWS A5.8/A5.8M - Specification for Filler Metals for Brazing and Braze Welding; American Welding Society; 2011 and errata.

H. MSS SP-58 - Pipe Hangers and Supports - Materials, Design and Manufacture, Selection, Application, and Installation; Manufacturers Standardization Society of the Valve and Fittings Industry, Inc.; 2009.

1.4 SYSTEM DESCRIPTION

A. Where more than one piping system material is specified ensure system components are compatible and joined to ensure the integrity of the system is not jeopardized. Provide necessary joining fittings. Ensure flanges, union, and couplings for servicing are consistently provided.

B. Provide pipe hangers and supports in accordance with ASME B31.5 unless indicated otherwise.

C. Liquid Indicators:

1. Use line size liquid indicators in main liquid line leaving condenser.

D. Filter-Driers:

1. Use a filter-drier immediately ahead of liquid-line controls, such as thermostatic expansion valves, solenoid valves, and moisture indicators.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide general assembly of specialties, including manufacturers catalogue information. Provide manufacturers catalog data including load capacity.

C. Shop Drawings: Indicate schematic layout of system, including equipment, critical dimensions, and sizes.

D. Design Data: Submit design data indicating pipe sizing. Indicate load carrying capacity of trapeze, multiple pipe, and riser support hangers.

E. Test Reports: Indicate results of leak test, acid test.

1.6 QUALITY ASSURANCE

A. Designer Qualifications: Design piping system under direct supervision of a Professional Engineer experienced in design of this type of work and licensed in Pennsylvania.

B. Installer Qualifications: Company specializing in performing the type of work specified in this section, with minimum ten years of documented experience.

1.7 REGULATORY REQUIREMENTS

A. Conform to ASME B31.9 for installation of piping system.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store piping and specialties in shipping containers with labeling in place.

B. Protect piping and specialties from entry of contaminating material by leaving end caps and plugs in place until installation.

C. Dehydrate and charge components such as piping and receivers, seal prior to shipment, until connected into system.

PART 2 PRODUCTS

2.1 PIPING

A. Copper Tube: ASTM B280, H58 hard drawn.

1. Fittings: ASME B16.22 wrought copper.
2. Joints: Braze, AWS A5.8 BCuP silver/phosphorus/copper alloy.

B. Pipe Supports and Anchors:

1. Provide hangers and supports that comply with MSS SP-58.

    a. If type of hanger or support for a particular situation is not indicated, select appropriate type using MSS SP-58 recommendations.

2. Hangers for Pipe Sizes 2 Inches and Over: Carbon steel, adjustable, clevis.
3. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
4. Wall Support for Pipe Sizes to 3 Inches: Cast iron hook.
5. Vertical Support: Steel riser clamp.
6. Copper Pipe Support: Carbon steel ring, adjustable, copper plated.
7. Hanger Rods: Mild steel threaded both ends, threaded one end, or continuous threaded.
8. Inserts: Malleable iron case of galvanized steel shell and expander plug for threaded connection with lateral adjustment, top slot for reinforcing rods, lugs for attaching to forms; size inserts to suit threaded hanger rods.

2.2 REFRIGERANT

A. Refrigerant: R-454b or R-32 as defined in ASHRAE Std 34.

2.3 MOISTURE AND LIQUID INDICATORS

A. Indicators: Single port type, UL listed, with copper or brass body, flared or solder ends, sight glass, color coded paper moisture indicator with removable element cartridge and plastic cap; for maximum temperature of 200 degrees F and maximum working pressure of 500 psi.

2.4 FILTER-DRIERS

A. Performance:

1. Pressure Drop: 2 psi, maximum, when operating at full connected evaporator capacity.
2. Design Working Pressure: 350 psi, minimum.

B. Cores: Molded or loose-fill molecular sieve desiccant compatible with refrigerant, activated alumina, activated charcoal, and filtration to 40 microns, with secondary filtration to 20 microns; of construction that will not pass into refrigerant lines.

C. Construction: UL listed.

1. Connections: As specified for applicable pipe type.

PART 3 EXECUTION

3.1 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.

B. Remove scale and dirt on inside and outside before assembly.

C. Prepare piping connections to equipment with flanges or unions.

3.2 INSTALLATION

A. Install refrigeration specialties in accordance with manufacturer's instructions.

B. Route piping in orderly manner, with plumbing parallel to building structure, and maintain gradient.

C. Install piping to conserve building space and avoid interference with use of space.

D. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

E. Pipe Hangers and Supports:

1. Install in accordance with ASME B31.5.
2. Support horizontal piping as scheduled.
3. Install hangers to provide minimum 2 inch space between finished covering and adjacent work.
4. Place hangers within 12 inches of each horizontal elbow.
5. Support vertical piping at every other floor. Support riser piping independently of connected horizontal piping.
6. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers.
7. Provide copper plated hangers and supports for copper piping.

F. Arrange piping to return oil to compressor. Provide traps and loops in piping, and provide double risers as required. Slope horizontal piping 0.40 percent in direction of flow.

G. Flood piping system with nitrogen when brazing.

H. Follow ASHRAE Std 15 procedures for charging and purging of systems and for disposal of refrigerant.

3.3 FIELD QUALITY CONTROL

A. Test refrigeration system in accordance with ASME B31.5.

B. Pressure test system with dry nitrogen to 200 psi. Perform final tests at 27 inches vacuum and 200 psi using halide torch. Test to no leakage.

3.4 CLOSEOUT

A. Provide documentation of the refrigerant charge quantity and pressure for each system.

END OF SECTION 23.2300

SECTION 23.2500 - HVAC WATER TREATMENT

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Cleaning of piping systems.

B. Chemical feeder equipment.

C. Chemical treatment.

1.2 RELATED SECTIONS

A. Section 23 2113 - Hydronic Piping.

B. Section 23 2114 - Hydronic Specialties.

1.3 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide chemical treatment materials, chemicals, and equipment including electrical characteristics and connection requirements.

C. Shop Drawings: Indicate system schematic, equipment locations, and controls schematics, electrical characteristics and connection requirements.

D. Manufacturer's Installation Instructions: Indicate placement of equipment in systems, piping configuration, and connection requirements.

E. Manufacturer's Field Reports: Indicate start-up of treatment systems when completed and operating properly. Indicate analysis of system water after cleaning and after treatment.

F. Certificate: Submit certificate of compliance from authority having jurisdiction indicating approval of chemicals and their proposed disposal.

G. Project Record Documents: Record actual locations of equipment and piping, including sampling points and location of chemical injectors.

H. Operation and Maintenance Data: Include data on chemical feed pumps, agitators, and other equipment including spare parts lists, procedures, and treatment programs. Include step by step instructions on test procedures including target concentrations.

I. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Sufficient chemicals for treatment and testing during required maintenance period.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum five years of documented experience. Company shall have local representatives with water analysis laboratories and full time service personnel.

B. Installer Qualifications: Company specializing in performing the type of work specified in this section, with minimum 5 years of experience and approved by manufacturer.

1.5 REGULATORY REQUIREMENTS

A. Conform to applicable code for addition of non-potable chemicals to building mechanical systems and to public sewage systems.

B. Products Requiring Electrical Connection: Listed and classified by UL as suitable for the purpose specified and indicated.

1.6 MAINTENANCE SERVICE

A. Furnish service and maintenance of treatment systems for one year from Date of Substantial Completion. Include monthly service visits and all chemicals

B. Provide monthly technical service visits to perform field inspections and make water analysis on site. Detail findings in writing on proper practices, chemical treating requirements, and corrective actions needed. Submit two copies of field service report after each visit.

C. Provide laboratory and technical assistance services during this maintenance period.

D. Include two hour training course for operating personnel, instructing them on installation, care, maintenance, testing, and operation of water treatment systems. Arrange course at startup of systems.

E. Provide on-site inspections of equipment during scheduled or emergency shutdown to properly evaluate success of water treatment program, and make recommendations in writing based upon these inspections.

1.7 MAINTENANCE MATERIALS

A. See Section 01 6000 - Product Requirements, for additional provisions.

B. Supply sufficient chemicals for treatment and testing during warranty and service period.

C. Provide chemicals for additional 1-year from warranty period.

PART 2 - PRODUCTS

2.1 MANUFACTURERS:

A. Proasys.

B. Chem-Aqua.

C. Water Treatment by Design.

2.2 MATERIALS

A. System Cleaner:

1. Liquid alkaline compound with emulsifying agents and detergents to remove grease and petroleum products; sodium tripoly phosphate and sodium molybdate.
2. Biocide chlorine release agents such as sodium hypochlorite or calcium hypochlorite.

B. Closed System Treatment (Water):

1. Sequestering agent to reduce deposits and adjust pH; polyphosphate.
2. Corrosion inhibitors; boron-nitrite, sodium nitrite and borax, sodium totyltriazole, low molecular weight polymers, phosphonates, sodium molybdate, or sulphites.
3. Conductivity enhancers; phosphates or phosphonates.
4. Biocide chlorine release agents such as sodium hypochlorite or calcium hypochlorite.

2.3 BY-PASS (POT) FILTER/FEEDER

A. 5.0 gallon with quick opening cap and 20 micron and 5 micron filter bags. Provide 20 of each type of filter bag for the Owner's use.

2.4 TEST EQUIPMENT

A. Provide white enamel test cabinet with local and fluorescent light, capable of accommodating 4 - 10 ml zeroing titrating burettes and associated reagents.

B. Provide the following test kits:

1. Alkalinity titration test kit.
2. Chloride titration test kit.
3. Sulphite titration test kit.
4. Total hardness titration test kit.
5. Low phosphate test kit.
6. Conductivity bridge, range 0 - 10,000 micro-ohms.
7. Creosol red pH slide complete with reagent.
8. Portable electronic conductivity meter.
9. High nitrite test kit.

PART 3 - EXECUTION

3.1 PREPARATION

A. Systems shall be operational, filled, started, and vented prior to cleaning. Use water meter to record capacity in each system.

B. Place terminal control valves in open position during cleaning.

3.2 CLEANING SEQUENCE

A. Concentration:

1. As recommended by CLEANER manufacturer.

B. Hot Water Heating Systems:

1. Add cleaner, apply heat while circulating, slowly raising temperature to 160 degrees F and maintain for 12 hours minimum.
2. Remove heat and circulate to 100 degrees F or less; drain systems as quickly as possible and refill with clean water.
3. Circulate for 6 hours at design temperatures, then drain.
4. Refill with clean water and repeat until system cleaner is removed.
5. Test water sample to verify cleaner is removed.

C. Use neutralizer agents on recommendation of system cleaner supplier and approval of Architect.

D. Flush open systems with clean water for one hour minimum. Drain completely and refill.

E. Remove, clean, and replace strainer screens.

F. Inspect, remove sludge, and flush low points with clean water after cleaning process is completed. Include disassembly of components as required.

G. System shall flushed, treated, and tested in accordance with the phasing. Multiple phased treatments will be required.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. After cleaning, fill each system completely with specified solution.

1. Hot Water System: 100% Water

3.4 CLOSED SYSTEM TREATMENT

A. Provide one bypass filter/feeder on each system. Install isolating and drain valves and necessary piping. Install around balancing valve downstream of circulating pumps unless indicated otherwise.

B. Introduce closed system treatment through bypass feeder when required or indicated by test.

C. Provide 3/4 inch water coupon rack around circulating pumps with space for 4 test specimens. Provide one for each bypass filter/feeder location.

3.5 CLOSEOUT ACTIVITIES

A. Training: Train Owner's personnel on operation and maintenance of chemical treatment system.

1. Provide minimum of two hours of instruction for two people.
2. Have operation and maintenance data prepared and available for review during training.
3. Conduct training using actual equipment after treated system has been put into full operation.

3.6 MAINTENANCE

A. Perform maintenance work using competent and qualified personnel under the supervision and in the direct employ of the equipment manufacturer or original installer.

B. Provide service and maintenance of treatment systems for one year from Date of Substantial Completion.

C. Provide monthly technical service visits to perform field inspections and make water analysis on site. Detail findings in writing on proper practices, chemical treating requirements, and corrective actions needed. Submit two copies of field service report after each visit.

D. Provide laboratory and technical assistance services during this maintenance period.

E. Provide on-site inspections of equipment during scheduled or emergency shutdown to properly evaluate success of water treatment program, and make recommendations in writing based upon these inspections.

END OF SECTION 23.2500

SECTION 23.3100 - HVAC DUCTS AND CASINGS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Metal ductwork.

B. Casing and plenums.

1.2 RELATED REQUIREMENTS

A. Section 07 8400 - Firestopping.

B. Section 09 9000 - Painting and Coating: Weld priming, weather resistant, paint or coating.

C. Section 23 0714 – HVAC Duct Insulation: External insulation and duct liner.

D. Section 23 3300 - Air Duct Accessories.

E. Section 23 3700 - Air Outlets and Inlets.

1.3 REFERENCE STANDARDS

A. ASHRAE (FUND) - ASHRAE Handbook - Fundamentals; 2009.

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2008.

C. ASTM A240/A240M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and General Applications; 2012.

D. ASTM A480/A480M - Standard Specification for General Requirements for Flat-Rolled Stainless and Heat-Resisting Steel Plate, Sheet, and Strip; 2012.

E. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2011.

F. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2010.

G. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate [Metric]; 2010.

H. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2012.

I. ICC-ES AC193 - Acceptance Criteria for Mechanical Anchors in Concrete Elements; 2012.

J. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems; National Fire Protection Association; 2012.

K. NFPA 96 - Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations; National Fire Protection Association; 2011.

L. SMACNA (LEAK) - HVAC Air Duct Leakage Test Manual; Sheet Metal and Air Conditioning Contractors' National Association; 2012, 2nd Edition.

M. SMACNA (DCS) - HVAC Duct Construction Standards; 2005.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data for duct materials.

C. Test Reports: Indicate pressure tests performed. Include date, section tested, test pressure, and leakage rate, following SMACNA (LEAK) - HVAC Air Duct Leakage Test Manual.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

1.6 REGULATORY REQUIREMENTS

A. Construct ductwork to NFPA 90A standards.

PART 2 PRODUCTS

2.1 DUCT ASSEMBLIES

A. All Ducts: Galvanized steel in concealed areas or galvannealed steel in exposed areas, unless otherwise indicated. All accessories shall be of the same material as the ductwork specified herein.

B. Low Pressure Supply: 2 inch w.g. pressure class, galvanized or galvannealed steel.

C. Medium and High Pressure Supply: 4 inch w.g. pressure class, galvanized or galvannealed steel.

D. Return and Relief: 2 inch w.g. pressure class, galvanized or galvannealed steel.

E. General Exhaust: 2 inch w.g. pressure class, galvanized or galvannealed steel.

F. Shower Room Exhaust: Aluminum up to the point where it connects to the Locker Room Exhaust System.

G. Outside Air Intake: 2 inch w.g. pressure class, galvanized steel.

H. Transfer Air and Sound Boots: 1 inch w.g. pressure class, galvanized steel.

I. Combustion Air: CPVC.

2.2 MATERIALS

A. Galvanized Steel for Ducts: Hot-dipped galvanized steel sheet, ASTM A653/A653M FS Type B, with G60/Z180 coating.

B. Galvannealed Steel for Ducts: Hot-dipped, zinc-iron coated, annealed steel sheet, ASTM A653-09.

C. Aluminum for Ducts: ASTM B209 (ASTM B209M); aluminum sheet, alloy 3003-H14. Aluminum Connectors and Bar Stock: Alloy 6061-T651 or of equivalent strength.

D. Stainless Steel for Ducts: ASTM A 240/A 240M, Type 304.

E. PVC: ASTM D1785, Schedule 80.

1. Fittings: ASTM D2466 or D2467, PVC.
2. Joints: Solvent welded in accordance with ASTM D2855.
3. For underground applications, install per ASTM D2321.

F. Joint Sealers and Sealants: Non-hardening, water resistant, mildew and mold resistant.

1. Type: Heavy mastic or liquid used alone or with tape, suitable for joint configuration and compatible with substrates, and recommended by manufacturer for pressure class of ducts.
2. Surface Burning Characteristics: Flame spread of zero, smoke developed of zero, when tested in accordance with ASTM E84.

G. Hanger Rod: ASTM A36/A36M; steel, galvanized; threaded both ends, threaded one end, or continuously threaded.

H. Hanger Fasteners: Attach hangers to structure using appropriate fasteners, as follows:

1. Concrete Screw Type Anchors: Complying with ICC-ES AC193.

2.3 DUCTWORK FABRICATION

A. Fabricate and support in accordance with SMACNA HVAC Duct Construction Standards and as indicated.

B. Provide duct material, gages, reinforcing, and sealing for operating pressures indicated.

C. Provide turning vanes of perforated metal with closed cell foam insulation when acoustical lining is indicated.

D. Increase duct sizes gradually, not exceeding 15 degrees divergence wherever possible; maximum 30 degrees divergence upstream of equipment and 45 degrees convergence downstream.

E. Fabricate continuously welded round and oval duct fittings in accordance with SMACNA HVAC Duct Construction Standards.

F. Seal all joints and fittings

2.4 MANUFACTURED DUCTWORK AND FITTINGS

A. Double Wall Insulated Round Ducts: Round spiral lockseam duct with 18-gauge galvanized steel outer wall, perforated galvanized steel inner wall; fitting with solid inner wall.

1. Manufacture in accordance with SMACNA HVAC Duct Construction Standards.
2. Insulation:

    a. Thickness: 1.5 inch
    b. Material: Fiberglass.

B. Double Wall Rectangular Ducts: Rectangular double wall ducts shall have a solid 18-gauge galvanized steel outer shell and a perforated inner liner, separated with a 1.5” thick fiberglass insulating layer. Fittings shall have solid inner walls.

C. Flexible Ducts: UL 181, Class 1, aluminum laminate and polyester film with latex adhesive supported by helically wound spring steel wire.

1. Pressure Rating: 10 inches WG positive and 1.0 inches WG negative.
2. Maximum Velocity: 4000 fpm.
3. Temperature Range: -20 degrees F to 210 degrees F.
4. Minimum R-value: R-6

2.5 EXTERIOR DUCTWORK

A. Exterior ductwork shall be TDC flange type.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install, support, and seal ducts in accordance with SMACNA HVAC Duct Construction Standards.

B. During construction provide temporary closures of metal or taped polyethylene on open ductwork to prevent construction dust from entering ductwork system.

C. Duct sizes indicated are inside clear dimensions. For lined ducts, maintain sizes inside lining.

D. Locate ducts with sufficient space around equipment to allow normal operating and maintenance activities.

3.2 DUCT LEAKAGE TESTING

A. Perform duct leakage test in accordance with 230593 – HVAC Testing, Adjusting and Balancing. Perform all tests in accordance with SMACNA HVAC Air Duct Leakage Test Manual. Perform leakage test for 20% of medium and high-pressure duct systems and 10% of low-pressure duct systems. Leakage testing shall be conducted by the Contractor prior to system balancing.

3.3 CLEANING

A. The HVAC system shall be cleaned using source removal mechanical cleaning methods designed to extract contaminants from within the HVAC system and safely remove contaminants from the facility. It is the contractor's responsibility to select source removal methods that will render the HVAC system visibly clean and capable of passing cleaning verification. Means, methods and materials shall be as described in the NADCA General Specifications for the Cleaning of Commercial HVAC Systems manual, and other specified tests, in accordance with all general requirements. No cleaning method, or combination of methods, shall be used which could potentially damage components of the HVAC system or negatively alter the integrity of the system.

B. Exposed ductwork shall have its exterior cleaned (in accordance with the manufacturer's recommended methods) to the satisfaction of the Architect.

END OF SECTION 23.3100

SECTION 23.3300 - AIR DUCT ACCESSORIES

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Air turning devices/extractors.

B. Backdraft dampers.

C. Duct access doors.

D. Duct test holes.

E. Fire dampers.

F. Flexible duct connections.

G. Smoke dampers.

H. Volume control dampers.

1.2 RELATED SECTIONS

A. Section 23 3100 - HVAC Ducts and Casings.

B. Section 23 3600 - Air Terminal Units: Pressure regulating damper assemblies.

1.3 REFERENCES

A. NFPA 90A - Standard for the Installation of Air Conditioning and Ventilating Systems; National Fire Protection Association; 2018.

B. SMACNA (DCS) - HVAC Duct Construction Standards - Metal and Flexible; Sheet Metal and Air Conditioning Contractors' National Association; 2005.

C. UL 33 - Heat Responsive Links for Fire-Protection Service; Underwriters Laboratories Inc.; Current Edition, Including All Revisions.

D. UL 555 - Standard for Fire Dampers; Underwriters Laboratories Inc.; Current Edition, Including All Revisions.

E. UL 555S - Standard for Leakage Rated Dampers for Use in Smoke Control Systems; Underwriters Laboratories Inc.; Current Edition, Including All Revisions.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide for shop fabricated assemblies including volume control dampers and duct access doors.

C. Shop Drawings: Indicate for shop fabricated assemblies including volume control dampers and duct access doors.

D. Manufacturer's Installation Instructions: Provide instructions for fire dampers and smoke dampers.

1.5 PROJECT RECORD DOCUMENTS

A. Record actual locations of access doors and test holes.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

B. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect dampers from damage to operating linkages and blades.

1.8 EXTRA MATERIALS

A. Provide two of each size and type of fusible link.

PART 2 - PRODUCTS

2.1 AIR TURNING DEVICES/EXTRACTORS - AIRFOIL TYPE

A. Manufacturers:

1. Ruskin Company: www.ruskin.com.
2. Titus: www.titus-hvac.com.

B. Multi-blade device with radius blades attached to pivoting frame and bracket, steel construction, with worm drive mechanism with removable key operator.

2.2 BACKDRAFT DAMPERS

A. Manufacturers:

1. Louvers & Dampers, Inc: www.louvers-dampers.com.
2. Nailor Industries Inc: www.nailor.com.
3. Ruskin Company: www.ruskin.com.
4. Pottorff: https://www.pottorff.com.

B. Multi-Blade, Parallel Action Gravity Balanced Backdraft Dampers: galvanized steel, with center pivoted blades of maximum 6 inch width, with flexible vinyl sealed edges, linked together in rattle-free manner with 90 degree stop, steel ball bearings, and plated steel pivot pin; adjustment device to permit setting for varying differential static pressure.

2.3 DUCT ACCESS DOORS

A. Manufacturers:

1. Ruskin Company: www.ruskin.com.
2. Approved Equal.

B. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible, and as indicated.

C. Fabrication: Rigid and close-fitting of galvanized steel with sealing gaskets and quick fastening locking devices. For insulated ducts, install minimum 1 inch thick insulation with sheet metal cover.

1. Less Than 12 inches Square: Secure with sash locks.
2. Up to 18 inches Square: Provide two hinges and two sash locks.
3. Up to 24 x 48 inches: Three hinges and two compression latches with outside and inside handles.
4. Larger Sizes: Provide an additional hinge.

D. Access doors with sheet metal screw fasteners are not acceptable.

2.4 DUCT TEST HOLES

A. Temporary Test Holes: Cut or drill in ducts as required. Cap with neat patches, neoprene plugs, threaded plugs, or threaded or twist-on metal caps.

B. Permanent Test Holes: Factory fabricated, air tight flanged fittings with screw cap. Provide extended neck fittings to clear insulation.

2.5 FIRE DAMPERS

A. Manufacturers:

1. Louvers & Dampers, Inc: www.louvers-dampers.com.
2. Nailor Industries Inc: www.nailor.com.
3. Ruskin Company: www.ruskin.com.
4. Pottorff: https://www.pottorff.com.

B. Fabricate in accordance with NFPA 90A and UL 555, and as indicated.

C. Ceiling Dampers: Galvanized steel, 22 gage frame and 16 gage flap, two layers 0.125 inch ceramic fiber on top side and one layer on bottom side for round flaps, with locking clip.

D. Horizontal Dampers: Galvanized steel, 22 gage frame, stainless steel closure spring, and lightweight, heat retardant non-asbestos fabric blanket.

E. Curtain Type Dampers: Galvanized steel with interlocking blades. Provide stainless steel closure springs and latches for horizontal installations. Configure with blades out of air stream.

F. Multiple Blade Dampers: 16 gage galvanized steel frame and blades, oil-impregnated bronze or stainless steel sleeve bearings and plated steel axles, 1/8 x 1/2 inch plated steel concealed linkage, stainless steel closure spring, blade stops, and lock.

G. Fusible Links: UL 33, separate at 165 degrees F.

H. All dampers shall be dynamic type.

2.6 FLEXIBLE DUCT CONNECTIONS

A. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible, and as indicated.

B. Flexible Duct Connections: Fabric crimped into metal edging strip.

1. Fabric: UL listed fire-retardant neoprene coated woven glass fiber fabric to NFPA 90A, minimum density 30 oz per sq yd.

a. Net Fabric Width: Approximately 2 inches wide.

2. Metal: 3 inches wide, 24 gage thick galvanized steel.

2.7 SMOKE DAMPERS

A. Manufacturers:

1. Louvers & Dampers, Inc: www.louvers-dampers.com.
2. Nailor Industries Inc: www.nailor.com.
3. Ruskin Company: www.ruskin.com.
4. Pottorff: https://www.pottorff.com.

B. Fabricate in accordance with NFPA 90A and UL 555S, and as indicated.

C. Dampers: UL Class 1 multiple blade type fire damper, normally closed automatically operated by electric actuator.

2.8 VOLUME CONTROL DAMPERS

A. Manufacturers:

1. Louvers & Dampers, Inc: www.louvers-dampers.com.
2. Nailor Industries Inc: www.nailor.com.
3. Ruskin Company: www.ruskin.com.
4. Pottorff: https://www.pottorff.com.

B. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible, and as indicated.

C. Splitter Dampers:

1. Material: Same gage as duct to 24 inches size in either direction, and two gages heavier for sizes over 24 inches.
2. Blade: Fabricate of single thickness sheet metal to streamline shape, secured with continuous hinge or rod.
3. Operator: Minimum 1/4 inch diameter rod in self aligning, universal joint action, flanged bushing with set screw.

D. Single Blade Dampers: Fabricate for duct sizes up to 6 x 30 inch.

E. Multi-Blade Damper: Fabricate of opposed blade pattern with maximum blade sizes 8 x 72 inch. Assemble center and edge crimped blades in prime coated or galvanized channel frame with suitable hardware.

F. End Bearings: Except in round ducts 12 inches and smaller, provide end bearings. On multiple blade dampers, provide oil-impregnated nylon or sintered bronze bearings.

G. Quadrants:

1. Provide locking, indicating quadrant regulators on single and multi-blade dampers.
2. On insulated ducts mount quadrant regulators on stand-off mounting brackets, bases, or adapters.
3. Where rod lengths exceed 30 inches provide regulator at both ends.

PART 3 - EXECUTION

3.1 PREPARATION

A. Verify that electric power is available and of the correct characteristics.

3.2 INSTALLATION

A. Install accessories in accordance with manufacturer's instructions, NFPA 90A, and follow SMACNA HVAC Duct Construction Standards - Metal and Flexible. Refer to Section 23 3100 for duct construction and pressure class.

B. Provide backdraft dampers on exhaust fans or exhaust ducts nearest to outside and where indicated.

C. Provide duct access doors for inspection and cleaning before and after filters, coils, fans, automatic dampers, at fire dampers, combination fire and smoke dampers, and elsewhere as indicated. Provide minimum 8 x 8 inch size for hand access, 18 x 18 inch size for shoulder access, and as indicated. Provide 4 x 4 inch for balancing dampers only. Review locations prior to fabrication.

D. Provide duct test holes where indicated and required for testing and balancing purposes.

E. Provide fire dampers and smoke dampers at locations indicated, where ducts and outlets pass through fire rated components. Install with required perimeter mounting angles, sleeves, breakaway duct connections, corrosion resistant springs, bearings, bushings and hinges.

F. Install smoke dampers and combination smoke and fire dampers in accordance with NFPA 92A. Provide control wiring.

G. Demonstrate re-setting of fire dampers to Owner's representative.

H. At fans and motorized equipment associated with ducts, provide flexible duct connections immediately adjacent to the equipment.

I. At equipment supported by vibration isolators, provide flexible duct connections immediately adjacent to the equipment.

J. Provide balancing dampers at points on supply, return, and exhaust systems where branches are taken from larger ducts as required for air balancing. Install minimum 2 duct widths from duct take-off.

K. Use splitter dampers only where indicated.

L. Provide balancing dampers on duct take-off to diffusers, grilles, and registers, regardless of whether dampers are specified as part of the diffuser, grille, or register assembly.

M. Provide turning vanes, Air Turning Devices, at all elbows greater than 45 degrees and all radiused elbows.

1. Provide Blades: 2" galvanized steel for up to and including 18" ducts.
2. Blades: 4 1/2" galvanized for ducts over 18"
3. Construction: Double wall blade.
4. Types: Gang operated blades with removable hex key.
5. Types: Gang operated blades with removable lever.
6. Types: Fixed blades for 90 degree elbows.

END OF SECTION 23.3300

SECTION 23.3416 – CENTRIFUGAL HVAC FANS

PART 1- GENERAL

1.1 SECTION INCLUDES

A. Centrifugal Roof Downblast Exhaust Fans.

B. Centrifugal Inline Fans.

C. Centrifugal Ceiling Exhaust and Cabinet Fans.

D. Ceiling Fans.

1.2 RELATED SECTIONS

A. Section 23 0513 - Common Motor Requirements for HVAC Equipment.

B. Section 23 3300 - Air Duct Accessories: Backdraft dampers.

1.3 REFERENCES

A. AMCA 204 - Balance Quality and Vibration Levels for Fans; 2005.

B. AMCA 210 - Laboratory Methods of Testing Fans for Aerodynamic Performance Rating; Air Movement and Control Association International, Inc.; 2007 (ANSI/AMCA 210, same as ANSI/ASHRAE 51).

H. UL 705 - Power Ventilators; Underwriters Laboratories Inc.; Current Edition, Including All Revisions.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on fans and accessories including fan curves with specified operating point clearly plotted, power, RPM, sound power levels at rated capacity, and electrical characteristics and connection requirements.

C. Manufacturer's Instructions: Indicate installation instructions.

D. Maintenance Data: Include instructions for lubrication, motor and drive replacement, spare parts list, and wiring diagrams.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

B. Kitchen Range Hood Exhaust Fans: Comply with requirements of NFPA 96 and the International Mechanical Code.

C. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

1.6 ENVIRONMENTAL REQUIREMENTS

A. Permanent ventilators may not be used for ventilation during construction.

1.7 EXTRA MATERIALS

A. Supply two sets of belts for each fan (if applicable).

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Greenheck.

B. Loren Cook Company.

C. PennBarry.

2.2 POWER VENTILATORS - GENERAL

A. Static and Dynamically Balanced: AMCA 204 - Balance Quality and Vibration Levels for Fans.

B. Performance Ratings: Determined in accordance with AMCA 210 and bearing the AMCA Certified Rating Seal.

C. Sound Ratings: AMCA 301, tested to AMCA 300, and bearing AMCA Certified Sound Rating Seal.

D. Fabrication: Conform to AMCA 99.

E. UL Compliance: UL listed and labeled, designed, manufactured, and tested in accordance with UL 705.

F. Electrical Components: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

G. Enclosed Safety Switches: Conform to NEMA 250.

H. Kitchen Range Hood Exhaust Fans: Comply with requirements of NFPA 96 and the International Mechanical Code.

2.3 CENTRIFUGAL ROOF DOWNBLAST EXHAUST FANS

A. General Description:

1. Fan shall be downblast type and shall be for roof mounted applications
2. Maximum continuous operating temperature shall be a minimum of 180 Fahrenheit (82.2 Celsius)
3. Each fan shall bear a permanently affixed manufacturer's engraved metal nameplate containing the model number and individual serial number.

B. Wheel:

1. Constructed of aluminum
2. Non-overloading, backward inclined centrifugal
3. Statically and dynamically balanced in accordance to AMCA Standard 204-05
4. The wheel cone and fan inlet will be matched and shall have precise running tolerances for maximum performance and operating efficiency

C. Motors:

1. Electronically Commutated Motor

a. Motor enclosure: ODP
b. Motor to be a DC electronic commutation type motor (ECM) specifically designed for fan applications. AC induction type motors are not acceptable.

c. Motors shall be permanently lubricated, heavy duty ball bearing type to match with the fan load and pre-wired to the specific voltage and phase
d. Internal motor circuitry to convert AC power supplied to the fan to DC power to operate the motor
e. Motor shall be speed controllable down to 20% of full speed (80% turndown). Speed shall be controlled by either a potentiometer dial mounted at the motor or by a 0-10 VDC signal
f. Motor shall be a minimum of 85% efficient at all speeds

2. AC Induction Motor (Belt Driven Fans)

a. Motor enclosure: ODP
b. Motors are permanently lubricated, heavy duty ball bearing type to match the fan load and pre-wired to the specific voltage and phase.
c. Accessible for maintenance.

D. Shaft and Bearings (Belt Driven Fans):

1. Fan Shaft shall be ground and polished solid steel with an anti-corrosive coating
2. Permanently sealed bearings or pillow block ball bearings
3. Bearing shall be selected for a minimum L10 life in excess of 100,000 hours (equivalent to L50 average life of 500,000 hours), at maximum cataloged operating speed
4. Bearings are 100 percent factory tested
5. Fan Shaft first critical speed is at least 25 percent over maximum operating speed

E. Housing:

1. Motor cover, shroud, curb cap, and lower windband shall be constructed of heavy gauge aluminum
2. Shroud shall have an integral rolled bead for extra strength
3. Shroud shall be drawn from a disc and direct air downward
4. Lower windband shall have a formed edge for added strength
5. Motor cover shall be drawn from a disc
6. All housing components shall have final thicknesses equal to or greater then preformed thickness
7. Curb cap shall have pre-punched mounting holes to ensure correct attachment
8. Rigid internal support structure
9. Leak proof

F. Housing Supports and Drive Frame:

1. Drive frame assemblies shall be constructed of heavy gauge steel and mounted on vibration isolators

G. Vibration Isolation:

1. Rubber isolators
2. Sized to match the weight of each fan

H. Disconnect Switches:

1. NEMA rated: NEMA 1: indoor application no water. Factory standard.
2. Positive electrical shut-off
3. Wired from fan motor to junction box installed within motor compartment

I. Drive Assembly (Belt Driven Fans):

1. Belts, pulleys, and keys oversized for a minimum of 150 percent of driven horsepower
2. Belt: Static free and oil resistant
3. Fully machined cast iron type, keyed and securely attached to the wheel and motor shafts
4. Motor pulleys are adjustable for final system balancing
5. Readily accessible for maintenance

J. Options/Accessories:

1. Birdscreen:

   a. Material Type: Galvanized
   b. Protects fan discharge

2. Roof Curbs:

   a. Welded, straight sided curb with 2 inches of flashing flange and wood nailer
   b. Material: Galvanized
   c. Height: 18”
   d. Insulation thickness: 1.5 inches

3. Dampers:

   a. Gravity backdraft damper
   b. Prevents outside air from entering back into the building when fan is off
   c. Balanced for minimal resistance to flow
   d. Galvanized frames with prepunched mounting holes

4. Variable Frequency Drive (Belt Driven Fans):

   a. Factory programed, mounted and wired
   b. Input speed control: On-Board Dial
   c. 24VDC damper power output
   d. Motor: (VFD Rated) compatible with induction and permanent magnet motors
   e. Parameters of acquainted motor shall be set to include voltage, speed, FLA, acceleration/deceleration time, and minimum and maximum motor frequency
   f. R3 Filtering for harmonic mitigation
   g. UL Recognized for 3 phase input at 380V-480V
   h. NEMA 4X Enclosure
   i. LED indication for Power, Run, and Fault

2.4 CENTRIFUGAL INLINE FANS

A. General Description:

1. Base fan performance at standard conditions (density 0.075 Lb/ft3)
2. Fan operating temperature shall be a minimum of 130 Fahrenheit (54.4 Celsius)
3. Each fan shall bear a permanently affixed manufacture's engraved metal nameplate containing the model number and individual serial number

B. Wheel:

1. Non-overloading, backward inclined centrifugal wheel
2. Constructed of aluminum
3. Statically and dynamically balanced in accordance to AMCA Standard 204-05
4. The wheel cone and fan inlet will be matched and shall have precise running tolerances for maximum performance and operating efficiency
5. Single thickness blades are securely riveted or welded to a heavy gauge back plate and wheel cone.

C. Motors:

1. Motor enclosures: Open type
2. Motor to be a DC electronic commutation type motor (ECM) specifically designed for fan applications. AC induction type motors are not acceptable.
3. Motors are permanently lubricated, heavy duty ball bearing type to match with the fan load and pre-wired to the specific voltage and phase.
4. Internal motor circuitry to convert AC power supplied to the fan to DC power to operate the motor.
5. Motor shall be speed controllable down to 20% of full speed (80% turndown). Speed shall be controlled by either a potentiometer dial mounted at the motor or by a 0-10 VDC signal.
6. Motor shall be a minimum of 85% efficient at all speeds.

D. Housing:

1. Constructed of heavy gauge galvanized steel
2. Housing and bearing supports shall be constructed of heavy gauge bolted and welded steel construction to prevent vibration and to rigidly support the shaft and bearing assembly.

E. Spring Loaded Aluminum Backdraft Damper:

1. Prevents air from entering back into the building when fan is off
2. Eliminates rattling or unwanted backdrafts

F. Accessories:

1. Provide unit mounted disconnect switch.

2.5 CENTRIFUGAL CEILING EXHAUST AND CABINET FANS

A. General Description:

1. Fan shall be for ceiling mounted applications
2. Fan maximum operating temperature shall be a minimum of 130 Fahrenheit (54.4 Celsius)
3. UL/cUL listed 507 - Electric Fans
4. Each fan shall bear a permanently affixed manufacture's nameplate containing the model number and individual serial number

B. Wheel:

1. Forward curved centrifugal wheel
2. Constructed of galvanized steel
3. Statically and dynamically balanced in accordance to AMCA Standard 204-05

C. Motors:

1. Motor enclosures shall be open driproof (ODP), opening in the frame body and or end brackets
2. Motors are permanently lubricated sleeve bearing type to match with the fan load and furnished at the specific voltage and phase
3. Motor shall be mounted on vibration isolators and be accessible for maintenance
4. Thermal overload protection

D. Housing:

1. Constructed of heavy gauge galvanized steel
2. Interior shall be lined with 0.5 inches of acoustical insulation

E. Spring Loaded Aluminum Backdraft Damper:

1. Prevents air from entering back into the building when fan is off
2. Eliminates rattling or unwanted backdrafts

F. Grille:

1. Types: Aluminum

G. Accessories:

1. Provide unit mounted disconnect switch.

2.6 CEILING FANS

A. Manufacturer:

1. Big Ass Fans; Powerfoil 5.

2. Pre-approved equal.

B. Complete Unit

1. Regulatory Requirements:

a. The entire fan assembly, as a system, shall be Nationally Recognized Testing Laboratory (NRTL)-certified and built pursuant to the construction guidelines set forth by UL standard 507 and CSA standards 22.2 No. 60335-1 and 22.2 No. 60335-2-80.
b. Ceiling fans greater than 7 ft (2.14 m) in diameter shall be tested and have performance data determined in accordance with 10 CFR Appendix U to Subpart B of Part 430 - Uniform Test Method for Measuring the Energy Consumption of Ceiling Fans and shall be listed in the US DOE Compliance Certification Database (CCD).
c. Ceiling fans greater than 7 ft (2.14 m) in diameter shall exceed the US DOE minimum-efficiency requirement of CFEI 1.00 at high speed and CFEI 1.31 at 40 percent speed or the nearest speed that is not less than 40 percent speed.
d. HVLS fans shall be listed in the California Energy Commission's Modernized Appliance Efficiency Database System of Appliance Models (MAEDbS), as required by Section 1606 of California Title 20.
e. Fans shall comply with all applicable requirements of Section 403 of the International Energy Conservation Code, Chapter 9 of the International Mechanical Code, and Chapter 6 of ANSI/ASHRAE/IES Standard 90.1.
f. The digital wall controller shall be compliant with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) The device may not cause harmful interference, and (2) The device shall accept any interference received, including interference that may cause undesirable operation.

2. Sustainability Characteristics:

a. The fan shall be designed to move an effective amount of air for cooling and destratification in industrial applications over an extended life. The fan components shall be designed specifically for high volume, low speed fans to ensure lower operational noise. Sound levels from the fan operating at maximum speed measured in a laboratory setting shall not exceed 55 dBA. Actual results of sound measurements in the field may vary due to sound reflective surfaces and environmental conditions.
b. The Wired Standard Control shall be designed to control Big Ass Fans from a secure, centralized location, and shall be designed specifically for high volume, low speed Big Ass Fans to ensure maximum control.
c. The optional BAFCon controller shall be designed to control Big Ass Fans and lighting systems from a secure, centralized location. The system shall be designed specifically for high volume, low speed Big Ass Fans to ensure maximum control. The system shall include optional SmartSense functionality to maximize energy savings. SmartSense shall provide the capability to automatically control the speed of Big Ass Fans using information from user-determined settings and built-in temperature and humidity sensors.

3. Good workmanship shall be evident in all aspects of construction. Field balancing of the airfoils shall not be necessary.
4. High volume, low speed (HVLS) fans shall be licensed to bear the AMCA Certified Rating Seal for Circulating Fan Performance to ensure performance as cataloged in the field. Unlicensed HVLS fans shall not be accepted.

C. Onboard Fan Control

1. The onboard fan controller shall be constructed using a variable frequency drive (VFD) that is pre-wired to the motor and factory-programmed to minimize the starting and braking torques for smooth and efficient operation. The onboard controller shall be pre-wired to the motor using a short run of flexible conduit with a dedicated ground conductor to minimize electromagnetic interference (EMI) and radio frequency interference (RFI). A 15-ft (4.6-m) incoming power cord shall be pre-wired to the controller.
2. For fans with single-phase input, conversion to three-phase output takes place at the VFD.
3. The VFD shall have a minimum rating of IP56.

D. Airfoil System

1. The fan shall be equipped with five (5) Powerfoil airfoils of precision extruded aluminum alloy. The airfoils shall be connected by means of two (2) high strength locking bolts per airfoil. The airfoils shall be connected to the hub and interlocked with zinc plated steel retainers. All airfoil hardware shall be SAE Grade 8 or equivalent.
2. The fan shall be equipped with five (5) Powerfoil winglets on the ends of the airfoils. The winglets shall be molded of a polypropylene blend. The standard color of the winglet shall be “BAF Yellow.”
3. Airfoil Restraint System

    a. All 20- to 24-ft (6- to 7.3-m) diameter fans shall be equipped with a patented airfoil restraint system to provide redundant safety between the ends of the airfoils and the fan hub. The airfoil restraint system shall be available as an option on smaller diameter fans.
    b. The airfoil restraint system shall be comprised of durable, lightweight nylon safety straps that shall extend from the winglets through the airfoils and secure to the fan hub with 12-gauge stamped steel safety clips.
    c. The straps shall be made of 1 in. (24 mm) wide heavy-duty nylon webbing rated for 825 lb (374 kg). The loops at the ends of the straps shall be secured in a double-stitch pattern for reinforced durability.
    d. The straps shall be precisely matched to each fan’s diameter, eliminating the need for a tensioning mechanism and reducing the opportunity for noise.
    e. The straps shall run along the inside of the airfoils for an uninterrupted look.
    f. Safety clips shall secure to each winglet to comprise the outer anchor points and provide tension, while clips on the opposite end shall secure to threaded inserts incorporated in the fan hub.

E. Motor

1. The fan motor shall be an AC induction type inverter rated at 1725 RPM, 200–240/400–480 VAC, 50/60 Hz, three-phase.
2. The motor shall be totally enclosed, fan cooled (TEFC) with an IP56 rating. A B5 standard frame shall be provided for ease of service. The motor shall be manufactured with a double baked Class F insulation and be capable of continuous operation in 5°F to 104°F (-15°C to 40°C) ambient conditions.

F. Gearbox

1. The gearbox shall be a helical gear reducer, precision finished from hardened steel for low noise and long service life with double lip seals to retain oil and prevent contamination. The gearbox shall be lubricated for life. The gear reducer shall have a standard backlash of less than 25 arc minutes and be equipped with a 17-4 stainless steel shaft of 1-1/4" (3.2 cm) diameter.

G. Motor Frame

1. The motor frame and mount shall be constructed of steel and powder coated for corrosion resistance and appearance.

H. Mounting System

1. The fan mounting system shall be designed for quick and secure installation on a variety of structural supports. The design of the upper mount shall provide two axes of rotation. This design shall allow for adjustments to be made after the mount is installed to the mounting structure to ensure the fan will hang level from the structure.
2. The upper mount shall be of ASTM A-36 steel, at least 3/16" thick, and powder coated for appearance and corrosion resistance. No mounting hardware or parts substitutions, including cast aluminum, are acceptable.
3. All mounting hardware shall be SAE Grade 8 or equivalent.

I. Hub

1. The fan hub shall be 19" (48 cm) in diameter and shall be made of precision cut aluminum for high strength and light weight. The hub shall consist of two (2) aluminum plates, five (5) aluminum spars, and one (1) aluminum spacer fastened with a pin and collar rivet system. The overall design shall provide a flexible assembly such that force loads experienced by the hub assembly shall be distributed over a large area to reduce the fatigue experienced at the attachment point for the fan blade.
2. The hub shall be secured to the output shaft of the gearbox by means of a steel coupling interface. The hub shall incorporate five (5) safety retaining clips made of 1/4" (0.6 cm) thick steel that shall restrain the hub/airfoil assembly.

J. Safety Cables

1. The fan shall be equipped with an upper safety cable that provides an additional means of securing the fan assembly to the building structure. The upper safety cable shall have a diameter of Ø1/4" (0.6 cm).
2. The fan shall be equipped with two lower safety cables pre-attached to the fan hub that shall provide an additional means of securing the fan to the extension tube. The lower safety cables shall have a diameter of 1/4" (0.6 cm).
3. The safety cables shall be fabricated out of 7 x 19 galvanized steel cable. The end loops shall be secured with swaged Nicopress® sleeves, pre-loaded and tested to 3,200 lbf (13,345 N).
4. Field construction of safety cables is not permitted.

J. BAFCon Controller

1. The fan shall be provided with a BAFCon controller.
2. The digital controller user interface shall be a wall-mounted touchscreen with a 5-inch (127-mm) display and an 800 (RGB) x 480 pixel resolution.
3. The digital controller shall be mounted to a standard rectangular or square outlet box.
4. A 150-ft (45.7-m) CAT5 cable shall be provided for connecting the digital controller to the fan's VFD, allowing for seamless communication between BAFCon and the VFD. The cable shall provide power to the digital controller.
5. The digital controller shall not require a 120 V power supply at the controller mounting location.
6. The digital controller mounting location shall meet the requirements of OSHA standard 29 CFR 1910.303(g) for accessibility minimum clearances.
7. The digital controller shall support up to 24 fans controlled as a group or individually.
8. The digital controller shall provide fan start/stop, speed, and direction control functions.
9. The digital controller shall provide diagnostic and fault history information for each connected fan as well as the ability to configure fan parameters with the assistance of Big Ass Fans Customer Service.
10. The digital controller shall include optional SmartSense functionality to maximize energy savings. SmartSense shall provide the capability to automatically control the speed of Big Ass Fans using information from user-determined settings and built-in temperature and humidity sensors.
11. The digital controller shall include a scheduling feature that shall provide the ability to create up to four fan schedules for turning fans on/off and turning Auto mode on/off. The scheduling feature shall require the date and time to be set on the controller.
12. The digital controller interface shall be able to be secured with user and admin passcodes to prevent unauthorized access to fan controls and settings.
13. The digital controller shall be BACnet-compatible.
14. BAFCon Multi-Fan Accessory Kit (Optional)

    a. If multiple fans will be installed with the BAFCon controller, the BAFCon Multi-Fan Accessory Kit shall be available.

L. Fire Control Panel Integration

1. Includes a 10–30 VDC pilot relay for seamless fire control panel integration. The pilot relay can be wired Normally Open or Normally Closed in the field.

M. Guy Wires

1. Included for installations with extension tubes 4 ft (1.2 m) or longer to limit the potential for lateral movement.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Secure roof exhausters with cadmium plated steel lag screws to roof curb.

C. Extend ducts to roof exhausters into roof curb. Counter flash duct to roof opening.

D. Provide sheaves required for final air balance.

E. Install backdraft dampers on inlet to roof and wall exhausters, except kitchen hood fans.

F. Provide backdraft dampers on outlet from cabinet and ceiling exhauster fans and as indicated.

END OF SECTION 23.3416

SECTION 23.3516 – VEHICLE EXHAUST EXTRACTION SYSTEM

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Magnetic type source capture exhaust removal system.

1.2 RELATED REQUIREMENTS

A. NIOSH Pocket Guide to Chemical Hazards

B. Underwriters Laboratory (UL)

C. National Fire Protection Agency (NFPA)

1. National Electric Code (NEC)
2. NFPA 1500

D. Air Movement (AMCA)

E. International Mechanical Code (IMC)

F. Uniform Mechanical Code (UMC)

G. American National Standards Institute (ANSI)

H. American Society of Mechanical Engineers (ASME)

1.2 MANUFACTURER QUALIFICATIONS

A. The manufacturer must be ISO 9001:2000, UL and CUL Certified and have their Exhaust Blowers certified by the Air Movement and Control Association (AMCA) to ensure quality, consistency and reliability of products. Certification documents shall be provided and attached to the bid proposal. All workmanship, manufacturing procedures, airflow design and materials shall be performance guaranteed.

B. The manufacturer has established reputation in the business of manufacturing Vehicle Exhaust Extraction Systems for a minimum of no less than Thirty (30) years. System has life of service of no less than Thirty (30) years to establish proof of quality, longevity, and service.

C. Equipment and materials provided for the system installation(s) shall be manufactured and provided by the supplier of primary exhaust removal system (Equipment Manufacturer) and be a standard product of manufacturer currently engaged in the manufacture of Vehicle Exhaust Extraction Systems. Where the requirement calls for a packaged exhaust system to be provided, all items shall be the product of the manufacturer. The product offering is to be a product that has been offered before a minimum period of Thirty (30) years.

1.4 TRAINING

A. Training is to be provided by manufacturer certified installer to the Fire Department Staff for the use and operation of the vehicle exhaust system.

B. An operation/training manual will be supplied as a permanent training aid.

1.5 WARRANTY

A. Vehicle Exhaust System Manufacturer's parts for a minimum of Five (5) Years on all parts and Ten (10) years on all aluminum extrusions (physical rails, aluminum tubing, etc.)

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Plymovent.

B. Nederman.

C. Ventaire.

2.2 TRACK EQUIPMENT TYPE

A. Shall be delivered and installed as a magnetic Sliding Balancer Track system. This type of system is designed for vehicles with under carriage exhaust tailpipe configurations. It will handle one apparatus per bay with back-in configurations allowing the operator to attach the system at the vehicle entrance and reach its designated rest position.

B. The operating logic of this system shall complete the following cycle. Upon the vehicles return to the apparatus floor of the station, a 5" dia. exhaust ventilation hose equipped with a magnetic nozzle shall be attached to the vehicle tailpipe at the door opening. The design shall ensure virtually 100% source capture of the exhaust fumes at the tailpipe. Once the system has been secured to the vehicles tailpipe, the exhaust fan shall automatically and instantaneously be energized by the output pressure of exhaust from any motor vehicle to assure total collection of exhaust gases. The vehicle can now back into its designated position and the hose will follow.

C. Upon emergency dispatch of the vehicle, the output pressure generated by any internal combustion engine shall again automatically energize the exhaust fan. As the vehicle leaves the apparatus floor, the flexible hose shall travel along the track and trolley system with the vehicle as it exits the station. The nozzle shall disconnect automatically and smoothly from the vehicle at a preset distance from the exiting door. The exhaust fan will continue to run to evacuate the exhaust from the duct system and then shut down automatically.

D. SAFETY FEATURE

1. Due to the harmful effects of diesel exhaust, the system must be designed and capable of capturing virtually 100% of the exhaust gas and particulate at the tailpipe. The system shall not detach itself from the apparatus during power failure. Connection of the system shall be achieved without bending over in front of the tailpipe.

E. SLIDING BALANCER TRACK

1. The track shall be 19 feet continuous in length without splices, have a maximum weight of 35 pounds and have a load capacity rating of 5800 pounds. Construction profile shall be of a boxloc type with cross sectional structural support for torsion reinforcement.

F. TRACK MOUNTING COMPARTMENT

1. Shall accept 8” length slider bars, which are utilized to secure vertical support legs to the boxloc track and distribute the load across the top of the track. This method of attachment ensures an enduring fastening system in the event the track comes in contact with a moving vehicle or encounters an unforeseeable force.

G. MOUNTING SUPPORT LEGS

1. Support legs shall be provided for every 10’ of track length. Supports shall be constructed of 2”x2” x 1/8” wall thickness tube aluminum alloy to provide strength and keep total system weight to a minimum. Leg supports shall be a one piece construction. All leg supports shall have side bracing constructed from tubular zinc plated steel to provide stabilization of track system. Angle shall be completely adjustable to the leg support and mounted perpendicular to direction of track. Typical support angle shall be 45 degrees from center line of support.

H. TRACK TROLLEY

I. Fixed to trolley with a use of solid steel pins shall be four load carrying bearings which are sealed and permanently lubricated. Load carrying bearings shall travel internally in track trolley compartment. Two Accu track bearings shall be provided on bottom side of external portion of track to eliminate or greatly reduce wobble of trolley to provide smooth travel along full length of track. Release plate shall be attached to energize uncoupling release valve when trolley balancer assembly passes under uncoupling valve.

I. TRACK SPLICE ASSEMBLY

1. In the event it is required to extend the length of track greater than its 19 foot continuous length, a track splice shall be provided. Track splice shall be manufactured of zinc plated steel in two parts as a clamp. This clamp shall accurately secure both tracks in a fashion which shall eliminate any possibility of problem passage through this splice. Connecting length of splice shall be a minimum of 15 ¾" long and fabricated of 14 gauge material. Four ¼" bolts with lock nuts shall pass directly through internal partition of boxloc track.

J. TRACK JOINER PLATE

1. In the event that it is necessary to join two tracks in a parallel configuration, a joiner plate shall be provided for proper support to both tracks and secure mounting to support leg assembly.

K. PRIMARY ENDSTOPS

1. Shall be installed inside the end of the track and fabricated of zinc plated steel in U-shape form with rubber endstop on the impact end of the endstop. It is attached by using a ¼" molded locking bolt. Endstop shall be secured to track with no less than (2) ¼" bolts and locking nuts located on the underside of the track.

L. DUCT/HOSE RISER BRACKET

1. The bracket, manufactured for the purpose of transitioning from flexible duct to solid spiral duct, shall be fabricated as a one piece welded assembly. Riser bracket shall mount directly to the track to provide stabilization to duct system and provide support to the flexible hose. Connecting the duct system directly to the traveling hose assembly is unacceptable.

M. BALANCER BLOCK

1. A balancer shall be used to keep the hose off the floor and away from the vehicle. It shall be a self adjusting, weight balancer with a lifting capacity of no less than 37 Lbs. and provide a constant lifting force without locking in an extended position. Balancer shall have a minimum diameter stainless steel cable of .080 for the purpose of retracting the hose away from the vehicle upon release. A steel cable shall be used for strength and durability and shall not be substituted.

N. UPPER HOSE ASSEMBLY

1. The upper hose shall be 5" in diameter manufactured for the sole purpose of venting high temperature exhaust gases, which are produced by internal combustion engines. Due to the increased temperatures associated with vehicle regeneration filter cleaning the flexible hose shall be rated for 900 degrees (F) continuous, 1,050 degrees (F) intermittent temperatures. The outside of the exhaust hose shall have a protective lamination the entire length of the hose to protect fire apparatus in the event vehicle and hose come in contact with each other.

O. LOWER HOSE ASSEMBLY

1. Shall be a rigid 2 foot long section of hose identical in characteristics to the upper hose assembly. Lower hose shall support connection nozzle and reducing elbow in a rigid fashion as to allow for operator to place hose collection device onto tailpipe without bending over. Lower hose is the only section of hose which shall release in the event of safety disconnect.

P, SAFETY HANDLE DISCONNECT COUPLING

1. Incorporated in the design of the system shall be a safety breakaway device enabling a physical disconnect between the exhaust system and the vehicle in the event of system malfunction or human error. The devise shall incorporate a handle for attaching the system to the vehicle without bending over. The coupling will enable the lower two foot hose assembly to freely rotate 360 degrees. The device shall utilize a quick connect fitting so the lower hose can be snapped back into place without the use of any tools. The quick connect also allows the lower hose to be manually disconnected and relocated to any other system should the vehicle be relocated. This feature provides safety to personnel, protects the apparatus and the exhaust system from damage, and provides user friendliness. This device shall be reusable and have an adjustable release tension of 20 – 206 Lbs. with a factory preset at 130 Lbs. Since this item is a point of safety for both personnel and the system itself, no exception may be taken to this feature.

Q. HOSE SUSPENSION SADDLE

1. The hose saddle shall be fabricated of steel with a heat resistant protective paint. The saddle shall support the hose and serve as the stress point during the system release. The design of saddle shall join two sections of hose together at its midpoint intersection and provide a smooth 93 degree transition.

R. MAGNETIC NOZZLE &TRANSITION ELBOW

1. The nozzle attachment shall be designed to mate up with the vehicle tailpipe in such a manor to prevent the operator from having to bend over to attach the nozzle. The connection shall be kept simple so the operator can attach the nozzle at any angle without having to align components to the vehicle. Simplicity of nozzle attachment will be determined by the fire department.
2. The nozzle will allow a sealed connection to the end of the tailpipe which is to be outfitted with a conical male adaptor designed for mating up with the nozzle. It is preferred the nozzle shall be fabricated from zinc plated steel and stainless steel for strength and malleability superior properties over aluminum. The nozzle shall also have the ability to add or subtract magnets from the nozzle thereby providing an adjustment capability for magnetic hold strength to the tailpipe conical adaptor. The manufacture shall offer the nozzle and tailpipe adaptor in 3”, 3.5”, 4”, 5”, 6” & 7” diameters to accommodate all tailpipe diameters and configurations.

3. To ensure there is no leakage of exhaust, the magnetic connection shall be accomplished in such a manner that there is no gap between the vehicle tailpipe termination point and the nozzle connection to the tailpipe The earth magnets shall be adjustable and easily removable for replacement. They shall be positioned to hold the nozzle connection to the tailpipe while the vehicle is entering and exiting the station without releasing. The nozzle shall incorporate a debris screen to prevent foreign objects from entering the system and a 67 degree transition to direct the exhaust gasses up the hose. The exterior of the nozzle shall be chrome plate for corrosion resistance and aesthetics.

2.3 VEHICLE TAILPIPE CONFIGURATION

A. Tailpipe conical adaptors shall be provided for all apparatus'. The adaptor shall be the same size as the vehicle tailpipe and allow the induction of ambient air into the nozzle. The tailpipe adaptor shall be constructed of corrosion resistant zinc plated steel with completely smooth edges to reduce grime accumulation. The fire department will be responsible for modify the exhaust pipes per the manufactures suggested recommendation so long as they comply with NFPA standards. The installing contractor shall coordinate with the department for having the tailpipes modified. All tailpipes will be modified by the owner.

2.4 EXHAUST FAN TYPE

A. The blower unit shall be a AMCA type B, direct drive spark resistant blower capable of delivering 500 CFM per vehicle. Exhaust fan offered shall be tested in accordance to AMCA standard # 210 in an AMCA approved test facility.

B. EXHAUST BLOWER

1. Shall provide a minimum of 500 CFM per vehicle at the properly calculated pressure loss of the system design.

C. FAN HOUSING & IMPELLER

1. The exhaust fan shall be AMCA type B direct drive spark resistant. The housing shall be a one piece construction fabricated from galvanized steel with epoxy powder coated paint inside and out. The design shall allow the user to remove the fan motor and impellor without removing the inlet or outlet duct connections. Impeller shall be fabricated from Aluminum and be designed as a Radial blade backward incline type wheel.

D. FAN MOTOR

1. Shall be UL listed and manufactured by a readily available nationally recognized motor manufacturer and meet EPAC standards.

E. MOTOR TYPE

1. Shall be supplied as a totally enclosed fan cooled or ventilated type with a readily available NEMA frame from 5 6 - 145 T.

F. MOTOR BEARINGS

1. Shall be provided as totally enclosed self lubricated type.

G. VIBRATION ISOLATING

1. Fan shall be manufactured as a complete assembly to assure the least possible vibration or movement. Fan wheel shall be both statically and dynamically balanced.

2.6 DUCTWORK

A. SMACNA class I conveying and must meet or exceed criteria for construction and performance as outlined in Round Industrial Duct Construction Standards for the designed operating pressure.

B. CERTIFICATION/APPROVALS

1. Construction, performance and installation must be performed to meet or exceed the International Mechanical Code as well as the uniform fire code. In turn the bidder must certify that they will adhere to all applicable city, state and federal codes.

C. MATERIALS OF CONSTRUCTION

1. Materials of construction unless otherwise specified for all duct and fittings shall be in minimum G-30 galvanized sheet metal in accordance with ASTM-A525 and A527.

D. DUCT SIZE

1. All duct subject to positive or negative pressure shall be of round spiral pipe construction, with the range of available sizes not to exceed 14 inches in diameter.

E. DUCT GAUGE

1. Duct gauge shall depend on diameter and a minimum operating pressure. Acceptable gauge and reinforcement requirements shall be in accordance with SMACNA guidelines. Bidder shall document their designed operating pressure on their design submission.

F. DUCT LENGTH

1. Duct shall be provided in 10’ continuous lengths wherever possible. Except when interrupted by fittings, round spiral duct section shall not be less than 10 feet long.

G. EXHAUST FITTINGS

1. All exhaust fittings shall be round and have a wall thickness 2 gauges (one even gauge number) heavier than the lightest allowable gauge of the downstream section of duct to which they are connected. Branch entrances shall be factory fabricated fittings or factory fabricated duct /tap assemblies. Fittings shall be constructed so that air streams converge at angles of 45°.

H. STANDARD WELDED SEAMS

1. Standard seam joints shall be continuous welded on all fittings. All welded joints shall be coated with a protective paint, inside and out to prevent damage to galvanized surface.

I. TURNING ELBOWS

1. Shall be die stamped and used for all diameters and pressures.

J. TAPERED BODY FITTINGS

1. Shall be used wherever particular fallout is anticipated, and where air flow is introduced to the transport duct manifold.

K. EXHAUST JOINT CONSTRUCTION

1. All joint connections which are not continuous welded shall be supplied with a transition coupling from the downstream end only. Coupling shall be fully welded and shall provide a fitting size projection to fit inside a downstream fitting or another duct section. Couplings shall have a two inch minimum insertion length and shall be 2 gauge numbers (one even gauge number) heavier than the duct to which they are connected. This along with a 600 high temperature silicon seal will constitute the primary mechanical seal.

L. DUCT CONVEYING VELOCITY

1. Shall be a minimum of 2000 - 3000 feet / minute transport velocity per UMC code. No exceptions.

M. EXHAUST RAIN CAP

1. Shall be manufactured in accordance with EPA standard for free draft rain cap requirements. Included as an intricate part of this rain cap shall be a back draft damper to provide protection from rain and other inclement weather.

N. EXHAUST DUCT PENETRATION

1. In all cases when making a wall penetration it should be clearly indicated in the bid drawing and be accomplished via use of a professional core drilling machine if possible. The core drilling shall be properly sized to reduce the diameter to the smallest possible size.

2.7 CONTROLLER TYPE

A. Shall be manufactured and delivered as an Operating System Three series controller, as manufactured by Plymovent Corporation or as an equal to the specifications to follow.

B. CONTROLLER LOGIC

1. Shall be designed to sense the output pressure which is normally generated by any internal combustion engine designed to propel any motor vehicle. The operating logic shall be designed to complete this cycle, at any point in time, when a collection device is connected to a motor vehicle's exhaust tail pipe and at which time the vehicle is manually or automatically energized by the operator. This controller shall in turn automatically sense the engine's output pressure and in turn energize the electrical contactors which will provide proper full load amperage to the exhaust system motor. The controller through the use of a three minute adjustable timer shall keep the contactors energized for the three minute minimum fixed time

2.8 ELECTRICAL PROTECTION

A. To protect the apparatus electrical system from any possible damage, the system **shall not** incorporate any design that requires the apparatus to be utilized as an electrical ground.

B. CERTIFICATION/APPROVALS

1. Electrical controller offered to the department shall be approved by Underwriters Laboratories (UL) as a complete electrical system for enclosed industrial control panels.

C. ELECTRICAL ENCLOSURE

1. Shall be NEMA 12 rated and UL listed as Type 12.

D. ENCLOSURE KEYLOCK

1. Shall be provided and mounted in electrical enclosure to restrict access to internal components of controller by only authorized entry.

E. ELECTRICAL CONTACTORS

1. Shall be Allen Bradley industrial electrical contactors provided with the appropriate adjustable overload relays to meet the proper full load amperage of motor it is designed to control. Contactor shall conform to the following standards: BS-5424, VDE0660, and be approved by UL Certification as an approved component.

F. CONTROL TRANSFORMER

1. To be UL listed industrial control circuit transformer with primary and secondary fuse blocks. Transformer shall be provided with multitap primary 208V through 480V, AC, and 24V through 120V secondary.

G. ELECTRICAL TIMER

1. Shall be solid state, 3 minute adjustable timer. Operating logic shall complete this cycle; Input voltage is applied to the timer at all times. Upon closure of a normally open isolated start switch, the load energizes and remains energized as long as the switch is closed. When the start switch opens, the timing cycle starts. At the end of the present time delay, the load de-energizes and the timer is ready for a new timing cycle. Timer shall be UL Recognized component under file number E65038.

H. ENGINE START SWITCH

1. Start switch shall be engine pressure sensing type capable of recognizing the output pressure of any type of motor vehicle. Electrical contact shall be dry type or not exceed 24V.

I. PUSH TO STOP BUTTON

1. Shall be Allen Bradley illuminated amber contact push button. This device shall meet UL Type 4X rating. Indicator light/start button shall be mounted on the enclosure cover and be identified by engraved ledger plate.

J. WIRING

1. Wiring shall be run in wire channel to allow for easier identification of wiring circuit and appearance. All wiring circuitry shall meet UL listed for proper bending radiuses and terminations.

K. TERMINAL BLOCK

1. Shall be 600 V, UL rated, recognized and shall provide individual connection points for remote controls, power and motor connections.

L. WIRING IDENTIFICATION

1. Shall be computer generated and identify all terminals, fuses, contactors, on both supply and termination points.

M. LABELING

1. Shall be provided and secured permanently to the exterior of electrical controller, indicating the manufacturer, his address and telephone number. The cover shall also have user instructions and any warnings or cautions required by Underwriter Laboratories.

N. ELECTRICAL WIRING SCHEMATIC

1. Wiring schematic shall be provided with each electrical control box supplied. Wiring schematic shall show internal circuitry as well as all primary and secondary connections to the controller. This schematic shall be provided as a "D" print drawing to the department.

O. ELECTRICAL INTERFERENCE

1. It is in the department's best interest to reject any design of electrical controller which utilizes or produces electrical frequency transmission or any possibility of electrical backfeed which may interfere with a central services communication or onboard vehicle computer logic or navigational equipment.

PART 3 EXECUTION

3.1 INSTALLATION

A. The Emergency Vehicle Exhaust System shall be installed by the local certified installer.

END OF SECTION 23.3516

SECTION 23.3600 - AIR TERMINAL UNITS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Variable volume terminal units.

B. Integral heating coils.

1.2 RELATED REQUIREMENTS

A. Section 23 2113 - Hydronic Piping: Connections to heating coils.

B. Section 23 2114 - Hydronic Specialties: Connections to heating coils.

C. Section 23 3100 - HVAC Ducts and Casings.

D. Section 23 3300 - Air Duct Accessories.

1.3 REFERENCE STANDARDS

A. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilation Systems; National Fire Protection Association; 2018.

B. UL 181 - Standard for Factory-Made Air Ducts and Air Connectors; Underwriters Laboratories Inc.; Current Edition, Including All Revisions.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data indicating configuration, general assembly, and materials used in fabrication. Include catalog performance ratings that indicate air flow, static pressure, and NC designation. Include electrical characteristics and connection requirements.

C. Shop Drawings: Indicate configuration, general assembly, and materials used in fabrication, and electrical characteristics and connection requirements.

1. Include schedules listing discharge and radiated sound power level for each of second through sixth octave bands at inlet static pressures of 1 to 4 inch wg.

D. Manufacturer's Installation Instructions: Indicate support and hanging details, and service clearances required.

E. Project Record Documents: Record actual locations of units.

F. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions, maintenance and repair data, and complete parts lists. Include directions for resetting constant volume regulators.

G. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

B. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

1.6 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide warranty for a period of one year from the date of substantial completion of the entire project.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Nailor.

B. Trane.

C. Johnson Controls.

D. Carrier.

E. Daikin.

2.2 MANUFACTURED UNITS

A. Ceiling mounted variable air volume supply air control terminals for connection to single duct, central air systems, with electronic variable volume controls, hot water heating coils.

B. Identify each terminal unit with clearly marked identification label and air flow indicator. Include unit nominal air flow, maximum factory set airflow, minimum factory set air flow, and coil type.

2.3 SINGLE DUCT VARIABLE VOLUME UNITS

A. Basic Assembly:

1. Casings: Minimum 22 gage galvanized steel.
2. Lining: Minimum 1" inch thick closed cell foam insulation. Insulation shall conform to UL 181 for erosion and NFPA 90A for fire, smoke and melting, and comply with a 25/50 Flame Spread and Smoke Developed Index per ASTM E-84 or UL 723. Additionally, insulation shall comply with Antimicrobial Performance Rating of 0, no observed growth, per ASTM G-21. Polyethylene insulation is not acceptable.
3. Plenum Air Inlets: Round stub connections for duct attachment.
4. Plenum Air Outlets: S slip and drive connections.

B. Basic Unit:

1. Configuration: Air volume damper assembly inside unit casing. Locate control components inside protective metal shroud.
2. Volume Damper: Construct of galvanized steel with peripheral gasket and self-lubricating bearings; maximum damper leakage: 2 percent of design air flow at 1 inches rated inlet static pressure.

C. Hot Water Heating Coil:

1. Construction: 1/2 inch copper tube mechanically expanded into aluminum plate fins, leak tested under water to 200 psig pressure, factory installed.

D. Automatic Damper Operator:

1. Electric Actuator: 24 volt with high limit.

E. Provide factory mounting and wiring of controls. Controls shall be provided by the ATC Contractor.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Support units individually from structure. Do not support from adjacent ductwork.

C. Connect to ductwork in accordance with Section 233100.

END OF SECTION 23.3600

SECTION 23.3700 - AIR OUTLETS AND INLETS

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Diffusers.

B. Registers/grilles.

C. Vents.

D. Roof Hoods.

1.2 REFERENCES

A. AMCA 500-L - Laboratory Methods of Testing Louvers for Rating; Air Movement and Control Association International, Inc.; 2007.

B. ARI 890 - Standard for Air Diffusers and Air Diffuser Assemblies; Air-Conditioning and Refrigeration Institute; 2008.

C. ASHRAE Std 70 - Method of Testing for Rating the Performance of Air Outlets and Inlets; American Society of Heating, Refrigerating and Air Conditioning Engineers, Inc.; 2006.

D. SMACNA (DCS) - HVAC Duct Construction Standards - Metal and Flexible; Sheet Metal and Air Conditioning Contractors' National Association; 2005.

1.3 SUBMITTALS

A. Product Data: Provide data for equipment required for this project. Review outlets and inlets as to size, finish, and type of mounting prior to submission. Submit schedule of outlets and inlets showing type, size, location, application, and noise level.

B. Project Record Documents: Record actual locations of air outlets and inlets.

1.4 QUALITY ASSURANCE

A. Test and rate air outlet and inlet performance in accordance with ASHRAE Std 70.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Kreuger.

B. Price.

C. Titus.

2.2 RECTANGULAR CEILING DIFFUSERS

A. Description: A square or rectangular inlet shall be an integral part of the frame assembly and a transition piece shall be available to facilitate attachment of round duct. An inner core assembly consisting of fixed deflection louvers shall be available in one-, two-, three- or four-way horizontal discharge patterns. Steel or aluminum induction blades shall be welded to each wing of the inner core. The induction blades shall be oriented at 45° angles in opposite directions to ensure rapid mixing of primary and room air. The inner core assembly must be removable in the field without tools for easy installation, cleaning or damper adjustment.

B. Frame: Surface mount type. In ACT, where outer dimensions are 18x18 or greater, lay-in type shall be used.

C. Color: As shown on drawings.

D. Damper: Optional damper shall be constructed of heavy gauge steel or aluminum. Damper must be operable from the face of the diffuser by removing the spring loaded inner core assembly.

2.3 CEILING EXHAUST AND RETURN REGISTERS/GRILLES

A. Description: Grilles shall have 3/4-inch blade spacing. The fixed deflection blades shall be available parallel to the long or short dimension of the grille. Construction shall be of extruded steel or aluminum with a 1¼-inch wide border on all sides. Minimum border thickness shall be 0.040-0.050 inch. Sizes 24 x 24 inches and smaller shall be constructed using a roll-formed frame. Corners shall be welded with full penetration resistance welds. Sizes larger than 24 x 24 inches shall be constructed by using heavy steel or aluminum extrusions and shall be interlocked at the four corners and mechanically staked to form a rigid frame. Screw holes shall be counter-sunk for a neat appearance. Deflection blades shall be contoured to a specifically designed and tested cross-section to meet published test performance data. Blades shall be firmly held in place by mullions from behind the grille and fixed in place by crimping or welding. Blade deflection angle shall be available at 35°.

B. Frame: Surface mounted with countersunk screw mounting. In ACT, where nominal dimensions are 18x18 or greater, lay-in type shall be used.

C. Color: As shown on drawings.

D. Damper: Optional opposed blade volume damper shall be constructed of heavy gauge steel or aluminum. Damper must be operable from the face of the grille.

2.4 HEAVY DUTY RETURN GRILLES

A. Description: Steel return bar grilles shall have 1/2-inch bar spacing and 38° deflection. The fixed deflection bars shall be available parallel to the long or short dimension of the grille. Construction shall be of steel with a 1¼-inch border width on all sides and a minimum border gauge thickness of 16; bars shall be 14-gauge steel. Bars shall be reinforced by perpendicular, steel support bars spaced on 6-inch maximum centers. Corners shall be welded with full penetration resistance welds with a reinforcing patch for extra strength. Screw holes shall be countersunk for a neat appearance.

B. Frame: Surface mounted with countersunk screw mounting.

C. Color: As shown on drawings.

2.5 WALL SUPPLY REGISTERS/GRILLES

A. Type: Supply grilles shall be double deflection. The deflection blades shall be available parallel to the long dimension of the grille or register. Construction shall be of steel or aluminum with a 1¼-inch wide border on all sides. Sizes 24 x 24 inches and below shall have roll-formed borders with a minimum thickness of 0.032 inch. Larger sizes shall be constructed using continuous steel or aluminum extrusions with a nominal thickness of 0.040 through 0.050 inch and shall be interlocked at the four corners and mechanically staked to form a rigid frame. Screw holes shall be countersunk for a neat appearance. Deflection blades shall be contoured to a specifically designed and tested cross-section to meet published test performance data. Blades shall be spaced on 3/4-inch centers. Blades shall have friction pivots on both sides to allow individual blade adjustment without loosening or rattling or be inserted through the frame and held tight with steel friction wire interlocked to the frame on both ends of each side. Plastic blade pivots are not acceptable.

B. Frame: Surface mounted with countersunk screw mounting.

B. Damper: Optional opposed blade volume damper shall be constructed of heavy gauge steel or aluminum. Damper must be operable from the face of the grille.

2.6 LINEAR SLOT DIFFUSERS

A. Fabrication: Linear slot diffusers shall have slot spacing of the sizes and mounting types shown on the plans. Linear slot diffusers shall be available in standard one piece lengths up to 6 feet and 1 to 8 discharge slots. Diffuser lengths greater than 6 feet shall be furnished in multiple sections and will be joined together end-to-end with alignment pins to form a continuous slot appearance. All alignment components to be provided by the manufacturer.

B. Frame: The frame and support bars shall be constructed of heavy gauge extruded aluminum. The pattern controller shall be an aerodynamically curved “ice-tong” shaped steel deflector capable of 180° pattern adjustment from the face of the diffuser and shall allow dampering if required. Maximum pattern controller length shall be 3 feet, for diffusers longer than 3 feet pattern controllers shall be furnished in multiple sections. Surface mount type with countersunk screw mounting for hard ceilings or lay-in mount type for ACT.

C. Color: The face finish shall be as shown on the drawings and the pattern colors shall have a black finish.

D. Accessories: Heavy gauge extruded aluminum end borders, end caps and mitered corners shall be available to close off the ends of the diffusers. Plenums shall be manufactured by the same manufacturer of the linear slot diffusers.

2.7 VENTS

A. Dryer/Kiln Exhaust Termination: Provide Tjernlund Products, Inc. Model VH1-3 sidewall vent hood or equal.

2.8 ROOF HOODS

A. General Description:

1. Ventilator is low silhouette for intake/relief applications.

B. Hood and Base:

1. Material Type: Aluminum.
2. Hood Constructed of precision formed, arched panels with interlocking seams.
3. Vertical end panels are fully locked into hood end panels.
4. Base height is standard of 5 inches.
5. Curb cap is six inches larger then throat size.
6. Curb cap has pre-punched mounting holes for installation.

C. Birdscreen:

1. Constructed of ½ inch Aluminum mesh.

2. Mounted horizontally across the intake area of the hood.

D. Hood Support:

1. Constructed of galvanized steel and fastened so the hood can either be removed completely from the base or hinged open.

E. Options/Accessories:

1. Roof Curbs:

a. Type: Welded, straight sided curb.
b. Material: Aluminum.
c. Insulation thickness: 2 inches.
d. Height: 18 inches.

2. Dampers:

a. Type: As noted on the drawings.
b. Prevents outside air from entering back into the building when fan is off
c. Balanced for minimal resistance to flow
d. Galvanized frames with pre-punched mounting holes

3. Insect Screen:

a. Constructed of fine mesh aluminum
b. Fitted to the top of the throat and prevents entry of insects

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Check location and sizes of outlets and inlets and make necessary adjustments in position and/or size to conform with architectural features, symmetry, lighting arrangement, and ceiling grid.

C. Ceiling grilles and registers shall fit in tiles without infringing on the ceiling grid. Any discrepancies shall be reported prior to ordering the inlet/outlet.

D. Install diffusers to ductwork with air tight connection.

E. Provide balancing dampers on duct take-off to diffusers, and grilles and registers, despite whether dampers are specified as part of the diffuser, or grille and register assembly.

F. Paint ductwork visible behind air outlets and inlets matte black. Refer to Section 099000.

END OF SECTION 23.3700

SECTION 23.3750 – WALL LOUVERS

PART 1 GENERAL

1.1 SUMMARY

A. This section includes fixed, extruded-aluminum louvers.

B. Related Sections include the following:

1. Division 07 Section "Joint Sealants": Sealants installed in perimeter joints between louver frames and adjoining construction.

1.2 DEFINITIONS

A. Louver Terminology: Definitions of terms for metal louvers contained in AMCA 501 apply to this Section unless otherwise defined in this Section or in referenced standards.

B. Drainable-Blade Louver: Louver with blades having gutters that collect water and drain it to channels in jambs and mullions, which carry it to bottom of unit and away from opening.

1.3 PERFORMANCE REQUIREMENTS

A. Thermal Movements: Provide louvers that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg. F., ambient; 180 deg. F., material surfaces.

B. Air-Performance, Water-Penetration, Air-Leakage, and Wind-Driven Rain Ratings: Provide louvers complying with performance requirements indicated, as demonstrated by testing manufacturer's sock units identical to those provided, except for length and width according to AMCA 500-L.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.

B. Shop Drawings: For louvers and accessories. Include plans, elevations, sections, details, and attachments to other Work. Show blade profiles, angles, and spacing.

C. Samples for Verification: For each type of metal finish required.

D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency or by manufacturer and witnessed by a qualified testing agency, for each type of louver.

1.5 QUALITY ASSURANCE

A. Source Limitations: Obtain louvers through one source from a single manufacturer where indicated to be of same type, design, or factory-applied color finish.

B. Welding: Qualify procedures and personnel according to the following:

1. AWS D1.2, “Structural Welding Code—Aluminum”.

C. SMACNA Standard: Comply with recommendations in SMACNA’s “Architectural Sheet Metal Manual” for fabrication, construction details, and installation procedures.

1.6 PROJECT CONDITIONS

A. Field Measurements: Verify louver openings by field measurements before fabrication and indicate measurement on Shop Drawings. Coordinate the requirements of the recessed flange installation with G.C.

1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish opening dimensions and proceed with fabricating louvers without field measurements. Coordinate construction to ensure that actual opening dimensions correspond to established dimensions.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Greenheck; Model ESD-603.
2. Pottorf; Model EFD-637.
3. Ruskin Company; Model ELF6375DX.

2.2 MATERIALS

A. Aluminum Extrusions: ASTM B 221, alloy 6063-T5 or T-52.

B. Aluminum Sheet: ASTM B 209, alloy 3003 or 5005 with temper as required for forming, or as otherwise recommended by metal producer for required finish.

C. Fasteners: Of same basic metal and alloy as fastened metal or 300 Series stainless steel, unless otherwise indicated. Do not use metals that are incompatible with joined materials.

1. Use types and sizes to suit unit installation conditions.
2. Use Phillips flat-head screws for exposed fasteners, unless otherwise indicated.

D. Post-installed Fasteners for Concrete and Masonry: Torque-controlled expansion anchors, made from stainless-steel components, with capability to sustain, without failure, a load equal to 4 times the loads for imposed, for concrete, or 6 times the load imposed, for masonry, as determined by testing per ASTM E 488, conducted by a qualified independent testing agency.

E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.3 FABRICATION, GENERAL

A. Assemble louvers in factory in minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

B. Maintain equal louver blade spacing to produce uniform appearance.

C. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.

D. Include supports, anchorages, and accessories required for complete assembly.

E. Provide subsills made of same material as louvers.

F. Join frame members to each other and to fixed louver blades with fillet welds, threaded fasteners, or both, as standard with louver manufacturer, concealed from view, unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.

2.4 FIXED, EXTRUDED-ALUMINUM LOUVERS

A. Horizontal, Drainable-Blade Louver:

1. Louver Depth: 6 inches.
2. Frame and Blade Nominal Thickness: As required to comply with structural performance requirements, but not less than 0.80 inch.
3. Louver Blades: 45 degree slope with center baffle, return bend, and continuous blade reinforcing.
4. Mullion Type: Concealed structural mullions.
5. Free Area: Not less than 8.0 sq.ft. for 48-inch-wide by 48-inch high louver.
6. Frame construction shall contain integral flanges, to be mounted within brick courses. Coordinate the requirements with the G.C. prior to ordering.

2.5 LOUVER SCREENS

A. General: Provide screen at interior face of each exterior louver.

1. Screening Type: Bird screening for louvers connected to ducts; insect screening for louvers not connected to ducts.

B. Secure screens to louver frames with stainless-steel machine screws, spaces a maximum of 6 inches from each corner and at 12 inches o.c.

C. Louver Screen Frames: Fabricate with mitered corners to louver sizes indicated.

1. Metal: Same kind and form of metal as indicated for louver to which screens are attached.
2. Finish: Same finish as louver frames to which louver screens are attached.
3. Type for Bird Screening: Non-rewireable frame with a driven spline or insert for securing screen mesh.
4. Type for Insect Screening: Rewirable frame with a driven spline or insert for securing screen mesh.

D. Louver Screening:

1. Bird Screening: Aluminum, ½-inch-square mesh, 0.063-inch wire.
2. Insect Screening: Stainless steel, 18-by-18 mesh, 0.009-inch wire.

2.6 BLANK-OFF PANELS

A. Insulated Blank-off Panels: Laminated metal-faced panels consisting of insulating core surfaced on back and front with metal sheets.

1. Thickness: 2 inches unless otherwise indicated.
2. Metal Facing Sheets: Aluminum sheet, not less than 0.032-inch nominal thickness.
3. Insulating Core: Unfaced mineral-fiber or foamed-plastic rigid insulation board.

4. Edge Treatment: Trim perimeter edges of blank-off panels with louver manufacturer's standard extruded-aluminum-channel frames, not less than 0.080-inch nominal thickness, with corners mitered and with same finish as panels.
5. Seal perimeter joints between panel faces and louver frames with 1/8-by-1-inch PVC compression gaskets.
6. Panel Finish: Same type of finish applied to louvers, but black color.
7. Attach blank-off panels of louver frames with clips or stainless-steel, sheet metal screws.

2.7 ALUMINUM FINISH

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products for recommendations for applying and designating finishes.

B. Finish louvers after assembly.

C. Finish designations prefixed by AA comply with system established by the Aluminum Association for designating aluminum finishes.

D. High-Performance Organic-Coating Finish: AA-C12C42R1 x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Fluoropolymer Two-Coat Coating system: Manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605.
2. Color: Custom color to match Architect's sample.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates and openings, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

3.3 INSTALLATION

A. Locate and place louvers level, plumb, and at indicated alignment with adjacent work.

B. Use concealed anchorages where possible. Provide brass or led washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.

C. Form closely fittings joints with exposed connections accurately located and secured.

D. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.

E. Repair finishes damaged by cutting, welding, soldering, and grinding. Restore finishes to no evidence remains of corrective work. Return items that cannot be refinished in the field to the factory, make required alterations, and refinish entire unit or provide new units.

F. Protect galvanized and nonferrous-metal surfaces from corrosion or galvanic action by applying a heavy coating of bituminous paint on surfaces that will be in contact with concrete, masonry, or dissimilar metals.

G. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Division 07 Section “Joint Sealants” for sealants applied during louver installation.

3.4 ADJUSTING AND CLEANING

A. Clean exposed surfaces of louvers that are not protected by temporary covering, to remote fingerprints and soil during construction period. Do not let soil accumulate until final cleaning.

B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surface and dry.

C. Restore louvers damaged during installation and construction so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.

1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

END OF SECTION 23.3750

SECTION 23.4000 – HVAC AIR CLEANING DEVICES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Disposable panel filters.

1.2 RELATED SECTIONS

A. Section 01 5000 - Temporary Facilities and Controls: Filters for temporary heating and ventilating.

B. Refer to the requirements of Division 1 and coordinate the division of responsibility of the work with Section 01 1000 – Summary of the Project.

1.3 REFERENCES

A. ARI 850 - Commercial and Industrial Air Filter Equipment; Air-Conditioning and Refrigeration Institute; 2004.

B. ASHRAE Std 52.1 - Gravimetric and Dust-Spot Procedures for Testing Air Cleaning Devices Used in General Ventilation for Removing Particulate Matter; American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.; 1992.

C. UL 900 - Standard for Air Filter Units; Underwriters Laboratories Inc.; 2004.

1.4 PERFORMANCE REQUIREMENTS

A. Conform to ARI 850 Section 7.4.

1. Dust Spot Efficiency: Plus or minus 5 percent.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on filter media, filter performance data, filter assembly and filter frames, dimensions, motor locations and electrical characteristics and connection requirements.

C. Shop Drawings: Indicate filter assembly and filter frames, dimensions, motor locations, and electrical characteristics and connection requirements.

D. Manufacturer's Installation Instructions: Indicate assembly and change-out procedures.

E. Operation and Maintenance Data: Include instructions for operation, changing, and periodic cleaning.

1.6 QUALITY ASSURANCE

A. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

1.7 EXTRA MATERIALS

A. See Section 01 6000 - Product Requirements, for additional provisions.

B. Provide two sets of disposable filters for each piece of HVAC equipment requiring air filters.

PART 2 PRODUCTS

2.1 DISPOSABLE PANEL FILTERS

A. Manufacturers:

1. American Filtration Inc: www.americanfiltration.com.
2. Camfil Farr Company: www.camfilfarr.com.

B. Media: UL 900 Class 2, fiber blanket, factory sprayed with flameproof, non-drip, non-volatile adhesive.

1. Nominal Size: 24 x 24 inches (610 x 610 mm).
2. Thickness: 2 inch (50 mm).

C. Performance Rating:

1. MERV Rating: 13.
2. Face Velocity: 500 FPM (2.54 m/sec).
3. Initial Resistance: less then 0.40 inch WG
4. Recommended Final Resistance: 2x initial pressure drop.

D. Filter Frame: High wet strength beverage board.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install air cleaning devices in accordance with manufacturer's instructions.

B. Prevent passage of unfiltered air around filters with felt, rubber, or neoprene gaskets.

C. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with clean set.

END OF SECTION 23.4000

SECTION 23.5233 – CONDENSING BOILERS

PART 1 GENERAL

1.1 RELATED SECTIONS

A. Section 23 2114 - Hydronic Specialties.

B. Section 23 0923 – Direct Digital Control (DDC) System.

C. Section 23 0993 - HVAC Control Sequence.

D. Refer to the requirements of Division 1 and coordinate the division of responsibility of the work with Section 01 1000 – Summary of the Project.

1.2 REFERENCES

A. ASME Section IV

B. CAN-1.3.1-77, Industrial and Commercial Gas Fired Packaged Boilers

C. CSD-1, Controls and Safety Devices

D. XL GAPS

E. NEC, National Electric Code

F. UL-795 7th Edition

G. AHRI, BTS-2000

H. ASHRAE 90.1

1.3 SUBMITTALS

A. Product Data: Include performance data, operating characteristics, technical product data, rated capacities of selected model, weights (shipping, installed and operating), installation and start-up instructions, and furnished accessory information.

B. Shop Drawings: For boiler, standard boiler trim and accessories.

1. End Assembly Drawing: Detail overall dimensions, connection sizes, connection locations, and clearance requirements.

2. Wiring Diagrams: Detail electrical requirements for the boiler including ladder type wiring diagrams for power, interlock and control wiring. Clearly differentiate between portions of wiring that are factory installed and portions to be field installed.

C. Certificate of Product Rating: Submit AHRI Certificate indicating Thermal Efficiency, Combustion Efficiency, Materials of Construction, Input, and Gross Output conform to the design basis.

D. Thermal efficiency curves: Submit thermal efficiency curves between and including minimum and maximum rated capacities, for return water temperatures ranging from 80°F to 180°F.

E. Water side pressure drop curve.

F. Flue gas temperature curves: Submit flue gas temperature curves for minimum and maximum boiler capacity, for return water temperatures ranging from 80°F to 160°F.

1. If submitted flue gas temperatures, minimum or maximum inputs are different from that of the basis of design manufacturer and model, the manufacturer shall be responsible for draft calculations and reselection of the flue gas exhaust system.

G. Source quality-control test reports.

H. Field quality-control test reports: Start-up by a factory authorized service company.

I. Operation and Maintenance Data: Data to be included in Installation and Operation Manual.

J. Warranty: Standard warranty specified in this Section.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: Firms regularly engaged in the manufacture of condensing hydronic boilers with welded steel pressure vessels, whose products have been in satisfactory use in service for not less than twenty-five (25) years. The manufacturer must be headquartered in North America and manufacture pressure vessels in an ASME-certified facility wholly owned by the manufacturer. The specifying engineer, contractor and end customer must have the option to visit the factory to witness test fire and other relevant procedures.

B. Electrical Components, Devices and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. ASME Compliance: Fabricate and label boilers to comply with ASME Boiler and Pressure Vessel Code, Section IV “Heating Boilers”, for a maximum allowable working pressure of 160 PSIG.

D. CSD-1 Compliance: The boiler shall comply with ASME Controls and Safety Devices for Automatically Fired Boilers (CSD-1).

E. ASHRAE/IESNA 90.1 Compliance: Boilers shall have minimum efficiency according to "Gas and Oil Fired Boilers - Minimum Efficiency Requirements."

F. UL Compliance: Boilers must be tested for compliance with UL 795, "Standard for Commercial-Industrial Gas Heating Equipment." Boilers shall be listed and labeled by ETL.

G. AHRI Compliance: Boilers shall be tested and rated according to the BTS-2000 test standard and verified by AHRI.

H. The equipment shall be of the type, design, and size that the manufacturer currently offers for sale and appears in the manufacturer's current catalog.

I. The equipment shall fit within the allocated space, leaving ample allowance for maintenance and inspection.

J. The equipment shall be new and fabricated from new materials. The equipment shall be free from defects in materials and workmanship.

K. In order to provide unit responsibility for the specified capacities, efficiencies, and performance, the boiler manufacturer shall certify in writing that the equipment being submitted shall perform as specified.

1.5 COORDINATION

A. Mechanical contractor shall coordinate the size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete reinforcement and formwork requirements are specified in Division 03.

1.6 WARRANTY

A. See Section 01 7700 - Closeout Submittals, for additional warranty requirements.

B. Standard Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of boilers that fail in materials or workmanship within specified warranty period provided the boiler is installed, controlled, operated and maintained in accordance with the Installation, Operation and Maintenance Manual.

1. Warranty Period for the Pressure Vessel and Heat Exchanger: The boiler manufacturer shall warranty against failure due to:

    a. Flue gas condensate corrosion, and/or defective material or workmanship for a period of ten (10) years, non-prorated, from the date of shipment from the factory.
    b. Thermal shock for the lifetime of the boiler.

2. Warranty Period for the Burner: The boiler manufacturer shall warranty the mesh burner head against defective material or workmanship for a period of five (5) years, non-prorated, from the date of shipment from the factory.
3. Warranty Period for all other components: The boiler manufacturer will repair or replace any part of the boiler that is found to be defective in workmanship or material for a period of two (2) years, non-prorated, from the date of shipment from the factory.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Weil-Mclain.

B. Lochinvar.

C. Pre-approved equal.

2.2 BOILER CONSTRUCTION

A. Boiler(s) heat exchanger:

1. Fire-tube stainless steel heat exchanger.
2. The boiler must have non-metallic condensate collector to capture condensate from both, the vent system and heat exchanger.

B. Factory Assembled and Tested.

C. Boiler(s) main components:

1. The combustion chamber will be sealed and located at the top which will be of counter flow design to assure that sediment and any lime that might form will fall to the bottom away from the crown sheet area.
2. Boiler(s) shall be supplied with a gas valve designed with negative pressure regulation (fan venturi effect "pulls" gas through valve rather than gas pressure “pushing” gas through valve). Negative pressure regulation enables the boiler to operate in a safe condition at 3.5” W.C. inlet gas pressure. The inlet (natural or propane) gas pressure to the boiler gas valve should be a minimum of 3.5” W.C. and a maximum of 14” W.C. If inlet gas pressure exceeds 13” W.C., a 100% lock-up type gas pressure regulator of adequate size must be installed in gas supply piping and adjusted to prevent pressure in excess of 13” W.C.
3. The burner shall be premix combustion type, made with stainless steel and a woven metal fiber outer covering to provide a wide range of modulating firing rates.
4. The boiler shall be equipped with a variable speed blower system capable of modulating the boiler firing rate.

5. The boiler shall be equipped with a device capable of controlling the air/fuel ratio through a 10 to 1 fturndown ratio.
6. The control system shall have an electronic display for boiler set-up, boiler status, and boiler diagnostics.
7. Taco ECM circulator.

2.3 VENTING AND COMBUSTION AIR

A. Boiler(s) must be capable of using outside air piped directly to boiler for combustion. Inlet and termination of these pipes must be connected to either through-the-roof or sidewall terminations as recommended by the manufacturer.

B. Internal vent pipe must be non-metallic.

C. The boiler shall be direct vent using SS.

2.4 BOILER TRIM

A. All electrical components to be of a high quality.

B. Water boiler(s) controls furnished:

1. High limit temperature control with manual reset (190 degrees F maximum allowable boiler water temperature).
2. Combination pressure-temperature gauge. Gauge dial clearly marked and easy to read.
3. ASME certified pressure relief valve.
4. Flue gas, outlet water temperature, and return water temperature sensors.
5. Low water protection with manual reset.
6. Built-in freeze protection.

C. Boiler Control to be UL 353 Listed with:

1. Built-in MODBUS communication.
2. 4 circulator contacts.
3. Auxiliary input/output capability.
4. Variable temperature zones that require no mixing valves.
5. 3 thermostat inputs.
6. Outdoor reset for each priority.
7. Zone and priority based setup options.
8. 2 Network and 2 local priorities available on each cascaded boiler.
9. Flue gas, outlet water temperature, and return water temperature sensors.
10. LCD display and 5 button interface.
11. Alarm contact that triggers during manual lockout, flame failure, high temperature limit and low water cut off.
12. Remote modulation capable of interfacing with Building Automation Systems and Multiple Boiler Systems.

13. Ability to control additional heat demand.

2.5 BOILER MANUALS

A. The boiler(s) shall be provided with complete instruction manuals, including:
   1. Boiler Installation Manual.
   2. User's Manual.

PART 3 EXECUTION

3.1 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping from equipment drain connection to nearest floor drain. Piping shall be at least full size of connection. Provide an isolation valve if required.

C. Connect gas piping to boiler gas train inlet with isolation valve and union. Piping shall be at least full size of gas train connection. Provide a reducer if required.

D. Connect hot water supply and return water connections with shutoff valve and union or flange at each connection.

E. Install piping from safety relief valves to the nearest floor drain.

F. Install piping from flue gas condensate drain connection to the condensate drain trap and to the nearest floor drain.

G. Boiler Venting:

   1. Install flue venting and combustion air-intake.
   2. Connect to boiler connections, flue size and type as recommended by the manufacturer.

H. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

I. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.2 FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.

1. After boiler installation is completed, the manufacturer shall provide the services of a field representative to inspect components, assemblies, and equipment installations, including connections and provide startup of the boiler and training to the operator.
2. Arrange with National Board of Boiler and Pressure Vessel Inspectors for inspection of boilers and piping. Obtain certification for completed boiler units, deliver to Owner, and obtain receipt.

B. Tests and inspections:

1. Perform installation and startup checks according to manufacturer's written instructions.
2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion.

    a. Check and adjust initial operating set points and high- and low-limit safety set points of fuel supply, water level and water temperature.
    b. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

C. Remove and replace malfunctioning units and retest as specified above.

D. Occupancy Adjustments: When requested within 12 months of startup, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to 2 visits to Project during other than normal occupancy hours for this purpose.

END OF SECTION 23.5233

SECTION 23.7416 - PACKAGED ROOFTOP AIR HANDLING UNITS

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Packaged Rooftop Air Handling Units (RTUs & ERUs).

1.2 RELATED SECTIONS

A. Section 23 0513 - Common Motor Requirements for HVAC Equipment.

B. Section 23 0514 – Variable Frequency Drives.

C. Section 23 3300 - Air Duct Accessories: Flexible duct connections.

D. Section 23 0993 – HVAC Controls Sequence.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data:

1. Published Literature: Indicate dimensions, weights, capacities, ratings, gages and finishes of materials, and electrical characteristics and connection requirements.
2. Filters: Data for filter media, filter performance data, filter assembly, and filter frames.
3. Fans: Performance and fan curves with specified operating point clearly plotted, power, RPM.
4. Sound Power Level Data: Fan outlet and casing radiation at rated capacity.
5. Electrical Requirements: Power supply wiring including wiring diagrams for interlock and control wiring, clearly indicating factory-installed and field-installed wiring.

C. Shop Drawings: Indicate assembly, unit dimensions, weight loading, required clearances, construction details, field connection details, and electrical characteristics and connection requirements.

D. Manufacturer's Instructions: Include installation instructions.

E. Maintenance Data: Include instructions for lubrication, filter replacement, motor and drive replacement, spare parts lists, and wiring diagrams.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum ten years of documented experience.

B. Unit shall be safety certified by ETL and ETL US listed. Unit nameplate shall include the ETL/ETL Canada label.

1.6 REGULATORY REQUIREMENTS

A. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

1.7 DELIVERY, STORAGE, AND PROTECTION

A. Accept products on site in factory-fabricated protective containers, with factory-installed shipping skids and lifting lugs. Inspect for damage.

B. Store in clean dry place and protect from weather and construction traffic. Handle carefully to avoid damage to components, enclosures, and finish.

C. Do not operate units until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

1.8 EXTRA MATERIALS

A. See Section 01 6000 - Product Requirements, for additional provisions.

B. Supply two sets of filters for each unit.

1.9 WARRANTIES

A. The units shall be warranted by the manufacturer against defects in material and factory workmanship for one year. A minimum (5) five year compressor warranty shall be provided. First year of warranty shall include parts and labor. The warranties shall begin when the building has been determined to be substantially complete.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. Aaon.

B. Daikin.

C. Valent.

D. Addison.

2.2 RTU-1, 3, 4, 5, & 6:

A. General Description

1. Packaged rooftop unit shall include:

a. Evaporator coils
b. Filters
c. Supply fans
d. Dampers
e. Variable capacity compressors
f. Air-cooled condenser coils and condenser fans
g. Reheat coil
h. Gas heaters
i. Unit controls

2. Unit shall be factory assembled and tested including leak testing of the DX coils, pressure testing of the refrigeration circuit, and run testing of the completed unit. Run test report shall be supplied with the unit in the service compartment's literature pocket.
3. Unit shall have decals and tags to indicate lifting and rigging, service areas and caution areas for safety and to assist service personnel.
4. Unit components shall be labeled, including refrigeration system components and electrical and controls components.
5. Estimated sound power levels (dB) shall be shown on the unit ratings sheet.
6. Installation, Operation, and Maintenance manual shall be supplied within the unit.
7. Laminated color-coded wiring diagram shall match factory installed wiring and shall be affixed to the interior of the control compartment's hinged access door.
8. Unit nameplate shall be provided in two locations on the unit, affixed to the exterior of the unit and affixed to the interior of the control compartment's hinged access door.

B. Construction

1. All cabinet walls, access doors, and roof shall be fabricated of double wall, impact resistant, rigid polyurethane foam panels.
2. Unit insulation shall have a minimum thermal resistance R-value of 16. Foam insulation shall have a minimum density of 2 pounds/cubic foot and shall be tested in accordance with ASTM D-1929-11 for a minimum flash ignition temperature of 610°F.
3. Unit construction shall be double wall with G90 galvanized steel on both sides and a thermal break. Double wall construction with a thermal break prevents moisture accumulation on the insulation, provides a cleanable interior, reduces heat transfer through the panel, and prevents exterior condensation on the panel.

4. Unit shall be designed to reduce air leakage and infiltration through the cabinet. Cabinet leakage shall not exceed 1% of total airflow when tested at 3 times the minimum external static pressure provided in

AHRI Standard 340/360. Panel deflection shall not exceed L/240 ratio at 125% of design static pressure, at a maximum 8 inches of positive or negative static pressure, to reduce air leakage. Deflection shall be measured at the midpoint of the panel height and width. Continuous sealing shall be included between panels and between access doors and openings to reduce air leakage. Piping and electrical conduit through cabinet panels shall include sealing to reduce air leakage.

5. Roof of the air tunnel shall be sloped to provide complete drainage. Cabinet shall have rain break overhangs above access doors.
6. Access to filters, dampers, cooling coils, reheat coil, heaters, compressors, and electrical and controls components shall be through hinged access doors with quarter turn, zinc cast, lockable handles. Full length stainless steel piano hinges shall be included on the doors.
7. Exterior paint finish shall be capable of withstanding at least 2,500 hours, with no visible corrosive effects, when tested in a salt spray and fog atmosphere in accordance with ASTM B 117-95 test procedure.
8. Units with cooling coils shall include double sloped 304 stainless steel drain pans.
9. Unit shall be provided with bottom discharge and bottom return air openings. Openings shall have upturned flanges of at least 1/2 inch in height around the opening.
10. Unit shall include lifting lugs on the top of the unit.
11. Unit shall include factory installed, painted galvanized steel condenser coil guards on the face of the condenser coil.

C. Electrical

1. Unit shall be provided with factory installed and factory wired, non-fused disconnect switch.
2. Unit shall have a 10 kAIC SCCR.
3. Unit shall be provided with a factory installed and factory wired 115V, 12 amp GFI outlet disconnect switch in the unit control panel.
4. Unit shall be provided with phase and brown out protection which shuts down all motors in the unit if the electrical phases are more than 10% out of balance on voltage, the voltage is more than 10% under design voltage or on phase reversal.

D. Supply Fans

1. Unit shall include direct drive, unhoused, backward curved, plenum supply fans.
2. Blowers and motors shall be dynamically balance and mounted on rubber isolators.
3. Motors shall be premium efficiency ODP with ball bearings rated for 200,000 hours service with external lubrication points.
4. Variable frequency drives shall be factory wired and mounted in the unit. Fan motors shall be premium efficiency.
5. Unit shall include barometric relief dampers.

E. Cooling Coils

1. Evaporator Coils

a. Coils shall be designed for use with R-454B refrigerant and constructed of copper tubes with aluminum fins mechanically bonded to the tubes and galvanized steel end casings. Fin design shall be sine wave rippled.
b. Coil shall be standard capacity.
c. Coils shall be hydrogen or helium leak tested.

d. Coils shall be furnished with factory installed expansion valves.

F. Refrigeration System

1. Unit shall be factory charged with R-454B refrigerant.
2. Compressors shall be scroll type with thermal overload protection and carry a 5 year non-prorated warranty, from the date of original equipment shipment from the factory.
3. Compressors shall be mounted in an isolated service compartment which can be accessed without affecting unit operation. Lockable hinged compressor access doors shall be fabricated of double wall, rigid polyurethane foam injected panels to prevent the transmission of noise outside the cabinet.
4. Compressors shall be isolated from the base pan with the compressor manufacturer's recommended rubber vibration isolators, to reduce any transmission of noise from the compressors into the building area.
5. Each refrigeration circuit shall be equipped with expansion valve type refrigerant flow control.
6. Each refrigeration circuit shall be equipped with automatic reset low pressure and manual reset high pressure refrigerant safety controls, Schrader type service fittings on both the high pressure and low pressure sides and a factory installed liquid line filter driers.
7. Unit shall include a variable capacity scroll compressor on the refrigeration circuit which shall be capable of modulation from 10-100% of its capacity.
8. Refrigeration circuit shall be provided with hot gas reheat coil, modulating valves, electronic controller, supply air temperature sensor and a control signal terminal which allow the unit to have a dehumidification mode of operation, which includes supply air temperature control to prevent supply air temperature swings and overcooling of the space.
9. Reheat coil shall be multi-pass and fabricated from aluminum microchannel tubes.
10. The factory installed controls shall include a 3 minute off delay timer to prevent compressor short cycling. The controls shall also include an adjustable, 20 second delay timer for each additional capacity stage to prevent multiple capacity stages from starting simultaneously and an adjustable compressor lock out.

G. Condensers

1. Air-Cooled Condenser

a. Condenser fans shall be a vertical discharge, axial flow, direct drive fans.
b. Coils shall be designed for use with R-454B refrigerant. Coils shall be multi-pass and fabricated from aluminum microchannel tubes.
c. Coils shall be designed for a minimum of 10°F of refrigerant sub-cooling.
d. Coils shall be hydrogen or helium leak tested.
e. Condenser fans shall be high efficiency electrically commutated motor driven with factory installed head pressure control module. Condenser airflow shall continuously modulate based on head pressure and cooling operation shall be allowed down to 35°F with adjustable compressor lockout.

H. Gas Heating

1. Stainless steel heat exchanger furnace shall carry a 25 year non-prorated warranty, from the date of original equipment shipment from the factory.
2. Gas furnace shall consist of stainless steel heat exchangers with multiple concavities, an induced draft blower and an electronic pressure switch to lockout the gas valve until the combustion chamber is purged and combustion airflow is established.

3. Furnace shall include a gas ignition system consisting of an electronic igniter to a pilot system, which will be continuous when the heater is operating, but will shut off the pilot when heating is not required.
4. Modulating Natural Gas Furnace shall be equipped with modulating gas valves, adjustable speed combustion blowers, stainless steel tubular heat exchangers, and electronic controller. Combustion blowers and gas valves shall be capable of modulation. Electronic controller includes a factory wired, field installed supply air temperature sensor. Sensor shall be field installed in the supply air ductwork. Supply air temperature setpoint shall be adjustable on the electronic controller within the controls Gas heater shall be capable of capacity turndown ratio as shown on the unit rating sheet.

I. Filters

1. Unit shall include 4 inch thick, pleated panel filters with an ASHRAE MERV rating of 13, upstream of the cooling coil. Unit shall also include 2 inch thick, pleated panel pre filters with an ASHRAE MERV rating of 8, upstream of the 4 inch standard filters.

J. Outside Air/Economizer

1. Unit shall include 0-100% economizer consisting of a motor operated outside air damper and return air damper assembly constructed of extruded aluminum, hollow core, airfoil blades with rubber edge seals and aluminum end seals. Damper blades shall be gear driven and designed to have no more than 20 cfm of leakage per sq ft. at 4 in. w.g. air pressure differential across the damper. Low leakage dampers shall be Class 2 AMCA certified, in accordance with AMCA Standard 511. Unit shall include outside air opening bird screen and outside air hood. Unit, except for horizontal series, shall also include barometric relief dampers.

a. Damper assembly shall be controlled by spring return enthalpy activated fully modulating actuator.

K. Controls

1. Factory Installed and Factory Provided Controller

a. Unit controller shall be capable of controlling all features and options of the unit. Controller shall be factory installed in the unit controls compartment and factory tested. Controller shall be capable of stand alone operation with unit configuration, setpoint adjustment, sensor status viewing, unit alarm viewing, and occupancy scheduling available without dependence on a building management system.

b. Controller shall have an onboard clock and calendar functions that allow for occupancy scheduling.
c. Controller shall include non-volatile memory to retain all programmed values without the use of a battery, in the event of a power failure.
d. Unit configuration, setpoint adjustment, sensor status viewing, unit alarm viewing, and occupancy scheduling shall be accomplished with connection to interface module with LCD screen and input keypad, interface module with touch screen, or with connection to PC with free configuration software. Controller shall be capable of connection with other factory installed and factory provided unit controllers with individual unit configuration, setpoint adjustment, sensor status viewing, and occupancy scheduling available from a single unit. Connection between unit controllers shall be with a modular cable. Controller shall be capable of communicating and integrating with a LonWorks or BACnet network. [Orion Controls System]

[RTU #4] Variable Air Volume Controller

1. [RTU #4] Unit shall utilize a variable capacity compressor system and a variable speed supply fan system to modulate cooling and airflow as required to meet space temperature cooling loads and to save operating energy. Supply fan speed shall modulate based on supply air duct static pressure. Cooling capacity shall modulate based on supply air temperature.
2. [RTU #4] With modulating hot gas reheat, unit shall modulate cooling and hot gas reheat as efficiently as possible, to meet space humidity loads and prevent supply air temperature swings and overcooling of the space.
3. [RTU #4] Unit shall modulate heating with constant airflow to meet space temperature heating loads. Modulating heating capacity shall modulate based on supply air temperature.

[RTU #1][RTU #3][RTU #5][RTU #6] Single Zone VAV Controller

1. Unit shall utilize a variable capacity compressor system and a variable speed fan system to modulate the cooling and airflow as required in meeting the space temperature needs and to save unit operating energy. Unit fan speed shall modulate based on space temperature, not supply air pressure.
2. [RTU #1][RTU #3][RTU #5][RTU #6] Units with modulating heat shall be capable of modulating fan speed in both the heating and cooling mode.
3. [RTU #1][RTU #3][RTU #5][RTU #6] With modulating hot gas reheat, unit shall modulate cooling and hot gas reheat as efficiently as possible, to meet space humidity loads and prevent supply air temperature swings and overcooling of the space.
4. Unit shall be provided with supply air temperature control. Mixing boxes and bypass ducts shall not be required for operation as a single zone VAV system.

L. Accessories

1. Unit shall be provided with a safety shutdown terminal block for field installation of a smoke detector which shuts off the unit's control circuit.
2. Unit shall be provided with a high condensate level switch that shuts down the unit when a high water level is detected in the drain pan.

2.3 RTU-2:

A. General Description

1. Packaged rooftop unit shall include:

a. Evaporator coils
b. Filters
c. Supply fans
d. Dampers
e. Variable capacity compressors
f. Air-cooled condenser coils and condenser fans
g. Reheat coil
h. Gas heaters
i. Unit controls

1. Unit shall be factory assembled and tested includingleak testing of the DX coils,pressure testing of the refrigeration circuit,and run testing of the completed unit. Run test report shall be supplied with the unit in the service compartment's literature pocket.
2. Unit shall have decals and tags to indicate lifting and rigging, service areas and caution areas for safety and to assist service personnel.
3. Unit components shall be labeled, includingrefrigeration system components andelectrical and controls components.
4. Estimated sound power levels (dB) shall be shown on the unit ratings sheet.
5. Installation, Operation and Maintenance manual shall be supplied within the unit.
6. Laminated color-coded wiring diagram shall match factory installed wiring and shall be affixed to the interior of the control compartment's hinged access door.
7. Unit nameplate shall be provided in two locations on the unit, affixed to the exterior of the unit and affixed to the interior of the control compartment's hinged access door.

B. Construction

1. All cabinet walls, access doors, and roof shall be fabricated of double wall, impact resistant, rigid polyurethane foam panels.
2. Unit insulation shall have a minimum thermal resistance R-value of 16. Foam insulation shall have a minimum density of 2 pounds/cubic foot and shall be tested in accordance with ASTM D-1929 for a minimum flash ignition temperature of 610°F.
3. Unit construction shall be double wall with G90 galvanized steel on both sides and a thermal break. Double wall construction with a thermal break prevents moisture accumulation on the insulation,provides a cleanable interior, reduces heat transfer through the panel, and prevents exterior condensation on the panel.

4. Unit shall be designed to reduce air leakage and infiltration through the cabinet. Cabinet leakage shall not exceed 1% of total airflow when tested at 3 times the minimum external static pressure provided in AHRI Standard 210/240.Panel deflection shall not exceed L/240 ratio at 125% of design static pressure, at a maximum 8 inches of positive or negative static pressure, to reduce air leakage. Deflection shall be measured at the midpoint of the panel height and width.Continuous sealing shall be included between panels and between access doors and openings to reduce air leakage. Piping and electrical conduit through cabinet panels shall include sealing to reduce air leakage.
5. Roof of the air tunnel shall be sloped to provide complete drainage. Cabinet shall have rain break overhangs above access doors.
6. Access to filters, dampers,cooling coil,reheat coil,heater,compressor,and electrical and controls components shall be through hinged access doors with quarter turn, lockable handles. Full length stainless steel piano hinges shall be included on the doors.
7. Exterior paint finish shall be capable of withstanding at least 2,500 hours, with no visible corrosive effects, when tested in a salt spray and fog atmosphere in accordance with ASTM B 117-95 test procedure.
8. Units shall include double sloped 304 stainless steel drain pans.
9. Unit shall be provided with through the base vertical discharge and return air openings. All openings through the unit shall have upturned flanges of at least 1/2 inch around the opening.

10. Unit shall include lifting lugs on the top of the unit.

C. Electrical

1. Unit shall be provided with factory installed and factory wired, non-fused disconnect switch.
2. Unit shall have a 10 kAIC SCCR.
3. Unit shall be provided with a factory installed and factory wired 115V, 12 amp GFI outlet disconnect switch in the unit control panel.
4. Unit shall be provided with phase and brown out protection which shuts down all motors in the unit if the electrical phases are more than 10% out of balance on voltage, the voltage is more than 10% under design voltage or on phase reversal.

D. Supply Fans

1. Unit shall include direct drive, unhoused, backward curved, plenum supply fans.
2. Blowers and motors shall be dynamically balanced.
3. Motor shall be premium efficiency ODP with ball bearings rated for 200,000 hours service with external lubrication points.
4. Variable frequency drive shall be factory wired and mounted in the unit.

E. Cooling Coils

1. Evaporator Coils

a. Coils shall be designed for use with R-454B refrigerant and constructed of copper tubes with aluminum fins mechanically bonded to the tubes and aluminum end casings. Fin design shall be sine wave rippled.
b. Coil shall be standard capacity
c. Coils shall be helium hydrogen or helium leak tested.
d. Coils shall be furnished with factory installed thermostatic expansion valves.

F. Refrigeration System

1. Unit shall be factory charged with R-454B refrigerant.
2. Compressors shall be scroll type with thermal overload protection and carry a 5 year non-prorated warranty, from the date of original equipment shipment from the factory.
3. Compressors shall be mounted in an isolated service compartment which can be accessed without affecting unit operation. Lockable hinged compressor access doors shall be fabricated of double wall,rigid polyurethane foam injected panels to prevent the transmission of noise outside the cabinet.
4. Compressors shall be isolated from the base pan with the compressor manufacturer's recommended rubber vibration isolators, to reduce any transmission of noise from the compressors into the building area.
5. Each refrigeration circuit shall be equipped with thermostatic expansion valve type refrigerant flow control.
6. Each refrigeration circuit shall be equipped with automatic reset low pressure and manual reset high pressure refrigerant safety controls, Schrader type service fittings on both the high pressureand low pressure sides, and a factory installed liquid line filter drier.

7. Unit shall include a variable capacity scroll compressor on the refrigeration circuit which shall be capable of modulation from 10-100% of its capacity.
8. Refrigeration circuit shall be provided with hot gas reheat coil, modulating valves, electronic controller, supply air temperature sensor and a control signal terminal which allow the unit to have a dehumidification mode of operation,which includes supply air temperature control to prevent supply air temperature swings and overcooling of the space.
9. The factory installed controls shall include a 3 minute off delay timer to prevent compressor short cycling and an adjustable compressor lockout.

G. Condensers

1. Air-Cooled Condenser

a. Condenser fans shall be a vertical discharge, axial flow, direct drive fans.
b. Coils shall be designed for use with R-454B refrigerant.
c. Coils shall be multi-pass and fabricated from aluminum microchannel tubes.
d. Coils shall be designed for a minimum of 10°F of refrigerant sub-cooling.
e. Coils shall be hydrogen or helium leak tested.
f. Condenser fans shall be high efficiency electrically commutated motor driven with factory installed head pressure control module.Condenser airflow shall continuously modulate based on head pressure and cooling operation shall be allowed down to 35°F with adjustable compressor lockout.

H. Gas Heating

1. Stainless steel heat exchanger furnace shall carry a 25 year non-prorated warranty, from the date of original equipment shipment from the factory.
2. Gas furnace shall consist of stainless steel heat exchangers with multiple concavities, an induced draft blower and an electronic pressure switch to lockout the gas valve until the combustion chamber is purged and combustion airflow is established.
3. Furnace shall include a gas ignition system consisting of an electronic igniter to a pilot system, which will be continuous when the heater is operating, but will shut off the pilot when heating is not required.
4. Modulating Natural Gas Furnace shall be equipped with modulating gas valves, adjustable speed combustion blowers, stainless steel tubular heat exchangers, and electronic controller. Combustion blowers and gas valves shall be capable of modulation.Electronic controller includes a factory wired, field installed supply air temperature sensor. Sensor shall be field installed in the supply air ductwork. Supply air temperature setpoint shall be adjustable on the electronic controller within the controlsGas heater shall be capable of capacity turndown ratio as shown on the unit rating sheet.

I. Filters

1. Unit shall include 4 inch thick, pleated panel filters with an ASHRAE MERV rating of 13, upstream of the cooling coil.Unit shall also include 2 inch thick, pleated panel pre filters with an ASHRAE MERV rating of 8, upstream of the 4 inch standard filters.

J. Outside Air/Economizer

1. Unit shall include 0-100% economizer consisting of a motor operated outside air damper and return air damper assembly constructed of extruded aluminum, hollow core, airfoil blades with rubber edge

seals and aluminum end seals.Damper blades shall be gear driven and designed to have no more than 15 CFM of leakage per sq. ft. of damper area when subjected to 2 inches w.g. air pressure differential across the damper.Unit shall include outside air opening bird screen, outside air hood with rain lip and barometric relief dampers.

2. Damper assembly shall be controlled by spring return enthalpy activated fully modulating actuator.

K. Controls

1. Factory Installed and Factory Provided Controller

a. Unit controller shall be capable of controlling all features and options of the unit. Controller shall be factory installed in the unit controls compartment and factory tested.

b. Controller shall be capable of stand alone operation with unit configuration, setpoint adjustment, sensor status viewing, unit alarm viewing, and occupancy scheduling available without dependence on a building management system.

c. Controller shall have an onboard clock and calendar functions that allow for occupancy scheduling.

d. Controller shall include non-volatile memory to retain all programmed values without the use of a battery, in the event of a power failure. Unit configuration, setpoint adjustment, sensor status viewing, unit alarm viewing, and occupancy scheduling shall be accomplished with connection to interface module with LCD screen and input keypad,interface module with touch screen, or with connection to PC with free configuration software. Controller shall be capable of connection with other factory installed and factory provided unit controllers with individual unit configuration,setpoint adjustment, sensor status viewing, and occupancy scheduling available from a single unit. Connection between unit controllers shall be with a modular cable.Controller shall be capable of communicating and integrating with a LonWorks or BACnet network. [Orion Controls System]

Variable Air Volume Controller

1. Unit shall utilize a variable capacity compressor system and a variable speed supply fan system to modulate cooling and airflow as required to meet space temperature cooling loads and to save operating energy.Supply fan speed shall modulate based on supply air duct static pressure. Cooling capacity shall modulate based on supply air temperature.

2. With modulating hot gas reheat, unit shall modulate cooling and hot gas reheat as efficiently as possible, to meet space humidity loads and prevent supply air temperature swings and overcooling of the space.

3. Unit shall modulate heating with constant airflow to meet space temperature heating loads. Modulating heating capacity shall modulate based on supply air temperature.

L. Accessories

1. Unit shall be provided with a safety shutdown terminal block for field installation of a smoke detector which shuts off the unit's control circuit.

2.4 ERUs:

A. General Description

1. Packaged rooftop unit shall include:

a. Evaporator coils
b. Filters
c. Supply fans
d. Dampers
e. Variable capacity compressors
f. Air-cooled condenser coils and condenser fans
g. Reheat coil
h. Gas heaters
i. Exhaust fans
j. Energy recovery wheels
k. Unit controls

1. Unit shall be factory assembled and tested including leak testing of the DX coils, pressure testing of the refrigeration circuit, and run testing of the completed unit. Run test report shall be supplied with the unit in the service compartment's literature pocket.
2. Unit shall have decals and tags to indicate lifting and rigging, service areas and caution areas for safety and to assist service personnel.
3. Unit components shall be labeled, including refrigeration system components and electrical and controls components.
4. Estimated sound power levels (dB) shall be shown on the unit ratings sheet.
5. Installation, Operation, and Maintenance manual shall be supplied within the unit.
6. Laminated color-coded wiring diagram shall match factory installed wiring and shall be affixed to the interior of the control compartment's hinged access door.
7. Unit nameplate shall be provided in two locations on the unit, affixed to the exterior of the unit and affixed to the interior of the control compartment's hinged access door.

B. Construction

1. All cabinet walls, access doors, and roof shall be fabricated of double wall, impact resistant, rigid polyurethane foam panels.
2. Unit insulation shall have a minimum thermal resistance R-value of 16. Foam insulation shall have a minimum density of 2 pounds/cubic foot and shall be tested in accordance with ASTM D-1929-11 for a minimum flash ignition temperature of 610°F.
3. Unit construction shall be double wall with G90 galvanized steel on both sides and a thermal break. Double wall construction with a thermal break prevents moisture accumulation on the insulation, provides a cleanable interior, reduces heat transfer through the panel, and prevents exterior condensation on the panel.
4. Unit shall be designed to reduce air leakage and infiltration through the cabinet. Cabinet leakage shall not exceed 1% of total airflow when tested at 3 times the minimum external static pressure provided in

AHRI Standard 340/360. Panel deflection shall not exceed L/240 ratio at 125% of design static pressure, at a maximum 8 inches of positive or negative static pressure, to reduce air leakage. Deflection shall be measured at the midpoint of the panel height and width. Continuous sealing shall be included between panels and between access doors and openings to reduce air leakage. Piping and electrical conduit through cabinet panels shall include sealing to reduce air leakage.

5. Roof of the air tunnel shall be sloped to provide complete drainage. Cabinet shall have rain break overhangs above access doors.
6. Access to filters, dampers, cooling coils, reheat coil, heaters, energy recovery wheels, compressors, and electrical and controls components shall be through hinged access doors with quarter turn, zinc cast, lockable handles. Full length stainless steel piano hinges shall be included on the doors.
7. Exterior paint finish shall be capable of withstanding at least 2,500 hours, with no visible corrosive effects, when tested in a salt spray and fog atmosphere in accordance with ASTM B 117-95 test procedure.
8. Units with cooling coils shall include double sloped 304 stainless steel drain pans.
9. Unit shall be provided with bottom discharge and bottom return air openings. Openings shall have upturned flanges of at least 1/2 inch in height around the opening.
10. Unit shall include lifting lugs on the top of the unit.
11. Unit shall include factory installed, painted galvanized steel condenser coil guards on the face of the condenser coil.

C. Electrical

1. Unit shall be provided with factory installed and factory wired, non-fused disconnect switch.
2. Unit shall have a 10 kAIC SCCR.
3. Unit shall be provided with a factory installed and factory wired 115V, 12 amp GFI outlet disconnect switch in the unit control panel.
4. Unit shall be provided with phase and brown out protection which shuts down all motors in the unit if the electrical phases are more than 10% out of balance on voltage, the voltage is more than 10% under design voltage or on phase reversal.

D. Supply Fans

1. Unit shall include direct drive, unhoused, backward curved, plenum supply fans.
2. Blowers and motors shall be dynamically balance and mounted on rubber isolators.
3. Motors shall be premium efficiency ODP with ball bearings rated for 200,000 hours service with external lubrication points.
4. Variable frequency drives shall be factory wired and mounted in the unit. Fan motors shall be premium efficiency.

E. Exhaust Fans

1. Exhaust dampers shall be sized for 100% relief.
2. Fans and motors shall be dynamically balanced.
3. Unit shall include barometric relief dampers.
4. Motors shall be premium efficiency ODP with ball bearings rated for 200,000 hours service with external lubrication points.
5. Access to exhaust fans shall be through double wall, hinged access doors with quarter turn lockable handles.

6. Unit shall include belt driven, unhoused, backward curved, plenum exhaust fans.
7. Variable frequency drives shall be factory wired and mounted in the unit. Fan motors shall be premium efficiency.

F. Cooling Coils

1. Evaporator Coils

a. Coils shall be designed for use with R-454B refrigerant and constructed of copper tubes with aluminum fins mechanically bonded to the tubes and galvanized steel end casings. Fin design shall be sine wave rippled.
b. Coils shall have interlaced circuitry and shall be standard capacity.
c. Coils shall be hydrogen or helium leak tested.
d. Coils shall be furnished with factory installed expansion valves.

G. Refrigeration System

1. Unit shall be factory charged with R-454B refrigerant.
2. Compressors shall be scroll type with thermal overload protection and carry a 5 year non-prorated warranty, from the date of original equipment shipment from the factory.
3. Compressors shall be mounted in an isolated service compartment which can be accessed without affecting unit operation. Lockable hinged compressor access doors shall be fabricated of double wall, rigid polyurethane foam injected panels to prevent the transmission of noise outside the cabinet.
4. Compressors shall be isolated from the base pan with the compressor manufacturer's recommended rubber vibration isolators, to reduce any transmission of noise from the compressors into the building area.
5. Each refrigeration circuit shall be equipped with expansion valve type refrigerant flow control.
6. Each refrigeration circuit shall be equipped with automatic reset low pressure and manual reset high pressure refrigerant safety controls, Schrader type service fittings on both the high pressure and low pressure sides and a factory installed liquid line filter driers.
7. Lag refrigeration circuit shall be provided with hot gas reheat coil, modulating valves, electronic controller, supply air temperature sensor and a control signal terminal which allow the unit to have a dehumidification mode of operation, which includes supply air temperature control to prevent supply air temperature swings and overcooling of the space.
8. Reheat coil shall be multi-pass and fabricated from aluminum microchannel tubes.
9. The factory installed controls shall include a 3 minute off delay timer to prevent compressor short cycling. The controls shall also include an adjustable, 20 second delay timer for each additional capacity stage to prevent multiple capacity stages from starting simultaneously and an adjustable compressor lock out.

H. Condensers

1. Air-Cooled Condenser

a. Condenser fans shall be a vertical discharge, axial flow, direct drive fans.
b. Coils shall be designed for use with R-454B refrigerant. Coils shall be multi-pass and fabricated from aluminum microchannel tubes.
c. Coils shall be designed for a minimum of 10°F of refrigerant sub-cooling.
d. Coils shall be hydrogen or helium leak tested.

e. Condenser fans shall be high efficiency electrically commutated motor driven with factory installed head pressure control module. Condenser airflow shall continuously modulate based on head pressure and cooling operation shall be allowed down to 35°F with adjustable compressor lockout.

I. Gas Heating

1. Stainless steel heat exchanger furnace shall carry a 25 year non-prorated warranty, from the date of original equipment shipment from the factory.
2. Gas furnace shall consist of stainless steel heat exchangers with multiple concavities, an induced draft blower and an electronic pressure switch to lockout the gas valve until the combustion chamber is purged and combustion airflow is established.
3. Furnace shall include a gas ignition system consisting of an electronic igniter to a pilot system, which will be continuous when the heater is operating, but will shut off the pilot when heating is not required.

4. High Turndown Modulating Natural Gas Furnace shall be equipped with modulating gas valves, adjustable speed combustion blowers, stainless steel tubular heat exchangers, and electronic controller. Combustion blowers and gas valves shall be capable of modulation. Electronic controller includes a factory wired, field installed supply air temperature sensor. Sensor shall be field installed in the supply air ductwork. Supply air temperature setpoint shall be adjustable on the electronic controller within the controls compartment. Gas heater shall be capable of capacity turndown ratio as shown on the unit rating sheet. Heat trace shall be include on the condensate drain line.

J. Filters

1. Unit shall include 4 inch thick, pleated panel filters with an ASHRAE MERV rating of 13, upstream of the cooling coil. Unit shall also include 2 inch thick, pleated panel pre filters with an ASHRAE MERV rating of 8, upstream of the 4 inch standard filters.

K. Outside Air/Economizer

1. Unit shall include 0-100% economizer consisting of a motor operated outside air damper and return air damper assembly constructed of extruded aluminum, hollow core, airfoil blades with rubber edge seals and aluminum end seals. Damper blades shall be gear driven and designed to have no more than 20 cfm of leakage per sq ft. at 4 in. w.g. air pressure differential across the damper. Low leakage dampers shall be Class 2 AMCA certified, in accordance with AMCA Standard 511. Unit shall include outside air opening bird screen and outside air hood. Unit, except for horizontal series, shall also include barometric relief dampers.

    a. Damper assembly shall be controlled by spring return enthalpy activated fully modulating actuator.

L. Energy Recovery

1. Unit shall contain a factory mounted and tested energy recovery wheel(s). The energy recovery wheel(s) shall be mounted in a rigid frame containing the wheel drive motor, drive belt, wheel seals and bearings.
2. Wheel frame shall slide out for service and removal from the cabinet.

3. The energy recovery component shall incorporate a rotary wheel in an insulated cassette frame complete with seals, drive motor and drive belt.
4. The energy recovery cassette shall be an Underwriters Laboratories Recognized Component for electrical and fire safety. The wheel drive motor shall be an Underwriters Laboratory Recognized Component and shall be mounted in the cassette frame and supplied with a service connector or junction box. Thermal performance shall be certified by the manufacturer in accordance with ASHRAE Standard 84, Method of Testing Air-to-Air Heat Exchangers and AHRI Standard 1060, Rating Air-to-Air Energy Recovery Ventilation Equipment. Cassettes shall be listed in the AHRI Certified Products.

5. Energy recovery wheel cassette shall carry a 5 year non-prorated warranty, from the date of original equipment shipment from the factory. The first 12 months from the date of equipment startup, or 18 months from the date of original equipment shipment from the factory, whichever is less, shall be covered under the standard AAON limited parts warranty. The remaining period of the warranty shall be covered by Airxchange. The 5 year warranty applies to all parts and components of the cassette, with the exception of the motor, which shall carry an 18 month warranty. Warranty shall cover material and workmanship that prove defective, within the specified warranty period, provided the Airxchange written instructions for Installation, Operation, and Maintenance have been followed. Warranty excludes parts associated with routine maintenance, such as belts. Refer to the Airxchange Energy Recovery Cassette Limited Warranty Certificate.
6. Unit shall include 2 inch thick, pleated panel outside air filters with an ASHRAE MERV rating of 8, upstream of the wheels.
7. Hinged service access doors shall allow access to the wheel(s).
8. Aluminum Energy Recovery Wheels

a. Unit shall contain a factory mounted and tested monolithic aluminum energy recovery wheel with an inverter duty motor and a durable segmented link drive belt composite. Wheel frame shall be constructed with prime G90 hot-dip galvanized steel tested for corrosion resistance of 400 hours of salt spray.
b. Aluminum Energy recovery wheel shall be covered under the standard AAON limited parts warranty; the first 12 months from the date of equipment startup, or 18 months from the date of original equipment shipment from the factory, whichever is less. Warranty shall cover material and workmanship that prove defective, within the specified warranty period, provided the written instructions for installation, operation and maintenance have been followed. Warranty excludes parts associated with routine maintenance, such as belts.
c. Total energy recovery wheels shall be made of corrugated aluminum with a 3A molecular sieve desiccant coating. Coated segments shall be cleanable with hot water or compressed air without degrading the latent recovery.

M. Controls

1. Factory Installed and Factory Provided Controller

a. Unit controller shall be capable of controlling all features and options of the unit. Controller shall be factory installed in the unit controls compartment and factory tested. Controller shall be capable of stand alone operation with unit configuration, setpoint adjustment, sensor status viewing, unit alarm viewing, and occupancy scheduling available without dependence on a building management system.

b. Controller shall have an onboard clock and calendar functions that allow for occupancy scheduling.
c. Controller shall include non-volatile memory to retain all programmed values without the use of a battery, in the event of a power failure. Unit configuration, setpoint adjustment, sensor status viewing, unit alarm viewing, and occupancy scheduling shall be accomplished with connection to interface module with LCD screen and input keypad, interface module with touch screen, or with connection to PC with free configuration software. Controller shall be capable of connection with other factory installed and factory provided unit controllers with individual unit configuration, setpoint adjustment, sensor status viewing, and occupancy scheduling available from a single unit. Connection between unit controllers shall be with a modular cable. Controller shall be capable of communicating and integrating with a LonWorks or BACnet network. [Orion Controls System]

Variable Air Volume Controller

1. Unit shall utilize a variable capacity compressor system and a variable speed supply fan system to modulate cooling and airflow as required to meet space temperature cooling loads and to save operating energy. Supply fan speed shall modulate based on supply air duct static pressure. Cooling capacity shall modulate based on supply air temperature.
2. With modulating hot gas reheat, unit shall modulate cooling and hot gas reheat as efficiently as possible, to meet space humidity loads and prevent supply air temperature swings and overcooling of the space.
3. Unit shall modulate heating with constant airflow to meet space temperature heating loads. Modulating heating capacity shall modulate based on supply air temperature.

N. Accessories

1. Unit shall be provided with a safety shutdown terminal block for field installation of a smoke detector which shuts off the unit's control circuit.
2. Unit shall be provided with a high condensate level switch that shuts down the unit when a high water level is detected in the drain pan.

PART 3 – EXECUTION

3.1 SHIPPING

A. Paper copies of the IOM shall also be shipped with each RTU.

B. The RTU manufacturer shall identify all shipments with the order number. Enough information shall be provided with each shipment to enable the Mechanical Contractor to confirm the receipt of units when they are received. For parts too small to mark individually, the RTU manufacturer shall place them in containers.

C. To protect equipment during shipment and delivery, all indoor units shall be completely stretch or shrink wrapped. Wrap shall be a minimum of 7 mil plastic. Pipe ends and pipe connection holes in the casing shall be capped or plugged prior to shipment

D. After loading the equipment for shipment, the RTU manufacturer shall contact the shipping contact on the order and provide the name of the carrier, description of equipment, order number, shipping point, and date of shipment.

3.2 ON-SITE STORAGE

A. If equipment is to be stored for a period of time prior to installation, the Mechanical Contractor shall remove all stretch or shrink wrap from units upon receipt to prevent unit corrosion and shall either place the units in a controlled indoor environment or shall cover the units with canvas tarps and place them in a well-drained area. Covering units with plastic tarps shall not be acceptable.

3.3 FIELD EXAMINATION

A. The Mechanical Contractor shall verify that the mechanical room and/or roof are ready to receive work and the opening dimensions are as indicated on the shop drawings and contract documents.

B. The Mechanical Contractor shall verify that the proper power supply is available prior to starting of the fans.

3.4 INSTALLATION

A. The Mechanical Contractor shall be responsible to coordinate ALL of his installation requirements with the Owner and the Owner's selected Mechanical Contractor to ensure that a complete installation for each unit is being provided. Coordination efforts shall include such items as unloading and hoisting requirements, field wiring requirements, field piping requirements, field ductwork requirements, requirements for assembly of field-bolted or welded joints, and all other installation and assembly requirements.

B. The Mechanical Contractor shall verify that the following items have been completed prior to scheduling the RTU manufacturer's final inspection and start up:

1. All spring-isolated components have had their shipping restraints removed and the components have been leveled.

2. On all field-joined units, that all interconnections have been completed, i.e., electrical and control wiring, piping, casing joints, bolting, welding, etc.
3. All water and steam piping connections have been completed and hydrostatically tested and all water flow rates have been set in accordance with the capacities scheduled on the Drawings.
4. All ductwork connections have been completed and all ductwork has been pressure tested for its intended service.
5. All power wiring, including motor starters and disconnects, serving the unit has been completed.
6. All automatic temperature and safety controls have been completed.

7. All dampers are fully operational.
8. All shipping materials have been removed.
9. All (clean) filter media has been installed in the units.

3.5 LEVELING

A. The Mechanical Contractor shall level all unit sections in accordance with the unit manufacturer's instructions. The Mechanical Contractor shall provide and install all necessary permanent shim material to ensure individual sections and entire assembled units are level.

3.6 FINAL INSPECTION AND START UP SERVICE

A. After the Mechanical Contractor has provided all water and steam piping connections, ductwork connections, and field control wiring, and Electrical Contractor has provided all the field power wiring, the Mechanical Contractor shall inspect the installation. The Mechanical Contractor shall then perform startup of the equipment.

B. The Automatic Temperature Control (Building Direct Digital Control) Contractor shall be scheduled to be at the job site at the time of the equipment start up.

C. The Mechanical Contractor, shall perform the following tests and services and submit a report outlining the results:

1. Record date, time, and person(s) performing service.
2. Lubricate all moving parts.
3. Check all motor and starter power lugs and tighten as required.
4. Verify all electrical power connections.
5. Conduct a start up inspection per the RTU manufacturer's recommendations.
6. Record fan motor voltage and amperage readings.
7. Check fan rotation and spin wheel to verify that rotation is free and does not rub or bind.
8. Check fan for excessive vibration.
9. Check V belt drive or coupling for proper alignment.
10. Check V belt drive for proper tension. Tighten the belts in accordance with the RTU manufacturer's directions. Check belt tension during the second and seventh day's operation and re-adjust belts, as may be required, to maintain proper tension as directed by the RTU manufacturer.
11. Remove all foreign loose material in ductwork leading to and from the fan and in the fan itself.
12. Disengage all shipping fasteners on vibration isolation equipment.
13. Check safety guards to insure they are properly secured.
14. Secure all access doors to the fan, the unit and the ductwork.
15. Switch electrical supply "on" and allow fan to reach full speed.
16. Physically check each fan at start up and shut down to insure no abnormal or problem conditions exist.
17. Check entering and leaving air temperatures (dry bulb and wet bulb) and simultaneously record

entering and leaving chilled water temperatures and flow, steam pressures and flow, and outside air temperature.

18. Check all control sequences.

D. The unit manufacturer shall train the Owner's Facility team for a minimum of one eight hour day and up to a maximum of two eight hour days (at the Owner's request and the manufacturer's expense) on the equipment specified herein.

END OF SECTION 23.7416

SECTION 23.8101 - TERMINAL HEAT TRANSFER UNITS

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Convectors.

B. Unit heaters.

C. Cabinet unit heaters.

D. Infrared Tube Heaters.

E. Electric Baseboard Radiation.

1.2 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.

B. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

1.3 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

1.4 EXTRA MATERIALS

A. Provide two sets of filters for each piece of equipment requiring filters.

PART 2 - PRODUCTS

2.1 GENERAL

A. The contractor shall furnish and install all equipment with required mounting components and accessories to meet size, capacity and characteristics as required on the Equipment Schedule or on the plans. Units shall be installed in accordance with specifications and manufacturer recommendations.

2.2 CONVECTORS

A. Manufacturers:

1. Rittling.
2. Trane.
3. Sterling Hydronics.
4. Sigma.

B. Heating Elements: The coil shall be non-ferrous ½" nominal copper tubing and aluminum fins which are die cut with a thickness of no less than .010". The fins shall have integral collars and the tubes shall be mechanically bonded to the fins to ensure permanent contact. The entire fin assembly shall be encased in a heavy gauge galvanized steel frame with spacers locked at regular intervals to provide added protection to the finned element. Headers are cast brass with ¾" FNPT tapings. Assembled heating elements shall be hydrostatically tested to 1700 PSI prior to leaving the factory.

C. Cabinet: Enclosures shall be of the size and style as shown on the plans. The cabinet fronts shall be manufactured from 14-gauge cold rolled steel. Cabinet front shall be flanged on top and sides for added rigidity. The cabinet shall be reinforced and braced where necessary to provide additional stiffness. The liners shall be manufactured from 18-gauge cold rolled steel. The heating element support brackets shall be spot welded to the inside ends of the liners. Cabinet fronts are to be attached to liners using Tamper proof Spanner head fasteners.

D. Finish: All enclosures and accessories shall be degreased and chemically phosphatized before application of a durable, attractive electrostatic epoxy powder coating. Color to be selected from manufacturer's standard color chart.

E. Accessories:

1. For otherwise inaccessible valves, provide access doors that are to be flush mounted with doors hinged at the top and use a slotted fastener.

2.3 UNIT HEATERS

A. Manufacturers:

1. Rittling.
2. Trane.
3. Sterling Hydronics.
4. Sigma.

B. Cabinet: All units shall have panels fabricated of not less than 18 gauge cold rolled steel.

1. Horizontal Units:
   a. Casing consists of top/back and side halves. Both halves are joined on top and back with hex head screws.
   b. Top casing is furnished with threaded hanger connections for suspension of unit.

c. Fan venturi is die-formed on back half.
d. Units shall be equipped with horizontal, individually adjustable louvers.

C. Cabinet Finish: All painted cabinet exterior panels shall be finished with a standard textured gray epoxy powder coat paint.

D. Hot-Water Coil: Designed for either two-pipe steam or hot water heating system.

1. Coils shall have ½" nominal diameter seamless copper tubes and shall be mechanically expanded to provide an efficient, permanent bond between the tube and integral collar of the aluminum fin.
2. Minimum copper tube thickness shall be 0.028".
3. Fins shall be die-formed and have a high efficiency aluminum surface optimized for heat transfer, air pressure drop and carryover.
4. Minimum fin thickness shall be 0.010".
5. Lanced fins shall not be acceptable.
6. Fins are continuous across width and depth of coil and are vertically oriented to resist collection of dirt and foreign particles.
7. Coils shall be of non-ferrous construction with a serpentine design or incorporate brazed steel header tubes.
8. All coils shall be tested at 275 PSIG air pressure under water, and rated for a maximum 220 PSIG water or 150 PSIG steam and 375°F.

E. Fan: Propeller type with non-conducting, spark-proof aluminum blade wheel with steel hub directly mounted on motor shaft in the fan venturi.

F. Fan Guard: Shall be finger-proof, constructed of welded steel rod and finished with a standard black epoxy powder coat paint. Units mounted below 8 feet from the floor must be equipped with an OSHA fan guard to meet ETL and OSHA requirements.

G. Fan Motors: Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."

1. Motor Type: Permanently lubricated, two-speed, permanent split capacitor, totally enclosed with automatic reset integral thermal overload protection (3-phase motors require field supplied motor overload protection), designed to handle up to 104°F maximum constant ambient temperature. Shaded pole motors are not acceptable. Single speed motors are not acceptable.

H. Electrical Connection: Factory wire motors and controls for a single electrical connection.

1. Provide a service disconnect switch to isolate power from the unit during maintenance.

2.4 CABINET UNIT HEATERS

A. Manufacturers:

1. Rittling.

2. Trane.
3. Sterling Hydronics.
4. Sigma.

B. Cabinet: 16 gauge steel with baked epoxy powder coating in manufacturer's standard paint color as selected by Architect.

1. Vertical Units:

   a. Removable front panel, 16 gauge steel, with discharge grille, channel-formed edges and ¼-turn tamper-proof allen-head cam fasteners.
   b. Louvered panel shall be supplied with two flush, hinged access doors with slotted cam-lock fasteners.

2. Horizontal Units:
   a. The front panel shall be hinged, 16 gauge steel providing full swing through 90° including removable safety chain(s) to prevent the panel from swinging fully open accidentally. Includes discharge grille, channel-formed edges and ¼-turn allen-head cam fasteners.

3. End pockets shall be no less than 8” in width, located on both sides of the unit.
4. Steel recessing flanges for recessing fan-coil units into wall or ceiling.
5. All concealed units shall have a minimum 1" duct collar on the discharge.

C. Filters: Minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.

1. 1” Washable Aluminum Mesh: 70 percent arrestance and 2 MERV.

D. Hydronic Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.083 inch (2.1 mm), rated for a minimum working pressure of 300 psig (2067 kPa) and a maximum entering-water temperature of 220 deg F (104 deg C). Minimum copper tube thickness shall be 0.016”. Minimum fin thickness shall be 0.0045”. Lanced fins shall not be acceptable. Coils shall be circuited for counter flow to maximize unit efficiency. Coil casing shall be fabricated from galvanized steel. Include manual air vent and drain valve.

E. Fan and Motor Board: Constructed from 18 gauge galvannealed steel.

1. Fan: Forward curved, double width, centrifugal; directly connected to motor. galvanized-steel wheels and fan scrolls.

2. Motor: Electronically commutated high-efficiency, programmable brushless DC motor; resiliently mounted on motor board. Shaded pole motors are not acceptable. Single speed motors are not acceptable. Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."

F. Electrical Connection: Factory wire motors and controls for a single electrical connection.

1. Provide a service disconnect switch to isolate power from the unit during maintenance.

2.5 INFRARED TUBE HEATERS

A. Manufacturers:

1. Detroit Radiant Products Co.

B. Approvals:

1. CSA Design Certified

C. Burner Control Box:

1. Sight glass for burner inspection
2. Totally enclosed components
3. Serviceable while in operation
4. Coated enameled steel
5. Operational indicator lights

D. Gas Connection:

1. 7/8 in. flare-M FPT connection to 1/2 in. x 24 in. (304) SS flex connector provided

E. Gas Supply:

1. Manifold pressure: Inlet pressure: 5.0 to 14.0” W.C.

F. Power Supply:

1. 120 VAC, 60 Hz GRD, 1 Ph., 3-wire
2. 60 in. grounded power cord
3. Ignition current: 4.8 amps, Running current: 1.1 amps

G. Controls:

1. Two stage gas valve (at 100% and 65%)
2. Air proving safety switch
3. Silicon carbide hot surface ignition
4. Pre- & post-purge controls
5. Flame rod sensing
6. 24 V thermostatic control voltage
7. Self-diagnostic LED

H. Reflector:

1. Highly polished aluminum

2. Two end caps included
3. Reflector tension springs
4. Continuous overlap design
5. One reflector center support per reflector

I. Combustion & Radiant Tubes:

1. 16 ga. 4" O.D. aluminized coated steel radiant emitter tubes
2. Titanium coated combustion chamber (150–200 MBH models)
3. All tubes coated with high temperature, corrosion-resistant black coating, 0.95 emissivity
4. Slip-fit swaged tube connection
5. Turbulator baffle

J. Combustion Air Inlet & Venting:

1. Preset 4 in. combustion air inlet collar
2. Sidewall or roof venting

K. Limited Warranty:

1. 3 year–Burner box components
2. 5 years–Combustion and radiant tubes
3. 10 years–Burner

2.6 ELECTRIC BASEBOARD RADIAITON

A. Manufacturers:

1. Runtal.
2. Approved Equal.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install equipment exposed to finished areas after walls and ceiling are finished and painted. Do not damage equipment or finishes.

C. Protection: Provide finished cabinet units with protective covers during balance of construction.

D. Recessed Units: Install where indicated. Coordinate to assure correct recess size for recessed units.

E. Unit Heaters: Hang from building structure, with pipe hangers anchored to building, not from piping. Mount as high as possible to maintain greatest headroom unless otherwise indicated.

3.2 CLEANING

A. After construction is completed, including painting, clean exposed surfaces of units. Vacuum clean coils and inside of cabinets.

B. Touch-up marred or scratched surfaces of factory-finished cabinets, using finish materials furnished by manufacturer.

C. Install new filters.

END OF SECTION 23.8101

SECTION 23.8127 - SMALL SPLIT-SYSTEM HEATING AND COOLING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Air cooled condensing units.

B. Indoor ductless fan & coil units.

C. Controls.

1.2 REFERENCE STANDARDS

A. AHRI 210/240 - Standard for Performance Rating of Unitary Air Conditioning and Air-Source Heat Pump Equipment; Air-Conditioning, Heating, and Refrigeration Institute; 2008.

B. AHRI 520 - Performance Rating of Positive Displacement Condensing Units; Air-Conditioning, Heating, and Refrigeration Institute; 2004.

C. ASHRAE Std 15 - Safety Standard for Refrigeration Systems; American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.; 2016 (ANSI/ASHRAE Std 15).

D. ASHRAE Std 23.1 - Methods of Testing for Rating Positive Displacement Refrigerant Compressors and Condensing Units that Operate at Subcritical Temperatures of the Refrigerant; American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.; 2010.

E. ASHRAE Std 90.1 - Energy Standard for Buildings Except Low-Rise Residential Buildings; American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.; 2016, Including All Addenda (ANSI/ASHRAE/IES Std 90.1).

F. NEMA MG 1 - Motors and Generators; National Electrical Manufacturers Association; 2011.

G. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems; National Fire Protection Association; 2018.

H. NFPA 90B - Standard for the Installation of Warm Air Heating and Air Conditioning Systems; National Fire Protection Association; 2018.

I. UL 207 - Refrigerant-Containing Components and Accessories, Nonelectrical; Underwriters Laboratories Inc.; Current Edition, Including All Revisions.

1.3 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide rated capacities, weights, accessories, electrical nameplate data, and wiring diagrams.

C. Shop Drawings: Indicate assembly, required clearances, and location and size of field connections.

D. Design Data: Indicate refrigerant pipe sizing.

E. Manufacturer's Instructions: Indicate rigging, assembly, and installation instructions.

F. Project Record Documents: Record actual locations of components and connections.

G. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions, installation instructions, maintenance and repair data, and parts listing.

H. Warranty: Submit manufacturer’s warranty and ensure forms have been filled out in Owner’s name and registered with manufacturer.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

B. Installer Qualifications: Company specializing in performing the work of this section with minimum three years of experience and approved by manufacturer.

1.5 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Mitsubishi.

B. LG.

C. Samsung.

D. Daikin.

E. Fujitsu.

F. Airstage.

2.2 SYSTEM DESIGN

A. Split-System Cooling Units: Self-contained, packaged, matched factory-engineered and assembled, pre-wired indoor and outdoor units; UL listed.

1. Heating/Cooling: Outdoor electric condensing unit with evaporator in indoor ductless unit.
2. Provide refrigerant lines internal to units and between indoor and outdoor units, factory cleaned, dried, pressurized and sealed, with insulated suction line.

2.3 INDOOR UNITS FOR DUCTLESS SYSTEMS

A. Indoor Units: Self-contained, packaged, factory assembled, pre-wired unit consisting of cabinet, supply fan, evaporator coil, and controls; wired for single power connection with control transformer.

1. Fan: Line-flow fan direct driven by a single motor.

B. Evaporator Coils: Copper tube aluminum fin assembly, galvanized or polymer drain pan sloped in all directions to drain, drain connection, refrigerant piping connections, restricted distributor or thermostatic expansion valve.

1. Construction and Ratings: In accordance with AHRI 210/240 and UL 207.
2. Manufacturer: System manufacturer.

2.4 OUTDOOR UNITS

A. Outdoor Units: Self-contained, packaged, pre-wired unit consisting of cabinet, with compressor and condenser.

1. Construction and Ratings: In accordance with AHRI 210/240 with testing in accordance with ASHRAE Std 23.1 and UL 207.

B. Air Cooled Condenser: ARI 520; Aluminum fin and copper tube coil, with direct drive axial propeller fan resiliently mounted, galvanized fan guard.

C. Accessories: Filter drier, high pressure switch (manual reset), low pressure switch (automatic reset), service valves and gage ports, thermometer well (in liquid line).

D. Operating Controls:

1. Control by room thermostat to maintain room temperature setting.
2. Low Ambient Kit: Provide refrigerant pressure switch to cycle condenser fan on when condenser refrigerant pressure is above 285 psig and off when pressure drops below 140 psig for operation to 0 degrees F.
3. Provide wind baffle for low ambient cooling.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that substrates are ready for installation of units and openings are as indicated on shop drawings.

B. Verify that proper power supply is available and in correct location.

3.2 INSTALLATION

A. Install in accordance with NFPA 90A and NFPA 90B.

B. Install refrigeration systems in accordance with ASHRAE Std 15.

END OF SECTION 23.8127

SECTION 23.8313 – RADIANT HEATING CABLES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Heating cable.

B. Temperature controllers for heating cable.

1.2 RELATED SECTIONS

A. Section 232113 - Hydronic Piping

B. Section 230719 - HVAC Piping Insulation.

C. Refer to the requirements of Division 1 and coordinate the division of responsibility of the work with Section 01 1000 – Summary of the Project.

1.3 PERFORMANCE REQUIREMENTS

A. Pipe Trace Heating: Freeze protection with outside temperature at -10 degrees F (-23 degrees C).

1.4 SUBMITTALS

A. See Section 01 3300 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data for heating cable and control components.

C. Shop Drawings: Indicate heating cable layout, locations of terminations, thermostats, and branch circuit connections.

D. Manufacturer's Installation Instructions: Indicate installation instructions.

E. Project Record Documents: Accurately record actual locations of heating cable and branch circuit connections.

F. Operation Data: Include description of operating controls.

G. Maintenance Data: Include repair methods and parts list of components.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

1.6 PRE-INSTALLATION MEETING

A. Convene one week prior to commencing work of this section.

B. Require attendance of parties directly affecting the work of this section.

C. Review sequencing of installation, protection from damage of finished installation, location of expansion and control joints in building, and methods used for covering installations with concrete.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Chromalox (SRL).

B. Orbit.

C. Nexans.

2.2 HEATING CABLE

A. Heating Cable: Self-limiting, parallel resistance heating cable.

2.3 ACCESSORIES

A. Thermostats:

1. Chromalox.
2. Orbit.
3. Nexans.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that piping is ready to receive work.

B. Verify field measurements are as shown on shop drawings.

C. Verify that required utilities are available, in proper location, and ready for use.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Avoid pinching and making sharp bends in cable.

C. Do not install heating cable across expansion or construction joints.

D. E.C. shall provide a service to the proximity of the cable locations. H.C. shall provide junction box and all interconnecting wiring between the E.C. service and the cables. H.C. shall be responsible for the final connection to the E.C. service.

3.3 FIELD QUALITY CONTROL

A. Test continuity of heating cable.

B. Perform tests on completed cable installation. For cables embedded in concrete, perform tests immediately before and after concrete placement.

C. Measure voltage and current at each unit.

3.4 DEMONSTRATION

A. Demonstrate operation of heating cable controls.

END OF SECTION 23.8313

SECTION 26.0100 - GENERAL REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. Drawings and General Provisions of Contract, including General and Supplementary Conditions and Division-1 Specifications sections, apply to work specified in this section.

1.2 SCOPE OF PROJECT:

A. Provide a complete and operating electrical installation in accordance with these specifications and accompanying contract drawings. This includes all required labor, materials, apparatus and supervision.

B. Without limiting or restricting the volume of work and solely for the convenience of the Contractor, the work to be performed in general, comprises the following:

1. New Electric Distribution Facilities; Re-worked Medium Voltage Distribution.
2. New Building Electrical Distribution System.
3. New Building Lighting and Lighting Controls.
4. Complete Building Power System.
5. New Medium Voltage Transformers and New Associated Vaults and Ductbanks
5. New Outdoor Emergency Generators and Associated Transfer Switches and Temporary Connection Infrastructure.
6. New Structured Cabling to New and Existing Devices.
7. Expansion of Existing VoiP Telephone System.
8. Expansion of Existing IP Intercommunication System.
9. Expansion of Master Clock System.
10. Expansion of CCTV system.
11. Expansion of Security Detection and Alarm system.
12. Expansion of Access Control System
13. Expansion of Voice Based Fre Alarm System
14. Control wiring for Division 23 equipment where shown on Division 26 documents.

1.3 INTENT OF THIS SECTION:

A. This Section is intended as a supplement to each of the following Sections of Division 26, 27, 28 ELECTRICAL.

B. Consider each article of this Section as a part of each of the following Sections insofar as such requirements may be termed applicable.

1.4 TRUE INTENT:

A. The Drawings and Specifications are intended to provide a complete and perfectly operating system. Therefore, it is specifically agreed and understood by the Contractor that anything, be it labor, material or equipment, which is not described in the Specifications or specifically shown on the Drawings, but is necessary for the operation and completion of a perfectly operating system, according to the true intent of the Specifications and Drawings and as interpreted by the architect, shall be furnished by the Contractor as a part of his Contract, at no extra charge, as though it were specifically detailed and described.

1.5 DEFINITIONS:

A. General - Basic Contract definitions are included in the Conditions of the Contract.

B. Indicated - The term indicated refers to graphic representations, notes, or schedules on the Drawings, or other Paragraphs or Schedules in the Specifications, and similar requirements in the Contract Documents. Terms such as shown, noted, scheduled, and specified are used to help the reader locate the reference. There is no limitation on location.

C. Directed - Terms such as directed, requested, authorized, selected, approved, required, and permitted mean directed by the Architect, requested by the Architect, and similar phrases.

D. Approved - The term approved, when used in conjunction with the Architect's action on the Contractor's submittals, applications and requests, is limited to the Architects duties and responsibilities as stated in the Conditions of the Contract.

E. Regulation - The term regulation includes laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, as well as rules, conventions, and agreements within the construction industry that control performance of the Work.

F. Furnish - The term furnish means supply and deliver to the Project Site, ready for unloading, unpacking, assembly, installation and similar operations.

G. Install - The term install describes operations at the Project site including the actual unloading, unpacking, assembly, erection, placing anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations.

H. Provide - The term provide means to furnish and install, complete and ready for the intended use.

I. Contractor - The Contractor or Electrical Contractor - The term means the Contractor responsible for all work under this section.

J. Installer - An installer is the Contractor or another entity engaged by the Contractor, either as an employee, subcontractor, or contractor of lower tier, to perform a particular construction activity, including installation, erection, application, and similar operations. Installers are required to be experienced in the operations they are engaged to perform.

1. The term experienced, when used with the term installer, means having a minimum of five previous projects similar in size and scope to this project, being familiar with the special requirements indicated, and having complied with requirements of the authority having jurisdiction.
2. Trades - Using terms such as carpentry is not intended to imply that certain construction activities must be performed by accredited or unionized individuals of a corresponding generic name, such as carpenter. It also does not imply that requirements specified apply exclusively to tradespersons of the corresponding generic name.
3. Assigning Specialists - Certain Section of the Specifications require that specific construction activities are performed by specialists who are recognized experts in those operations. The specialists must be engaged for those activities, and their assignments are requirements over which the Contractor has no choice or option. However, the ultimate responsibility for fulfilling Contract requirements remains with the Contractor.
    a. This requirement is not to be interpreted to conflict with enforcing building codes and similar regulations governing the Work. It is also not intended to interfere with local trade union jurisdictional settlements and similar conventions.

K. Testing Agencies - A testing agency is an independent entity engaged to perform specific inspections or tests, either at the Project site or elsewhere and to report on and, if required, to interpret results of those inspections or tests.

1.6 VISITS TO SITE:

A. Attention is directed to the necessity for all the Electrical Contractor to visit the site and examine all conditions affecting the proper execution of this Contract. Submission of proposals shall be considered evidence that Contractors have visited and examined the site.

B. Existing contours and topography as indicated, are believed to be reasonably correct, but are not guaranteed. Where conditions at project site do not agree exactly with conditions as indicated, Contractor shall assume all responsibility for said discrepancy.

C. No extra payment will be allowed the Electrical Contractor for extra work caused by failure to visit, examine and clarify.

1.7 GENERAL:

A. Throughout the Specifications, types of material are specified by manufacturer's name. Where more than one manufacturer is mentioned, catalog and specification data is given for a specific manufacturer. Equal material produced by other manufacturers listed is acceptable. Refer to SPECIAL REQUIREMENTS - Division 1 for substitution of materials.

1.8 RULES AND REGULATIONS

A. Perform in accordance with the rules and regulations of the National Electric Code (NEC), International Building Code (IBC) and other Codes and Standards cited in this specification and the requirements of the Utility Companies serving this project.

B. Certificates of Approval in triplicate, for rough and finished wiring from a Certified Inspection Service must be delivered to the Engineer before final payment can be authorized.

C. Perform all work in accordance with the rules and regulations of the Pennsylvania Department of Labor and Industry, Federal Department of Labor (Occupational Safety and Health Administration) and any other national, state, or local authority having jurisdiction.

D. Perform all Construction, design, fabrication, tests, rating, and installation in compliance with the regulations of all local, state or national agencies having jurisdiction over the project. Pay all costs involved in work necessary to comply with these regulations.

E. The Contractor assumes all responsibility and liability for any code violations, damage or injury which occurs as a result of deviation from or a change to the requirements of these plans and specifications which has not been approved in writing by the Engineer.

1.9 SUBMITTAL OF SHOP DRAWINGS FOR REVIEW:

A. Submit Shop Drawings in accordance with SUBMITTALS Division 1 and as indicated in subsequent Sections of this Division. Assume responsibility for quantities and correct mounting details. In addition, submit other shop drawings as may be requested by the Architect.

1. Metal Clad Cable
2. Building Wire
3. Medium Voltage Cables
4. Conduit
5. Fittings
6. Wireways
7. Outlet Boxes
8. Switches
9. Receptacles

10. Dry-Type Energy-Efficient Transformers
11. Switchboards
12. Electronic Circuit Monitors
13. Panelboards and Circuit Breakers
14. Safety Switches and Fuses
15. Fire Alarm & Detection System Equipment
16. Intrusion System Equipment.
17. Surveillance System Equipment.
18. Access Control System Equipment.
19. Area of Rescue Assistance Equipment (shown on drawings)
20. Structured Cabling system.
21. Emergency Generator & ATS
22. Interior and Exterior Lighting
23. Lighting Controls
24. PA and Master Clock System.
25 Selective Coordination and Arc-Flash Study.
26. Local Sound Reinforcement Systems.
27. Medium Voltage Transformers

1.10 DRAWINGS:

A. The Electrical drawings are indicative of the general arrangements and approximate sizes and relative locations of principal materials to be provided. Drawings are diagrammatic and are a graphic representation of contract requirements to best available standards at the scale required. Provide certain items such as pull boxes, offsets to clear interferences, and supports which are not specifically shown but which are obviously needed to make the system complete and operable.

B. Verify all grades, elevations, dimensions and clearances at the site.

C. Electrical riser and schematic diagrams generally indicate wiring to be used in various systems. Provide all work shown on diagrams whether or not it is duplicated on the plans.

D. All drawings and specifications pertaining to general construction, plumbing, HVAC, kitchen, electrical and other work shall be carefully examined. Where physical interferences with his work occur because of his failure to coordinate with other trades, this Contractor shall rearrange his work at his own expense.

1.11 ENVIRONMENTAL CONDITIONS:

A. Provide effective protection for all material and equipment against damage that may be caused by environmental conditions. Do no work when conditions or temperature in area or moisture on materials or substrates are not in accordance with material manufacturer's recommended conditions for installation.

1.12 PROTECTION:

A. Provide effective protection against damage for all materials and equipment during shipment, and storage at the Project site. Cover all stored equipment to exclude dust and moisture. Place stored conduit on dunnage with appropriate weather cover and caps on exposed ends.

B. After cabinets and boxes are installed, cover openings to prevent entrance of water and foreign materials. Close conduit openings with temporary metal or plastic caps, including those terminated in cabinets.

C. Protect all rough and finished floors and finished surfaces from damage which may be caused by construction materials and methods. Protect floors with tarpaulins, chip pans and oil-proof floor coverings. Protect finished surfaces from welding and cutting splatters with baffles and asbestos splatter blankets. Protect finished surfaces from paint droppings, adhesive and other marring agents with drop cloths. Protect other surfaces with appropriate protective measures.

1.13 PRODUCT:

A. Have materials delivered to site. Unload and store materials in allotted location, and protect from damage. Deliver materials to their point of installation.

B. Deliver materials to Project site in manufacturer's original unopened containers with manufacturer's name and product identification clearly marked thereon.

1.14 COMPLIANCE WITH GENERAL STANDARDS AND REGULATIONS:

A. Provide equipment that is in conformity with these specifications and applicable requirements of the following:

1. AASHTO American Assoc. of State Highway and Transportation Officials
2. ACI American Concrete Institute
3. AISC American Institute of Steel Construction
4. AISI American Iron and Steel Institute
5. ANSI American National Standards Institute
6. ASTM American Society for Testing and Materials
7. AWS American Welding Society
8. CBM Certified Ballast Manufacturers Assoc.
9. CRSI Concrete Reinforcing Steel Institute
10. EIA Electronic Industries Assoc.
11. ETL ETL Testing Laboratories Inc.
12. FM Factory Mutual Research Assoc.
13. ICEA Insulated Cable Engineers Association, Inc.
14. IEC International Electrotechnical Commission

15.	IEEE	Institute of Electrical and Electronic Engineers
16.	IESNA	Illuminating Engineering Society of North America
17.	IMSA	International Municipal Signal Association
18.	LPI	Lighting Protection Institute
19.	NEC	National Electric Code
20.	NECA	National Electrical Contractors Association
21.	NEMA	National Electrical Manufacturers Association
22.	NETA	International Electrical Testing Association
23.	NFPA	National Fire Protection Association
24.	UL	Underwriters Laboratories, Inc

1.15 COMPLIANCE WITH FEDERAL GOVERNMENT AGENCIES

A. Names and titles of federal government standard - or Specification-producing agencies are often abbreviated. The following acronyms or abbreviations referenced in the Contract Documents indicate names of standard - Specification-producing agencies of the federal government. Names and addresses are subject to change but are believed to be, but are not assured to be, accurate and up to the date of the Contract Documents.

1.	ADA	Americans with Disabilities Act
2.	CFR	Code of Federal Regulations
3.	EPA	Environmental Protection Agency
4.	FAA	Federal Aviation Administration (US Dept. of Transportation)
5.	FCC	Federal Communication Commission
6.	FS	Federal Specification (from GSA); Specifications Unit (WFISIS)
7.	MIL	Military Standardization Documents (US Department of Defense) Naval Publications and Forms Center
8.	OSHA	Occupational Safety and Health Administration (US Department of Labor)
9.	REA	Rural Electrification Administration (US Department of Agriculture)

1.16 GUARANTEE:

A. Each Contractor shall unconditionally guarantee in writing all materials, equipment, and workmanship for a period of one year from the date of substantial completion of the project. The Contractor shall provide free service for all equipment involved in his Contract during this guarantee period.

B. The guarantee shall include restoration to its original condition of all adjacent work that must be disturbed in fulfilling this guarantee.

C. All such repairs and/or replacements shall be made without delay and at the convenience of the Owner.

PART 2 - PRODUCTS

2.1 Refer to Division 26 - ELECTRICAL

PART 3 - EXECUTION

3.1 LOCATION OF MATERIAL:

A. Locate all lighting fixtures, power apparatus, conduit, outlets and other materials to result in proper operation of the building and to avoid conflicts with the work of other trades. Obtain required location information sufficiently in advance of installation time to allow uninterrupted progress of the work. Check layouts of equipment with shop drawings of all trades to determine roughing-in requirements. Do not scale drawings for exact locations. Exercise proper judgment to secure a neat arrangement of conduit, piping, ductwork and other material; and to overcome local interferences to best advantage of the Project.

B. Where physical interferences cannot be resolved readily, consult with the Construction Manager and Architect and prepare dated, dimensioned drawings correcting the interferences. Obtain written approval of the Construction Manager and Architect for such changes and distribute the drawings to all interested parties as directed by the Construction Manager and Architect.

C. In modular panel ceilings, locate lights, detectors and similar equipment as shown on reflected ceiling plan. Arrange ceiling outlets symmetrically. Verify locations of all floor outlets with Architect before roughing-in.

D. Locate switches and other manually operated devices in a location easily accessible and convenient to operating personnel. If any such devices are mounted in a location deemed inaccessible or impractical, relocate devices at no increase in contract costs.

3.2 EARTHWORK:

A. Provide all excavation, backfill, shoring and similar work as required for the installation of the Work of this Division. Refer to the requirements of Excavation, Grading and Site Work, Section 33, and Earthwork, Division 2.

B. Protect roots of live trees encountered in excavation.

C. Where excavations at footings, foundations, and other structures are deeper than the angle of repose deemed adequate by Architect, backfill such excavations solidly with 3000 pound concrete. All concrete must have air entrainment.

D. Remove and dispose of excess excavated materials as directed by the Construction Manager or Architect.

3.3 FLASHING AND COUNTERFLASHING:

A. Provide metal flashing and counterflashing under Division 26 in accordance with SHEET METAL, Division 7, for all conduits penetrating the roof. Form counterflashing into a rainhood attached to conduit and passed down over top of flashing. Attach counterflashing to conduit with clamp, and waterproof with sealing compound.

B. Base flashing will be worked into roofing.

3.4 CHASES AND OPENINGS:

A. Openings, recesses and chases will be provided in the building construction as described in SUPPLEMENTAL GENERAL CONDITIONS. Make detailed dimensioned drawings under Division 26 where required by Architect.

3.5 CUTTING AND PATCHING:

A. Perform all cutting of existing building construction under Division 26 as required for installation of electrical work.

B. Perform cutting carefully so as not to damage the structure or leave unsightly surfaces that cannot be covered with plates, escutcheons, or other normal concealing construction. Patch unsightly conditions resulting from cutting as directed by the Construction Manager or Architect. Engage competent mechanics for patching.

3.6 CONCRETE:

A. Provide all concrete required for the work of Division 26 - ELECTRICAL, unless otherwise noted. Provide 3000 pound concrete in accordance with the provisions of Division-CONCRETE.

B. Provide concrete housing cleaning pads for all freestanding electrical equipment inside and site light bases outside building, unless otherwise noted. Include all required anchor bolts, fish plates, sleeves, inserts, conduit and miscellaneous hardware and have them installed in their proper location in all concrete foundations.

3.7 MOTOR STARTERS

A. Furnish all manual motor starters, and mount where shown on drawings.

B. Mount manual motor starters for roof fans in an accessible location inside the building to avoid affecting thermal devices by atmospheric conditions.

C. In general, magnetic motor starters will be delivered to the site with the equipment they control.

1. Starters furnished under Division 21, 22, and 23 will be delivered to the Electrical Contractor for installation and wiring. The Electrical Contractor shall mount the starters where shown on the Drawings, and provide power wiring to the starter, as well as power wiring from the starter to the motor. Control wiring will be provided under the HVAC Contract.
2. Equipment furnished under other Divisions and under other contracts generally will not be combination type. Provide disconnects as required by the NEC within site of the controller and motor.
3. Check running current of each motor and verify correct size of overload elements, and fuses in combination starters. Notify Architect in writing of all overload elements and fuses incorrectly sized, so that corrective action can be initiated.
4. Prepare a typewritten list of all motors in the project, and submit to Architect for delivery to the Owner. Include the following information for each motor:
    a. Function and nomenclature, as identified by the marking actually used in the field.
    b. Physical location in the building.
    c. Rated horsepower, voltage and phase.
    d. Rated full load current.
    e. Proper size of thermal overload element.
    f. Mount all motor starters, except those factory mounted on equipment.

3.8 COLOR CODING OF WIRING

A. Color code all wiring in accordance with the following table. In general, use factory colored insulation. Use colored vinyl tape for black insulation on cables No. 8 and larger. Apply pressure sensitive tape in half-lap serving for distance of 6" at cable terminations, in pull boxes, manholes, panels, and similar locations.

1.	Phase	208/120 Volts	480/277 Volts
2.	Phase "A"	Black	Brown
3.	Phase "B"	Blue	Orange
4.	Phase "C"	Red	Yellow
5.	Neutral	White	Gray
6.	Equipment ground	Green	Green

3.9 PHASING

A. Phase building load centers and panelboards "A", "B", "C" top to bottom and left to right. Identify the neutral, although it may be in different locations for different equipment.

B. Connect transformers in all systems so that:

1. "A" Phase is terminated at "H1" connection.
2. "B" Phase is terminated at "H2" connection.
3. "C" Phase is terminated at "H3" connection.
4. "X1" connection shall be the "A" Phase.
5. "X2" connection shall be the "B" Phase.
6. "X3" connection shall be the "C" Phase.

C. Ascertain from Power Company phase identifications at the point of connection and thereafter carry out and maintain this consistent system of color coding, phase identification and positioning.

D. Verify phase rotation after all terminations at equipment have been made, by producing a 1-2-3 rotation on a phase sequence meter when connected to "A", "B", and "C" phases. Make phase rotation compatible with existing distribution system.

3.10 GROUNDING RESISTANCE TEST:

A. Provide grounding system resistance test to verify resistance. Maximum resistance shall be 5 ohms.

B. Send final certified test reports and Certifications to Construction Manager for approval and transmittal to the Owner in accordance with SUBMITTALS, Division 1.

3.11 INSPECTION AND CERTIFICATION:

A. Obtain and deliver a final Certificate of Approval from the applicable NEC inspection authority having jurisdiction. Make delivery to Construction Manager for transmittal to the Owner upon completion of the work and before final payment in accordance with PROJECT CLOSE-OUT, Division 1. Pay all charges made by the inspection authority and include their cost in the bid.

3.12 INSTALLATION:

A. Install equipment in accordance with manufacturer's recommendations.

3.13 EQUIPMENT BY OWNER:

A. The Owner will furnish certain equipment, and deliver this equipment to the site as stated in EQUIPMENT FURNISHED BY OWNER, Division 11. Provide final electrical connections as required.

3.14 AS-BUILT DRAWINGS:

A. During construction, the Contractor shall maintain a record set of installation prints. He shall record on these prints, all deviations from the Contract Drawings in pipe sizing, location, and details. The record set of installation prints shall be updated at the end of each month and shall be delivered to the Construction Manager and the Architect.

B. At the completion of the work, the Contractor shall forward these prints to the Construction Manager and the Architect for incorporation into the final As-Built Drawings.

3.15 INSTRUCTION TO EMPLOYEES:

A. At the completion of the work, and before final acceptance of the building by the Owner, each Contractor, together with the representatives of the manufacturers of the equipment installed by the Contractor, shall instruct the designated employees of the Owner in the care, adjustment, maintenance and operation of equipment installed by him. The instruction shall be video recorded and a copy of the recording turned over to the Owner for future reference.

B. Three copies of factory maintenance schedules shall be furnished for each of equipment. Acceptance of materials and equipment is conditional upon receipts of maintenance manuals.

C. A representative of the manufacturer of each piece of equipment shall inspect his respective pieces of equipment, make final adjustments, and put them in a satisfactory working condition.

D. Instructions described shall be given for the following systems:

1. Fire Alarm & Detection System.
2. Telephone System.
3. PA/Intercom and Master Clock System
4. Video Surveillance System.
5. Card Access System.
6. Security Detection and Alarm System.
7. Television Distribution System.
8. Theatrical Lighting Systems.
9. Local sound systems.
10. Media Distribution Network.
11. Lighting control systems.
12. A/V Systems

END OF SECTION 26.0100

SECTION 26.0513 - MEDIUM-VOLTAGE CABLES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Medium voltage cable.

B. Cable accessories.

1.2 RELATED REQUIREMENTS

A. Section 26.0553 - Identification for Electrical Systems.

B. Section 33.7119 - Electrical Underground Ducts, Ductbanks, and Manholes: Cable racks in manholes.

1.3 REFERENCE STANDARDS

A. IEEE 48 - IEEE Standard for Test Procedures and Requirements for Alternating-Current Cable Terminations Used on Shielded Cables Having Laminated Insulation Rated 2.5 kV through 765 kV or Extruded Insulation Rated 2.5 kV through 500 kV; 2020.

B. NEMA WC 70 - Power Cables Rated 2000 Volts or Less for the Distribution of Electrical Energy; 2021.

C. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems; 2025.

D. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.4 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide for cable, terminations, and accessories.

C. Sustainable Design Documentation: Submit manufacturer's product data on conductor and cable showing compliance with specified lead content requirements.

D. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency specified under Regulatory Requirements. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

E. Project Record Documents: Record actual sizes and locations of cables.

F. Certificate of Compliance: Indicate approval of installation by authority having jurisdiction.

G. Maintenance Data: Include instructions for testing and cleaning cable and accessories.

1.5 QUALITY ASSURANCE

A. Comply with NFPA 70.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience and with service facilities within 100 miles of Project.

C. Installer Qualifications: Authorized installer of specified manufacturer with service facilities within 100 miles of Project.

D. Products: Listed, classified, and labeled as suitable for the purpose intended.

E. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

PART 2 PRODUCTS

2.1 MEDIUM-VOLTAGE CABLE

A. Manufacturers:

1. General Cable Technologies Corporation; _____: www.generalcable.com/#sle.
2. Okonite; _____: www.okonite.com/#sle.
3. Southwire Company; _____: www.southwire.com/#sle.
4. Substitutions: See Section 01.6000 - Product Requirements.

B. Medium Voltage Cable: NEMA WC 70 ethylene propylene insulated cable.

1. Voltage: 15 kV, grounded.
2. Conductor: Copper, concentric, stranded, with foil conductor shield.
3. Construction: Single conductor with metal wire insulation shielding.

2.2 CABLE ACCESSORIES

A. Potheads: IEEE 48, Class 1 termination. Pothead with porcelain insulators, cable connector and aerial lug, sealed cable entrance and support, and insulating compound.

B. Cable Terminations: IEEE 48, Class 2 porcelain insulator cable terminator in kit form.

C. Cast Epoxy Cable Terminations: IEEE 48, Class 1 cast epoxy cable termination in kit form with stress cone, shield ground connection, wet porcelain rain shield for outdoor units, epoxy resin molding material, and accessories and molds required for proper application.

D. Modular Cable Terminations: IEEE 48, Class 1, molded-rubber cable termination in kit form with stress cone, ground clamp, non-tracking rubber skirts, load break connector, rubber cap, and aerial lug.

E. Tape Terminations: IEEE 48; Class 1, tape termination kit with semi- conductive tape, stress control tape, splicing tape, vinyl plastic tape, stress cone, mechanical ground straps, and cable preparation kit.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that conduit, duct, trench, or manholes are ready to receive cable.

B. Verify that field measurements are as indicated.

C. Verify routing and termination locations of cable bank prior to rough-in.

D. Cable routing is shown in approximate locations unless dimensioned. Route as required to complete wiring system.

3.2 PREPARATION

A. Use swab to clean conduits before pulling cables.

3.3 INSTALLATION

A. Avoid abrasion and other damage to cables during installation.

B. Use suitable lubricants and pulling equipment.

C. Sustain cable pulling tensions and bending radii below recommended limits.

D. Ground cable shield at each termination and splice.

E. Install cables in manholes along wall providing longest route.

F. Arrange cable in manholes to avoid interference with duct entrances.

G. Fireproof cables in manholes using fireproofing tape in half-lapped wrapping. Extend fireproofing 1 inch into duct.

3.4 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Inspect exposed cable sections for physical damage.

C. Inspect cable for proper connections as indicated.

D. Inspect shield grounding, cable supports, and terminations for proper installation.

E. Inspect and test in accordance with NETA ATS, except Section 4.

F. Perform inspections and tests listed in NETA ATS, Section 7.3.3. The cable time domain reflectometer (TDR) measurements on each conductor listed as optional are not required.

3.5 PROTECTION

A. Protect installed cables from entrance of moisture.

END OF SECTION 26.0513

SECTION 26.0519 - LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Single conductor building wire.

B. Underground feeder and branch-circuit cable.

C. Armored cable.

D. Metal-clad cable.

E. Variable-frequency drive cable.

F. Manufactured wiring systems.

G. Wiring connectors.

H. Electrical tape.

I. Heat shrink tubing.

J. Oxide inhibiting compound.

K. Wire pulling lubricant.

L. Cable ties.

M. Firestop sleeves.

1.2 RELATED REQUIREMENTS

A. Section 07.8400 - Firestopping.

B. Section 26.0513 - Medium-Voltage Cables: Cables and terminations for systems 601 V through 35,000 V.

C. Section 26.0526 - Grounding and Bonding for Electrical Systems: Additional requirements for grounding conductors and grounding connectors.

D. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

E. Section 28.4600 - Fire Detection and Alarm: Fire alarm system conductors and cables.

F. Section 31.2316 - Excavation.

G. Section 31.2316.13 - Trenching: Excavating, bedding, and backfilling.

H. Section 31.2323 - Fill: Bedding and backfilling.

1.3 REFERENCE STANDARDS

A. ASTM B3 - Standard Specification for Soft or Annealed Copper Wire; 2013 (Reapproved 2024).

B. ASTM B8 - Standard Specification for Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft; 2023.

C. ASTM B33 - Standard Specification for Tin-Coated Soft or Annealed Copper Wire for Electrical Purposes; 2010, with Editorial Revision (2020).

D. ASTM B787/B787M - Standard Specification for 19 Wire Combination Unilay-Stranded Copper Conductors for Subsequent Insulation; 2004 (Reapproved 2020).

E. ASTM D3005 - Standard Specification for Low-Temperature Resistant Vinyl Chloride Plastic Pressure-Sensitive Electrical Insulating Tape; 2024.

F. ASTM D4388 - Standard Specification for Nonmetallic Semi-Conducting and Electrically Insulating Rubber Tapes; 2020.

G. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2026a.

H. FM 3971 - Examination Standard for Fire Protective Coatings and Wraps for Grouped Cables; 2023.

I. IEEE 383 - IEEE Standard for Qualifying Electric Cables and Splices for Nuclear Facilities; 2023.

J. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

K. NECA 120 - Standard for Installing Armored Cable (AC) and Type Metal-Clad (MC) Cable; 2018.

L. NEMA WC 70 - Power Cables Rated 2000 Volts or Less for the Distribution of Electrical Energy; 2021.

M. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems; 2025.

N. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

O. NFPA 79 - Electrical Standard for Industrial Machinery; 2024.

P. UL 44 - Thermoset-Insulated Wires and Cables; Current Edition, Including All Revisions.

Q. UL 83 - Thermoplastic-Insulated Wires and Cables; Current Edition, Including All Revisions.

R. UL 183 - Manufactured Wiring Systems; Current Edition, Including All Revisions.

S. UL 267 - Outline of Investigation for Wire-Pulling Compounds; Current Edition, Including All Revisions.

T. UL 486A-486B - Wire Connectors; Current Edition, Including All Revisions.

U. UL 486C - Splicing Wire Connectors; Current Edition, Including All Revisions.

V. UL 486D - Sealed Wire Connector Systems; Current Edition, Including All Revisions.

W. UL 510 - Polyvinyl Chloride, Polyethylene, and Rubber Insulating Tape; Current Edition, Including All Revisions.

X. UL 1569 - Metal-Clad Cables; Current Edition, Including All Revisions.

Y. UL 2277 - Outline of Investigation for Flexible Motor Supply Cable and Wind Turbine Tray Cable; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate sizes of raceways, boxes, and equipment enclosures installed under other sections with the actual conductors to be installed, including adjustments for conductor sizes increased for voltage drop.

2. Coordinate with electrical equipment installed under other sections to provide terminations suitable for use with the conductors to be installed.
3. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for conductors and cables, including detailed information on materials, construction, ratings, listings, and available sizes, configurations, and stranding.

C. Sustainable Design Documentation: Submit manufacturer's product data on conductor and cable showing compliance with specified lead content requirements.

D. Manufactured Wiring System Shop Drawings: Provide plan views indicating proposed system layout with components identified; indicate branch circuit connections.

E. Wire Pulling Lubricant: Certification of compatibility with conductors/cables where used with the following insulation/jacket types:

1. Low-smoke zero halogen (LSZH).

F. Design Data: Indicate voltage drop and ampacity calculations for aluminum conductors substituted for copper conductors. Include proposed modifications to raceways, boxes, wiring gutters, enclosures, etc. to accommodate substituted conductors.

G. Field Quality Control Test Reports.

H. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

I. Project Record Documents: Record actual installed circuiting arrangements. Record actual routing for underground circuits.

J. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01.6000 - Product Requirements, for additional provisions.

1.6 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store conductors and cables in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.1 CONDUCTOR AND CABLE APPLICATIONS

A. Do not use conductors and cables for applications other than as permitted by NFPA 70 and product listing.

B. Provide single conductor building wire installed in suitable raceway unless otherwise indicated, permitted, or required.

1. Exceptions:
    a. Use variable-frequency drive cable for connection between variable-frequency motor controllers and associated motors.

C. Nonmetallic-sheathed cable is not permitted.

D. Underground feeder and branch-circuit cable is not permitted.

E. Service entrance cable is not permitted.

F. Armored cable is not permitted.

G. Metal-clad cable is permitted only as follows:

1. Where not otherwise restricted, may be used:
    a. Where concealed above accessible ceilings for final connections from junction boxes to luminaires.
        1) Maximum Length: 6 feet.
    b. Where concealed in hollow stud walls, above accessible ceilings, and under raised floors for branch circuits up to 20 A.
        1) Exception: Provide single conductor building wire in raceway for circuit homerun from first outlet to panelboard.
2. In addition to other applicable restrictions, may not be used:
    a. Unless approved by Owner.
    b. Where not approved for use by the authority having jurisdiction.
    c. Where exposed to damage.
    d. For damp, wet, or corrosive locations, unless provided with a PVC jacket listed as suitable for those locations.
    e. For isolated ground circuits, unless provided with an additional isolated/insulated grounding conductor.

H. Manufactured wiring systems are permitted only as follows:

1. Where not otherwise restricted, may be used:
    a. For branch circuits where concealed under raised floors, where concealed above accessible ceilings for lighting, and in open ceiling areas for lighting.
        1) Exception: Provide single conductor building wire in raceway for circuit homerun from distribution box to panelboard.
2. In addition to other applicable restrictions, may not be used:

a. Unless approved by Owner.
b. Where not approved for use by the authority having jurisdiction.
c. Where exposed to damage.
d. For damp, wet, or corrosive locations.
e. For isolated ground circuits, unless provided with an additional isolated/insulated grounding conductor.

2.2 CONDUCTOR AND CABLE GENERAL REQUIREMENTS

A. Provide products that comply with requirements of NFPA 70.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Provide new conductors and cables manufactured not more than one year prior to installation.

D. Unless specifically indicated to be excluded, provide all required conduit, boxes, wiring, connectors, etc. as required for a complete operating system.

E. Comply with NEMA WC 70.

F. Thermoplastic-Insulated Conductors and Cables: Listed and labeled as complying with UL 83.

G. Thermoset-Insulated Conductors and Cables: Listed and labeled as complying with UL 44.

H. Conductors for Grounding and Bonding: Also comply with Section 26.0526.

I. Conductor Material:

1. Provide copper conductors only. Aluminum conductors are not acceptable for this project. Conductor sizes indicated are based on copper.
2. Copper Conductors: Soft drawn annealed, 98 percent conductivity, uncoated copper conductors complying with ASTM B3, ASTM B8, or ASTM B787/B787M unless otherwise indicated.
3. Tinned Copper Conductors: Comply with ASTM B33.

J. Minimum Conductor Size:

1. Branch Circuits: 12 AWG.
   a. Exceptions:
      1) 20 A, 120 V circuits longer than 75 feet: 10 AWG, for voltage drop.
      2) 20 A, 120 V circuits longer than 150 feet: 8 AWG, for voltage drop.
2. Control Circuits: 14 AWG.

K. Where conductor size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.

L. Conductor Color Coding:

1. Color code conductors as indicated unless otherwise required by the authority having jurisdiction. Maintain consistent color coding throughout project.
2. Color Coding Method: Integrally colored insulation.
   a. Conductors size 4 AWG and larger may have black insulation color coded using vinyl color coding electrical tape.
3. Color Code:
   a. 208Y/120 V, 3 Phase, 4 Wire System:

1) Phase A: Black.
2) Phase B: Red.
3) Phase C: Blue.
4) Neutral/Grounded: White.

b. Equipment Ground, All Systems: Green.
c. Isolated Ground, All Systems: Green with yellow stripe.
d. Travelers for 3-Way and 4-Way Switching: Pink.
e. For modifications or additions to existing wiring systems, comply with existing color code when existing code complies with NFPA 70 and is approved by the authority having jurisdiction.
f. For control circuits, comply with manufacturer's recommended color code.

2.3 SINGLE CONDUCTOR BUILDING WIRE

A. Manufacturers:

1. Copper Building Wire:
   a. Cerro Wire LLC: www.cerrowire.com/#sle.
   b. Encore Wire Corporation: www.encorewire.com/#sle.
   c. General Cable Technologies Corporation; _____: www.generalcable.com/#sle.
   d. Service Wire Co: www.servicewire.com/#sle.
   e. Southwire Company: www.southwire.com/#sle.
   f. Substitutions: See Section 01.6000 - Product Requirements.

B. Description: Single conductor insulated wire.

C. Conductor Stranding:

1. Feeders and Branch Circuits:
   a. Size 10 AWG and Smaller: Solid.
   b. Size 8 AWG and Larger: Stranded.
2. Control Circuits: Stranded.

D. Insulation Voltage Rating: 600 V.

E. Insulation:

1. Copper Building Wire: Type THHN/THWN or THHN/THWN-2, except as indicated below.
   a. Size 4 AWG and Larger: Type XHHW-2.
   b. Installed Underground: Type XHHW-2.
   c. Fixture Wiring Within Luminaires: Type TFFN/TFN for luminaires with labeled maximum temperature of 90 degrees C; Approved suitable type for luminaires with labeled maximum temperature greater than 90 degrees C.

2.4 METAL-CLAD CABLE

A. Manufacturers:

1. AFC Cable Systems Inc: www.afcweb.com/#sle.
2. Encore Wire Corporation: www.encorewire.com/#sle.

3. Service Wire Co: www.servicewire.com/#sle.
4. Southwire Company: www.southwire.com/#sle.
5. Substitutions: See Section 01.6000 - Product Requirements.

B. Description: NFPA 70, Type MC cable listed and labeled as complying with UL 1569, and listed for use in classified firestop systems to be used.

C. Conductor Stranding:

1. Size 10 AWG and Smaller: Solid.
2. Size 8 AWG and Larger: Stranded.

D. Insulation Voltage Rating: 600 V.

E. Insulation: Type THHN, THHN/THWN, or THHN/THWN-2.

F. Grounding: Full-size integral equipment grounding conductor.

1. Provide additional isolated/insulated grounding conductor where indicated.

G. Armor: Aluminum or steel, interlocked tape.

H. Provide PVC jacket applied over cable armor.

2.5 VARIABLE-FREQUENCY DRIVE CABLE

A. Manufacturers:

1. Service Wire Co; ServiceDrive: www.servicewire.com/#sle.
2. Substitutions: See Section 01.6000 - Product Requirements.

B. Description: Flexible motor supply cable listed and labeled as complying with UL 2277 in accordance with NFPA 79; specifically designed for use with variable frequency drives and associated nonlinear power distortions.

C. Conductor Stranding: Stranded.

D. Insulation Voltage Rating: 1000 V.

E. Insulation: Use only thermoset insulation types; thermoplastic insulation types are not permitted.

F. Grounding: Full-size integral equipment grounding conductor or symmetrical arrangement of multiple conductors of equivalent size.

G. Provide metallic shielding.

H. Jacket: PVC or Chlorinated Polyethylene (CPE).

2.6 MANUFACTURED WIRING SYSTEMS

A. Manufacturers:

1. AFC Cable Systems Inc: www.afcweb.com/#sle.
2. D&P Custom Lights & Wiring Systems, Inc: www.dandpcustomlights.com/#sle.
3. RELOC Wiring Solutions, a brand of Acuity Brands, Inc: www.relocwiring.com/#sle.
4. Wiremold, a brand of Legrand North America, Inc: www.legrand.us/#sle.
5. Substitutions: See Section 01.6000 - Product Requirements.

B. Description: Manufactured wiring assemblies complying with NFPA 70 Article 604, and listed and labeled as complying with UL 183.

C. Provide components necessary to transition between manufactured wiring system and other wiring methods.

D. Branch Circuit Cables:

1. Conductor Stranding (Size 10 AWG and Smaller): Solid.
2. Insulation Voltage Rating: 600 V.
3. Insulation: Type THHN.
4. Grounding: Full-size integral equipment grounding conductor.
   a. Provide additional isolated/insulated grounding conductor where indicated or required.
5. Armor: Steel, interlocked tape.

E. Connectors: Keyed and color-coded to prevent interconnection of different voltages.

F. Fixture Leads: Type TFN insulation.

2.7 WIRING CONNECTORS

A. Description: Wiring connectors appropriate for the application, suitable for use with the conductors to be connected, and listed as complying with UL 486A-486B or UL 486C as applicable.

B. Connectors for Grounding and Bonding: Comply with Section 26.0526.

C. Wiring Connectors for Splices and Taps:

1. Copper Conductors Size 8 AWG and Smaller: Use twist-on insulated spring connectors.
2. Copper Conductors Size 6 AWG and Larger: Use mechanical connectors or compression connectors.

D. Wiring Connectors for Terminations:

1. Provide terminal lugs for connecting conductors to equipment furnished with terminations designed for terminal lugs.
2. Provide compression adapters for connecting conductors to equipment furnished with mechanical lugs when only compression connectors are specified.
3. Where over-sized conductors are larger than the equipment terminations can accommodate, provide connectors suitable for reducing to appropriate size, but not less than required for the rating of the overcurrent protective device.
4. Provide motor pigtail connectors for connecting motor leads in order to facilitate disconnection.
5. Copper Conductors Size 8 AWG and Larger: Use mechanical connectors or compression connectors where connectors are required.
6. Stranded Conductors Size 10 AWG and Smaller: Use crimped terminals for connections to terminal screws.
7. Conductors for Control Circuits: Use crimped terminals for all connections.

E. Do not use insulation-piercing or insulation-displacement connectors designed for use with conductors without stripping insulation.

F. Do not use push-in wire connectors as a substitute for twist-on insulated spring connectors.

G. Twist-on Insulated Spring Connectors: Rated 600 V, 221 degrees F for standard applications and 302 degrees F for high temperature applications; pre-filled with sealant and listed as complying with UL 486D for damp and wet locations.

H. Mechanical Connectors: Provide bolted type.

I. Compression Connectors: Provide circumferential type crimp configuration.

J. Crimped Terminals: Nylon-insulated, with insulation grip and terminal configuration suitable for connection to be made.

2.8 ACCESSORIES

A. Electrical Tape:

1. Vinyl Color Coding Electrical Tape: Integrally colored to match color code indicated; listed as complying with UL 510; minimum thickness of 7 mil; resistant to abrasion, corrosion, and sunlight; suitable for continuous temperature environment up to 221 degrees F.
2. Vinyl Insulating Electrical Tape: Complying with ASTM D3005 and listed as complying with UL 510; minimum thickness of 7 mil; resistant to abrasion, corrosion, and sunlight; conformable for application down to 0 degrees F and suitable for continuous temperature environment up to 221 degrees F.
3. Rubber Splicing Electrical Tape: Ethylene Propylene Rubber (EPR) tape, complying with ASTM D4388; minimum thickness of 30 mil; suitable for continuous temperature environment up to 194 degrees F and short-term 266 degrees F overload service.
4. Electrical Filler Tape: Rubber-based insulating moldable putty, minimum thickness of 125 mil; suitable for continuous temperature environment up to 176 degrees F.
5. Varnished Cambric Electrical Tape: Cotton cambric fabric tape, with or without adhesive, oil-primed and coated with high-grade insulating varnish; minimum thickness of 7 mil; suitable for continuous temperature environment up to 221 degrees F.
6. Moisture Sealing Electrical Tape: Insulating mastic compound laminated to flexible, all-weather vinyl backing; minimum thickness of 90 mil.

B. Heat Shrink Tubing: Heavy-wall, split-resistant, with factory-applied adhesive; rated 600 V; suitable for direct burial applications; listed as complying with UL 486D.

C. Oxide Inhibiting Compound: Listed; suitable for use with the conductors or cables to be installed.

D. Wire Pulling Lubricant:

1. Listed and labeled as complying with UL 267.
2. Suitable for use with conductors/cables and associated insulation/jackets to be installed.
3. Suitable for use at installation temperature.

E. Cable Ties: Material and tensile strength rating suitable for application.

F. Sealing Systems for Roof Penetrations: Premanufactured components and accessories as required to preserve integrity of roofing system and maintain roof warranty; suitable for cables and roofing system to be installed; designed to accommodate existing penetrations where applicable.

G. Firestop Sleeves: Listed; provide as required to preserve fire resistance rating of building elements.

H. Fire-Protective Coating for Electrical Conductors and Cables: Field-applied, intumescent or ablative coating designed to prevent ignition and propagation of fire along thermoplastic-insulated conductors and cables.

1. Pass flammability tests of one of the following:
   a. ASTM E84, Class A; maximum flame spread index of 25.
   b. FM 3971.
   c. IEEE 383.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that interior of building has been protected from weather.

B. Verify that work likely to damage wire and cable has been completed.

C. Verify that raceways, boxes, and equipment enclosures are installed and are properly sized to accommodate conductors and cables in accordance with NFPA 70.

D. Verify that field measurements are as indicated.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.2 PREPARATION

A. Clean raceways thoroughly to remove foreign materials before installing conductors and cables.

3.3 INSTALLATION

A. Circuiting Requirements:

1. Unless dimensioned, circuit routing indicated is diagrammatic.
2. When circuit destination is indicated without specific routing, determine exact routing required.
3. Arrange circuiting to minimize splices.
4. Include circuit lengths required to install connected devices within 10 ft of location indicated.
5. Maintain separation of Class 1, Class 2, and Class 3 remote-control, signaling, and power-limited circuits in accordance with NFPA 70.
6. Maintain separation of wiring for emergency systems in accordance with NFPA 70.
7. Circuiting Adjustments: Unless otherwise indicated, when branch circuits are indicated as separate, combining them together in a single raceway is permitted, under the following conditions:
   a. Provide no more than six current-carrying conductors in a single raceway. Dedicated neutral conductors are considered current-carrying conductors.
   b. Increase size of conductors as required to account for ampacity derating.
   c. Size raceways, boxes, etc. to accommodate conductors.
8. Common Neutrals: Unless otherwise indicated, sharing of neutral/grounded conductors among single phase branch circuits of different phases installed in the same raceway is not permitted. Provide dedicated neutral/grounded conductor for each individual branch circuit.
9. Provide oversized neutral/grounded conductors where indicated and as specified below.
   a. Provide 200 percent rated neutral for feeders fed from K-rated transformers.
   b. Provide 200 percent rated neutral for feeders serving panelboards with 200 percent rated neutral bus.

B. Install products in accordance with manufacturer's instructions.

C. Perform work in accordance with NECA 1 (general workmanship).

D. Install metal-clad cable (Type MC) in accordance with NECA 120.

E. Installation in Raceway:

1. Tape ends of conductors and cables to prevent infiltration of moisture and other contaminants.

2. Pull all conductors and cables together into raceway at same time.
3. Do not damage conductors and cables or exceed manufacturer's recommended maximum pulling tension and sidewall pressure.
4. Use suitable wire pulling lubricant where necessary, except when lubricant is not recommended by the manufacturer.

F. Paralleled Conductors: Install conductors of the same length and terminate in the same manner.

G. Secure and support conductors and cables in accordance with NFPA 70 using suitable supports and methods approved by the authority having jurisdiction. Provide independent support from building structure. Do not provide support from raceways, piping, ductwork, or other systems.

H. Terminate cables using suitable fittings.

1. Metal-Clad Cable (Type MC):
   a. Use listed fittings.
   b. Cut cable armor only using specialized tools to prevent damaging conductors or insulation. Do not use hacksaw or wire cutters to cut armor.
   c. Do not use direct-bearing set-screw type fittings for cables with aluminum armor.

I. Variable-Frequency Drive Cable: Terminate shielding at both variable-frequency motor controller and associated motor using glands or termination kits recommended by manufacturer.

J. Install conductors with a minimum of 12 inches of slack at each outlet.

K. Neatly train and bundle conductors inside boxes, wireways, panelboards and other equipment enclosures.

L. Group or otherwise identify neutral/grounded conductors with associated ungrounded conductors inside enclosures in accordance with NFPA 70.

M. Make wiring connections using specified wiring connectors.

1. Make splices and taps only in accessible boxes. Do not pull splices into raceways or make splices in conduit bodies or wiring gutters.
2. Remove appropriate amount of conductor insulation for making connections without cutting, nicking or damaging conductors.
3. Do not remove conductor strands to facilitate insertion into connector.
4. Clean contact surfaces on conductors and connectors to suitable remove corrosion, oxides, and other contaminates. Do not use wire brush on plated connector surfaces.
5. Mechanical Connectors: Secure connections according to manufacturer's recommended torque settings.
6. Compression Connectors: Secure connections using manufacturer's recommended tools and dies.

N. Insulate splices and taps that are made with uninsulated connectors using methods suitable for the application, with insulation and mechanical strength at least equivalent to unspliced conductors.

1. Dry Locations: Use insulating covers specifically designed for the connectors, electrical tape, or heat shrink tubing.
   a. For taped connections, first apply adequate amount of rubber splicing electrical tape or electrical filler tape, followed by outer covering of vinyl insulating electrical tape.

b. For taped connections likely to require re-entering, including motor leads, first apply varnished cambric electrical tape, followed by adequate amount of rubber splicing electrical tape, followed by outer covering of vinyl insulating electrical tape.

2. Damp Locations: Use insulating covers specifically designed for the connectors, electrical tape, or heat shrink tubing.
   a. For connections with insulating covers, apply outer covering of moisture sealing electrical tape.
   b. For taped connections, follow same procedure as for dry locations but apply outer covering of moisture sealing electrical tape.
3. Wet Locations: Use heat shrink tubing.

O. Insulate ends of spare conductors using vinyl insulating electrical tape.

P. Field-Applied Color Coding: Where vinyl color coding electrical tape is used in lieu of integrally colored insulation as permitted in Part 2 under "Color Coding", apply half overlapping turns of tape at each termination and at each location conductors are accessible.

Q. Identify conductors and cables in accordance with Section 26.0553.

R. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 07.8400.

S. Unless specifically indicated to be excluded, provide final connections to all equipment and devices, including those furnished by others, as required for a complete operating system.

3.4 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Perform inspections and tests listed in NETA ATS, Section 7.3.2. The insulation resistance test is required for all conductors. The resistance test for parallel conductors listed as optional is not required.

1. Disconnect surge protective devices (SPDs) prior to performing any high potential testing. Replace SPDs damaged by performing high potential testing with SPDs connected.

D. Correct deficiencies and replace damaged or defective conductors and cables.

END OF SECTION 26.0519

SECTION 26.0526 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Grounding and bonding requirements.

B. Conductors for grounding and bonding.

C. Connectors for grounding and bonding.

D. Ground bars.

E. Ground rod electrodes.

F. Ground enhancement material.

G. Ground access wells.

1.2 RELATED REQUIREMENTS

A. Section 13.4613 - Lightning Protection for Structures.

B. Section 26.0519 - Low-Voltage Electrical Power Conductors and Cables: Additional requirements for conductors for grounding and bonding, including conductor color coding.

1. Includes oxide inhibiting compound.

C. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

D. Section 26.5600 - Exterior Lighting: Additional grounding and bonding requirements for pole-mounted luminaires.

1.3 REFERENCE STANDARDS

A. IEEE 81 - IEEE Guide for Measuring Earth Resistivity, Ground Impedance, and Earth Surface Potentials of a Grounding System; 2025.

B. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

C. NEMA GR 1 - Grounding Rod Electrodes and Grounding Rod Electrode Couplings; 2022.

D. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems; 2025.

E. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. NFPA 99 - Health Care Facilities Code; 2027.

G. NFPA 780 - Standard for the Installation of Lightning Protection Systems; 2026.

H. UL 467 - Grounding and Bonding Equipment; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Verify exact locations of underground metal water service pipe entrances to building.
2. Coordinate the work with other trades to provide steel reinforcement complying with specified requirements for concrete-encased electrode.
3. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:

1. Do not install ground rod electrodes until final backfill and compaction is complete.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements for submittals procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for grounding and bonding system components.

C. Shop Drawings:

1. Indicate proposed arrangement for signal reference grids. Include locations of items to be bonded and methods of connection.

D. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

E. Field quality control test reports.

F. Project Record Documents: Record actual locations of grounding electrode system components and connections.

1.6 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Installer Qualifications for Signal Reference Grids: Company with minimum five years documented experience with high frequency grounding systems.

E. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.1 GROUNDING AND BONDING REQUIREMENTS

A. Do not use products for applications other than as permitted by NFPA 70 and product listing.

B. Unless specifically indicated to be excluded, provide all required components, conductors, connectors, conduit, boxes, fittings, supports, accessories, etc. as necessary for a complete grounding and bonding system.

C. Where conductor size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.

D. Grounding System Resistance:

1. Achieve specified grounding system resistance under normally dry conditions unless otherwise approved by Architect. Precipitation within the previous 48 hours does not constitute normally dry conditions.
2. Grounding Electrode System: Not greater than 5 ohms to ground, when tested according to IEEE 81 using "fall-of-potential" method.
3. Between Grounding Electrode System and Major Electrical Equipment Frames, System Neutral, and Derived Neutral Points: Not greater than 0.5 ohms, when tested using "point-to-point" methods.

E. Grounding Electrode System:

1. Provide connection to required and supplemental grounding electrodes indicated to form grounding electrode system.
    a. Provide continuous grounding electrode conductors without splice or joint.
    b. Install grounding electrode conductors in raceway where exposed to physical damage. Bond grounding electrode conductor to metallic raceways at each end with bonding jumper.
2. Metal Underground Water Pipe(s):
    a. Provide connection to underground metal domestic and fire protection (where present) water service pipe(s) that are in direct contact with earth for at least 10 feet at an accessible location not more than 5 feet from the point of entrance to the building.
    b. Provide bonding jumper(s) around insulating joints/pipes as required to make pipe electrically continuous.
    c. Provide bonding jumper around water meter of sufficient length to permit removal of meter without disconnecting jumper.
3. Metal In-Ground Support Structure:
    a. Provide connection to metal in-ground support structure that is in direct contact with earth in accordance with NFPA 70.
4. Concrete-Encased Electrode:
    a. Provide connection to concrete-encased electrode consisting of not less than 20 feet of bare copper conductor not smaller than 4 AWG embedded within concrete foundation or footing that is in direct contact with earth in accordance with NFPA 70.

5. Ground Ring:
    a. Provide a ground ring encircling the building or structure consisting of bare copper conductor not less than 2 AWG in direct contact with earth, installed at a depth of not less than 30 inches.
    b. Where location is not indicated, locate ground ring conductor at least 24 inches outside building perimeter foundation.
    c. Provide ground enhancement material around conductor where indicated.

d. Provide connection from ground ring conductor to:
   1) Perimeter columns of metal building frame.
   2) Ground rod electrodes located at each corner of the building/structure.

6. Ground Rod Electrode(s):
   a. Provide three electrodes in an equilateral triangle configuration unless otherwise indicated or required.
   b. Space electrodes not less than 20 feet from each other and any other ground electrode.
   c. Where location is not indicated, locate electrode(s) at least 5 feet outside building perimeter foundation as near as possible to electrical service entrance; where possible, locate in softscape (uncovered) area.
   d. Provide ground enhancement material around electrode where indicated.
   e. Provide ground access well for each electrode.
7. Provide additional ground electrode(s) as required to achieve specified grounding electrode system resistance.
8. Ground Bar: Provide ground bar, separate from service equipment enclosure, for common connection point of grounding electrode system bonding jumpers as permitted in NFPA 70. Connect grounding electrode conductor provided for service-supplied system grounding to this ground bar.
   a. Ground Bar Size: 1/4 by 4 by 12 inches unless otherwise indicated or required.
   b. Where ground bar location is not indicated, locate in accessible location as near as possible to service disconnect enclosure.
   c. Ground Bar Mounting Height: 18 inches above finished floor unless otherwise indicated.
9. Ground Riser: Provide common grounding electrode conductor not less than 3/0 AWG for tap connections to multiple separately derived systems as permitted in NFPA 70.

F. Service-Supplied System Grounding:

1. For each service disconnect, provide grounding electrode conductor to connect neutral (grounded) service conductor to grounding electrode system. Unless otherwise indicated, make connection at neutral (grounded) bus in service disconnect enclosure.
2. For each service disconnect, provide main bonding jumper to connect neutral (grounded) bus to equipment ground bus where not factory-installed. Do not make any other connections between neutral (grounded) conductors and ground on load side of service disconnect.

G. Grounding for Separate Building or Structure Supplied by Feeder(s) or Branch Circuits:

1. Provide grounding electrode system for each separate building or structure.
2. Provide equipment grounding conductor routed with supply conductors.
3. For each disconnecting means, provide grounding electrode conductor to connect equipment ground bus to grounding electrode system.
4. Do not make any connections and remove any factory-installed jumpers between neutral (grounded) conductors and ground.

H. Separately Derived System Grounding:

1. Separately derived systems include, but are not limited to:
   a. Transformers (except autotransformers such as buck-boost transformers).
   b. Uninterruptible power supplies (UPS), when configured as separately derived systems.

c. Generators, when neutral is switched in the transfer switch.

2. Provide grounding electrode conductor to connect derived system grounded conductor to nearest effectively grounded metal building frame. Unless otherwise indicated, make connection at neutral (grounded) bus in source enclosure.
3. Provide bonding jumper to connect derived system grounded conductor to nearest metal building frame and nearest metal water piping in the area served by the derived system, where not already used as a grounding electrode for the derived system. Make connection at same location as grounding electrode conductor connection.
4. Where common grounding electrode conductor ground riser is used for tap connections to multiple separately derived systems, provide bonding jumper to connect the metal building frame and metal water piping in the area served by the derived system to the common grounding electrode conductor.
5. Outdoor Source: Where the source of the separately derived system is located outside the building or structure supplied, provide connection to grounding electrode at source in accordance with NFPA 70.
6. Provide system bonding jumper to connect system grounded conductor to equipment ground bus. Make connection at same location as grounding electrode conductor connection. Do not make any other connections between neutral (grounded) conductors and ground on load side of separately derived system disconnect.
7. Where the source and first disconnecting means are in separate enclosures, provide supply-side bonding jumper between source and first disconnecting means.

I. Bonding and Equipment Grounding:

1. Provide bonding for equipment grounding conductors, equipment ground busses, metallic equipment enclosures, metallic raceways and boxes, device grounding terminals, and other normally non-current-carrying conductive materials enclosing electrical conductors/equipment or likely to become energized as indicated and in accordance with NFPA 70.
2. Provide insulated equipment grounding conductor in each feeder and branch circuit raceway. Do not use raceways as sole equipment grounding conductor.
3. Where circuit conductor sizes are increased for voltage drop, increase size of equipment grounding conductor proportionally in accordance with NFPA 70.
4. Unless otherwise indicated, connect wiring device grounding terminal to branch circuit equipment grounding conductor and to outlet box with bonding jumper.
5. Terminate branch circuit equipment grounding conductors on solidly bonded equipment ground bus only. Do not terminate on neutral (grounded) or isolated/insulated ground bus.
6. Provide bonding jumper across expansion or expansion/deflection fittings provided to accommodate conduit movement.
7. Provide bonding for interior metal piping systems in accordance with NFPA 70. This includes, but is not limited to:
   a. Metal water piping where not already effectively bonded to metal underground water pipe used as grounding electrode.
   b. Metal gas piping.
8. Provide bonding for interior metal air ducts.
9. Provide bonding for metal building frame.
10. Provide bonding for metal siding not effectively bonded through attachment to metal building frame.
11. Provide bonding and equipment grounding for pools and fountains and associated equipment in accordance with NFPA 70.

12. Provide redundant grounding and bonding for patient care areas of health care facilities in accordance with NFPA 70 and NFPA 99.

J. Isolated Ground System:

1. Where isolated ground receptacles or other isolated ground connections are indicated, provide separate isolated/insulated equipment grounding conductors.
2. Connect isolated/insulated equipment grounding conductors only to separate isolated/insulated equipment ground busses.
3. Connect the isolated/insulated equipment grounding conductors to the solidly bonded equipment ground bus only at the service disconnect or separately derived system disconnect. Do not make any other connections between isolated ground system and normal equipment ground system on the load side of this connection.

K. Communications Systems Grounding and Bonding:

1. Provide intersystem bonding termination at service equipment or metering equipment enclosure and at disconnecting means for any additional buildings or structures in accordance with NFPA 70.
2. Provide bonding jumper in raceway from intersystem bonding termination to each communications room or backboard and provide ground bar for termination.
   a. Bonding Jumper Size: 6 AWG, unless otherwise indicated or required.
   b. Raceway Size: 3/4 inch trade size unless otherwise indicated or required.
   c. Ground Bar Size: 1/4 by 2 by 12 inches unless otherwise indicated or required.
   d. Ground Bar Mounting Height: 18 inches above finished floor unless otherwise indicated.

L. Lightning Protection Systems:

1. See Section 264100 for additional requirements.
2. Do not use grounding electrode dedicated for lightning protection system for component of building grounding electrode system provided under this section.
3. Provide bonding of building grounding electrode system provided under this section and lightning protection grounding electrode system in accordance with NFPA 70 and NFPA 780.

M. Pole-Mounted Luminaires: Also comply with Section 26.5600.

2.2 GROUNDING AND BONDING COMPONENTS

A. General Requirements:

1. Provide products listed, classified, and labeled as suitable for the purpose intended.
2. Provide products listed and labeled as complying with UL 467 where applicable.

B. Conductors for Grounding and Bonding, in Addition to Requirements of Section 26.0526:

1. Use insulated copper conductors unless otherwise indicated.
   a. Exceptions:
      1) Use bare copper conductors where installed underground in direct contact with earth.
      2) Use bare copper conductors where directly encased in concrete (not in raceway).

C. Connectors for Grounding and Bonding:

1. Description: Connectors appropriate for the application and suitable for the conductors and items to be connected; listed and labeled as complying with UL 467.
2. Unless otherwise indicated, use exothermic welded connections for underground, concealed and other inaccessible connections.
3. Unless otherwise indicated, use mechanical connectors, compression connectors, or exothermic welded connections for accessible connections.
    a. Exceptions:
        1) Use exothermic welded connections for connections to metal building frame.

D. Ground Bars:

1. Description: Copper rectangular ground bars with mounting brackets and insulators.
2. Size: 1/4"x4"x12" unless otherwise indicated or required.
3. Holes for Connections: As indicated or as required for connections to be made.
4. Manufacturers:
    a. allG Fabrication; _____: www.allgfab.com/#sle.
    b. Harger Lightning & Grounding; _____: www.harger.com/#sle.
    c. nVent ERICO; _____: www.nvent.com/#sle.
    d. thermOweld, subsidiary of Continental Industries; division of Burndy LLC; _____: www.thermoweld.com/#sle.
    e. Substitutions: See Section 01.6000 - Product Requirements.

E. Ground Rod Electrodes:

1. Comply with NEMA GR 1.
2. Material: Copper-bonded (copper-clad) steel.
3. Size: 3/4 inch diameter by 10 feet length, unless otherwise indicated.
4. Where rod lengths of greater than 10 feet are indicated or otherwise required, sectionalized ground rods may be used.
5. Manufacturers:
    a. allG Fabrication; _____: www.allgfab.com/#sle.
    b. Galvan Industries, Inc; _____: www.galvanelectrical.com/#sle.
    c. Harger Lightning & Grounding; _____: www.harger.com/#sle.
    d. nVent ERICO; _____: www.nvent.com/#sle.
    e. Substitutions: See Section 01.6000 - Product Requirements.

F. Ground Enhancement Material:

1. Description: Factory-mixed conductive material designed for permanent and maintenance-free improvement of grounding effectiveness by lowering resistivity.

G. Ground Access Wells:

1. Description: Open bottom round or rectangular well with access cover for testing and inspection; suitable for the expected load at the installed location.
2. Size: As required to provide adequate access for testing and inspection, but not less than minimum size requirements specified.
    a. Round Wells: Not less than 8 inches in diameter.

b. Rectangular Wells: Not less than 12 by 12 inches.

3. Depth: As required to extend below frost line to prevent frost upheaval, but not less than 10 inches.
4. Cover: Factory-identified by permanent means with word "GROUND".

H. Oxide Inhibiting Compound: Comply with Section 26.0519.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that work likely to damage grounding and bonding system components has been completed.

B. Verify that field measurements are as indicated.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Perform work in accordance with NECA 1 (general workmanship).

C. Ground Rod Electrodes: Unless otherwise indicated, install ground rod electrodes vertically. Where encountered rock prohibits vertical installation, install at 45 degree angle or bury horizontally in trench at least 30 inches (750 mm) deep in accordance with NFPA 70 or provide ground plates.

1. Outdoor Installations: Unless otherwise indicated, install with top of rod 6 inches below finished grade.
2. Indoor Installations: Unless otherwise indicated, install with 4 inches of top of rod exposed.

D. Make grounding and bonding connections using specified connectors.

1. Remove appropriate amount of conductor insulation for making connections without cutting, nicking or damaging conductors. Do not remove conductor strands to facilitate insertion into connector.
2. Remove nonconductive paint, enamel, or similar coating at threads, contact points, and contact surfaces.
3. Exothermic Welds: Make connections using molds and weld material suitable for the items to be connected in accordance with manufacturer's recommendations.
4. Mechanical Connectors: Secure connections according to manufacturer's recommended torque settings.
5. Compression Connectors: Secure connections using manufacturer's recommended tools and dies.

E. Identify grounding and bonding system components in accordance with Section 26.0553.

3.3 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Inspect and test in accordance with NETA ATS except Section 4.

C. Perform inspections and tests listed in NETA ATS, Section 7.13.

D. Perform ground electrode resistance tests under normally dry conditions. Precipitation within the previous 48 hours does not constitute normally dry conditions.

E. Investigate and correct deficiencies where measured ground resistances do not comply with specified requirements.

F. Submit detailed reports indicating inspection and testing results and corrective actions taken.

END OF SECTION 26.0526

SECTION 26.0529 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Support and attachment requirements and components for equipment, conduit, cable, boxes, and other electrical work.

1.2 RELATED REQUIREMENTS

A. Section 03.3000 - Cast-in-Place Concrete: Concrete equipment pads.

B. Section 05.5000 - Metal Fabrications: Materials and requirements for fabricated metal supports.

C. Section 26.0533.13 - Conduit for Electrical Systems: Additional support and attachment requirements for conduits.

D. Section 26.0533.16 - Boxes for Electrical Systems: Additional support and attachment requirements for boxes.

E. Section 26.0548 - Vibration and Seismic Controls for Electrical Systems.

F. Section 26.5100 - Interior Lighting: Additional support and attachment requirements for interior luminaires.

G. Section 26.5600 - Exterior Lighting: Additional support and attachment requirements for exterior luminaires.

1.3 REFERENCE STANDARDS

A. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2024.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

C. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel; 2023.

D. MFMA-4 - Metal Framing Standards Publication; 2004.

E. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

F. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

G. UL 5B - Strut-Type Channel Raceways and Fittings; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate sizes and arrangement of supports and bases with actual equipment and components to be installed.
2. Coordinate work to provide additional framing and materials required for installation.

3. Coordinate compatibility of support and attachment components with mounting surfaces at installed locations.
4. Coordinate arrangement of supports with ductwork, piping, equipment and other potential conflicts.
5. Notify Architect of conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:

1. Do not install products on or provide attachment to concrete surfaces until concrete has cured; see Section 03.3000.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for channel/strut framing systems, nonpenetrating rooftop supports, and post-installed concrete/masonry anchors.

C. Shop Drawings: Include details for fabricated hangers and supports where materials or methods other than those indicated are proposed for substitution.

D. Evaluation Reports: For products specified as requiring evaluation and recognition by ICC Evaluation Service, LLC (ICC-ES), provide current ICC-ES evaluation reports upon request.

E. Installer's qualification statement.

F. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

1.6 QUALITY ASSURANCE

A. Maintain at project site one copy of each referenced document that prescribes execution requirements.

B. Installer Qualifications for Powder-Actuated Fasteners: Certified by fastener system manufacturer with current operator's license.

C. Installer Qualifications for Field Welding: See Section 05.5000.

D. Product Listing Organization Qualifications: Organization recognized by OSHA as Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.1 SUPPORT AND ATTACHMENT COMPONENTS

A. General Requirements:

1. Comply with the following. Where requirements differ, comply with most stringent.
   a. NFPA 70.

b. Requirements of authorities having jurisdiction.

2. Provide required hangers, supports, anchors, fasteners, fittings, accessories, and hardware as necessary for complete installation of electrical work.
3. Provide products listed, classified, and labeled as suitable for purpose intended, where applicable.
4. Where support and attachment component types and sizes are not indicated, select in accordance with manufacturer's application criteria as required for load to be supported with minimum safety factor of _____. Include consideration for vibration, equipment operation, and shock loads where applicable.
5. Do not use products for applications other than as permitted by NFPA 70 and product listing.
6. Do not use wire, chain, perforated pipe strap, or wood for permanent supports unless specifically indicated or permitted.
7. Steel Components: Use corrosion-resistant materials suitable for environment where installed.
   a. Indoor Dry Locations: Use zinc-plated steel or approved equivalent unless otherwise indicated.
   b. Outdoor and Damp or Wet Indoor Locations: Use galvanized steel, stainless steel, or approved equivalent unless otherwise indicated.
   c. Zinc-Plated Steel: Electroplated in accordance with ASTM B633.
   d. Galvanized Steel: Hot-dip galvanized after fabrication in accordance with ASTM A123/A123M or ASTM A153/A153M.

B. Components for Vibration Isolation and/or Seismic Controls: See Section 26.0548.

C. Materials for Metal Fabricated Supports: See Section 05.5000.

D. Conduit and Cable Supports: Straps and clamps suitable for conduit or cable to be supported.

1. Manufacturers:
   a. ABB: www.electrification.us.abb.com/#sle.
   b. Atkore: www.atkore.com/#sle.
   c. Eaton Corporation: www.eaton.com/#sle.
   d. Emerson Electric Co; O-Z/Gedney: www.emerson.com/#sle.
   e. HoldRite, a brand of Reliance Worldwide Corporation: www.holdrite.com/#sle.
   f. Substitutions: See Section 01.6000 - Product Requirements.
2. Conduit Straps: One-hole or two-hole type; steel or malleable iron.
3. Conduit Clamps: Bolted type unless otherwise indicated.
4. Products:
   a. Atkore: www.atkore.com/#sle.
   b. Gripple, Inc; Universal Bracket: www.gripple.com/#sle.
   c. Gripple, Inc; Fast Trak: www.gripple.com/#sle.
   d. Gripple, Inc; Universal Clamp (Threaded): www.gripple.com/#sle.
   e. Gripple, Inc; Low Profile Bracket Kits: www.gripple.com/#sle.
   f. Substitutions: See Section 01.6000 - Product Requirements.

E. Outlet Box Supports: Hangers and brackets suitable for boxes to be supported.

1. Manufacturers:
   a. ABB: www.electrification.us.abb.com/#sle.

b. Eaton Corporation: www.eaton.com/#sle.
c. Emerson Electric Co; O-Z/Gedney: www.emerson.com/#sle.
d. HoldRite, a brand of Reliance Worldwide Corporation: www.holdrite.com/#sle.

F. Metal Channel/Strut Framing Systems:

1. Manufacturers:
   a. ABB: www.electrification.us.abb.com/#sle.
   b. Atkore; Unistrut: www.atkore.com/#sle.
   c. Substitutions: See Section 01.6000 - Product Requirements.
   d. Source Limitations: Furnish channel/strut and associated fittings, accessories, and hardware produced by single manufacturer.
2. Description: Factory-fabricated, continuous-slot, metal channel/strut and associated fittings, accessories, and hardware required for field assembly of supports.
3. Comply with MFMA-4.
4. Channel/Strut Used as Raceway, Where Indicated: Listed and labeled as complying with UL 5B.
5. Channel Material:
   a. Indoor Dry Locations: Use painted steel, zinc-plated steel, or galvanized steel.
   b. Outdoor and Damp or Wet Indoor Locations: Use galvanized steel.
6. Minimum Channel Thickness: Steel sheet, 12 gauge, 0.1046 inch.
7. Minimum Channel Dimensions: 1-5/8 inch wide by 13/16 inch high.

G. Hanger Rods: Threaded, zinc-plated steel unless otherwise indicated.

1. Minimum Size, Unless Otherwise Indicated or Required:
   a. Equipment Supports: 1/2-inch diameter.
   b. Busway Supports: 1/2-inch diameter.
   c. Single Conduit up to 1-inch (27 mm) Trade Size: 1/4-inch diameter.
   d. Single Conduit Larger than 1-inch (27 mm) Trade Size: 3/8-inch diameter.
   e. Trapeze Support for Multiple Conduits: 3/8-inch diameter.
   f. Outlet Boxes: 1/4-inch diameter.
   g. Luminaires: 1/4-inch diameter.

H. Nonpenetrating Rooftop Supports for Low-Slope Roofs:

1. Manufacturers:
   a. Atkore; Unistrut: www.atkore.com/#sle.
   b. Eaton Corporation: www.eaton.com/#sle.
   c. Green Link, Inc: www.greenlinkengineering.com/#sle.
   d. PHP Systems/Design: www.phpsd.com/#sle.
   e. Substitutions: See Section 01.6000 - Product Requirements.
2. Description: Steel pedestals with thermoplastic or rubber bases that rest on top of roofing membrane, not requiring attachment to roof structure and not penetrating roofing assembly, with support fixtures as specified.
3. Base Sizes: As required to distribute load sufficiently to prevent indentation of roofing assembly.
4. Attachment/Support Fixtures: As recommended by manufacturer, same type as indicated for equivalent indoor hangers and supports.

5. Mounting Height: Provide minimum clearance of 6 inches under supported component to top of roofing.

I. Anchors and Fasteners:

1. Manufacturers - Mechanical Anchors:
   a. Atkore: www.atkore.com/#sle.
   b. Dewalt: anchors.dewalt.com/#sle.
   c. Hilti, Inc: www.hilti.com/#sle.
   d. ITW Red Head, a division of Illinois Tool Works, Inc: www.itwredhead.com/#sle.
   e. MKT Fastening: www.mktfasteningusa.com/#sle.
   f. Simpson Strong-Tie Company Inc: www.strongtie.com/#sle.
   g. Substitutions: See Section 01.6000 - Product Requirements.
2. Manufacturers - Powder-Actuated Fastening Systems:
   a. Dewalt: anchors.dewalt.com/#sle.
   b. Hilti, Inc: www.hilti.com/#sle.
   c. ITW Ramset, a division of Illinois Tool Works, Inc: www.ramset.com/#sle.
   d. Simpson Strong-Tie Company Inc: www.strongtie.com/#sle.
   e. Substitutions: See Section 01.6000 - Product Requirements.
3. Unless otherwise indicated and where not otherwise restricted, use anchor and fastener types indicated for specified applications.
4. Concrete: Use preset concrete inserts, expansion anchors, or screw anchors.
5. Solid or Grout-Filled Masonry: Use expansion anchors or screw anchors.
6. Hollow Masonry: Use toggle bolts.
7. Hollow Stud Walls: Use toggle bolts.
8. Steel: Use beam clamps, machine bolts, or welded threaded studs.
9. Sheet Metal: Use sheet metal screws.
10. Wood: Use wood screws.
11. Plastic and lead anchors are not permitted.
12. Powder-actuated fasteners are permitted only as follows:
    a. Where approved by Architect.
13. Hammer-driven anchors and fasteners are not permitted.
14. Preset Concrete Inserts: Continuous metal channel/strut and spot inserts specifically designed to be cast in concrete ceilings, walls, and floors.
    a. Manufacturer: Same as manufacturer of metal channel/strut framing system.
    b. Comply with MFMA-4.
    c. Channel Material: Use galvanized steel.
    d. Minimum Channel Thickness: Steel sheet, 12 gauge, 0.1046 inch minimum base metal thickness.
15. Post-Installed Concrete and Masonry Anchors: Evaluated and recognized by ICC Evaluation Service, LLC (ICC-ES) for compliance with applicable building code.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that mounting surfaces are ready to receive support and attachment components.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install hangers and supports in accordance with NECA 1.

C. Install anchors and fasteners in accordance with ICC Evaluation Services, LLC (ICC-ES) evaluation report conditions of use where applicable.

D. Provide independent support from building structure. Do not provide support from piping, ductwork, or other systems.

E. Unless specifically indicated or approved by Architect, do not provide support from suspended ceiling support system or ceiling grid.

F. Unless specifically indicated or approved by Architect, do not provide support from roof deck.

G. Do not penetrate or otherwise notch or cut structural members without approval of Structural Engineer.

H. Provide required vibration isolation and/or seismic controls; see Section 26.0548.

I. Equipment Support and Attachment:

1. Use metal, fabricated supports or supports assembled from metal channel/strut to support equipment as required.
2. Use metal channel/strut secured to studs to support equipment surface mounted on hollow stud walls when wall strength is not sufficient to resist pull-out.
3. Use metal channel/strut to support surface-mounted equipment in wet or damp locations to provide space between equipment and mounting surface.
4. Securely fasten floor-mounted equipment. Do not install equipment such that it relies on its own weight for support.

J. Conduit Support and Attachment: See Section 26.0533.13 for additional requirements.

K. Box Support and Attachment: See Section 26.0533.16 for additional requirements.

L. Interior Luminaire Support and Attachment: See Section 26.5100 for additional requirements.

M. Exterior Luminaire Support and Attachment: See Section 26.5600 for additional requirements.

N. Preset Concrete Inserts: Use manufacturer provided closure strips to inhibit concrete seepage during concrete pour.

O. Secure fasteners in accordance with manufacturer's recommended torque settings.

P. Remove temporary supports.

Q. Identify independent electrical component support wires above accessible ceilings, where permitted, with color distinguishable from ceiling support wires in accordance with NFPA 70.

3.3 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements for additional requirements.

B. Inspect support and attachment components for damage and defects.

C. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.

D. Correct deficiencies and replace damaged or defective support and attachment components.

END OF SECTION 26.0529

SECTION 26.0533.13 - CONDUIT FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Galvanized steel rigid metal conduit (RMC).

B. Stainless steel rigid metal conduit (RMC).

C. Flexible metal conduit (FMC).

D. Liquidtight flexible metal conduit (LFMC).

E. Galvanized steel electrical metallic tubing (EMT).

F. Rigid polyvinyl chloride (PVC) conduit.

1.2 RELATED REQUIREMENTS

A. Section 03.3000 - Cast-in-Place Concrete: Concrete encasement of conduits.

B. Section 07.8400 - Firestopping.

C. Section 26.0526 - Grounding and Bonding for Electrical Systems.

1. Includes additional requirements for fittings for grounding and bonding.

D. Section 26.0529 - Hangers and Supports for Electrical Systems.

E. Section 26.0548 - Vibration and Seismic Controls for Electrical Systems.

F. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

G. Section 26.2100 - Low-Voltage Electrical Service Entrance: Additional requirements for electrical service conduits.

H. Section 31.2316.13 - Trenching: Excavating, bedding, and backfilling.

1.3 REFERENCE STANDARDS

A. ANSI C80.1 - American National Standard for Electrical Rigid Steel Conduit (ERSC); 2025.

B. ANSI C80.3 - American National Standard for Electrical Metallic Tubing -- Steel (EMT-S); 2020.

C. ANSI C80.6 - American National Standard for Electrical Intermediate Metal Conduit; 2025.

D. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

E. NECA 101 - Standard for Installing Steel Conduits (Rigid, IMC, EMT); 2020.

F. NECA 111 - Standard for Installing Nonmetallic Raceways (RNC, ENT, LFNC); 2025.

G. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit, Electrical Metallic Tubing, and Cable; 2014.

H. NEMA TC 2 - Electrical Polyvinyl Chloride (PVC) Conduit; 2020.

I. NEMA TC 3 - Polyvinyl Chloride (PVC) Fittings for Use with Rigid PVC Conduit and Tubing; 2021.

J. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

K. UL 1 - Flexible Metal Conduit; Current Edition, Including All Revisions.

L. UL 6 - Electrical Rigid Metal Conduit-Steel; Current Edition, Including All Revisions.

M. UL 6A - Electrical Rigid Metal Conduit-Aluminum, Red Brass, and Stainless Steel; Current Edition, Including All Revisions.

N. UL 360 - Liquid-Tight Flexible Metal Conduit; Current Edition, Including All Revisions.

O. UL 514B - Conduit, Tubing, and Cable Fittings; Current Edition, Including All Revisions.

P. UL 651 - Schedule 40, 80, Type EB and A Rigid PVC Conduit and Fittings; Current Edition, Including All Revisions.

Q. UL 797 - Electrical Metallic Tubing-Steel; Current Edition, Including All Revisions.

R. UL 1203 - Explosion-Proof and Dust-Ignition-Proof Electrical Equipment for Use in Hazardous (Classified) Locations; Current Edition, Including All Revisions.

S. UL 1242 - Electrical Intermediate Metal Conduit-Steel; Current Edition, Including All Revisions.

T. UL 2419 - Outline of Investigation for Electrically Conductive Corrosion Resistant Compounds; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate minimum sizes of conduits with actual type and quantity of conductors to be installed, including adjustments for conductor sizes increased for voltage drop.
2. Coordinate arrangement of conduits with structural members, ductwork, piping, equipment, and other potential conflicts.
3. Verify exact conduit termination locations required for boxes, enclosures, and equipment.
4. Coordinate work to provide roof penetrations that preserve integrity of roofing system and do not void roof warranty.
5. Notify Architect of conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:

1. Do not begin installation of conductors and cables until installation of conduit between termination points is complete.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements for submittals procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for conduits and fittings.

C. Shop Drawings:

1. Indicate proposed arrangement for conduits to be installed within structural concrete slabs, where permitted.
2. Include proposed locations of roof penetrations and proposed methods for sealing.

1.6 QUALITY ASSURANCE

A. Documents at Project Site: Maintain at project site one copy of manufacturer's instructions and shop drawings.

B. Product Listing Organization Qualifications: Organization recognized by OSHA as Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND HANDLING

A. See Section 01.7419 - Construction Waste Management and Disposal for packaging waste requirements.

B. Receive, inspect, handle, and store conduit and fittings in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.1 CONDUIT APPLICATIONS

A. Do not use conduit and associated fittings for applications other than as permitted by NFPA 70, manufacturer's instructions, and product listing.

B. Unless otherwise indicated and where not otherwise restricted, use conduit types indicated for specified applications. Where more than one listed application applies, comply with most restrictive requirements. Where conduit type for particular application is not specified, use galvanized steel rigid metal conduit.

C. Underground:

1. Under Slab on Grade: Use rigid PVC conduit.
2. Exterior, Direct-Buried: Use rigid PVC conduit.
3. Exterior, Embedded Within Concrete: Use rigid PVC conduit.
4. Where rigid polyvinyl chloride (PVC) conduit is provided, transition to galvanized steel rigid metal conduit (RMC) where emerging from underground.
5. Where rigid polyvinyl (PVC) conduit larger than 2-inch (53 mm) trade size is provided, use galvanized steel rigid metal conduit (RMC) elbows for bends.
6. Where galvanized steel rigid metal conduit (RMC) or galvanized steel intermediate metal conduit (IMC) is installed in direct contact with earth where soil has resistivity of less than 2000 ohm-centimeters or is characterized as severely corrosive based on soils report or local experience, use corrosion protection tape, factory-applied corrosion protection coating, or field-applied corrosion protection compound acceptable to authorities having jurisdiction to provide supplementary corrosion protection.
7. Where galvanized rigid metal conduit (RMC), galvanized steel intermediate metal conduit (IMC), or galvanized steel electrical metallic tubing (EMT) emerges from concrete into soil, use corrosion protection tape, factory-applied corrosion protection coating, or field-applied corrosion protection compound acceptable to authorities having jurisdiction to provide supplementary corrosion protection for minimum of 4 inches on either side of where conduit emerges.

D. Embedded Within Concrete:

1. Within Slab on Grade: Not permitted.

2. Within Slab Above Ground: Not permitted.

E. Concealed Within Masonry Walls: Use galvanized steel rigid metal conduit (RMC) or galvanized steel electrical metallic tubing (EMT).

F. Concealed Within Hollow Stud Walls: Use galvanized steel electrical metallic tubing (EMT).

G. Concealed Above Accessible Ceilings: Use galvanized steel electrical metallic tubing (EMT).

H. Interior, Damp or Wet Locations: Use galvanized steel electrical metallic tubing (EMT).

I. Exposed, Interior, Not Subject to Physical Damage: Use galvanized steel electrical metallic tubing (EMT).

J. Exposed, Interior, Subject to Physical Damage: Use galvanized steel electrical metallic tubing (EMT).

1. Locations subject to physical damage include, but are not limited to:
   a. Where exposed below 8 feet, except within electrical and communication rooms or closets.
   b. Where exposed below 20 feet in vehicle bays.

K. Exposed, Interior, Subject to Severe Physical Damage: Use galvanized steel rigid metal conduit (RMC) .

1. Locations subject to severe physical damage include, but are not limited to:
   a. High traffic industrial and warehouse areas where exposed below 8 feet, except within electrical and communication rooms or closets.

L. Exposed, Exterior, Not Subject to Severe Physical Damage: Use galvanized steel rigid metal conduit (RMC).

M. Exposed, Exterior, Subject to Severe Physical Damage: Use galvanized steel rigid metal conduit (RMC) .

1. Exterior locations subject to severe physical damage include, but are not limited to:
   a. Where exposed to vehicular traffic below 20 feet.

N. Concealed, Exterior, Not Embedded in Concrete or in Contact With Earth: Use galvanized steel rigid metal conduit (RMC).

O. Corrosive Locations Above Ground: Use stainless steel rigid metal conduit (RMC).

1. Corrosive locations include, but are not limited to:
   a. Cooling towers.
   b. Electroplating operations.
   c. Swimming pools and associated equipment areas.
   d. Wastewater treatment facilities.
   e. Marine environments.
   f. Chemical storage areas.

P. Flexible Connections to Luminaires Above Accessible Ceilings: Use flexible metal conduit (FMC).

1. Maximum Length: 6 feet.

Q. Flexible Connections to Vibrating Equipment:

1. Dry Locations: Use flexible metal conduit (FMC).

2. Damp, Wet, or Corrosive Locations: Use liquidtight flexible metal conduit (LFMC).
3. Maximum Length: 6 feet unless otherwise indicated.
4. Vibrating equipment includes, but is not limited to:
   a. Transformers.
   b. Motors.

2.2 CONDUIT - GENERAL REQUIREMENTS

A. Comply with NFPA 70.

B. Electrical Service Conduits: See Section 26.2100 for additional requirements.

C. Fittings for Grounding and Bonding: See Section 26.0526 for additional requirements.

D. Provide conduit, fittings, supports, and accessories required for complete raceway system.

E. Provide products listed, classified, and labeled as suitable for purpose intended.

F. Minimum Conduit Size, Unless Otherwise Indicated:

1. Branch Circuits: 3/4-inch trade size.
2. Branch Circuit Homeruns: 3/4-inch trade size.
3. Control Circuits: 1/2-inch trade size.
4. Flexible Connections to Luminaires: 3/8-inch trade size.
5. Underground, Interior: 3/4-inch trade size.
6. Underground, Exterior: 1-inch trade size.

G. Where conduit size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.

2.3 GALVANIZED STEEL RIGID METAL CONDUIT (RMC)

A. Manufacturers:

1. Allied Tube & Conduit, a division of Atkore International: www.alliedeg.com/#sle.
2. Nucor Tubular Products: www.nucortubular.com/#sle.
3. Rymco USA: www.rymcousa.com/#sle.
4. Western Tube, a division of Zekelman Industries: www.westerntube.com/#sle.
5. Wheatland Tube, a division of Zekelman Industries: www.wheatland.com/#sle.
6. Substitutions: See Section 01.6000 - Product Requirements.

B. Description: NFPA 70, Type RMC galvanized steel rigid metal conduit complying with ANSI C80.1 and listed and labeled as complying with UL 6.

C. Fittings:

1. Manufacturers:
   a. ABB; T&B: www.electrification.us.abb.com/#sle.
   b. Allied Tube & Conduit, a division of Atkore International: www.alliedeg.us/#sle.
   c. Bridgeport Fittings Inc: www.bptfittings.com/#sle.
   d. Emerson Electric Co; O-Z/Gedney: www.emerson.com/#sle.
   e. Substitutions: See Section 01.6000 - Product Requirements.
2. Nonhazardous Locations: Use fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B or UL 6.

3. Hazardous/Classified Locations: Use fittings listed and labeled as complying with UL 1203 for classification of installed location.
4. Material: Use steel or malleable iron.
   a. Where not subject to severe corrosive influence, stainless steel or aluminum fittings may be used.
   b. Do not use die cast zinc fittings.
5. Connectors and Couplings: Use threaded type fittings only. Threadless fittings, including set screw and compression/gland types, are not permitted.

2.4 STAINLESS STEEL RIGID METAL CONDUIT (RMC)

A. Manufacturers:

1. Atkore; Calbrite: www.atkore.com/#sle.
2. Gibson Stainless & Specialty Inc: www.gibsonstainless.com/#sle.
3. Patriot Industries, a division of Patriot Aluminum Products LLC: www.patriotsas.com/#sle.
4. Rymco USA: www.rymcousa.com/#sle.
5. Substitutions: See Section 01.6000 - Product Requirements.

B. Description: NFPA 70, Type RMC stainless steel rigid metal conduit complying with ANSI C80.1 and listed and labeled as complying with UL 6A.

1. Material: Type 304 or 316 stainless steel.

C. Fittings:

1. Manufacturers:
   a. Atkore; Calbrite: www.atkore.com/#sle.
   b. Eaton: www.eaton.com/#sle.
   c. Gibson Stainless & Specialty Inc: www.gibsonstainless.com/#sle.
   d. Patriot Industries, a division of Patriot Aluminum Products LLC: www.patriotsas.com/#sle.
   e. Substitutions: See Section 01.6000 - Product Requirements.
2. Nonhazardous Locations: Use fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B or UL 6A.
3. Hazardous/Classified Locations: Use fittings listed and labeled as complying with UL 1203 for classification of installed location.
4. Material: Use stainless steel with corrosion resistance equivalent to conduit.
5. Connectors and Couplings: Use threaded type fittings only. Threadless fittings, including set screw and compression/gland types, are not permitted.

2.5 FLEXIBLE METAL CONDUIT (FMC)

A. Manufacturers:

1. AFC Cable Systems, a division of Atkore International: www.afcweb.com/#sle.
2. Electri-Flex Company: www.electriflex.com/#sle.
3. International Metal Hose: www.metalhose.com/#sle.
4. Substitutions: See Section 01.6000 - Product Requirements.

B. Description: NFPA 70, Type FMC standard-wall steel flexible metal conduit listed and labeled as complying with UL 1, and listed for use in classified firestop systems.

C. Fittings:

1. Manufacturers:
   a. ABB; T&B: www.electrification.us.abb.com/#sle.
   b. Bridgeport Fittings, LLC: www.bptfittings.com/#sle.
   c. Emerson Electric Co; O-Z/Gedney: www.emerson.com/#sle.
   d. Substitutions: See Section 01.6000 - Product Requirements.
2. Description: Fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B.
3. Material: Use steel or malleable iron.
   a. Do not use die cast zinc fittings.

2.6 LIQUIDTIGHT FLEXIBLE METAL CONDUIT (LFMC)

A. Manufacturers:

1. AFC Cable Systems, a division of Atkore International: www.afcweb.com/#sle.
2. Electri-Flex Company: www.electriflex.com/#sle.
3. International Metal Hose: www.metalhose.com/#sle.
4. Substitutions: See Section 01.6000 - Product Requirements.

B. Description: NFPA 70, Type LFMC polyvinyl chloride (PVC) jacketed steel flexible metal conduit listed and labeled as complying with UL 360.

C. Fittings:

1. Manufacturers:
   a. ABB; T&B: www.electrification.us.abb.com/#sle.
   b. Bridgeport Fittings, LLC: www.bptfittings.com/#sle.
   c. Emerson Electric Co; O-Z/Gedney: www.emerson.com/#sle.
   d. Substitutions: See Section 01.6000 - Product Requirements.
2. Description: Fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B.
3. Material: Use steel or malleable iron.
   a. Do not use die cast zinc fittings.

2.7 GALVANIZED STEEL ELECTRICAL METALLIC TUBING (EMT)

A. Manufacturers:

1. Allied Tube & Conduit, a division of Atkore International: www.alliedeg.com/#sle.
2. Nucor Tubular Products: www.nucortubular/#sle.
3. Rymco USA: www.rymcousa.com/#sle.
4. Western Tube, a division of Zekelman Industries: www.westerntube.com/#sle.
5. Wheatland Tube, a division of Zekelman Industries: www.wheatland.com/#sle.
6. Substitutions: See Section 01.6000 - Product Requirements.

B. Description: NFPA 70, Type EMT galvanized steel electrical metallic tubing complying with ANSI C80.3 and listed and labeled as complying with UL 797.

C. Fittings:

1. Manufacturers:

a. ABB; T&B: www.electrification.us.abb.com/#sle.
b. Allied Tube & Conduit, a division of Atkore International: www.alliedeg.us/#sle.
c. Bridgeport Fittings, LLC: www.bptfittings.com/#sle.
d. Emerson Electric Co; O-Z/Gedney: www.emerson.com/#sle.
e. Substitutions: See Section 01.6000 - Product Requirements.

2. Description: Fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B.
3. Material: Use steel or malleable iron.
   a. Do not use die cast zinc fittings.
4. Connectors and Couplings: Use compression/gland type.
   a. Do not use indenter type connectors and couplings.
5. Embedded Within Concrete, Where Permitted: Use fittings listed as concrete-tight. Fittings that require taping to be concrete-tight are not acceptable.

2.8 RIGID POLYVINYL CHLORIDE (PVC) CONDUIT

A. Manufacturers:

1. ABB; Carlon: www.carlon.com/#sle.
2. Allied Tube & Conduit, a division of Atkore International: www.alliedeg.com/#sle.
3. Cantex Inc: www.cantexinc.com/#sle.
4. Heritage Plastics, a division of Atkore International: www.heritageplastics.com/#sle.
5. JM Eagle: www.jmeagle.com/#sle.
6. Rymco USA: www.rymcousa.com/#sle.
7. Substitutions: See Section 01.6000 - Product Requirements.

B. Description: NFPA 70, Type PVC rigid polyvinyl chloride conduit complying with NEMA TC 2 and listed and labeled as complying with UL 651; Schedule 40 unless otherwise indicated, Schedule 80 where subject to physical damage; rated for use with conductors rated 90 degrees C.

C. Fittings:

1. Manufacturer: Same as manufacturer of conduit to be connected.
2. Description: Fittings complying with NEMA TC 3 and listed and labeled as complying with UL 651; material to match conduit.

2.9 ACCESSORIES

A. Corrosion Protection Tape: PVC-based, minimum thickness of 20 mil, 0.020 inch.

B. Conduit Joint Compound: Corrosion-resistant, electrically conductive compound listed as complying with UL 2419; suitable for use with conduit to be installed.

C. Solvent Cement for PVC Conduit and Fittings: As recommended by manufacturer of conduit and fittings to be installed.

D. Pull Strings: Use nylon or polyester tape with average breaking strength of not less than 1,250 lbf.

E. Foam Conduit Sealant:

1. Removable, two-part, closed-cell foam, specifically designed for sealing conduit openings against water, moisture, gases, and dust.
2. Suitable for use with conductors/cables and associated insulation/jackets to be installed.

3. Rated to hold minimum of 10 ft water head pressure.

F. Conduit Mechanical Seals:

1. Listed as complying with UL 514B.
2. Specifically designed for sealing conduit openings against water, moisture, gases, and dust.
3. Suitable for sealing around installed conductors/cables.

G. Sealing Compound for Hazardous/Classified Location Sealing Fittings: Listed for use with particular fittings to be installed.

H. Sealing Systems for Concrete Penetrations:

1. Sleeves: Provide water stop ring or cement coating that bonds to concrete to prevent water infiltration.
2. Rate for minimum of 40 psig; suitable for sealing around conduits to be installed.

I. Flashing Panels for Exterior Wall Penetrations: Premanufactured components and accessories as required to preserve integrity of building envelope; suitable for conduits and facade materials to be installed.

J. Duct Bank Spacers: Nonmetallic; designed for maintaining conduit/duct spacing for concrete encasement in open trench installation; suitable for conduit/duct arrangement to be installed.

K. Bore Spacers: Nonmetallic; designed for maintaining conduit/duct spacing for installation within casing; furnished with roller wheels to facilitate installation, openings to facilitate grout flow, and holes for stabilization cable; suitable for casing and conduit/duct arrangement to be installed.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that mounting surfaces are ready to receive conduits.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install conduit in accordance with NECA 1.

C. Galvanized Steel Rigid Metal Conduit (RMC): Install in accordance with NECA 101.

D. Intermediate Metal Conduit (IMC): Install in accordance with NECA 101.

E. Rigid Polyvinyl Chloride (PVC) Conduit: Install in accordance with NECA 111.

F. Conduit Routing:

1. Unless dimensioned, conduit routing indicated is diagrammatic.
2. When conduit destination is indicated without specific routing, determine exact routing required.
3. Conceal conduits unless specifically indicated to be exposed.
4. Conduits in the following areas may be exposed, unless otherwise indicated:
   a. Electrical rooms.

b. Mechanical equipment rooms.
c. Within joists in areas with no ceiling.

5. Unless otherwise approved, do not route exposed conduits:
   a. Across floors.
   b. Across roofs.
   c. Across top of parapet walls.
   d. Across building exterior surfaces.
6. Conduits installed underground or embedded in concrete may be routed in shortest possible manner unless otherwise indicated. Route other conduits parallel or perpendicular to building structure and surfaces, following surface contours where practical.
7. Arrange conduit to maintain adequate headroom, clearances, and access.
8. Arrange conduit to provide no more than equivalent of four 90-degree bends between pull points.
9. Arrange conduit to provide no more than 150 feet between pull points.
10. Route conduits above water and drain piping where possible.
11. Arrange conduit to prevent moisture traps. Provide drain fittings at low points and at sealing fittings where moisture may collect.
12. Maintain minimum clearance of 6 inches between conduits and piping for other systems.
13. Maintain minimum clearance of 12 inches between conduits and hot surfaces. This includes, but is not limited to:
    a. Heaters.
    b. Hot water piping.
    c. Flues.
14. Group parallel conduits in same area on common rack.

G. Conduit Support:

1. Secure and support conduits in accordance with NFPA 70 using suitable supports and methods approved by authorities having jurisdiction; see Section 26.0529.
2. Provide required vibration isolation and/or seismic controls; see Section 26.0548.
3. Provide independent support from building structure. Do not provide support from piping, ductwork, or other systems.
4. Installation Above Suspended Ceilings: Do not provide support from ceiling support system. Do not provide support from ceiling grid or allow conduits to lay on ceiling tiles.
5. Use conduit strap to support single surface-mounted conduit.
   a. Use clamp back spacer with conduit strap for damp and wet locations to provide space between conduit and mounting surface.
6. Use metal channel/strut with accessory conduit clamps to support multiple parallel surface-mounted conduits.
7. Use conduit clamp to support single conduit from beam clamp or threaded rod.
8. Use trapeze hangers assembled from threaded rods and metal channel/strut with accessory conduit clamps to support multiple parallel suspended conduits.
9. Use nonpenetrating rooftop supports to support conduits routed across rooftops, where approved.
10. Use of spring steel conduit clips for support of conduits is not permitted.
11. Use of wire for support of conduits is not permitted.

12. Where conduit support intervals specified in NFPA 70 and NECA standards differ, comply with most stringent requirements.

H. Connections and Terminations:

1. Use approved zinc-rich paint or conduit joint compound on field-cut threads of galvanized steel conduits prior to making connections.
2. Where two threaded conduits must be joined and neither can be rotated, use three-piece couplings or split couplings. Do not use running threads.
3. Use suitable adapters where required to transition from one type of conduit to another.
4. Provide drip loops for liquidtight flexible conduit connections to prevent drainage of liquid into connectors.
5. Terminate threaded conduits in boxes and enclosures using threaded hubs or double lock nuts for dry locations and raintight hubs for wet locations.
6. Provide insulating bushings, insulated throats, or listed metal fittings with smooth, rounded edges at conduit terminations to protect conductors.
7. Secure joints and connections to provide mechanical strength and electrical continuity.

I. Penetrations:

1. Do not penetrate or otherwise notch or cut structural members, including footings and grade beams, without approval of Structural Engineer.
2. Make penetrations perpendicular to surfaces unless otherwise indicated.
3. Provide sleeves for penetrations as indicated or as required to facilitate installation. Set sleeves flush with exposed surfaces unless otherwise indicated or required.
4. Conceal bends for conduit risers emerging above ground.
5. Where conduits penetrate waterproof membrane, seal as required to maintain integrity of membrane.
6. Make penetrations for roof-mounted equipment within associated equipment openings and curbs where possible to minimize roofing system penetrations. Where penetrations are necessary, seal as indicated or as required to preserve integrity of roofing system and maintain roof warranty.
7. Install firestopping to preserve fire resistance rating of partitions and other elements; see Section 07.8400.

J. Underground Installation:

1. Provide trenching and backfilling; see Section 31.2316.13.

K. Embedment Within Structural Concrete Slabs (only where approved by Structural Engineer):

1. Secure conduits to prevent floating or movement during pouring of concrete.

L. Concrete Encasement: Where conduits not otherwise embedded within concrete are indicated to be concrete-encased, provide minimum concrete cover of 3 inches on all sides unless otherwise indicated; see Section 03.3000.

M. Conduit Movement Provisions: Where conduits are subject to movement, provide expansion and expansion/deflection fittings to prevent damage to enclosed conductors or connected equipment. This includes, but is not limited to:

1. Where conduits cross structural joints intended for expansion, contraction, or deflection.
2. Where calculated in accordance with NFPA 70 for rigid polyvinyl chloride (PVC) conduit installed above ground to compensate for thermal expansion and contraction.

3. Where conduits are subject to earth movement by settlement or frost.

N. Conduit Sealing:

1. Use foam conduit sealant to prevent entry of moisture and gases. This includes, but is not limited to:
   a. Where conduits enter building from outside.
   b. Where service conduits enter building from underground distribution system.
   c. Where conduits enter building from underground.
   d. Where conduits may transport moisture to contact live parts.
2. Where conduits cross barriers between areas of potential substantial temperature differential, use foam conduit sealant at accessible point near penetration to prevent condensation. This includes, but is not limited to:
   a. Where conduits pass from outdoors into conditioned interior spaces.
   b. Where conduits pass from unconditioned interior spaces into conditioned interior spaces.
   c. Where conduits penetrate coolers or freezers.
3. Where conduits cross boundaries of hazardous/classified locations, provide identified/listed sealing fittings or conduit mechanical seals as approved by authorities having jurisdiction; locate as indicated or in accordance with NFPA 70.

O. Provide pull string in each empty conduit and in conduits where conductors and cables are to be installed by others. Leave minimum slack of 12 inches at each end.

P. Provide grounding and bonding; see Section 26.0526.

Q. Identify conduits; see Section 26.0553.

3.3 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements for additional requirements.

B. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.

C. Correct deficiencies and replace damaged or defective conduits.

3.4 CLEANING

A. Clean interior of conduits to remove moisture and foreign matter.

3.5 PROTECTION

A. Immediately after installation of conduit, use suitable manufactured plugs to provide protection from entry of moisture and foreign material and do not remove until ready for installation of conductors.

END OF SECTION 26.0533.13

SECTION 26.0533.16 - BOXES FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Outlet and device boxes up to 100 cubic inches, including those used as junction and pull boxes.

B. Cabinets and enclosures, including junction and pull boxes larger than 100 cubic inches.

C. Boxes and enclosures for integrated power, data, and audio/video.

D. Floor boxes.

E. Underground boxes/enclosures.

F. Accessories.

1.2 RELATED REQUIREMENTS

A. Section 03.3000 - Cast-in-Place Concrete.

B. Section 07.8400 - Firestopping.

C. Section 08.3100 - Access Doors and Panels: Panels for maintaining access to concealed boxes.

D. Section 26.0526 - Grounding and Bonding for Electrical Systems.

E. Section 26.0529 - Hangers and Supports for Electrical Systems.

F. Section 26.0533.13 - Conduit for Electrical Systems:

1. Conduit bodies and other fittings.
2. Additional requirements for locating boxes to limit conduit length and/or number of bends between pulling points.

G. Section 26.0533.23 - Surface Raceways for Electrical Systems:

H. Section 26.0548 - Vibration and Seismic Controls for Electrical Systems.

I. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

J. Section 26.2726 - Wiring Devices:

1. Wall plates.
2. Floor box service fittings.
3. Additional requirements for locating boxes for wiring devices.

K. Section 27.1000 - Structured Cabling: Additional requirements for communications systems outlet boxes.

L. Section 33.7119 - Electrical Underground Ducts, Ductbanks, and Manholes: Concrete manholes for electrical systems.

1.3 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

B. NECA 130 - Standard for Installing and Maintaining Wiring Devices; 2016.

C. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2024.

D. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit, Electrical Metallic Tubing, and Cable; 2014.

E. NEMA OS 1 - Sheet-Steel Outlet Boxes, Device Boxes, Covers, and Box Supports; 2013 (Reaffirmed 2020).

F. NEMA OS 2 - Nonmetallic Outlet Boxes, Device Boxes, Covers and Box Supports; 2013 (Reaffirmed 2020).

G. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

H. SCTE 77 - Specifications for Underground Enclosure Integrity; 2023.

I. UL 50 - Enclosures for Electrical Equipment, Non-Environmental Considerations; Current Edition, Including All Revisions.

J. UL 50E - Enclosures for Electrical Equipment, Environmental Considerations; Current Edition, Including All Revisions.

K. UL 508A - Industrial Control Panels; Current Edition, Including All Revisions.

L. UL 514A - Metallic Outlet Boxes; Current Edition, Including All Revisions.

M. UL 514C - Nonmetallic Outlet Boxes, Flush-Device Boxes, and Covers; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment, or other potential obstructions within the dedicated equipment spaces and working clearances for electrical equipment required by NFPA 70.
2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
3. Coordinate minimum sizes of boxes with the actual installed arrangement of conductors, clamps, support fittings, and devices, calculated according to NFPA 70.
4. Coordinate minimum sizes of pull boxes with the actual installed arrangement of connected conduits, calculated according to NFPA 70.
5. Coordinate the placement of boxes with millwork, furniture, devices, equipment, etc. installed under other sections or by others.
6. Coordinate the work with other trades to preserve insulation integrity.
7. Coordinate the work with other trades to provide walls suitable for installation of flush-mounted boxes where indicated.
8. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for cabinets and enclosures, boxes for hazardous (classified) locations, floor boxes, and underground boxes/enclosures.

1. Underground Boxes/Enclosures: Include reports for load testing in accordance with SCTE 77 certified by a professional engineer or an independent testing agency upon request.

C. Samples:

1. Floor Boxes: Provide one sample(s) of each floor box proposed for substitution upon request.

D. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

E. Project Record Documents: Record actual locations for outlet and device boxes, pull boxes, cabinets and enclosures, floor boxes, and underground boxes/enclosures.

F. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01.6000 - Product Requirements, for additional provisions.
2. Keys for Lockable Enclosures: Two of each different key.

1.6 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

PART 2 PRODUCTS

2.1 BOXES

A. General Requirements:

1. Do not use boxes and associated accessories for applications other than as permitted by NFPA 70 and product listing.
2. Provide all boxes, fittings, supports, and accessories required for a complete raceway system and to accommodate devices and equipment to be installed.
3. Provide products listed, classified, and labeled as suitable for the purpose intended.
4. Where box size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.
5. Provide grounding terminals within boxes where equipment grounding conductors terminate.

B. Outlet and Device Boxes Up to 100 cubic inches, Including Those Used as Junction and Pull Boxes:

1. Use sheet-steel boxes for dry locations unless otherwise indicated or required.
2. Use cast iron boxes for damp or wet locations unless otherwise indicated or required; furnish with compatible weatherproof gasketed covers.
3. Use cast iron boxes where exposed galvanized steel rigid metal conduit or exposed intermediate metal conduit (IMC) is used.
4. Use nonmetallic boxes where exposed rigid PVC conduit is used.
5. Use suitable concrete type boxes where flush-mounted in concrete.
6. Use suitable masonry type boxes where flush-mounted in masonry walls.
7. Use raised covers suitable for the type of wall construction and device configuration where required.

8. Use shallow boxes where required by the type of wall construction.
9. Do not use "through-wall" boxes designed for access from both sides of wall.
10. Sheet-Steel Boxes: Comply with NEMA OS 1, and list and label as complying with UL 514A.
11. Cast Metal Boxes: Comply with NEMA FB 1, and list and label as complying with UL 514A; furnish with threaded hubs.
12. Nonmetallic Boxes: Comply with NEMA OS 2, and list and label as complying with UL 514C.
13. Boxes for Supporting Luminaires and Ceiling Fans: Listed as suitable for the type and weight of load to be supported; furnished with fixture stud to accommodate mounting of luminaire where required.
14. Boxes for Ganged Devices: Use multigang boxes of single-piece construction. Do not use field-connected gangable boxes unless specifically indicated or permitted.
15. Minimum Box Size, Unless Otherwise Indicated:
    a. Wiring Devices: 4 inch square by 2-1/8 inch deep (100 by 54 mm) trade size.
    b. Communications Systems Outlets: 4 inch square by 2-1/8 inch (100 by 54 mm) trade size.
16. Wall Plates: Comply with Section 26.2726.

C. Cabinets and Enclosures, Including Junction and Pull Boxes Larger Than 100 cubic inches:

1. Comply with NEMA EN 10250, and list and label as complying with UL 50 and UL 50E, or UL 508A.
2. NEMA EN 10250 Environment Type, Unless Otherwise Indicated:
    a. Indoor Clean, Dry Locations: Type 1, painted steel.
    b. Outdoor Locations: Type 3R, painted steel.
3. Junction and Pull Boxes Larger Than 100 cubic inches:
    a. Provide screw-cover or hinged-cover enclosures unless otherwise indicated.
4. Cabinets and Hinged-Cover Enclosures, Other Than Junction and Pull Boxes:
    a. Provide lockable hinged covers, all locks keyed alike unless otherwise indicated.
    b. Back Panels: Painted steel, removable.
    c. Terminal Blocks: Provide voltage/current ratings and terminal quantity suitable for purpose indicated, with 25 percent spare terminal capacity.
5. Finish for Painted Steel Enclosures: Manufacturer's standard grey unless otherwise indicated.

D. Boxes and Enclosures for Integrated Power, Data, and Audio/Video: Size and configuration as indicated or as required with partitions to separate services; field-connected gangable boxes may be used.

E. Floor Boxes:

1. Description: Floor boxes compatible with floor box service fittings provided in accordance with Section 26.2726; with partitions to separate multiple services; furnished with all components, adapters, and trims required for complete installation.
2. Manufacturer: Same as manufacturer of floor box service fittings.

F. Underground Boxes/Enclosures:

1. Description: In-ground, open bottom boxes furnished with flush, non-skid covers with legend indicating type of service and stainless steel tamper resistant cover bolts.
2. Size: As indicated on drawings.

3. Depth: As required to extend below frost line to prevent frost upheaval, but not less than 24 inches.
4. Provide logo on cover to indicate type of service.
5. Applications:
   a. Do not use polymer concrete enclosures in areas subject to deliberate vehicular traffic.
6. Polymer Concrete Underground Boxes/Enclosures: Comply with SCTE 77.
   a. Combination fiberglass/polymer concrete boxes/enclosures are acceptable.

2.2 ACCESSORIES

A. Flashing Panels for Exterior Wall Penetrations: Premanufactured components and accessories as required to preserve integrity of building envelope; suitable for boxes and facade materials to be installed.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that mounting surfaces are ready to receive boxes.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install boxes in accordance with NECA 1 (general workmanship) and, where applicable, NECA 130, including mounting heights specified in those standards where mounting heights are not indicated.

C. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and NFPA 70.

D. Provide separate boxes for emergency power and normal power systems.

E. Unless otherwise indicated, provide separate boxes for line voltage and low voltage systems.

F. Flush-mount boxes in finished areas unless specifically indicated to be surface-mounted.

G. Unless otherwise indicated, boxes may be surface-mounted where exposed conduits are indicated or permitted.

H. Box Locations:

1. Locate boxes to be accessible. Provide access panels in accordance with Section 08.3100 as required where approved by the Architect.
2. Unless dimensioned, box locations indicated are approximate.
3. Locate boxes as required for devices installed under other sections or by others.
   a. Switches, Receptacles, and Other Wiring Devices: Comply with Section 26.2726.
   b. Communications Systems Outlets: Comply with Section 271005.
4. Locate boxes so that wall plates do not span different building finishes.
5. Locate boxes so that wall plates do not cross masonry joints.

6. Unless otherwise indicated, where multiple outlet boxes are installed at the same location at different mounting heights, install along a common vertical center line.
7. Do not install flush-mounted boxes on opposite sides of walls back-to-back. Provide minimum 6 inches horizontal separation unless otherwise indicated.
8. Acoustic-Rated Walls: Do not install flush-mounted boxes on opposite sides of walls back-to-back; provide minimum 24 inches horizontal separation.
9. Fire Resistance Rated Walls: Install flush-mounted boxes such that the required fire resistance will not be reduced.
    a. Do not install flush-mounted boxes on opposite sides of walls back-to-back; provide minimum 24 inches separation where wall is constructed with individual noncommunicating stud cavities or protect both boxes with listed putty pads.
    b. Do not install flush-mounted boxes with area larger than 16 square inches or such that the total aggregate area of openings exceeds 100 square inches for any 100 square feet of wall area.
10. Locate junction and pull boxes as indicated, as required to facilitate installation of conductors, and to limit conduit length and/or number of bends between pulling points in accordance with Section 26.0533.13.
11. Locate junction and pull boxes in the following areas, unless otherwise indicated or approved by the Architect:
    a. Concealed above accessible suspended ceilings.
    b. Within joists in areas with no ceiling.
    c. Electrical rooms.
    d. Mechanical equipment rooms.

I. Box Supports:

1. Secure and support boxes in accordance with NFPA 70 and Section 26.0529 using suitable supports and methods approved by the authority having jurisdiction.
2. Provide independent support from building structure except for cast metal boxes (other than boxes used for fixture support) supported by threaded conduit connections in accordance with NFPA 70. Do not provide support from piping, ductwork, or other systems.
3. Installation Above Suspended Ceilings: Do not provide support from ceiling grid or ceiling support system.
4. Use far-side support to secure flush-mounted boxes supported from single stud in hollow stud walls. Repair or replace supports for boxes that permit excessive movement.

J. Install boxes plumb and level.

K. Flush-Mounted Boxes:

1. Install boxes in noncombustible materials such as concrete, tile, gypsum, plaster, etc. so that front edge of box or associated raised cover is not set back from finished surface more than 1/4 inch or does not project beyond finished surface.
2. Install boxes in combustible materials such as wood so that front edge of box or associated raised cover is flush with finished surface.
3. Repair rough openings around boxes in noncombustible materials such as concrete, tile, gypsum, plaster, etc. so that there are no gaps or open spaces greater than 1/8 inch at the edge of the box.

L. Floor-Mounted Cabinets: Mount on properly sized 4 inch high concrete pad constructed in accordance with Section 03.3000.

M. Install boxes as required to preserve insulation integrity.

N. Metallic Floor Boxes: Install box level at the proper elevation to be flush with finished floor.

O. Nonmetallic Floor Boxes: Cut box flush with finished floor after concrete pour.

P. Underground Boxes/Enclosures:

1. Install enclosure on gravel base, minimum 6 inches deep.
2. Provide cast-in-place concrete collar constructed in accordance with Section 03.3000, minimum 10 inches wide by 12 inches deep, around enclosures that are not located in concrete areas.
3. Install additional bracing inside enclosures in accordance with manufacturer's instructions to minimize box sidewall deflections during backfilling. Backfill with cover bolted in place.

Q. Install permanent barrier between ganged wiring devices when voltage between adjacent devices exceeds 300 V.

R. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 07.8400.

S. Close unused box openings.

T. Install blank wall plates on junction boxes and on outlet boxes with no devices or equipment installed or designated for future use.

U. Provide grounding and bonding in accordance with Section 26.0526.

V. Identify boxes in accordance with Section 26.0553.

3.3 CLEANING

A. Clean interior of boxes to remove dirt, debris, plaster and other foreign material.

3.4 PROTECTION

A. Immediately after installation, protect boxes from entry of moisture and foreign material until ready for installation of conductors.

END OF SECTION 26.0533.16

SECTION 26.0536 - CABLE TRAYS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Metal cable tray systems:

1. Metal ladder cable tray.

1.2 RELATED REQUIREMENTS

A. Section 26.0513 - Medium-Voltage Cables.

B. Section 26.0519 - Low-Voltage Electrical Power Conductors and Cables.

C. Section 26.0526 - Grounding and Bonding for Electrical Systems.

D. Section 26.0529 - Hangers and Supports for Electrical Systems.

E. Section 26.0548 - Vibration and Seismic Controls for Electrical Systems.

F. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

1.3 REFERENCE STANDARDS

A. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2025a.

B. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel; 2023.

C. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

D. NEMA BI 50015 - Metal Cable Tray Systems; 2024.

E. NEMA BI-50016 - Cable Tray Installation Guidelines; 2024.

F. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate arrangement of cable tray with structural members, ductwork, piping, equipment and other potential conflicts. Coordinate work to avoid installation of obstructions within cable tray required clearances.
2. Coordinate arrangement of cable tray with dimensions and clearance requirements of actual products to be installed.
3. Coordinate work with placement of supports and anchors required for mounting.
4. Notify of conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Preinstallation Meeting: Convene one week prior to commencing work of this section; require attendance of affected installers. Review proposed routing, sequence of installation, and protection requirements for installed cable tray.

C. Sequencing:

1. Do not begin installation of cables until installation of associated cable tray run is complete.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for cable tray system components and accessories. Include dimensions, materials, fabrication details, finishes, and span/load ratings.

C. Shop Drawings: Include dimensioned plan views and sections indicating proposed cable tray routing, required clearances, and locations and details of supports, fittings, building element penetrations, and equipment connections.

D. Derating Calculations for Fiberglass Cable Tray Systems: Indicate span/load ratings adjusted for applicable service conditions.

E. Manufacturer qualification statement.

F. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

G. Project Record Documents: Record actual routing of cable tray and locations of supports.

1.6 QUALITY ASSURANCE

A. Comply with NFPA 70.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

C. Product Evaluation and Listing Organization Qualifications: Organization engaged in evaluation of products and services, including those recognized by OSHA as Nationally Recognized Testing Laboratories (NRTL), and acceptable to authorities having jurisdiction.

D. See Section 26.0513 for additional requirements.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions and NEMA BI-50016, except do not store cable tray outdoors without cover as permitted in NEMA BI-50016.

B. Handle products carefully to avoid damage to finish.

PART 2 PRODUCTS

2.1 CABLE TRAY SYSTEM - GENERAL REQUIREMENTS

A. Provide new cable tray system consisting of required components, fittings, supports, and accessories, as necessary for complete system.

B. Provide products listed, classified, and labeled as suitable for purpose intended.

C. Do not use cable tray for applications other than as permitted by NFPA 70 and product listing/classification.

D. Provide cable tray system and associated components suitable for use at indicated span/load ratings under service conditions at installed location.

E. Unless otherwise indicated, specified span/load ratings are based on safety factor of 1.5 and working load only (i.e., no additional concentrated static load), with ratings for metal cable tray systems in accordance with NEMA BI 50015.

F. Unless otherwise indicated, specified load/fill depths and inside widths are nominal values, with values for metal cable tray systems in accordance with NEMA BI 50015 including applicable allowable tolerances.

2.2 METAL CABLE TRAY SYSTEMS

A. Manufacturers:

1. ABB, Inc: www.new.abb.com/#sle.
2. Atkore; Cope: www.atkore.com/#sle.
3. Cablofil, a brand of Legrand North America, Inc: www.legrand.us/cablofil/#sle.
4. Substitutions: See Section 01.6000 - Product Requirements.
5. Source Limitations: Furnish cable tray system and associated components and accessories produced by single manufacturer and obtained from single supplier.

B. Comply with NEMA BI 50015.

C. Material/Finishes:

1. Zinc Electroplated Steel: Comply with ASTM B633.
2. Mill-Galvanized Before Fabrication (Pre-Galvanized) Steel: Comply with ASTM A653/A653M, G90 coating.

D. Metal Ladder Cable Tray:

1. Material: Mill-galvanized before fabrication (pre-galvanized) steel.
2. Side Rail Construction: C-channel flange out.
3. Load/Fill Depth: 6 inches.
4. Span/Load Rating: NEMA VE 1 Class 10A.
5. Rung Spacing: 6 inches on center for straight lengths.
6. Inside Width: 18 inches.
7. Inside Radius of Fittings: 12 inches.
8. Covers: Solid flat nonflanged.

2.3 ACCESSORIES

A. Cable Tray Cover Clamps:

1. Provide heavy-duty wrap around style clamps.

B. Cable Clamps:

1. Material: Stainless steel.
2. Type: Trefoil.
3. Minimum Short Circuit Listed Rating: 65 kA.

2.4 SOURCE QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements for additional requirements.

B. Metal Cable Tray: Perform factory design tests in accordance with NEMA BI 50015, including electrical continuity and load testing.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that work likely to damage cable tray system has been completed.

B. Verify field measurements.

C. Verify dimensions and span/load ratings of cable tray system components.

D. Verify that mounting surfaces are ready to receive cable tray and associated supports.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install cable tray in accordance with NECA 1 (general workmanship) and NEMA BI-50016.

C. Unless otherwise indicated, arrange cable tray to be parallel or perpendicular to building lines.

D. Arrange cable tray to provide required clearances and maintain cable access.

1. Minimum Clearance Above and Adjacent to Cable Tray: 12 inches.
2. Arrange cable tray systems to stack higher voltage circuits in cable trays above and lower voltage circuits in cable trays below.
3. Minimum Separation Distance from other Cable Trays and Building Components:
   a. Horizontal: Width of installed cable tray.
   b. Vertical: 2.5 times width of installed cable tray.

E. Install cable tray plumb and level, with sections aligned and with horizontal runs at specified elevation.

F. Cable Tray Movement Provisions:

1. Provide expansion fittings where cable tray is subject to movement, including but not limited to:
   a. Where cable tray crosses structural joints intended for expansion.
   b. Long straight cable tray runs in accordance with NEMA BI-50016.
2. Use expansion guides in lieu of hold-down clamps where prescribed in NEMA BI-50016.
3. Set gaps for expansion fittings in accordance with NEMA BI-50016.

G. Cable and Conductors:

1. Ampacity: As determined by applications listed in NFPA 70.

H. Cable Provisions:

1. Use fixed barrier strips to maintain separation of cables as indicated and as required by NFPA 70.

2. Use drop-out fittings or bushings where cables exit cable tray as required to maintain minimum cable bending radius.
3. Use cable support fittings for long vertical cable tray runs with heavy cables.

I. Provide end closures at unconnected ends of cable tray runs.

J. Cable Tray Support:

1. See Section 26.0529 for additional requirements.
2. See Section 26.0548 for vibration isolation and/or seismic controls.
3. Use manufacturer's recommended hangers and supports, located in accordance with NEMA BI-50016 and manufacturer's requirements, but not exceeding specified span unless otherwise approved by Engineer. Provide required support and attachment where not furnished by cable tray manufacturer.
4. Provide independent support from building structure. Do not provide support from piping, ductwork, or other systems.

K. Grounding and Bonding Requirements:

1. See Section 26.0526 for additional requirements.
2. Comply with grounding and bonding requirements of NEMA BI-50016.
3. Metal Cable Tray Systems: Use suitable bonding jumpers or classified cable tray connectors to provide electrical continuity. Do not use classified cable tray connectors where cable tray sections have been modified, such as being bent, cut, or reshaped.
4. Provide suitable equipment grounding conductor in each metal cable tray. Do not use metal cable tray system as sole equipment grounding conductor.
    a. Equipment Grounding Conductor for Galvanized Steel Cable Tray: Use bare or insulated copper conductor.
    b. Equipment Grounding Conductor for Aluminum Cable Tray: Use insulated copper conductor only; do not use bare copper conductor.
    c. Minimum Equipment Grounding Conductor Size: 6 AWG copper.
    d. Bond equipment grounding conductor to each metal cable tray section using suitable listed ground clamps. Separate bonding jumpers are not required where properly bonded equipment grounding conductor provides equivalent continuity.

L. Conduit Termination:

1. Use listed cable tray conduit clamps (evaluated for bonding connection) to terminate conduits at cable tray.
2. Provide insulating bushing at conduit termination to protect cables.
3. Provide independent support for conduit.

M. Cable Installation:

1. Install cables in accordance with cable installation requirements of NEMA BI-50016.
2. Use appropriate cable pulling tools, applied to prevent excessive force on cable tray system and maintain minimum cable bending radius.
3. Use cable clamps or cable ties to fasten conductors/cables to vertical and horizontal runs of cable tray
    a. Distance Between Fastening Points for Vertical Runs: 18 inches.

b. Distance Between Fastening Points for Horizontal Runs: As required to maintain spacing and confine conductor/cable within cable fill area.

N. Penetrations: Install firestopping to preserve fire resistance rating of building elements.

O. Identification Requirements:

P. Install cable tray covers where indicated and as follows:

3.3 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements for additional requirements.

B. Inspect cable tray system for damage and defects.

C. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.

D. Correct deficiencies and replace damaged or defective cable tray system components.

3.4 ADJUSTING

A. Adjust tightness of mechanical connections to manufacturer's recommended torque settings.

3.5 CLEANING

A. Remove dirt and debris from cable tray.

B. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.6 PROTECTION

A. Protect cable tray system from subsequent construction operations.

END OF SECTION 26.0536

SECTION 26.0548 - VIBRATION AND SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Vibration isolation requirements.

B. Vibration-isolated equipment support bases.

C. Vibration isolators.

1.2 RELATED REQUIREMENTS

A. Section 01.4533 - Code-Required Special Inspections and Procedures.

B. Section 03.3000 - Cast-in-Place Concrete.

C. Section 26.0529 - Hangers and Supports for Electrical Systems.

1.3 DEFINITIONS

A. Electrical Component: Where referenced in this section in regards to seismic controls, applies to any portion of the electrical system subject to seismic evaluation in accordance with applicable codes, including distributed systems (e.g., conduit, cable tray).

1.4 REFERENCE STANDARDS

A. ASHRAE (HVACA) - ASHRAE Handbook - HVAC Applications; Most Recent Edition Cited by Referring Code or Reference Standard.

B. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

C. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate selection and arrangement of vibration isolation and/or seismic control components with the actual equipment to be installed.
2. Coordinate the work with other trades to provide additional framing and materials required for installation.
3. Coordinate compatibility of support and attachment components with mounting surfaces at the installed locations.
4. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:

1. Do not install products on or provide attachment to concrete surfaces until concrete has fully cured in accordance with Section 03.3000.

1.6 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Design Documents: Prepare and submit all information required for plan review and permitting by authorities having jurisdiction, including but not limited to floor plans, details, and calculations.

C. Product Data: Provide manufacturer's standard catalog pages and data sheets for products, including materials, fabrication details, dimensions, and finishes.

1. Vibration Isolators: Include rated load capacities and deflections; include information on color coding or other identification methods for spring element load capacities.
2. Seismic Controls: Include seismic load capacities.

D. Shop Drawings - Vibration Isolation Systems:

1. Include dimensioned plan views and sections indicating proposed arrangement of vibration isolators; indicate equipment weights and static deflections.
2. Vibration-Isolated Equipment Support Bases: Include base weights, including concrete fill where applicable; indicate equipment mounting provisions.

E. Evaluation Reports: For products specified as requiring evaluation and recognition by a qualified evaluation service, provide current evaluation reports.

F. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

G. Evidence of qualifications for seismic controls designer.

H. Evidence of qualifications for manufacturer.

I. Manufacturer’s detailed field testing and inspection procedures.

J. Field quality control test reports.

1.7 QUALITY ASSURANCE

A. Comply with NFPA 70.

B. Comply with applicable building code.

C. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

D. Seismic Controls Designer Qualifications: Registered professional engineer licensed in the State in which the Project is located and with minimum five years experience designing seismic restraints for nonstructural components.

1. Designer may be employed by the manufacturer of the seismic restraint products.

E. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.1 VIBRATION ISOLATION REQUIREMENTS

A. Design and provide vibration isolation systems to reduce vibration transmission to supporting structure from vibration-producing electrical equipment and/or electrical connections to vibration-isolated equipment.

B. Comply with applicable general recommendations of ASHRAE (HVACA), where not in conflict with other specified requirements:

C. General Requirements:

1. Select vibration isolators to provide required static deflection.
2. Select vibration isolators for uniform deflection based on distributed operating weight of actual installed equipment.
3. Select vibration isolators for outdoor equipment to comply with wind design requirements.
4. Select vibration-isolated equipment support bases and associated vibration isolators to provide minimum 2-inch operating clearance beneath base unless otherwise indicated.

D. Equipment Isolation:

1. Transformers:
   a. Specified vibration isolators are in addition to any factory-installed internal core and coil assembly vibration isolators unless otherwise indicated.
   b. Floor-Mounted Transformers, Nonseismic Applications: Use resilent material isolator pads, resilient material isolator mounts, or open (unhoused) spring isolators.
   c. Suspended Transformers, Nonseismic Applications: Use resilient material isolator hangers, spring isolator hangers, or combination resilient material/spring isolator hangers.
   d. Wall-Mounted Transformers, Nonseismic Applications: Use resilient material isolator mounts.
   e. Minimum Static Deflection:
      1) Transformers Mounted on Grade-Level Slabs: 0.25 inch deflection unless otherwise indicated.
      2) Transformers Mounted at Above-Grade Levels: 0.5 inch deflection unless otherwise indicated.
2. Engine Generators:
   a. Specified vibration isolators are in addition to any factory-installed internal vibration isolators between generator set and integral base unless otherwise indicated; obtain generator set manufacturer approval of applied vibration isolation.
   b. Nonseismic Applications, Isolators Not Located Below Sub-Base Fuel Tank: Use housed spring isolators or restrained spring isolators.
   c. Provide vibration-isolated concrete inertia bases.
   d. Minimum Static Deflection:
      1) Generators Mounted at Above-Grade Levels: 2 inch deflection unless otherwise indicated.

E. Conduit Isolation:

1. Use flexible conduit or cable for electrical connections to vibration-isolated equipment, including equipment installed under other sections or by others.
   a. Minimum Length: 3 feet unless otherwise indicated.
2. Vibration Isolators:
   a. Provide vibration isolators for conduit supports:
      1) Located within 50 feet of connected vibration-isolated equipment where flexible connection to equipment is not possible.
      2) For conduits over 2 inch trade size located below or within 50 feet of noise-sensitive areas indicated.
   b. Minimum Static Deflection:
      1) First Three Supports Closest to Isolated Equipment: Same as static deflection of equipment; maximum of 2 inch deflection required.
      2) Remainder of Supports: 0.75 inch deflection unless otherwise indicated.
   c. Suspended Conduits, Nonseismic Applications: Use resilient material isolator hangers, spring isolator hangers, or combination resilient material/spring isolator hangers.
   d. Use modular seal or approved resilient material where vibration-isolated conduits penetrate building elements (e.g., walls, floors) arranged to prevent vibration transmission to structure.

2.2 VIBRATION-ISOLATED EQUIPMENT SUPPORT BASES

A. Manufacturers:

1. Vibration-Isolated Equipment Support Bases:
   a. Kinetics Noise Control, Inc; _____: www.kineticsnoise.com/#sle.
   b. Mason Industries; _____: www.mason-ind.com/#sle.
   c. Vibration Eliminator Company, Inc; _____: www.veco-nyc.com/#sle.
2. Substitutions: See Section 01.6000 - Product Requirements.
3. Source Limitations: Furnish vibration-isolated equipment support bases and associated components and accessories produced by the same manufacturer as the vibration isolators and obtained from a single supplier.

B. Vibration-Isolated Structural Steel Bases:

1. Description: Engineered structural steel frames with integral mounting provisions for vibration isolators, sized and configured for mounting of equipment.

C. Vibration-Isolated Concrete Inertia Bases:

1. Description: Concrete-filled engineered steel forms with integral mounting provisions for vibration isolators, sized and configured for mounting of equipment.
2. Minimum Base Depth: 6 inches.
3. Minimum Base Mass (Including Concrete): 1.5 times weight of supported equipment.
4. Concrete Reinforcement: Welded or tied reinforcing bars running both ways in a single layer.
5. Concrete: Filled on site with minimum 3000 psi concrete in accordance with Section 03.3000.

2.3 VIBRATION ISOLATORS

A. Manufacturers:

1. Vibration Isolators:
   a. ANDRE HVAC International, Inc: www.andrehvac.com/#sle.
   b. Kinetics Noise Control, Inc; _____: www.kineticsnoise.com/#sle.
   c. Mason Industries; _____: www.mason-ind.com/#sle.
   d. Vibration Eliminator Company, Inc; _____: www.veco-nyc.com/#sle.
2. Substitutions: See Section 01.6000 - Product Requirements.
3. Source Limitations: Furnish vibration-isolators and associated accessories produced by a single manufacturer and obtained from a single supplier.

B. General Requirements:

1. Resilient Materials for Vibration Isolators: Oil, ozone, and oxidant resistant.
2. Spring Elements for Spring Isolators:
   a. Color code or otherwise identify springs to indicate load capacity.
   b. Lateral Stability: Minimum lateral stiffness to vertical stiffness ratio of 0.8.
   c. Designed to operate in the linear portion of their load versus deflection curve over deflection range of not less than 50 percent above specified deflection.
   d. Designed to provide additional travel to solid of not less than 50 percent of rated deflection at rated load.
   e. Selected to provide designed deflection of not less than 75 percent of specified deflection.
   f. Selected to function without undue stress or overloading.

C. Vibration Isolators for Nonseismic Applications:

1. Resilient Material Isolator Pads:
   a. Description: Single or multiple layer pads utilizing elastomeric (e.g., neoprene, rubber) isolator material.
   b. Pad Thickness: As required for specified minimum static deflection; minimum 0.25 inch thickness.
   c. Multiple Layer Pads: Provide bonded, galvanized sheet metal separation plate between each layer.
2. Resilient Material Isolator Mounts, Nonseismic:
   a. Description: Mounting assemblies for bolting equipment to supporting structure utilizing elastomeric (e.g., neoprene, rubber) or fiberglass isolator material; fail-safe type.
3. Open (Unhoused) Spring Isolators:
   a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) without a housing.
   b. Bottom Load Plate: Nonskid, molded, elastomeric isolator material or steel with nonskid elastomeric isolator pad with provisions for bolting to supporting structure as required.
   c. Furnished with integral leveling device for positioning and securing supported equipment.
4. Housed Spring Isolators:
   a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) within a metal housing.

b. Furnished with integral elastomeric snubbing elements, nonadjustable type, for limiting equipment movement and preventing metal-to-metal contact between housing elements.
c. Bottom Load Plate: Steel with nonskid, elastomeric isolator pad with provisions for bolting to supporting structure as required.
d. Furnished with integral leveling device for positioning and securing supported equipment.

5. Restrained Spring Isolators, Nonseismic:
   a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) within a metal housing designed to prevent movement of supported equipment above an adjustable vertical limit stop.
   b. Bottom Load Plate: Steel with nonskid, elastomeric isolator pad with provisions for bolting to supporting structure as required.
   c. Furnished with integral leveling device for positioning and securing supported equipment.
   d. Provides constant free and operating height.
6. Resilient Material Isolator Hangers, Nonseismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing elastomeric (e.g., neoprene, rubber) or fiberglass isolator material for the lower hanger rod connection.
7. Spring Isolator Hangers, Nonseismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing single or multiple free-standing, laterally stable steel spring(s) in series with an elastomeric element for the lower hanger rod connection.
   b. Designed to accommodate misalignment of bottom hanger rod up to 30 degrees (plus/minus 15 degrees) without short-circuiting of isolation.
8. Combination Resilient Material/Spring Isolator Hangers, Nonseismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing single or multiple free-standing, laterally stable steel spring(s) for the lower hanger rod connection and elastomeric (e.g., neoprene, rubber) or fiberglass isolator material for the upper hanger rod connection.
   b. Designed to accommodate misalignment of bottom hanger rod up to 30 degrees (plus/minus 15 degrees) without short-circuiting of isolation.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as shown on the drawings.

B. Verify that mounting surfaces are ready to receive vibration isolation and/or seismic control components and associated attachments.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.2 CODE-REQUIRED SPECIAL INSPECTIONS

A. Arrange work to accommodate tests and/or inspections performed by Special Inspection Agency employed by Owner or Architect in accordance with Section 01.4533 and statement of special inspections as required by applicable building code.

B. Frequency of Special Inspections: Where special inspections are designated as continuous or periodic, arrange work accordingly.

1. Continuous Special Inspections: Special Inspection Agency to be present in the area where the work is being performed and observe the work at all times the work is in progress.
2. Periodic Special Inspections: Special Inspection Agency to be present in the area where work is being performed and observe the work part-time or intermittently and at the completion of the work.

C. Prior to starting work, Contractor to submit written statement of responsibility to authorities having jurisdiction and to Owner acknowledging awareness of special requirements contained in the statement of special inspections.

D. Special Inspection Agency services do not relieve Contractor from performing inspections and testing specified elsewhere.

3.3 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install products in accordance with applicable requirements of NECA 1 (general workmanship).

C. Install anchors and fasteners in accordance with ICC Evaluation Services, LLC (ICC-ES) evaluation report conditions of use where applicable.

D. Secure fasteners according to manufacturer's recommended torque settings.

E. Install flexible conduit and cable connections to provide sufficient slack for vibration isolation and/or seismic relative displacements as indicated or as required.

F. Vibration Isolation Systems:

1. Vibration-Isolated Equipment Support Bases:
   a. Provide specified minimum clearance beneath base.
2. Spring Isolators:
   a. Position equipment at operating height; provide temporary blocking as required.
   b. Lift equipment free of isolators prior to lateral repositioning to avoid damage to isolators.
   c. Level equipment by adjusting isolators gradually in sequence to raise equipment uniformly such that excessive weight or stress is not placed on any single isolator.
3. Isolator Hangers:
   a. Use precompressed isolator hangers where required to facilitate installation and prevent damage to equipment utility connection provisions.
   b. Locate isolator hangers at top of hanger rods in accordance with manufacturer's instructions.
4. Clean debris from beneath vibration-isolated equipment that could cause short-circuiting of isolation.

5. Use elastomeric grommets for attachments where required to prevent short-circuiting of isolation.
6. Adjust isolators to be free of isolation short circuits during normal operation.
7. Do not overtighten fasteners such that resilient material isolator pads are compressed beyond manufacturer's maximum recommended deflection.

3.4 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Inspect vibration isolation and/or seismic control components for damage and defects.

C. Vibration Isolation Systems:

1. Verify isolator static deflections.
2. Verify required clearance beneath vibration-isolated equipment support bases.
3. Verify vibration isolation performance during normal operation; investigate sources of isolation short circuits.

D. Correct deficiencies and replace damaged or defective vibration isolation and/or seismic control components.

E. Submit detailed reports indicating inspection and testing results and corrective actions taken.

END OF SECTION 26.0548

SECTION 26.0553 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Electrical identification requirements.

B. Identification nameplates and labels.

C. Wire and cable markers.

D. Voltage markers.

E. Underground warning tape.

F. Floor marking tape.

G. Warning signs and labels.

1.2 RELATED REQUIREMENTS

A. Section 09.9113 - Exterior Painting.

B. Section 09.9123 - Interior Painting.

C. Section 26.0519 - Low-Voltage Electrical Power Conductors and Cables: Color coding for power conductors and cables 600 V and less; vinyl color coding electrical tape.

D. Section 26.0573 - Power System Studies: Arc flash hazard warning labels.

E. Section 26.2300 - Low-Voltage Switchgear: Factory-installed mimic bus.

F. Section 26.2726 - Wiring Devices: Device and wallplate finishes; factory pre-marked wallplates.

G. Section 27.1000 - Structured Cabling: Identification for communications cabling and devices.

1.3 REFERENCE STANDARDS

A. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

B. UL 969 - Marking and Labeling Systems; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Verify final designations for equipment, systems, and components to be identified prior to fabrication of identification products.

B. Sequencing:

1. Do not conceal items to be identified, in locations such as above suspended ceilings, until identification products have been installed.
2. Do not install identification products until final surface finishes and painting are complete.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements for submittals procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product.

C. Shop Drawings: Provide schedule of items to be identified indicating proposed designations, materials, legends, and formats.

D. Samples:

1. Identification Nameplates: One of each type and color specified.

E. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation and installation of product.

1.6 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

1.7 FIELD CONDITIONS

A. Do not install adhesive products when ambient temperature is lower than recommended by manufacturer.

PART 2 PRODUCTS

2.1 IDENTIFICATION REQUIREMENTS

A. Identification for Equipment:

1. Use identification nameplate to identify each piece of electrical distribution and control equipment and associated sections, compartments, and components.
   a. Switchboards:
      1) Identify ampere rating.
      2) Identify voltage and phase.
      3) Identify power source and circuit number. Include location when not within sight of equipment.
      4) Use identification nameplate to identify load(s) served for each branch device. Identify spares and spaces.
   b. Panelboards:
      1) Identify ampere rating.
      2) Identify voltage and phase.
      3) Identify power source and circuit number. Include location when not within sight of equipment.
      4) Identify main overcurrent protective device. Use identification label for panelboards with a door. For power distribution panelboards without a door, use identification nameplate.

5) Use typewritten circuit directory to identify load(s) served for panelboards with a door. Identify spares and spaces.
6) For power panelboards without a door, use identification nameplate to identify load(s) served for each branch device. Do not identify spares and spaces.

c. Enclosed switches, circuit breakers, and motor controllers:
1) Identify voltage and phase.
2) Identify power source and circuit number. Include location when not within sight of equipment.
3) Identify load(s) served. Include location when not within sight of equipment.

d. Time Switches:
1) Identify load(s) served and associated circuits controlled. Include location.

e. Enclosed Contactors:
1) Identify voltage and phase.
2) Identify configuration, e.g., E.O.E.H. (electrically operated, electrically held) or E.O.M.H. (electrically operated, mechanically held).
3) Identify coil voltage.
4) Identify load(s) and associated circuits controlled. Include location.

f. Transfer Switches:
1) Identify voltage and phase.
2) Identify power source and circuit number for both normal power source and standby power source. Include location.
3) Identify load(s) served. Include location.
4) Identify short circuit current rating based on the specific overcurrent protective device type and settings protecting the transfer switch.

g. Electricity Meters:
1) Identify load(s) metered.

2. Service Equipment:
a. Use identification nameplate to identify each service disconnecting means.

3. Emergency System Equipment:
a. Use identification nameplate or voltage marker to identify emergency system equipment in accordance with NFPA 70.
b. Use identification nameplate at each piece of service equipment to identify type and location of on-site emergency power sources.
c. Use identification nameplate to identify emergency operating instructions for emergency system equipment.

4. Use voltage marker to identify highest voltage present for each piece of electrical equipment.
5. Use identification nameplate to identify equipment utilizing series ratings, where permitted, in accordance with NFPA 70.
6. Use identification nameplate to identify disconnect location for equipment with remote disconnecting means.
7. Use identification label on inside of door at each fused switch to identify required NEMA fuse class and size.

8. Use identification label to identify overcurrent protective devices for branch circuits serving fire alarm circuits. Identify with text "FIRE ALARM CIRCUIT".
9. Use floor marking tape to identify required equipment working clearances.
10. Available Fault Current Documentation: Use identification label to identify the available fault current and date calculations were performed at locations requiring documentation by NFPA 70 including but not limited to the following.
    a. Service equipment.
    b. Industrial control panels.
    c. Motor control centers.
    d. Elevator control panels.
    e. Industrial machinery.
11. Arc Flash Hazard Warning Labels: Comply with Section 26.0573.

B. Identification for Conductors and Cables:

1. Color Coding for Power Conductors 600 V and Less: Comply with Section 26.0519.
2. Identification for Communications Conductors and Cables: Comply with Section 271005.
3. Use identification nameplate or identification label to identify color code for ungrounded and grounded power conductors inside door or enclosure at each piece of feeder or branch-circuit distribution equipment when premises has feeders or branch circuits served by more than one nominal voltage system.
4. Use wire and cable markers to identify circuit number or other designation indicated for power, control, and instrumentation conductors and cables at the following locations:
    a. At each source and load connection.
    b. Within boxes when more than one circuit is present.
    c. Within equipment enclosures when conductors and cables enter or leave the enclosure.
    d. In cable tray, at maximum intervals of 20 feet.
5. Use wire and cable markers to identify connected grounding electrode system components for grounding electrode conductors.
6. Use underground warning tape to identify direct buried cables.

C. Identification for Raceways:

1. Use voltage markers, color-coded bands, or factory-painted conduits to identify systems other than normal power system for accessible conduits.
    a. Maximum Intervals: 20 feet.
    b. Color-Coded Bands: Use field-painting or vinyl color coding electrical tape to mark bands 3 inches wide.
        1) Field-Painting: Comply with Section 09.9123 and 09.9113.
        2) Vinyl Color Coding Electrical Tape: Comply with Section 26.0519.
    c. Color Code:
        1) Emergency Power System:
            (a) Life Safety Branch: Red.
        2) Fire Alarm System: Red.
2. Use identification labels or plastic marker tags to identify circuits enclosed for accessible conduits at wall penetrations, at floor penetrations, at roof penetrations, and at equipment terminations when source is not within sight.

3. Use identification labels or plastic marker tags to identify spare conduits at each end. Identify purpose and termination location.
4. Use underground warning tape to identify underground raceways.
5. Use voltage markers to identify highest voltage present for wireways at maximum intervals of 20 feet.

D. Identification for Boxes:

1. Use voltage markers to identify highest voltage present.
2. Use voltage markers or color coded boxes to identify systems other than normal power system.
   a. Color-Coded Boxes: Field-painted in accordance with Section 09.9123 and 09.9113 per the same color code used for raceways.
3. Use identification labels to identify circuits enclosed.
4. Use warning labels to identify electrical hazards for boxes containing exposed live parts or exposed conductors operating at over 600 V nominal with the word message "DANGER; HIGH VOLTAGE; KEEP OUT".

E. Identification for Devices:

1. Identification for Communications Devices: Comply with Section 271005.
2. Wiring Device and Wallplate Finishes: Comply with Section 26.2726.
3. Factory Pre-Marked Wallplates: Comply with Section 26.2726.
4. Use identification label to identify fire alarm system devices.
   a. For devices concealed above suspended ceilings, provide additional identification on ceiling tile below device location.
5. Use identification label or engraved wallplate to identify serving branch circuit for all receptacles.
   a. For receptacles in public areas or in areas as directed by Architect, provide identification on inside surface of wallplate.

2.2 IDENTIFICATION NAMEPLATES AND LABELS

A. Identification Nameplates:

1. Manufacturers:
   a. Brimar Industries, Inc: www.brimar.com/#sle.
   b. Kolbi Pipe Marker Co; _____: www.kolbipipemarkers.com/#sle.
   c. Seton Identification Products; _____: www.seton.com/#sle.
   d. Substitutions: See Section 01.6000 - Product Requirements.
2. Materials:
   a. Indoor Clean, Dry Locations: Use plastic nameplates.
   b. Outdoor Locations: Use plastic, stainless steel, or aluminum nameplates suitable for exterior use.
3. Plastic Nameplates: Two-layer or three-layer laminated acrylic or electrically non-conductive phenolic with beveled edges; minimum thickness of 1/16 inch; engraved text.
   a. Exception: Provide minimum thickness of 1/8 inch when any dimension is greater than 4 inches.
4. Stainless Steel Nameplates: Minimum thickness of 1/32 inch; engraved or laser-etched text.
5. Aluminum Nameplates: Anodized; minimum thickness of 1/32 inch; engraved or laser-etched text.

6. Mounting Holes for Mechanical Fasteners: Two, centered on sides for sizes up to 1 inch high; Four, located at corners for larger sizes.

B. Identification Labels:

1. Manufacturers:
   a. Brady Corporation; _____: www.bradyid.com/#sle.
   b. Brother International Corporation: www.brother-usa.com/#sle.
   c. Panduit Corp: www.panduit.com/#sle.
   d. Substitutions: See Section 01.6000 - Product Requirements.
2. Materials: Use self-adhesive laminated plastic labels; UV, chemical, water, heat, and abrasion resistant.
   a. Use only for indoor locations.
3. Text: Use factory pre-printed or machine-printed text. Do not use handwritten text unless otherwise indicated.

C. Format for Equipment Identification:

1. Minimum Size: 1 inch by 2.5 inches.
2. Legend:
   a. System designation where applicable:
      1) Emergency Power System: Identify with text "EMERGENCY".
      2) Fire Alarm System: Identify with text "FIRE ALARM".
   b. Equipment designation or other approved description.
   c. Other information as indicated.
3. Text: All capitalized unless otherwise indicated.
4. Minimum Text Height:
   a. System Designation: 1 inch.
   b. Equipment Designation: 1/2 inch.
   c. Other Information: 1/4 inch.
   d. Exception: Provide minimum text height of 1 inch for equipment located more than 10 feet above floor or working platform.
5. Color:
   a. Normal Power System: White text on black background.
   b. Emergency Power System:
      1) Life Safety Branch: White text on Red background.
   c. Fire Alarm System: White text on red background.

D. Format for General Information and Operating Instructions:

1. Minimum Size: 1 inch by 2.5 inches.
2. Legend: Include information or instructions indicated or as required for proper and safe operation and maintenance.
3. Text: All capitalized unless otherwise indicated.
4. Minimum Text Height: 1/4 inch.
5. Color: Black text on white background unless otherwise indicated.
   a. Exceptions:

1) Provide white text on red background for general information or operational instructions for emergency systems.
2) Provide white text on red background for general information or operational instructions for fire alarm systems.

E. Format for Caution and Warning Messages:

1. Minimum Size: 2 inches by 4 inches.
2. Legend: Include information or instructions indicated or as required for proper and safe operation and maintenance.
3. Text: All capitalized unless otherwise indicated.
4. Minimum Text Height: 1/2 inch.
5. Color: Black text on yellow background unless otherwise indicated.

F. Format for Receptacle Identification:

1. Minimum Size: 3/8 inch by 1.5 inches.
2. Legend: Power source and circuit number or other designation indicated.
   a. Include voltage and phase for other than 120 V, single phase circuits.
3. Text: All capitalized unless otherwise indicated.
4. Minimum Text Height: 3/16 inch.
5. Color: Black text on clear background.

G. Format for Fire Alarm Device Identification:

1. Minimum Size: 3/8 inch by 1.5 inches.
2. Legend: Designation indicated and device zone or address.
3. Text: All capitalized unless otherwise indicated.
4. Minimum Text Height: 3/16 inch.
5. Color: Red text on white background.

2.3 WIRE AND CABLE MARKERS

A. Manufacturers:

1. Brady Corporation; _____: www.bradyid.com/#sle.
2. HellermannTyton; _____: www.hellermanntyton.com/#sle.
3. Panduit Corp: www.panduit.com/#sle.
4. Substitutions: See Section 01.6000 - Product Requirements.

B. Markers for Conductors and Cables: Use wrap-around self-adhesive vinyl cloth, wrap-around self-adhesive vinyl self-laminating, heat-shrink sleeve, plastic sleeve, plastic clip-on, or vinyl split sleeve type markers suitable for the conductor or cable to be identified.

C. Markers for Conductor and Cable Bundles: Use plastic marker tags secured by nylon cable ties.

D. Legend: Power source and circuit number or other designation indicated.

E. Text: Use factory pre-printed or machine-printed text, all capitalized unless otherwise indicated.

F. Minimum Text Height: 1/8 inch.

G. Color: Black text on white background unless otherwise indicated.

2.4 VOLTAGE MARKERS

A. Manufacturers:

1. Brady Corporation; _____: www.bradyid.com/#sle.
2. Brimar Industries, Inc: www.brimar.com/#sle.
3. Seton Identification Products; _____: www.seton.com/#sle.
4. Substitutions: See Section 01.6000 - Product Requirements.

B. Markers for Conduits: Use factory pre-printed self-adhesive vinyl, self-adhesive vinyl cloth, or vinyl snap-around type markers.

C. Markers for Boxes and Equipment Enclosures: Use factory pre-printed self-adhesive vinyl or self-adhesive vinyl cloth type markers.

D. Minimum Size:

1. Markers for Equipment: 1 1/8 by 4 1/2 inches.
2. Markers for Conduits: As recommended by manufacturer for conduit size to be identified.
3. Markers for Pull Boxes: 1 1/8 by 4 1/2 inches.
4. Markers for Junction Boxes: 1/2 by 2 1/4 inches.

E. Legend:

1. Markers for Voltage Identification: Highest voltage present.
2. Markers for System Identification:
    a. Emergency Power System: Text "EMERGENCY".

F. Color: Black text on orange background unless otherwise indicated.

2.5 UNDERGROUND WARNING TAPE

A. Manufacturers:

1. Brady Corporation: www.bradyid.com/#sle.
2. Brimar Industries, Inc: www.brimar.com/#sle.
3. Seton Identification Products: www.seton.com/#sle.
4. Substitutions: See Section 01.6000 - Product Requirements.

B. Material: Polyethylene tape suitable for direct burial.

C. Use detectable tape for open trench applications, unless otherwise indicated.

D. Nondetectable Tape for Open Trench Applications: 6 inches wide, with minimum thickness of 4 mils, 0.0004 inch.

E. Detectable Tape for Open Trench Applications: 4 inches wide, with minimum thickness of 5 mils, 0.0005 inch; provide integral foil core or tracer wire for detection by locator.

F. Legend: Type of service, continuously repeated over full length of tape.

G. Color:

1. Buried Electrical Lines: Black text on red background.
2. Buried Communication, Alarm, and Signal Lines: Black text on orange background.

2.6 FLOOR MARKING TAPE

A. Manufacturers:

1. Brady Corporation; _____: www.bradyid.com/#sle.
2. Brimar Industries, Inc: www.brimar.com/#sle.
3. Insite Solutions, LLC; _____: www.stop-painting.com/#sle.
4. Substitutions: See Section 01.6000 - Product Requirements.

B. Floor Marking Tape for Equipment Working Clearance Identification: Self-adhesive vinyl or polyester tape with overlaminate, 3 inches wide, with alternating black and white stripes.

2.7 WARNING SIGNS AND LABELS

A. Manufacturers:

1. Brimar Industries, Inc: www.brimar.com/#sle.
2. Clarion Safety Systems, LLC; _____: www.clarionsafety.com/#sle.
3. Insite Solutions, LLC; _____: www.stop-painting.com/#sle.
4. Seton Identification Products; _____: www.seton.com/#sle.
5. Substitutions: See Section 01.6000 - Product Requirements.

B. Comply with ANSI Z535.2 or ANSI Z535.4 as applicable.

C. Warning Signs:

1. Materials:
   a. Indoor Dry, Clean Locations: Use factory pre-printed rigid plastic or self-adhesive vinyl signs.
   b. Outdoor Locations: Use factory pre-printed rigid aluminum signs.
2. Rigid Signs: Provide four mounting holes at corners for mechanical fasteners.
3. Minimum Size: 7 by 10 inches unless otherwise indicated.

D. Warning Labels:

1. Materials: Use factory pre-printed or machine-printed self-adhesive polyester or self-adhesive vinyl labels; UV, chemical, water, heat, and abrasion resistant; produced using materials recognized to UL 969.
   a. Do not use labels designed to be completed using handwritten text.
2. Machine-Printed Labels: Use thermal transfer process printing machines and accessories recommended by label manufacturer.
3. Minimum Size: 2 by 4 inches unless otherwise indicated.

E. Floor Signs:

1. Materials: Use factory preprinted, self-adhesive vinyl, polyester, or rubber labels with protective overlaminate; removable.
2. Minimum Size: 17-inch diameter unless otherwise indicated.

PART 3 EXECUTION

3.1 PREPARATION

A. Clean surfaces to receive adhesive products according to manufacturer's instructions.

3.2 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install identification products to be plainly visible for examination, adjustment, servicing, and maintenance. Unless otherwise indicated, locate products as follows:

1. Surface-Mounted Equipment: Enclosure front.
2. Flush-Mounted Equipment: Inside of equipment door.
3. Free-Standing Equipment: Enclosure front; also enclosure rear for equipment with rear access.
4. Elevated Equipment: Legible from the floor or working platform.
5. Branch Devices: Adjacent to device.
6. Interior Components: Legible from the point of access.
7. Conduits: Legible from the floor.
8. Boxes: Outside face of cover.
9. Conductors and Cables: Legible from the point of access.
10. Devices: Outside face of cover.

C. Install identification products centered, level, and parallel with lines of item being identified.

D. Secure nameplates to exterior surfaces of enclosures using stainless steel screws and to interior surfaces using self-adhesive backing or epoxy cement.

1. Do not use adhesives on exterior surfaces except where substrate cannot be penetrated.

E. Install self-adhesive labels and markers to achieve maximum adhesion, with no bubbles or wrinkles and edges properly sealed.

F. Install underground warning tape above buried lines with one tape per trench at 3 inches below finished grade.

G. Secure rigid signs using stainless steel screws.

H. Mark all handwritten text, where permitted, to be neat and legible.

3.3 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Replace self-adhesive labels and markers that exhibit bubbles, wrinkles, curling or other signs of improper adhesion.

END OF SECTION 26.0553

SECTION 26.0573 - POWER SYSTEM STUDIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Short-circuit study.

B. Protective device coordination study.

C. Arc flash and shock risk assessment.

1. Includes arc flash hazard warning labels.

D. Criteria for the selection and adjustment of equipment and associated protective devices not specified in this section, as determined by studies to be performed.

1.2 RELATED REQUIREMENTS

A. Section 26.0553 - Identification for Electrical Systems: Additional requirements for arc flash hazard warning labels.

B. Section 26.2100 - Low-Voltage Electrical Service Entrance.

1. Includes Utility Company contact information.

C. Section 26.2300 - Low-Voltage Switchgear.

D. Section 26.2413 - Switchboards.

E. Section 26.2416 - Panelboards.

F. Section 26.2813 - Fuses.

G. Section 26.2816.13 - Enclosed Circuit Breakers.

H. Section 26.2816.16 - Enclosed Switches.

1.3 REFERENCE STANDARDS

A. ANSI Z535.4 - American National Standard for Product Safety Signs and Labels; 2023.

B. IEEE 141 - IEEE Recommended Practice for Electric Power Distribution for Industrial Plants; 1993 (Reaffirmed 1999).

C. IEEE 242 - IEEE Recommended Practice for Protection and Coordination of Industrial and Commercial Power Systems; 2001, with Errata (2003).

D. IEEE 399 - IEEE Recommended Practice for Industrial and Commercial Power Systems Analysis; 1997.

E. IEEE 551 - IEEE Recommended Practice for Calculating Short-Circuit Currents in Industrial and Commercial Power Systems; 2006.

F. IEEE 1584 - IEEE Guide for Performing Arc-Flash Hazard Calculations; 2018, with Errata (2019).

G. NEMA MG 00001 - Motors and Generators; 2024.

H. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems; 2025.

I. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

J. NFPA 70E - Standard for Electrical Safety in the Workplace; 2027.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the work to provide equipment and associated protective devices complying with criteria for selection and adjustment, as determined by studies to be performed.
2. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Pre-Study Meeting: Conduct meeting with Engineer to discuss system operating modes and conditions to be considered in studies.

C. Sequencing:

1. Submit study reports prior to or concurrent with product submittals.
2. Do not order equipment until matching study reports and product submittals have both been evaluated by Architect.
3. Verify naming convention for equipment identification prior to creation of final drawings, reports, and arc flash hazard warning labels (where applicable).

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Study preparer's qualifications.

C. Field testing agency's qualifications.

D. Study reports, stamped or sealed and signed by study preparer.

E. Product Data: In addition to submittal requirements specified in other sections, include manufacturer's standard catalog pages and data sheets for equipment and protective devices indicating information relevant to studies.

1. Include characteristic time-current trip curves for protective devices.
2. Include impedance data for busway.
3. Include impedance data for engine generators.
4. Clearly indicate whether proposed short circuit current ratings are fully rated or, where acceptable, series rated systems.
5. Include documentation of listed series ratings upon request.
6. Identify modifications made in accordance with studies that:
    a. Can be made at no additional cost to Owner.
    b. As submitted will involve a change to the contract sum.

F. Arc Flash Hazard Warning Label Samples: One of each type and legend specified.

G. Site-specific arc flash hazard warning labels.

H. Field quality control reports.

I. Certification that field adjustable protective devices have been set in accordance with requirements of studies.

J. Project Record Documents: Revise studies as required to reflect as-built conditions.

1. Include hard copies with operation and maintenance data submittals.
2. Include computer software files used to prepare studies with file name(s) cross-referenced to specific pieces of equipment and systems.

1.6 POWER SYSTEM STUDIES

A. Scope of Studies:

1. Perform analysis of new electrical distribution system.
2. Except where study descriptions below indicate exclusions, analyze system at each bus from primary protective devices of utility source down to each piece of equipment involved, including parts of system affecting calculations being performed (e.g. fault current contribution from motors).
3. Include in analysis alternate sources and operating modes (including known future configurations) to determine worst case conditions.
    a. Known Operating Modes:
        1) Utility as source.
        2) Generator as source.
        3) Maintenance settings.

B. General Study Requirements:

1. Comply with NFPA 70.
2. Perform studies utilizing computer software complying with specified requirements; manual calculations are not permitted.

C. Data Collection:

1. Compile information on project-specific characteristics of actual installed equipment, protective devices, feeders, etc. as necessary to develop single-line diagram of electrical distribution system and associated input data for use in system modeling.
    a. Utility Source Data: Include primary voltage, maximum and minimum three-phase and line-to-ground fault currents, impedance, X/R ratio, and primary protective device information.
        1) Obtain up-to-date information from Utility Company.
        2) Utility Company: See Section 26.2100 for Utility Company contact information.
    b. Generators: Include manufacturer/model, kW and voltage ratings, and impedance.
    c. Motors: Include manufacturer/model, type (e.g. induction, synchronous), horsepower rating, voltage rating, full load amps, and locked rotor current or NEMA MG 00001 code letter designation.
    d. Transformers: Include primary and secondary voltage ratings, kVA rating, winding configuration, percent impedance, and X/R ratio.
    e. Protective Devices:
        1) Circuit Breakers: Include manufacturer/model, type (e.g. thermal magnetic, electronic trip), frame size, trip rating, voltage rating, interrupting rating, available

field-adjustable trip response settings, and features (e.g. zone selective interlocking).

2) Fuses: Include manufacturer/model, type/class (e.g. Class J), size/rating, and speed (e.g. time delay, fast acting).

f. Protective Relays: Include manufacturer/model, type, settings, current/potential transformer ratio, and associated protective device.

g. Conductors: Include feeder size, material (e.g. copper, aluminum), insulation type, voltage rating, number per phase, raceway type, and actual length.

D. Short-Circuit Study:

1. Comply with IEEE 551 and applicable portions of IEEE 141, IEEE 242, and IEEE 399.
2. For purposes of determining equipment short circuit current ratings, consider conditions that may result in maximum available fault current, including but not limited to:
   a. Maximum utility fault currents.
   b. Maximum motor contribution.
   c. Known operating modes (e.g. utility as source, generator as source, utility/generator in parallel, bus tie breaker open/close positions).
3. For each bus location, calculate the maximum available three-phase bolted symmetrical and asymmetrical fault currents. For grounded systems, also calculate the maximum available line-to-ground bolted fault currents.

E. Protective Device Coordination Study:

1. Comply with applicable portions of IEEE 242 and IEEE 399.
2. Analyze alternate scenarios considering known operating modes (e.g. utility as source, generator as source, utility/generator in parallel, bus tie breaker open/close positions).
3. Analyze protective devices and associated settings for suitable margins between time-current curves to provide adequate protection for equipment and conductors while achieving full selective coordination.

F. Arc Flash and Shock Risk Assessment:

1. Comply with NFPA 70E.
2. Perform incident energy and arc flash boundary calculations in accordance with IEEE 1584 (as referenced in NFPA 70E Annex D), where applicable.
   a. Where reasonable, study preparer may assume a maximum clearing time of two seconds in accordance with IEEE 1584, provided that the conditions are such that a worker's egress from an arc flash event would not be inhibited.
   b. For single-phase systems, study preparer to perform calculations assuming three-phase system in accordance with IEEE 1584 using single phase bolted fault current, yielding conservative results.
3. For equipment with main devices mounted in separate compartmentalized sections, perform calculations on both the line and load side of the main device.
4. Analyze alternate scenarios considering conditions that may result in maximum incident energy, including but not limited to:
   a. Maximum and minimum utility fault currents.
   b. Maximum and minimum motor contribution.

c. Known operating modes (e.g. utility as source, generator as source, utility/generator in parallel, bus tie breaker open/close positions).

G. Study Reports:

1. General Requirements:
   a. Identify date of study and study preparer.
   b. Identify study methodology and software product(s) used.
   c. Identify scope of studies, assumptions made, implications of possible alternate scenarios, and any exclusions from studies.
   d. Identify base used for per unit values.
   e. Include single-line diagram and associated input data used for studies; identify buses on single-line diagram as referenced in reports, and indicate bus voltage.
   f. Include conclusions and recommendations.
2. Short-Circuit Study:
   a. For each scenario, identify at each bus location:
      1) Calculated maximum available symmetrical and asymmetrical fault currents (both three-phase and line-to-ground where applicable).
      2) Fault point X/R ratio.
      3) Associated equipment short circuit current ratings.
   b. Identify locations where the available fault current exceeds the equipment short circuit current rating, along with recommendations.
3. Protective Device Coordination Study:
   a. For each scenario, include time-current coordination curves plotted on log-log scale graphs.
   b. For each graph include (where applicable):
      1) Partial single-line diagram identifying the portion of the system illustrated.
      2) Protective Devices: Time-current curves with applicable tolerance bands for each protective device in series back to the source, plotted up to the maximum available fault current at the associated bus.
      3) Conductors: Damage curves.
      4) Transformers: Inrush points and damage curves.
      5) Generators: Full load current, overload curves, decrement curves, and short circuit withstand points.
      6) Motors: Full load current, starting curves, and damage curves.
      7) Capacitors: Full load current and damage curves.
   c. For each protective device, identify fixed and adjustable characteristics with available ranges and recommended settings.
      1) Circuit Breakers: Include long time pickup and delay, short time pickup and delay, and instantaneous pickup.
      2) Include ground fault pickup and delay.
      3) Include fuse ratings.
      4) Protective Relays: Include current/potential transformer ratios, tap, time dial, and instantaneous pickup.

d. Identify cases where either full selective coordination or adequate protection is not achieved, along with recommendations.

4. Arc Flash and Shock Risk Assessment:
   a. For the worst case for each scenario, identify at each bus location:
      1) Calculated incident energy and associated working distance.
      2) Calculated arc flash boundary.
      3) Bolted fault current.
      4) Arcing fault current.
      5) Clearing time.
      6) Arc gap distance.
   b. For purposes of producing arc flash hazard warning labels, summarize the maximum incident energy and associated data reflecting the worst case condition of all scenarios at each bus location.
   c. Include recommendations for reducing the incident energy at locations where the calculated maximum incident energy exceeds 40 calories per sq cm.

1.7 QUALITY ASSURANCE

A. Study Preparer Qualifications: Professional electrical engineer licensed in the State in which the Project is located and with minimum five years experience in preparation of studies of similar type and complexity using specified computer software.

1. Study preparer may be employed by manufacturer of electrical distribution equipment.
2. Study preparer may be employed by field testing agency.

B. Field Testing Agency Qualifications: Independent testing organization specializing in testing, analysis, and maintenance of electrical systems with minimum five years experience; NETA Accredited Company.

1. Field Supervisor: Certified electrical testing technician; NETA ETT Level III.

C. Computer Software for Study Preparation: Use the latest edition of commercially available software utilizing specified methodologies.

1. Products:
   a. EasyPower LLC: www.easypower.com/#sle.
   b. ETAP/Operation Technology, Inc: www.etap.com/#sle.
   c. Power Analytics Corporation: www.poweranalytics.com/#sle.
   d. SKM Systems Analysis, Inc: www.skm.com/#sle.
   e. Substitutions: See Section 01.6000 - Product Requirements.

PART 2 PRODUCTS

2.1 ARC FLASH HAZARD WARNING LABELS

A. Provide warning labels complying with ANSI Z535.4 to identify arc flash hazards for each work location analyzed by the arc flash and shock risk assessment.

1. Materials: Comply with Section 26.0553.

2. Minimum Size: 4 by 6 inches.
3. Legend: Provide custom legend in accordance with NFPA 70E based on equipment-specific data as determined by arc flash and shock risk assessment.
    a. Include orange header that reads "WARNING" unless otherwise indicated.
    b. Include the text "Arc Flash and Shock Hazard; Appropriate PPE Required" or approved equivalent.
    c. Include the following information:
        1) Arc flash boundary.
        2) Available incident energy and corresponding working distance.
        3) Site-specific PPE (personnel protective equipment) requirements.
        4) Nominal system voltage.
        5) Limited approach boundary.
        6) Restricted approach boundary.
        7) Equipment identification.
        8) Study preparer, report reference, and date calculations were performed.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install arc flash warning labels in accordance with Section 26.0553.

3.2 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Provide the services of field testing agency or equipment manufacturer's representative to perform inspection, testing, and adjusting.

C. Inspect and test in accordance with NETA ATS, except Section 4.

D. Adjust equipment and protective devices for compliance with studies and recommended settings.

E. Notify Architect of any conflicts with or deviations from studies. Obtain direction before proceeding.

F. Submit detailed reports indicating inspection and testing results, and final adjusted settings.

3.3 CLOSEOUT ACTIVITIES

A. See Section 01.7800 - Closeout Submittals, for closeout submittals.

B. See Section 01.7900 - Demonstration and Training, for additional requirements.

C. Training: Include as part of the base bid training for Owner's personnel on electrical safety pertaining to arc flash and shock hazards.

1. Use site-specific arc flash and shock risk assessment report as training reference, supplemented with additional training materials as required.
2. Provide minimum of eight hours of training.
3. Instructor: Representative of entity performing study.

4. Location: At project site.

END OF SECTION 26.0573

SECTION 26.0923 - LIGHTING CONTROL DEVICES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Occupancy sensors.

B. Outdoor photo controls.

1.2 RELATED REQUIREMENTS

A. Section 26.0526 - Grounding and Bonding for Electrical Systems.

B. Section 26.0537 - Boxes.

C. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

D. Section 26.2726 - Wiring Devices: Devices for manual control of lighting, including wall switches, wall dimmers, fan-speed controllers, and wall plates.

E. Section 26.5100 - Interior Lighting.

F. Section 26.5600 - Exterior Lighting.

1.3 REFERENCE STANDARDS

A. ANSI C136.24 - American National Standard for Roadway and Area Lighting Equipment - Nonlocking (Button) Type Photocontrols; 2004 (R2010).

B. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2010.

C. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2008.

D. NEMA 410 - Performance Testing for Lighting Controls and Switching Devices with Electronic Fluorescent Ballasts; National Electrical Manufacturers Association; 2011.

E. NFPA 70 - National Electrical Code; National Fire Protection Association; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. UL 773 - Plug-in Locking Type Photocontrols for Use with Area Lighting; Current Edition, Including All Revisions.

G. UL 773A - Nonindustrial Photoelectric Switches for Lighting Control; Current Edition, Including All Revisions.

H. UL 916 - Energy Management Equipment; Current Edition, Including All Revisions.

I. UL 917 - Clock-Operated Switches; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the placement of lighting control devices with millwork, furniture, equipment, etc. installed under other sections or by others.
2. Coordinate the placement of wall switch occupancy sensors with actual installed door swings.
3. Coordinate the placement of occupancy sensors with millwork, furniture, equipment or other potential obstructions to motion detection coverage installed under other sections or by others.
4. Coordinate the placement of photo sensors for daylighting controls with windows, skylights, and luminaires to achieve optimum operation. Coordinate placement with ductwork, piping, equipment, or other potential obstructions to light level measurement installed under other sections or by others.
5. Notify Architect of any conflicts or deviations from the contract documents to obtain direction prior to proceeding with work.

B. Sequencing:

1. Do not install lighting control devices until final surface finishes and painting are complete.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Include ratings, configurations, standard wiring diagrams, dimensions, colors, service condition requirements, and installed features.

1. Occupancy Sensors: Include detailed motion detection coverage range diagrams.

C. Shop Drawings:

1. Occupancy Sensors: Provide lighting plan indicating location, model number, and orientation of each occupancy sensor and associated system component.

D. Field Quality Control Reports.

E. Manufacturer's Installation Instructions: Include application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

F. Operation and Maintenance Data: Include detailed information on device programming and setup.

G. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01.6000 - Product Requirements, for additional provisions.

H. Project Record Documents: Record actual installed locations and settings for lighting control devices.

1.6 QUALITY ASSURANCE

A. Conform to requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

1.7 DELIVERY, STORAGE, AND PROTECTION

A. Store products in a clean, dry space in original manufacturer's packaging in accordance with manufacturer's written instructions until ready for installation.

1.8 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.9 WARRANTY

A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer warranty for all occupancy sensors.

PART 2 PRODUCTS

2.1 ALL LIGHTING CONTROL DEVICES

A. Provide products listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

B. Unless specifically indicated to be excluded, provide all required conduit, wiring, connectors, hardware, components, accessories, etc. as required for a complete operating system.

2.2 OCCUPANCY SENSORS

A. Manufacturers:

1. Manufacturer: Wattstopper DLM
2. Other acceptable manufacturers:
   a. Leviton GreenMax
   b. Lutron

B. All Occupancy Sensors:

1. Description: Factory-assembled commercial specification grade devices for indoor use capable of sensing both major motion, such as walking, and minor motion, such as small desktop level movements, according to published coverage areas, for automatic control of load indicated.
2. Sensor Technology:
   a. Passive Infrared (PIR) Occupancy Sensors: Designed to detect occupancy by sensing movement of thermal energy between zones.
   b. Ultrasonic Occupancy Sensors: Designed to detect occupancy by sensing frequency shifts in emitted and reflected inaudible sound waves.
   c. Passive Infrared/Ultrasonic Dual Technology Occupancy Sensors: Designed to detect occupancy using a combination of both passive infrared and ultrasonic technologies.
3. Provide LED to visually indicate motion detection with separate color LEDs for each sensor type in dual technology units.
4. Operation: Unless otherwise indicated, occupancy sensor to turn load on when occupant presence is detected and to turn load off when no occupant presence is detected during an adjustable turn-off delay time interval.
5. Dual Technology Occupancy Sensors: Field configurable turn-on and hold-on activation with settings for activation by either or both sensing technologies.
6. Passive Infrared Lens Field of View: Field customizable by addition of factory masking material, adjustment of integral blinders, or similar means to block motion detection in selected areas.
7. Turn-Off Delay: Field adjustable, up to a maximum time delay setting of not less than 15 minutes and not more than 30 minutes.
8. Sensitivity: Field adjustable.
9. Adaptive Technology: Field selectable; capable of self-adjusting sensitivity and time delay according to conditions.
10. Integral Photocell: For field selectable and adjustable inhibition of automatic turn-on of load

when ambient lighting is above the selected level.

11. Compatibility: Suitable for controlling incandescent lighting, low-voltage lighting with electronic and magnetic transformers, fluorescent lighting with electronic and magnetic ballasts, and fractional motor loads, with no minimum load requirements.
12. Load Rating for Line Voltage Occupancy Sensors: As required to control the load indicated on the drawings.
13. Isolated Relay for Low Voltage Occupancy Sensors: SPDT dry contacts, ratings as required for interface with system indicated.

C. Wall Switch Occupancy Sensors:

1. All Wall Switch Occupancy Sensors:
    a. Description: Occupancy sensors designed for installation in standard wall box at standard wall switch mounting height with a field of view of 180 degrees, integrated manual control capability, and no leakage current to load in off mode.
    b. Unless otherwise indicated or required to control the load indicated on the drawings, provide line voltage units with self-contained relay.
    c. Where indicated, provide two-circuit units for control of two separate lighting loads, with separate manual controls and separately programmable operation for each load.
    d. Operation: Field selectable to operate either as occupancy sensor (automatic on/off) or as vacancy sensor (manual-on/automatic off).
    e. Manual-Off Override Control: When used to turn off load while in automatic-on mode, unit to revert back to automatic mode after no occupant presence is detected during the delayed-off time interval.
2. Passive Infrared (PIR) Wall Switch Occupancy Sensors: Capable of detecting motion within an area of 900 square feet.
3. Ultrasonic Wall Switch Occupancy Sensors: Capable of detecting motion within an area of 400 square feet.
4. Passive Infrared/Ultrasonic Dual Technology Wall Switch Occupancy Sensors: Capable of detecting motion within an area of 900 square feet.

D. Ceiling Mounted Occupancy Sensors:

1. All Ceiling Mounted Occupancy Sensors:
    a. Description: Low profile occupancy sensors designed for ceiling installation.
    b. Unless otherwise indicated or required to control the load indicated on the drawings, provide low voltage units, for use with separate compatible accessory power packs.
    c. Provide field selectable setting for disabling LED motion detector visual indicator.
    d. Occupancy sensor to be field selectable as either manual-on/automatic-off or automatic on/off.
    e. Finish: White unless otherwise indicated.
2. Passive Infrared (PIR) Ceiling Mounted Occupancy Sensors:
    a. Standard Range Sensors: Capable of detecting motion within an area of 450 square feet at a mounting height of 9 feet, with a field of view of 360 degrees.
    b. Extended Range Sensors: Capable of detecting motion within an area of 1,200 square feet

at a mounting height of 9 feet, with a field of view of 360 degrees.

3. Ultrasonic Ceiling Mounted Occupancy Sensors:
   a. Standard Range Sensors: Capable of detecting motion within an area of 500 square feet at a mounting height of 9 feet, with a field of view of 360 degrees.
   b. Extended Range Sensors: Capable of detecting motion within an area of 2,000 square feet at a mounting height of 9 feet.
   c. Microphonic occupancy sensors will not be accepted as a substitution for ultrasonic technology.
4. Passive Infrared/Ultrasonic Dual Technology Ceiling Mounted Occupancy Sensors:
   a. Standard Range Sensors: Capable of detecting motion within an area of 450 square feet at a mounting height of 9 feet, with a field of view of 360 degrees.
   b. Extended Range Sensors: Capable of detecting motion within an area of 1,200 square feet at a mounting height of 9 feet, with a field of view of 360 degrees.

E. Power Packs for Low Voltage Occupancy Sensors:

1. Description: Plenum rated, self-contained low voltage class 2 transformer and relay compatible with specified low voltage occupancy sensors for switching of line voltage loads.
2. Provide quantity and configuration of power and slave packs with all associated wiring and accessories as required to control the load indicated on the drawings.
3. Input Supply Voltage: Dual rated for 120/277 V ac.
4. Load Rating: As required to control the load indicated on the drawings.

2.3 OUTDOOR PHOTO CONTROLS

A. Manufacturers:

1. Intermatic, Inc: www.intermatic.com.
2. Paragon, a brand of Invensys Controls: www.invensyscontrols.com.
3. Tork, a division of NSI Industries LLC: www.tork.com.
4. Substitutions: See Section 01.6000 - Product Requirements.
5. Source Limitations: Furnish products produced by a single manufacturer and obtained from a single supplier.

B. Stem-Mounted Outdoor Photo Controls:

1. Description: Direct-wired photo control unit with threaded conduit mounting stem and field-adjustable swivel base, listed and labeled as complying with UL 773A.
2. Housing: Weatherproof, impact resistant polycarbonate.
3. Photo Sensor: Cadmium sulfide.
4. Provide external sliding shield for field adjustment of light level activation.
5. Light Level Activation: 1 to 5 footcandles turn-on and 3 to 1 turn-off to turn-on ratio with delayed turn-off.
6. Voltage: As required to control the load indicated on the drawings.
7. Failure Mode: Fails to the on position.
8. Load Rating: As required to control the load indicated on the drawings.

9. Provide accessory wall-mounting bracket where indicated or as required to complete installation.

C. Locking Receptacle-Mounted Outdoor Photo Controls

1. Description: Plug-in locking type photo control unit complying with ANSI C136.10 for mounting on a compatible receptacle, listed and labeled as complying with UL 773.
2. Housing: Weatherproof, impact resistant UV stabilized polypropylene, color to be selected.
3. Photo Sensor: Cadmium sulfide.
4. Light Level Activation: 1 to 3 footcandles turn-on and 1.5 to 1 turn-off to turn-on ratio with instant turn-on and delayed turn-off.
5. Voltage: As required to control the load indicated on the drawings.
6. Failure Mode: Fails to the on position.
7. Load Rating: As required to control the load indicated on the drawings.
8. Surge Protection: 160 joule metal oxide varistor.

D. Button Type Outdoor Photo Controls

1. Description: Direct-wired photo control unit complying with ANSI C136.24 with weatherproof gasketed wall plate where required or indicated, listed and labeled as complying with UL 773A.
2. Housing: Weather resistant polycarbonate.
3. Photo Sensor: Cadmium sulfide.
4. Light Level Activation: 1 to 3 footcandles turn-on and 3 to 1 turn-off to turn-on ratio with delayed turn-off.
5. Voltage: As required to control the load indicated on the drawings.
6. Failure Mode: Fails to the on position.
7. Load Rating: As required to control the load indicated on the drawings.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as shown on the drawings.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate devices and conductors in accordance with NFPA 70.

C. Verify that openings for outlet boxes are neatly cut and will be completely covered by devices or wall plates.

D. Verify that final surface finishes are complete, including painting.

E. Verify that branch circuit wiring installation is completed, tested, and ready for connection to lighting control devices.

F. Verify that the service voltage and ratings of lighting control devices are appropriate for the service

voltage and load requirements at the location to be installed.

G. Verify that conditions are satisfactory for installation prior to starting work.

3.2 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.3 INSTALLATION

A. Perform work in a neat and workmanlike manner in accordance with NECA 1 and, where applicable, NECA 130, including mounting heights specified in those standards unless otherwise indicated.

B. Coordinate locations of outlet boxes provided under Section 260537 as required for installation of lighting control devices provided under this section.

1. Mounting Heights: Unless otherwise indicated, as follows:
   a. Wall Switch Occupancy Sensors: 48 inches above finished floor to the top of the box.

C. Install lighting control devices in accordance with manufacturer's instructions.

D. Unless otherwise indicated, connect lighting control device grounding terminal or conductor to branch circuit equipment grounding conductor and to outlet box with bonding jumper.

E. Install lighting control devices plumb and level, and held securely in place.

F. Where required and not furnished with lighting control device, provide wall plate in accordance with Section 26.2726.

G. Where applicable, install lighting control devices and associated wall plates to fit completely flush to mounting surface with no gaps and rough opening completely covered without strain on wall plate. Repair or reinstall improperly installed outlet boxes or improperly sized rough openings. Do not use oversized wall plates in lieu of meeting this requirement.

H. Identify lighting control devices in accordance with Section 26.0553.

I. Occupancy Sensor Locations:

1. Location Adjustments: Locations indicated are diagrammatic and only intended to indicate which rooms or areas require devices. Provide quantity and locations as required for complete coverage of respective room or area based on manufacturer's recommendations for installed devices.

2. Locate ultrasonic and dual technology passive infrared/ultrasonic occupancy sensors a minimum of 4 feet from air supply ducts or other sources of heavy air flow and as per manufacturer's recommendations, in order to minimize false triggers.

J. Outdoor Photo Control Locations:

1. Where possible, locate outdoor photo controls with photo sensor facing north. If north facing photo sensor is not possible, install with photo sensor facing east, west, or down.
2. Locate outdoor photo controls so that photo sensors do not face artificial light sources, including light sources controlled by the photo control itself.

K. Install outdoor photo controls so that connections are weatherproof. Do not install photo controls with conduit stem facing up in order to prevent infiltration of water into the photo control.

L. Unless otherwise indicated, install power packs for lighting control devices above accessible ceiling or above access panel in inaccessible ceiling near the sensor location.

M. Where indicated, install separate compatible wall switches for manual control interface with lighting control devices or associated power packs.

3.4 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Inspect each lighting control device for damage and defects.

C. Test occupancy sensors to verify proper operation, including time delays and ambient light thresholds where applicable. Verify optimal coverage for entire room or area. Record test results in written report to be included with submittals.

D. Test outdoor photo controls to verify proper operation, including time delays where applicable.

E. Correct wiring deficiencies and replace damaged or defective lighting control devices.

3.5 ADJUSTING

A. Adjust devices and wall plates to be flush and level.

B. Adjust occupancy sensor settings to minimize undesired activations while optimizing energy savings, and to achieve desired function as indicated or as directed by Architect.

C. Where indicated or as directed by Architect, install factory masking material or adjust integral blinders on passive infrared (PIR) and dual technology occupancy sensor lenses to block undesired motion detection.

D. Adjust external sliding shields on outdoor photo controls under optimum lighting conditions to achieve desired turn-on and turn-off activation as indicated or as directed by Architect.

3.6 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.7 CLOSEOUT ACTIVITIES

A. Training: Train Owner's personnel on operation, adjustment, programming, and maintenance of lighting control devices.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
2. Provide minimum of two hours of training.
3. Instructor: Qualified contractor familiar with the project and with sufficient knowledge of the installed lighting control devices.
4. Location: At project site.

END OF SECTION 26.0923

SECTION 26.2100 - LOW-VOLTAGE ELECTRICAL SERVICE ENTRANCE

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Electrical service requirements.

1.2 RELATED REQUIREMENTS

A. Section 03.3000 - Cast-in-Place Concrete: Materials and installation requirements for cast-in-place concrete equipment pads.

B. Section 26.0519 - Low-Voltage Electrical Power Conductors and Cables.

C. Section 26.0526 - Grounding and Bonding for Electrical Systems.

D. Section 26.0529 - Hangers and Supports for Electrical Systems.

E. Section 26.0533.13 - Conduit for Electrical Systems.

F. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

G. Section 26.2413 - Switchboards: Service entrance equipment.

H. Section 26.2416 - Panelboards: Service entrance equipment.

I. Section 26.2713 - Electricity Metering: Non-utility electrical metering.

J. Section 26.2816.16 - Enclosed Switches: Service entrance equipment.

K. Section 26.3213 - Engine Generators: Emergency/standby power systems for interconnection with normal utility electrical supply.

L. Section 26.3600 - Transfer Switches: Service entrance equipment.

M. Section 31.2316 - Excavation.

N. Section 31.2316.13 - Trenching: Excavating, bedding, and backfilling.

O. Section 31.2323 - Fill: Bedding and backfilling.

P. Section 33.7119 - Electrical Underground Ducts, Ductbanks, and Manholes.

1.3 PRICE AND PAYMENT PROCEDURES

A. Allowances:

1. See Section 01.2100 - Allowances, for allowances affecting this section.
2. Include cash allowance for Utility Company charges associated with providing service.

B. Unit Prices:

1. See Section 01.2200 - Unit Prices, for additional unit price requirements.

1.4 DEFINITIONS

A. Service Point: The point of connection between the facilities of the serving utility and the premises wiring as defined in NFPA 70, and as designated by the Utility Company.

1.5 REFERENCE STANDARDS

A. IEEE C2 - National Electrical Safety Code(R) (NESC(R)); 2023.

B. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

C. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.6 ADMINISTRATIVE REQUIREMENTS

A. No later than two weeks following date of the Agreement, notify Utility Company of anticipated date of service.

B. Coordination:

1. Verify the following with Utility Company representative:
   a. Utility Company requirements, including division of responsibility.
   b. Exact location and details of utility point of connection.
   c. Utility easement requirements.
   d. Utility Company charges associated with providing service.
2. Coordinate the work with other trades to avoid placement of other utilities or obstructions within the spaces dedicated for electrical service and associated equipment.
3. Coordinate arrangement of service entrance equipment with the dimensions and clearance requirements of the actual equipment to be installed.
4. Coordinate the work with other installers to provide communication lines required for Utility Company meters.
5. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

C. Arrange for Utility Company to provide permanent electrical service. Prepare and submit documentation required by Utility Company.

D. Utility Company charges associated with providing permanent service to be paid by Owner.

E. Preinstallation Meeting: Convene one week prior to commencing work of this section to review service requirements and details with Utility Company representative.

F. Scheduling:

1. Where work of this section involves interruption of existing electrical service, arrange service interruption with Owner.
2. Arrange for inspections necessary to obtain Utility Company approval of installation.

1.7 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Utility Company letter of availability for providing electrical service to project.

C. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product. Include ratings, configurations, standard wiring diagrams, outline and support point dimensions, finishes, weights, service condition requirements, and installed features.

D. Shop Drawings: Include dimensioned plan views and sections indicating locations and arrangement of Utility Company and service entrance equipment, metering provisions, required clearances, and proposed service routing.

1. Obtain Utility company approval of shop drawings prior to submittal.

E. Drawings prepared by Utility Company.

F. Project Record Documents: Record actual locations of equipment and installed service routing.

1.8 QUALITY ASSURANCE

A. Comply with the following:

1. IEEE C2 (National Electrical Safety Code).
2. NFPA 70 (National Electrical Code).
3. The requirements of the Utility Company.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Products: Listed, classified, and labeled as suitable for the purpose intended.

D. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

B. Store products indoors in a clean, dry space having a uniform temperature to prevent condensation (including outdoor rated products which are not weatherproof until completely and properly installed). Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

C. Handle products carefully to avoid damage to internal components, enclosure, and finish.

PART 2 PRODUCTS

2.1 ELECTRICAL SERVICE REQUIREMENTS

A. Provide new electrical service consisting of all required conduits, conductors, equipment, metering provisions, supports, accessories, etc. as necessary for connection between Utility Company point of supply and service entrance equipment.

B. Electrical Service Characteristics: As indicated on drawings.

C. Utility Company: PECO.

1. Point of Contact: Nicholas Hatcher.
2. Email: Nicholas.Hatcher@exeloncorp.com.
3. Utility Company Project Reference Number: 20834405.

D. Division of Responsibility:

1. Pad-Mounted Utility Transformers:

a. Transformer Vaults and Pads: Furnished and installed by Contractor per Utility Company requirements.
b. Transformers: Furnished and installed by Utility Company.
c. Transformer Grounding Provisions: Furnished and installed by Contractor per Utility Company requirements.
d. Transformer Protective Bollards: Furnished and installed by Contractor per Utility Company requirements.
e. Primary:
1) Trenching and Backfilling: Provided by Contractor.
2) Conduits: Furnished and installed by Contractor.
3) Conductors: Furnished and Installed by Contractor.
f. Secondary:
1) Trenching and Backfilling: Provided by Contractor.
2) Conduits: Furnished and installed by Contractor.
3) Conductors: Furnished and installed by Contractor (Service Point at transformer).

2. Terminations at Service Point: Provided by Utility Company.
3. Metering Provisions:
a. Meter Bases: Furnished and installed by Contractor per Utility Company requirements.
b. Metering Compartments in Service Entrance Equipment: Furnished and installed by Contractor per Utility Company requirements.
c. Communications Conduits for Meters: Furnished and installed by Contractor per Utility Company requirements.

E. Products Furnished by Contractor: Comply with Utility Company requirements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that ratings and configurations of service entrance equipment are consistent with the indicated requirements.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.2 PREPARATION

3.3 INSTALLATION

A. Install products in accordance with manufacturer's instructions and Utility Company requirements.

B. Perform work in accordance with NECA 1 (general workmanship).

C. Arrange equipment to provide minimum clearances and required maintenance access.

D. Construct cast-in-place concrete pads for utility equipment in accordance with Utility Company requirements and Section 03.3000.

E. Provide required protective bollards in accordance with Utility Company requirements.

F. Provide required support and attachment components in accordance with Section 26.0529.

G. Provide grounding and bonding for service entrance equipment in accordance with Section 26.0526.

H. Identify service entrance equipment, including main service disconnect(s) in accordance with Section 26.0553.

3.4 PROTECTION

A. Protect installed equipment from subsequent construction operations.

END OF SECTION 26.2100

SECTION 26.2413 - SWITCHBOARDS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Low-voltage (600 V and less) switchboards and associated accessories for service and distribution applications.

B. Overcurrent protective devices for switchboards.

1.2 RELATED REQUIREMENTS

A. Section 03.3000 - Cast-in-Place Concrete: Concrete equipment pads.

B. Section 26.0526 - Grounding and Bonding for Electrical Systems.

C. Section 26.0529 - Hangers and Supports for Electrical Systems.

D. Section 26.0548 - Vibration and Seismic Controls for Electrical Systems.

1. Includes requirements for the seismic qualification of equipment specified in this section.

E. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

F. Section 26.0573 - Power System Studies: Additional criteria for the selection and adjustment of equipment and associated protective devices specified in this section.

G. Section 26.2100 - Low-Voltage Electrical Service Entrance.

1. Includes Utility Company contact information.

H. Section 26.2513 - Low-Voltage Busways.

I. Section 26.2713 - Electricity Metering: For interface with equipment specified in this section.

J. Section 26.2813 - Fuses: Fuses for fusible switches.

1. Includes requirements for spare fuses and spare fuse cabinets.

K. Section 26.4300 - Surge Protective Devices.

1.3 REFERENCE STANDARDS

A. FS W-C-375 - Circuit Breakers, Molded Case; Branch Circuit and Service; 2013e, with Amendments (2022).

B. IEEE C57.13 - IEEE Standard Requirements for Instrument Transformers; 2016.

C. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

D. NECA 400 - Standard for Installing and Maintaining Switchboards; 2007.

E. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2024.

F. NEMA PB 2 - Deadfront Distribution Switchboards; 2011.

G. NEMA PB 2.1 - General Instructions for Proper Handling, Installation, Operation, and Maintenance of Deadfront Distribution Switchboards Rated 1000 Volts or Less; 2023.

H. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems; 2025.

I. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

J. UL 489 - Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures; Current Edition, Including All Revisions.

K. UL 869A - Reference Standard for Service Equipment; Current Edition, Including All Revisions.

L. UL 891 - Switchboards; Current Edition, Including All Revisions.

M. UL 1053 - Ground-Fault Sensing and Relaying Equipment; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment, or other potential obstructions within the dedicated equipment spaces and working clearances required by NFPA 70.
2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
3. Verify with manufacturer that conductor terminations are suitable for use with the conductors to be installed.
4. Coordinate with manufacturer to provide shipping splits suitable for the dimensional constraints of the installation.
5. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Service Entrance Switchboards:

1. Coordinate with Utility Company to provide switchboards with suitable provisions for electrical service and utility metering, where applicable.
2. Coordinate with Owner to arrange for Utility Company required access to equipment for installation and maintenance.
3. See Section 26.2100 for Utility Company contact information and additional requirements.
4. Obtain Utility Company approval of switchboard prior to fabrication.
5. Preinstallation Meeting: Convene one week prior to commencing work of this section to review requirements with Utility Company representative.
6. Arrange for inspections necessary to obtain Utility Company approval of installation.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for switchboards, enclosures, overcurrent protective devices, and other installed components and accessories.

1. Include characteristic trip curves for each type and rating of overcurrent protective device upon request.

C. Shop Drawings: Indicate dimensions, voltage, bus ampacities, overcurrent protective device arrangement and sizes, short circuit current ratings, conduit entry locations, conductor terminal information, and installed features and accessories.

1. Include dimensioned plan and elevation views of switchboards and adjacent equipment with all required clearances indicated.
2. Include wiring diagrams showing all factory and field connections.
3. Clearly indicate whether proposed short circuit current ratings are fully rated or, where acceptable, series rated systems.
4. Include documentation of listed series ratings upon request.
5. Include documentation demonstrating selective coordination upon request.
6. Identify mounting conditions required for equipment seismic qualification.

D. Manufacturer's equipment seismic qualification certification.

E. Service Entrance Switchboards: Include documentation of Utility Company approval of switchboard.

F. Source Quality Control Test Reports: Include reports for tests designated in NEMA PB 2 as production (routine) tests.

G. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

H. Field Quality Control Test Reports.

I. Project Record Documents: Record actual installed locations of switchboards and final equipment settings.

J. Maintenance Data: Include information on replacement parts and recommended maintenance procedures and intervals.

K. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01.6000 - Product Requirements, for additional provisions.
2. Enclosure Keys: Two of each different key.
3. Electronic Trip Circuit Breakers: Provide one portable test set.
4. Drawout Devices:
    a. Handles Necessary for Racking of Devices: One for each electrical room containing switchgear with drawout devices.
    b. Lifting Yokes: One of each different yoke required, for each electrical room containing drawout devices.
    c. Portable Lifting Devices: One for each electrical room containing switchboards with drawout devices and no integral top rail-mounted lifting device.
    d. Removable Covers: One for blocking each different opening size when device is temporarily removed from its compartment.
5. See Section 26.2813 for requirements for spare fuses and spare fuse cabinets.

1.6 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store switchboards in accordance with manufacturer's instructions, NECA 400, and NEMA PB 2.1.

B. Store in a clean, dry space having a uniform temperature to prevent condensation (including outdoor switchboards, which are not weatherproof until completely and properly installed). Where necessary, provide temporary enclosure space heaters or temporary power for permanent factory-installed space heaters.

C. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

D. Handle carefully to avoid damage to switchboard internal components, enclosure, and finish.

1.8 FIELD CONDITIONS

A. Maintain field conditions within required service conditions during and after installation.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Switchboards:

1. ABB: www.electrification.us.abb.com/#sle.
2. Eaton Corporation: www.eaton.com/#sle.
3. Schneider Electric: www.se.com/#sle.
4. Siemens Industry, Inc: www.new.siemens.com/#sle.
5. Substitutions: See Section 01.6000 - Product Requirements.
6. Source Limitations: Provide switchboards and associated components produced by same manufacturer as other electrical distribution equipment used for project and obtained from single supplier.

2.2 SWITCHBOARDS

A. Provide switchboards consisting of all required components, control power transformers, instrumentation and control wiring, accessories, etc. as necessary for a complete operating system.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Description: Dead-front switchboard assemblies complying with NEMA PB 2, and listed and labeled as complying with UL 891; ratings, configurations and features as indicated on the drawings.

D. Front-Connected Switchboards:

1. Main Device(s): Individually-mounted.
2. Feeder Devices: Panel/group-mounted.

3. Arrangement: Front and rear accessible, front and rear aligned.
4. Gutter Access: Bolted covers.

E. Service Entrance Switchboards:

1. Listed and labeled as suitable for use as service equipment according to UL 869A.
2. For solidly-grounded wye systems, provide factory-installed main bonding jumper between neutral and ground busses, and removable neutral disconnecting link for testing purposes.
3. Comply with Utility Company requirements for electrical service.
4. Utility Metering Provisions: Provide separate barriered compartment complying with Utility Company requirements where indicated or where required by Utility Company. Include hinged sealable door and provisions for Utility Company current transformers (CTs), potential transformers (PTs), or potential taps as required.
5. See Section 26.2100 for additional requirements.

F. Switchboards With Busway Transitions: Configured for bussed connection to busway provided in accordance with Section 26.2513.

G. Switchboards With Drawout Devices: Provide integral top rail-mounted lifting device where indicated.

H. Seismic Qualification: Provide switchboards and associated components suitable for application under the seismic design criteria specified in Section 26.0548 where required. Include certification of compliance with submittals.

I. Service Conditions:

1. Provide switchboards and associated components suitable for operation under the following service conditions without derating:
   a. Altitude: Less than 6,600 feet.
   b. Ambient Temperature:
      1) Switchboards Containing Molded Case or Insulated Case Circuit Breakers: Between 23 degrees F and 104 degrees F.
2. Provide switchboards and associated components suitable for operation at indicated ratings under the service conditions at the installed location.

J. Short Circuit Current Rating:

1. Provide switchboards with listed short circuit current rating not less than the available fault current at the installed location as indicated on the drawings.
2. Minimum Rating: 100,000 rms symmetrical amperes.
3. Listed series ratings are acceptable, except where not permitted by motor contribution according to NFPA 70.
4. Label equipment utilizing series ratings as required by NFPA 70.

K. Selectivity: Where the requirement for selectivity is indicated, furnish products as required to achieve selective coordination.

L. Main Devices: Configure for top or bottom incoming feed as indicated or as required for the installation. Provide separate pull section and/or top-mounted pullbox as indicated or as required to facilitate installation of incoming feed.

M. Bussing: Sized in accordance with UL 891 temperature rise requirements.

1. Through bus (horizontal cross bus) to be fully rated through full length of switchboard (non-tapered). Tapered bus is not permitted.

2. Provide fully rated neutral bus, with a suitable lug for each feeder or branch circuit requiring a neutral connection.
3. Provide solidly bonded equipment ground bus through full length of switchboard, with a suitable lug for each feeder and branch circuit equipment grounding conductor.
4. Phase and Neutral Bus Material: Copper.
5. Ground Bus Material: Copper.

N. Conductor Terminations: Suitable for use with the conductors to be installed.

1. Line Conductor Terminations:
   a. Main and Neutral Lug Material: Aluminum, suitable for terminating aluminum or copper conductors.
   b. Main and Neutral Lug Type: Mechanical.
2. Load Conductor Terminations:
   a. Lug Material: Aluminum, suitable for terminating aluminum or copper conductors.
   b. Lug Type:
      1) Provide mechanical lugs unless otherwise indicated.

O. Enclosures:

1. Environment Type per NEMA EN 10250: Unless otherwise indicated, as specified for the following installation locations:
   a. Indoor Clean, Dry Locations: Type 1 or Type 2 (drip-proof).
   b. Outdoor Locations: Type 3R.
2. Finish: Manufacturer's standard unless otherwise indicated.
3. Enclosure Space Heaters:
   a. Provide in each switchboard section installed outdoors and in unconditioned indoor spaces.
   b. Size according to manufacturer's recommendations for worst case ambient temperature to prevent condensation.
   c. Heater Control: Thermostat.
   d. Heater Power Source: Provide connection to transformer factory-installed in switchboard or suitable external branch circuit as indicated or as required.
4. Outdoor Enclosures:
   a. Enclosure Type: Non-walk-in type unless otherwise indicated.
   b. Color: Manufacturer's standard.
   c. Access Doors: Lockable, with all locks keyed alike.

P. Future Provisions:

1. Prepare designated spaces for future installation of devices including bussing, connectors, mounting hardware and all other required provisions.
2. Equip distribution sections with full height vertical bussing to accommodate maximum utilization of space for devices.
3. Arrange and equip through bus and ground bus to accommodate future installation of additional switchboard sections.

Q. Surge Protective Devices: Where factory-installed, internally mounted surge protective devices are provided in accordance with Section 26.4300, list switchboards as a complete assembly including surge protective device.

R. Ground Fault Protection: Where ground-fault protection is indicated, provide system listed and labeled as complying with UL 1053.

1. Where overcurrent protective devices equipped with integral ground fault protection are used, provide separate neutral current sensor where applicable.
2. Where accessory ground fault sensing and relaying equipment is used, equip companion overcurrent protective devices with ground-fault shunt trips.
    a. Use zero sequence or residual ground fault detection method unless otherwise indicated.
    b. Provide test panel and field-adjustable ground fault pick-up and delay settings.
    c. Provide zone selective interlocking capability, capable of communicating with other electronic trip circuit breakers and external ground fault sensing systems to control ground fault delay functions for system coordination purposes.

S. Arc Flash Energy-Reducing Maintenance Switching: For circuit breakers rated 1200 A or higher, provide a local accessory switch with status indicator light that permits selection of a maintenance mode with alternate electronic trip unit settings for reduced fault clearing time.

T. Owner Metering:

1. Provide microprocessor-based digital electrical metering system including all instrument transformers, wiring, and connections necessary for measurements specified.
2. Measured Parameters:
    a. Voltage (Volts AC): Line-to-line, line-to-neutral for each phase.
    b. Current (Amps): For each phase and neutral.
    c. Frequency (Hz).
    d. Real power (kW): For each phase, 3-phase total.
    e. Reactive power (kVAR): For each phase, 3-phase total.
    f. Apparent power (kVA): For each phase, 3-phase total.
    g. Power factor.
    h. Real energy (kWh).
    i. Reactive energy (kVARh).
    j. Apparent energy (kVAh).
    k. Power demand: Real, reactive, and apparent.
3. Meter Accuracy: Plus/minus 1.0 percent.
4. Features:
    a. Communications Capability: Utilize Modbus communications protocol. Provide all accessories necessary for proper interface.
    b. KYZ pulse output.
    c. Adjustable demand interval.
    d. Remote monitoring capability via PC.

U. Instrument Transformers:

1. Comply with IEEE C57.13.
2. Select suitable ratio, burden, and accuracy as required for connected devices.

3. Current Transformers: Connect secondaries to shorting terminal blocks.
4. Potential Transformers: Include primary and secondary fuses with disconnecting means.

2.3 OVERCURRENT PROTECTIVE DEVICES

A. Circuit Breakers:

1. Interrupting Capacity:
   a. Provide circuit breakers with interrupting capacity as required to provide the short circuit current rating indicated, but not less than specified minimum requirements.
   b. Fully Rated Systems: Provide circuit breakers with interrupting capacity not less than the short circuit current rating indicated.
   c. Series Rated Systems: Provide circuit breakers listed in combination with upstream devices to provide interrupting rating not less than the short circuit current rating indicated.
2. Molded Case Circuit Breakers:
   a. Description: Quick-make, quick-break, over center toggle, trip-free, trip-indicating circuit breakers; listed and labeled as complying with UL 489, and complying with FS W-C-375 where applicable; ratings, configurations, and features as indicated on the drawings.
      1) Provide thermal magnetic circuit breakers for circuit breaker frame sizes less than 400 amperes.
      2) Provide electronic trip circuit breakers for circuit breaker frame sizes 400 amperes and above.
   b. Thermal Magnetic Circuit Breakers: For each pole, furnish thermal inverse time tripping element for overload protection and magnetic instantaneous tripping element for short circuit protection.
      1) Provide field-adjustable magnetic instantaneous trip setting for circuit breaker frame sizes 225 amperes and larger.
   c. Electronic Trip Circuit Breakers: Furnish solid state, microprocessor-based, true rms sensing trip units.
      1) Provide the following field-adjustable trip response settings:
         (a) Long time pickup, adjustable by replacing interchangeable trip unit or by setting dial.
         (b) Long time delay.
         (c) Short time pickup and delay.
         (d) Instantaneous pickup.
         (e) Ground fault pickup and delay where ground fault protection is indicated.
      2) Provide zone selective interlocking capability where indicated, capable of communicating with other electronic trip circuit breakers and external ground fault sensing systems to control short time delay and ground fault delay functions for system coordination purposes.
      3) Provide communication capability where indicated: Compatible with system indicated.
   d. Provide the following circuit breaker types where indicated:
      1) 100 Percent Rated Circuit Breakers: Listed for application within the switchboard where installed at 100 percent of the continuous current rating.
      2) Current Limiting Circuit Breakers: Without using fusible elements, designed to limit the let-through energy to a value less than the energy of a one-half cycle wave of

the symmetrical prospective current when operating within its current limiting range.

e. Provide the following features and accessories where indicated or where required to complete installation:
   1) Shunt Trip: Provide coil voltage as required for connection to indicated trip actuator.
   2) Pad-Lock Provision: For locking circuit breaker handle in OFF position.

3. Insulated Case Circuit Breakers:
   a. Description: Quick-make, quick-break, trip-free circuit breakers with two-step stored energy closing mechanism; standard 80 percent rated unless otherwise indicated; listed and labeled as complying with UL 489; ratings, configurations, and features as indicated on the drawings.
   b. Operation:
      1) Provide manually operated circuit breakers unless otherwise indicated.
      2) Pad-Lock Provision: For preventing circuit breaker closing operation.
   c. Construction:
   d. Minimum Interrupting Capacity:
      1) 42,000 rms symmetrical amperes at 240 VAC or 208 VAC.
   e. Trip Units: Solid state, microprocessor-based, true rms sensing.
      1) Provide the following field-adjustable trip response settings:
         (a) Long time pickup, adjustable by replacing interchangeable trip unit or by setting dial.
         (b) Long time delay.
         (c) Short time pickup and delay.
         (d) Instantaneous pickup.
         (e) Ground fault pickup and delay where ground fault protection is indicated.
      2) Provide zone selective interlocking capability where indicated, capable of communicating with other electronic trip circuit breakers and external ground fault sensing systems to control short time delay and ground fault delay functions for system coordination purposes.
      3) Provide communication capability where indicated: Compatible with system indicated.

   f. Provide the following circuit breaker types where indicated:
      1) 100 Percent Rated Circuit Breakers: Listed for application within the switchboard where installed at 100 percent of the continuous current rating.
      2) Current Limiting Circuit Breakers: Without using fusible elements, designed to limit the let-through energy to a value less than the energy of a one-half cycle wave of the symmetrical prospective current when operating within its current limiting range.
   g. Provide the following features and accessories where indicated or where required to complete installation:
      1) Shunt Trip: Provide coil voltage as required for connection to indicated trip actuator.

2.4 SOURCE QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Factory test switchboards according to NEMA PB 2, including the following production (routine) tests on each switchboard assembly or component:

1. Dielectric tests.
2. Mechanical operation tests.
3. Grounding of instrument transformer cases test.
4. Electrical operation and control wiring tests, including polarity and sequence tests.
5. Ground-fault sensing equipment test.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the ratings and configurations of the switchboards and associated components are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive switchboards.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install switchboards in accordance with NECA 1 (general workmanship), NECA 400, and NEMA PB 2.1.

C. Arrange equipment to provide required clearances and maintenance access, including accommodations for any drawout devices.

D. Where switchboard is indicated to be mounted with inaccessible side against wall, provide minimum clearance of 1/2 inch between switchboard and wall.

E. Provide required support and attachment in accordance with Section 26.0529.

F. Install switchboards plumb and level.

G. Unless otherwise indicated, mount switchboards on properly sized 4 inch high concrete pad constructed in accordance with Section 03.3000.

H. Provide grounding and bonding in accordance with Section 26.0526.

I. Install all field-installed devices, components, and accessories.

J. Where accessories are not self-powered, provide control power source as indicated or as required to complete installation.

K. Set field-adjustable circuit breaker tripping function settings as determined by overcurrent protective device coordination study performed in accordance with Section 26.0573.

L. Set field-adjustable ground fault protection pickup and time delay settings as indicated.

M. Provide filler plates to cover unused spaces in switchboards.

3.3 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Provide services of a manufacturer's authorized representative to observe installation and assist in inspection and testing. Include manufacturer's reports with submittals.

C. Disconnect surge protective devices (SPDs) prior to performing any high potential testing. Replace SPDs damaged by performing high potential testing with SPDs connected.

D. Before energizing switchboard, perform insulation resistance testing in accordance with NECA 400 and NEMA PB 2.1.

E. Inspect and test in accordance with NETA ATS, except Section 4.

F. Perform inspections and tests listed in NETA ATS, Section 7.1.

G. Molded Case and Insulated Case Circuit Breakers: Perform inspections and tests listed in NETA ATS, Section 7.6.1.1 for all main circuit breakers and circuit breakers larger than _____ amperes. Tests listed as optional are not required.

H. Ground Fault Protection Systems: Test in accordance with manufacturer's instructions as required by NFPA 70.

1. Perform inspections and tests listed in NETA ATS, Section 7.14. The insulation-resistance test on control wiring listed as optional is not required.

I. Meters: Perform inspections and tests listed in NETA ATS, Section 7.11.2.

J. Instrument Transformers: Perform inspections and tests listed in NETA ATS, Section 7.10. The dielectric withstand tests on primary windings with secondary windings connected to ground listed as optional are not required.

K. Test shunt trips to verify proper operation.

L. Correct deficiencies and replace damaged or defective switchboards or associated components.

M. Submit detailed reports indicating inspection and testing results and corrective actions taken.

3.4 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

B. Adjust alignment of switchboard covers and doors.

3.5 CLEANING

A. See Section 01.7419 - Construction Waste Management and Disposal, for additional requirements.

B. Clean dirt and debris from switchboard enclosures and components according to manufacturer's instructions.

C. Repair scratched or marred surfaces to match original factory finish.

3.6 CLOSEOUT ACTIVITIES

A. See Section 01.7800 - Closeout Submittals, for closeout submittals.

B. See Section 01.7900 - Demonstration and Training, for additional requirements.

C. Training: Train Owner's personnel on operation, adjustment, and maintenance of switchboard and associated devices.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
2. Provide minimum of two hours of training.
3. Instructor: Manufacturer's authorized representative.
4. Location: At project site.

3.7 PROTECTION

A. Protect installed switchboards from subsequent construction operations.

END OF SECTION 26.2413

SECTION 26.2416 - PANELBOARDS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Power distribution panelboards.

B. Lighting and appliance panelboards.

C. Overcurrent protective devices for panelboards.

1.2 RELATED REQUIREMENTS

A. Section 03.3000 - Cast-in-Place Concrete: Concrete equipment pads.

B. Section 26.0526 - Grounding and Bonding for Electrical Systems.

C. Section 26.0529 - Hangers and Supports for Electrical Systems.

D. Section 26.0548 - Vibration and Seismic Controls for Electrical Systems.

E. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

F. Section 26.0573 - Power System Studies: Additional criteria for the selection and adjustment of equipment and associated protective devices specified in this section.

G. Section 26.2713 - Electricity Metering: For interface with equipment specified in this section.

H. Section 26.2813 - Fuses: Fuses for fusible switches and spare fuse cabinets.

I. Section 26.4300 - Surge Protective Devices.

1.3 REFERENCE STANDARDS

A. FS W-C-375 - Circuit Breakers, Molded Case; Branch Circuit and Service; 2013e, with Amendments (2022).

B. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

C. NECA 407 - Standard for Installing and Maintaining Panelboards; 2025.

D. NEMA BS 31047 - Heavy Duty Enclosed and Dead-Front Switches (600 Volts Maximum); 2013 (Reaffirmed 2023).

E. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2024.

F. NEMA PB 1 - Panelboards; 2011.

G. NEMA PB 1.1 - General Instructions for Proper Installation, Operation and Maintenance of Panelboards Rated 1000V or Less; 2023.

H. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems; 2025.

I. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

J. UL 50 - Enclosures for Electrical Equipment, Non-Environmental Considerations; Current Edition, Including All Revisions.

K. UL 50E - Enclosures for Electrical Equipment, Environmental Considerations; Current Edition, Including All Revisions.

L. UL 67 - Panelboards; Current Edition, Including All Revisions.

M. UL 98 - Enclosed and Dead-Front Switches; Current Edition, Including All Revisions.

N. UL 489 - Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures; Current Edition, Including All Revisions.

O. UL 943 - Ground-Fault Circuit-Interrupters; Current Edition, Including All Revisions.

P. UL 1053 - Ground-Fault Sensing and Relaying Equipment; Current Edition, Including All Revisions.

Q. UL 1699 - Arc-Fault Circuit-Interrupters; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment, or other potential obstructions within the dedicated equipment spaces and working clearances for electrical equipment required by NFPA 70.
2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
3. Coordinate the work with other trades to provide walls suitable for installation of flush-mounted panelboards where indicated.
4. Verify with manufacturer that conductor terminations are suitable for use with the conductors to be installed.
5. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for panelboards, enclosures, overcurrent protective devices, and other installed components and accessories.

1. Include characteristic trip curves for each type and rating of overcurrent protective device upon request.

C. Shop Drawings: Indicate outline and support point dimensions, voltage, main bus ampacity, overcurrent protective device arrangement and sizes, short circuit current ratings, conduit entry locations, conductor terminal information, and installed features and accessories.

1. Include dimensioned plan and elevation views of panelboards and adjacent equipment with all required clearances indicated.
2. Include wiring diagrams showing all factory and field connections.
3. Clearly indicate whether proposed short circuit current ratings are fully rated or, where acceptable, series rated systems.
4. Include documentation of listed series ratings upon request.
5. Identify mounting conditions required for equipment seismic qualification.

D. Source Quality Control Test Reports: Include reports for tests designated in NEMA PB 1 as routine tests.

E. Field Quality Control Test Reports.

F. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

G. Project Record Documents: Record actual installed locations of panelboards and actual installed circuiting arrangements.

H. Maintenance Data: Include information on replacement parts and recommended maintenance procedures and intervals.

I. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01.6000 - Product Requirements, for additional provisions.
2. Panelboard Keys: Two of each different key.
3. See Section 26.2813 for requirements for spare fuses and spare fuse cabinets.

1.6 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store panelboards in accordance with manufacturer's instructions and NECA 407.

B. Store in a clean, dry space. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

C. Handle carefully in accordance with manufacturer's written instructions to avoid damage to panelboard internal components, enclosure, and finish.

1.8 FIELD CONDITIONS

A. Maintain ambient temperature within the following limits during and after installation of panelboards:

1. Panelboards Containing Circuit Breakers: Between 23 degrees F and 104 degrees F.
2. Panelboards Containing Fusible Switches: Between -22 degrees F and 104 degrees F.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. ABB: www.electrification.us.abb.com/#sle.

B. Eaton Corporation: www.eaton.com/#sle.

C. Schneider Electric: www.se.com/#sle.

D. Siemens Industry, Inc: www.new.siemens.com/#sle.

E. Substitutions: See Section 01.6000 - Product Requirements.

F. Source Limitations: Provide panelboards and associated components produced by same manufacturer as other electrical distribution equipment used for project and obtained from a single supplier.

2.2 PANELBOARDS - GENERAL REQUIREMENTS

A. Provide products listed, classified, and labeled as suitable for the purpose intended.

B. Unless otherwise indicated, provide products suitable for continuous operation under the following service conditions:

1. Altitude: Less than 6,600 feet.
2. Ambient Temperature:
   a. Panelboards Containing Circuit Breakers: Between 23 degrees F and 104 degrees F.
   b. Panelboards Containing Fusible Switches: Between -22 degrees F and 104 degrees F.

C. Short Circuit Current Rating:

1. Provide panelboards with listed short circuit current rating not less than the available fault current at the installed location as indicated on the drawings.
2. Listed series ratings are acceptable, except where not permitted by motor contribution according to NFPA 70.
3. Label equipment utilizing series ratings as required by NFPA 70.

D. Mains: Configure for top or bottom incoming feed as indicated or as required for the installation.

E. Branch Overcurrent Protective Devices: Replaceable without disturbing adjacent devices.

F. Bussing: Sized in accordance with UL 67 temperature rise requirements.

1. Provide fully rated neutral bus, with a suitable lug for each feeder or branch circuit requiring a neutral connection.
2. Provide 200 percent rated neutral bus and lugs where indicated, where oversized neutral conductors are provided, or where panelboards are fed from K-rated transformers.
3. Provide solidly bonded equipment ground bus in each panelboard, with a suitable lug for each feeder and branch circuit equipment grounding conductor.

G. Conductor Terminations: Suitable for use with the conductors to be installed.

H. Enclosures: Comply with NEMA EN 10250, and list and label as complying with UL 50 and UL 50E.

1. Environment Type per NEMA EN 10250: Unless otherwise indicated, as specified for the following installation locations:
   a. Indoor Clean, Dry Locations: Type 1.
   b. Outdoor Locations: Type 3R.
2. Boxes: Galvanized steel unless otherwise indicated.
   a. Provide wiring gutters sized to accommodate the conductors to be installed.
   b. Increase gutter space as required where sub-feed lugs, feed-through lugs, gutter taps, or oversized lugs are provided.

c. Provide removable end walls for NEMA Type 1 enclosures.
d. Provide painted steel boxes for surface-mounted panelboards where indicated, finish to match fronts.

3. Fronts:
   a. Fronts for Surface-Mounted Enclosures: Same dimensions as boxes.
   b. Fronts for Flush-Mounted Enclosures: Overlap boxes on all sides to conceal rough opening.
   c. Finish for Painted Steel Fronts: Manufacturer's standard grey unless otherwise indicated.
4. Lockable Doors: All locks keyed alike unless otherwise indicated.

I. Future Provisions: Prepare all unused spaces for future installation of devices including bussing, connectors, mounting hardware and all other required provisions.

J. Ground Fault Protection: Where ground-fault protection is indicated, provide system listed and labeled as complying with UL 1053.

1. Where electronic circuit breakers equipped with integral ground fault protection are used, provide separate neutral current sensor where applicable.
2. Where accessory ground fault sensing and relaying equipment is used, equip companion overcurrent protective devices with ground-fault shunt trips.
   a. Use zero sequence ground fault detection method unless otherwise indicated.
   b. Provide test panel and field-adjustable ground fault pick-up and delay settings.
   c. Provide zone selective interlocking capability where indicated, capable of communicating with other electronic trip circuit breakers and external ground fault sensing systems to control ground fault delay functions for system coordination purposes.

K. Selectivity: Where the requirement for selectivity is indicated, furnish products as required to achieve selective coordination.

L. Multi-Section Panelboards: Provide enclosures of the same height, with feed-through lugs or sub-feed lugs and feeders as indicated or as required to interconnect sections.

M. Load centers are not acceptable.

N. Provide the following features and accessories where indicated or where required to complete installation:

1. Feed-through lugs.
2. Sub-feed lugs.

2.3 POWER DISTRIBUTION PANELBOARDS

A. Description: Panelboards complying with NEMA PB 1, power and feeder distribution type, circuit breaker type, and listed and labeled as complying with UL 67; ratings, configurations and features as indicated on the drawings.

B. Conductor Terminations:

1. Main and Neutral Lug Material: Aluminum, suitable for terminating aluminum or copper conductors.
2. Main and Neutral Lug Type: Mechanical.

C. Bussing:

1. Phase and Neutral Bus Material: Copper.
2. Ground Bus Material: Copper.

D. Circuit Breakers:

1. Provide bolt-on type.
2. Provide thermal magnetic circuit breakers unless otherwise indicated.
3. Provide electronic trip circuit breakers for circuit breaker frame sizes 400 amperes and above.

E. Enclosures:

1. Provide surface-mounted enclosures unless otherwise indicated.
2. Fronts: Provide lockable hinged door with concealed hinges for access to overcurrent protective device handles without exposing live parts.
3. Provide clear plastic circuit directory holder mounted on inside of door.

2.4 LIGHTING AND APPLIANCE PANELBOARDS

A. Description: Panelboards complying with NEMA PB 1, lighting and appliance branch circuit type, circuit breaker type, and listed and labeled as complying with UL 67; ratings, configurations and features as indicated on the drawings.

B. Conductor Terminations:

1. Main and Neutral Lug Material: Aluminum, suitable for terminating aluminum or copper conductors.
2. Main and Neutral Lug Type: Mechanical.

C. Bussing:

1. Phase Bus Connections: Arranged for sequential phasing of overcurrent protective devices.
2. Phase and Neutral Bus Material: Copper.
3. Ground Bus Material: Copper.

D. Circuit Breakers: Thermal magnetic bolt-on type unless otherwise indicated.

E. Enclosures:

1. Provide surface-mounted or flush-mounted enclosures as indicated.
2. Fronts: Provide lockable hinged door with concealed hinges for access to overcurrent protective device handles without exposing live parts.
3. Provide clear plastic circuit directory holder mounted on inside of door.

2.5 OVERCURRENT PROTECTIVE DEVICES

A. Fusible Switches:

1. Description: Quick-make, quick-break, dead-front fusible switch units complying with NEMA BS 31047, and listed and labeled as complying with UL 98; ratings, configurations, and features as indicated on the drawings.
2. Fuse Clips: As required to accept indicated fuses.
   a. Where NEMA Class R fuses are installed, provide rejection feature to prevent installation of fuses other than Class R.
3. Provide externally operable handle with means for locking in the OFF position. Provide means for locking switch cover in the closed position. Provide safety interlock to prevent opening the

cover with the switch in the ON position with capability of overriding interlock for testing purposes.

4. Conductor Terminations:
   a. Provide mechanical lugs unless otherwise indicated.
   b. Provide compression lugs where indicated.
   c. Lug Material: Aluminum, suitable for terminating aluminum or copper conductors.

B. Molded Case Circuit Breakers:

1. Description: Quick-make, quick-break, over center toggle, trip-free, trip-indicating circuit breakers listed and labeled as complying with UL 489, and complying with FS W-C-375 where applicable; ratings, configurations, and features as indicated on the drawings.
2. Interrupting Capacity:
   a. Provide circuit breakers with interrupting capacity as required to provide the short circuit current rating indicated, but not less than:
      1) 10,000 rms symmetrical amperes at 240 VAC or 208 VAC.
   b. Fully Rated Systems: Provide circuit breakers with interrupting capacity not less than the short circuit current rating indicated.
   c. Series Rated Systems: Provide circuit breakers listed in combination with upstream devices to provide interrupting rating not less than the short circuit current rating indicated.
3. Conductor Terminations:
   a. Provide mechanical lugs unless otherwise indicated.
   b. Provide compression lugs where indicated.
   c. Lug Material: Aluminum, suitable for terminating aluminum or copper conductors.
4. Thermal Magnetic Circuit Breakers: For each pole, furnish thermal inverse time tripping element for overload protection and magnetic instantaneous tripping element for short circuit protection.
   a. Provide field-adjustable magnetic instantaneous trip setting for circuit breaker frame sizes 225 amperes and larger.
5. Electronic Trip Circuit Breakers: Furnish solid state, microprocessor-based, true rms sensing trip units.
   a. Provide the following field-adjustable trip response settings:
      1) Long time pickup, adjustable by replacing interchangeable trip unit or by setting dial.
      2) Long time delay.
      3) Short time pickup and delay.
      4) Instantaneous pickup.
      5) Ground fault pickup and delay where ground fault protection is indicated.
   b. Provide zone selective interlocking capability where indicated, capable of communicating with other electronic trip circuit breakers and external ground fault sensing systems to control short time delay and ground fault delay functions for system coordination purposes.
   c. Provide communication capability where indicated: Compatible with system indicated.
6. Multi-Pole Circuit Breakers: Furnish with common trip for all poles.
7. Provide the following circuit breaker types where indicated:

a. Ground Fault Circuit Interrupter (GFCI) Circuit Breakers: Listed as complying with UL 943, class A for protection of personnel.
b. Ground Fault Equipment Protection Circuit Breakers: Designed to trip at 30 mA for protection of equipment.
c. Arc-Fault Circuit Interrupter (AFCI) Circuit Breakers: Combination type listed as complying with UL 1699.
d. 100 Percent Rated Circuit Breakers: Listed for application within the panelboard where installed at 100 percent of the continuous current rating.
e. Current Limiting Circuit Breakers: Without using fusible elements, designed to limit the let-through energy to a value less than the energy of a one-half cycle wave of the symmetrical prospective current when operating within its current limiting range.

8. Do not use tandem circuit breakers.
9. Do not use handle ties in lieu of multi-pole circuit breakers.
10. Provide multi-pole circuit breakers for multi-wire branch circuits as required by NFPA 70.
11. Provide the following features and accessories where indicated or where required to complete installation:
    a. Shunt Trip: Provide coil voltage as required for connection to indicated trip actuator.

2.6 SOURCE QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Factory test panelboards according to NEMA PB 1.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the ratings and configurations of the panelboards and associated components are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive panelboards.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Perform work in accordance with NECA 1 (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Install panelboards in accordance with NECA 407 and NEMA PB 1.1.

D. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and NFPA 70.

E. Provide required support and attachment in accordance with Section 26.0529.

F. Install panelboards plumb.

G. Install flush-mounted panelboards so that trims fit completely flush to wall with no gaps and rough opening completely covered.

H. Mount panelboards such that the highest position of any operating handle for circuit breakers or switches does not exceed 79 inches above the floor or working platform.

I. Mount floor-mounted power distribution panelboards on properly sized 4 inch high concrete pad constructed in accordance with Section 03.3000.

J. Provide minimum of six spare 1 inch trade size conduits out of each flush-mounted panelboard stubbed into accessible space above ceiling and below floor.

K. Provide grounding and bonding in accordance with Section 26.0526.

1. Terminate branch circuit equipment grounding conductors on solidly bonded equipment ground bus only. Do not terminate on isolated/insulated ground bus.
2. Terminate branch circuit isolated grounding conductors on isolated/insulated ground bus only. Do not terminate on solidly bonded equipment ground bus.

L. Install all field-installed branch devices, components, and accessories.

M. Provide fuses complying with Section 26.2813 for fusible switches as indicated.

N. Where accessories are not self-powered, provide control power source as indicated or as required to complete installation.

O. Multi-Wire Branch Circuits: Group grounded and ungrounded conductors together in the panelboard as required by NFPA 70.

P. Set field-adjustable circuit breaker tripping function settings as determined by overcurrent protective device coordination study performed according to Section 26.0573.

Q. Set field-adjustable ground fault protection pickup and time delay settings as indicated.

R. Provide filler plates to cover unused spaces in panelboards.

S. Provide circuit breaker lock-on devices to prevent unauthorized personnel from de-energizing essential loads where indicated. Also provide for the following:

1. Emergency and night lighting circuits.
2. Fire detection and alarm circuits.
3. Communications equipment circuits.
4. Intrusion detection and access control system circuits.
5. Video surveillance system circuits.

T. Identify panelboards in accordance with Section 26.0553.

3.3 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Fusible Switches: Perform inspections and tests listed in NETA ATS, Section 7.5.1.1.

D. Molded Case Circuit Breakers: Perform inspections and tests listed in NETA ATS, Section 7.6.1.1 for all main circuit breakers and circuit breakers larger than _____ amperes. Tests listed as optional are not required.

E. Ground Fault Protection Systems: Test in accordance with manufacturer's instructions as required by NFPA 70.

1. Perform inspections and tests listed in NETA ATS, Section 7.14. The insulation-resistance test on control wiring listed as optional is not required.

F. Test GFCI circuit breakers to verify proper operation.

G. Test AFCI circuit breakers to verify proper operation.

H. Test shunt trips to verify proper operation.

I. Procure services of a qualified manufacturer's representative to observe installation and assist in inspection, testing, and adjusting. Include manufacturer's reports with field quality control submittals.

J. Correct deficiencies and replace damaged or defective panelboards or associated components.

3.4 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

B. Adjust alignment of panelboard fronts.

C. Load Balancing: For each panelboard, rearrange circuits such that the difference between each measured steady state phase load does not exceed 20 percent and adjust circuit directories accordingly. Maintain proper phasing for multi-wire branch circuits.

3.5 CLEANING

A. Clean dirt and debris from panelboard enclosures and components according to manufacturer's instructions.

B. Repair scratched or marred exterior surfaces to match original factory finish.

END OF SECTION 26.2416

SECTION 26.2713 - ELECTRICITY METERING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Equipment for Owner electricity metering:

1. Single circuit electricity meters.
2. Multi-circuit electricity meters.

1.2 RELATED REQUIREMENTS

A. Section 26.0526 - Grounding and Bonding for Electrical Systems.

B. Section 26.0529 - Hangers and Supports for Electrical Systems.

C. Section 26.0533.16 - Boxes for Electrical Systems: Cabinets and enclosures for metering system components.

D. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

E. Section 26.2100 - Low-Voltage Electrical Service Entrance: Requirements for Utility Company electricity metering.

F. Section 26.2413 - Switchboards: For interface with meters specified in this section.

G. Section 26.2416 - Panelboards: For interface with meters specified in this section.

H. Section 26.2813 - Fuses.

I. Section 27.1000 - Structured Cabling: Data cables for IP network connections.

1.3 REFERENCE STANDARDS

A. ANSI C12.1 - Electric Meters - Code for Electricity Metering; 2026.

B. IEC 62053-21 - Electricity Metering Equipment - Particular Requirements - Part 21: Static Meters for AC Active Energy (Classes 0,5, 1 and 2); 2020.

C. IEC 62053-23 - Electricity Metering Equipment - Particular Requirements - Part 23: Static Meters for Reactive Energy (Classes 2 and 3); 2020.

D. IEEE C57.13 - IEEE Standard Requirements for Instrument Transformers; 2016.

E. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

F. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2024.

G. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems; 2025.

H. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate work to provide equipment suitable for interface with electricity metering systems to be provided.
2. Coordinate the work with other installers to provide communication lines required for electricity metering system interface.
3. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Preinstallation Meeting: Conduct meeting with facility representative and other related equipment manufacturers to discuss electricity metering system interface requirements.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for electricity metering systems and associated components and accessories. Include ratings, configurations, standard wiring diagrams, dimensions, service condition requirements, and installed features.

C. Shop Drawings: Include system interconnection schematic diagrams showing all factory and field connections. Include requirements for interface with other systems.

D. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

E. Field Quality Control Test Reports.

F. Project Record Documents: Record actual installed locations of meters and final equipment settings.

G. Maintenance Data: Include information on replacement parts and recommended maintenance procedures and intervals.

H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01.6000 - Product Requirements, for additional provisions.
2. Enclosure Keys: Two of each different key.

1.6 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

B. Store products in manufacturer's unopened packaging, keep dry and protect from damage until ready for installation.

1.8 FIELD CONDITIONS

A. Maintain field conditions within required service conditions during and after installation.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Electricity Meters:

1. ABB: www.electrification.us.abb.com/#sle.
2. DENT Instruments; PowerScout FLEX 3 Power Submeter: www.dentinstruments.com/#sle.
3. Eaton Corporation: www.eaton.com/#sle.
4. Schneider Electric: www.se.com/#sle.
5. Siemens Industry, Inc: www.new.siemens.com/#sle.
6. SOCOMEC: www.socomec.us/#sle.
7. Veris Industries: www.veris.com/#sle.
8. Leviton.
9. Substitutions: See Section 01.6000 - Product Requirements.
10. Source Limitations: Provide electricity meters produced by single manufacturer and obtained from single supplier.

2.2 EQUIPMENT FOR OWNER ELECTRICITY METERING

A. Provide microprocessor-based digital electricity metering systems including all instrument transformers, wiring, and connections necessary for measurements specified.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Provide electricity metering systems and associated components compatible with the equipment and associated circuits to be metered.

D. Service Conditions: Provide electricity meters suitable for operation under the service conditions at the installed location.

E. Enclosures:

1. Where not furnished by manufacturer, provide required cabinets and enclosures in accordance with Section 26.0533.16.
2. Environment Type per NEMA EN 10250: Unless otherwise indicated, as specified for the following installation locations:
   a. Indoor Clean, Dry Locations: Type 1.
   b. Outdoor Locations: Type 3R or Type 4.
3. Provide lockable door(s) for outdoor locations.
4. Finish: Manufacturer's standard unless otherwise indicated.

F. Instrument Transformers:

1. Comply with IEEE C57.13, where applicable.
2. Select suitable ratio, burden, and accuracy as required for connected devices.

3. Current Transformers: Compatible with connected meters; replace meters damaged by connection of incompatible current transformers. Provide shorting terminal blocks for connection of secondaries where applicable.
4. Potential Transformers: Include primary and secondary fuses with disconnecting means.

G. Accessories:

1. Wiring: Provide manufacturer's recommended cables as indicated or as required for connections between system components.

2.3 SINGLE CIRCUIT ELECTRICITY METERS

A. Single Circuit Electricity Meter:

1. Accuracy:
   a. Real/Active Power/Energy: Revenue grade; plus/minus 1.0 percent; complying with ANSI C12.1 and/or IEC 62053-21 Class 1.
   b. Reactive Power/Energy: Plus/minus 2.0 percent, complying with IEC 62053-23 Class 2.
2. Measured Parameters:
   a. Voltage (Volts AC); line-to-line and line-to-neutral; per phase.
   b. Current (Amps); per phase.
   c. Frequency (Hz).
   d. Real/active power (kW); per phase and total of all phases.
   e. Reactive power (kVAR); per phase and total of all phases.
   f. Apparent power (kVA); per phase and total of all phases.
   g. Power factor; per phase and total of all phases.
   h. Real/active energy (kWh).
   i. Reactive energy (kVARh).
   j. Apparent energy (kVAh).
   k. Power demand; real/active, reactive, and apparent; present and maximum.
   l. Current demand.
   m. Bi-directional energy measurements; real/active and reactive; imported and exported.
3. Data logging.
   a. Storage Capacity: 30 days of readings at 15 minute intervals.
4. Alarm capability, with configurable setpoints.
   a. Current over range.
   b. Voltage over range.
5. Inputs:
6. Outputs:
   a. Pulse Output(s): One.
7. Communications: Compatible with connected systems. Provide all accessories necessary for proper interface.
   a. Serial Communications: RS-485; support for Modbus RTU protocol.
   b. Ethernet Communications: Support for Modbus TCP protocol.

2.4 MULTI-CIRCUIT ELECTRICITY METERS

A. Multi-Circuit Electricity Meter:

1. Metering Capacity: As indicated or as required for circuits to be metered.
2. Accuracy:

a. Real/Active Power/Energy: Revenue grade; plus/minus 1.0 percent; complying with ANSI C12.1 and/or IEC 62053-21 Class 1.
b. Reactive Power/Energy: Plus/minus 2.0 percent, complying with IEC 62053-23 Class 2.

3. Measured Parameters:
   a. Voltage (Volts AC); line-to-line and line-to-neutral; per phase.
   b. Current (Amps); per phase.
   c. Frequency (Hz).
   d. Real/active power (kW); per phase and total of all phases.
   e. Reactive power (kVAR); per phase and total of all phases.
   f. Apparent power (kVA); per phase and total of all phases.
   g. Power factor; per phase and total of all phases.
   h. Real/active energy (kWh).
   i. Reactive energy (kVARh).
   j. Apparent energy (kVAh).
   k. Power demand; real/active; present and maximum.
4. Data logging.
   a. Storage Capacity: 30 days of readings at 15 minute intervals.
5. Alarm capability, with configurable setpoints.
   a. Current over range.
   b. Voltage over range.
6. Inputs:
7. Outputs:
8. Communications: Compatible with connected systems. Provide all accessories necessary for proper interface.
   a. Serial Communications: RS-485; support for Modbus RTU protocol.
   b. Ethernet Communications: Support for Modbus TCP protocol.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the ratings and configurations of metering systems and associated components are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive meters.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Perform work in accordance with NECA 1 (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Provide required support and attachment components in accordance with Section 26.0529.

D. Provide grounding and bonding in accordance with Section 26.0526.

E. Provide fuses complying with Section 26.2813 as required.

F. Identify meters and associated wiring in accordance with Section 26.0553.

3.3 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Meters: Perform inspections and tests listed in NETA ATS, Section 7.11.2.

D. Instrument Transformers: Perform inspections and tests listed in NETA ATS, Section 7.10. The dielectric withstand tests on primary windings with secondary windings connected to ground listed as optional are not required.

E. Correct deficiencies and replace damaged or defective metering system components.

F. Submit detailed reports indicating inspection and testing results and corrective actions taken.

3.4 ADJUSTING

A. Program system parameters according to requirements of Owner.

3.5 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.6 CLOSEOUT ACTIVITIES

A. See Section 01.7800 - Closeout Submittals, for closeout submittals.

B. See Section 01.7900 - Demonstration and Training, for additional requirements.

C. Training: Train Owner's personnel on operation, adjustment, and maintenance of system.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
2. Provide minimum of two hours of training.
3. Instructor: Manufacturer's authorized representative.
4. Location: At project site.

3.7 PROTECTION

A. Protect installed system components from subsequent construction operations.

END OF SECTION 26.2713

SECTION 26.2726 - WIRING DEVICES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Wall switches.

B. Wall dimmers.

C. Receptacles.

D. Wall plates and covers.

E. Floor box service fittings.

F. Poke-through assemblies.

1.2 RELATED REQUIREMENTS

A. Section 26.0519 - Low-Voltage Electrical Power Conductors and Cables: Manufactured wiring systems for use with access floor boxes with compatible pre-wired connectors.

B. Section 26.0526 - Grounding and Bonding for Electrical Systems.

C. Section 26.0533.16 - Boxes for Electrical Systems.

D. Section 26.0533.23 - Surface Raceways for Electrical Systems: Surface raceway systems, including multioutlet assemblies.

E. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

F. Section 26.0583 - Wiring Connections: Cords and plugs for equipment.

G. Section 26.0923 - Lighting Control Devices: Devices for automatic control of lighting, including occupancy sensors, in-wall time switches, and in-wall interval timers.

H. Section 27.1000 - Structured Cabling: Voice and data jacks.

1.3 REFERENCE STANDARDS

A. FS W-C-596 - Connector, Electrical, Power, General Specification for; 2014h (Validated 2022).

B. FS W-S-896 - Switches, Toggle (Toggle and Lock), Flush Mounted (General Specification); 2017g (Validated 2023).

C. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

D. NECA 130 - Standard for Installing and Maintaining Wiring Devices; 2016.

E. NEMA WD 1 - General Color Requirements for Wiring Devices; 1999 (Reaffirmed 2020).

F. NEMA WD 6 - Wiring Devices - Dimensional Specifications; 2021.

G. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

H. UL 20 - General-Use Snap Switches; Current Edition, Including All Revisions.

I. UL 498 - Attachment Plugs and Receptacles; Current Edition, Including All Revisions.

J. UL 514D - Cover Plates for Flush-Mounted Wiring Devices; Current Edition, Including All Revisions.

K. UL 943 - Ground-Fault Circuit-Interrupters; Current Edition, Including All Revisions.

L. UL 1310 - Class 2 Power Units; Current Edition, Including All Revisions.

M. UL 1449 - Standard for Surge Protective Devices; Current Edition, Including All Revisions.

N. UL 1472 - Solid-State Dimming Controls; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the placement of outlet boxes with millwork, furniture, equipment, etc. installed under other sections or by others.
2. Coordinate wiring device ratings and configurations with the electrical requirements of actual equipment to be installed.
3. Coordinate the installation and preparation of uneven surfaces, such as split face block, to provide suitable surface for installation of wiring devices.
4. Coordinate the core drilling of holes for poke-through assemblies with the work covered under other sections.
5. Notify Architect of any conflicts or deviations from Contract Documents to obtain direction prior to proceeding with work.

B. Sequencing:

1. Do not install wiring devices until final surface finishes and painting are complete.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's catalog information showing dimensions, colors, and configurations.

1. Wall Dimmers: Include derating information for ganged multiple devices.
2. Surge Protection Receptacles: Include surge current rating, voltage protection rating (VPR) for each protection mode, and diagnostics information.

C. Samples: One for each type and color of device and wall plate specified.

D. Certificates for Surge Protection Receptacles: Manufacturer's documentation of listing for compliance with UL 1449.

E. Field Quality Control Test Reports.

F. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

G. Operation and Maintenance Data:

1. Wall Dimmers: Include information on operation and setting of presets.
2. GFCI Receptacles: Include information on status indicators.

3. Surge Protection Receptacles: Include information on status indicators.

H. Project Record Documents: Record actual installed locations of wiring devices.

I. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01.6000 - Product Requirements, for additional provisions.
2. Screwdrivers for Tamper-Resistant Screws: Two for each type of screw.
3. Extra Keys for Locking Switches: Two of each type.

1.6 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Products: Listed, classified, and labeled as suitable for the purpose intended.

E. Product Evaluation and Listing Organization Qualifications: Organization engaged in evaluation of products and services, including those recognized by OSHA as Nationally Recognized Testing Laboratories (NRTL), and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND PROTECTION

A. Store in a clean, dry space in original manufacturer's packaging until ready for installation.

PART 2 PRODUCTS

2.1 WIRING DEVICES - GENERAL REQUIREMENTS

A. Provide wiring devices suitable for intended use with ratings adequate for load served.

B. Except where explicitly permitted, substitution of combination switch-and-receptacle devices for separate switches and receptacles is not permitted.

C. Prewired Wiring Device and Outlet Box Assemblies: Factory-assembled products complying with requirements for wiring devices, boxes, and wiring methods may be used in lieu of field-assembled products.

1. Wiring: See Section 26.0519 - Low-Voltage Electrical Power Conductors and Cables.
2. Boxes: See Section 26.0533.16 - Boxes for Electrical Systems.

D. Wiring Device Applications:

1. Receptacles Installed Outdoors or in Damp or Wet Locations: Use weather-resistant GFCI receptacles with weatherproof covers.
2. Provide GFCI protection for:
   a. Receptacles installed within 6 feet of sinks.
   b. Receptacles installed in kitchens.
3. Single Receptacles Installed on Individual Branch Circuits: Provide receptacle ampere rating equal to branch circuit rating.

E. Wiring Device Finishes:

1. Provide wiring device finishes as described below, unless otherwise indicated.
2. Wiring Devices, Unless Otherwise Indicated: White with stainless steel wall plate.
3. Surge Protection Receptacles: Blue.
4. Wiring Devices Connected to Emergency Power: Red with red nylon wall plate.

2.2 WALL SWITCHES

A. Manufacturers:

1. Leviton Manufacturing Company, Inc; _____: www.leviton.com/#sle.
2. Pass & Seymour, a brand of Legrand North America, Inc; _____: www.legrand.us/#sle.
3. Substitutions: See Section 01.6000 - Product Requirements.

B. General Requirements: AC only, quiet operating, general-use snap switches with silver alloy contacts, complying with NEMA WD 1 and NEMA WD 6, and listed as complying with UL 20 and where applicable, FS W-S-896; types as indicated on the drawings.

1. Wiring Provisions: Terminal screws for side wiring and screw actuated binding clamp for back wiring with separate ground terminal screw.

C. Standard Wall Switches: Industrial specification grade, 20 A, 120/277 V with standard toggle type switch actuator and maintained contacts; single pole single throw, double pole single throw, three way, or four way as indicated on the drawings.

D. Locking Wall Switches: Industrial specification grade, 20 A, 120/277 V with lever type keyed switch actuator and maintained contacts; switches keyed alike; single pole single throw, double pole single throw, three way, or four way as indicated on the drawings.

2.3 WALL DIMMERS

A. Manufacturers:

1. Leviton Manufacturing Company, Inc; _____: www.leviton.com/#sle.
2. Lutron Electronics Company, Inc; Maestro Series: www.lutron.com/#sle.
3. Pass & Seymour, a brand of Legrand North America, Inc; _____: www.legrand.us/#sle.
4. Substitutions: See Section 01.6000 - Product Requirements.

B. General Requirements: Solid-state with continuous full-range even control following square law dimming curve, integral radio frequency interference filtering, power failure preset memory, air gap switch accessible without removing wall plate, complying with NEMA WD 1 and NEMA WD 6, and listed as complying with UL 1472; types and ratings suitable for load controlled as indicated on the drawings.

C. Control: Slide control type with separate on/off switch.

D. Power Rating, Unless Otherwise Indicated or Required to Control the Load Indicated on the Drawings:

2.4 RECEPTACLES

A. Manufacturers:

1. Hubbell Incorporated; _____: www.hubbell.com/#sle.
2. Leviton Manufacturing Company, Inc; _____: www.leviton.com/#sle.
3. Lutron Electronics Company, Inc; Designer Style: www.lutron.com/#sle.
4. Pass & Seymour, a brand of Legrand North America, Inc; _____: www.legrand.us/#sle.
5. Substitutions: See Section 01.6000 - Product Requirements.

6. Source Limitations: Where wall controls are furnished as part of lighting control system, provide accessory matching receptacles and wallplates by the same manufacturer in locations indicated.

B. General Requirements: Self-grounding, complying with NEMA WD 1 and NEMA WD 6, and listed as complying with UL 498, and where applicable, FS W-C-596; types as indicated on the drawings.

1. Wiring Provisions: Terminal screws for side wiring or screw actuated binding clamp for back wiring with separate ground terminal screw.
2. NEMA configurations specified are according to NEMA WD 6.

C. Convenience Receptacles:

1. Standard Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R; single or duplex as indicated on the drawings.
2. Weather Resistant Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R, listed and labeled as weather resistant type complying with UL 498 Supplement SD suitable for installation in damp or wet locations; single or duplex as indicated on the drawings.
3. Tamper Resistant Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R, listed and labeled as tamper resistant type; single or duplex as indicated on the drawings.
4. Tamper Resistant and Weather Resistant Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R, listed and labeled as tamper resistant type and as weather resistant type complying with UL 498 Supplement SD suitable for installation in damp or wet locations; single or duplex as indicated on the drawings.

D. GFCI Receptacles:

1. General Requirements: Self-testing, with feed-through protection and light to indicate ground fault tripped condition and loss of protection; listed as complying with UL 943, class A.
   a. Provide test and reset buttons of same color as device.
2. Standard GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style.
3. Weather Resistant GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style, listed and labeled as weather resistant type complying with UL 498 Supplement SD suitable for installation in damp or wet locations.
4. Tamper Resistant GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style, listed and labeled as tamper resistant type.
5. Tamper Resistant and Weather Resistant GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style, listed and labeled as tamper resistant type and as weather resistant type complying with UL 498 Supplement SD suitable for installation in damp or wet locations.

E. USB Charging Devices:

1. General Requirements: Listed as complying with UL 1310.
   a. Charging Capacity - Two-Port Devices: 2.1 A, minimum.
   b. Charging Capacity - Four-Port Devices: 4.2 A, minimum.
2. USB Charging/Tamper Resistant Receptacle Combination Devices: Two-port (Type A and Type C) USB charging device and receptacle, commercial specification grade, duplex, 20A, 125V, NEMA 5-20R, listed and labeled as tamper resistant type; rectangular decorator style.

F. Locking Receptacles: Industrial specification grade, configuration as indicated on the drawings.

2.5 WALL PLATES AND COVERS

A. Manufacturers:

1. Hubbell Incorporated; _____: www.hubbell-wiring.com/#sle.
2. Intermatic, Inc; _____: www.intermatic.com/#sle.
3. Leviton Manufacturing Company, Inc; _____: www.leviton.com/#sle.
4. Lutron Electronics Company, Inc; _____: www.lutron.com/#sle.
5. Pass & Seymour, a brand of Legrand North America, Inc; _____: www.legrand.us/#sle.

B. Wall Plates: Comply with UL 514D.

1. Configuration: One piece cover as required for quantity and types of corresponding wiring devices.
2. Size: Standard; _____.
3. Screws: Metal with slotted heads finished to match wall plate finish.

C. Stainless Steel Wall Plates: Brushed satin finish, Type 302 stainless steel.

D. Weatherproof Receptacle Covers for Damp Locations: Gasketed, cast aluminum, with self-closing hinged cover and corrosion-resistant screws; listed as suitable for use in wet locations with cover closed.

E. Weatherproof Receptacle Covers for Wet Locations: Gasketed, cast aluminum, with hinged lockable cover and corrosion-resistant screws; listed as suitable for use in wet locations while in use with attachment plugs connected and identified as extra-duty type.

2.6 POKE-THROUGH ASSEMBLIES

A. Manufacturers:

1. Hubbell Incorporated; _____: www.hubbell.com/#sle.
2. Thomas & Betts Corporation; _____: www.tnb.com/#sle.
3. Wiremold, a brand of Legrand North America, Inc; _____: www.legrand.us/#sle.
4. Substitutions: See Section 01.6000 - Product Requirements.

B. Description: Assembly comprising floor service fitting, poke-through component, fire stops and smoke barriers, and junction box for conduit termination; fire rating listed to match fire rating of floor and suitable for floor thickness where installed.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate devices and conductors in accordance with NFPA 70.

C. Verify that wall openings are neatly cut and will be completely covered by wall plates.

D. Verify that final surface finishes are complete, including painting.

E. Verify that floor boxes are adjusted properly.

F. Verify that branch circuit wiring installation is completed, tested, and ready for connection to wiring devices.

G. Verify that core drilled holes for poke-through assemblies are in proper locations.

H. Verify that openings in access floor are in proper locations.

I. Verify that conditions are satisfactory for installation prior to starting work.

3.2 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.3 INSTALLATION

A. Perform work in accordance with NECA 1 (general workmanship) and, where applicable, NECA 130, including mounting heights specified in those standards unless otherwise indicated.

B. Coordinate locations of outlet boxes provided under Section 26.0533.16 as required for installation of wiring devices provided under this section.

1. Mounting Heights: Unless otherwise indicated, as follows:
   a. Wall Switches: 48 inches above finished floor.
   b. Wall Dimmers: 48 inches above finished floor.
   c. Fan Speed Controllers: 48 inches above finished floor.
   d. Receptacles: 18 inches above finished floor or 6 inches above counter.
2. Orient outlet boxes for vertical installation of wiring devices unless otherwise indicated.
3. Where multiple receptacles, wall switches, or wall dimmers are installed at the same location and at the same mounting height, gang devices together under a common wall plate.
4. Locate wall switches on strike side of door with edge of wall plate 3 inches from edge of door frame. Where locations are indicated otherwise, notify Architect to obtain direction prior to proceeding with work.
5. Locate receptacles for electric drinking fountains concealed behind drinking fountain according to manufacturer's instructions.

C. Install wiring devices in accordance with manufacturer's instructions.

D. Install permanent barrier between ganged wiring devices when voltage between adjacent devices exceeds 300 V.

E. Where required, connect wiring devices using pigtails not less than 6 inches long. Do not connect more than one conductor to wiring device terminals.

F. Connect wiring devices by wrapping conductor clockwise 3/4 turn around screw terminal and tightening to proper torque specified by the manufacturer. Where present, do not use push-in pressure terminals that do not rely on screw-actuated binding.

G. Unless otherwise indicated, connect wiring device grounding terminal to branch circuit equipment grounding conductor and to outlet box with bonding jumper.

H. Provide GFCI receptacles with integral GFCI protection at each location indicated. Do not use feed-through wiring to protect downstream devices.

I. Install wiring devices plumb and level with mounting yoke held rigidly in place.

J. Install wall switches with OFF position down.

K. Install wall dimmers to achieve full rating specified and indicated after derating for ganging as instructed by manufacturer.

L. Do not share neutral conductor on branch circuits utilizing wall dimmers.

M. Install vertically mounted receptacles with grounding pole on top and horizontally mounted receptacles with grounding pole on left.

N. Install wall plates to fit completely flush to wall with no gaps and rough opening completely covered without strain on wall plate. Repair or reinstall improperly installed outlet boxes or improperly sized rough openings. Do not use oversized wall plates in lieu of meeting this requirement.

O. Install blank wall plates on junction boxes and on outlet boxes with no wiring devices installed or designated for future use.

P. Identify wiring devices in accordance with Section 26.0553.

Q. Install poke-through closure plugs in each unused core holes to maintain fire rating of floor.

3.4 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Inspect each wiring device for damage and defects.

C. Operate each wall switch, wall dimmer, and fan speed controller with circuit energized to verify proper operation.

D. Test each receptacle to verify operation and proper polarity.

E. Test each GFCI receptacle for proper tripping operation according to manufacturer's instructions.

F. Correct wiring deficiencies and replace damaged or defective wiring devices.

3.5 ADJUSTING

A. Adjust devices and wall plates to be flush and level.

B. Adjust presets for wall dimmers according to manufacturer's instructions as directed by Architect.

3.6 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

END OF SECTION 26.2726

SECTION 26.2813 - FUSES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Fuses.

B. Spare fuse cabinet.

1.2 RELATED REQUIREMENTS

A. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

B. Section 26.0573 - Power System Studies: Additional criteria for the selection of protective devices specified in this section.

C. Section 26.2413 - Switchboards: Fusible switches.

D. Section 26.2416 - Panelboards: Fusible switches.

E. Section 26.2816.16 - Enclosed Switches: Fusible switches.

1.3 REFERENCE STANDARDS

A. NEMA FU 1 - Low Voltage Cartridge Fuses; 2012.

B. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

C. UL 248-1 - Low-Voltage Fuses - Part 1: General Requirements; Current Edition, Including All Revisions.

D. UL 248-4 - Low-Voltage Fuses - Part 4: Class CC Fuses; Current Edition, Including All Revisions.

E. UL 248-8 - Low-Voltage Fuses - Part 8: Class J Fuses; Current Edition, Including All Revisions.

F. UL 248-10 - Low-Voltage Fuses - Part 10: Class L Fuses; Current Edition, Including All Revisions.

G. UL 248-12 - Low-Voltage Fuses - Part 12: Class R Fuses; Current Edition, Including All Revisions.

H. UL 248-15 - Low-Voltage Fuses - Part 15: Class T Fuses; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate fuse clips furnished in equipment provided under other sections for compatibility with indicated fuses.
    a. Fusible Switches for Switchboards: See Section 26.2413.
    b. Fusible Enclosed Switches: See Section 26.2816.16.
2. Coordinate fuse requirements according to manufacturer's recommendations and nameplate data for actual equipment to be installed.
3. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard data sheets including voltage and current ratings, interrupting ratings, time-current curves, and current limitation curves.

1. Spare Fuse Cabinet: Include dimensions.

C. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01.6000 - Product Requirements, for additional provisions.
2. Extra Fuses: One set(s) of three for each type and size installed.
3. Fuse Pullers: One set(s) compatible with each type and size installed.
4. Spare Fuse Cabinet Keys: Two.

1.6 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

C. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Bussmann, a division of Eaton Corporation; _____: www.cooperindustries.com/#sle.

B. Littelfuse, Inc; _____: www.littelfuse.com/#sle.

C. Mersen; _____: ep-us.mersen.com/#sle.

D. Substitutions: See Section 01.6000 - Product Requirements.

2.2 APPLICATIONS

A. Service Entrance:

1. Fusible Switches up to 600 Amperes: Class RK1, time-delay.

B. Feeders:

1. Fusible Switches up to 600 Amperes: Class RK1, time-delay.
2. Fusible Switches Larger Than 600 Amperes: Class L, time-delay.

C. General Purpose Branch Circuits: Class RK1, time-delay.

D. Individual Motor Branch Circuits: Class RK1, time-delay.

E. In-Line Protection for Pole-Mounted Luminaires: Class CC, time-delay.

F. Primary Protection for Control Transformers: Class CC, time-delay.

2.3 FUSES

A. Provide products listed, classified, and labeled as suitable for the purpose intended.

B. Unless specifically indicated to be excluded, provide fuses for all fusible equipment as required for a complete operating system.

C. Provide fuses of the same type, rating, and manufacturer within the same switch.

D. Comply with UL 248-1.

E. Unless otherwise indicated, provide cartridge type fuses complying with NEMA FU 1, Class and ratings as indicated.

F. Voltage Rating: Suitable for circuit voltage.

G. Class R Fuses: Comply with UL 248-12.

H. Class J Fuses: Comply with UL 248-8.

I. Class L Fuses: Comply with UL 248-10.

J. Class T Fuses: Comply with UL 248-15.

K. Class CC Fuses: Comply with UL 248-4.

L. Selectivity: Where the requirement for selectivity is indicated, furnish products as required to achieve selective coordination.

M. Provide the following accessories where indicated or where required to complete installation:

1. Fuse Reducers: For adapting indicated fuses to permit installation in switch designed for fuses with larger ampere ratings.

2.4 SPARE FUSE CABINET

A. Description: Wall-mounted sheet metal cabinet with shelves and hinged door with cylinder lock, suitably sized to store spare fuses and fuse pullers specified.

B. Finish: Manufacturer's standard, factory applied grey finish unless otherwise indicated.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that fuse ratings are consistent with circuit voltage and manufacturer's recommendations and nameplate data for equipment.

B. Verify that mounting surfaces are ready to receive spare fuse cabinet.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Do not install fuses until circuits are ready to be energized.

B. Install fuses with label oriented such that manufacturer, type, and size are easily read.

C. Install spare fuse cabinet where indicated.

D. Identify spare fuse cabinet in accordance with Section 26.0553.

END OF SECTION 26.2813

SECTION 26.2816.13 - ENCLOSED CIRCUIT BREAKERS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Enclosed circuit breakers.

1.2 RELATED REQUIREMENTS

A. Section 26.0526 - Grounding and Bonding for Electrical Systems.

B. Section 26.0529 - Hangers and Supports for Electrical Systems.

C. Section 26.0548 - Vibration and Seismic Controls for Electrical Systems.

D. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

E. Section 26.0573 - Power System Studies: Additional criteria for the selection and adjustment of equipment and associated protective devices specified in this section.

1.3 REFERENCE STANDARDS

A. FS W-C-375 - Circuit Breakers, Molded Case; Branch Circuit and Service; 2013e, with Amendments (2022).

B. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

C. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2024.

D. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems; 2025.

E. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. UL 50 - Enclosures for Electrical Equipment, Non-Environmental Considerations; Current Edition, Including All Revisions.

G. UL 50E - Enclosures for Electrical Equipment, Environmental Considerations; Current Edition, Including All Revisions.

H. UL 489 - Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures; Current Edition, Including All Revisions.

I. UL 869A - Reference Standard for Service Equipment; Current Edition, Including All Revisions.

J. UL 943 - Ground-Fault Circuit-Interrupters; Current Edition, Including All Revisions.

K. UL 1053 - Ground-Fault Sensing and Relaying Equipment; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate work with other trades. Avoid placement of ductwork, piping, equipment, or other potential obstructions within dedicated equipment spaces and within working clearances for electrical equipment required by NFPA 70.
2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
3. Coordinate the work with other trades to provide walls suitable for installation of flush-mounted enclosed circuit breakers where indicated.
4. Verify with manufacturer that conductor terminations are suitable for use with the conductors to be installed.
5. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for circuit breakers, enclosures, and other installed components and accessories.

1. Include characteristic trip curves for each type and rating of circuit breaker upon request.

C. Shop Drawings: Indicate outline and support point dimensions, voltage and current ratings, short circuit current ratings, conduit entry locations, conductor terminal information, and installed features and accessories.

1. Include dimensioned plan and elevation views of enclosed circuit breakers and adjacent equipment with all required clearances indicated.
2. Include wiring diagrams showing all factory and field connections.
3. Clearly indicate whether proposed short circuit current ratings are fully rated or, where acceptable, series rated systems.
4. Include documentation of listed series ratings upon request.
5. Identify mounting conditions required for equipment seismic qualification.

D. Manufacturer's equipment seismic qualification certification.

E. Field Quality Control Test Reports.

F. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and starting of product.

G. Project Record Documents: Record actual installed locations of enclosed circuit breakers.

H. Maintenance Data: Include information on replacement parts and recommended maintenance procedures and intervals.

1.6 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store in a clean, dry space. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

B. Handle carefully in accordance with manufacturer's written instructions to avoid damage to enclosed circuit breaker internal components, enclosure, and finish.

1.8 FIELD CONDITIONS

A. Maintain ambient temperature between 23 degrees F and 104 degrees F during and after installation of enclosed circuit breakers.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. ABB: www.electrification.us.abb.com/#sle.

B. Eaton Corporation: www.eaton.com/#sle.

C. Schneider Electric: www.se.com/#sle.

D. Siemens Industry, Inc: www.new.siemens.com/#sle.

E. Substitutions: See Section 01.6000 - Product Requirements.

F. Source Limitations: Provide enclosed circuit breakers and associated components produced by same manufacturer as other electrical distribution equipment used for project and obtained from single supplier.

2.2 ENCLOSED CIRCUIT BREAKERS

A. Description: Units consisting of molded case circuit breakers individually mounted in enclosures.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Unless otherwise indicated, provide products suitable for continuous operation under the following service conditions:

1. Altitude: Less than 6,600 feet.
2. Ambient Temperature: Between 23 degrees F and 104 degrees F.

D. Short Circuit Current Rating:

1. Provide enclosed circuit breakers with listed short circuit current rating not less than the available fault current at the installed location as determined by short circuit study performed in accordance with Section 26.0573.
2. Listed series ratings are acceptable, except where not permitted by motor contribution according to NFPA 70.
3. Label equipment utilizing series ratings as required by NFPA 70.

E. Enclosed Circuit Breakers Used for Service Entrance: Listed and labeled as suitable for use as service equipment according to UL 869A.

F. Conductor Terminations: Suitable for use with the conductors to be installed.

G. Provide thermal magnetic circuit breakers unless otherwise indicated.

H. Provide electronic trip circuit breakers for circuit breaker frame sizes 400 amperes and above.

I. Provide insulated, groundable fully rated solid neutral assembly where a neutral connection is required, with a suitable lug for terminating each neutral conductor.

J. Provide solidly bonded equipment ground bus in each enclosed circuit breaker, with a suitable lug for terminating each equipment grounding conductor.

K. Enclosures: Comply with NEMA EN 10250, and list and label as complying with UL 50 and UL 50E.

1. Environment Type per NEMA EN 10250: Unless otherwise indicated, as specified for the following installation locations:
   a. Indoor Clean, Dry Locations: Type 1.
2. Finish for Painted Steel Enclosures: Manufacturer's standard, factory applied grey unless otherwise indicated.
3. Provide surface-mounted enclosures unless otherwise indicated.

L. Provide externally operable handle with means for locking in the OFF position.

M. Ground Fault Protection: Where ground-fault protection is indicated, provide system listed and labeled as complying with UL 1053.

1. Where electronic circuit breakers equipped with integral ground fault protection are used, provide separate neutral current sensor where applicable.
2. Where accessory ground fault sensing and relaying equipment is used, equip companion circuit breakers with ground-fault shunt trips.
   a. Use zero sequence ground fault detection method unless otherwise indicated.
   b. Provide test panel and field-adjustable ground fault pick-up and delay settings.
   c. Provide zone selective interlocking capability where indicated, capable of communicating with other electronic trip circuit breakers and external ground fault sensing systems to control ground fault delay functions for system coordination purposes.

N. Selectivity: Where the requirement for selectivity is indicated, furnish products as required to achieve selective coordination.

2.3 MOLDED CASE CIRCUIT BREAKERS

A. Description: Quick-make, quick-break, over center toggle, trip-free, trip-indicating circuit breakers listed and labeled as complying with UL 489, and complying with FS W-C-375 where applicable; ratings, configurations, and features as indicated on the drawings.

B. Interrupting Capacity:

1. Provide circuit breakers with interrupting capacity as required to provide the short circuit current rating indicated, but not less than:
   a. 10,000 rms symmetrical amperes at 240 VAC or 208 VAC.
2. Fully Rated Systems: Provide circuit breakers with interrupting capacity not less than the short circuit current rating indicated.
3. Series Rated Systems: Provide circuit breakers listed in combination with upstream devices to provide interrupting rating not less than the short circuit current rating indicated.

C. Conductor Terminations:

1. Provide mechanical lugs unless otherwise indicated.
2. Lug Material: Aluminum, suitable for terminating aluminum or copper conductors.

D. Thermal Magnetic Circuit Breakers: For each pole, furnish thermal inverse time tripping element for overload protection and magnetic instantaneous tripping element for short circuit protection.

1. Provide field-adjustable magnetic instantaneous trip setting for circuit breaker frame sizes 225 amperes and larger.

E. Electronic Trip Circuit Breakers: Furnish solid state, microprocessor-based, true rms sensing trip units.

1. Provide the following field-adjustable trip response settings:
   a. Long time pickup, adjustable by replacing interchangeable trip unit or by setting dial.
   b. Long time delay.
   c. Short time pickup and delay.
   d. Instantaneous pickup.
   e. Ground fault pickup and delay where ground fault protection is indicated.
2. Provide zone selective interlocking capability where indicated, capable of communicating with other electronic trip circuit breakers and external ground fault sensing systems to control short time delay and ground fault delay functions for system coordination purposes.

F. Multi-Pole Circuit Breakers: Furnish with common trip for all poles.

G. Provide the following circuit breaker types where indicated:

1. Ground Fault Circuit Interrupter (GFCI) Circuit Breakers: Listed as complying with UL 943, class A for protection of personnel.
2. Current Limiting Circuit Breakers: Without using fusible elements, designed to limit the let-through energy to a value less than the energy of a one-half cycle wave of the symmetrical prospective current when operating within its current limiting range.

H. Provide the following features and accessories where indicated or where required to complete installation:

1. Shunt Trip: Provide coil voltage as required for connection to indicated trip actuator.
2. Auxiliary Switch: SPDT switch suitable for connection to system indicated for indicating when circuit breaker has tripped or been turned off.
3. Undervoltage Release: For tripping circuit breaker upon predetermined drop in coil voltage with field-adjustable time delay to prevent nuisance tripping.
4. Alarm Switch: SPDT switch suitable for connection to system indicated for indicating when circuit breaker has tripped.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the ratings of the enclosed circuit breakers are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive enclosed circuit breakers.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Perform work in accordance with NECA 1 (general workmanship).

C. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and NFPA 70.

D. Provide required support and attachment in accordance with Section 26.0529.

E. Install enclosed circuit breakers plumb.

F. Except where indicated to be mounted adjacent to the equipment they supply, mount enclosed circuit breakers such that the highest position of the operating handle does not exceed 79 inches above the floor or working platform.

G. Provide grounding and bonding in accordance with Section 26.0526.

H. Where accessories are not self-powered, provide control power source as indicated or as required to complete installation.

I. Set field-adjustable circuit breaker tripping function settings as determined by overcurrent protective device coordination study performed according to Section 26.0573.

J. Set field-adjustable ground fault protection pickup and time delay settings as indicated.

K. Identify enclosed circuit breakers in accordance with Section 26.0553.

3.3 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Inspect and test in accordance with manufacturer's instructions and NETA ATS, except Section 4.

C. Perform inspections and tests listed in NETA ATS, Section 7.6.1.1 for circuit breakers used for service entrance. Tests listed as optional are not required.

D. Ground Fault Protection Systems: Test in accordance with manufacturer's instructions as required by NFPA 70.

E. Test GFCI circuit breakers to verify proper operation.

F. Test shunt trips to verify proper operation.

G. Correct deficiencies and replace damaged or defective enclosed circuit breakers.

3.4 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

3.5 CLEANING

A. Clean dirt and debris from circuit breaker enclosures and components according to manufacturer's instructions.

B. Repair scratched or marred exterior surfaces to match original factory finish.

END OF SECTION 26.2816.13

SECTION 26.2816.16 - ENCLOSED SWITCHES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Enclosed safety switches.

B. Enclosed fused power-circuit devices.

1.2 RELATED REQUIREMENTS

A. Section 26.0526 - Grounding and Bonding for Electrical Systems.

B. Section 26.0529 - Hangers and Supports for Electrical Systems.

C. Section 26.0548 - Vibration and Seismic Controls for Electrical Systems.

D. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

E. Section 26.2813 - Fuses.

F. Section 26.3600 - Transfer Switches: Automatic and non-automatic switches listed for use as transfer switch equipment.

1.3 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

B. NEMA BS 31047 - Heavy Duty Enclosed and Dead-Front Switches (600 Volts Maximum); 2013 (Reaffirmed 2023).

C. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2024.

D. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems; 2025.

E. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. UL 50 - Enclosures for Electrical Equipment, Non-Environmental Considerations; Current Edition, Including All Revisions.

G. UL 50E - Enclosures for Electrical Equipment, Environmental Considerations; Current Edition, Including All Revisions.

H. UL 98 - Enclosed and Dead-Front Switches; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the work with other trades. Avoid placement of ductwork, piping, equipment, or other potential obstructions within the dedicated equipment spaces and within working clearances for electrical equipment required by NFPA 70.

2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
3. Verify with manufacturer that conductor terminations are suitable for use with the conductors to be installed.
4. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for enclosed switches and other installed components and accessories.

C. Shop Drawings: Indicate outline and support point dimensions, voltage and current ratings, short circuit current ratings, conduit entry locations, conductor terminal information, and installed features and accessories.

1. Include dimensioned plan and elevation views of enclosed switches and adjacent equipment with all required clearances indicated.
2. Include wiring diagrams showing all factory and field connections.
3. Identify mounting conditions required for equipment seismic qualification.

D. Manufacturer's equipment seismic qualification certification.

E. Field Quality Control Test Reports.

F. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and starting of product.

G. Project Record Documents: Record actual locations of enclosed switches.

H. Maintenance Data: Include information on replacement parts and recommended maintenance procedures and intervals.

I. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01.6000 - Product Requirements, for additional provisions.
2. See Section 26.2813 for requirements for spare fuses and spare fuse cabinets.

1.6 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store in a clean, dry space. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

B. Handle carefully in accordance with manufacturer's written instructions to avoid damage to enclosed switch internal components, enclosure, and finish.

1.8 FIELD CONDITIONS

A. Maintain ambient temperature between -22 degrees F and 104 degrees F during and after installation of enclosed switches.

PART 2 PRODUCTS

2.1 ENCLOSED SAFETY SWITCHES

A. Manufacturers:

1. ABB: www.electrification.us.abb.com/#sle.
2. Eaton Corporation: www.eaton.com/#sle.
3. Schneider Electric: www.se.com/#sle.
4. Siemens Industry, Inc: www.siemens.com/#sle.
5. Substitutions: See Section 01.6000 - Product Requirements.
6. Source Limitations: Furnish products produced by same manufacturer as other electrical distribution equipment for project and obtained from single supplier.

B. Description: Quick-make, quick-break enclosed safety switches listed and labeled as complying with UL 98; heavy duty; ratings, configurations, and features as indicated on the drawings.

C. Provide products listed, classified, and labeled as suitable for the purpose intended.

D. Unless otherwise indicated, provide products suitable for continuous operation under the following service conditions:

1. Altitude: Less than 6,600 feet.
2. Ambient Temperature: Between -22 degrees F and 104 degrees F.

E. Horsepower Rating: Suitable for connected load.

F. Voltage Rating: Suitable for circuit voltage.

G. Short Circuit Current Rating:

1. Provide enclosed safety switches, when protected by the fuses or supply side overcurrent protective devices to be installed, with listed short circuit current rating not less than the available fault current at the installed location as indicated on the drawings.
2. Minimum Ratings:
   a. Switches Protected by Class H Fuses: 10,000 rms symmetrical amperes.
   b. Heavy Duty Single Throw Switches Protected by Class R, Class J, Class L, or Class T Fuses: 200,000 rms symmetrical amperes.

H. Provide with switch blade contact position that is visible when the cover is open.

I. Fuse Clips for Fusible Switches: As required to accept fuses indicated.

1. Where NEMA Class R fuses are installed, provide rejection feature to prevent installation of fuses other than Class R.

J. Conductor Terminations: Suitable for use with the conductors to be installed.

K. Provide insulated, groundable fully rated solid neutral assembly where a neutral connection is required, with a suitable lug for terminating each neutral conductor.

L. Provide solidly bonded equipment ground bus in each enclosed safety switch, with a suitable lug for terminating each equipment grounding conductor.

M. Enclosures: Comply with NEMA EN 10250, and list and label as complying with UL 50 and UL 50E.

1. Environment Type per NEMA EN 10250: Unless otherwise indicated, as specified for the following installation locations:
   a. Indoor Clean, Dry Locations: Type 1.
   b. Outdoor Locations: Type 3R.
2. Finish for Painted Steel Enclosures: Manufacturer's standard, factory applied grey unless otherwise indicated.

N. Provide safety interlock to prevent opening the cover with the switch in the ON position with capability of overriding interlock for testing purposes.

O. Heavy Duty Switches:

1. Comply with NEMA BS 31047.
2. Conductor Terminations:
   a. Provide mechanical lugs unless otherwise indicated.
   b. Lug Material: Aluminum, suitable for terminating aluminum or copper conductors.
3. Provide externally operable handle with means for locking in the OFF position, capable of accepting three padlocks.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the ratings of the enclosed switches are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive enclosed safety switches.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Perform work in accordance with NECA 1 (general workmanship).

C. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and NFPA 70.

D. Provide required support and attachment in accordance with Section 26.0529.

E. Install enclosed switches plumb.

F. Except where indicated to be mounted adjacent to the equipment they supply, mount enclosed switches such that the highest position of the operating handle does not exceed 79 inches above the floor or working platform.

G. Provide grounding and bonding in accordance with Section 26.0526.

H. Provide fuses complying with Section 26.2813 for fusible switches as indicated or as required by equipment manufacturer's recommendations.

I. Where accessories are not self-powered, provide control power source as indicated or as required to complete installation.

J. Identify enclosed switches in accordance with Section 26.0553.

3.3 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Perform inspections and tests listed in NETA ATS, Section 7.5.1.1.

D. Correct deficiencies and replace damaged or defective enclosed safety switches or associated components.

3.4 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

3.5 CLEANING

A. Clean dirt and debris from switch enclosures and components according to manufacturer's instructions.

B. Repair scratched or marred exterior surfaces to match original factory finish.

END OF SECTION 26.2816.16

SECTION 26.3213 - ENGINE GENERATORS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Packaged engine generator system and associated components and accessories:

1. Engine and engine accessory equipment.
2. Alternator (generator).
3. Generator set control system.
4. Generator set enclosure.

1.2 RELATED REQUIREMENTS

A. Section 03.3000 - Cast-in-Place Concrete: Concrete equipment pads.

B. Section 23.1123 - Facility Natural-Gas Piping.

C. Section 23.5100 - Breechings, Chimneys, and Stacks: Engine exhaust piping.

1. Includes installation of exhaust silencer specified in this section.

D. Section 26.0526 - Grounding and Bonding for Electrical Systems.

E. Section 26.0529 - Hangers and Supports for Electrical Systems.

F. Section 26.0548 - Vibration and Seismic Controls for Electrical Systems.

G. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

H. Section 26.3600 - Transfer Switches.

I. Section 26.3633 - Connection Cabinets for Portable Generators and Load Banks.

1.3 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

B. NECA/EGSA 404 - Standard for Installing Generator Sets; 2014.

C. NEMA MG 00001 - Motors and Generators; 2024.

D. NFPA 30 - Flammable and Combustible Liquids Code; 2027, with Errata (2026).

E. NFPA 37 - Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines; 2024, with Amendment.

F. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

G. NFPA 99 - Health Care Facilities Code; 2027.

H. NFPA 110 - Standard for Emergency and Standby Power Systems; 2025.

I. UL 1236 - Battery Chargers for Charging Engine-Starter Batteries; Current Edition, Including All Revisions.

J. UL 2200 - Stationary Engine Generator Assemblies; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate compatibility of generator sets to be installed with work provided under other sections or by others.
   a. Transfer Switches: See Section 26.3600.
2. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment or other potential obstructions within the spaces dedicated for engine generator system.
3. Coordinate arrangement of equipment with the dimensions and clearance requirements of the actual equipment to be installed.
4. Coordinate the work to provide electrical circuits suitable for the power requirements of the actual auxiliary equipment and accessories to be installed.
5. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Preinstallation Meeting: Convene one week before starting work of this section; require attendance of all affected installers.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product, including ratings, configurations, dimensions, finishes, weights, service condition requirements, and installed features. Include alternator starting capabilities, engine fuel consumption rates, and cooling, combustion air, and exhaust requirements.

1. Include generator set sound level test data.
2. Include characteristic trip curves for overcurrent protective devices.
3. Include alternator thermal damage curve.

C. Shop Drawings: Include dimensioned plan views and sections indicating locations of system components, required clearances, and field connection locations. Include system interconnection schematic diagrams showing all factory and field connections.

1. Identify mounting conditions required for equipment seismic qualification.

D. Manufacturer's equipment seismic qualification certification.

E. Derating Calculations: Indicate ratings adjusted for applicable service conditions.

F. Fuel Storage Tank Calculations: Indicate maximum running time for generator set configuration provided.

G. Evidence of qualifications for installer.

H. Evidence of qualifications for maintenance contractor (if different entity from installer).

I. Evidence of manufacturer approval for use of flexible reusable and removable blanket insulation for engine.

J. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and operation of product.

K. Manufacturer's factory emissions certification.

L. Manufacturer's certification that products meet or exceed specified requirements.

M. Source quality control test reports.

N. Provide NFPA 110 required documentation from manufacturer where requested by authorities having jurisdiction, including but not limited to:

1. Certified prototype tests.
2. Torsional vibration compatibility certification.
3. NFPA 110 compliance certification.
4. Certified rated load test at rated power factor.

O. Manufacturer's detailed field testing procedures.

P. Field quality control test reports.

Q. Operation and Maintenance Data: Include detailed information on system operation, equipment programming and setup, replacement parts, and recommended maintenance procedures and intervals.

1. Include contact information for entity that will be providing contract maintenance and trouble call-back service.

R. Executed Warranty: Submit documentation of final executed warranty completed in Owner's name and registered with manufacturer.

S. Maintenance contracts.

T. Project Record Documents: Record actual locations of system components, installed circuiting arrangements and routing, and final equipment settings.

U. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01.6000 - Product Requirements, for additional provisions.
2. Extra Fuses: One of each type and size.
3. Extra Filter Elements: One of each type, including fuel, oil and air.

1.6 QUALITY ASSURANCE

A. Comply with the following:

1. NFPA 70 (National Electrical Code).
2. NFPA 110 (Standard for Emergency and Standby Power Systems); meet requirements for Level 1 system.
3. NFPA 37 (Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines).
4. NFPA 30 (Flammable and Combustible Liquids Code).

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

1. Authorized service facilities located within 200 miles of project site.

D. Installer Qualifications: Company specializing in performing the work of this section with minimum three years documented experience with engine generator systems of similar size, type, and complexity; manufacturer's authorized installer.

E. Maintenance Contractor Qualifications: Same entity as installer or different entity with specified qualifications.

1. Contract maintenance office located within 200 miles of project site.

F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store generator sets in accordance with manufacturer's instructions and NECA/EGSA 404.

B. Store in a clean, dry space. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

C. Handle carefully in accordance with manufacturer's instructions to avoid damage to generator set components, enclosure, and finish.

1.8 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.9 WARRANTY

A. See Section 01.7800 - Closeout Submittals, for additional warranty requirements.

B. Provide minimum one year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Packaged Engine Generator Set:

1. Caterpillar Inc: www.cat.com/#sle.
2. Cummins Power Generation Inc: www.cumminspower.com/#sle.
3. Rehlko: www.powersystems.rehlko.com/#sle.
4. Rolls-Royce Power Systems; MTU: www.mtu-solutions.com/#sle.

B. Substitutions: See Section 01.6000 - Product Requirements.

C. Source Limitations: Furnish engine generator sets and associated components and accessories produced by single manufacturer and obtained from single supplier.

2.2 PACKAGED ENGINE GENERATOR SYSTEM

A. Provide new engine generator system consisting of all required equipment, sensors, conduit, boxes, wiring, piping, supports, accessories, system programming, etc. as necessary for a complete operating system that provides the functional intent indicated.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. System Description:

1. Application: Emergency/standby.
2. Configuration: Multiple packaged engine generator sets operated in parallel.
3. Total System Power Rating: As indicated on drawings, standby.
4. Where design is based on multiple parallel generator sets, use of fewer, larger unit(s) to obtain equivalent total system power rating is not permitted.

D. Packaged Engine Generator Set:

1. Type: Gaseous (spark ignition).
2. Power Rating: As indicated on drawings, standby.
3. Voltage: As indicated on drawings.
4. Main Line Circuit Breaker:
    a. Type: Electronic trip with long time and short time delay and instantaneous pickup
    b. Trip Rating: As indicated on drawings.
    c. Features:
        1) Shunt trip.
        2) Auxiliary contacts.
        3) Zone Selective Interlocking, Tied to Downstream Distribution Breakers. .

E. Generator Set General Requirements:

1. Prototype tested in accordance with NFPA 110 for Level 1 systems.
2. Factory-assembled, with components mounted on suitable base.
3. List and label engine generator assembly as complying with UL 2200.
4. Power Factor: Unless otherwise indicated, specified power ratings are at 0.8 power factor for three phase voltages and 1.0 power factor for single phase voltages.
5. Provide suitable guards to protect personnel from accidental contact with rotating parts, hot piping, and other potential sources of injury.
6. Main Line Circuit Breakers: Provide factory-installed line side connections with suitable lugs for load side connections.

F. Service Conditions: Provide engine generator system and associated components suitable for operation under the service conditions at the installed location.

G. Starting and Load Acceptance Requirements:

1. Cranking Method: Cycle cranking complying with NFPA 110 (15 second crank period, followed by 15 second rest period, with cranking limiter time-out after 3 cycles), unless otherwise required.
2. Cranking Limiter Time-Out: If generator set fails to start after specified cranking period, indicate overcrank alarm condition and lock-out generator set from further cranking until manually reset.
3. Start Time: Capable of starting and achieving conditions necessary for load acceptance within 10 seconds (NFPA 110, Type 10).
4. Maximum Load Step: Supports 100 percent of rated load in one step.

H. Exhaust Emissions Requirements:

1. Comply with federal (EPA), state, and local regulations applicable at the time of commissioning; include factory emissions certification with submittals.

2. Do not make modifications affecting generator set factory emissions certification without approval of manufacturer and Engineer. Where such modifications are made, provide field emissions testing as necessary for certification.

I. Sound Level Requirements:

1. Do not exceed 78 dBA when measured at 23 feet from generator set in free field (no sound barriers) while operating at full load; include manufacturer's sound data with submittals.
2. Comply with applicable noise level regulations.

J. Interface with building automation system as specified in Section 230993.

2.3 ENGINE AND ENGINE ACCESSORY EQUIPMENT

A. Provide engine with adequate horsepower to achieve specified power output at rated speed, accounting for alternator efficiency and parasitic loads.

B. Engine Fuel System - Gaseous (Spark Ignition):

1. Fuel Source: Natural gas.
2. Engine Fuel Connections: Provide suitable, approved flexible fuel lines for coupling engine to fuel source.
3. Provide components/features indicated and as necessary for operation and/or required by applicable codes, including but not limited to:
   a. Carburetor.
   b. Gas pressure regulators.
   c. Fuel shutoff control valves.
   d. Low gas pressure switches.

C. Engine Starting System:

1. System Type: Electric, with DC solenoid-activated starting motor(s).
2. Battery(s):
   a. Battery Type: Lead-acid.
   b. Battery Capacity: Size according to manufacturer's recommendations for achieving starting and load acceptance requirements under worst case ambient temperature; capable of providing cranking through two complete periods of cranking limiter time-outs without recharging.
   c. Provide battery rack, cables, and connectors suitable for the supplied battery(s); size battery cables according to manufacturer's recommendations for cable length to be installed.
3. Battery-Charging Alternator: Engine-driven, with integral solid-state voltage regulation.
4. Battery Charger:
   a. Provide dual rate battery charger with automatic float and equalize charging modes and minimum rating of 10 amps; suitable for maintaining the supplied battery(s) at full charge without manual intervention.
   b. Capable of returning supplied battery(s) from fully discharged to fully charged condition within 24 hours, as required by NFPA 110 for Level 1 applications while carrying normal loads.
   c. Listed as complying with UL 1236.

d. Furnished with integral overcurrent protection; current limited to protect charger during engine cranking; reverse polarity protection.
e. Provide integral DC output ammeter and voltmeter with five percent accuracy.
f. Provide alarm output contacts as necessary for alarm indications.

5. Battery Heater: Provide thermostatically controlled battery heater to improve starting under cold ambient conditions.

D. Engine Speed Control System (Governor):

1. Multiple Engine Generator Sets Operated in Parallel: Provide electronic isochronous governors with automatic load sharing controls.
2. Frequency Regulation, Electronic Isochronous Governors: No change in frequency from no load to full load; plus/minus 0.25 percent at steady state.

E. Engine Lubrication System:

1. System Type: Full pressure, with engine-driven, positive displacement lubrication oil pump, replaceable full-flow oil filter(s), and dip-stick for oil level indication. Provide oil cooler where recommended by manufacturer.
2. Oil Heater: Provide thermostatically controlled oil heater to improve starting under cold ambient conditions.

F. Engine Cooling System:

1. System Type: Closed-loop, liquid-cooled, with unit-mounted radiator/fan and engine-driven coolant pump; suitable for providing adequate cooling while operating at full load under worst case ambient temperature.
2. Fan Guard: Provide suitable guard to protect personnel from accidental contact with fan.
3. Coolant Heater: Provide thermostatically controlled coolant heater to improve starting under cold ambient conditions; size according to manufacturer's recommendations for achieving starting and load acceptance requirements under worst case ambient temperature.

G. Engine Air Intake and Exhaust System:

1. Air Intake Filtration: Provide engine-mounted, replaceable, dry element filter.
2. Engine Exhaust Connection: Provide suitable, approved flexible connector for coupling engine to exhaust system.
3. Exhaust Silencer: Provide critical grade or better exhaust silencer with sound attenuation not less than basis of design; select according to manufacturer's recommendations to meet sound performance requirements, where specified.

2.4 ALTERNATOR (GENERATOR)

A. Alternator: 4-pole, 1800 rpm (60 Hz output) revolving field, synchronous generator complying with NEMA MG 00001; connected to engine with flexible coupling; voltage output configuration as indicated, with reconnectable leads for 3 phase alternators.

B. Exciter:

1. Exciter Type: Brushless; provide permanent magnet generator (PMG) excitation system; self-excited (shunt) systems are not permitted.
2. PMG Excitation Short-Circuit Current Support: Capable of sustaining 300 percent of rated output current for 10 seconds.

3. Voltage Regulation (with PMG excitation): Plus/minus 0.5 percent for any constant load from no load to full load.

C. Temperature Rise: Comply with UL 2200.

D. Insulation System: NEMA MG 00001, Class H; suitable for alternator temperature rise.

E. Enclosure: NEMA MG 00001, drip-proof.

F. Total Harmonic Distortion: Not greater than five percent.

2.5 GENERATOR SET CONTROL SYSTEM

A. Provide microprocessor-based control system for automatic control, monitoring, and protection of generator set. Include sensors, wiring, and connections necessary for functions/indications specified.

B. Control Panel:

1. Control Panel Mounting: Unit-mounted unless otherwise indicated; vibration isolated.
2. Generator Set Control Functions:
   a. Automatic Mode: Initiates generator set start/shutdown upon receiving corresponding signal from remote device (e.g. automatic transfer switch).
   b. Manual Mode: Initiates generator set start/shutdown upon direction from operator.
   c. Reset Mode: Clears all faults, allowing generator set restart after a shutdown.
   d. Emergency Stop: Immediately shuts down generator set (without time delay) and prevents automatic restarting until manually reset.
   e. Cycle Cranking: Programmable crank time, rest time, and number of cycles.
   f. Time Delay: Programmable for shutdown (engine cooldown) and start (engine warmup).
   g. Voltage Adjustment: Adjustable through range of plus/minus 5 percent.
3. Generator Set Status Indications:
   a. Voltage (Volts AC): Line-to-line, line-to-neutral for each phase.
   b. Current (Amps): For each phase.
   c. Frequency (Hz).
   d. Real power (W/kW).
   e. Reactive power (VAR/kVAR).
   f. Apparent power (VA/kVA).
   g. Power factor.
   h. Duty Level: Actual load as percentage of rated power.
   i. Engine speed (RPM).
   j. Battery voltage (Volts DC).
   k. Engine oil pressure.
   l. Engine coolant temperature.
   m. Engine run time.
   n. Generator powering load (position signal from transfer switch).
4. Generator Set Protection and Warning/Shutdown Indications:
   a. Comply with NFPA 110; configurable for NFPA 110 Level 1 or Level 2, or NFPA 99 systems including but not limited to the following protections/indications:
      1) Overcrank (shutdown).

2) Low coolant temperature (warning).
3) High coolant temperature (warning).
4) High coolant temperature (shutdown).
5) Low oil pressure (shutdown).
6) Overspeed (shutdown).
7) Low fuel level (warning).
8) Low coolant level (warning/shutdown).
9) Generator control not in automatic mode (warning).
10) High battery voltage (warning).
11) Low cranking voltage (warning).
12) Low battery voltage (warning).
13) Battery charger failure (warning).

b. In addition to NFPA 110 requirements, provide the following protections/indications:
1) High AC voltage (shutdown).
2) Low AC voltage (shutdown).
3) High frequency (shutdown).
4) Low frequency (shutdown).
5) Overcurrent (shutdown).

c. Provide contacts for local and remote common alarm.

d. Provide lamp test function that illuminates all indicator lamps.

5. Other Control Panel Features:
a. Event log.
b. Communications Capability: Utilize Modbus communications protocol. Provide all accessories necessary for proper interface.
c. Remote monitoring capability via PC.

C. Remote Annunciator:

1. Remote Annunciator Mounting: Wall-mounted; Provide flush-mounted annunciator for finished areas and surface-mounted annunciator for non-finished areas unless otherwise indicated.
2. Generator Set Status Indications:
a. Generator powering load (via position signal from transfer switch).
b. Communication functional.
3. Generator Set Warning/Shutdown Indications:
a. Comply with NFPA 110; configurable for NFPA 110 Level 1 or Level 2, or NFPA 99 systems including but not limited to the following indications:
1) Overcrank (shutdown).
2) Low coolant temperature (warning).
3) High coolant temperature (warning).
4) High coolant temperature (shutdown).
5) Low oil pressure (shutdown).
6) Overspeed (shutdown).
7) Low fuel level (warning).
8) Low coolant level (warning/shutdown).

9) Generator control not in automatic mode (warning).
10) High battery voltage (warning).
11) Low cranking voltage (warning).
12) Low battery voltage (warning).
13) Battery charger failure (warning).

b. Provide audible alarm with silence function.
c. Provide lamp test function that illuminates all indicator lamps.

D. Remote Emergency Stop: Provide approved red, mushroom style remote emergency stop button where indicated or required by authorities having jurisdiction.

2.6 GENERATOR SET ENCLOSURE

A. Enclosure Type: Sound attenuating, weather protective.

B. Enclosure Material: Aluminum.

C. Hardware Material: Stainless steel.

D. Color: Manufacturer's standard.

E. Access Doors: Lockable, with all locks keyed alike.

F. Openings: Designed to prevent bird/rodent entry.

G. External Drains: Extend oil and coolant drain lines to exterior of enclosure for maintenance service.

H. Sound Attenuating Enclosures: Line enclosure with non-hydroscopic, self-extinguishing sound-attenuating material.

I. Utilize an upward discharging radiator hood.

J. Exhaust Silencers: Where exhaust silencers are mounted within enclosure in main engine compartment, insulate silencer to minimize heat dissipation as necessary for operation at rated load under worst case ambient temperature.

K. Enclosure Space Heater: Provide thermostatically controlled enclosure space heater to prevent condensation and improve starting under cold ambient conditions; size according to manufacturer's recommendations for achieving starting and load acceptance requirements under worst case ambient temperature.

2.7 SOURCE QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Perform production tests on generator sets at factory to verify operation and performance characteristics prior to shipment. Include certified test report with submittals.

C. Generator Set production testing to include, at a minimum:

1. Operation at rated load and rated power factor.
2. Single step load pick-up.
3. Transient and steady state voltage and frequency performance.
4. Operation of safety shutdowns.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the ratings and configurations of generator sets and auxiliary equipment are consistent with the indicated requirements.

C. Verify that rough-ins for field connections are in the proper locations.

D. Verify that mounting surfaces are ready to receive equipment.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Perform work in accordance with NECA 1 (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Install generator sets and associated accessories in accordance with NECA/EGSA 404.

D. Arrange equipment to provide minimum clearances and required maintenance access.

E. Unless otherwise indicated, mount generator set on properly sized, minimum 6 inch high concrete pad constructed in accordance with Section 03.3000.

F. Provide required support and attachment in accordance with Section 26.0529.

G. Provide required vibration isolation and/or seismic controls in accordance with Section 26.0548.

H. Use manufacturer's recommended oil and coolant, suitable for the worst case ambient temperatures.

I. Provide natural gas piping in accordance with Section 23.1123.

J. Provide engine exhaust piping in accordance with Section 23.5100, where not factory installed.

1. Include piping expansion joints, piping insulation, thimble, condensation trap/drain, rain cap, hangers/supports, etc. as indicated or as required.
2. Do not exceed manufacturer's maximum back pressure requirements.

K. Do not insulate piping for engine components restricted by manufacturer.

L. Install exhaust silencer in accordance with Section 23.5100, where not factory installed.

M. Provide grounding and bonding in accordance with Section 26.0526.

N. Identify system wiring and components in accordance with Section 26.0553.

3.3 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Provide services of a manufacturer's authorized representative to prepare and start systems and perform inspection and testing. Include manufacturer's detailed testing procedures and field reports with submittals.

C. Notify Owner and Architect at least two weeks prior to scheduled inspections and tests.

D. Notify authorities having jurisdiction and comply with their requirements for scheduling inspections and tests and for observation by their personnel.

E. Provide all equipment, tools, and supplies required to accomplish inspection and testing, including load bank and fuel.

F. Preliminary inspection and testing to include, at a minimum:

1. Inspect each system component for damage and defects.
2. Verify tightness of mechanical and electrical connections are according to manufacturer's recommended torque settings.
3. Check for proper oil and coolant levels.

G. Prepare and start system in accordance with manufacturer's instructions.

H. Perform acceptance test in accordance with NFPA 110.

I. Inspection and testing to include, at a minimum:

1. Verify compliance with starting and load acceptance requirements.
2. Verify voltage and frequency; make required adjustments as necessary.
3. Verify phase sequence.
4. Verify control system operation, including safety shutdowns.
5. Verify operation of auxiliary equipment and accessories (e.g. battery charger, heaters, etc.).
6. Perform load tests in accordance with NFPA 110 (1.5 hour building load test followed by 2 hour full load test).

J. Provide field emissions testing where necessary for certification.

K. Sound Level Tests: Measure sound levels for compliance with specified requirements. Identify and report ambient noise conditions.

L. Correct defective work, adjust for proper operation, and retest until entire system complies with Contract Documents.

M. Submit detailed reports indicating inspection and testing results and corrective actions taken.

3.4 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.5 CLOSEOUT ACTIVITIES

A. See Section 01.7800 - Closeout Submittals, for closeout submittals.

B. See Section 01.7900 - Demonstration and Training, for additional requirements.

C. Demonstration: Demonstrate proper operation of system to Owner, and correct deficiencies or make adjustments as directed.

D. Training: Train Owner's personnel on operation, adjustment, and maintenance of system.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
2. Provide minimum of four hours of training.
3. Instructor: Manufacturer's authorized representative.
4. Location: At project site.

E. After successful acceptance test and just prior to Substantial Completion, replace air, oil, and fuel filters .

3.6 PROTECTION

A. Protect installed engine generator system from subsequent construction operations.

3.7 MAINTENANCE

A. See Section 01.7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

B. Provide to Owner a proposal as an alternate to the base bid, a separate maintenance contract for the service and maintenance of engine generator system for two years from date of Substantial Completion; Include a complete description of preventive maintenance, systematic examination, adjustment, inspection, and testing, with a detailed schedule.

C. Conduct site visit at least once every three months to perform inspection, testing, and preventive maintenance. Submit report to Owner indicating maintenance performed along with evaluations and recommendations.

D. Provide trouble call-back service upon notification by Owner:

1. Provide on-site response within 4 hours of notification.
2. Include allowance for call-back service during normal working hours at no extra cost to Owner.
3. Owner will pay for call-back service outside of normal working hours on an hourly basis, based on actual time spent at site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

E. Maintain an on-site log listing the date and time of each inspection and call-back visit, the condition of the system, nature of the trouble, correction performed, and parts replaced.

END OF SECTION 26.3213

SECTION 26.3600 - TRANSFER SWITCHES

PART 1 GENERAL

1.1 SCOPE

A. Furnish and install automatic transfer switches (ATS) with number of poles, amperage, voltage, and withstand current ratings as shown on the plans. Each automatic transfer shall consist of an inherently double throw power transfer switch unit and a microprocessor controller, interconnected to provide complete automatic operation. All transfer switches and control panels shall be the product of the same manufacturer.

B. Furnish an enclosure for the (3AUS) that is for service entrance. It shall provide all of the proper disconnecting, protection, grounding and bonding required for service entrance equipment.

1.2 ACCEPTABLE MANUFACTURERS

A. Service entrance automatic transfer switches shall be ASCO Series 3AUS. Any alternate shall be submitted to the consulting engineer in writing at least 10 days prior to bid. Each alternate bid must list any deviations from this specification.

1.3 CODES AND STANDARDS

A. The service entrance automatic transfer switch and accessories shall conform to the requirements of:

1. UL 1008 Listed for Optional Standby Transfer Switches (Manual Transfer Switches)
2. CSA C22.2 No.178 1978
3. IEC 60947-6-1 Low – Voltage Switchgear and Controller
4. NFPA 70 - National Electrical Code
5. NFPA 99 – Essential Electrical Systems for Health Care Facilities
6. IEEE Standard 446 - IEEE Recommended Practice for Emergency and StandbyPower Systems for Commercial and Industrial Applications
7. UL 508 Industrial Control Equipment
8. UL 891 Switchboards
9. NEC Articles 700, 701, 702
10. International Standards Organization ISO 90estrication 01: 2008
11. RoHs compliant (Restriction of Hazardous Substances)
    a. Seismic qualification – International Building Code & OSHPD to SDS level of 2.5

PART 2 PRODUCTS

2.1 ATS INFO

A. (ATS#2) Service Entrance Automatic transfer switch – Delayed Transition – 2500A – 208V – Switched Neutral – NEMA 3R Enclosure – Load Shed

B. (ATS#1) Automatic transfer switch – Open Transition – 260A – 208V – Switched Neutral – NEMA 1 Enclosure

C. Non-automatic transfer switch – Open Transition – 260A – 208V – Switched Neutral – NEMA 3R Enclosure

D. 5350 annunciator

E. 5101-Gen Kit – Start signal monitoring

2.2 ATS ACCESSORIES

A. 6DL Description (NTS only): Retransfer to normal mode. While in manual retransfer mode if an emergency source failure should occur and the normal source is still available manual retransfer will be automatically bypassed. A pilot light indicates manual retransfer mode.

B. 7ES Description : 5101 Engine Start Circuit Monitor. 5101-ATS module pre-wired to the Feature 7 NC Start Signal ready for integration into a engine start monitoring system. (Must be wired to 5101-GEN module at generator)

C. 11BE Description : Adds the following features to the Group G controller: (1) Serial RS-485 Modbus Communications (2) Multi-Schedule Engine Exerciser (3) a 300 Entry Event Log and (4) a common alarm output function. When applied on 3-phase systems it also enables: (1) 3-Phase Emergency Source VLL sensing (2) Phase Rotation Monitoring (3) Emergency Source VLL Unbalance Monitoring.

D. 18RX Description : REX (Relay Expansion Module) with Normal and Emergency available output contacts (18B & 18G)

E. 44G Description: (NEMA 3R ONLY) Enclosure Heater - A 125 watt enclosure heater with transformer and thermostat (adjustable from 30□ to 140 □ F) shall be provided for outdoor installations where type 3R accessory 44G, and shall be capable of being added to existing switches).

F. 72EE Description : Quad - Ethernet Module with AES - 128 bit with encryption and (4) RJ - 45s, includes 11BE feature bundle

G. 135L Description : Power Meter on Load Side with CT

H. 30AA: Load shed by auxiliary contact

2.3 MECHANICALLY HELD TRANSFER SWITCH

A. The transfer switch unit shall be electrically operated and mechanically held. The electrical operator shall be a single-solenoid mechanism, momentarily energized. Main operators which include overcurrent disconnect devices will not be accepted. The switch shall be mechanically interlocked to ensure only one of two possible positions, normal or emergency.

B. The switch shall be positively locked and unaffected by momentary outages so that contact pressure is maintained at a constant value and temperature rise at the contacts is minimized for maximum reliability and operating life.

C. All main contacts shall be silver composition. Switches rated 600 amperes and above shall have segmented, blow-on construction for high withstand current capability and be protected by separate arcing contacts.

D. Inspection of all contacts shall be possible from the front of the switch without disassembly of operating linkages and without disconnection of power conductors. A manual operating handle shall be provided for maintenance purposes. The handle shall permit the operator to manually stop the contacts at any point throughout their entire travel to inspect and service the contacts when required.

E. Designs utilizing components of molded-case circuit breakers, contactors, or parts thereof which are not intended for continuous duty, repetitive switching or transfer between two active power sources are not acceptable.

F. Where neutral conductors must be switched, the ATS shall be provided with fully-rated neutral transfer contacts.

G. Where neutral conductors are to be solidly connected, a neutral terminal plate with fully-rated AL-CU pressure connectors shall be provided.

2.4 GROUP G CONTROLLER WITH INTEGRATED USER INTERFACE PANEL

A. The controller shall be connected to the transfer switch by an interconnecting wiring harness. The harness shall include a keyed disconnect plug to enable the controller to be disconnected from the transfer switch for routine maintenance.

B. The controller shall direct the operation of the transfer switch. The controller's sensing and logic shall be controlled by a built – in microprocessor for maximum reliability, minimum maintenance, inherent serial communications capability, and the ability to communicate via Ethernet through optional communications module.

C. A single controller shall provide single and three phase capability for maximum application flexibility and mimimal spare part requirements. Voltage sensing shall be true RMS type and shall be accurate to ± 1% of nominal voltage. Frequency sensing shall be accurate to ± 0.1 Hz. Time delay settings shall be accurate to ± 0.5% of the full scale value of the time delay. The panel shall be capable of operating over a temperature range of -20 to + 70 degrees C, and storage from -55 to + 85 degrees C.

D. The controller shall be enclosed with a protective cover and be mounted separate from the transfer switch unit for safety and ease of maintenance. Sensing and control logic shall be provided on printed circuit boards.

E. The controller shall meet or exceed the requirements for Electromagnetic Compatibility (EMC) as follows:

1. IEC 60947-6-1 Multiple Function Equipment Transfer Switching Equipment.
   61000-4 Testing And Measurement Techniques – Overview
   a. IEC 61000 – 4 – 2 Electrostatic Discharge Immunity
   b. IEC 61000 - 4 – 3 Radiated RF Field Immunity
   c. IEC 61000 – 4 – 4 Electrical Fast Transient/Burst Immunity
   d. IEC 61000 – 4 – 5 Surge Immunity
   e. IEC 61000 – 4 – 6 Conducted RF Immunity
2. CISPR 11 – Conducted RF Emissions and Radiated RF Emissions

2.5 ENCLOSURE

A. The service entrance 3AUS shall be furnished in a NEMA type 1 enclosure unless otherwise shown on the plans.

B. Provide strip heater with thermostat for Type 3R enclosure requirements.

C. Controller shall be mounted on, visable, and operational through enclosure door..

D. The complete assembly shall be degreased, and thoroughly cleaned through a five-stage aqueous process. The finish shall be ANSI-61, light gray, electrostatically-charged polyester powder paint over a phosphate coating, at a minimum of 2.0 mils in density. Finish shall be suitable for indoor and outdoor environments.

E. For those automatic transfer switches that are less than 1000 amperes, the connection between the normal disconnecting device and the ATS shall be made with the appropriate size cable. For those automatic transfer switches that are greater than 1000 amperes, the connection between the normal disconnecting device and the ATS shall be made with the appropriate size bus. Bus shall be silver plated copper rated no less than 1000 amps per square inch.

F. A pressure disconnect link shall be provided to disconnect the normal source neutral connection from the emergency and load neutral connections for 4-wire applications. A ground bus shall be provided for connection of the grounding conductor to the grounding electrode. A pressure disconnect link for the neutral to ground bonding jumper shall be provided to connect the normal neutral connection to the ground bus.

G. Control wiring shall be rated for 600 volt, UL 1015. Wires shall be placed in wire duct or harnessed, and shall be supported to prevent sagging or breakage from weight or vibration. All wiring to hinged doors shall be run through door terminal blocks or connection plugs.

PART 3 OPERATIONS

3.1 CONTROLLER DISPLAY AND KEYPAD

A. A 128*64 graphical LCD display and keypad shall be an integral part of the controller for viewing all available data and setting desired operational parameters.
Operational parameters shall also be available for viewing and limited control through communications port. The following parameters shall only be adjustable via DIP switches on the controller.

1. Nominal line voltage and frequency
2. Single or three phase sensing on normal
3. Transfer operating mode configuration, (open transition, or delayed transition)
All instructions and controller settings shall be easily accessible, readable and accomplished without the use of codes, calculations, or instruction manuals.

3.2 VOLTAGE AND FREQUENCY SENSING

A. Voltage and frequency on both the normal and emergency sources (as noted below) shall be continuously monitored, with the following pickup, dropout, and trip settings capabilities (values shown as % of nominal unless otherwise specified.

1.	Parameter	Sources	Dropout/Trip	Pickup/Reset
a.	Undervoltage	N & E	70 to 98%	85 to 100%
b.	Overvoltage	N & E	102 to116%	2% below trip
c.	Underfrequency	N & E	85 to 98%	86 to 100%
d.	Overfrequency	N & E	101 to 111%	2% bellow trip

B. Repetitive accuracy of all settings shall be within 1% at +25C

C. Voltage and frequency settings shall be field adjustable in 1% increments either locally with the display and keypad or remotely via serial communications port access.

D. Source status screens shall be provided for both normal & emergency to provide digital readout of voltage and frequency. *Note: Single phase sensing on emergency*

E. The backlit 128*64 graphical display shall have multiple language capability.
Languages can be selected from the user interface.

3.3 TIME DELAYS

A. A time delay shall be provided to override momentary normal source outages and delay all transfer and engine starting signals, adjustable 0 to 6 seconds. It shall be possible to bypass the time delay from the controller user interface.

B. A time delay shall be provided on transfer to emergency, adjustable from 0 to 60 minutes 59 seconds for controlled timing of transfer of loads to emergency. It shall be possible to bypass the time delay from the controller user interface.

C. A generator stabilization time delay shall be provided after transfer to emergency adjustable 0 or 4 seconds.

D. A time delay shall be provided on retransfer to normal, adjustable 0 to 9 hours 59 minutes 59 seconds. Time delay shall be automatically bypassed if emergency source fails and normal source is acceptable.

E. A cooldown time delay shall be provided on shutdown of engine generator, Adjustable 0 to 60 minutes 59 seconds.

F. All adjustable time delays shall be field adjustable without the use of special tools.

G. A time delay activated output signal shall also be provided to drive an external relay(s) for selective load disconnect control. The controller shall have the ability to activate an adjustable 0 to 5 minutes 59 seconds time delay in any of the following modes:

1. Prior to transfer only.
2. Prior to and after transfer.
3. Normal to emergency only.
4. Emergency to normal only.
5. Normal to emergency and emergency to normal.
6. All transfer conditions or only when both sources are available.

H. In the event that the alternate source is not accepted within the configured Failure to Accept time delay, the common alert indication shall become active.

I. The controller shall also include the following built-in time delay for delayed transition operation.

1. A time delay for the load disconnect position for delayed transition operation adjustable 0 to 5 minutes 59 seconds.

3.4 ADDITIONAL FEATURES

A. The user interface shall be provided with test/reset modes. The test mode will simulate a normal source failure. The reset mode shall bypass the time delays on either transfer to emergency or retransfer to normal.

B. A set of contacts rated 5 amps, 30 VDC shall be provided for a low-voltage engine start signal. The start signal shall prevent dry cranking of the engine by requiring the generator set to reach proper output, and run for the duration of the cool down. setting, regardless of whether the normal source restores before the load is transferred.

C. Auxiliary contacts, rated 10 amps, 250 VAC shall be provided consisting of one contact, closed when the ATS is connected to the normal source and one contact closed when the ATS is connected to the emergency source.

D. A single alarm indication shall light up the alert indicator and de – energize the configured common alarm output relay for external monitoring.

E. LED indicating lights shall be provided; one to indicate when the ATS is connected to the normal source (green) and one to indicate when the ATS is connected to the emergency source (red).

F. LED indicating lights shall be provided and energized by controller outputs. The lights shall provide true source availability of the normal (green) and emergency (red) source, as determined by the voltage sensing trip and reset settings for each source.

G. LED indicating light shall be provided to indicate switch not in automatic mode (manual); and blinking (amber) to indicate transfer inhibit.

H. LED indicating light shall be provided to indicate any alarm condition or active time delay (red).

The following features shall be built – in to the controller, but capable of being activated through keypad programming or the serial port only when required by the user:

I. Provide the ability to select "commit/no commit to transfer" to determine whether the load should be transferred to the emergency generator if the normal source restores before the generator is ready to accept the load.

J. A variable window inphase monitor shall be provided in the controller. The monitor shall control transfer so that motor load inrush currents do not exceed normal starting currents, and shall not require external control of power sources. The inphase monitor shall be specifically designed for and be the product of the ATS manufacturer. The inphase monitor shall be equal to ASCO feature 27.

K. An engine generator exercising timer shall be provided to configure weekly and bi-weekly automatic testing of an engine generator set with or without load for 20 minutes fixed. It shall be capable of being configured to indicate a day of the week, and time weekly testing should occur.

The following feature shall be built – into the controller, but capable of being activated through keypad programming, communications interface port, or additional hardware.

L. Terminals shall be provided for a remote contact to signal the ATS to transfer to emergency. This inhibit signal can be enabled through the keypad or serial port.

M. System Status –

1. The controller LCD display shall include a "System Status" screen which shall be readily accessible from any point in the menu by depressing the "ESC" key. This screen shall display a clear description of the active operating sequences and switch position. For example,

a Normal Failed
b. Load on Normal
c. TD Normal to Emerg
d. 2min15s

2. Controllers that require multiple screens to determine system status or display "coded" system status messages, which must be explained by references in the operator's manual are not permissible.

N. Self Diagnostics – The controller shall contain a diagnostic screen for the purpose of detecting system errors. This screen shall provide information on the status input signals to the controller which may be preventing load transfer commands from being completed.

O. Communications Interface – The controller shall be capable of interfacing, through an optional serial communication port with a network of transfer switches, locally (up to 4000 ft.). Standard software specific for transfer switch applications shall be available by the transfer switch manufacturer. This software shall allow for the monitoring, control, and setup of parameters.

P. Data Logging – The controller shall have the ability to log data and to maintain the last 300 events, even in the event of total power loss. The following events shall be time and date stamped and maintained in a non – volatile memory.

1. Event Logging
   a. Data and time and reason for transfer normal to emergency
   b. Data and time and reason for transfer emergency to normal
   c. Data and time and reason for engine start
   d. Data and time engine stopped
   e. Data and time emergency source available
   f. Data and time emergency source not available
2. Statistical Data
   a. Total number of transfers
   b. Total number of transfers due to source failure
   c. Total number of day's controller is energized
   d. Total number of hours both normal and emergency sources are Available
   e. Total time load is connected to normal
   f. Total time load is connected to emergency
   g. Last engine start
   h. Last engine start up time
   i. Input and output status

3.5 OPTIONAL FEATURES

A. Accessory Package - An accessory bundle shall be provided that includes:

1. A fully programmable engine exerciser with seven independent routines to exercise the engine generator, with or without load on a daily weekly, bi – weekly, or monthly basis.
2. Event log display that shows event number, time and date of events, event type, and reason (if applicable). A minimum of 300 events shall be stored.
3. RS – 485 communications port enabled.
4. Common alarm output contact.
   (This feature shall be equal to ASCO accessory 11BE, and shall be capable of being activated for existing switches through optional accessory dongle).

B. Expansion Module - A relay expansion module (REX) is a standard feature when delayed transition transfer is specified. A REX module shall also be provided for open transition transfer that includes one form C contact for source availability of the normal (18G) and emergency (18B) sources. Additional output relay shall be provided to indicate a common alarm. The REX module shall have the capability of being daisy chained for multiple sets of contacts. (This feature shall be equal to ASCO accessory 18RX, and shall be capable of being added to existing switches without modification).

C. Communications Module – Shall provide remote interface module to support monitoring of vendor's transfer switch, controller and optional power meter. Module shall provide status, analog parameters, event logs, equipment settings & configurations over embedded webpage and open protocol. Features shall include:

1. Email notifications and SNMP traps of selectable events and alarms may be sent to a mobile device or PC.
2. Modbus TCP/IP, SNMP, HTTP, SMTP open protocols shall be simultaneously supported.
3. Web app interface requiring user credentials to monitor and control the transfer switch supporting modern smart phones, tablets and PC browsers. User will be able to view the dynamic one-line, ATS controls status, alarms, metering, event logging as well as settings.
4. Secure access shall be provided by requiring credentials for a minimum of 3 user privilege levels to the web app, monitor (view only), control (view and control) and administrator (view, control and change settings). 128-Bit AES encryption standard shall be supported for all means of connectivity.
5. Shall allow for the initiating of transfers, retransfers, bypassing of active timers and the activating/deactiviting of engine start signal shall be available over the embedded webpage and to the transfer switch vendor's monitoring equipment.
6. An event log displaying a minimum of three-hundred (300) events shall be viewable and printable from the embedded webpages and accessible from supported open protocols.
7. Four (4) 100 Mbps Ethernet copper RJ-45 ports, two (2) serial ports, and LEDs for diagnostics.
8. DIN rail mountable.

This option shall be equivalent to ASCO accessory 72EE

D. Enclosure Heater - A 125 watt enclosure heater with transformer and thermostat (adjustable from 30° to 140 ° F) shall be provided for outdoor installations where type 3R, 4, are specified. (This feature shall be equal to ASCO accessory 44G, and shall be capable of being added to existing switches).

I . Power Meter – (This feature shall be equal to ASCO accessory 135L, or feature bundle accessory 150*).

2. The Power Meter shall conform to the requirements of:
   a. UL 3111-1-Electrical Measuring and Testing Equipment
   b. CAN/CSA-C22.2 No. 23-M89-CSA Safety Requirements for Electrical and Electronic Measuring and Test Equipment

c. The Power Meter shall be capable of operating without modification at a nominal frequency of 45 to 66Hz.
d. The Power Meter shall be rated for an operating temperature of -4°F to 158°F and a storage temperature of -22°F to 176°F. and shall be rated for an 85% non-condensing, relative humidity.
e. The Power Meter shall accept inputs from industry standard instrument transformers (120 VAC secondary PT's and 5A secondary CT's). Direct phase voltage connections, 0 to 600VAC nominal, shall be possible without the use of PT's.
f. The Power Meter shall accept single, 3 phase, or three & four wire circuits. A fourth CT input shall be available to measure neutral or ground current.
g. The Power Meter shall contain a built-in discrete contact to wire an ATS 14A auxiliary contact to indicate switch position.
h. The Power Meter shall accept AC voltage from the sensing lines for operation. Additional provisions shall be provided for external DC voltage input range 9-36 VDC with a nominal of 24 VDC.
i. The Power Meter shall be equipped with a continuous duty, long –life, 4 line x 20 character green backlit LCD.
j. All setup parameters required by the Power Meter shall be stored in non-volatile memory and retained in the event of a control power interruption.
k. The Power Meter shall be flush mountable on a surface.
l. The Power Meter enclosure shall be sealed to IP-51 (NEMA 1) and the faceplate shall be sealed to IP-65 (NEMA 4). All push buttons shall be sealed tact switches.
m. The Power Meter shall send, when prompted, information to a central location equipped with a manufacturer supplied critical power management system or 3rd party monitor through manufacturer supplied communication modules. All 3rd party monitor must utilize industry standard open protocols Modbus/RTU.Modbus/TCP or SNMP.
n. An embedded RS-485 port will be provided which will enable communication at 9600, 19.2K, 38.4K, or 57.6K baud. DIP switches will be provided on the RS-485 port allowing a user to select 2-wire or 4-wire communication as well as the option to activate a terminating resistor on the port.
o. The Power Meter shall help facilities comply with NEC 220. It shall provide Maximum Demand calculations for the past 24 months, as per standards with 15 minute averages.
p. The following data will be available on the display and Modbus registers of the Power Meter:
    1) Line-to-neutral voltages (V_{AN}, V_{BN}, and V_{CN})
    2) Line-to-neutral voltage average (V_{AVE})
    3) Line-to-line voltages (V_{AB}, V_{BC}, and V_{CA})
    4) Line-Line voltage average (V_{LAVE})
    5) Current on each phase (I_A,I_B,and I_C)
    6) Current on the neutral conductor (I_N)
    7) Average current (I_{AVE})
    8) Active power, KW per phase and total (W_A,W_B,W_C, and WT)
    9) *Apparent power, KVA per phase and total (V_{AA}, V_{AB}, V_{AC}, and V_{AT})*

10) *KWHours importing, exporting and net (KWH_{IMP}, KWH_{EXP}, and KWH_{NET})*
11) *KVARHours leading, lagging and net ($KVARH_{LEAD}$, KVARLAG, and KVARHNET)*
12) *Power factor (PF)*
13) *Signal Frequency (Hz)*
14) *Digital Input*

q. The Power Meter shall offer an LCD which can display no less then nine different languages.

r. Displaying each of the metered values shall be done through the use of menu scroll buttons. There will be an escape button which will be used to take the user back to the previous page or to cancel a setting change. Pressing escape no more than three times will return the user to the home screen.

s. For ease of operator viewing, the display can be configured to remain on continuously, with no detrimental effect on the life of the Power Meter.

t. The display's contrast shall be configurable in intervals of 10% (ranging 0%-100%).

u. Setup of a system requirements shall be allowed from the front of the Power Meter.

3.6 ATS REMOTE ANNUNCIATOR

A. General

1. Provide and install ATS Remote Annunciators for monitoring and control of automatic transfer switches remotely over Ethernet.

B. Hardware Specifications

1. The ATS Remote Annunciator shall be listed to cUL-60950-1 and UL 1008 and include the following features and ratings*:*
   a. User-configured labels with ATS names and power sources
   b. Dual 10/100 Base-T auto sensing and auto crossover Ethernet ports
   c. LED indication of source acceptability, switch position, common alarm, time delay and Ethernet link activity
   d. Push button for transfer/retransfer control operations and time delay bypass
   e. Push buttons for Alarm Silence and Lamp Test
   f. Key lock to enable and disable the transfer push button
   g. Audible and visual alarm to indicate Communication Error ATS Locked Out Failure to Synchronize Extended Parallel and any of the 8 user-configured discrete inputs
   h. Programmable watchdog timer that can generate a system reset upon timeout (minimum 1 sec)
   i. Factory reset capability
   j. 100 ms power ride-through

C. Software Specification

1. The ATS Remote Annunciator shall contain embedded web pages accessible via various web browsers with the following capabilities:
   a. Configuration for protocol and communications management with the ability of auto discovering transfer switches on network
   b. Ability to create and print customized labels for ATS names and power sources
   c. The ability to choose a continuous or periodic audible alarm with customizable interval time
   d. View detailed packet status counters i.e. transmitted received and dropped packets with the ability to reset counters
   e. ATS source name configuration page which allows users to configure power source names and print labels
   f. Upgrade firmware from Ethernet network without interrupting equipment operation

D. Communications

1. Dual 10/100 Base-T (RJ-45) Ethernet ports are provided to support TCP/IP communications for up to eight automatic transfer switches via individual remote connectivity modules or daisy-chained serial modules into a single Connectivity Module. Additional features include:
   a. Supports Full Duplex Flow Control (IEEE 802.3x)
   b. 3.3V power supply with 5V I/O tolerance
   c. Supports 3 LEDs to indicate traffic link speed and collision

E. Mounting

1. The ATS Remote Annunciator is suitable for:
   a. Surface mounting using mounting screws studs
   b. Flush Mount from behind a cutout section (Enclosure Door Mounting)
   c. Flush Mount from the front of a cutout section (Enclosure Door Mounting)

F. Power Supply

1. The ATS Remote Annunciator shall be capable of accepting 24VDC, 120 VAC or 240 VAC power source.

G. Environmental

1. The ATS Remote Annunciator shall have an Ambient Operating Temperature range of -4 º to 158 º F (-20 º to +70 º C) @ 5~85% humidity and Ambient Storage Temperature of -40 º to 185 º F (-40 º to 85 º C).

3.7 DISCONNECTING AND OVERCURRENT PROTECTION DEVICE

A. For those automatic transfer switches less than 1000 amperes, the normal connection shall be provided with a thermal magnetic rated molded case circuit breaker with current ratings as shown on the plans. It shall have a thermal magnetic trip unit.

B. For those automatic transfer switches rated above 1000 amperes, the normal connection shall be provided with a stationary mount, insulated case circuit breaker with a solid-state trip unit. The trip unit shall have an adjustable long time, short time, instantaneous, and ground fault trip settings. The insulated case circuit breaker shall trip open when the ground fault setting is exceeded.

3.8 ADDITIONAL REQUIREMENTS

A. AMPERE INTERRUPTING CAPACITY (AIC)

1. The maximum short circuit current the breaker shall be required to interrupt is as follows:

a. Switch Rating	AIC Rating	Voltage
1) 70 - 225	25,000A	480V
2) 250, 400	50,000A	480V
600	50,000A	480V
3) 800 – 2000	65,000A	480V
4) 2500, 3000	100,000A	480V

B. TESTS AND CERTIFICATION

1. The complete 3AUS shall be factory tested to ensure proper operation of the individual components and correct overall sequence of operation and to ensure that the operating transfer time, voltage, frequency and time delay settings are in compliance with the specification requirements.
2. Upon request, the manufacturer shall provide a notarized letter certifying compliance with all of the requirements of this specification including compliance with the above codes and standards, and withstand and closing ratings. The certification shall identify, by serial number(s), the equipment involved. No exceptions to the specifications, other than those stipulated at the time of the submittal, shall be included in the certification.
3. The ATS manufacturer shall be certified to ISO 9001 International Quality Standard and the manufacturer shall have third party certification verifying quality assurance in design/development, production, installation and servicing in accordance with ISO 9001:2008.

C. SERVICE REPRESENTATION

1. The ATS manufacturer shall maintain a national service organization of company-employed personnel located throughout the contiguous United States. The service center's personnel must be factory trained and must be on call 24 hours a day, 365 days a year.
2. The manufacturer shall maintain records of each switch, by serial number, for a minimum of 20 years.
3. For ease of maintenance and parts replacement, the switch nameplate shall include drawing numbers, part numbers for main coil and control.

END OF SECTION 26.3600

SECTION 26.3633 - CONNECTION CABINETS FOR PORTABLE GENERATORS AND LOAD BANKS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Permanently installed connection cabinets/docking stations with provisions for temporary power connections to portable equipment.

1.2 RELATED REQUIREMENTS

A. Section 03.3000 - Cast-in-Place Concrete: Concrete equipment pads.

B. Section 26.0526 - Grounding and Bonding for Electrical Systems.

C. Section 26.0529 - Hangers and Supports for Electrical Systems.

D. Section 26.0548 - Vibration and Seismic Controls for Electrical Systems.

E. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

F. Section 26.0573 - Power System Studies: Additional criteria for the selection of equipment specified in this section.

G. Section 26.3213 - Engine Generators: Permanently installed generators.

H. Section 26.3600 - Transfer Switches.

1.3 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

B. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2024.

C. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. UL 1008 - Transfer Switch Equipment; Current Edition, Including All Revisions.

E. UL 1773 - Termination Boxes; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate compatibility of products and installation with Owner-furnished portable generators/load banks.
2. Coordinate work to avoid placement of ductwork, piping, equipment, and other obstructions within dedicated equipment spaces and working clearances required by NFPA 70.
3. Coordinate arrangement of equipment with dimensions and clearance requirements of actual equipment to be installed.
4. Coordinate work with placement of supports and anchors required for mounting.
5. Notify Architect of conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Preinstallation Meeting: Where applicable, conduct meeting with permanently installed generator manufacturer representative and installer to review proposed system configuration.

C. Where work involves interruption of existing electrical service, arrange service interruption with Owner.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product, including ratings, configurations, dimensions, finishes, weights, service condition requirements, and installed features.

C. Shop Drawings: Include dimensioned plan views and sections indicating locations of system components, required clearances, and field connection locations. Include system interconnection schematic diagrams showing factory and field connections.

1. Identify mounting conditions required for equipment seismic qualification.

D. Manufacturer's equipment seismic qualification certification.

E. Manufacturer's qualification statement.

F. Installer's qualification statement.

G. Field quality control test reports.

H. Operation and Maintenance Data: Include detailed information on system operation, replacement parts, and recommended maintenance procedures and intervals.

I. Project Record Documents: Record actual locations of system components, installed circuiting arrangements and routing, and final equipment settings.

1.6 QUALITY ASSURANCE

A. Comply with the following:

1. NFPA 70.
2. Requirements of authorities having jurisdiction.
3. Applicable local codes.
4. _____.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

C. Installer Qualifications: Company specializing in performing the work of this section with minimum three years documented experience with power transfer systems of similar size, type, and complexity.

D. Product Evaluation and Listing Organization Qualifications: Organization engaged in evaluation of products and services, including those recognized by OSHA as Nationally Recognized Testing Laboratories (NRTL), and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

B. Store in clean, dry space. Maintain factory wrapping or provide additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

C. Handle carefully in accordance with manufacturer's instructions to avoid damage to components, enclosure, and finish.

1.8 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.9 WARRANTY

A. See Section 01.7800 - Closeout Submittals, for additional warranty requirements.

B. Provide minimum one year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Substitutions: See Section 01.6000 - Product Requirements.

B. Source Limitations: Provide connection cabinets and accessories produced by single manufacturer and obtained from single supplier.

2.2 CONNECTION CABINETS/DOCKING STATIONS

A. Description: Cabinets with provisions for temporary facility connection to portable generators and/or load banks.

B. General Requirements:

1. Listed as complying with UL 1008 or UL 1773.
2. Temporary Connectors:
    a. Camlocks: Single-pole, series 16; 400 A rated.
    b. Lugs: Single-pole, mechanical type.
3. Input Camlock Connections for Generator: For each row, provide five camlock connectors (one for each phase, one for neutral, and one for ground).
4. Output Camlock Connections for Load Bank: For each row, provide four camlock connectors (one for each phase and one for ground).
5. Camlock Connector Color Code:
    a. 240 V and Below:
        1) Phase 1: Black.
        2) Phase 2: Red.
        3) Phase 3, Where Required: Blue.
    b. 277 V to 480 V:
        1) Phase 1: Brown.
        2) Phase 2: Orange.
        3) Phase 3: Yellow.
    c. Neutral: White.
    d. Ground: Green.
6. Equipment Ground: Bonded to enclosure.

7. Bus Bar:
   a. Material: Tin-plated copper, unless otherwise indicated.
   b. Provide permanent connection to facility with mechanical set screw lugs.
8. Neutral Configuration:
   a. Input for Generator: 100 percent rated.
   b. Output for Load Bank: No neutral.
9. Temporary Cable Provisions: Provide access wiring entry/exit for conductors, with no sharp edges that may come in contact with conductor insulation.

C. Enclosure:

1. Material: Aluminum.
2. NEMA EN 10250 Rating: Type 3R.
3. Front Door: Lockable; capable of securing connection cables when locked.
4. Temporary Cable Access Panel: Hinged plate for bottom entry, mechanically interlocked with front door.
5. Finish Color: Manufacturer's standard.

D. Short Circuit Current Rating: Where not specified, provide connection cabinet with listed short circuit current rating not less than available fault current at installed location as indicated on drawings.

E. Connection Cabinet:

1. Input/Output Configurations: Input for generator, male camlocks.
2. Main Disconnect: No disconnect.
3. Ground: Minimum 25 percent rated.
4. Phase Poles: Four.
5. Ampere Rating: 400.
6. Voltage for Color Codes: As indicated on drawings.
7. Mounting Configuration: Wall mounted.
8. Features:
   a. Two-wire auto start.
   b. Drip hood.
   c. Camlock snap covers.
9. Products:
   a. Schneider Electric; ASCO 300 Series; Quick Connect Power Panel: www.ascopower.com/#sle.
   b. Substitutions: See Section 01.6000 - Product Requirements.

F. Accessories:

1. 400 A camlock cable set; length and quantity as required for connection to portable equipment.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify field measurements.

B. Verify ratings and configurations of connection cabinets and associated components.

C. Verify locations of rough-ins for field connections.

D. Verify mounting surfaces are ready to receive connection cabinets.

E. Verify conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Comply with NECA 1 for general workmanship.

B. Install products in accordance with manufacturer's instructions.

C. Arrange equipment to provide minimum clearances and required maintenance access; provide adequate space for temporary cable connections.

D. Provide required support and attachment; see Section 26.0529.

E. Install connection cabinets plumb and level.

F. Unless otherwise indicated, mount floor-mounted connection cabinets on properly sized concrete pad 3 inches in height.

1. See Section 03.3000.

G. Provide grounding and bonding; see Section 26.0526.

H. Provide identification; see Section 26.0553.

1. Identify system wiring and components.
2. Connection Cabinets for Portable Generators:
    a. Use identification nameplate to identify phase rotation.
    b. Use warning label or identification nameplate to identify system bonding requirements in accordance with NFPA 70.

3.3 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements for additional requirements.

B. Test system operation.

C. Correct defective work, adjust for proper operation, and retest until entire system complies with Contract Documents.

D. Provide additional inspection and testing as required for completion of permanent engine generator testing as specified in Section 26.3213.

E. Submit detailed reports indicating inspection and testing results and corrective actions taken.

3.4 CLEANING

A. See Section 01.7419 - Construction Waste Management and Disposal for additional requirements.

B. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.5 CLOSEOUT ACTIVITIES

A. See Section 01.7800 - Closeout Submittals for closeout submittals.

B. See Section 01.7900 - Demonstration and Training for additional requirements.

C. Demonstration: Demonstrate proper operation of connection cabinets and associated power transfer systems to Owner, and correct deficiencies or make adjustments as directed.

D. Training: Train Owner's personnel on operation, adjustment, and maintenance of connection cabinets and associated power transfer systems.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
2. Provide minimum of four hours of training.
3. Instructor: Manufacturer's authorized representative.
4. Location: At project site.

3.6 PROTECTION

A. Protect installed connection cabinets from subsequent construction operations.

END OF SECTION 26.3633

SECTION 26.4100 - FACILITY LIGHTNING PROTECTION

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Strike (air) terminals and interconnecting conductors.

B. Grounding and bonding for lightning protection.

1.2 RELATED REQUIREMENTS

A. Section 26.0526 - Grounding and Bonding for Electrical Systems: Electrical system grounds.

B. Surge Protection for Wiring Systems: Specified in individual system requirements.

C. Section _____: Ground connections for metal communications towers.

1.3 REFERENCE STANDARDS

A. NFPA 780 - Standard for the Installation of Lightning Protection Systems; 2026.

B. UL 96 - Lightning Protection Components; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination with Concrete Work: Coordinate embedding of lightning protection components in concrete.

B. Coordination with Roofing Work: Ensure adequate attachment of strike terminals and conductors without damage to roofing.

C. Preinstallation Meeting: Convene meeting at least at least two weeks prior to commencement of work affected by lightning protection system requirements to discuss prerequisites and coordination required by other installers; require attendance by representatives of installers whose work will be affected.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements for submittal procedures.

B. Shop Drawings: Indicate location and layout of air terminals, grounding electrodes, and bonding connections to structure and other metal objects. Include terminal, electrode, and conductor sizes, and connection and termination details.

1. Where conductors or grounds are to be embedded or concealed in other construction, submit shop drawings at least 30 days prior to start of construction.
2. If concrete-encased grounds are to be used and are not shown in Contract Documents, provide sufficient data to determine concrete encasement dimensions and location.
3. Include data on actual ground resistance determined by field measurement in accordance with NFPA 780.
4. Include engineering analysis of equalization of potential to metal bodies within structure.
5. Include access panels, test holes, and disconnecting means for maintenance.

C. Product Data: Provide dimensions and materials of each component, indication of testing agency listing, and installation instructions.

D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

E. Installation Certification: Submit copy of certification agency's approval.

F. Operation and Maintenance Data: Provide recommended inspection and testing plan, including recommended intervals, to achieve periodic maintenance as recommended in NFPA 780; provide customized plan reflecting actual installation configuration with specific installed components identified.

G. Project Record Documents: Record actual locations of air terminals, grounding electrodes, bonding connections, and routing of system conductors in project record documents.

1.6 QUALITY ASSURANCE

A. Maintain one copy of each referenced system design standard on site.

B. Manufacturer Qualifications: Company specializing in lightning protection equipment with minimum three years documented experience.

C. Designer Qualifications: Person or entity, employed by installer, who specializes in lightning protection system design with minimum three years documented experience.

D. Installer Qualifications: Capable of providing specified certification of installed system.

E. Products: Listed, classified, and labeled as suitable for purpose intended.

F. Product Listing Organization Qualifications: Organization recognized by OSHA as Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Lightning Protection Components:

1. allG Fabrication; _____: www.allgfab.com/#sle.
2. Harger Lightning and Grounding; _____: www.harger.com/#sle.
3. National Lightning Protection Corporation; _____: www.theprotectionsource.com/#sle.
4. nVent ERICO; System 2000: www.nvent.com/#sle.
5. Robbins Lightning, Inc; _____: www.robbinslightning.com/#sle.
6. thermOweld, subsidiary of Continental Industries; division of Burndy LLC; _____: www.thermoweld.com/#sle.
7. Substitutions: See Section 01.6000 - Product Requirements.

2.2 LIGHTNING PROTECTION SYSTEM

A. Lightning Protection System: Provide complete system complying with NFPA 780, including air terminals, bonding, interconnecting conductors and grounding electrodes.

1. Provide system that protects:
   a. Entire structure.
   b. Open air areas within 100 feet of exterior walls at grade level.
   c. Open air areas within building footprint.

d. Metal communications towers (grounding only).

2. Coordinate with other grounding and bonding systems specified.
3. Treat isolated non-grounded protruding metal items as specified by NFPA 780 for heavy-duty stacks.
4. Determine ground resistance by field measurement.
5. Provide copper, bronze, or stainless steel components, except where aluminum is allowed by NFPA 780.
6. Provide disconnecting means and access panels or similar devices to allow complete periodic inspection and testing as described by NFPA 780 Annex D.
7. Provide system certified by Underwriters Laboratories or Lightning Protection Institute.

B. Strike Terminals: Provide strike (air) terminals on the following:

1. Roofs.
2. Penthouse roofs.
3. Parapets.
4. Roof mounted equipment.
5. Stacks.
6. Chimneys.
7. Generators.

2.3 COMPONENTS

A. All Components: Complying with applicable requirements of UL 96.

B. Strike (Air) Terminals: Copper, solid, with adhesive bases for single-ply roof installations.

C. Grounding Rods: Solid copper.

D. Ground Plate: Copper.

E. Conductors: Copper cable.

F. Connectors and Splicers: Bronze.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated on shop drawings.

B. Coordinate work with installation of roofing and exterior and interior finishes.

3.2 INSTALLATION

A. Install in accordance with referenced system standards and as required for specified certification.

B. Connect conductors using mechanical connectors or exothermic welding process; protect adjacent construction elements and finishes from damage.

3.3 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements for additional requirements.

B. Perform visual inspection as specified in NFPA 780 as if this were a periodic follow-up inspection.

C. Perform continuity testing as specified in NFPA 780 as if this were testing for periodic maintenance.

D. Obtain services of specified certification agency to provide inspection and certification of lightning protection system, including performance of other testing required by that agency.

END OF SECTION 26.4100

SECTION 26.4300 - SURGE PROTECTIVE DEVICES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Surge protective devices for service entrance locations.

B. Surge protective devices for distribution locations.

C. Surge protective devices for branch panelboard locations.

1.2 RELATED REQUIREMENTS

A. Section 26.0526 - Grounding and Bonding for Electrical Systems.

B. Section 26.2300 - Low-Voltage Switchgear.

C. Section 26.2413 - Switchboards.

D. Section 26.2416 - Panelboards.

E. Section 27.1000 - Structured Cabling: Protectors for communications service entrance.

1.3 ABBREVIATIONS AND ACRONYMS

A. EMI/RFI: Electromagnetic Interference/Radio Frequency Interference.

B. SPD: Surge Protective Device.

1.4 REFERENCE STANDARDS

A. MIL-STD-220 - Method of Insertion Loss Measurement; 2009c (Validated 2024).

B. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

C. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2024.

D. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems; 2025.

E. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. UL 1283 - Standard for Electromagnetic Interference Filters; Current Edition, Including All Revisions.

G. UL 1449 - Standard for Surge Protective Devices; Current Edition, Including All Revisions.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Include detailed component information, voltage, surge current ratings, repetitive surge current capacity, voltage protection rating (VPR) for all protection modes, maximum continuous operating voltage (MCOV), nominal discharge current (I-n), short circuit current rating (SCCR), connection means including any required external overcurrent protection, enclosure ratings, outline and support point dimensions, weight, service condition requirements, and installed features.

1. SPDs with EMI/RFI filter: Include noise attenuation performance.

C. Shop Drawings: Include wiring diagrams showing all factory and field connections with wire and circuit breaker/fuse sizes.

D. Certificates: Manufacturer's documentation of listing for compliance with the following standards:

1. UL 1449.
2. UL 1283 (for Type 2 SPDs).

E. Field Quality Control Test Reports.

F. Manufacturer's Installation Instructions: Include application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

G. Operation and Maintenance Data: Include information on status indicators and recommended maintenance procedures and intervals.

H. Warranty: Submit sample of manufacturer's warranty and documentation of final executed warranty completed in Owner's name and registered with manufacturer.

I. Project Record Documents: Record actual connections and locations of surge protective devices.

1.6 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND PROTECTION

A. Store in a clean, dry space in accordance with manufacturer's written instructions.

1.8 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.9 WARRANTY

A. See Section 01.7800 - Closeout Submittals, for additional warranty requirements.

B. Manufacturer's Warranty: Provide minimum five year warranty covering repair or replacement of surge protective devices showing evidence of failure due to defective materials or workmanship.

C. Exclude surge protective devices from any clause limiting warranty responsibility for acts of nature, including lightning, stated elsewhere.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Field-Installed, Externally Mounted Surge Protective Devices:

1. ABB: www.electrification.us.abb.com/#sle.
2. Intermatic, Inc: www.intermatic.com/#sle.
3. nVent ERICO: www.nvent.com/#sle.
4. Schneider Electric: www.se.com/#sle.
5. Surge Suppression, LLC (SSI): www.surgesuppression.com/#sle.
6. Leviton.

B. Factory-installed, Internally Mounted Surge Protective Devices:

1. Same as manufacturer of equipment containing surge protective device, to provide complete listed assembly including SPD.

C. Substitutions: See Section 01.6000 - Product Requirements.

D. Source Limitations: Provide surge protective devices produced by single manufacturer and obtained from single supplier.

2.2 SURGE PROTECTIVE DEVICES - GENERAL REQUIREMENTS

A. Description: Factory-assembled surge protective devices (SPDs) for 60 Hz service; listed, classified, and labeled as suitable for the purpose intended; system voltage as indicated on the drawings.

B. Unless otherwise indicated, provide field-installed, externally-mounted or factory-installed, internally-mouonted SPDs.

C. List and label as complying with UL 1449, Type 1 when connected on line side of service disconnect overcurrent device and Type 1 or 2 when connected on load side of service disconnect overcurrent device.

D. Protected Modes:

1. Wye Systems: L-N, L-G, N-G, L-L.

E. UL 1449 Voltage Protection Ratings (VPRs):

1. Equivalent to basis of design.
2. 208Y/120V System Voltage: Not more than 1,000 V for L-N, L-G, and N-G modes and 1,200 V for L-L mode.

F. UL 1449 Maximum Continuous Operating Voltage (MCOV): Not less than 115% of nominal system voltage.

G. Enclosure Environment Type per NEMA EN 10250: Unless otherwise indicated, as specified for the following installation locations:

1. Indoor clean, dry locations: Type 1.
2. Outdoor locations: Type 3R.

H. Mounting for Field-installed, Externally Mounted SPDs: Unless otherwise indicated, as specified for the following locations:

1. Provide surface-mounted SPD where mounted in non-public areas or adjacent to surface-mounted equipment.
2. Provide flush-mounted SPD where mounted in public areas or adjacent to flush-mounted equipment.

I. Equipment Containing Factory-installed, Internally Mounted SPDs: Listed and labeled as a complete assembly including SPD.

1. Switchgear: See Section 26.2300.
2. Switchboards: See Section 26.2413.
3. Panelboards: See Section 26.2416.

2.3 SURGE PROTECTIVE DEVICES FOR SERVICE ENTRANCE LOCATIONS

A. Surge Protective Device:

1. Protection Circuits: Field-replaceable modular or non-modular.
2. Surge Current Rating: Not less than 240 kA per mode/480 kA per phase.
3. Repetitive Surge Current Capacity: Not less than 5,000 impulses.
4. UL 1449 Nominal Discharge Current (I-n): 20 kA.
5. UL 1449 Short Circuit Current Rating (SCCR): Not less than the available fault current at the installed location as indicated on the drawings.
6. EMI/RFI Filtering: Provide EMI/RFI filter to attenuate electrical noise; listed as complying with UL 1283 for Type 2 SPDs (UL 1283 listing not available for Type 1 SPDs).
    a. Noise Attenuation: Not less than 40 dB at 100 kHz using MIL-STD-220 insertion loss test method.
7. Diagnostics:
    a. Protection Status Monitoring: Provide indicator lights to report the protection for each phase.
    b. Alarm Notification: Provide indicator light and audible alarm to report alarm condition. Provide button to manually silence audible alarm.
    c. Remote Status Monitoring: Provide Form C dry type contacts (normally open and normally closed) for remote annunciation of status.
8. Provide surge rated integral disconnect switch for SPDs not connected to a dedicated circuit breaker or fused switch or not direct bus connected.

2.4 SURGE PROTECTIVE DEVICES FOR DISTRIBUTION LOCATIONS

A. Distribution locations include SPDs connected to distribution panelboards.

B. Surge Protective Device:

1. Protection Circuits: Field-replaceable modular or non-modular.
2. Surge Current Rating: Not less than 120 kA per mode/240 kA per phase.
3. Repetitive Surge Current Capacity: Not less than 3,500 impulses.
4. UL 1449 Nominal Discharge Current (I-n): 20 kA.

5. UL 1449 Short Circuit Current Rating (SCCR): Not less than the available fault current at the installed location as indicated on the drawings.
6. EMI/RFI Filtering: Provide EMI/RFI filter to attenuate electrical noise; listed as complying with UL 1283 for Type 2 SPDs (UL 1283 listing not available for Type 1 SPDs).
    a. Noise Attenuation: Not less than 40 dB at 100 kHz using MIL-STD-220 insertion loss test method.
7. Diagnostics:
    a. Protection Status Monitoring: Provide indicator lights to report the protection status for each phase.
    b. Alarm Notification: Provide indicator light and audible alarm to report alarm condition. Provide button to manually silence audible alarm.
    c. Remote Status Monitoring: Provide Form C dry type contacts (normally open and normally closed) for remote annunciation of status.
    d. Surge Counter: Provide surge event counter with manual reset button, surge count retention upon power loss, and six digit LCD display that indicates quantity of surge events.
8. Provide surge rated integral disconnect switch for SPDs not connected to a dedicated circuit breaker or fused switch or not direct bus connected.

2.5 SURGE PROTECTIVE DEVICES FOR BRANCH PANELBOARD LOCATIONS

A. Surge Protective Device:

1. Protection Circuits: Field-replaceable modular or non-modular.
2. Surge Current Rating: Not less than 60 kA per mode/120 kA per phase.
3. Repetitive Surge Current Capacity: Not less than 2,000 impulses.
4. UL 1449 Nominal Discharge Current (I-n): 20 kA.
5. UL 1449 Short Circuit Current Rating (SCCR): Not less than the available fault current at the installed location as indicated on the drawings.
6. EMI/RFI Filtering: Provide EMI/RFI filter to attenuate electrical noise; listed as complying with UL 1283 for Type 2 SPDs (UL 1283 listing not available for Type 1 SPDs).
    a. Noise Attenuation: Not less than 40 dB at 100 kHz using MIL-STD-220 insertion loss test method.
7. Diagnostics:
    a. Protection Status Monitoring: Provide indicator lights to report the protection status for each phase.
    b. Alarm Notification: Provide indicator light and audible alarm to report alarm condition. Provide button to manually silence audible alarm.
    c. Remote Status Monitoring: Provide Form C dry type contacts (normally open and normally closed) for remote annunciation of status.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the service voltage and configuration marked on the SPD are consistent with the service voltage and configuration at the location to be installed.

C. Verify that electrical equipment is ready to accept connection of the SPD and that installed overcurrent device is consistent with requirements of drawings and manufacturer's instructions.

D. Verify system grounding and bonding is in accordance with Section 26.0526, including bonding of neutral and ground for service entrance and separately derived systems where applicable. Do not energize SPD until deficiencies have been corrected.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION

A. Perform work in accordance with NECA 1 (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and NFPA 70.

D. Unless indicated otherwise, connect service entrance surge protective device on load side of service disconnect main overcurrent device.

E. Provide conductors with minimum ampacity as indicated on the drawings, as required by NFPA 70, and not less than manufacturer's recommended minimum conductor size.

F. Install conductors between SPD and equipment terminations as short and straight as possible, not exceeding manufacturer's recommended maximum conductor length. Breaker locations may be reasonably rearranged in order to provide leads as short and straight as possible. Twist conductors together to reduce inductance.

G. Do not energize SPD until bonding of neutral and ground for service entrance and separately derived systems is complete in accordance with Section 26.0526 where applicable. Replace SPDs damaged by improper or missing neutral-ground bond.

H. Disconnect SPD prior to performing any high potential testing. Replace SPDs damaged by performing high potential testing with SPD connected.

3.3 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Perform inspections and tests listed in NETA ATS Section 7.19.1.

D. Procure services of a qualified manufacturer's representative to observe installation and assist in inspection, testing, and adjusting. Include manufacturer's reports with field quality control submittals.

3.4 CLEANING

A. Repair scratched or marred exterior surfaces to match original factory finish.

END OF SECTION 26.4300

SECTION 26.5100 - INTERIOR LIGHTING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Interior luminaires.

B. Exit signs.

C. Ballasts and drivers.

1.2 RELATED REQUIREMENTS

A. Section 26.0529 - Hangers and Supports for Electrical Systems.

B. Section 26.0533.16 - Boxes for Electrical Systems.

C. Section 26.0548 - Vibration and Seismic Controls for Electrical Systems.

D. Section 26.0553 - Identification for Electrical Systems: Identification products and requirements.

E. Section 26.0923 - Lighting Control Devices.

F. Section 26.2726 - Wiring Devices: Manual wall switches and wall dimmers.

G. Section 26.5600 - Exterior Lighting.

1.3 REFERENCE STANDARDS

A. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

B. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric); 2021.

C. IEC 60529 - Degrees of Protection Provided by Enclosures (IP Code); 1989 (Corrigendum 2019).

D. IES LM-63 - Approved Method: IES Standard File Format for the Electronic Transfer of Photometric Data and Related Information; 2019 (Reaffirmed 2025).

E. IES LM-79 - Approved Method: Optical and Electrical Measurements of Solid-State Lighting Products; 2024.

F. IES LM-80 - Approved Method: Measuring Maintenance of Light Output Characteristics of Solid-State Light Sources; 2021.

G. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

H. NECA/IESNA 500 - Standard for Installing Indoor Commercial Lighting Systems; 2025.

I. NECA/IESNA 502 - Standard for Installing Industrial Lighting Systems; 2006.

J. NEMA 410 - Performance Testing for Lighting Controls and Switching Devices with Electronic Drivers and Discharge Ballasts; 2023.

K. NEMA LE 4 - Recessed Luminaires, Ceiling Compatibility; 2023.

L. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

M. NFPA 101 - Life Safety Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

N. UL 844 - Luminaires for Use in Hazardous (Classified) Locations; Current Edition, Including All Revisions.

O. UL 924 - Emergency Lighting and Power Equipment; Current Edition, Including All Revisions.

P. UL 1598 - Luminaires; Current Edition, Including All Revisions.

Q. UL 8750 - Light Emitting Diode (LED) Equipment for Use in Lighting Products; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the installation of luminaires with mounting surfaces installed under other sections or by others. Coordinate the work with placement of supports, anchors, etc. required for mounting. Coordinate compatibility of luminaires and associated trims with mounting surfaces at installed locations.
2. Coordinate the placement of luminaires with structural members, ductwork, piping, equipment, diffusers, fire suppression system components, and other potential conflicts installed under other sections or by others.
3. Coordinate the placement of exit signs with furniture, equipment, signage or other potential obstructions to visibility installed under other sections or by others.
4. Notify Architect of any conflicts or deviations from Contract Documents to obtain direction prior to proceeding with work.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings:

1. Indicate dimensions and components for each luminaire that is not a standard product of the manufacturer.
2. Provide photometric calculations where luminaires are proposed for substitution.

C. Product Data: Provide manufacturer's standard catalog pages and data sheets including detailed information on luminaire construction, dimensions, ratings, finishes, mounting requirements, listings, service conditions, photometric performance, installed accessories, and ceiling compatibility; include model number nomenclature clearly marked with all proposed features.

1. LED Luminaires:
   a. Include estimated useful life, calculated based on IES LM-80 test data.
   b. Include IES LM-79 test report upon request.
2. Provide electronic files of photometric data certified by a National Voluntary Laboratory Accreditation Program (NVLAP) lab or independent testing agency in IES LM-63 standard format upon request.
3. Ballasts: Include wiring diagrams and list of compatible lamp configurations.

4. Lamps: Include rated life, color temperature, color rendering index (CRI), and initial and mean lumen output.

D. Samples:

1. Provide one sample(s) of each specified luminaire upon request.
2. Provide one sample(s) of each luminaire proposed for substitution upon request.

E. Field quality control reports.

F. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

G. Operation and Maintenance Data: Instructions for each product including information on replacement parts.

H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01.6000 - Product Requirements, for additional provisions.

I. Project Record Documents: Record actual connections and locations of luminaires and any associated remote components.

1.6 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND PROTECTION

A. Receive, handle, and store products according to NECA/IESNA 500 (commercial lighting), NECA/IESNA 502 (industrial lighting), and manufacturer's written instructions.

B. Keep products in original manufacturer's packaging and protect from damage until ready for installation.

1.8 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.9 WARRANTY

A. See Section 01.7800 - Closeout Submittals, for additional warranty requirements.

B. Provide 5-year manufacturer warranty for LED luminaires, including drivers.

PART 2 PRODUCTS

2.1 LUMINAIRE TYPES

A. Furnish products as indicated in luminaire schedule included on the drawings.

B. Substitutions: See Section 01.6000 - Product Requirements.

2.2 LUMINAIRES

A. Provide products that comply with requirements of NFPA 70.

B. Provide products that are listed and labeled as complying with UL 1598, where applicable.

C. Provide products listed, classified, and labeled as suitable for the purpose intended.

D. Unless otherwise indicated, provide complete luminaires including lamp(s) and all sockets, ballasts, reflectors, lenses, housings and other components required to position, energize and protect the lamp and distribute the light.

E. Unless specifically indicated to be excluded, provide all required conduit, boxes, wiring, connectors, hardware, supports, trims, accessories, etc. as necessary for a complete operating system.

F. Provide products suitable to withstand normal handling, installation, and service without any damage, distortion, corrosion, fading, discoloring, etc.

G. Recessed Luminaires:

1. Ceiling Compatibility: Comply with NEMA LE 4.
2. Luminaires Recessed in Insulated Ceilings: Listed and labeled as IC-rated, suitable for direct contact with insulation and combustible materials.
3. Luminaires Recessed in Sloped Ceilings: Provide suitable sloped ceiling adapters.

H. Hazardous (Classified) Location Luminaires: Listed and labeled as complying with UL 844 for the classification of the installed location.

I. LED Luminaires:

1. Components: UL 8750 recognized or listed as applicable.
2. Tested in accordance with IES LM-79 and IES LM-80.
3. LED Estimated Useful Life: Minimum of 60,000 hours at 70 percent lumen maintenance, calculated based on IES LM-80 test data.

J. LED Tape Lighting Systems: Provide all power supplies, drivers, cables, connectors, channels, covers, mounting accessories, and interfaces as necessary to complete installation.

1. LED Tape - General Requirements:
   a. Listed.
   b. Designed for field cutting in accordance with listing.
   c. Wet Location Applications: IEC 60529, IP 68 (waterproof) rated.

K. Track Lighting Systems: Provide track compatible with specified track heads, with all connectors, power feed fittings, dead ends, hangers and canopies as necessary to complete installation.

L. Luminaires Mounted in Continuous Rows: Provide quantity of units required for length indicated, with all accessories required for joining and aligning.

2.3 EXIT SIGNS

A. Description: Exit signs complying with NFPA 101 and applicable state and local codes, and listed and labeled as complying with UL 924.

1. Number of Faces: Single- or double-face as indicated or as required for installed location.
2. Directional Arrows: As indicated or as required for installed location.

B. Powered Exit Signs: Internally illuminated with LEDs unless otherwise indicated.

2.4 BALLASTS AND DRIVERS

A. Ballasts/Drivers - General Requirements:

1. Provide ballasts containing no polychlorinated biphenyls (PCBs).
2. Minimum Efficiency/Efficacy: Provide ballasts complying with all current applicable federal and state ballast efficiency/efficacy standards.
3. Electronic Ballasts/Drivers: Inrush currents not exceeding peak currents specified in NEMA 410.

B. Dimmable LED Drivers:

1. Dimming Range: Continuous dimming from 100 percent to one percent relative light output unless dimming capability to lower level is indicated, without flicker.
2. Control Compatibility: Fully compatible with the dimming controls to be installed.
   a. Wall Dimmers: See Section 26.2726.
   b. Daylighting Controls: See Section 26.0923.

2.5 ACCESSORIES

A. Stems for Suspended Luminaires: Steel tubing, minimum 1/2" size, factory finished to match luminaire or field-painted as directed.

B. Threaded Rods for Suspended Luminaires: Zinc-plated steel, minimum 1/4" size, field-painted as directed.

C. Wire Rope Hanging Systems for Suspended Luminaires: Zinc-plated steel, selected in accordance with manufacturer's application criteria as required for load with minimum safety factor of _____.

D. Provide accessory plaster frames for luminaires recessed in plaster ceilings.

E. Architectural Trims for LED Lighting:

1. Description: Trims designed for integration into architectural elements, with channels to accommodate LED tape lighting system.
2. Material: Extruded aluminum, ASTM B221 ASTM B221M 6063 alloy, T5 temper.
3. Profile: As indicated on drawings.
4. Finish: As indicated on drawings.
5. Provide accessory lenses for LED channels.

F. Fire-Rated Luminaire Enclosures:

1. Provide as required to preserve fire resistance rating of building elements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate conductors in accordance with NFPA 70.

C. Verify that suitable support frames are installed where required.

D. Verify that branch circuit wiring installation is completed, tested, and ready for connection to luminaires.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.2 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.3 INSTALLATION

A. Coordinate locations of outlet boxes provided under Section 26.0533.16 as required for installation of luminaires provided under this section.

B. Perform work in accordance with NECA 1 (general workmanship).

C. Install products in accordance with manufacturer's instructions.

D. Install luminaires securely, in a neat and workmanlike manner, as specified in NECA 500 (commercial lighting) and NECA 502 (industrial lighting).

E. Provide required support and attachment in accordance with Section 26.0529.

F. Install luminaires plumb and square and aligned with building lines and with adjacent luminaires.

G. Suspended Ceiling Mounted Luminaires:

1. Do not use ceiling tiles to bear weight of luminaires.
2. Do not use ceiling support system to bear weight of luminaires unless ceiling support system is certified as suitable to do so.
3. Secure surface-mounted and recessed luminaires to building structure.
4. Secure pendant-mounted luminaires to building structure.
5. Secure lay-in luminaires to ceiling support channels using listed safety clips at four corners.
6. In addition to ceiling support wires, provide two galvanized steel safety wire(s), minimum 12 gauge, connected from opposing corners of each recessed luminaire to building structure.
7. See appropriate Division 9 section where suspended grid ceiling is specified for additional requirements.

H. Recessed Luminaires:

1. Install trims tight to mounting surface with no visible light leakage.
2. Luminaires Recessed in Fire-Rated Ceilings: Install using accessories and firestopping materials to meet regulatory requirements for fire rating.

I. Suspended Luminaires:

1. Unless otherwise indicated, specified mounting heights are to bottom of luminaire.
2. Install using the suspension method indicated, with support lengths and accessories as required for specified mounting height.
3. Provide minimum of two supports for each luminaire, with no more than 8 feet between supports.
4. Install canopies tight to mounting surface.
5. Unless otherwise indicated, support pendants from swivel hangers.

J. Wall-Mounted Luminaires: Unless otherwise indicated, specified mounting heights are to bottom of luminaire.

K. Install accessories furnished with each luminaire.

L. Bond products and metal accessories to branch circuit equipment grounding conductor.

M. Exit Signs:

1. Unless otherwise indicated, connect unit to unswitched power. Bypass local switches, contactors, or other lighting controls.
2. Install lock-on device on branch circuit breaker serving units.

N. Install lamps in each luminaire.

3.4 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Inspect each product for damage and defects.

C. Operate each luminaire after installation and connection to verify proper operation.

D. Correct wiring deficiencies and repair or replace damaged or defective products. Repair or replace excessively noisy ballasts as determined by Architect.

3.5 ADJUSTING

A. Aim and position adjustable luminaires to achieve desired illumination as indicated or as directed by Architect. Secure locking fittings in place.

B. Exit Signs with Field-Selectable Directional Arrows: Set as indicated or as required to properly designate egress path as directed by Architect or authority having jurisdiction.

3.6 CLEANING

A. Clean surfaces according to NECA 500 (commercial lighting), NECA 502 (industrial lighting), and manufacturer's instructions to remove dirt, fingerprints, paint, or other foreign material and restore finishes to match original factory finish.

3.7 CLOSEOUT ACTIVITIES

A. See Section 01.7800 - Closeout Submittals, for closeout submittals.

B. See Section 01.7900 - Demonstration and Training, for additional requirements.

C. Demonstration: Demonstrate proper operation of luminaires to Architect, and correct deficiencies or make adjustments as directed.

3.8 PROTECTION

A. Protect installed luminaires from subsequent construction operations.

END OF SECTION 26.5100

SECTION 26.5600 - EXTERIOR LIGHTING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Exterior luminaires.

B. Ballasts.

C. Poles and accessories.

D. Luminaire accessories.

1.2 RELATED REQUIREMENTS

A. Section 03.3000 - Cast-in-Place Concrete: Materials and installation requirements for concrete bases for poles.

B. Section 26.0526 - Grounding and Bonding for Electrical Systems.

C. Section 26.0529 - Hangers and Supports for Electrical Systems.

D. Section 26.0533.16 - Boxes for Electrical Systems.

E. Section 26.0548 - Vibration and Seismic Controls for Electrical Systems.

F. Section 26.0923 - Lighting Control Devices.

G. Section 26.2726 - Wiring Devices: Receptacles for installation in poles.

H. Section 26.2813 - Fuses.

I. Section 26.5100 - Interior Lighting.

1.3 REFERENCE STANDARDS

A. AASHTO LTS - Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals; 2013, with Editorial Revision (2025).

B. IEEE C2 - National Electrical Safety Code(R) (NESC(R)); 2023.

C. IES LM-63 - Approved Method: IES Standard File Format for the Electronic Transfer of Photometric Data and Related Information; 2019 (Reaffirmed 2025).

D. IES LM-79 - Approved Method: Optical and Electrical Measurements of Solid-State Lighting Products; 2024.

E. IES LM-80 - Approved Method: Measuring Maintenance of Light Output Characteristics of Solid-State Light Sources; 2021.

F. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

G. NECA/IESNA 501 - Standard for Installing Exterior Lighting Systems; 2000 (Reaffirmed 2006).

H. NEMA 410 - Performance Testing for Lighting Controls and Switching Devices with Electronic Drivers and Discharge Ballasts; 2023.

I. NEMA LE 4 - Recessed Luminaires, Ceiling Compatibility; 2023.

J. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

K. UL 844 - Luminaires for Use in Hazardous (Classified) Locations; Current Edition, Including All Revisions.

L. UL 1598 - Luminaires; Current Edition, Including All Revisions.

M. UL 8750 - Light Emitting Diode (LED) Equipment for Use in Lighting Products; Current Edition, Including All Revisions.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate placement of poles and associated foundations with utilities, curbs, sidewalks, trees, walls, fences, striping, etc. installed under other sections or by others. Coordinate elevation to obtain specified foundation height.
2. Notify Architect of any conflicts or deviations from Contract Documents to obtain direction prior to proceeding with work.

1.5 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings:

1. Indicate dimensions and components for each luminaire that is not a standard product of the manufacturer.
2. Provide photometric calculations where luminaires are proposed for substitution upon request.
3. Provide structural calculations for each pole proposed for substitution.

C. Product Data: Provide manufacturer's standard catalog pages and data sheets including detailed information on luminaire construction, dimensions, ratings, finishes, mounting requirements, listings, service conditions, photometric performance, weight, effective projected area (EPA), and installed accessories; include model number nomenclature clearly marked with all proposed features.

1. LED Luminaires:
   a. Include estimated useful life, calculated based on IES LM-80 test data.
   b. Include IES LM-79 test report upon request.
2. Provide electronic files of photometric data certified by a National Voluntary Laboratory Accreditation Program (NVLAP) lab or independent testing agency in IES LM-63 standard format upon request.
3. Lamps: Include rated life and initial and mean lumen output.
4. Poles: Include information on maximum supported effective projected area (EPA) and weight for the design wind speed.

D. Sustainable Design Documentation: Submit manufacturer's product data on lamp mercury content and rated lamp life, showing compliance with specified requirements.

E. Samples:

1. Provide one sample(s) of each specified luminaire upon request.
2. Provide one sample(s) of each luminaire proposed for substitution upon request.

F. Certificates for Poles and Accessories: Manufacturer's documentation that products are suitable for the luminaires to be installed and comply with designated structural design criteria.

G. Field Quality Control Reports.

1. Include test report indicating measured illumination levels.

H. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and starting of product.

I. Operation and Maintenance Data: Instructions for each product including information on replacement parts.

J. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01.6000 - Product Requirements, for additional provisions.
2. Touch-Up Paint: 2 gallons, to match color of pole finish.

K. Project Record Documents: Record actual connections and locations of pole foundations, luminaires, and any pull or junction boxes.

1.6 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Receive, handle, and store products according to NECA/IESNA 501 and manufacturer's written instructions.

B. Keep products in original manufacturer's packaging and protect from damage until ready for installation.

1.8 WARRANTY

A. See Section 01.7800 - Closeout Submittals, for additional warranty requirements.

B. Provide 5-year manufacturer warranty for all LED luminaires, including drivers.

PART 2 PRODUCTS

2.1 LUMINAIRE TYPES

A. Furnish products as indicated in luminaire schedule included on the drawings.

B. Substitutions: See Section 01.6000 - Product Requirements.

2.2 LUMINAIRES

A. Provide products that comply with requirements of NFPA 70.

B. Provide products that are listed and labeled as complying with UL 1598, where applicable.

C. Provide products listed, classified, and labeled as suitable for the purpose intended.

D. Unless otherwise indicated, provide complete luminaires including lamp(s) and all sockets, ballasts, reflectors, lenses, housings and other components required to position, energize and protect the lamp and distribute the light.

E. Unless specifically indicated to be excluded, provide all required conduit, boxes, wiring, connectors, hardware, poles, foundations, supports, trims, accessories, etc. as necessary for a complete operating system.

F. Provide products suitable to withstand normal handling, installation, and service without any damage, distortion, corrosion, fading, discoloring, etc.

G. Provide luminaires listed and labeled as suitable for wet locations unless otherwise indicated.

H. Recessed Luminaires:

1. Ceiling Compatibility: Comply with NEMA LE 4.
2. Luminaires Recessed in Insulated Ceilings: Listed and labeled as IC-rated, suitable for direct contact with insulation and combustible materials.
3. Luminaires Recessed in Sloped Ceilings: Provide suitable sloped ceiling adapters.

I. Hazardous (Classified) Location Luminaires: Listed and labeled as complying with UL 844 for the classification of the installed location.

J. Luminaires Mounted in Continuous Rows: Provide quantity of units required for length indicated, with all accessories required for joining and aligning.

K. LED Luminaires:

1. Components: UL 8750 recognized or listed as applicable.
2. Tested in accordance with IES LM-79 and IES LM-80.
3. LED Estimated Useful Life: Minimum of 60,000 hours at 70 percent lumen maintenance, calculated based on IES LM-80 test data.

2.3 BALLASTS AND DRIVERS

A. Ballasts/Drivers - General Requirements:

1. Provide ballasts containing no polychlorinated biphenyls (PCBs).
2. Minimum Efficiency/Efficacy: Provide ballasts complying with all current applicable federal and state ballast efficiency/efficacy standards.
3. Electronic Ballasts/Drivers: Inrush currents not exceeding peak currents specified in NEMA 410.

B. Dimmable LED Drivers:

1. Dimming Range: Continuous dimming from 100 percent to five percent relative light output unless dimming capability to lower level is indicated, without flicker.
2. Control Compatibility: Fully compatible with the dimming controls to be installed.

2.4 POLES

A. All Poles:

1. Provide poles and associated support components suitable for the luminaire(s) and associated supports and accessories to be installed.
2. Structural Design Criteria:
   a. Comply with AASHTO LTS.
   b. Wind Load: Include effective projected area (EPA) of luminaire(s) and associated supports and accessories to be installed.
3. Mounting: Install on concrete foundation, height as indicated on the drawings, unless otherwise indicated.
4. Unless otherwise indicated, provide with the following features/accessories:
   a. Top cap.
   b. Anchor bolts with leveling nuts or leveling shims.
   c. Anchor base cover.

B. Metal Poles: Provide ground lug, accessible from handhole or transformer base.

2.5 ACCESSORIES

A. Stems for Suspended Luminaires: Steel tubing, minimum 1/2" size, factory finished to match luminaire or field-painted as directed.

B. Threaded Rods for Suspended Luminaires: Zinc-plated steel, minimum 1/4" size, field-painted as directed.

C. Provide accessory plaster frames for luminaires recessed in plaster ceilings.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate conductors in accordance with NFPA 70.

C. Verify that suitable support frames are installed where required.

D. Verify that branch circuit wiring installation is completed, tested, and ready for connection to luminaires.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.2 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.3 INSTALLATION

A. Coordinate locations of outlet boxes provided under Section 26.0533.16 as required for installation of luminaires provided under this section.

B. Install products in accordance with manufacturer's instructions.

C. Install luminaires in accordance with NECA/IESNA 501.

D. Provide required support and attachment in accordance with Section 26.0529.

E. Install luminaires plumb and square and aligned with building lines and with adjacent luminaires.

F. Recessed Luminaires:

1. Install trims tight to mounting surface with no visible light leakage.
2. Non-IC Rated Luminaires: Maintain required separation from insulation and combustible materials according to listing.
3. Luminaires Recessed in Fire-Rated Ceilings: Install using accessories and firestopping materials to meet regulatory requirements for fire rating.

G. Suspended Luminaires:

1. Unless otherwise indicated, specified mounting heights are to bottom of luminaire.
2. Install using the suspension method indicated, with support lengths and accessories as required for specified mounting height.
3. Provide minimum of two supports for each luminaire equal to or exceeding 4 feet in length, with no more than 8 feet between supports.
4. Install canopies tight to mounting surface.
5. Unless otherwise indicated, support pendants from swivel hangers.

H. Wall-Mounted Luminaires: Unless otherwise indicated, specified mounting heights are to bottom of luminaire.

I. Pole-Mounted Luminaires:

1. Maintain the following minimum clearances:
   a. Comply with IEEE C2.
   b. Comply with utility company requirements.
2. Foundation-Mounted Poles:
   a. Install foundations plumb.
   b. Install poles plumb, using leveling nuts or shims as required to adjust to plumb.
   c. Tighten anchor bolt nuts to manufacturer's recommended torque.
   d. Install non-shrink grout between pole anchor base and concrete foundation, leaving small channel for condensation drainage.
   e. Install anchor base covers or anchor bolt covers as indicated.
3. Grounding:
   a. Bond luminaires, metal accessories, metal poles, and foundation reinforcement to branch circuit equipment grounding conductor.
   b. Provide supplementary ground rod electrode as specified in Section 26.0526 at each pole bonded to grounding system as indicated.
4. Install separate service conductors, 12 AWG copper, from each luminaire down to handhole for connection to branch circuit conductors.
5. Install non-breakaway in-line fuse holders and fuses complying with Section 26.2813 in pole handhole or transformer base for each ungrounded conductor.

J. Install accessories furnished with each luminaire.

K. Bond products and metal accessories to branch circuit equipment grounding conductor.

L. Install lamps in each luminaire.

3.4 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements, for additional requirements.

B. Inspect each product for damage and defects.

C. Operate each luminaire after installation and connection to verify proper operation.

D. Correct wiring deficiencies and repair or replace damaged or defective products. Repair or replace excessively noisy ballasts as determined by Architect.

E. Measure illumination levels at night with calibrated meters to verify compliance with performance requirements. Record test results in written report to be included with submittals.

3.5 ADJUSTING

A. Aim and position adjustable luminaires to achieve desired illumination as indicated or as directed by Architect. Secure locking fittings in place.

B. Luminaires with Field-Rotatable Optics: Position optics according to manufacturer's instructions to achieve lighting distribution as indicated or as directed by Architect.

3.6 CLEANING

A. Clean surfaces according to NECA/IESNA 501 and manufacturer's instructions to remove dirt, fingerprints, paint, or other foreign material and restore finishes to match original factory finish.

3.7 CLOSEOUT ACTIVITIES

A. See Section 01.7800 - Closeout Submittals, for closeout submittals.

B. See Section 01.7900 - Demonstration and Training, for additional requirements.

C. Demonstration: Demonstrate proper operation of luminaires to Architect, and correct deficiencies or make adjustments as directed.

3.8 PROTECTION

A. Protect installed luminaires from subsequent construction operations.

END OF SECTION 26.5600

SECTION 26.5613 - LIGHTING

PART 1 - GENERAL

1.01 DESCRIPTION

A. Furnish style light fixtures as indicated on the Drawings.

1.02 MATERIALS

A. Fasteners

All fasteners shall be non-ferrous to prevent corrosion and ensure longer life.

1.03 OPTICAL ASSEMBLY

A. As indicated on the Drawings for each lighting fixture.

1.04 ELECTRICAL ASSEMBLY

A. All selected components shall be UL recognized and be an integral part of the fixture. The fixture will carry a UL, cUL label and will be suitable for wet locations. Socket will include, nickel plated screw shell with center contact.

1.05 BALLASTS

A. All ballasts are regulating with power factors better than 90% (HPF). Ballast shall provide +/- 5% lamp power regulation with +/- 10% input voltage regulation. Ballasts are factory prewired and tested. Ballast shall be twist-lock type for easier serviceability.

1.06 FINISH

A. Thermoset polyester powdercoat, laboratory tested for superior weatherability and fade resistance in accordance with ASTM B-117-64 and ASNI/ASTM G53-77 specifications.

1.07 WARRANTY

A. Minimum three year limited warranty.

1.08 LAMP POST

A. As indicated on the Drawings for each lighting type.

1.09 FOUNDATION

A. As indicated on the Drawings and recommended by the manufacturer for each type of lighting fixture.

END OF SECTION

SECTION 27.1000 - STRUCTURED CABLING FOR VOICE AND DATA - OUTSIDE AND INSIDE PLANT

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Telecommunications service entrance to building(s).

B. Cabling and pathways inside building(s).

C. Cabling and pathways connecting building(s).

D. Distribution frames, cross-connection equipment, enclosures, and outlets.

E. Grounding and bonding the telecommunications distribution system.

1.2 RELATED REQUIREMENTS

A. Section 337119 - Electrical Underground Ducts and Manholes.

B. Section 078400 - Firestopping.

C. Section 260526 - Grounding and Bonding for Electrical Systems: Electrical system grounding and bonding.

D. Section 260534 - Conduit.

E. Section 260536 - Cable Trays for Electrical Systems.

F. Section 260537 - Boxes.

G. Section 262726 - Wiring Devices.

1.3 REFERENCE STANDARDS

A. EIA-310 - Cabinets, Racks, Panels, and Associated Equipment; Electronic Industries Association; Revision D, 1992.

B. CEA-310 - Cabinets, Racks, Panels, and Associated Equipment; Consumer Electronics Association; Revision E, 2005.

C. ICEA S-90-661 - Category 3, 5, 5e, 6 and 6A Individually Unshielded Twisted Pair Indoor Cable for Use in General Purpose and LAN Communications Wiring Systems; Insulated Cable Engineers Association; 2002.

D. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

E. TIA-455-21 - FOTP-21 - Mating Durability of Fiber Optic Interconnecting Devices; 2012.

F. TIA-492AAAB-A - Detail Specification for 50-um Core Diameter/125-um Cladding Diameter Class Ia Graded-Index Multimode Optical Fibers; 2009.

G. TIA-492CAAA - Detail Specification for Class IVa Dispersion-Unshifted Single-Mode Optical Fibers; 1998 (R 2002).

H. TIA-526-7 - OFSTP-7 - Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant; 2002.

I. TIA-526-14 - OFSTP-14 - Optical Power Loss Measurements of Installed Multimode Fiber Cable Plant; Rev B, 2010.

J. TIA/EIA-568-C.1 - Commercial Building Telecommunications Cabling Standard - Part 1: General Requirements; Rev C, 2012; Addenda 1-7.

K. TIA/EIA-568-C.2 - Commercial Building Telecommunications Cabling Standard - Part 2: Balanced Twisted Pair Cabling Components; Rev C, 2012; Addenda 1-11.

L. TIA/EIA-568-C.3 - Commercial Building Telecommunications Cabling Standard - Part 3: Optical Fiber Cabling Components Standard, and Addendum 1 - Additional Transmission Performance Specifications for 50/125 um Optical Fiber Cables; Rev C, 2012; Addendum 1.

M. TIA-569 - Commercial Building Standard for Telecommunications Pathways and Spaces; 2012.

N. TIA-570 - Residential Telecommunications Infrastructure Standard; 2009.

O. TIA/EIA-606 - Administration Standard for the Telecommunications Infrastructure; Rev B, 2012.

P. ANSI/J-STD-607 - Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications; Rev A, 2002.

Q. UL 444 - Communications Cables; Current Edition, Including All Revisions.

R. UL 497 - Standard for Protectors for Paired-Conductor Communications Circuits; Current Edition, Including All Revisions.

S. UL 1863 - Standard for Communications-Circuit Accessories; Current Edition, Including All Revisions.

T. USDA RUS 345-83 - Gas Tube Surge Arrestors (PE-80); US Department of Agriculture; 1982.

1.4 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
1. Storage and handling requirements and recommendations.

2. Installation methods.

C. Shop Drawings: Show compliance with requirements on isometric schematic diagram of network layout, showing cable routings, telecommunication closets, rack and enclosure layouts and locations, service entrance, and grounding, prepared and approved by BICSI Registered Communications Distribution Designer (RCDD).

D. Manufacturer Qualifications.

E. Installer Qualifications.

F. Field Test Reports.

G. Project Record Documents: Prepared and approved by BICSI Registered Communications Distribution Designer (RCDD).

1. Record actual locations of outlet boxes and distribution frames.
2. Show as-installed color coding, pair assignment, polarization, and cross-connect layout.
3. Identify distribution frames and equipment rooms by room number on contract drawings.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: At least 3 years' experience manufacturing products of the type specified.

B. Installer Qualifications: A company having at least 3 years' experience in the installation and testing of the type of system specified, and:

1. Employing a BICSI Registered Communications Distribution Designer (RCDD).
2. Supervisors and installers factory certified by manufacturers of products to be installed.
3. Employing experienced technicians for all work; show at least 3 years' experience in the installation of the type of system specified, with evidence from at least 2 projects that have been in use for at least 18 months; submit project name, address, and written certification by user.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Keep stored products clean and dry.

1.7 WARRANTY

A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a 15 week period after Date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Cabling and Equipment:

B. Hubbell Premise Wiring

1. Substitutions:
   a. Systimax GigaSpeed solution, Not Uniprise
   b. Panduit Mini-Com with Panduit cable
   c. Leviton Berk-Tek
   d. See Section 260100 - Product Requirements.
   e. Cable and connectivity manufacturer must be the same.

2.2 SYSTEM DESIGN

A. Provide a complete permanent system of cabling and pathways for voice and data communications, including cables, conduits and wireways, pull wires, support structures, enclosures and cabinets, and outlets.

1. Comply with TIA/EIA-568 and TIA/EIA-569, latest editions.
2. Provide fixed cables and pathways that comply with NFPA 70 and ANSI/J-STD-607 and are UL listed or third party independent testing laboratory certified.
3. Provide connection devices that are rated for operation under conditions of 32 to 140 degrees F at relative humidity of 0 to 95 percent, noncondensing.
4. In this project, the term plenum is defined as return air spaces above ceilings, inside ducts, under raised floors, and other air-handling spaces.

B. Capacity:

1. Horizontal Cabling
   a. MDF to IDF's
      1) Armored 12 strand single mode (OS2) fiber optic Hubbell PN# HFCD150012PS, Armored 12-strand multi-mode (OM4) fiber optic Hubbell PN#HFCB150012P4, and 25-pair copper Mohawk PN#M58142.
      2) Number of outlets:
         (a) Classrooms: Refer to the drawings for exact counts of ports. Contractor shall calculate based on floor plans.
         (b) Refer to floor plans for Wi-Fi locations (4 drops per location).
         (c) Refer to floor plans for Camera locations (1 drops per interior location, 2 drops per exterior location).
         (c) Provide additional outlets where indicated on drawings.

C. Main Distribution Frame (MDF): MDF as support structure for terminating backbone cables, functioning as point of presence to external service provider.

1. Located as indicated on the drawings.
2. Capacity: As required to terminate all cables required by design criteria plus minimum 25 percent spare space.
3. Provide new 4-post racks. Hubbell PN# SF841948.
4. Provide cable management Hubbell PN#VME614C2 and Hubbell PN#HM24C
5. Provide (2) PDU's for each 2-post rack Tripplite# PDUMNV30LX
6. Provide Uninterruptible power Supply (UPS)Eaton PN# 9PX3000RT-L

D. Intermediate Distribution Frames (IDF): Support structures for terminating horizontal cables that extend to data and telecommunications outlets.

1. Locate intermediate distribution frames as indicated on the drawings.
2. Provide 4-post racks Hubbell PN#SF841936
3. Provide enclosed wall mounted racks where indicated. Hubbell cat#HSQ2436
4. Provide cable management Hubbell PN#VME677 and Hubbell PN#HM24C
5. Provide (2) PDU's for each 2-post rack Tripplite# PDUMNV30LX
6. Provide Uninterruptible power Supply (UPS)Eaton PN# 9PX3000RT-L

E. Backbone Cabling: Cabling, pathways, and terminal hardware connecting intermediate distribution frames (IDF's) with main distribution frame (MDF), wired in star topology with main distribution frame at center hub of star.

F. Cabling to Outlets: Specified horizontal cabling, wired in star topology to distribution frame located at center hub of star; also referred to as "links".

2.3 PATHWAYS

A. Conduit: As specified in Section 260534; provide pull cords in all conduit.

B. Cable Trays: As specified in Section 260536.

2.4 COPPER CABLE AND TERMINATIONS

A. Copper Horizontal Cable: TIA/EIA-568 Category 6A, (.260 OD) solid conductor unshielded twisted pair (UTP), 23 AWG, 100 ohm; 4 individually twisted pairs; covered with blue jacket and complying with all relevant parts of and addenda to latest edition of TIA/EIA-568 and UL 444.

1. In plenums, provide NFPA 70 type CMP plenum-rated cable, Hubbell PN#C6ASPDSB
2. Testing: Furnish factory reel tests.
3. Provide jacket colors as follows:
   a) Data: Blue
   b) Wireless: Yellow
   c) Access Control: Purple
   d) Video Surveillance: Green

e) Paging/Clock System: Orange

B. Copper Cable Terminations: Insulation displacement connection (IDC) type using appropriate tool; use screw connections only where specifically indicated.

C. Jacks and Connectors: RJ-45, angled, non-keyed, terminated with 110-style insulation displacement connectors; high impact thermoplastic housing; complying with same standard as specified horizontal cable and UL 1863. Hubbell PN# HJU6Axx

1. Performance: 500 mating cycles.
2. Voice and Data Jacks: 4-pair, pre-wired to T568A configuration, with color-coded indications for T568B configuration.

D. Copper Backbone Cable: TIA/EIA-568 Category 5e solid conductor unshielded twisted pair (UTP), 24 AWG, 100 ohm; 25 pair; covered with gray thermoplastic jacket and complying with all relevant parts of and addenda to latest editions of TIA/EIA-568 and ICEA S-90-661, and UL 444. Cable shall be Mohawk #M58142. Terminate copper backbone cables on Cat 5e patch panels in the network rack.

1. In plenums, provide NFPA 70 type CMP plenum-rated cable.
2. Provide cable having conductors twisted at minimum rate of two per foot; actual length and frequency of twists at manufacturer's option.
3. Color code conductors in accordance with ICEA S-90-661.
4. Testing: Furnish factory reel tests.

2.5 FIBER OPTIC CABLE AND ADAPTORS

A. Fiber Optic Backbone Cable:

1. 12-fiber, Armored OS2 single mode 8/125 um, complying with TIA-492CAAA; covered with yellow cable jacket and complying with relevant portions of and addenda to latest edition of TIA/EIA-568. PN#HFCD10xxPS
2. 12-fiber, armored OM4 multimode 50/125 um, complying with TIA-492AAAB; covered with aqua cable jacket and complying with relevant portions of and addenda to latest edition of TIA/EIA-568. PN#HFCD1012P5

B. Fiber Patch Cords shall be part #DFHPCLCLCS3SM and DFHPCLCLCF3MM, 3 meter length.

C. Fiber Enclosures shall be Hubbell #FCR2U9SPX, with FSPNLCDS6 Duplex MM Adapter Panels, #FCLC900K50GM12 & FCLC900KSM12 SM and MM connectors.

D. Fiber Optic Adapters and Connectors: Duplex LC, push-on-push-off type, multimode adaptors with zirconia ceramic alignment sleeves; complying with relevant parts and addenda to latest edition of TIA/EIA-568 and with maximum attenuation of 0.3 dB at 1300 nm with less than 0.2 dB change after 500 mating cycles when tested in accordance with TIA-455-21.

2.6 CROSS-CONNECTION EQUIPMENT

A. Connector Blocks for Category 6A and Up Cabling: Type 110 insulation displacement connectors; capacity sufficient for cables to be terminated plus 25 percent spare.

B. Patch Panels for Copper Cabling: Sized to fit EIA standard 19 inch wide equipment racks; 0.09 inch thick aluminum; cabling terminated on Type 110 insulation displacement connectors; printed circuit board interface. Provide Hubbell #HPJ6A48, Comes with Rear management bar

1. Jacks: Non-keyed RJ-45, suitable for and complying with same standard as cable to be terminated; maximum 48 ports per standard width panel.
2. Capacity: Provide ports sufficient for cables to be terminated plus 25 percent spare.
3. Labels: Factory installed laminated plastic nameplates above each port, numbered consecutively; comply with TIA/EIA-606 using encoded identifiers.
4. Provide incoming cable strain relief and routing guides on back of panel.
5. Patch Cords: Provide one patch cord for each pair of patch panel ports.
   a. Patch Cords shall be Hubbell #HC6Axxyy ten feet in length.
6. Manufacturer's patch cords must be used to provide a Channel Warranty
7. Category 6A panels shall meet or exceed Category 6A transmission requirements for connecting hardware, as specified in ANSI/TIA/EIA-568.2-D, Transmission Performance specifications for 4-pair 100 OHM cat 6A cabling systems
8. Panels shall be tested to 150% of IEEE 802.3bt DTE Power specification with no degradation of performance or materials
9. Stainless steel face plates must be used. Hubbell SSFL series

C. Patch Panels for Fiber Optic Cabling: Sized to fit EIA standard 19 inch wide equipment racks; 0.09 inch thick aluminum.

1. Adaptors: As specified above under FIBER OPTIC CABLING; maximum of 24 duplex adaptors per standard panel width.
2. Labels: Factory installed laminated plastic nameplates above each port, numbered consecutively; comply with TIA/EIA-606 using encoded identifiers.
3. Provide incoming cable strain relief and routing guides on back of panel.
4. Provide rear cable management tray at least 8 inches deep with removable cover.
5. Provide dust covers for unused adaptors.
6. Patch Cords: Provide one patch cord for each pair of patch panel ports.

2.7 ENCLOSURES

A. Backboards: Interior grade plywood without voids, 3/4 inch thick; UL-labeled fire-retardant.

1. Size: 96 inches wide by 96 inches high.
2. Do not paint over UL label.

B. Server Cabinets: CEA-310 standard 700-millimeter-wide component racks.

1. Floor Mounted Cabinet: 16 gauge steel construction with corrosion resistant finish; vertical and horizontal cable management channels, top and bottom cable troughs, PDU channel, and grounding lug. Provide Hubbell PN# HCC423240BK
2. Provide Vertical and HZ cable management PN# HCC42UVCMBK Horizontal PN#HM24C.

C. Equipment Racks and Cabinets: CEA-310 standard 19 inch wide component racks.

1. Floor Mounted Racks: 16 gage steel construction with corrosion resistant finish; vertical and horizontal cable management channels, top and bottom cable troughs, and grounding lug. Provide Hubbell PN#SF841942 with PN#VME67, Horizontal managers PN#HM24C

D. Building Entrance Protector: Factory fabricated panel to connect incoming cable and interior cable to protector modules.

1. Capacity: One protector module per pair in incoming cable.
2. Protector Modules: Type rated for the application.
   a. Solid State Type: Complying with UL 497.
3. Incoming Side: Provide connector blocks of type specified.
4. Outgoing Side (to Interior): Backbone cable wired to connector blocks.

E. Outlet Boxes: For flush mounting in walls; depth as required to accommodate cable manufacturer's recommended minimum conductor bend radius.

1. Size, Unless Otherwise Indicated: 4 inches square by 2-1/8 inches deep.
2. Wall-Mounted Telephones: 4 inches high by 2 inches wide by 2-1/8 inches deep.
3. Wall Plates: Material and finish to match wiring device and wall plate finishes specified in Section 262726, complying with system design standards and UL 514C.
4. Faceplates: Stainless Steel, complying with system design standards and UL 514C.
5. Labels: Comply with TIA/EIA-606 using encoded identifiers; label each jack on the face plate as to its function with a unique numerical identifier.

2.7 POWER DISTRIBUTION UNIT (PDU)

A. Equipment Racks and Enclosures: Tripplite# PDUMNV30LX
Tripp Lite Monitored PDU Vertical Mount TAA

1. Single Phase, 120V 2.9kW
2. **Input: L5-30P 10ft**
3. Output: (24)5-15/20R
4. Dims: 70"H x 2.19"W x 1.75"

2.8 UNINTERRUPTIBLE POWER SUPPLY (UPS)

A. Provide Uninterruptible power Supply (UPS)Eaton PN# 9PX3000RT-L

1. Eaton 9PX Lithium Ion Series
2. Single Phase Online Rack/Tower UPS
3. 3000VA/2700W, 120V, 50/60Hz
4. L5-30P input line cord, 8ft
5. (6) 5-20R, (1**) L5-30R output receptacles**
6. 10.2 minutes internal runtime at full load
7. 4-post rail kit included
8. Provide Network Card
9. Dims: 3.4"H x 17.3"W x 23.8"D each
10. Weight: 53 lbs each

PART 3 EXECUTION

3.1 INSTALLATION - GENERAL

A. Comply with latest editions and addenda of TIA/EIA-568, TIA/EIA-569, ANSI/J-STD-607, NFPA 70, and SYSTEM DESIGN as specified in PART 2.

B. Comply with latest editions and addenda of TIA-570, ANSI/J-STD-607, NFPA 70, and SYSTEM DESIGN as specified in PART 2.

3.2 PATHWAYS

A. Install with the following minimum clearances:

1. 48 inches from motors, generators, frequency converters, transformers, x-ray equipment, and uninterruptible power systems.
2. 12 inches from power conduits and cables and panelboards.
3. 5 inches from fluorescent and high frequency lighting fixtures.
4. 6 inches from flues, hot water pipes, and steam pipes.

B. Conduit:

1. Do not install more than 2 (two) 90 degree bends in a single horizontal cable run.
2. Leave pull cords in place where cables are not initially installed.
3. Conceal conduit under floor slabs and within finished walls, ceilings, and floors except where specifically indicated to be exposed.
    a. Conduit may remain exposed to view in mechanical rooms, electrical rooms, and telecommunications rooms.
    b. Treat conduit in crawl spaces and under floor slabs as if exposed to view.
    c. Where exposed to view, install parallel with or at right angles to ceilings, walls, and structural members.

    d. Under floor slabs, locate conduit at 12 inches, minimum, below vapor retarder; seal penetrations of vapor retarder around conduit.

C. Outlet Boxes:

1. Coordinate locations of outlet boxes provided under Section 260537 as required for installation of telecommunications outlets provided under this section.
   a. Mounting Heights: Unless otherwise indicated, as follows:
      1) Telephone and Data Outlets: 18 inches above finished floor.
      2) Telephone Outlets for Side-Reach Wall-Mounted Telephones: 54 inches above finished floor to top of telephone.
      3) Telephone Outlets for Forward-Reach Wall-Mounted Telephones: 48 inches above finished floor to top of telephone.
   b. Orient outlet boxes for vertical installation of wiring devices unless otherwise indicated.
   c. Provide minimum of 24 inches horizontal separation between flush mounted outlet boxes installed on opposite sides of fire rated walls.

D. Grounding and Bonding: Perform in accordance with ANSI/J-STD-607 and NFPA 70.

E. Firestopping: Seal openings around pathway penetrations through fire-rated walls, partitions, floors, and ceilings in accordance with Section 078400.

3.3 INSTALLATION OF EQUIPMENT AND CABLING

A. Cabling:

1. Do not bend cable at radius less than manufacturer's recommended bend radius; for unshielded twisted pair use bend radius of not less than 4 times cable diameter.
2. Do not over-cinch or crush cables.
3. Do not exceed manufacturer's recommended cable pull tension.
4. When installing in conduit, use only lubricants approved by cable manufacturer and do not chafe or damage outer jacket.

B. Service Loops (Slack or Excess Length): Provide the following minimum extra length of cable, looped neatly:

1. At Distribution Frames: 120 inches.
2. At Outlets - Copper: 12 inches.
3. At Outlets - Optical Fiber: 39 inches.

C. Copper Cabling:

1. Category 5e/6: Maintain cable geometry; do not untwist more than 1/2 inch from point of termination.
2. For 4-pair cables in conduit, do not exceed 25 pounds pull tension.
3. Copper Cabling Not in Conduit: Use only type CMP plenum-rated cable as specified.

D. Fiber Optic Cabling:

1. Prepare for pulling by cutting outer jacket for 10 inches from end, leaving strength members exposed. Twist strength members together and attach to pulling eye.

2. Support vertical cable at intervals as recommended by manufacturer.

E. Floor-Mounted Racks and Enclosures: Permanently anchor to floor in accordance with manufacturer's recommendations.

F. Field-Installed Labels: Comply with TIA/EIA-606 using encoded identifiers.

1. Cables: Install color coded labels on both ends.
2. Outlets: Label each jack on its face plate as to its type and function, with a unique numerical identifier.
3. Patch Panels: Label each jack as to its type and function, with a unique numerical identifier.
4. Patch Cords: Label with jack identifier corresponding to initial installation.

3.4 FIELD QUALITY CONTROL

A. Comply with inspection and testing requirements of specified installation standards.

B. Visual Inspection:
1. Inspect cable jackets for certification markings.
2. Inspect cable terminations for color coded labels of proper type.
3. Inspect outlet plates and patch panels for complete labels.
4. Inspect patch cords for complete labels.

3.5 FINAL TESTING AND INSPECTION

A. Provide testing in accordance with ANSI/TIA/EIA-568-C.1.

B. Cable Test: Provide prior to substantial completion, a Performance Evaluation Report, which will contain the following:

1. Cable Test: List by cable number each UTP Cable in the project, which details:
   a. UTP Cables:
      1) Cable ID Number
      2) List continuity, reversal, open, shorts and miswires
      3) Category performance
      4) List other discrepancies with the UTP installation (bad terminations, faulty labeling, etc).
      5) Tester printout for each cable.
2. UTP Cable Testing: Test each cable pair of each cable after installation for Specified Category performance. Conduct test with a tester designed for testing above cable (with RJ-45 jacks installed) from each data outlet to associated patch cord through +0 panel jack (Channel). Provide printout for each test as part of the Performance Evaluation Report. Minimum performance categories for report are to be as follows:
   a. Wire Map/Continuity
   b. Length
   c. Near End Crosstalk (pair to pair) NEXT
   d. Near End Crosstalk (power sum) PSNEXT

e. Equal Level Far-End Crosstalk Loss (pair to pair) ELFEXT
f. Equal Level Far-End Crosstalk Loss (power sum) PSELFEXT
g. Return Loss
h. Attenuation
i. Propogation Delay
j. Delay Skew
k. PSACR (Powersum Attenuation – Crosstalk Ratio)

3. System Performance Report: Provide a narrative detailing the system as a whole, in regard to the quality of installation and any discrepancies affecting performance. This narrative to indicate a summary of the above Cable Test, as well as an accurate summary of specified Category performance as well as capability of the cabling system to perform at specified Category bandwidth.

3.6 WARRANTY

A. The installation shall be provided with a minimum 25-year **CHANNEL** warranty for strict compliance with the performance requirements of ANSI/TIA/EIA-568-C.1 to support and conform to ANSI/TIA/EIA-568-C.1 specifications covering any current or future application which supports transmission over a properly constructed horizontal cabling system premises network which meets the channel performance as described in ANSI/TIA/EIA-568-C.2.

END OF SECTION 27.1000

SECTION 27.4100 - FITNESS AND DAY ROOM SOUND SYSTEMS

PART 1 GENERAL

1.1 WORK INCLUDED

A. The Electrical Contractor, as part of this section, shall provide, install and test a complete sound reinforcement system as specified herein for areas indicated on the drawings.

B. The Electrical Contractor shall furnish all conduit, wire, connectors, hardware and other incidental items necessary for the complete and proper operation of the sound reinforcement system.

1.2 SUBMITTALS

A. Submit the following in accordance with Conditions of Contracts and Division 1 specifications sections:

B. Audio functional drawings for each system

C. Rack elevations

D. Loudspeaker mounting details

E. Conduit riser

F. AV plate details

G. Cable pull schedule

H. Manufacturer equipment specification sheets

1.3 QUALIFICATIONS OF BIDDERS

A. The bidder shall be a firm with a minimum of 5 years of experience in the fabrication, assembly, and installation of audio systems of similar magnitude and quality as specified in these documents, and shall submit documentation to this effect with the bid return.

B. The bidder shall be I.C.I.A / A.V.S.P certified.

1.4 ALTERNATE EQUIPMENT

A. This equipment was selected to establish a standard of quality and performance. The contractor may offer substitutes for approval but the burden of proof of equality shall be with the contractor.

B. Pre-approval submittals shall contain a component-by-component comparison of all specification lines. Differences shall be clearly high-lited with

C. The contractor shall provide any additional documentation, samples, or performance tests required by the Engineer in order to establish proof of equality with the specified equipment.

D. All substitutions shall provide equal of greater system performance and function. No substitute equipment shall be purchased or installed without approval by the Engineer.

E. Final approval of the substituted equipment shall be given after the system has been installed. Failure to meet the specification, as determined by the Engineer, shall result in the removal of the substituted equipment and the installation of the specified equipment without any additional cost to the owner.

F. When a piece of specified equipment has been discontinued by the manufacturer or is unavailable due to lack of inventory, the contractor may substitute the *manufacturers recommended* replacement without notice to the Engineer. If a piece of equipment is not replaced by a newer model with the same or better features and a different manufacturer can supply a piece of equipment that meets or exceeds the original specified equipment, the contractor shall notify the Engineer and submit the equipment cut sheets for approval.

1.5 EXCEPTIONS

A. Any and all exceptions to these specifications and related drawings must be made with the submission of the bid. In the absence of exceptions, the specifications and related drawings shall be binding in letter and intent on the successful bidder. It will also be understood that the bidder has examined the design and specifications in detail, and is prepared to take full responsibility for the performance of the complete installation as designed and specified.

1.6 SUB-CONTRACT INFORMATION

A. Any and all sub-contractors that a bidder plans to utilize for this project are to be listed with the references and qualifications in the bid submission. The successful bidder shall supervise all sub-contract work. Any and all sub-contract work is the complete and sole responsibility of the contractor.

1.7 SPECIFICATION INFORMATION REQUESTS AND QUESTIONS

A. Any requests for clarification shall be submitted to Mr. DJ Seibert of Snyder Hoffman Associates, 1005 West Lehigh Street, Bethlehem, PA, 18018, 610-694-8020, dseibert@snyderhoffman.com. All requests are to be made in writing and submitted no later than ten days prior to bid submission.

1.8 CERTIFICATIONS AND REPRESENTATIONS

A. Quality of materials: All equipment items and installation materials will be new. No previously owned, demonstrated or otherwise used items will be provided. Note that prior to equipment installation and on-site integration, all equipment items shall be performance tested and quality checked to insure full functionality of each equipment item.

B. Tax Statement Certification: The contractor certifies that all local, state, and federal taxes are separately listed in any price quotations.

1.9 QUALITY ASSURANCE

A. All equipment and materials provided for this contract are to be new and shall meet or exceed the latest published specification of the manufacturer for that item.

B. All equipment shall be UL listed or equivalent.

1.10 NOT IN CONTRACT

A. Some equipment related to the audio system will be provided under the Electrical Contract. Unless otherwise indicated in these specifications or related drawings, these will include the following:

1. All electrical breaker / load panels.
2. Receptacles / switches.

PART 2 PRODUCTS

2.1 EQUIPMENT DESCRIPTION

A. The Fitness & Day Rooms shall be provided with a complete locally controllable audio system. All equipment shall conform to the manufacturer's latest published specifications in feature and function both physically and electronically whether or not those specifications are delineated herein. The manufacturer's latest published specifications shall be considered as part of this text.

2.2 MIXER / AMPLIFIER:

A. Provide Ashly Audio mXa-1502 or equal. The unit shall consist of a two-channel, multi-mode Class D amplifier capable of driving 2 Ohm loads at full power. Each channel shall have selectable output mode of Low Z, 25V, 70V, or 100V with a maximum rated output power of 150W per channel in all modes and will be bridgeable to deliver a single channel power output of 300W @4 or 8 Ohms. There shall be an automatic but defeatable sleep mode consuming <1W. A switch-mode power supply with active Power Factor Correction (PFC) shall auto-detect 100 – 240VAC mains and operate from 70 – 270VAC.

The unit shall have a multi-channel, user-programmable DSP capable of mixing 8-mic/line inputs, plus 4 stereo line inputs into 4 independent outputs. The mic inputs shall each provide 48V phantom power, switchable per channel via software. Each Input DSP channel shall have up to six assignable DSP function blocks, which shall be arrangeable in any order by the user and which may include: Gain, VCA Gain, DCA Gain, Remote Gain, 10-band PEQ, 31-band graphic EQ, HPF, LPF, Compressor, Auto-Leveler, Brick Wall Limiter, Gate, Feedback Suppressor, Delay, Signal Generator & Meter. DSP functions for the stereo channels shall also be stereo. Each Input shall allow routing to up to four mixers, each of which provides: Gain, Meter, Auto-Mix & Ducker assignable to each input channel. The unit's Output DSP consists of four channels, each having six assignable blocks, also arrangeable in an order by the user and which may include: Gain, VCA Gain, DCA Gain, Remote Gain, 10-band PEQ, 31-band graphic EQ, HPF, LPF, Compressor, Auto-Leveler, Brick Wall Limiter, Gate, Ambient Noise Compensation, FIR Filters, Delay, X-Over (2, 3 & 4-way), Signal Generator & Meter. Each Output Channel shall allow receiving a signal from any one of the four mixers as determined by the user. The four Output Channels shall feed the two amplifier channels (AMP OUT 1 & AMP OUT 2) and the two AUX Line Out Channels (AUX OUT 1 & AUX OUT 2) respectively in a fixed configuration.

The unit's DSP shall also incorporate an RTC (Real-Time Clock), which can be synchronized to an external clock source (such as a PC or NTP server). The unit shall have a built-in scheduler (driven by the RTC), which can be programmed by the user for various timed operations, such as: power-on/standby, preset recall, sub-preset recall, source select, channel mute/unmute & channel gain adjustment (±). The unit's DSP shall be managed by an internal web-server and database and controlled by a networked PC or tablet device which is browser-enabled. It shall therefore not be required that a separate software application be installed on a PC or other device, in order for the user to access DSP functions.

Mechanical: The front panel shall have LEDs indicating Input Signal (green), Clip/Mute (Red), Current (Green) and Temperature (Yellow) for each power channel and will also have global LEDs for indicating

the amp's Protect (Red), COM (Green), Disable (Yellow) and Sleep (Blue) modes. The front panel shall have four momentary buttons that may be user-programmed to perform preset recall or source-select functions. There shall also be a round momentary Power button with a white LED backlight to indicate the amp's "ON" status. The front grille shall be composed of high-impact resin and shall be perforated to allow proper airflow.

The unit's rear panel shall have 8-Balanced Mic/Line inputs each with removeable 3.5mm Euroblock connectors and will also have 4-stereo unbalanced Line Inputs, each with dual RCA phono connectors. The unit will have two balanced line (AUX) outputs with removeable 3.5mm Euroblock connectors and two powered speaker outputs, which shall have 7.62mm Euroblock connectors. The unit shall have 8-adressable GPI & 2-GPO, 2-Amplifier Fault, 3-VC Remote, 1-Serial Data and 1-Amplfier Standby ports, all with removeable 3.5mm Euroblock connectors. There shall be a DIP-switch pair for each power amp allowing selection of amplifier mode (Low Z/25/70/100V). The unit shall be networkable and shall have an RJ45 100/1000BaseT Ethernet jack. The unit shall have a detachable IEC power receptacle capable of working with region appropriate power cables.

The unit shall be housed in a 1U metal chassis, with front and side perforations to allow proper cooling from the variable-speed fan. The unit shall weigh <11.3 lbs. (5.1kg) and shall measure 19" W x 1.75"H x 14.54" D (483mm x 45mm x 369mm) and mount in a standard 19" rack. There shall be a five-year warranty for units purchased in the US.

B. Provide Ashly Audio AquaTouch7, 7" color touch-panel for remote control access to the Ashly mX81502 mixer/amplifier. Provide necessary mounting brackets for a flush apperance.

2.3 MULTI-MEDIA PLAYER

A. Provide Tascam BD-MP1MKII or equal. The media player shall feature:

Supported Media: Blu-ray: BD25, BD50, BD-ROM, BD-R(SL,DL), BD-RE(SL,DL), DVD: DVD-ROM, DVD-R (SL, DL), DVD-RW, DVD+R (SL, DL), DVD+RW, CD: CD-DA, CD-R, CD-RW.

Disc formats: Blu-ray 3D supported, Blu-ray BDMV, BDAV: DVD: DVD-Video, DVD-VR, AVCHD, File formats USB flash drive and SD card formats must use FAT16,FAT32, exFAT or NTFS file systems.

File Formats: Video: ASF, MPG, AVI, 3GP, DAT, MKV, MOV, M2TS, OGM, TP, TS, MP4, WMV, Audio: WAV, MP3, WMA, AAC, FLAC, APE, Picture: JPEG, GIF, PNG, Supported subtitle file format: sub, .ass, idx+sub (.idx+.sub)

Audio: BD/DVD/USB/SD, Sampling frequency: 44.1k/ 48k/ 64k/ 88.2k/ 96k/176.4k/ 192k Hz, Bit length: 16/24 bit

CD Sampling frequency: 44.1k/48k Hz, Bit length: 16/24bit, MP3/WMA Sampling frequency: 32k/44.1k/48k Hz, MP3: 112k to 320k bps, WMA: 48k to 192k bps

HDMI Output: Connector: HDMI 19pin Type A, Resolution: 480i/576i, 480p/576p, 720p, 1080i, 1080p, Aspect ratio: 16:9 Full, 16:9 Normal, 4:3 Pan & Scan, 4:3 Letterbox, Video format: NTSC, PAL, Multi, HDMI signal system: RGB PC level, RGB Video level, YCbCr(4:4:4), YCbCr(4:2:2)

Digital Audio output: COAXIAL, Connector: RCA pin jacks, Format: IEC60958-3(S/PDIF), Output impedance: 75 Ω or lower. Analog audio outputs: Balanced Connectors: XLR-3-32(1 : GND, 2 : HOT, 3 : COLD) × 2 (Stereo), Normal output level: +4dBu (1.23 Vrms), Maximum output level: +20dBu (7.75 Vrms), Output impedance: 200Ω or lower

Unbalanced Connector: RCA pin jack × 1 pair, Normal output level: -10dBV (0.316 Vrms), Maximum output level: +6dBV (2.0 Vrms), Output impedance: 210Ω or lower

7.1ch Audio outputs Connector: RCA x8 (FL/FR/SL/SR/SBL/SBR/C/SW), Connector Color: FL/SL/SBL: White, FR/SR/SBR: Red C/SW: Black, Normal output level: -10dBV (0.316 Vrms), Maximum output level: +6dBV (2.0 Vrms), Output impedance: 210Ω or lower

RS-232C Connector: D-sub 9pin, Format: RS-232C compliant

ETHERNET Connector: RJ-45, Protocol: 10BASE-T/100BASE-TX, Cable: Category 5e or faster

USB Connector: USB type-A ×2 (front ×1, back ×1), Protocol : USB2.0 compliant, Rated supply voltage DC 5V, 1A, Mass storage class Less than 2 TB, File format: FAT16/FAT32/exFAT/NTFS, USB device class:Mass storage class SD slot Supported media: SD (512 MB-2 GB), SDHC (4 GB-32 GB), SDXC (64GB - 512GB), File format: FAT16/FAT32/exFAT/NTFS

Output Section: Analog Out L/R- Type: RCA terminal, Load impedance: Over 10 k/kohms, Output level: 2 Vrms / at 10 k/kohms load.

2.4 WIRELESS BLUETOOTH EXTENDER

A. Provide RDL (Radio Labs) D-BT1A wall mounted Bluetooth audio Format-A interface or equal.

1. The interface shall feature:
    a. Bluetooth Audio Input for Installed Sound System
    b. Intuitive Single Button Pairing with LED Status Indication
    c. Special Software Not Required for Module SetupCustomize the Module ID Name and Programming Password through the Bluetooth Connection
    d. Sends Received Bluetooth Audio to RDL Format-A Receivers
    e. Mono Summed or Stereo Audio Input Mode is Switch-Selectable on Rear Panel
    f. Rear-Panel Switch Selects which RJ45 Pair (A, B or C) is Fed in Mono Summed Mode
    g. Daisy-Chain up to Three D SERIES-BT1A modules to One Format-A Receiver in Mono Mode
    h. Remotely Powered through Twisted Pair Cable
    i. Signal and Power Pair Pass-Through on RJ45 Jacks

Required additional equipment shall include at least one compatible Format-A receiver and its recommended power supply.

Provide RDL (Radio Labs) TX-TPR2A active two-pair receiver, twited pair Format-A or equal. The TX-TPR2A is a two-pair audio receiving module compatible with RDL Format-A twisted pair products. Two outputs are provided corresponding to the two signal pairs B and C. The audio signal received on each pair of the RJ45 INPUT jack feeds the corresponding -10 dBV unbalanced output and the +4 dBu balanced output on the detachable terminal block. A studio-quality amplifier feeds the outputs at the correct operating level.

The TX-TPR2A features bridging inputs, allowing it to be connected to the LOOP OUT jack of other receivers. The bridging input circuits used in all FORMAT-A twisted pair receivers allow connection of up to 10 receiver outputs for each cable pair.The TX-TPR2A may be powered directly from a 24 Vdc power supply. Local power connected to the module is also fed to all modules connected to the INPUT

RJ45 jack. The TX-TPR2A may be remotely powered through the twisted pair cable from any other module, signal distributor or RDL power inserter connected to the same twisted pair cable. Module power is indicated by a front-panel LED.

2.5 LOUDSPEAKERS

A. Provide *Desono P30DTD*, 2-way, 4.25" pendant loudspeaker or equal. The loudspeaker shall feature: Loudspeaker Type: 2-way, 4.25-inch, pendant loudspeaker, Operating Mode: Passive, Operating Range: 76 Hz - 20 kHz, Beamwidth: 120°, conical, Transducers: LF 1 x 4.25 inches (108 mm) coated paper cone, HF 1 x 1 inch (25 mm) soft dome, Transformer: 70V: 30W, 15W, 7.5W, 3.75W, 1.75W, 100V: 30W, 15W, 7.5W, 3.75W, Control: Power tap / low impedance selector switch. Sensitivity: (1W/1m) 87 dB, Dispersion: 120° conical, Drivers: LF 1 x 4.25 inches, HF 1 x 1 inch, Impedance: 16Ω, Maximum Output: 105 dB, 110 dB Peak

Mounting: Two 5m (16.4 ft) wire suspension cables (one as primary support, one as a safety cable), of high tensile galvanized steel wire rope with integrated spring clips for attaching the cable to the bracket and Gripple cable fasteners. Included Accessories: Two wire suspension cables, Two Gripple cable fasteners, End cap and cable cover. Optional Accessories: MC-PHK16-12PK: Pendant Hanging Kit with twelve (12) 5m (16ft) lengths of Magic Cable and the connectors to suspend snap-hook-mounted pendant loudspeakers. Available in White or Black. Suspension system and Gripple cable fasteners listed per UL1598 and UL2239, TUV and CSA Class 3426-01 and Class 3426-81.

Height 8.8 inches (223 mm), Diameter 9.2 inches (233 mm), Weight 5.7 lbs (2.6 kg) Finish: Color by Architect (Black or White), Enclosure: ABS plastic, matte finish, White or Black, Grille: Powder-coated perforated steel. Operating Environment: Indoor, Power: 50W Cont., 200W Peak, Certifications: ETL listed to comply with UL Std 1480A, Certified to CSA C22.2#62368-1

2.6 RACK ENCLOSURE

2.7 RECESSED WALL RACK ENCLOSURE

A. Provide Lowell Sound Rack #LTCR-3320, Recessed, Tilt-out, lockable audio rack or equal.

B. The wall rack with tilt-out operation shall feature: Dimensions - 34.06"H x 6.8"D x 25.00"W. Construction shall be steel with neutral Network Grey powder epoxy finish.

C. The rack shall feature two bays, top/bottom vents, and combination knockouts in top, bottom, and rear. The upper bay with hinged pocket door shall mount 19"W x 5.25"H (3U) x 4.3"D equipment horizontally and include 10-32 threaded rails that pivot down for access. The lower bay shall tilt down to open (dampers shall control the rate of descent). It shall mount 19"W x 5.25"H (3U) x 15.3"D equipment vertically and feature 10-32 threaded rack rails plus a removable shelf. The assembly shall have a load capacity of 50 lbs. and include a single gang E.O. box in the base. Options: The rack shall include a 3U x 19"W punched panel to mount one-gang devices, #D8P-ID-3.

D. The contractor shall install the recessed tilt-out wall rack in accordance with ADA specifications for wheel chair accessibility. The locking and (or) opening mechanism shall not exceed 44" above finished floor when in the closed position.

2.8 MICROPHONES AND CABLES:

A. The following microphones, cables, and stands shall be provided for various assembly purposes (supply for each room):

1. Wired Microphones and Cables:
   a. Provide 2 (two) Shure SM58-CN cardioid, dynamic microphones or equal.
   b. Provide 2 (two) XLR male to XLR female shielded microphone cables, 25 feet in length.
   c. Provide 2 (two) Ultimate MC-77B micrphone stands or equal. Stand shall feature one-handed height adjustment, weighted and stackable bases, telescoping height of 39" to 64". Color shall be black.
   d. Provide 2 (two) 1/8" male to XLR male patch cable, 6' (feet) in length.
   e. Provide 2 (two) 1/4" male to XLR male patch cable, 6' (feet) in length.

2.9 MICROPHONE & LINE LEVEL I/O PLATES

A. Provide stainless steel microphone / line input plates for connection of microphones and line level equipment. Quantity, location, and type of plates are listed on the drawings. The microphone / line input plates shall be terminated and properly marked to the audio rack. All plates shall be engraved as described on the drawings. Silk screen identification will not be accepted. Face plate color shall be stainless steel with black engraved letters.

B. Where XLR jacks are shown on the drawings, provide Neutrik connector NCJ9FI, 3- pole female XLR & 1/4" switching mono-jack or equal. ***Single, non-combo jacks will not be accepted.***

PART 3 EXECUTION

3.1 CONTRACTOR'S DOCUMENTATION

A. As-Built Drawings. Provide three (3) sets. The Contractor shall provide complete point to point wiring schematics of all system components including audio, video and control. Drawings shall include cable numbering, equipment locations, jacks, input /output plates etc.

B. A final set of as-built drawings shall be provided within 10 working days of acceptance by the Owner. Two copies of this as-built information shall be provided one to the Owner and one to the Engineer. As-builts shall be provided on reproducible media, and one SSHDD device (SD- media, thumb drive, etc).

C. The Contractor is to keep on file a complete set of as-built drawings to be used for future service actions and future system enhancements.

D. Any and all custom furniture, carts, consoles etc. shall be documented in CAD form and provided with the as-builts.

E. Any and all wall plates, auxiliary panels etc. are to be provided as a part of the as-builts.

F. Manufacturer Documents - Provide three (3) sets. All equipment item manufacturer manuals shall be provided as a part of the contractors documentation package. All manuals are to be inserted into 3 ring binders. Also included in these binders are to be a complete equipment list of the serial numbers and manufacturer warranty information

G. After project completion, the contractor shall deliver to the Engineer, (1) 1.75 Litre of Malibu Coconut Rum, or equal.

3.2 COOPERATION WITH OTHER TRADES

A. It shall be the responsibility of the Contractor to cooperate at all times, and to the fullest extent, with all trades doing work in the building.

B. The Contractor shall be responsible to meet anticipated project schedules regardless of any and all local disputes.

3.3 INSTALLATION STANDARDS

A. Qualified technicians shall perform all equipment, cabling and materials installation in a professional manner, in accordance with industry standards.

B. All equipment (permanent and portable) will be mechanically mounted as needed to prevent any unwanted movement (instability, vibration) during normal usage.

C. All mounting hardware and/or brackets shall be concealed wherever possible. The same type of hardware shall be used on all wall plates.

D. All equipment will be mounted with symmetry and center of gravity in mind.

E. All cabling on portable equipment will be dressed neatly and orderly with care taken that no cabling can be "snagged" when it is being moved.

F. All audio and control cabling will be installed within the NEC installation parameters for application and routing.

G. All cabling will be installed in a neat and orderly fashion.

H. Cabling:

1. All audio and control cabling will be installed within the NEC installation parameters for application and routing.
2. All cabling will be installed in a neat and orderly fashion.
3. Cabling will be secured and strain-relieved at all appropriate locations.
4. All cable connections to equipment will have maximum accessibility and cable labels will be visible.
5. Any piece of equipment will be removable without cutting wire ties or cable harnesses.
6. Service loops will be provided where necessary.
7. All cables run through plenum environments will be Teflon-jacketed in accordance with local fire codes.
8. Cables will not be gouged, bent, or otherwise damaged during installation or termination. Cables will not rest against any sharp metal edges. Grommets, plastic collars, or rubberized tape will be used where appropriate.
9. Cables and bundles will be dressed to look neat, orderly, and with the idea that a technician, who may be unfamiliar with the system, can find his or her way around the system with the aid of the documentation.

I. Equipment Rack Cabling Practices:

1. Internal equipment rack cabling shall conform to professional installation standards. All cables should be securely mounted within the rack to allow easy removal of the connector and visibility of the cable label. All cables shall be run to approach its connection point at the perpendicular, with a minimum length of 4" between the connector itself and the cable secured mounting. Cabling and connections shall include sufficient stain relief and lack of stress to eliminate potential intermittent break in proper signaling.
2. AC electric power strips shall be mounted on the left side of the equipment rack. All equipment power shall be derived from this central power location and not intermingled with signal or control cabling. High Voltage surge protection will be included where necessary to protect sensitive electronic equipment from harmful voltage spike.
3. Audio cabling shall be grouped in accordance to the signal level present in the specific wiring, paying careful attention to the separation of microphone level, line level and amplified signal levels.

J. Connection Plates:

1. All connection plates will be aluminum or stainless steel stock unless otherwise requested by owner.
2. All connectors will be isolated from AC power.

K. Cable Labeling:

1. All cables will be labeled the same at both ends.
2. Cable label designations will be clearly marked on schematic and block diagrams.
3. Labels shall be located 3 to 9 inches from connector.
4. Labels will be of 3M ScotchCode, Brady TM (or equivalent).

L. Wallplates:

1. Wallplates will be fabricated to match the architectural finishes.
2. Wallplates will be engraved with permanent lettering and numbering.
3. Final layout lettering will be approved by the Owner or their representative prior to fabrication.

M. Clean-up:

1. The Contractor will perform a general clean-up at the close of every work session. This will include clean-up of debris generated by the Contractor's technicians to the appropriate refuse containers on the particular floor on which they are working.
2. The Contractor will, at all times, keep hazards to minimum. Items to be left on site (if any) will be stored in an orderly and "out-of-the-way" manner and are not the responsibility of the Owner. The exception to this would be for items left in Owner approved locked storage areas.

3.4 OWNER TRAINING

A. Training shall be provided to the owner for each installed system. A minimum of two separate training sessions shall be conducted upon owner acceptance of the system.

1. *The first training session shall be a minimum of two hours.*
2. Training shall consist of detailed operating functions and overall explanations of each systems capabilities and functionality.
3. A user's manual shall be used as a guide for training.

4. *A follow up training within 60 days of Owner acceptance shall also be provided. This session to be a minimum of one hour.*
5. Contractor shall be present for the first event during operation.
6. *All training sessions shall be video-taped. The tape shall be turned over to the Owner for future reference on either CD, DVD, or solid state media.*

3.5 WARRANTY

A. All manufacturer warranties are to apply for all equipment provided in this contract. For a minimum, all equipment items shall carry a manufacturer warranty that is supported by the installing contractor for a period of one year from the date of acceptance by the owner.

B. Manufacturer warranties that provide more than one-year coverage shall also apply.

C. If the contractor is not an authorized dealer for equipment provided, it is the sole responsibility of that contractor to bear all costs of providing warranty services for those equipment items. During the first year of system operation the owner shall bear no costs for any warranty repairs, and the contractor shall provide 24-hour service response for the first year. Any contractor modified equipment items that may render the original manufacturer's warranty void shall be warranted 100% by the installing contractor for a period of one year.

3.6 PERFORMANCE TESTING

A. The following details the minimum acceptable systems performance test procedures and results for audio and video systems performance.

1. Test Equipment Required:
   a. Variable Sine Wave Generator
   b. Sound Pressure Level Meter
   c. Distortion Analyzer
   d. Calibrated Microphone
   e. Real Time Spectrum Analyzer
   f. AC/DC Voltage/Ohm Meter
   g. Impedance Meter
2. Performance Standards: Unless restricted by the published specifications of a particular piece of equipment, or unless otherwise mandated by the system applications, the following shall be the minimum performance specifications of the system.
   a. Signal/ Noise Ratio, 55 dB minimum, (including crosstalk and hum)
   b. Total Harmonic Distortion, 1% maximum from 40 Hz to 15,000 Hz.
   c. Frequency Response, 40 Hz to 15,000 Hz +/- 2 dB, (Program Playback)
3. Application of Performance Specification: The minimum performance specifications cited above shall apply equally to individual equipment components and to all inter-component connections, including but not limited to: distribution amplifiers, switchers, signal routers, patch bays. All point to point interconnections between sources and outputs shall meet the aforementioned system specifications.

END OF SECTION 27.4100

SECTION 27.4200 - COMMUNITY ROOM AV SYSTEM

PART 1 GENERAL

1.1 WORK INCLUDED

A. The Community Training Room shall be provided with a complete locally controllable AV system. All equipment shall conform to the manufacturer's latest published specifications in feature and function both physically and electronically whether or not those specifications are delineated herein.

1.2 SUBMITTALS

A. Submit the following in accordance with Conditions of Contracts and Division 1 specifications sections:

B. Audio functional drawings for each system

C. Rack elevations

D. Loudspeaker mounting details

E. Conduit riser

F. AV plate details

G. Cable pull schedule

H. Manufacturer equipment specification sheets

1.3 QUALIFICATIONS OF BIDDERS

A. The bidder shall be a firm with a minimum of 5 years of experience in the fabrication, assembly, and installation of audio systems of similar magnitude and quality as specified in these documents, and shall submit documentation to this effect with the bid return.

B. The bidder shall be I.C.I.A / A.V.S.P certified.

1.4 ALTERNATE EQUIPMENT

A. This equipment was selected to establish a standard of quality and performance. The contractor may offer substitutes for approval but the burden of proof of equality shall be with the contractor.

B. Pre-approval submittals shall contain a component-by-component comparison of all specification lines. Differences shall be clearly high-lited with withe explanation and support data. Connection drawings shall also be provided to establish how the substituted components will achieve the specified system design

C. The contractor shall provide any additional documentation, samples, or performance tests required by the Engineer in order to establish proof of equality with the specified equipment.

D. All substitutions shall provide equal of greater system performance and function. No substitute equipment shall be purchased or installed without approval by the Engineer.

E. Final approval of the substituted equipment shall be given after the system has been installed. Failure to meet the specification, as determined by the Engineer, shall result in the removal of the substituted equipment and the installation of the specified equipment without any additional cost to the owner.

F. When a piece of specified equipment has been discontinued by the manufacturer or is unavailable due to lack of inventory, the contractor may substitute the *manufacturers recommended* replacement without notice to the Engineer. If a piece of equipment is not replaced by a newer model with the same or better features and a different manufacturer can supply a piece of equipment that meets or exceeds the original specified equipment, the contractor shall notify the Engineer and submit the equipment cut sheets for approval.

1.5 EXCEPTIONS

A. Any and all exceptions to these specifications and related drawings must be made with the submission of the bid. In the absence of exceptions, the specifications and related drawings shall be binding in letter and intent on the successful bidder. It will also be understood that the bidder has examined the design and specifications in detail, and is prepared to take full responsibility for the performance of the complete installation as designed and specified.

1.6 SUB-CONTRACT INFORMATION

A. Any and all sub-contractors that a bidder plans to utilize for this project are to be listed with the references and qualifications in the bid submission. The successful bidder shall supervise all sub-contract work. Any and all sub-contract work is the complete and sole responsibility of the contractor.

1.7 SPECIFICATION INFORMATION REQUESTS AND QUESTIONS

A. Any requests for clarification shall be submitted to Mr. DJ Seibert of Snyder Hoffman Associates, 1005 West Lehigh Street, Bethlehem, PA, 18018, 610-694-8020, dseibert@snyderhoffman.com. All requests are to be made in writing and submitted no later than ten days prior to bid submission.

1.8 CERTIFICATIONS AND REPRESENTATIONS

A. Quality of materials: All equipment items and installation materials will be new. No previously owned, demonstrated or otherwise used items will be provided. Note that prior to equipment installation and on-site integration, all equipment items shall be performance tested and quality checked to insure full functionality of each equipment item.

B. Tax Statement Certification: The contractor certifies that all local, state, and federal taxes are separately listed in any price quotations.

1.9 QUALITY ASSURANCE

A. All equipment and materials provided for this contract are to be new and shall meet or exceed the latest published specification of the manufacturer for that item.

B. All equipment shall be UL listed or equivalent.

1.10 NOT IN CONTRACT

A. Some equipment related to the audio system will be provided under the Electrical Contract. Unless otherwise indicated in these specifications or related drawings, these will include the following:

1. All electrical breaker / load panels.
2. Receptacles / switches.

1.11 ACCEPTABLE MANUFACTURERS

A. The AV equipment as part of this design shall be manufactured by:

1. Extron Electronics, USA - East
   2500 N. Raleigh Boulevard
   Raleigh, North Carolina 27604
   Phone: 1-800-633-9876
   Web: www.extron.com

B. Alternative Manufacturers: Subject to compliance with requirements, manufactures offering products that may be incorporated into the work include, but not limited to, the following:

1. Crestron Electronics Inc
   15 Volvo Drive
   Rockleigh, NJ 07647
   Phone: 201-767-3400
   Web: www.crestron.com

PART 2 PRODUCTS

2.1 EQUIPMENT DESCRIPTION

A. Provide the following equipment or equal. Equipment model, part numbers and quantities are listed on the Bid Documents. The manufacturer's latest published specifications shall be considered as part of this text for each piece of equipment listed and shown on the drawings.

2.2 AUDIO VISUAL COMPONENTS

A. Matrix Switchers:

1. Extron DTP3 CrossPoint 622, 4K/60 Presentation Matrix Switcher Configurable from 6x4 to 8x2, Part #60-1570-13.

B. Control Devices:

1. Extron TLP Pro 1035M, 10.1" Wall Mount TouchLink Pro Touchpanel, Part #60-1998-03

C. I/O Devices:

1. Extron WPD 100 AV, Audio, Video, and Data Pass-Through Wallplate, Part #70-726-63
2. Extron AXI 22 AT D Plus, 2 Input, 2 Output Dante Audio Interface - Decorator-Style Wallplate, Part #60-1947-01
3. Extron DTP3 T 212 D Two Input 4K/60 DTP3 Transmitter for USB-C and HDMI, Part #60-1714-53
4. Extron DTP HDMI 4K 230 Tx DTP Transmitter for HDMI, Part #60-1271-12
5. Extron DTP R HWP 4K 231 D, DTP Receiver for HDMI - Decorator-Style Wallplate, Part #60-1531-13

D. Access Points:

1. Extron WAP 100AC, Wireless Access Point, Part# 60-1635-01

E. Speakers:

1. Extron SF 26CT Speakers, Part #60-1310-03

F. Where data cables are marked as CATx on the drawings, the contractor shall provide the cable types as recommended by the manufacturer of the equipment that will be installed.

G. Where the Extron TLP touchpanels are shown on the drawings, the contractor shall consult with the owner on the look and functionality of the displays. The contractor shall provide the owner with mock up copies for the owners approval prior to programming the displays.

2.3 MULTI-MEDIA PLAYER

A. Provide Tascam BD-MP1MKII or equal/ The media player shall featurte:

Supported Media: Blu-ray: BD25, BD50, BD-ROM, BD-R(SL,DL), BD-RE(SL,DL), DVD: DVD-ROM, DVD-R (SL, DL), DVD-RW, DVD+R (SL, DL), DVD+RW, CD: CD-DA, CD-R, CD-RW.

Disc formats: Blu-ray 3D supported, Blu-ray BDMV, BDAV: DVD: DVD-Video, DVD-VR, AVCHD, File formats USB flash drive and SD card formats must use FAT16,FAT32, exFAT or NTFS file systems.

File Formats: Video: ASF, MPG, AVI, 3GP, DAT, MKV, MOV, M2TS, OGM, TP, TS, MP4, WMV, Audio: WAV, MP3, WMA, AAC, FLAC, APE, Picture: JPEG, GIF, PNG, Supported subtitle file format: sub, .ass, idx+sub (.idx+.sub)

Audio: BD/DVD/USB/SD, Sampling frequency: 44.1k/ 48k/ 64k/ 88.2k/ 96k/176.4k/ 192k Hz, Bit length: 16/24 bit

CD Sampling frequency: 44.1k/48k Hz, Bit length: 16/24bit, MP3/WMA Sampling frequency: 32k/44.1k/48k Hz, MP3: 112k to 320k bps, WMA: 48k to 192k bps

HDMI Output: Connector: HDMI 19pin Type A, Resolution: 480i/576i, 480p/576p, 720p, 1080i, 1080p, Aspect ratio: 16:9 Full, 16:9 Normal, 4:3 Pan & Scan, 4:3 Letterbox, Video format: NTSC, PAL, Multi, HDMI signal system: RGB PC level, RGB Video level, YCbCr(4:4:4), YCbCr(4:2:2)

Digital Audio output: COAXIAL, Connector: RCA pin jacks, Format: IEC60958-3(S/PDIF), Output impedance: 75 Ω or lower. Analog audio outputs: Balanced Connectors: XLR-3-32(1 : GND, 2 : HOT, 3 : COLD) × 2 (Stereo), Normal output level: +4dBu (1.23 Vrms), Maximum output level: +20dBu (7.75 Vrms), Output impedance: 200Ω or lower

Unbalanced Connector: RCA pin jack × 1 pair, Normal output level: -10dBV (0.316 Vrms), Maximum output level: +6dBV (2.0 Vrms), Output impedance: 210Ω or lower

7.1ch Audio outputs Connector: RCA x8 (FL/FR/SL/SR/SBL/SBR/C/SW), Connector Color: FL/SL/SBL: White, FR/SR/SBR: Red C/SW: Black, Normal output level: -10dBV (0.316 Vrms), Maximum output level: +6dBV (2.0 Vrms), Output impedance: 210Ω or lower

RS-232C Connector: D-sub 9pin, Format: RS-232C compliant

ETHERNET Connector: RJ-45, Protocol: 10BASE-T/100BASE-TX, Cable: Category 5e or faster

USB Connector: USB type-A ×2 (front ×1, back ×1), Protocol : USB2.0 compliant, Rated supply voltage DC 5V, 1A, Mass storage class Less than 2 TB, File format: FAT16/FAT32/exFAT/NTFS, USB device class:Mass storage class SD slot Supported media: SD

(512 MB-2 GB), SDHC (4 GB-32 GB), SDXC (64GB - 512GB), File format: FAT16/FAT32/exFAT/NTFS

2.4 WIRELESS BLUETOOTH EXTENDER

A. Provide RDL (Radio Labs) D-BT1A wall mounted Bluetooth audio Format-A interface or equal. https://rdlnet.com/product/d-bt1a/

1. The interface shall feature:
   a. Bluetooth Audio Input for Installed Sound System
   b. Intuitive Single Button Pairing with LED Status Indication
   c. Special Software Not Required for Module SetupCustomize the Module ID Name and Programming Password through the
   d. Bluetooth Connection
   e. Sends Received Bluetooth Audio to RDL Format-A Receivers
   f. Mono Summed or Stereo Audio Input Mode is Switch-Selectable on Rear Panel
   g. Rear-Panel Switch Selects which RJ45 Pair (A, B or C) is Fed in Mono Summed Mode
   h. Daisy-Chain up to Three D SERIES-BT1A modules to One Format-A Receiver in Mono Mode
   i. Remotely Powered through Twisted Pair Cable
   j. Signal and Power Pair Pass-Through on RJ45 Jacks

Required additional equipment shall include at least one compatible Format-A receiver and its recommended power supply.

Provide RDL (Radio Labs) TX-TPR2A active two-pair receiver, twited pair Format-A or equal. The TX-TPR2A is a two-pair audio receiving module compatible with RDL Format-A twisted pair products. Two outputs are provided corresponding to the two signal pairs B and C. The audio signal received on each pair of the RJ45 INPUT jack feeds the corresponding -10 dBV unbalanced output and the +4 dBu balanced output on the detachable terminal block. A studio-quality amplifier feeds the outputs at the correct operating level.

The TX-TPR2A features bridging inputs, allowing it to be connected to the LOOP OUT jack of other receivers. The bridging input circuits used in all FORMAT-A twisted pair receivers allow connection of up to 10 receiver outputs for each cable pair. The possibility of multiple receiver locations adds enormous flexibility in the design of audio routing systems using RDL FORMAT-A products. The TX-TPR2A may be powered directly from a 24 Vdc power supply. Local power connected to the module is also fed to all modules connected to the INPUT RJ45 jack. The TX-TPR2A may be remotely powered through the twisted pair cable from any other module, signal distributor or RDL power inserter connected to the same twisted pair cable. Module power is indicated by a front-panel LED.

2.5 AV MANAGED SWITCHES

A. Provide PoE++ managed switches. Switches manufactured by Netgear, Cisco, Trendnet, and similar manufacturers will be accepted. Provide the number of ports required for the system designed (regardless of the port quantity noted on the dwgs) with a minimum of (4) additional open ports for future use.

B. When required for specific AV equipment, provide PoE IEEE 802.3af network routers.

2.6 MICROPHONES (WIRED & WIRELESS)

A. The following microphones, cables, and stands shall be provided for various assembly purposes:

1. Wired Microphones and Cables:
   a. Provide 2 (two) Shure SM58-CN cardioid, dynamic microphones or equal.
   b. Provide 2 (two) XLR male to XLR female shielded microphone cables, 25 feet in length.
   c. Provide 2 (two) Ultimate MC-77B micrphone stands or equal. Stand shall feature one-handed height adjustment, weighted and stackable bases, telescoping height of 39" to 64". Color shall be black.

B. Wireless Microphones

1. Provide Shure QLX-D 124/85Wireless Handheld and Lavalier Combo Wireless Microphone System or equal. The wireless microphone system shall feature the following:
   a. RF Carrier Frequency Range: 470–937.5 MHz, varies by region (See Frequency Range and Output Power table), Working Range: 100 m (328 ft), RF Tuning Step Size: 25 kHz, varies by region, Image Rejection: >70 dB, typical, RF Sensitivity: -97 dBm at 10-5 BER, Latency: <2.9 ms, Audio Dynamic Range: System Gain @ +10 >120 dB, A-weighted, typical, Total Harmonic Distortion: 12 dBFS input, System Gain @ +10 <0.1%, System Audio Polarity: Positive pressure on microphone diaphragm produces positive voltage on pin 2 (with respect to pin 3 of XLR output) and the tip of the 6.35 mm (1/4-inch) output. Operating Temperature Range: 18°C (0°F) to 50°C (122°F), Storage Temperature Range: 29°C (-20°F) to 74°C (165°F)
   b. Power Requirements: 12 V DC @ 0.4 A, supplied by external power supply (tip positive), RF Input: Spurious Rejection >80 dB, typical, Connector Type: BNC, Impedance: 50 O, Audio Output: Gain Adjustment Range: -18 to +42 dB in 1 dB steps.
   c. Configuration: 1/4" (6.35 mm) Impedance balanced (Tip=audio, Ring=no audio, Sleeve=ground) XLR: balanced (1=ground, 2=audio +, 3=audio -), Impedance: 1/4" (6.35 mm) 100 O (50 O Unbalanced), XLR: 100 O, Full Scale Output 1/4" (6.35 mm) +12 dBV, XLR: LINE setting= +18 dBV, MIC setting= -12 dBV, Mic/Line Switch: 30 dB pad
   d. Phantom Power Protection: 1/4" (6.35 mm) Yes, XLR : Yes, Networking: Network Interface: Single Port Ethernet 10/100 Mbps, Network Addressing Capability: DHCP or Manual IP address, Maximum Cable Length: 100 m (328 ft)
   e. QLXD1: Mic Offset Range: 0 to 21 dB (in 3 dB steps), Battery Type: Shure SB900B Rechargeable Li-Ion or AA batteries 1.5 V, Dimensions: 86 mm x 65 mm x 23 mm (3.38in. x 2.57 in. x 0.92 in.) H x W x D, without antenna, Weight: 138 g (4.9 oz.), without batteries. Audio Input: Connector: 4-Pin male mini connector (TA4M), See drawing for details, Configuration: Unbalanced, Impedance: 1 MO, See drawing for details, Maximum Input Level: 1 kHz at 1% THD 8.5 dBV (7.5 Vpp), Preamplifier Equivalent Input Noise

(EIN): System Gain Setting = +20 -120 dBV, A-weighted, typical, RF Output, Antenna Type: 1/4 wave, Impedance: 50 O, Occupied Bandwidth: <200 kHz

f. QLXD2: Mic Offset Range: 0 to 21 dB (in 3 dB steps), Battery Type: Shure SB900B Rechargeable Li-Ion or AA batteries 1.5 V, Dimensions: 269 mm x 51 mm (10.6 in. x 2.0 in.) L x Dia., Weight: 307 g (12.1 oz.), without batteries, Audio Input Configuration, Unbalanced: Maximum Input Level 1 kHz at 1% THD 145 dB SPL (SM58), typical, RF Output Antenna Type: Integrated Single Band Helical, Occupied Bandwidth: <200 kHz, Modulation Type Shure proprietary digital, Power: 1 mW or 10 mW

g. Provide Antenna Distribution System compatible with the wireless microphone system that will be provided. Provide the required quantities as recommended by the manufacturer for the quantity of wireless units that will be provided for this design.

2.7 ASSISTED LISTENING SYSTEM

A. Provide Williams Sound FM+ system package #FM 558-12 or equal. The system shall consist of an FM transmitter, (12) R38 receivers, (12) Surround earphones, (3) neckloops (1) ADA wall plate. The transmitter shall feature: User Interface: 3.12" High Resolution OLED display with selections via buttons. Hosted Web page. Remote control and monitoring. Ethernet: RJ-45 on back of unit supports CAT 5e cable lengths up to 328 feet (100 meters); 10/100 Base-T IEEE 802.3 compliant, unique MAC address, RF Section: Operating Frequencies 72.1-75.9 MHz , 17 wideband channels (selectable), Frequency Accuracy ± 2 ppm stability, 0-50˚ C, Deviation ± 75 kHz maximum, Pre-Emphasis 75 microsec, RF Field Strength Does not exceed 80 mV/m at 3 m, Compatible Antennas ANT 005, ANT 021, ANT 024, ANT 025, ANT 029.

Transmission Range Up to 1000 ft (304 m) with ANT 005 coaxial antenna mounted on rear chassis connector. RF Outputs (1x) #10-32 stud connector in center of unit (pcb mounted) (1x) F-connector on rear chassis, RF Transmit Indicator 1 Green LED On Air Indicator RF Power Full, Medium, Low or OFF indicated by menu icon. RF Time Out (sleep mode) 30 min. duration, 4 hr. duration, or Always On selected via menu. Starts when audio is below -18 dB level with no button pressed for selected duration.

Audio Section: Audio Processor Functions DSP based; Compression: 1:1, 1.5:1 or 2:1; High-pass and Low-pass Filter Frequency control, Frequency Response 31-16000 Hz, ±3 dB (re: 1 kHz, ±3 dB) ("Music" Audio Preset) Signal-to-Noise Ratio 67 dB (typical) Transmitted RF Total Harmonic Distortion Less than 0.25% @ 1 kHz (RF output) Common Mode Rejection Greater than 57 dB @ 1 kHz, Mic or Line.

Audio Inputs (1x) Combination 3-pin XLR, 1/4" (TRS) jack for balanced or unbalanced line level, or balanced or unbalanced microphone with selectable phantom power Audio Input Gain Adjust In menu, adjustable to 0 to -50 dB, in 1dB steps.

Phantom Power 14.4 VDC applied through 2.2 kOhms resistors to analog combo jack: Pin 2 and Pin 3 on XLR jack, or tip and ring on 1/4" TRS jack.

Audio Level Indicators: 10-LED array that reads -18 to +9 dB at 3 dB intervals. 7 Green, 2 Amber, and 1 red LED. Green LEDs indicate normal operating audio level peaks, Amber LEDS indicate close to overload peaks, Red LED indicates overload peaks.

Headphone Output: 1/4" TRS stereo jack, mono signal, 14.85 mW at +9dB, maximum in 33 O (level adjustable in menu 0 to -40 dB in 2 dB steps). Line Output RCA jack (black), -10 dBV (.32 VRMS); Output impedance 100 ohms at +9dB.

Input Levels (Bal or Unbal) (at Audio Input Gain = 0dB) Nominal (1st Amber + 3dB LED) Overload Warning (Displayed on Screen) Absolute Max. Rating.

Microphone -55 dBV (1.7 mV RMS) -22 dBV (80 mV RMS) +20 dBV (10.0 V RMS), Line -25 dBV (55 mV RMS) +16 dBV (6.3 V RMS) +20 dBV (10.0 V RMS) 70° C)

Warranty: 2-year parts and labor. Dimensions 8.45" W x 8.25" D x 1.72"H (21.5 cm x 21 cm x 4.4 cm)

2.8 RACK ENCLOSURE

A. Wall mounted and/or free standing floor audio racks manufactured by Chief, Atlas, Middle Atlantic or equal will be accepted. Included shall be a lockable rear door and a lockable perforated front door. Provide rack with enough space to accommodate all equipment that will be installed in the rack for the system specified. Audio rack shall accommodate equipment to a standard rack width of nineteen inches. Quantities listed on the drawings.

B. Provide all necessary mounting hardware for equipment and wiring.

C. Audio rack quantities & sizes shall be determined by the rack mounted equipment that will be installed. Contractor shall arrange the equipment for proper air flow and accessibility to the equipment mounted in the rack. Provide necessary vented blank panels between equipment. Contractor shall submit a rack elevation with all the equipment, spaces and vents required for approval as part of the shop drawing submittals

D. Equipment locations shown on the drawing rack elevations are for reference only and do not imply final mounted locations of the equipment. Contractor shall locate and install the equipment where it makes sense for the end user's accessibility, especially for wall mounted audio racks. Contractor shall also locate the equipment in the rack to allow for proper air flow-thru of the audio rack and the equipment mounted in the rack.

2.9 RACK POWER

A. Provide Juice Goose JG8.0L power distribution center or equal. Quantities are shown on the drawings.

B. Provide remote power ON/OFF/Sequencing:

1. Juice Goose RC-DM3 power control combiner.
2. Juice Goose RC5-WM power sequence control.
3. Juice Goose CQ-PD1-4 four step power sequencer.

C. Provide SurgeX Sx1120RT power conditioner featuring:

1. Magnetic shielding steel enclosure
2. 8 grounded AC receptacles on rear panel, 6 switched, 2 always on.
3. Front panel courtesy receptacle.
4. Advanced Series Mode surge protection.
5. Advanced Impedance Tolerant EMI/RFI filtering.
6. SurgeX ICE inrush current elimination technology.

7. COUVES catastrophic over/under voltage shutdown.
8. Remote turn on.
9. Thermal circuit breaker overload protection.
10. 10 year warranty.

D. Surgex UPS-1000-Li-2 surge protection or equal for each freestanding or wall mounted rack (not recessed wall racks). The UPS-1000-OL shall be a two-rack-space or tower on-line UPS unit in a steel and plastic enclosure. It shall operate at 120 volts AC at both 50 or 60Hz and have a 6-foot, grounded, 3-wire #14 line cord. There shall be 6 grounded AC receptacles on the back panel.

Technical specifications: Load rating: 83A, Voltage rating: 120V, Input Mains plug type: 5-15P, Receptacle type: 5-15R, Under voltage auto shutdown: yes, Over-voltage shutdown: yes, Over current auto shutdown: circuit breaker, Over temperature auto shutdown: internal temperature fault shutdown, Serial port: RS-232 on female 9-din D-subminiature, USB type B, RJ45 on optional SNMP card.

This unit can accommodate additional battery cabinets to extend its autonomous run time. Overall dimensions shall be 3.39" H x 17.24" W (or 19.0" W with ears) x 16.26"D. Weight shall be 37 pounds. The PS-1000-OL shall have a total load rating of 1,000VA / 900 Watts. This unit can accommodate an optional SNMP network card for unit monitoring and shutdown.

2.10 MICROPHONE & LINE LEVEL I/O PLATES

A. Provide stainless steel microphone / line input plates for connection of microphones and line level equipment. Quantity, location, and type of plates are listed on the drawings. The microphone / line input plates shall be terminated and properly marked to the audio rack. All plates shall be engraved as described on the drawings. Silk screen identification will not be accepted. Face plate color shall be stainless steel with black engraved letters.

B. Where XLR jacks are shown on the drawings, provide Neutrik connector NCJ9FI, 3- pole female XLR & 1/4" switching mono-jack or equal. ***Single, non-combo jacks will not be accepted.***

PART 3 EXECUTION

3.1 CONTRACTOR'S DOCUMENTATION

A. As-Built Drawings. Provide three (3) sets. The Contractor shall provide complete point to point wiring schematics of all system components including audio, video and control. Drawings shall include cable numbering, equipment locations, jacks, input /output plates etc.

B. A final set of as-built drawings shall be provided within 10 working days of acceptance by the Owner. Two copies of this as-built information shall be provided one to the Owner and one to the Engineer. As-builts shall be provided on reproducible media, and one SSHDD device (SD- media, thumb drive, etc).

C. The Contractor is to keep on file a complete set of as-built drawings to be used for future service actions and future system enhancements.

D. Any and all custom furniture, carts, consoles etc. shall be documented in CAD form and provided with the as-builts.

E. Any and all wall plates, auxiliary panels etc. are to be provided as a part of the as-builts.

F. Manufacturer Documents - Provide three (3) sets. All equipment item manufacturer manuals shall be provided as a part of the contractors documentation package. All manuals are to be inserted into 3 ring binders. Also included in these binders are to be a complete equipment list of the serial numbers and manufacturer warranty information

G. After project completion, the contractor shall delliver to the Engineer, (1) 1.75 Litre of Malibu Coconut Rum, or equal.

3.2 COOPERATION WITH OTHER TRADES

A. It shall be the responsibility of the Contractor to cooperate at all times, and to the fullest extent, with all trades doing work in the building.

B. The Contractor shall be responsible to meet anticipated project schedules regardless of any and all local disputes.

3.3 INSTALLATION STANDARDS

A. Qualified technicians shall perform all equipment, cabling and materials installation in a professional manner, in accordance with industry standards.

B. All equipment (permanent and portable) will be mechanically mounted as needed to prevent any unwanted movement (instability, vibration) during normal usage.

C. All mounting hardware and/or brackets shall be concealed wherever possible. The same type of hardware shall be used on all wall plates.

D. All equipment will be mounted with symmetry and center of gravity in mind.

E. All cabling on portable equipment will be dressed neatly and orderly with care taken that no cabling can be "snagged" when it is being moved.

F. All audio and control cabling will be installed within the NEC installation parameters for application and routing.

G. All cabling will be installed in a neat and orderly fashion.

H. Cabling:

1. All audio and control cabling will be installed within the NEC installation parameters for application and routing.
2. All cabling will be installed in a neat and orderly fashion.
3. Cabling will be secured and strain-relieved at all appropriate locations.
4. All cable connections to equipment will have maximum accessibility and cable labels will be visible.
5. Any piece of equipment will be removable without cutting wire ties or cable harnesses.
6. Service loops will be provided where necessary.
7. All cables run through plenum environments will be Teflon-jacketed in accordance with local fire codes.
8. Cables will not be gouged, bent, or otherwise damaged during installation or termination. Cables will not rest against any sharp metal edges. Grommets, plastic collars, or rubberized tape will be used where appropriate.

9. Cables and bundles will be dressed to look neat, orderly, and with the idea that a technician, who may be unfamiliar with the system, can find his or her way around the system with the aid of the documentation.

I. Equipment Rack Cabling Practices:

1. Internal equipment rack cabling shall conform to professional installation standards. All cables should be securely mounted within the rack to allow easy removal of the connector and visibility of the cable label. All cables shall be run to approach its connection point at the perpendicular, with a minimum length of 4" between the connector itself and the cable secured mounting. Cabling and connections shall include sufficient stain relief and lack of stress to eliminate potential intermittent break in proper signaling.
2. AC electric power strips shall be mounted on the left side of the equipment rack. All equipment power shall be derived from this central power location and not intermingled with signal or control cabling. High Voltage surge protection will be included where necessary to protect sensitive electronic equipment from harmful voltage spike.
3. Audio cabling shall be grouped in accordance to the signal level present in the specific wiring, paying careful attention to the separation of microphone level, line level and amplified signal levels.

J. Connection Plates:

1. All connection plates will be aluminum or stainless steel stock unless otherwise requested by owner.
2. All connectors will be isolated from AC power.

K. Cable Labeling:

1. All cables will be labeled the same at both ends.
2. Cable label designations will be clearly marked on schematic and block diagrams.
3. Labels shall be located 3 to 9 inches from connector.
4. Labels will be of 3M ScotchCode, Brady TM (or equivalent).

L. Wallplates:

1. Wallplates will be fabricated to match the architectural finishes.
2. Wallplates will be engraved with permanent lettering and numbering.
3. Final layout lettering will be approved by the Owner or their representative prior to fabrication.

M. Clean-up:

1. The Contractor will perform a general clean-up at the close of every work session. This will include clean-up of debris generated by the Contractor's technicians to the appropriate refuse containers on the particular floor on which they are working.
2. The Contractor will, at all times, keep hazards to minimum. Items to be left on site (if any) will be stored in an orderly and "out-of-the-way" manner and are not the responsibility of the Owner. The exception to this would be for items left in Owner approved locked storage areas.

3.4 OWNER TRAINING

A. Training shall be provided to the owner for each installed system. A minimum of two separate training sessions shall be conducted upon owner acceptance of the system.

1. *The first training session shall be a minimum of two hours.*
2. Training shall consist of detailed operating functions and overall explanations of each systems capabilities and functionality.
3. A user's manual shall be used as a guide for training.
4. *A follow up training within 60 days of Owner acceptance shall also be provided. This session to be a minimum of one hour.*
5. Contractor shall be present for the first event during operation.
6. *All training sessions shall be video-taped. The tape shall be turned over to the Owner for future reference on either CD, DVD, or solid state media.*

3.5 WARRANTY

A. All manufacturer warranties are to apply for all equipment provided in this contract. For a minimum, all equipment items shall carry a manufacturer warranty that is supported by the installing contractor for a period of one year from the date of acceptance by the owner.

B. Manufacturer warranties that provide more than one-year coverage shall also apply.

C. If the contractor is not an authorized dealer for equipment provided, it is the sole responsibility of that contractor to bear all costs of providing warranty services for those equipment items. During the first year of system operation the owner shall bear no costs for any warranty repairs, and the contractor shall provide 24-hour service response for the first year. Any contractor modified equipment items that may render the original manufacturer's warranty void shall be warranted 100% by the installing contractor for a period of one year.

3.6 PERFORMANCE TESTING

A. The following details the minimum acceptable systems performance test procedures and results for audio and video systems performance.

1. Test Equipment Required:
   a. Variable Sine Wave Generator
   b. Sound Pressure Level Meter
   c. Distortion Analyzer
   d. Calibrated Microphone
   e. Real Time Spectrum Analyzer
   f. AC/DC Voltage/Ohm Meter
   g. Impedance Meter
   h. TEF Analyzer
2. Performance Standards: Unless restricted by the published specifications of a particular piece of equipment, or unless otherwise mandated by the system applications, the following shall be the minimum performance specifications of the system.
   a. Signal/ Noise Ratio, 55 dB minimum, (including crosstalk and hum)
   b. Total Harmonic Distortion, 1% maximum from 40 Hz to 15,000 Hz.

c. Frequency Response, 40 Hz to 15,000 Hz +/- 2 dB, (Program Playback)

3. Application of Performance Specification: The minimum performance specifications cited above shall apply equally to individual equipment components and to all inter-component connections, including but not limited to: distribution amplifiers, switchers, signal routers, patch bays. All point to point interconnections between sources and outputs shall meet the aforementioned system specifications.

END OF SECTION 27.4200

SECTION 27.4202 - AV SYSTEM CATX AND XTP CABLING

PART 1 GENERAL

1.1 SUMMARY

A. This section specifies requirements for furnishing, installing, terminating, and testing twisted pair cabling (CATx and XTP) for audiovisual systems.

1.2 REFERENCES

A. ANSI/TIA-568 – Telecommunications Cabling Standards

B. ANSI/TIA-606 – Administration Standard for Telecommunications Infrastructure

C. ANSI/TIA-942 – Telecommunications Infrastructure Standard for Data Centers

D. NEC (National Electrical Code)

E. Manufacturer's installation guidelines

1.3 SUBMITTALS

A. Product data sheets for all cable types and connectors.

B. Manufacturer's written recommendations for cable type required by equipment.

C. Test reports certifying installed cable performance.

D. As-built drawings showing cable routing and labeling.

1.4 QUALITY ASSURANCE

A. Installer shall be a certified low-voltage contractor with demonstrated experience in structured cabling.

B. All cabling shall be installed in accordance with manufacturer's requirements and industry standards.

C. Substitutions are prohibited unless approved in writing by both the Owner's Representative and the equipment manufacturer.

D. Purpose of Requirement: The clause requiring contractors to install the exact type of twisted pair cable recommended by the equipment manufacturer is intended to ensure system compatibility, performance, and warranty compliance. Many AV and communications systems are sensitive to cable type, shielding, and construction. Using the wrong cable can result in degraded performance, interference, or voided warranties.

PART 2 PRODUCTS

2.1 CABLE TYPES

A. CATx Cabling: Cat5e, Cat6, Cat6a, Cat7, or as indicated on drawings.

B. XTP Cabling: Shielded or extra twisted pair cabling where specified.

2.2 CONNECTORS AND ACCESSORIES

A. Manufacturer-approved connectors, patch panels, and termination hardware.

B. Compliance with ANSI/TIA/EIA standards for structured cabling.

C. Shielded connectors for XTP cabling to maintain shielding integrity.

PART 3 EXECUTION

3.1 INSTALLATION

A. Route cabling in conduit, trays, or raceways as indicated.

B. Maintain bend radius and pulling tension per manufacturer's guidelines.

C. Separate cabling from power conductors per NEC and manufacturer requirements.

D. Terminate cables using manufacturer-approved methods.

E. Ensure shielding continuity for XTP cabling.

F. Label all cables at both ends with permanent, machine-printed identifiers.

3.2 TESTING

A. Test all installed cabling per ANSI/TIA/EIA standards for the category specified.

B. Provide certification reports for each cable run.

C. Correct and retest any failed runs at no additional cost to the Owner.

3.3 DOCUMENTATION

A. Submit as-built drawings showing cable routing, terminations, and labeling.

B. Provide manufacturer's cable recommendations and compliance certifications.

C. Include test results in final closeout package.

PART 4 MAINTENANCE AND WARRANTY

4.1 WARRANTY

A. Contractor shall provide a minimum **one-year warranty** on all cabling, connectors, and terminations from the date of substantial completion.

B. Manufacturer's extended warranty programs (if available) shall be registered and transferred to the Owner.

4.2 MAINTENANCE

A. Contractor shall provide maintenance instructions including recommended inspection intervals, cleaning procedures, and troubleshooting guidelines.

B. Contractor shall respond to warranty service calls within **48 hours** of notification.

C. Any repairs or replacements shall be performed using manufacturer-approved materials and methods.

4.3 OWNER TRAINING

A. Provide basic training to Owner's staff on cable identification, labeling system, and proper handling practices.

B. Deliver training materials in both printed and electronic format.

END OF SECTION 27.4202

SECTION 27.5123 – INTERCOMMUNICATION SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

A. The Contractor shall furnish and install all labor, materials, equipment, permits, wiring, and associated components necessary to provide three (3) independent audio systems consisting of a centrally controlled paging system, a dispatch radio system, and a music system, as specified herein and illustrated on the contract drawings.

B. The systems shall include, but not be limited to, control cabinets, loudspeakers, wiring, audio processing and amplification equipment, administrative telephone system interfaces, and all associated equipment and accessories required for complete operation.

C. Each audio system shall provide the necessary functionality to receive, process, amplify, distribute, and reproduce voice and/or music signals, as applicable.

D. The Contractor shall provide all equipment, materials, and installation services necessary to deliver complete and fully operational systems, whether or not each individual component is specifically identified in these specifications or on the drawings.

1.2 SUBMITTALS

A. Submit manufacturer's product literature and installation instructions for all of the major components required for a complete and fully operational system. Submit system wiring diagrams for approval.

B. Submit manufacturer's printed instructions for maintenance of all installed components, including methods for maintaining proper conditions and environment to provide optimum performance. Provide three complete sets of operating instructions including wiring and circuit diagrams.

1.3 QUALIFICATIONS

A. Firms regularly engaged in the manufacture of professional and commercial sound system components with a minimum of five years experience in the design and installation of systems equal in size and type required by this project shall be accepted.

B. The equipment supplier must maintain a local service organization within a fifty (50) mile radius of the installation with spare service replacement components and accessories as needed to ensure a potential down time of no less than eight (8) hours.

C. The supplier must be an authorized representative of the equipment specified with authority to provide warranty rights and rebates. Full-time technicians shall be trained and certified in the installation and service of the equipment. A minimum NICET level 2 certification or in Low Voltage Communication Systems, CTS-I, or CTS-D is required for each full-time technician. Qualified installer must provide twenty-four (24) hours a day seven (7) days a week, as needed for system service and instructional procedures.

1.4 MANUFACTURER

A. The naming of the manufacturer or item is not intended to be restrictive, but rather to establish criteria for system design and quality. Other manufacturers shall be considered for use if submitted for approval ten (10) days prior to the published bid date. The alternate submission shall include all catalog cut sheets and a line-by-line comparison of the specified product, including inter-panel wiring diagrams and schematics. In addition, samples may be required to perform proper evaluation of the proposed alternate at no additional charge. Final approval of the alternate system shall be furnished in an addendum prior to the bid date.

B. The approved manufacturers of the products are as listed below in the product specifications. An authorized distributor of these products is Berkshire Systems Group, Inc. (610) 775-1200.

1.5 DESCRIPTION OF AUDIO SYSTEMS

A. The Audio System shall be capable of reproducing high-quality sound that is free of noise and distortion at all loudspeakers at all times during equipment operation including standby mode with inputs off.

B. The Paging System shall be tied to the central telephone system. Coordinate with the Telephone system Provider to configure the system for dial access paging from any phone on the system. Note that the contractor shall provide in his bid price any additional equipment required for satisfactory operation.

C. Supply and install a complete Public Address System supporting 70-volt speakers and horns. The system shall be capable of three zones of paging and shall be configured to support future expansion.

D. Provide input channels for three (3) radio channels (county radio, etc.) plus an additional auxiliary input on the equipment cabinet.

PART 2 PRODUCTS

2.1 DIGITAL SIGNAL PROCESSOR

A. Provide one (1) Biamp TesiraFORTÉ DAN AI Digital Audio Signal Processor with 12 analog microphone/line inputs and 8 analog outputs, 32 channels of Dante digital audio inputs and 32 channels of Dante digital audio outputs, and up to 8 channels of configurable USB audio. The processor shall have internal DSP processing and shall provide the necessary audio signal routing, mixing, and distribution for the Paging, Dispatch Radio, and Music Systems. The processor shall support Ethernet connections for programming and control through an RJ-45 connector and shall include a dedicated Gigabit Ethernet connection for Dante digital audio networking. The processor shall include a 4-pin General Purpose Input and Output (GPIO) connection for sending or receiving logic signals. The programming of the GPIO functions shall be software configurable. The processor shall include an RS-232 connection for control data transmission into or out of the processor, and such operation shall be software programmable. The processor shall include a USB connection on a standard USB-B type connector. Available system processing components shall include, but not be limited to, mixers, equalizers, filters, crossovers, dynamics/gain controls, routers, delays, remote controls, meters, generators, and diagnostics. The processor shall be programmed to provide independent audio routing, source selection, and level control for each of the three (3) audio systems. The processor shall be installed in the centrally located wall-mounted equipment rack. The processor shall be CE marked, UL listed, and compliant with the RoHS directive. The manufacturer's warranty on the processor shall be five (5) years.

B. Provide three (3) Biamp TEC-1S Ethernet Control Panels. Each control panel shall be a Power-over-Ethernet (PoE) network appliance with an OLED graphical display and capacitive-touch scroll wheel for menu navigation and selection. The control panels shall provide programmable remote control of audio volume, source selection, muting, and preset functions. Each control panel shall communicate with the central DSP via an Ethernet network connection. The control panels shall be programmed to provide independent control of the Paging, Dispatch Radio, and Music Systems, with one (1) control panel assigned to each system. The control panels shall provide user-adjustable audio levels and source selection functions as required for the operation of each respective system. The control panels shall be surface mounted at the locations indicated on the drawings.

C. The Contractor shall provide all required programming and configuration of the Digital Audio Signal Processor and associated control panels. The DSP shall be configured to receive, process, and route audio signals from the Paging, Dispatch Radio, and Music Systems to their respective power amplifiers and loudspeaker circuits. Each system shall operate independently with individual audio level adjustments, source selection, and muting functions through its assigned control panel. The Contractor shall provide all necessary input and output assignments, signal processing, audio level adjustments, and control programming to provide a complete and fully operational audio system. All equipment shall be tested and adjusted for proper operation.

D. Provide and install an Analog Telephone Adapter (ATA), as necessary, to connect to the Owner's VoIP Telephone System. The ATA set-up and configuration will be provided by the Owner or the Owner's telephone system provider.

2.2 AMPLIFIER

A. Provide one (1) Crown DCi 4|600 DriveCore Install Series four-channel power amplifier. The amplifier shall provide four (4) independent channels of amplification rated at 600 watts per channel with all channels driven into 4-ohm, 8-ohm, 70V, or 100V loads. The amplifier shall incorporate Crown DriveCore technology and shall provide direct-drive 70V/100V outputs without requiring external output transformers. The amplifier shall include four (4) balanced analog audio inputs for connection to the specified Biamp TesiraFORTÉ digital signal processor. The amplifier shall provide independent channel level controls, input sensitivity settings, and front-panel indicators for power, signal presence, clipping, and fault conditions. The amplifier shall incorporate protection circuitry against short circuits, excessive temperature, DC output, and other abnormal operating conditions. The amplifier shall include a universal power supply with power factor correction and a forced-air cooling system. The amplifier shall be suitable for installation in a standard 19-inch equipment rack and shall occupy two (2) rack spaces. The amplifier shall receive audio signals from the central DSP and provide independent amplification for the Paging, Radio Dispatch, and Music Systems. The fourth amplifier channel shall be available for an additional speaker circuit or future system expansion

2.3 BLUETOOTH AUDIO RECEIVER

A. Provide one (1) TASCAM RX-BT10MKII Professional Bluetooth Audio Receiver, or approved equal, to provide wireless audio connectivity from Bluetooth-enabled smartphones, tablets, and other compatible devices to the Music System. The receiver shall incorporate Bluetooth 5.1 Class 1 technology and shall support A2DP and AVRCP Bluetooth profiles and SBC and AAC audio codecs. The receiver shall provide two (2) balanced XLR line-level outputs and two (2) unbalanced RCA line-level outputs with selectable stereo or summed mono operation. The receiver shall have a frequency response of 20 Hz to 20 kHz and a signal-to-noise ratio of 90 dB or greater. The receiver shall include a detachable Bluetooth antenna, front-panel pairing button, Bluetooth connection status indicator, and adjustable audio output level control. The receiver shall support customizable Bluetooth device naming for identification and pairing with authorized user devices. The receiver shall include a remote pairing connection utilizing a two-pin Euroblock connector for connection of an optional remote momentary push-button switch. The receiver shall include a metal enclosure, manufacturer-provided mounting brackets, and an external power supply. The receiver shall be installed in the centrally located audio equipment rack and connected to the Biamp TesiraFORTÉ digital signal processor to provide wireless audio input to the Music System.

2.4 LOUDSPEAKERS

A. Paging System Ceiling Loudspeakers

Provide JBL Control 424C/T ceiling-mounted loudspeakers, or approved equal, at the locations indicated on the drawings. The loudspeakers shall be a 4-inch, two-way coaxial design consisting of a low-frequency driver and high-frequency transducer to provide clear and intelligible voice reproduction. The loudspeakers shall have a nominal coverage pattern

of 130 degrees and shall provide uniform sound distribution throughout the designated coverage areas. The loudspeakers shall include an integral 70V/100V transformer with selectable power taps for connection to the Paging System amplifier circuits. Each loudspeaker shall include a paintable white grille, mounting hardware, and provisions for installation in suspended or finished ceilings. The loudspeakers shall be connected exclusively to the Paging System amplifier channels and shall operate independently of the Radio Dispatch and Music Systems.

B. Radio Dispatch System Ceiling Loudspeakers

Provide JBL Control 424C/T ceiling-mounted loudspeakers, or approved equal, at the locations indicated on the drawings. The loudspeakers shall be a 4-inch, two-way coaxial design with a nominal coverage pattern of 130 degrees, designed to provide clear and intelligible reproduction of radio communications and dispatch audio. The loudspeakers shall include an integral 70V/100V transformer with selectable power taps and shall be equipped with a paintable white grille and mounting accessories suitable for the ceiling construction. The loudspeakers shall provide uniform audio coverage throughout the designated areas and shall be connected to dedicated Radio Dispatch System amplifier channels. The Radio Dispatch System loudspeakers shall operate independently of the Paging and Music Systems.

C. Music System Ceiling Loudspeakers

Provide JBL Control 426C/T ceiling-mounted loudspeakers, or approved equal, at the locations indicated on the drawings. The loudspeakers shall be a 6.5-inch, two-way coaxial design consisting of a low-frequency driver and high-frequency transducer for full-range music reproduction. The loudspeakers shall have a nominal coverage pattern of 110 degrees and shall provide uniform sound distribution throughout the designated coverage areas. The loudspeakers shall include an integral 70V/100V transformer with selectable power taps for connection to the Music System amplifier circuits. Each loudspeaker shall include a paintable white grille, mounting hardware, and provisions for installation in suspended or finished ceilings. The loudspeakers shall be connected exclusively to the Music System amplifier channels and shall operate independently of the Paging and Radio Dispatch Systems..

D. High-Ceiling Pendant Loudspeakers

Provide JBL Control 67HC/T pendant-mounted loudspeakers, or approved equal, at the locations indicated on the drawings. The loudspeakers shall be a commercial-grade, full-range, two-way coaxial design consisting of a 6.5-inch low-frequency driver and a 1-inch high-frequency transducer. The loudspeakers shall provide a nominal 75-degree conical coverage pattern designed to provide uniform sound distribution and improved speech intelligibility in high-ceiling areas and spaces with reflective surfaces. The loudspeakers shall have a frequency response of 75 Hz to 17 kHz, a nominal sensitivity of 93 dB, and a continuous power handling capacity of 75 watts. Each loudspeaker shall include an integral 70V/100V transformer with selectable power taps of 7.5, 15, 30, and 60 watts at 70V. The loudspeakers shall include a durable enclosure, protective grille, and manufacturer-approved suspension hardware consisting of primary and secondary safety cables. The loudspeakers shall be suitable for installation in open-structure ceilings and other designated high-ceiling areas.

The Contractor shall coordinate loudspeaker mounting heights, locations, and transformer tap settings with the Electrical Engineer to provide the required audio coverage.

E. Horn-Type Paging and Dispatch Loudspeakers

Provide AtlasIED APX40TN horn-type loudspeakers, or approved equal, at the locations indicated on the drawings. The loudspeakers shall be commercial-grade, high-efficiency, constant-directivity paging horns suitable for indoor and outdoor applications, including apparatus bays and exterior areas. The loudspeakers shall have a nominal power handling capacity of 40 watts, a frequency response of 400 Hz to 7.5 kHz, and a sensitivity of 107 dB. The loudspeakers shall provide a nominal 60-degree horizontal by 40-degree vertical coverage pattern for controlled sound distribution and clear voice reproduction. Each loudspeaker shall include an integral 25V/70V/100V transformer with selectable power taps of 2.5, 5, 10, 20, 30, and 40 watts at 70V. The loudspeaker enclosure shall be constructed of high-impact, UV-resistant polycarbonate material suitable for exposure to environmental conditions. The loudspeakers shall incorporate an adjustable rotating horn assembly with 15-degree positioning increments to allow precise aiming and coverage adjustment. Each loudspeaker shall include a corrosion-resistant mounting bracket and provisions for installation on walls, structural members, or other designated mounting surfaces. The Contractor shall coordinate loudspeaker mounting locations, aiming, coverage patterns, and transformer tap settings with the Electrical Engineer to provide the required sound pressure levels and speech intelligibility.

F. The Contractor shall furnish and install all loudspeakers, wiring, mounting hardware, supports, and accessories required for a complete installation. Loudspeakers shall be installed at the locations indicated on the drawings and shall be securely mounted in accordance with the manufacturer's recommendations. Each of the three (3) audio systems shall utilize dedicated loudspeakers and amplifier channels. Where multiple systems serve the same room or area, separate loudspeakers shall be provided for each system as indicated on the drawings. The Contractor shall adjust the transformer power taps and amplifier output levels to provide uniform audio coverage and appropriate sound levels throughout the facility. All loudspeakers shall be connected, tested, and adjusted for proper operation.

2.5 EQUIPMENT CABINET

A. Provide one (1) fully welded, wall-mounted equipment cabinet with locking front door to house the central audio system equipment. The cabinet shall be constructed of minimum 16-gauge steel with triple-formed side-to-bottom and side-to-top wrapped construction to provide a rigid and durable enclosure. The cabinet shall incorporate a hinged mounting section to allow access to the rear of the equipment for installation, wiring, and maintenance. The mounting section shall attach to the backbox utilizing heavy-duty, spring-loaded, positive-locking mechanisms. The equipment cabinet shall provide a minimum of twenty-four (24) rack units and shall have a nominal depth of twenty-six (26) inches. The cabinet shall include a locking, perforated front door to provide ventilation while preventing unauthorized access to the equipment. Provide ventilation panels at the top and bottom of the cabinet to facilitate airflow and prevent excessive heat buildup. Provide matching blank panels for all unused rack spaces. The cabinet shall be equipped with one (1) four-space

locking security drawer for storage of system accessories and documentation. The Contractor shall provide all necessary rack shelves, mounting hardware, cable management accessories, and equipment supports required for a complete installation. The equipment cabinet shall be Middle Atlantic Products model DWR-24-26 with VFD-24 perforated front door.

B. Provide all necessary connectors, cables, terminal blocks, mounting hardware, wire management accessories, power supplies, audio interfaces, combiners, switch panels, power distribution accessories, and other miscellaneous equipment required for a complete and operational audio system. The Contractor shall provide all necessary audio connections between the Biamp TesiraFORTÉ digital signal processor, Crown power amplifier, Bluetooth audio receiver, paging microphone, and associated equipment. Provide passive stereo-to-mono summing interfaces where required for connection of stereo audio sources to mono system inputs. All equipment shall be properly mounted, interconnected, and identified. Audio wiring, control wiring, and power wiring shall be neatly arranged and secured within the equipment cabinet. The Contractor shall provide all necessary system programming, configuration, testing, and adjustments to ensure proper operation of the Paging, Radio Dispatch, and Music Systems.

2.6 SURGE PROTECTION AND POWER CONDITIONING

A. Provide one (1) SurgeX Surge Eliminator and Power Conditioner, model SX1120RT, or approved equal. The unit shall be rack-mounted and operate from a 120VAC power source with a nominal load capacity of 20 amperes. The unit shall incorporate advanced surge elimination technology to protect the connected audio equipment against electrical transients and power disturbances. The unit shall provide EMI/RFI noise filtering, inrush current elimination, and catastrophic over/under voltage shutdown protection. The unit shall include visual status indicators for monitoring power and protection conditions. The unit shall be equipped with a grounded power cord and shall provide the necessary receptacles for connection of the audio system equipment. The Contractor shall coordinate the electrical power requirements with the Electrical Engineer and provide all necessary power connections and accessories for a complete installation.

B. Provide one (1) WattBox WB-UPS-OL-1000-8 Online Double Conversion Uninterruptible Power Supply (UPS), or approved equal. The unit shall provide a minimum capacity of 1000VA/1000 watts and operate from a nominal 120VAC, 60Hz power source. The UPS shall incorporate online double-conversion technology to provide continuous, regulated, pure sine wave power with zero transfer time to battery backup in the event of an interruption or failure of the incoming electrical service. The unit shall provide protection against power surges, voltage fluctuations, electrical noise, and other power disturbances. The UPS shall include eight (8) protected AC receptacles, internal rechargeable sealed lead-acid batteries, automatic battery charging, and provisions for connecting external battery expansion modules. The unit shall incorporate an LCD display for monitoring input and output voltage, battery status, load conditions, and system operating status. The UPS shall include audible and visual alarms for power failure, low battery, overload, and fault conditions. The unit shall

provide USB and RS-232 communication ports for system monitoring and management. The UPS shall be suitable for installation in a standard 19-inch equipment rack and shall occupy two (2) rack spaces. The UPS shall provide battery-backed power to the designated audio processing and control equipment to maintain system operation during temporary interruptions of electrical service.

2.7 DESKTOP PAGING MICROPHONE

A. Provide one (1) TOA PM-660U desktop paging microphone, or approved equal, at the location indicated on the drawings. The microphone shall be a commercial-grade, dynamic desktop microphone designed for voice paging and dispatch communications. The microphone shall incorporate a directional pickup pattern to provide clear and intelligible speech reproduction while minimizing unwanted background noise. The microphone shall include a weighted desktop base and an integral push-to-talk switch with provisions for activating an external control circuit. The microphone shall provide a low-impedance audio output suitable for connection to the specified Biamp TesiraFORTÉ digital signal processor. The push-to-talk control shall interface with the DSP through the appropriate control circuitry to activate the microphone input and route announcements to the designated Paging System amplifier channel. The Contractor shall provide all required wiring, connections, interfaces, and DSP programming necessary for proper microphone operation. The microphone shall be TOA PM-660U, or approved equal.

PART 3 EXECUTION

3.1 INSTALLATION

A. Comply with all installation parameters provided by the system manufacturer. Installation shall comply with manufacturer's drawings and printed instructions.

B. Identify and label all cables on each end of the cable. Provide wire tags and a cross-reference sheet detailing each cable location.

C. Furnish and install necessary conduit, wiremold, cable trays, pull boxes, outlet boxes, and cable to provide a complete system as herein specified. All wires shall be tested for continuity and freedom of all grounds and short circuits.

D. All output wiring to the system loudspeakers shall be 18 AWG stranded twisted pair minimum.

3.2 SUPERVISION

A. Installation of these systems shall be supervised by a factory trained representative who shall accompany the Owner's representative on an inspection of the entire system and shall demonstrate the entire systems performance.

B. A complete operational test of the entire system shall be performed to demonstrate proper system function in accordance with the specified requirements. Correct any malfunctions within the system where necessary.

3.4 TRAINING

A. Upon acceptance of the system by the Owner, arrangements shall be made to provide a minimum of two (2) hours of training for the Owner's representatives in proper and full potential operation of the system. The training session shall be scheduled through the Electrical Contractor, Construction Manager, Electrical Engineer, and Architect.

B. Provide three (3) complete sets of bound operating instructions including circuit diagrams, part numbers, names, addresses and telephone numbers of parts and equipment sources.

3.5 WARRANTY

A. The Contractor shall provide a system warranty covering the installed system against defects in workmanship, components, and performance, and follow-up support after project completion. The Contractor shall provide a one (1) year written warranty after system acceptance by the Owner.

END OF SECTION 27.5123

SECTION 28.4600 - FIRE DETECTION AND ALARM

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Fire alarm system and associated components, including control units, related equipment, initiating devices, and notification appliances.

1.2 RELATED REQUIREMENTS

A. Section 07.8400 - Firestopping.

B. Section 08.7100 - Door Hardware:

C. Section 14.2100 - Electric Traction Elevators: For interface with fire alarm system.

D. Section 14.2400 - Hydraulic Elevators: For interface with fire alarm system.

E. Section 21.1300 - Fire-Suppression Sprinkler Systems: For interface with fire alarm system.

F. Section 21.3000 - Fire Pumps: For interface with fire alarm system.

G. Section 26.0519 - Low-Voltage Electrical Power Conductors and Cables: For non-power-limited cables.

H. Section 26.0526 - Grounding and Bonding for Electrical Systems.

I. Section 26.0533.16 - Boxes for Electrical Systems.

J. Section 26.0536 - Cable Trays for Electrical Systems.

K. Section 26.0548 - Vibration and Seismic Controls for Electrical Systems: Requirements for seismic qualification of equipment specified in this section.

L. Section 26.3213 - Engine Generators: For interface with fire alarm system.

M. Section 27.1000 - Structured Cabling: Data cables for fire alarm system IP network connections.

N. Section 27.5116 - Public Address Systems.

O. Section 27.5129.13 - Rescue Assistance Signal Systems: Two-way emergency communication systems for areas of refuge/rescue assistance.

P. Section 28.4614 - Single and Multiple Station Alarms.

1.3 ABBREVIATIONS AND ACRONYMS

A. AHJ: Authorities having jurisdiction.

B. BAS: Building automation system.

C. DMNS: Distributed mass notification system.

D. ECS: Emergency communications system.

E. EoL: End-of-line.

F. EVACS: Emergency voice/audio communication systems.

G. FACU: Fire alarm control unit.

H. HVAC: Heating, ventilation, and air conditioning.

I. IDC: Initiating device circuit.

J. LAN: Local area network.

K. MNS: Mass notification system.

L. NAC: Notification appliance circuit.

M. NPLFA: Non-power-limited fire alarm.

N. PLFA: Power-limited fire alarm.

O. SLC: Signaling line circuit.

P. SOO: Sequence of operation.

1.4 REFERENCE STANDARDS

A. 36 CFR 1191 - Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines; current edition.

B. ADA Standards - 2010 ADA Standards for Accessible Design; 2010.

C. ASME A17.1 - Safety Code for Elevators and Escalators Includes Requirements for Elevators, Escalators, Dumbwaiters, Moving Walks, Material Lifts, and Dumbwaiters with Automatic Transfer Devices; 2025.

D. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

E. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

F. NECA 90 - Standard for Commissioning Building Electrical Systems; 2024.

G. NECA 305 - Standard for Fire Alarm System Job Practices; 2018.

H. NFPA 3 - Standard for Commissioning of Fire Protection and Life Safety Systems; 2027.

I. NFPA 4 - Standard for Integrated Fire Protection and Life Safety System Testing; 2027.

J. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

K. NFPA 72 - National Fire Alarm and Signaling Code; Most Recent Edition Cited by Referring Code or Reference Standard.

L. NFPA 76 - Standard for the Fire Protection of Telecommunications Facilities; 2024.

M. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems; 2027.

N. NFPA 1225 - Standard for Emergency Services Communications; 2022.

O. UL 38 - Standard for Manual Signaling Boxes for Fire Alarm Systems; Current Edition, Including All Revisions.

P. UL 268 - Standard for Smoke Detectors for Fire Alarm Systems; Current Edition, Including All Revisions.

Q. UL 268A - Standard for Smoke Detectors for Duct Application; Current Edition, Including All Revisions.

R. UL 464 - Standard for Audible Signaling Devices for Fire Alarm and Signaling Systems, Including Accessories; Current Edition, Including All Revisions.

S. UL 497B - Standard for Protectors for Data Communications and Fire-Alarm Circuits; Current Edition, Including All Revisions.

T. UL 521 - Standard for Heat Detectors for Fire Protective Signaling Systems; Current Edition, Including All Revisions.

U. UL 864 - Control Units and Accessories for Fire Alarm Systems; Current Edition, Including All Revisions.

V. UL 1449 - Standard for Surge Protective Devices; Current Edition, Including All Revisions.

W. UL 1480 - Standard for Speakers for Fire Alarm and Signaling Systems, Including Accessories; Current Edition, Including All Revisions.

X. UL 1711 - Amplifiers for Fire Protective Signaling Systems; Current Edition, Including All Revisions.

Y. UL 1971 - Standard for Signaling Devices for the Hearing Impaired; Current Edition, Including All Revisions.

Z. UL 2075 - Standard for Gas and Vapor Detectors and Sensors; Current Edition, Including All Revisions.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate arrangement of equipment with dimensions and clearance requirements of actual equipment.
2. Coordinate placement of devices and notification appliances with potential conflicts or view obstructions.
3. Coordinate work to provide power for equipment at required locations (e.g., smoke dampers, type of actuators, line or local control transformer, zoning, grouping and circuit activations).
4. Coordinate fire suppression systemdevice requirements, monitoring, control, and associated interconnections.
5. Coordinate requirements for branch circuit protection, identification, and shunt trip if applicable.
6. Coordinate kitchen equipment requirements for fire alarm system interconnections based on selected equipment.
7. Coordinate fire alarm system detection and requirements for battery energy storage spaces.
8. Coordinate reflected ceiling plans to avoid conflicting placements; maintain minimum diffuser and detector clearances as indicated.
9. Coordinate drawing indicated locations for fire extinguisher monitoring requirements.
10. Coordinate submittals to confirm equipment and associated components are capable of indicated settings, and manufacturer documentation identifies required compatible product listings.
11. Municipal Alarm Connections: Coordinate requirements for connection with municipality representative.
12. Notify Architect of conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.
13. Radio Transmitter: Coordinate roof location and installation with Architect.
14. Door Hardware: See Section 08.7100 and coordinate, including access control panel locations.
15. Elevators or Escalators: See Division 14.
16. Lighting Controls: See Division 26.
17. Non-Power-Limited Cables: See Section 26.0519.

18. Engine Generators: See Section 26.3213.
19. See Section 01.9113 - General Commissioning Requirements and coordinate for supporting requirements, including support of services not limited to installation checklists, acceptance testing reports, functional testing, and integrated system testing.

B. Preinstallation Meetings:

1. Conduct meeting with facility representative to review devices, notification appliances, and equipment locations.
2. Conduct meeting with facility representative and other related equipment manufacturers to discuss fire alarm system interface requirements.
3. Conduct meeting to review anticipated installation of code-required smoke control requirements, product solutions, and SOO.
4. Convene one week before starting work for review of documented SOO for system applications.

C. Sequencing:

1. Verify exact termination locations required for boxes, enclosures, and equipment.
2. Do not install devices or notification appliances until final surface finishes, painting, and cleaning are complete, unless otherwise required by AHJ.
3. Do not begin installation of conductors and cables until installation of conduit and pathways between termination points is complete.
4. Sequence work to protect cabling (e.g., overspray painting, physical stress, and insulation damage or covering markings).
5. Verify naming convention for equipment identification, including room names and numbers, prior to creation of final drawings, reports, and labels.

D. Scheduling:

1. Arrange access to facility for data collection with facility representative.
2. Where work involves interruption of existing electrical or fire alarm system service, arrange interruption with Owner.
    a. Arrange test start and end with responsible reporting service. Confirm system normal operating mode and record as-found and as-left settings.
    b. Arrange work to disable individual devices or circuits for minimal disruption if possible.
    c. Arrange in accordance with NFPA 72 fire alarm system impairment requirements.
    d. Where required by AHJ, arrange systems or partial system out of service interruption in accordance with requirements of building, life safety, and fire codes (e.g., approved fire watch plus required notifications, tags at each fire department connection and control valve, and AHJ notification when excess hours).

1.6 SUBMITTALS

A. See Section 01.3000 - Administrative Requirements for submittal procedures.

B. Evidence of designer qualifications.

C. Comply with NFPA 72 chapter "Documentation," including noting names of installers, owners, and system classification information.

D. Design Documents: Submit all information required for plan review and permitting by AHJ, including floor plans, riser diagrams, and description of operation.

1. Copy (if any) of list of data required by AHJ.
2. NFPA 72 "Record of Completion", filled out to extent known at time.
3. Clear and concise description of operation, with input/output matrix similar to that shown in NFPA 72 Appendix A, and complete listing of software required.
4. Manufacturer's detailed product data sheet for each component, including wiring diagrams, and circuit length limitations. Catalog pages and product descriptions include ratings, dimensions, finishes, service conditions, and included features.
5. Certification by manufacturer of FACU that system design complies with Contract Documents.
6. Certification by Contractor that system design complies with Contract Documents.

E. Shop Drawings: Submit installation documentation required for plan review and permitting by AHJ, including floor plans showing locations of fire alarm system components, enlarged drawn to identified scale plan view, and riser diagrams.

1. System zone boundaries and interfaces to fire safety systems.
2. Show locations of components, circuits, and raceways; mark components with identifiers used in control unit programming.
3. Include elevations and details of proposed equipment arrangements.
4. Include system interconnection schematic riser diagram showing proposed and approved cable size and type; coordinated with floor plans and describing circuit class, survivability, and application specific information required by NFPA 72.
5. Include typical wiring diagrams for devices, notification appliances, remote indicators, annunciators, remote test stations, and EoL and power supervisory devices.
6. Include requirements and control diagrams for interfacing with other systems.
7. Circuit layouts; number, size, and type of raceways and conductors; conduit fill calculations; standby and spare capacity calculations; notification appliance circuit loop resistance and voltage drop calculations, including spare capacity.
8. List of devices and notification appliances on each SLC, with spare capacity indicated.
9. Manufacturer's detailed data sheet for each component, including wiring diagrams, installation instructions, and circuit length limitations.
10. Air-Sampling Smoke Detection Systems: Include air-sampling pipe network layout with sampling ports identified; include calculations demonstrating compliance with specified requirements, including spare capacity.
11. Description of power supplies; if secondary power is by battery include calculations demonstrating adequate battery power.
12. Detailed drawing of graphic annunciators, displays, and interfaces.
13. Certification by either FACU manufacturer or manufacturer of related equipment.
14. Certification by FACU manufacturer that system design complies with Contract Documents.
15. Certification by Contractor that system design complies with Contract Documents.

F. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

G. Evidence of cybersecurity compliance in accordance with NFPA 72.

H. Evidence of installer qualifications.

I. Evidence of maintenance contractor qualifications, if different from installer.

J. Inspection and Test Reports:

1. Submit inspection and test plan prior to closeout demonstration.
2. Submit documentation of satisfactory inspections and tests.
3. Submit NFPA 72 "Inspection and Test," filled out.

K. Operating and Maintenance Data: See Section 01 7800 for additional requirements; revise and resubmit until acceptable; have one set available during closeout demonstration:

1. Original copy of NFPA 72 with portions that are not relevant to this project neatly crossed out by hand; label with project name and date.
2. Complete set of specified design documents, as approved by AHJ.
3. Additional printed set of project record documents and closeout documents, bound or filed in same manuals.
4. Contact information for firm that will be providing contract maintenance and trouble call-back service.
5. List of recommended spare parts, tools, and instruments for testing.
6. Replacement parts list with current prices, and source of supply.
7. Detailed troubleshooting guide and large scale input/output matrix.
8. Preventive maintenance, inspection, and testing schedule complying with NFPA 72; provide printed copy and computer format acceptable to Owner.
9. Detailed but easy to read explanation of procedures require recording of system trouble events by qualified personnel, such as when routine testing is being conducted for fire drills and when entering into contracts for building renovations.

L. Project Record Documents: See Section 01 7800 for additional requirements, have one set available during closeout demonstration:

1. Complete set of floor plans showing actual installed locations of components, conduit, and zones.
2. "As installed" wiring and schematic diagrams, with final terminal identifications.
3. "As programmed" operating sequences, including control events by device, and updated input/output chart.
    a. ECS: Voice messages by event.

M. Closeout Documents:

1. Certification by manufacturer that system has been installed in compliance with manufacturer's installation requirements, is complete, and is in satisfactory operating condition.
2. NFPA 72 "Record of Completion," filled out completely and signed by installer and authorized representative of AHJ.
3. Certificate of Occupancy.
4. Report on training results.

N. Maintenance Materials, Tools, and Software: Furnish the following for Owner's use in maintenance of project.

1. See Section 01.6000 - Product Requirements for additional provisions.
2. Furnish spare parts of same manufacturer and model as those installed; deliver in original packaging, labeled in same manner as in operating and maintenance data and place in spare parts cabinet.
3. In addition to items in quantities indicated in PART 2, furnish the following:
    a. Tools, software, and documentation necessary to modify fire alarm system using Owner's personnel; minimum modification capability to include addition and deletion of devices,

notification appliances, circuits, and zones, and changes to system description, and operation.

1) ECS: Include same capability for evacuation and instructional messages.

b. One copy of software not resident in read-only-memory.

c. Extra Fuses: Two for each installed fuse; store inside applicable control cabinet.

d. Extra Cabinet Keys: Six spare for each cabinet lock provided; label key number and corresponding cabinet identifier; collect and provide to Owner facility manager.

1.7 QUALITY ASSURANCE

A. Copies of Design Criteria Documents: For duration of project, maintain at project site copy of each referenced document that prescribes execution requirements; bound together. Also, NFPA 72, relevant portions of other applicable codes, and instructions and guidelines of AHJ. Include in submittals upon completion.

B. Designer Qualifications: NICET Level IV (four) certified fire alarm technician or registered fire protection engineer, employed by FACU manufacturer, Contractor, or installer, with experience designing fire alarm systems in jurisdictional area of AHJ.

C. Installer Qualifications: Firm with minimum three years documented experience installing fire alarm systems of specified type and providing contract maintenance service as regular part of their business.

1. Authorized representative of FACU manufacturer; submit manufacturer's certification that installer is authorized; include name and title of manufacturer's representative making certification.
2. Installer Personnel: At least two years of experience installing fire alarm systems.
3. Supervisor: Level IV (four) certified fire alarm technician; furnish name and address.
4. Contract maintenance office located within 50 miles of project site.
5. Certified in the State in which the Project is located as fire alarm installer.

D. Manufacturer Qualifications: Company specialized in manufacturing products specified in this section with at least three years of documented experience.

E. Maintenance Contractor Qualifications: Same entity as installer or different entity with specified qualifications.

F. Product Evaluation and Listing Organization Qualifications: Organization engaged in evaluation of products and services, including those recognized by OSHA as Nationally Recognized Testing Laboratory (NRTL), and acceptable to AHJ.

1.8 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

B. Do not exceed maximum ambient temperature requirements for batteries at any time, which reduces battery service life. Replace batteries exposed to temperatures in excess of manufacturer's requirements.

C. Do not install or otherwise handle thermoplastic-insulated conductors at temperatures lower than 14 degrees F, unless otherwise permitted by manufacturer's instructions. When installation below this temperature is unavoidable, notify Architect and obtain direction before proceeding with work.

1.9 WARRANTY

A. See Section 01.7800 - Closeout Submittals for additional warranty requirements.

B. Fire Alarm Control Units and Accessory Equipment: Provide minimum 3-year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

C. Fire Alarm Manual Pull Stations: Provide minimum 3-year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

D. Fire Alarm System Detectors: Provide minimum 3-year year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

E. Fire Alarm System Notification Appliances: Provide minimum 3-year year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

PART 2 PRODUCTS

2.1 FIRE ALARM SYSTEM

A. General Requirements:

1. Provide new fire alarm system complying with NFPA 70, NFPA 72, NFPA 90A, and consisting of required equipment, conduit, cabinets, outlet boxes, wiring, connectors, hardware, supports, accessories, components, software, and system programming as necessary for complete operating system that provides functional intent indicated.
2. Comply with the following; where requirements conflict, order of precedence of requirements is as listed:
    a. 36 CFR 1191 and ADA Standards.
    b. Requirements of AHJ.
    c. Applicable local codes.
    d. Contract Documents.
    e. NFPA 72; "should" is mandatory; where conflicts between requirements require deviation, identify deviations clearly on design documents.
3. Fire Alarm System Products:
    a. Listed, classified, and labeled as suitable for purpose intended.
    b. Installation Environments: Provide products suitable for their respective indoor and outdoor applications.
    c. Cybersecurity:
        1) Network communication for control or monitoring of system components protects users by data encryption, mutual device authentication, firmware protection, tamper-proof hardware, and authenticated user access.
        2) Modular component fire alarm system maintains valid cybersecurity certificate from National Registered Testing Laboratory (NRTL), renewed annually.
        3) Firmware upgrades incorporate signature receipts to avoid unauthorized access.
        4) Privacy and Security:
            (a) Authorized password protection is required for accessing and modifying system.

(b) User access level control functionality is configurable.
(c) Includes independent firewall protection.
(d) Incorporates user profiles or other means of data preservation and archiving (e.g., historical changes logs for settings of devices, zones, scenes).
(e) Provide similar devices and equipment to maintain same firmware version.

4. Fire Alarm System Design Information:
   a. Building Code: Comply with ICC (IBC).
      1) Principle Occupancy: As indicated on Architect code summary drawings.
      2) Principle Use: As indicated on Architect code summary drawings.
      3) Elevators: As indicated on Architect code summary drawings.
      4) Occupant Evacuation Method: Total building.
      5) Equipment Room Rating: None required.
      6) Fire Suppression System: Fully sprinkled.
         (a) Types:
            (1) Wet-Pipe Sprinklers.
         (b) Elevator Hoistway: Provide detection, actuation, and dedicated annunciation for sprinklered hoistways in accordance with NFPA 72.
   b. NFPA 72 Fire Alarm System Classification: Protected premises.
   c. Smoke and Heat Detector Coverage: Partial or selective coverage in accordance with NFPA 72.
5. Provide fire alarm circuits in accordance with NFPA 70.
   a. Comply with methods of interconnecting FACUs in accordance with NFPA 72 and NFPA 70.
   b. Power Sources:
      1) Comply with requirements for power supplies of emergency systems in accordance with NFPA 70.
      2) Primary: Dedicated branch circuits from facility power distribution system.
      3) Secondary: Storage batteries with capacity to operate system for period specified by NFPA 72.
   c. Wiring and Wiring Methods:
      1) General Requirements:
         (a) Comply with requirements for wiring and wiring methods in accordance with NFPA 70.
         (b) Conductors and Cables Installed Exposed in Spaces Used for Environmental Air (only where specifically permitted): Plenum-rated, listed and labeled as suitable for use in return air plenums.
         (c) Special Occupancies: Comply with NFPA 70.
         (d) Comply with NFPA 70 for wire and cable plenum, riser, general-purpose, limited-use, undercarpet, and underground applications.
      2) Fire Alarm Circuits:
         (a) Comply with NFPA 70 for conditions and types required for multiconductor cable systems.

(b) Non-Power-Limited Fire Alarm (NPLFA) Circuits:
(1) Provide dedicated NPLFA non-GFCI branch circuits for fire alarm equipment and marked by red identification in accordance with NFPA 70.
(c) Power-Limited Fire Alarm (PLFA) Circuits:
(1) Provide identification for PLFA circuits in accordance with NFPA 70.

3) Active Smoke Control - System Interfaces:
(a) SLCs to and from fans wired as Class A (daisy-chain loop, with return, with isolation modules installed as indicated, minimum of one per floor).
(b) Install wiring associated with fans, including control wiring, in metallic conduit.
(c) Provide approved two-hour fire-rated protection for components pertaining to stair pressurization fans (e.g., wiring, control interfaces, and hardware).

4) Fire-Rated Cables and Cable Systems:
(a) Performance alternative approved by AHJ.
(b) Provide cable fastening and listing requirements in accordance with NFPA 70. Provide indication of application, use cases, and product make and model for which listing applies.
(c) Provide additional classification suffix marking on cable system; observable by AHJ.

6. Provide pathway class designations and pathway survivability, as defined in NFPA 72.
a. Provide monitoring of conductors and other signaling channels for integrity and circuit performance.
b. Pathway Class Designations:
1) Unless otherwise indicated or required, pathways to meet the following requirements:
(a) SLCs: Class B (star, tee-tap, multi-tap, with no return).
(b) IDCs: Class B (daisy-chain with EoL resistor device installed at end of circuit).
(c) NACs: Class B (daisy-chain with EoL resistor device installed at end of circuit).
(d) Network Communications: Class B.
(e) Other Wiring:
(1) Other life safety control features not covered above (e.g., door holder circuits, elevator recall circuits, fire smoke dampers, and air handling system interfaces), wired as Class D (failsafe, intended operation is performed in event of pathway failure).
(2) Where Class D wiring is not possible due to limitation of equipment, wiring limited to 3-feet between addressable control module and equipment and be installed in metallic conduit.
c. Pathway Survivability:

1) Unless otherwise indicated or required, pathways to meet requirements for Pathway Survivability Level 3 (two-hour rated cable with performance approved by AHJ, building protected by automatic sprinkler system).

7. Spare System Capacity:
   a. SLCs: Minimum 25 percent spare capacity.
   b. NACs: Minimum 25 percent spare capacity.
8. Secondary Power Source - Battery Storage Capacity:
   a. Provide standby (nonalarm) operation sufficient for 24 hours.
   b. Provide additional alarm operation for 15 minutes.
   c. Calculate combined of standby load plus alarm load for overall battery storage capacity requirements, per power supply.
   d. Provide 25 percent additional overall battery capacity correction factor.

B. Fire Alarm System Interfaces and Control Functions:

1. UL 864 listed unless otherwise indicated.
2. Descriptions below are intended to provide means for interface. See project SOOs, narrative, and input/output matrix for execution requirements.
3. Provide initiating devices, interfaces, and control functions for emergency control function interfaces in accordance with NFPA 72.
4. Provide monitoring of interconnected systems. Coordinate notification appliance alternate markings as indicated on drawings.
5. Elevators:
   a. Comply with ASME A17.1.
   b. Elevator Shutoff:
      1) Elevator Machine Room Heat Detector:
         (a) Shut down elevator power prior to hoistway sprinkler activation.
         (b) Locate within 24 inches of each sprinkler in accordance with NFPA 72.
      2) Sprinkler Pressure or Waterflow: Shut down elevator power prior to hoistway sprinkler activation.
      3) For each elevator, provide output signal to stop elevator via addressable relay module and power isolation relay.
   c. Elevator Emergency Recall Operation:
      1) Elevator Lobby, Hoistway, and Machine Room Smoke Detectors: Elevator recall for fire fighters' service.
      2) In each elevator machine room, provide interface for each elevator car or group of elevator cars as determined by AHJ via separate addressable relay modules for each output signal below, where applicable.
         (a) Recall elevator to designated (primary) level.
         (b) Recall elevator to alternate level.
         (c) Smoke detection in elevator machine room (fire fighter's hat light).
6. Fire and Smoke Doors/Shutters/Curtains:
   a. Automatic Fire and Smoke Door/Shutter/Curtain Release:
      1) Provide output signal for release of fire and smoke doors/shutters/curtains via addressable relay module and power isolation relay.

7. Electrically Locked Doors:
    a. Comply with NFPA 72, building code, and life safety code requirements for electrically locked doors.
    b. Lock Power Supplies: Provide independent power supplies.
8. Lighting/Dimming Control Systems:
9. Sound and Audio/Visual Media Control Systems:
    a. System Override:
        1) Provide output signal to override sound and audio/visual media controls via addressable relay module and power isolation relays.
        2) Provide connection to UL 864 listed system interface or interface with system control power where interruption of control power overrides system.
10. Emergency Communication Systems (ECS):
    a. Provide minimum of six monitoring point inputs per system, including associated enhancement systems.
11. Generator Systems:
    a. Provide minimum of three monitoring point inputs per system.
12. Other Interconnected Systems: For systems listed below, provide minimum of two monitoring point inputs each.
    a. Gas Detection Systems: Including providing notification appliances as indicated on plans for NOX - Nitrous Oxide, CO2 - Carbon Dioxide, CO - Carbon Monoxide, and HC - Hydrocarbon.
13. HVAC Systems:
    a. Air Handling Units (AHUs) and Roof Top Units (RTUs):
        1) Provide duct smoke detector on supply side of air stream for units over 2,000 cfm.
        2) Provide duct smoke detector on return side of air stream for units over 15,000 cfm.
        3) Provide remote test station for each duct smoke detector unless explicitly indicated as not required.
        4) Provide output signal to shut down units with at least one duct smoke detector via addressable relay module.
        5) Where fire/smoke dampers are located downstream of unit, provide monitoring point input to determine that unit is not operational and subsequently provide output signal to close such dampers via addressable relay module and power isolation relay.
    b. Energy Recovery Units (ERUs):
        1) Provide duct smoke detector on supply side of air stream.
        2) Provide duct smoke detector on return side of air stream.
        3) Provide remote test station for each duct smoke detector unless explicitly indicated as not required.
        4) Provide output signal to shut down units with at least one duct smoke detector via addressable relay module.
        5) Where fire/smoke dampers are located downstream of unit, provide monitoring point input to determine that unit is not operational and subsequently provide

output signal to close such dampers via addressable relay module and power isolation relay.

c. Remote Test Stations: Provide remote test station for each duct smoke detector unless explicitly indicated as not required. Unless otherwise indicated, use remote test stations only in clean, dry, indoor, nonhazardous locations.

14. Fire/Smoke Dampers:
    a. Provide output signal to close fire/smoke damper via addressable relay module and power isolation relay.
    b. Fire/smoke damper activated by the following method(s); where more than one method is listed see drawings for method used at each location.
        1) By addressable duct smoke detector.
        2) By smoke detector installed within 5 feet of fire/smoke damper air diffuser (in lieu of duct smoke detection), where fire/smoke dampers serve spaces other than corridors or corridors not provided with smoke detection; smoke detectors installed solely for activation of fire/smoke damper programmed as supervisory signal (not alarm) unless otherwise required by AHJ.
        3) By room/area smoke detection (in lieu of duct smoke detection), where area/room is provided with smoke detection throughout and all dampers serving such room/area are activated.

C. Sleeping Areas:

1. Quantity of Sleeping Locations or Units: As indicated on drawings.
2. Devices Within Units:
    a. Use fire alarm system-connected addressable devices for local unit detection/alarm (in lieu of single- and multiple-station alarms) and for building fire alarm event notification.
    b. Local Unit Detection/Alarm:
        1) Provide low frequency sounder bases for detectors (smoke and carbon monoxide as indicated).
        2) Smoke Detector Activation:
            (a) Provide dedicated local unit supervisory signal to fire alarm system (separate from carbon monoxide detection).
            (b) Activate low-frequency sounder bases within same unit to provide NFPA 72-compliant temporal 3 pattern.
            (c) Detector Restoration: Device activation to automatically restore to normal condition when smoke chamber obscuration levels drop below activation threshold.
        3) Carbon Monoxide Detector Activation:
            (a) Provide dedicated local unit carbon monoxide supervisory signal to fire alarm system (separate from smoke detection).
            (b) Activate low-frequency sounder bases within same unit to provide NFPA 72-compliant temporal 4 pattern.
            (c) Detector Restoration: Device activation to latch and only restore to normal condition upon reset command from FACU.

4) Hearing-Impaired Units:
   (a) Provide strobe (either in combination with sounder or separate device) in each legally-defined bedroom (177 cd), each living area (minimum 75 cd), and each bathroom (minimum 75 cd). Interface to dedicated NAC or addressable control module, 24 VDC, supervised.
   (b) Where unit includes both smoke and carbon monoxide detection, provide strobe labeled "ALERT" in lieu of "FIRE."
5) Synchronize notification appliances (sounders and strobes) within unit with each other.
6) Exclude local unit detection/alarm from any fire alarm system bypass/disable operation.

c. Building Fire Alarm Event Notification:
1) Provide low frequency sounders in each unit as indicated and as required to achieve minimum of 75 dB at pillow in legally-defined bedrooms and 15 dB over ambient in other interior areas of unit.
2) In lieu of providing separate low frequency sounders, system may activate detector low frequency sounder bases provided under local unit detection/alarm above.
3) Hearing-Impaired Units: Use strobe provided for local unit detection/alarm above.
4) Synchronize notification appliances (sounders and strobes) within unit with each other and with common area notification appliances on same floor.
5) FACU to control activation mapping, silencing, and restoration.

2.2 FIRE ALARM CONTROL UNITS AND RELATED EQUIPMENT

A. Manufacturers:

1. Honeywell International, Inc; Honeywell Gamewell-FCI: www.honeywell.com/#sle.
2. Honeywell International, Inc; Honeywell Notifier: www.honeywell.com/#sle.
3. Potter Electric Signal Company: www.pottersignal.com/#sle.
4. Silent Knight.
5. Substitutions: See Section 01.6000 - Product Requirements.
6. Source Limitations: Furnish FACUs and related equipment produced by single manufacturer and obtained from single supplier.

B. Fire Alarm Control Units and Related Equipment: Listed and labeled as complying with UL 864.

C. Provide cabinets and enclosures as indicated or as required to house system components.

D. Fire Alarm Control Unit (FACU): Addressable.

1. SLCs and IDCs: Configurable for Class B or Class A with additional modules.
2. NACs: Integral and programmable with synchronization modules or cards as required.
3. Power Supply: 120 VAC, 60 Hz, supplying necessary power for FACU.
4. User-Interface: Touchscreen display for system interfacing and service mode settings, include password and user credentials; configurable for custom actions and incorporates historical event log.
5. Support self-testing detector capability.

6. Remote Annunciator Support: Up to 10.
7. Provide NAC expansion as required.
8. Networking: Copper media.
9. Enclosure Finish Color: Red.

E. Basis of Design - Addressable Fire Alarm Control Unit: Potter Electric Signal Company; IPA Series; Model IPA-4000; www.pottersignal.com/#sle.

1. System Capacity: 4,064 addresses; six (expandable to 192) notification appliance circuits (NACs); four input/output (I/O) circuits; 1,500 software zones.
2. Features: Strobe synchronization; dedicated alarm, supervisory and trouble relays; 4,000 event history buffer; built-in IP communicator; Ethernet port for programming and network connectivity; e-mail system status, reports and event information.

F. Notification Appliance Circuit Expansion:

1. Where notification appliance circuit requirements exceed capacity of FACU, provide accessories and cabinets as required for expansion.

G. Networking:

1. Comply with NFPA 70.
2. FACU capable of communicating over network utilizing peer-to-peer, inherently regenerative communication and format.
3. Provide network repeaters as required.
4. Networks with Copper Media:
   a. Provide surge protection for wiring that leaves structure.

H. Emergency Communications System (ECS):

1. Comply with NFPA 1225.
2. Amplifiers listed and labeled as complying with UL 1711.
3. FACU Listed for ECS:
   a. Provide digital ECS integrated with FACU and capable of automatic and manual paging, messaging, evacuation, and alerting on selective and all-call basis.
   b. Provide all-call and total evacuation necessary switch points of command, manual controls of evacuation and paging, per zone, prerecorded messaging for nonemergency voice notifications, door unlock provisions, and commands for speaker bypass, unless otherwise approved by Engineer and AHJ.
   c. Provide minimum of six switch points of command for speaker bypass, visual bypass, elevator recall bypass, door control bypass, HVAC bypass, and auxiliary bypass.
   d. Local and Remote Transponders:
      1) Audio hardware, including multiple primary and backup amplifiers, speaker circuit interfaces, power supplies, supervision hardware, cabinets, and battery backup systems may be configured to support multiple notification zones and packaged as audio transponders.
      2) Transponders considered system control equipment and located, installed, and interfaced accordingly.

I. Releasing Service:

1. Provide FACU listed for releasing service, UL 864.
2. Provide addressable releasing control modules as indicated or as required for control of solenoids listed for releasing applications.
3. Provide manual releasing stations for suppression system activation as indicated.
4. Provide alarm bells for audible notification as indicated. Interface to dedicated NAC or addressable control module, 24 VDC, supervised. Default operation march time pattern on activation of first event, continuous tone on release.
5. Provide strobes for visible notification as indicated. Interface to dedicated NAC or addressable control module, 24 VDC, supervised. Default operation flash on activation of first event, flash on release.
6. FACU capable of supporting 10 releasing zones for independent hazards, with each zone capable of three cross-zone and four abort options; provide adjustable delay and discharge timers.
7. Provide momentary red push button abort switches as indicated with stainless steel wallplate and identify "SUPPRESSION SYSTEM ABORT."
8. Addressable Releasing Control Modules: See "Addressable Interface Modules" below.
9. Manual Release Station: See "Manual Pull Stations" under "Initiating Devices" article below.
10. Bells and Strobes: See "Notification Appliances" article below.

J. Active Smoke Control:

1. Provide FACU listed for active smoke control, UL 864.
2. Provide panels listed to UL 864 for smoke control use as indicated or as required for annunciation and manual override. Panels that use separate components not listed for smoke control use as assembly are not permitted.
3. Provide LED graphical annunciator and fire fighter's override panel at locations indicated on drawings.
4. Provide smoke control system report printing capability via fire alarm system printer.
    a. Fire Alarm System Printer: See "Fire Alarm System Printers" below.
    b. Capable of producing ACTIVE and ACTIVE CLEAR reports for points related to smoke control system.
    c. Capable of producing PASS and FAIL reports for weekly test of smoke control system. If present, indicate cause of failures (e.g., fan timeout) for diagnostic purposes.
5. Fan Control/Indication:
    a. Provide HAND/OFF/AUTO selector switch for each fan to permit manual override control.
    b. Provide white NORMAL indication to identify each selector switch is in AUTO position.
    c. Provide green ON and red OFF indication to identify operating status of each fan.
    d. Provide amber FAULT indication to identify abnormal condition for each fan or associated control hardware.
    e. Where applicable, provide blue DUCT SMOKE indication to identify fans that have been deactivated by duct smoke detectors to permit manual override control to ON with selector switch.
6. Damper Control/Indication:
    a. Provide OPEN/AUTO/OFF selector switch for each damper to permit manual override control.
    b. Provide white NORMAL indication to identify each selector switch is in AUTO position.

c. Provide green OPEN and red CLOSED indication to identify operating status of each damper.
d. Provide amber FAULT indication to identify abnormal condition for each damper or associated control hardware.

7. Where fan and damper are to operate in unison, provide single selector switch and NORMAL indication for combined control. Provide separate annunciation points for other specified indications.
8. Provide master engage key-operated switch to enable panel operation.
   a. When switch is in ENGAGE position and any fan/damper selector switch is placed in position other than AUTO, generate fault at FACU to indicate that smoke control system manual mode has been initiated.
   b. Restore to normal condition when selector switches have been returned to AUTO position or when ENGAGE switch is returned to NORMAL position.
9. Provide local lamp test/acknowledge switch to confirm operation of each lamp and to silence local panel fault indicating sounder; switch to operate with panel master engage key switch in either ENGNAGED or NORMAL position.
10. If more than one panel is required, each panel to be programmable to permit equal operational feature at each panel. Command of panels determined by programmable priority sequence assigned to each panel.

K. Addressable Interface Modules:

1. General Requirements:
   a. Provide addressable modules suitable for connection to FACU SLCs.
   b. Unless otherwise indicated, use addressable modules only in clean, dry, indoor, nonhazardous locations.
2. Addressable Monitor Modules: Unless devices are explicitly permitted connected together on one zone; provide separate addressable monitor module for each conventional dry-contact input device in order to be individually identifiable by addressable FACU.
3. Addressable Relay Modules:
   a. Provide as indicated or as required to perform necessary functions via dry-contact interface.
   b. Where load exceeds module contact rating, provide accessory power isolation relays suitable for load as required.

L. Alarm Communication:

1. Protected Premises Alarm and Signaling Systems:
   a. Provide accessories as required for interface as indicated and as required by AHJ.
   b. Provide accessories in accordance with building code, fire code, and life safety code requirements for occupancy classifications and use cases.
   c. Include software and firmware control, required features, special requirements for low-power radio (wireless) systems, and fire alarm system interconnections required by NFPA 72.
2. Supervising Station Alarm Systems:

a. Provide accessories as required for interface with supervising station as indicated and as required by AHJ.
b. Communication Method: Single path, internet protocol (IP).
c. Supervise communication paths at interval required by NFPA 72.

3. Public Emergency Alarm Reporting Systems:
   a. Provide accessories as required for interface as indicated and as required by AHJ.
   b. Provide municipality-approved master box with quantity of interface zones, coding, and timing as required by AHJ.
   c. Interface with FACU utilizing supervised wiring to relay modules with quantity of contacts as required for interface zones.
4. Products:
   a. NAPCO Security Technologies, Inc; StarLink Max Series Cellular Communicators: www.napcosecurity.com/#sle.
   b. Substitutions: See Section 01.6000 - Product Requirements.

M. Remote Annunciators:

1. LCD Remote Annunciators:
   a. Provide backlit LCD display that mimics FACU display.
   b. Provide dedicated status indications for power and alarm, supervisory, and trouble conditions.
   c. Enable system control functions including acknowledge, silence, and reset.
   d. Provide local audible alarm.
   e. Mounting: Wall-mounted; provide flush-mounted annunciator for finished areas and surface-mounted annunciator for non-finished areas unless otherwise indicated.
2. LED Remote Annunciators:
   a. Provide LEDs each with customizable label for displaying alarm, supervisory, and trouble conditions.
   b. Mounting: Wall-mounted; Provide flush-mounted annunciator for finished areas and surface-mounted annunciator for non-finished areas unless otherwise indicated.

N. Fire Alarm System Printers:

1. Listed to UL 864 for use with fire alarm system.
2. Capable of providing written record of system events and status changes.

2.3 FIRE ALARM SYSTEM INITIATING DEVICES

A. General Requirements:

1. Addressable Systems:
   a. Addressable Devices: Individually identifiable by addressable FACU; suitable for connection to FACU SLCs.
   b. Conventional/Nonaddressable Devices: Provide addressable interface modules as indicated or as required for connection to addressable FACU. Unless devices are explicitly

permitted to be connected together as one zone, provide separate addressable monitoring point for each device in order to be individually identifiable by addressable FACU.

2. Provide devices and associated accessories suitable for intended application and location to be installed. Unless otherwise indicated, use addressable devices and addressable interface modules only in clean, dry, indoor, nonhazardous locations.
3. Surface-Mounted Devices: Provide manufacturer's accessory surface mount backboxes or suitable outlet/device box.
4. Devices for Outdoor and Damp/Wet Locations: Weatherproof, suitable for outdoor use; provide manufacturer's accessory backboxes or enclosures in accordance with product listing.
5. Devices for Hazardous/Classified Locations: Listed and labeled as suitable for classification of installed location.

B. Manual Fire Alarm Boxes/Pull Stations:

1. Description: Noncoded manual signaling boxes listed and labeled as complying with UL 38.
2. Alarm Initiation: Configured for general alarm initiation unless otherwise indicated; presignal stations (where indicated) require use of key to initiate general alarm.
3. Operation: Dual-action unless otherwise indicated or required.
   a. Dual-Action Operation: First requires pushing, pulling, or lifting, then pulling of lever.
4. Color: Red, in accordance with NFPA 72.
5. Station Reset: Requires use of key or tool.

C. Spot-Type Detectors:

1. Utilize plug-in mounting to separate base with tamper-resistant feature; provide bases as indicated or as required.
2. Addressable Detectors:
   a. Provide LED indication of normal operation and regular communication with FACU and alarm condition.
3. Smoke Detectors:
   a. Listed and labeled as complying with UL 268.
   b. Provide sensor type (e.g., photoelectric, ionization) as indicated.
4. Thermal/Heat Detectors:
   a. Listed and labeled as complying with UL 521.
   b. Provide sensor type (e.g., fixed temperature, rate-of-rise) and rating as indicated.
5. Carbon Monoxide Detectors:
   a. Listed and labeled as complying with UL 2075.
   b. Provide end-of-life notification.

D. Duct Smoke Detectors:

1. Listed and labeled as complying with UL 268A.
2. Ratings: Compatible with air velocity, temperature, and humidity requirements for installed duct.
3. Housing: Select as required for application.
4. Sampling Tubes: Select as required for installation in duct to be monitored.

E. Beam Smoke Detectors:

1. Listed and labeled as complying with UL 268.
2. Provide reflective type (with transmitter/receiver unit and separate reflector) or end-to-end type (with separate transmitter and receiver units) detectors.

3. Provide minimum of four configurable automatic detection sensitivity levels.
4. Select detectors and associated accessories suitable for coverage range required.
5. Finish Color: Selected by Architect.

F. Air-Sampling Smoke Detection Systems:

1. Design and provide smoke detection system suitable for application and coverage area indicated, consisting of smoke detector unit with aspirator/fan that continuously draws air into sensing chamber through connected sampling pipe network and associated sampling ports.
2. Comply with NFPA 72 and list and label as complying with UL 268.
3. Comply with applicable requirements of NFPA 76 for Very Early Warning Fire Detection (VEWFD).
4. Detector Unit:
   a. Sensitivity: Programmable; capable of meeting NFPA 76 requirements for Very Early Warning Fire Detection (VEWFD) even if system is designed and programmed for less stringent level.
   b. Smoke Detection Method: Provide detector units employing laser-based light scattering mass detection.
   c. Alarm Levels: Programmable; as indicated or as required to perform alert, prealarm action, and alarm functions; minimum of three.
   d. Minimum Number of Output Relays Supported: _____.
   e. Display: Provides local annunciation of detector trouble and alarm status.
5. Sampling Pipe Network:
   a. Use manufacturer's recommended sampling pipe and fittings; plenum rated; identified in accordance with NFPA 72.
   b. Designed using manufacturer's product-specific design software or based on manufacturer's pre-engineered design suitable for application.
6. SLC Interface: Communicates levels of events; allows FACU real-time status information, resetting of historical values, and initiating operating modes.

2.4 FIRE ALARM SYSTEM NOTIFICATION APPLIANCES

A. General Requirements:

1. Provide signaling notification appliances listed for fire-protective service and intended operating mode, public or private; suitable for connection to FACU notification appliance circuits.
2. Provide notification appliances and associated accessories suitable for intended application and location to be installed. Use notification appliances only according to listed mounting (e.g. ceiling, wall).
3. Surface-Mounted Notification Appliances: Provide manufacturer's accessory surface mount backboxes or suitable outlet/device box.
4. Concealed Notification Appliances:
   a. Upon activation from fire alarm system, expose device for operation; return to concealed position upon system deactivation; motor-driven.
   b. Provide door position monitoring system for remote indication of concealed and exposed positions.
5. Exterior Notification:
   a. In addition to required occupant notification, provide notification appliances on exterior of building.

b. Outdoor and Damp/Wet Locations: Weatherproof, suitable for outdoor use; provide manufacturer's accessory backboxes or enclosures in accordance with product listing.
c. Visible Notification: Provide strobe beacon with red lens; interface to dedicated NAC or addressable control module, 24 VDC, supervised.
d. Trouble Visible Notification: Provide strobe beacon with amber lens; interface to dedicated NAC or addressable control module, 24 VDC, supervised.
e. Sprinkler System Waterflow Visible Notification: Provide strobe beacon with clear lens; interface to dedicated NAC or addressable control module, 24 VDC, supervised; same circuit as sprinkler system waterflow audible notification where provided.
f. Sprinkler System Waterflow Audible Notification: Provide bell; interface to dedicated NAC or addressable control module, 24 VDC, supervised; same circuit as sprinkler system waterflow visible notification where provided.

6. Notification Appliance Derating: Include device derating adjustments in accordance with listing where applicable, including the following.
   a. Where accessory protective guards or enclosures are utilized.
   b. Where required by field conditions (e.g., ambient temperature and sound).
7. Notification Appliance Color:
   a. Wall-Mounted: Red.
   b. Ceiling-Mounted: White.
   c. See drawings for mounting configuration indicated by symbols on floor plans, system interconnection diagrams, and details.

B. Visible Notification Appliances:

1. Public Mode Operation: Listed and labeled as complying with UL 1971.
2. Strobes: Clear or nominal white lens with flash rate of 1 Hz unless otherwise indicated or required; xenon or LED light source with maximum pulse duration of 0.02 seconds; candela rating as indicated.

C. Audible Notification Appliances:

1. Listed and labeled as complying with UL 464.
2. Rated Sound Pressure Level: As required to achieve design sound pressure levels, but not less than 75 dBA at 10 feet for public mode operation or 45 dBA at 10 feet for private mode operation in accordance with UL 464.
3. Horns: Selectable tone, including at minimum NFPA 72 temporal 3 pattern and continuous; minimum of two selectable volume levels.
4. Low-Frequency Sounders: Listed for producing 520 Hz low frequency alarm signal for sleeping areas in accordance with NFPA 72; selectable tone, including at minimum NFPA 72 temporal 3 pattern and continuous.

D. Textual Audible Notification Appliances:

1. Listed and labeled as complying with UL 1480.
2. Rated Sound Pressure Level: As required to achieve design sound pressure levels, but not less than 75 dBA at 10 feet for public mode operation or 45 dBA at 10 feet for private mode operation in accordance with UL 464.
3. Frequency Range: 400 to 4,000 Hz minimum in accordance with UL 1480; listed for producing 520 Hz low frequency alarm signal for sleeping areas in accordance with NFPA 72.

4. Loudspeakers:
   a. Listed as suitable for installed environment.
   b. Speaker Voltage: Field configurable, matched to audio distribution circuit voltage.
   c. Provide minimum of four field-selectable power taps.

E. Combination Notification Appliances: Comply with respective requirements for each signaling method.

F. Accessories:

1. Notification Appliance Bases: White, unless otherwise indicated.
2. Provide guards to protect notification appliances where subject to mechanical damage; listed for use with notification appliance.

2.5 WIRE AND CABLE

A. General Requirements:

1. Substitution of fire alarm listed cables for communication wiring, in accordance with NFPA 70, is not permitted.
2. Provide cables as indicated or as required for connections between system components.
   a. Data Cables for IP Network Connections: Unshielded twisted pair (UTP) complying manufacturer's minimum requirements.
   b. See Section 27.1000.

B. Power-Limited Fire Alarm Cables (PLFA):

1. Comply with applications of listed cables in accordance with Chapter 7 of NFPA 70.
   a. Fire alarm cable substitutions in accordance with NFPA 70: Permitted.

C. Non-Power-Limited Fire Alarm Cables (NPLFA):

1. Comply with NPLFA circuit conductor properties in accordance with NFPA 72.
2. Comply with listing requirements in Chapter 7 of NFPA 70.

2.6 ACCESSORIES

A. Provide components as indicated or as required for connection of fire alarm system to devices and other systems indicated.

B. Provide EoL resistors as required for wiring supervision.

C. Terminal Cabinets:

1. Cabinet: Steel, with red finish; keyed to match fire alarm system equipment.
2. Terminal Strips: Rated for 20 A at 250 VAC.
3. Termination Points: Rated for 12 AWG conductors; quantity as indicated on drawings or as required for application with minimum 25 percent spare capacity.

D. Protective Covers for Fire Alarm Devices:

1. Listed to same standard as device being protected.
2. Outdoor Covers: Weather resistant, suitable for outdoor use; use only with outdoor-rated devices.
3. Provide guards to protect devices where subject to mechanical damage; listed for use with detector.

a. Protective Covers for Manual Pull Stations:
   1) Provide protective covers with hinged access for manual pull stations where indicated.
   2) Listed and labeled as complying with UL 38.
   3) Outdoor Covers: Weather resistant, suitable for outdoor use; use only with outdoor rated devices.
   4) Provide integral battery-powered horn activated by lifting cover where indicated for false alarm deterrent.
b. Protective Covers for Detectors:
   1) Use only with specific devices approved under listing.

E. Documentation Cabinets:
   1. Provide cabinets, size as indicated or as required to comply with on-site documentation storage required by NFPA 72.
      a. Quantity of Cabinets: As indicated on drawings.
   2. Cabinet: Steel with red finish; keyed to match fire alarm system equipment unless otherwise required by AHJ.

F. Surge Protection:
   1. Line Voltage Surge Protection:
      a. Provide for each line voltage circuit serving fire alarm system control units and related equipment (e.g., FACU, field booster panels, nodes, and transponders).
      b. Listed and labeled as complying with UL 1449.
   2. Low Voltage Surge Protection:
      a. Provide for each power-limited fire alarm circuit that enters or exits a building.
      b. Listed as complying with UL 497B.
      c. Provide voltage/current ratings suitable for circuit to be protected.

G. Battery Tester:
   1. Provide listed equipment rated for VDC, VAC, and fire alarm system maximum amperage capacity, in-rush conditions, and correction factors.
   2. Provide battery analyzer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify field measurements, including future system expansion as indicated on Contract Documents.

B. Verify that system capacities listed in manufacturer instructions align with designed system.

C. Verify that mounting surfaces are ready to accept components and equipment, with suitable support frames and anchors installed where required.

D. Verify ratings, configurations, and characteristics of system components.

E. Verify rough-ins for field connections.

F. Verify that work likely to damage fire alarm system has been completed.

G. Verify that interior of building has been protected from weather.

H. Perform preinstallation tests and inspections per manufacturer's instructions and in accordance with NECA 305.

I. Verify that system bonding is in accordance with Section 26.0526.

J. Do not energize system until deficiencies have been corrected.

K. Verify that branch circuit wiring installation is completed, tested, and ready for connection to fire alarm system. Overcurrent protection ratings are consistent with circuit voltage and manufacturer's recommendations and nameplate data for equipment.

3.2 PREPARATION

A. Prior to installation, confirm environment of installation area is clean, and with ambient temperature, humidity, and ventilation requirements are per manufacturer’s written instructions.

1. Clean and vacuum in accordance with manufacturer's written instructions. Confirm equipment ventilation holes are absent of obstructions and free for air flow.
2. Clean pathways thoroughly to remove foreign materials before installing conductors and cables.
3. Clean dirt, debris, plaster, and other foreign materials from equipment enclosures, cabinets, and outlet boxes.
4. Clean surfaces to receive adhesive products according to manufacturer's instructions.

B. Follow tool requirements for installation, including torquing adjustments, as listed in manufacturer documentation.

C. Remove detector dust covers prior to system energization.

3.3 INSTALLATION

A. Install field-devices, components, FACU and related equipment, and accessories in accordance with the following:

1. Manufacturer's instructions, applicable codes, and Contract Documents.
2. NECA 1.
3. NECA 305.
4. NFPA 70; including requirements for mechanical execution of work.

B. Field Locations:

1. Obtain Owner's approval of locations of devices and notification appliances before installation.
2. Arrange equipment to provide minimum operational clearances and required maintenance access in accordance with manufacturer's instructions and NFPA 70.
3. Conceal wiring, conduit, outlet boxes, and supports where installed in finished areas; maintain code-required access.

C. Raceways and Supports:

1. Coordinate locations of outlet boxes as required for installation. Only install boxes and equipment at locations based on application standards indicated in NFPA 72.
   a. See Section 26.0533.16.

2. Secure and support raceways at intervals complying with NFPA 70. Provide supports where vertical rise exceeds permissible limits.
   a. See Section 26.0529.
3. Provide minimum of six spare 1-inch trade size conduits out of each fire alarm panel stubbed into accessible space above ceiling.
4. Install firestopping to preserve fire resistance rating of partitions and other elements.
   a. Minimum height for pathways to pass through floor or wall, if cable fastening is required, and routing in elevator hoistways in accordance with NFPA 70.
   b. See Section 07.8400.
5. Provide required vibration isolation or seismic controls.
   a. See Section 26.0548.
6. Cable Trays: Coordinate non-power-limited fire alarm and other Class 1 circuits utilizing cable tray for support for maximum conductors in cable trays and raceways; including ampacity adjustment factors in accordance with NFPA 70.
   a. Cable Tray Support and Attachment: See Section 26.0536 for additional requirements.

D. Wiring and Connections:

1. Maintain separation of Class 1, Class 2, Class 3 remote-control, signaling, fire alarm circuits, and power-limited circuits in accordance with cable insulation class and NFPA 70.
2. Maintain circuit pathway and class designations in accordance with NFPA 72 for configuration, separation, and survivability.
3. Comply with permitted and not permitted installations for wires, cables, cable routing assemblies, communications circuits, and fire alarm circuits in accordance with NFPA 70.
4. Secure and support conductors and cables in accordance with NFPA 70 using suitable supports and methods approved by AHJ. Provide independent support from building structure and suspended ceiling systems. Do not provide support from raceways, piping, ductwork, or other systems.
5. Provide grounding and bonding in accordance with Section 26.0526.
6. Comply with manufacturer's minimum cable sizes or ratings.
7. Do not exceed manufacturer's recommended maximum power, signal, or network cable lengths between components.
8. Provide network wiring in accordance with NFPA 70.
9. Neatly train and bundle conductors inside boxes, wireways, and cabinets.
10. Fire-Rated Cables and Cabling Systems: Comply with listing requirements to maintain installation, including aspects of attachment surfaces, specific products, and requirements associated with vertical and horizontal routing.
11. See manufacturer's instructions for batteries.

E. Fire Alarm System Components:

1. Install field-installed devices, components, relays, notification appliances, accessories, and when applicable EoL resistors.
   a. Install wiring to supervisory devices and associated EoL resistors as required for supervision of hardwired connections
2. Install Wall-Mounted Equipment: Assemble component hardware within (e.g., card bays, sub-bays, expansion bays, signal cards, other card frames, networking, signal transmission, application modules, tamper monitoring devices, interconnecting modules, and auxiliary power supplies), including space for required spare capacity, and configure settings.

3. Install Interconnect Wiring: Connect system cabinets, install processor and cards, cabling, connectors, terminations, and bonding.

F. Branch Power:

1. After installation confirmations, follow manufacturer instructions to connect branch circuit power cables to premises fire alarm system components; comply with NFPA 70.
2. Where accessories require auxiliary power, provide control power source and monitoring as indicated or as required to complete installation.
3. Install auxiliary power supplies, including indicated monitoring, and connections necessary for remote equipment.

G. System Identification:

1. Identify devices, notification appliances, components, cables, and equipment in accordance with approved submittals. See Section 26.0553.
2. Confirm fire alarm system programming meets requirements of SOO and sub-system SOOs.
3. Mark location of disconnecting means for NPFLA circuits.
4. Coordinate to provide red branch power circuit protective devices or identify them accordingly as required by NFPA 72 and NFPA 70.
5. Mark date of batteries installed on inside cover of panels and formal maintenance logs.

H. Troubleshooting and Installer Checks:

1. Field test connectivity periodically during installation process to avoid unexpected troubleshooting.
2. Check system operation for notification, FACU functions, circuit supervision, alarm initiating devices, supervisory initiating devices, dress panels/doors/covers, and programming before performing field tests.

I. Fire Alarm System Tests:

1. Perform required tests of NFPA 72. Record measured values during operational checks.
2. Confirm functional testing of fire alarm system is as indicated in Contract Documents.

3.4 FIELD QUALITY CONTROL

A. See Section 01.4000 - Quality Requirements for additional requirements.

B. Provide services of manufacturer's authorized representation to observe installation and assist in inspection, testing, and adjusting. Include manufacturer's detailed testing procedures and field reports and with submittals.

C. Provide equipment, two-way radios for testing personnel use, tools, and supplies required to accomplish inspection and testing.

D. Notify Owner and Architect at least two weeks prior to scheduled inspections and tests.

E. Inspect and test in accordance with manufacturer's instructions.

F. Inspect wiring and components for damage and defects.

G. Batteries and Power Supplies: Perform inspections and tests listed in manufacturer installation instructions.

H. Perform additional requirements related to testing and inspection during system startup.

I. Test for interface with other systems.

J. Test shunt trips to verify operation.

K. Correct defective work, adjust for operation, and retest until entire system complies with Contract Documents.

L. Submit detailed reports indicated inspection and testing results, corrective actions taken, and as-found and final adjusted settings.

M. Diagnostic Period: After successful completion of inspections and tests, operate system to normal mode for at least 14 days without system or equipment malfunctions.

3.5 SYSTEM STARTUP

A. Obtain Owner approval prior to performing system startup.

B. Manufacturer Services: Provide services of manufacturer's authorized representation to systems startup. Include manufacturer's detailed startup procedures with submittals.

C. Prepare and start equipment and systems in accordance with manufacturer's instructions and recommendations.

3.6 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

B. Adjust initiating device and notification appliance settings to achieve desired operation as indicated in submittals.

C. Measure power supply primary and secondary voltages, log values for records, and make appropriate adjustments.

D. Adjust alignment of equipment covers and doors. Provide keys and spare keys to Owner.

E. Reprint and reinstall damaged or misinstalled labels; maintain neat and square to installed location good workmanship - see NECA 1; maintain consistent placements for identification on products of similar type.

F. Adjust devices or notification appliances and associated bases to be flush and level.

G. Program system parameters according to requirements of Owner.

3.7 CLEANING

A. See Section 01.7000 - Execution and Closeout Requirements for additional requirements.

B. See Section 01.7419 - Construction Waste Management and Disposal for field-generated construction waste requirements.

C. Check tightness of electrical connections. Replace damaged components and provide closure plates for vacant positions. Provide circuit directory updates for related power branch circuits.

D. Clean and repair existing materials and equipment that remain or are indicated for reuse.

E. Clean dirt, debris, plaster, and other foreign materials from outlet boxes and fire alarm system equipment and components.

F. Clean fire alarm system equipment and components according to manufacturer's instructions and NECA 305.

G. Clean surfaces and interiors of boxes and device cover plates in accordance with manufacturer's instructions to remove dirt, fingerprints, debris, plaster, and other foreign materials.

H. Repair scratched or marred exposed surfaces to match original factory finish.

I. Comply with federal (EPA), state, and local regulations for battery handling and disposal. Do not spill battery fluids down plumbing drains. Only use containers safe for transportation marked 'nonspillable.'

3.8 COMMISSIONING

A. See Section 01.9113 - General Commissioning Requirements for additional requirements.

B. Comply with NFPA 3 for commissioning of fire protection and life safety systems.

C. Comply with NECA 90 for commissioning building electrical systems.

D. Support Commissioning Agent in assembling test data and generating reports.

E. Comply with requirements for testing as required by Commissioning Agent for Integrated System Testing.

1. Comply with NFPA 4 for integrated fire protection and life safety system testing.

F. Participate in four hours of seasonal testing, as scheduled by Commissioning Agent, six months from Date of Substantial Completion.

3.9 INSPECTION AND TESTING FOR COMPLETION

A. Notify Owner 7 days prior to beginning completion inspections and tests.

B. Owner will provide services of an independent fire alarm engineer or technician to observe tests and approve closeout documentation.

C. Notify AHJ and comply with their requirements for scheduling inspections and tests and for observation by their personnel.

D. Provide services of installer's supervisor or person with equivalent qualifications to supervise inspection and testing, correction, and adjustments.

E. Prepare for testing by ensuring that work is complete and correct; perform preliminary tests as required.

F. Provide tools, software, and supplies required to accomplish inspection, testing, and document results.

G. Perform inspection and testing in accordance with NFPA 72 and requirements of AHJ; document each inspection and test.

H. Correct defective work, adjust for operation, and retest until entire system complies with Contract Documents.

I. Diagnostic Period: After successful completion of inspections and tests, operate system in normal mode for at least 14 days without system or equipment malfunctions.

1. Record system operations and malfunctions.
2. If malfunction occurs, start diagnostic period over after correction of malfunction.
3. Owner will provide attendant operator personnel during diagnostic period; schedule training to allow Owner personnel to perform normal duties.

4. At end of successful diagnostic period, fill out and submit NFPA 72 "Inspection and Testing Form."

3.10 OWNER PERSONNEL INSTRUCTION

A. Provide the following instruction to designated Owner personnel:

1. Hands-On Instruction: On-site, using operational system.
2. Classroom Instruction: Owner furnished classroom, on-site or at other local facility.
3. Factory Instruction: At FACU manufacturer's authorized training facility.

B. Administrative: One-hour session(s) covering issues necessary for nontechnical administrative staff; classroom:

1. Initial Training: One session precloseout.
2. Refresher Training: One session post-occupancy.

C. Basic Operation: One-hour sessions for attendant personnel, security officers, and engineering staff; combination of classroom and hands-on:

1. Initial Training: One session precloseout.
2. Refresher Training: one session post-occupancy.

D. Detailed Operation: Two-hour sessions for engineering staff; assume NICET level I qualifications or equivalent; combination of classroom and hands-on:

1. Initial Training: One session precloseout.
2. Refresher Training: One session post-occupancy.

E. Maintenance Technicians: Detailed training for electrical technicians on programming, maintaining, repairing, and modifying; factory training:

1. Initial Training: One 3-day session, precloseout.
2. Refresher Training: One 1-day session post-occupancy.

F. Use operation and maintenance documentation as primary instruction material; have paper copies available for attendees and supplement training material aids.

G. Provide means of evaluation of trainees suitable to type of training given; report results to Owner.

3.11 CLOSEOUT ACTIVITIES

A. See Section 01.7800 - Closeout Submittals for additional submittals.

B. See Section 01.7900 - Demonstration and Training for additional requirements.

C. Closeout Demonstration: Demonstrate operation of all functions to Owner.

1. Be prepared to conduct any of required tests.
2. Have minimum one copy of operation and maintenance data, preliminary copy of project record drawings, input/output matrix, and operator instruction chart(s) available during demonstration.
3. Have authorized technical representative of FACU manufacturer present during demonstration.
4. Demonstration may be combined with inspection and testing required by AHJ; notify AHJ with enough time to schedule demonstration.
5. Repeat demonstration until successful.

D. Occupancy will not occur prior to Substantial Completion.

E. Substantial Completion of project cannot be achieved until inspection and testing is successful and the following:

1. Specified diagnostic period without malfunction has been completed.
2. Approved operating and maintenance data has been delivered.
3. Spare parts, extra materials, and tools have been delivered.
4. All aspects of operation have been demonstrated to Owner.
5. Final acceptance of fire alarm system has been given by AHJ.
6. Occupancy permit has been granted.
7. Specified precloseout instruction is complete.

F. Perform post-occupancy instruction within three months after Substantial Completion.

3.12 PROTECTION

A. Protect installed fire alarm system from subsequent construction operations.

3.13 MAINTENANCE

A. See Section 01.7000 - Execution and Closeout Requirements for additional requirements relating to maintenance service.

B. Provide to Owner as alternate to base bid separate maintenance contract for service and maintenance of fire alarm system for entire warranty period to include work described below; include complete description of preventive maintenance, systematic examination, adjustment, inspection, and testing, with detailed schedule.

C. Perform routine inspection, testing, and preventive maintenance required by NFPA 72, including:

1. Maintenance of fire safety interface and supervisory devices connected to fire alarm system.
2. Repairs required, unless due to improper use, accidents, or negligence beyond control of maintenance contractor.
3. Record keeping required by NFPA 72 and AHJ.

D. Provide trouble call-back service upon notification by Owner:

1. Provide on-site response within two hours of notification.
2. Include allowance for call-back service during normal working hours at no extra cost to Owner.
3. Owner will pay for call-back service outside of normal working hours on hourly basis, based on actual time spent at site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

E. Provide complete description of preventive maintenance, systematic examination, adjustment, cleaning, inspection, and testing, with detailed schedule.

F. Maintain on-site log listing date and time of each inspection and call-back visit, condition of system, nature of trouble, correction performed, and parts replaced. Submit duplicate of each log entry to Owner's representative upon completion of site visit.

G. Comply with Owner's requirements for access to facility and security.

END OF SECTION 28.4600

SECTION 28 46 11.25 - AIR SAMPLING DETECTION SYSTEM FOR LITHIUM ION BATTERY OFF GASSING

PART - 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 STANDARDS

A. The system shall be designed, installed, commissioned & maintained to meet the county specific recommendations. All normative references for this document shall be considered.

B. System conformity shall be tested & approved according to UL 268 standard for smoke detectors used in fire alarm systems.

Class	Sensitivity	Description
A	Aspirating smoke detector providing very high sensitivity	Very early warning fire detection: (VEWFD) NFPA 76 The detection of very diluted amounts of smoke, for example entering air conditioning return air ducts to detect the extremely diluted concentrations of smoke that may be emanating from overheating electrical equipment in the protected space (i.e. clean room, server room)
B	Aspirating smoke detector providing enhanced sensitivity	Early warning fire detection: (EWFD) NFPA 76 For special fire detection arrangements, close to uniquely valuable, vulnerable or critical items such as medical analysis equipment, computers, Lithium-ion energy storage or electronic equipment cabinets
C	Aspirating smoke detector providing normal sensitivity	Standard fire detection: (SFD) NFPA 72 General fire detection in normal rooms or spaces, giving, for example, at least an equivalent level of detection as a point or beam type smoke detection system

Tab. 1. Smoke detection classification table NFPA.

All fire detection & control equipment shall be Listed for their functions to the relevant parts of NFPA 72. Certificate of conformance according to the relevant NFPA codes & standards shall be provided.

The electrical installation shall be installed & tested in accordance with NFPA 70 (NEC) & any applicable local codes of practice. Design guidance as well as installation supervision shall be supplied by an authorized Siemens dealer with at least 10 years' experience in the installation of Air aspirating type detection. The qualified dealer for this project shall be Berkshire System Group, Inc.

Please contact Jed Richardson, jrichardson@bsgi, at BSGI for any questions and application specific installation practices.

1.3 SUMMARY

A. Scope

This specification describes a highly sensitive LED-based dual wavelength smoke detector using aspirated air sampling. The analog detecting device shall be conventional ASD. It shall be in full compliance with all applicable codes and standards. The features and capacities described in this specification are required as a minimum for this project and shall be furnished by the successful contractor.

The system shall support pre-engineered sampling pipe network designs with verified hydraulic calculations in addition to custom sampling pipe network designs using a computer based hydraulic design modeling tool. Sample pipe network material shall be approved to local codes and standards for use in air sampling smoke detection systems.

The system shall be in full compliance with North American standards and country specific codes.

The system shall include all required hardware, raceways, interconnecting wiring and software to accomplish the requirements of this specification and the contract drawings, whether or not specifically itemized herein.

All equipment furnished shall be new and the latest state-of-the-art products of a single manufacturer engaged in the manufacturing and sale of analog fire detection devices.

The system as specified shall be supplied, installed, tested, and approved by the local Authority Having Jurisdiction, and turned over to the owner in an operational condition.

In the interest of job coordination and responsibilities the installing contractor shall contract with a single supplier for fire alarm equipment, engineering, programming, inspection and tests, and shall be capable of providing UL, VdS, and certificates for the complete system.

The system specified shall be that of a Fire Safety Company which meets the project requirements. Other systems shall be submitted 10 days prior to bid date for approval by the Engineer. All systems approved shall meet all the requirements spelled out in this specification. System approval shall be in writing by the Engineer of record, and a copy shall be submitted with the system submittals.

1.4 QUALIFICATIONS

A. The fire detection system supplier will be a company with a minimum of 10 years' experience in fire detection. BSGI is the authorized supplier to meet these requirements.

1.5 SYSTEM DESCRIPTION

A. Summary

1. Aspirating smoke detectors are used for early warning detection of smoke-generating fires in rooms and equipment. They are particularly suited to applications in which point detectors are pushed to their limits, cannot be used, or not preferred.
2. The aspirating smoke detectors shall use dual-wavelength (blue and infrared) technology to trigger an alarm at the earliest possible moment. Aspirating smoke detectors continually extract air from the room being monitored using a connected

pipe network system with defined aspirating holes. The extracted air is fed into a uniquely designed detection chamber, in which minute smoke particles are detected by scattered light.

B. Basic system features

The detector shall consist of an air sampling pipe network to transport air to the detection system and support pre-engineered designs. Complex designs shall be supported by hydraulic calculations from a computer-based design-modeling tool.
The detector shall consist of a highly sensitive LED-based smoke detector and an aspirator.
The smoke-density threshold necessary to active the various alarm states shall be programmable (in percentage obscuration per foot)
The detector shall have a USB-compatible serial control port for the purpose of configuration, control, status monitoring, event log extraction and upgrade.
The detector shall be capable of working in stand-alone applications, whereby the various alarm states cause the corresponding relay output contacts to be activated.

C. Alarm states and other status indicators.

1. It shall be possible to configure the required smoke density thresholds for the corresponding detection alarm levels:
   a. Info alarm
   b. Pre-alarm
   c. Fire 1
   d. Fire 2

D. Networking

1. The detector shall be capable of communicating operational status with a fire protection panel via contact monitor modules communicating over the detector bus. The network shall support up to 252 devices. PC based and App based configuration tools shall be available to configure and manage the detector.

E. System configuration

1. A USB compatible serial port shall be provided to enable configuration, status monitoring, command input, event log extraction and software upgrades. It shall comply with EIA USB Protocol. The detector may be configured by a Windows PC (via a USB cable).
2. A smartphone app shall also be provided to support a semi-automated commissioning process, enabling the configuration data to be transmitted directly to the detector via a wireless (Bluetooth) connection. No manual entry of the configuration data shall be required.

F. Serviceability

1. On-site replacement of either the aspirator or the detection chamber shall be possible, without having to replace the entire assembly.

1.6 SUBMITTAL

A. The contractor shall include the following information with their offer:

Product data for detector, piping, supports, and accessories.
Piping layout showing sampling point locations, pipe routing, and detector unit location.
Air sampling pipe network calculations (carried out using a hydraulic modeling program), which specify the following performance criteria:

a. Smoke Transport Time
   The manufacturer's recommended transport time (i.e. the time between the smoke entering the pipe and it reaches the detector) from the least sample point on each pipe run shall meet NFPA 72 and product Listing requirements.
b. Balance %
   The sample point balance for the pipe shall not be less than 70% (as indicated by the manufacturer's hydraulic modeling program). That is, the volume of air drawn from the last sampling point shall not be less than 70% of the average volume of air through the other sample holes.
c. Share %
   The sample hole share for the pipe shall not be less than 70% (as indicated by the manufacturer's hydraulic modeling program). That is, the sum volume of air drawn through the sampling holes must always be greater than 70% of the total volume of air entering the pipe (i.e. the End Vent must not exceed 30% of the total flow).

A copy of the manufacturer's installation, operation and maintenance manuals shall be supplied upon completion of the installation.
System commissioning data shall be supplied (in a format recommended by the manufacturer and per the instructions provided by the manufacturer) within 30 days of completion of the installation.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications

The specified aspiration detection system for Lithium-Ion battery off gassing equipment is manufactured by Siemens as supplied, programmed and commissioned by BSGI. No substitutions will be permitted.
Classification for aspirating smoke detection UL 268 Standard for Safety for Smoke Detectors for Fire Alarm Signaling Systems.

The manufacturer shall be certified as meeting ISO 9002 for manufacturing.

B. Supplier Qualifications

Provide the services of a factory trained and certified representative or technician, experienced in the installation and operation of the type of system provided. The qualified representative is Berkshire Systems Group, Inc. Please contact Jed Richardson for more information: jrichardson@bsgi.com.
The technician shall supervise installation, software documentation, adjustment, preliminary testing, final testing, and certification of the system. The technician shall provide the required instruction to the owner's personnel in system operation and maintenance.
The supplier shall furnish evidence they have an experienced service organization, which carries a stock of spare and repair parts for the system being furnished.

The equipment supplier shall be authorized and trained by the manufacturer to calculate, design, install, test, and maintain the air sampling system and shall be able to produce a certificate stating such upon request.

C. Installer Qualifications:

Before commencing work, the contractor shall submit data showing that the manufacturer has successfully installed fire alarm systems of the same scope, type and design as specified.
The contractor shall submit copies of all required Licenses and Bonds as required in the Country having jurisdiction.
The contractor shall be qualified to certify fire alarm systems. Upon completion of the installation the contractor shall certify that the final system meets the county regulations for ongoing maintenance.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Products shall be delivered to the project site in original, unopened packages with intact and legible manufacturers' labels identifying product and manufacturer, date of manufacture, and shelf life (if applicable).

B. Materials shall be stored inside, under cover, above ground, and kept dry and protected from physical damage until ready for use. Wet or damaged materials shall be removed from the project site and discarded.

1.9 PROJECT CONDITIONS

A. Installed products or materials shall be free from any damage including, but not limited to, physical insult, dirt and debris, moisture, and mold damage.

B. Environmental Limitations: Products or materials shall not be delivered or installed until spaces are enclosed and weather tight, wet work in spaces is complete and dry, and a temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.10 WARRANTY

A. The contractor shall provide a warranty for the entire system for electrical & mechanical failures for one year. The warranty shall begin on completion of the acceptance certificate.

B. Maintenance Contract

The fire alarm system manufacturer or subcontractor shall offer for the owner's consideration at the time of submittal a priced inspection, maintenance test & repair contract complying with country regulations.

C. Technical Support

Beginning with Substantial Completion, software support shall be provided for a minimum period of 1 years.

PART 2 - PRODUCTS

Subject to compliance with requirements all equipment shall be from an approved supplier. The listed equipment shall be supplied, no substitutions permitted.

2.1 DEVICE TYPES

A. A range of aspirating smoke detectors shall be available, enabling system optimization in accordance with site-specific requirements. As a minimum, detectors shall be available that are UL Listed to UL 268 standard to cover the following areas:

1. Up to 5,000 ft^2

Specified product: SIEMENS FDA422

Up to 10,000 ft^2

Specified product: SIEMENS FDA442

Up to 15,000 ft^2

Specified product: SIEMENS FDA461

Up to 21,500 ft^2

Specified product: SIEMENS FDA462

B. Common basic features

The detectors may be used as stand-alone devices connected to a fire protection control unit via the detector bus. In the latter case the devices shall transmit the alarm and status information to the connected fire protection panel and receive corresponding commands (e.g. ACK and Reset) from the panel.

The detectors will continually draw in air through a pipe system via aspirating holes. The air shall be fed into a uniquely designed smoke detection chamber, in which minute smoke particles are detected by scattered light.

It shall be possible to adjust the sensitivity of the detectors (measured in percentage obscuration per foot) for each of the alarm status levels (Info alarm, Pre-alarm, Fire 1, and Fire 2).

In addition to the programmable fire alarm sensitivities, the detector will have three modes of operation: Automatic; Ultra-Sense; and Robust.

- "Automatic": for standard applications (e.g. large public buildings, museums, warehouses).
- "Ultra-sense": for applications with low dust load, where the fastest possible fire detection is needed and no deceptive phenomena are expected (e.g. clean rooms, server rooms and manufacturing).
- "Robust": for applications with a high level of dust suppression in harsh environments with deceptive phenomena (e.g. industrial areas, recycling plants and sawmills).

The LED based detection chamber shall be of the mass light scattering type and capable of detecting a wide range of smoke particle types of varying size. A dual wavelength technology shall be used to:

a. prevent large particles from affecting the true smoke density reading
b. monitor contamination of the detection chamber (dust & dirt etc.) to automatically notify when the chamber has been contaminated and maintenance is required.

The detection chamber shall be designed to minimize any soiling of the optical measuring path, hence keeping the critical detector optics clean and preventing internal detector contamination.

The detector shall not use adaptive algorithms to adjust the sensitivity from that set during commissioning.

All detector types shall have an integrated short-circuit isolator when connected to the detector bus.

C. Device type designed for up to 5,000 ft^2

Specified product: SIEMENS FDA422

In addition to the common features described above, this device shall also provide the following:

Detector features

1. The ASD shall be UL Listed to cover up to 5,000 ft^2.
2. The Info alarm, Pre-alarm, Fire 1 and Fire 2 smoke density thresholds shall be freely configurable within the range of 0.002 to 6.096 %/ft obs.
3. The time delays for each of the alarm thresholds shall be freely programmable between zero and 300 seconds.
4. A non-volatile event memory shall be provided with time and date stamp. It shall have separate event log storage for smoke levels, alarm conditions, operator actions and faults. As a minimum, the event log shall support up to 40,000 entries.
5. The ASD shall be VdS approved to detect lithium-ion battery off-gas particles during the "pre-thermal runaway" period of battery failure.

Operation and display

As a minimum, the front panel user interface shall provide the following elements:

1. Independent high intensity alarm indicators for:
   a. The four alarm levels: Info alarm; Pre-alarm; Fire 1; Fire 2
   b. Fault
   c. Power
   d. Connection status (Bluetooth connection to smartphone for configuration purposes)
   e. Alarm Setup and Airflow Setup
   f. Dust

A silence buzzer / LED-test button

Restricted access to the following functions shall be available to authorized personnel:

1. Normalization of airflow and smoke-density (used during commissioning).

Reset detector status indicators, including the associated output relays.
(N.B. **only** when the detector is operating in stand-alone mode).

Inputs/Outputs

1. Three programmable relay outputs (NO/NC, latching/non-latching) shall be provided (e.g. for Pre-alarm, Fire 1 and Fire 2).

A dedicated (normally closed) relay output shall be provided for Fault.

Three general-purpose monitored inputs shall also be provided to trigger one of the following optional actions:

a. Switching to 'Manned' / 'Unmanned' (NB only possible when the detector is operating in stand-alone mode)
b. Reset
c. Activation of the blowing-out unit
d. Deactivation of all relays and alarm outputs

As a minimum, the following optional modules shall be available.

e. A 4…20 mA card with 2 analog outputs, which can be configured to represent smoke-density alarm levels, airflow rates, dust values, or fine dust values.

   Specified product: SIEMENS FDAZ296

f. A relay card with 6 freely programmable relay outputs, which can be mapped to reflect the status of any of the alarm levels.

   Specified product: SIEMENS FDAZ295

Technical Details:

• Standards	NFPA 72, NFPA 76, NFPA 70; IEC 62443-4-1; IEC 62443-4-2
• IP-rating	IP30
• Operating temperature	32 °F – 120 °F (0 °C to +49 °C)
• Relative humidity	5…95 % (no moisture condensation)
• Approvals	UL-268, VdS; TÜV SÜD

D. Device type designed for up to 10,000 ft^2

Specified product: SIEMENS FDA442

In addition to the common features described above, this device shall also provide the following:

Detector features

1. The ASD shall be UL Listed to cover up to 10,000 ft^2.
2. The Info alarm, Pre-alarm, Fire 1 and Fire 2 smoke density thresholds shall be freely configurable within the range of 0.001 to 6.096 %/ft obs.
3. The time delays for each of the alarm thresholds shall be freely programmable between zero and 300 seconds.
4. A non-volatile event memory shall be provided with time and date stamp. It shall have separate event log storage for smoke levels, alarm conditions, operator actions and faults. As a minimum, the event log shall support up to 40,000 entries.

5. The ASD shall be VdS approved to detect lithium-ion battery off-gas particles during the "pre-thermal runaway" period of battery failure.

Operation and display

As a minimum, the front panel user interface shall provide the following elements:

1. Independent high intensity alarm indicators for:
    a. The four alarm levels: Info alarm; Pre-alarm; Fire 1; Fire 2
    b. Fault
    c. Power
    d. Connection status (Bluetooth connection to smartphone for configuration purposes)
    e. Alarm Setup and Airflow Setup
    f. Dust

A silence buzzer / LED-test button

Restricted access to the following functions shall be available to authorized personnel:

1. Normalization of airflow and smoke-density (used during commissioning).

Reset detector status indicators, including the associated relays.
(N.B. **only** when the detector is operating in stand-alone mode).

Inputs/Outputs

1. Three configurable relay outputs (NO/NC, latching/non-latching) shall be provided (e.g. for Pre-alarm, Fire 1 and Fire 2).

A dedicated (normally closed) relay output shall be provided for Fault.

Three general-purpose monitored inputs shall also be provided to trigger one of the following actions:

a. Switching to 'Manned' / 'Unmanned' (NB only possible when the detector is operating in stand-alone mode)
b. Reset
c. Activation of the blowing-out unit
d. Deactivation of all relays and alarm outputs

As a minimum, the following optional modules shall be available.

e. A 4…20 mA card with 2 analog outputs, which can be configured to represent smoke-density alarm levels, airflow rates, dust values, or fine dust values.

    Specified product: SIEMENS FDAZ296

f. A relay card with 6 freely programmable relay outputs, which can be mapped to reflect the status of any of the alarm levels.

    Specified product: SIEMENS FDAZ295

Technical Details:

- Standards NFPA 72, NFPA 76 and NFPA 70
  IEC 62443-4-1; IEC 62443-4-2

- IP-rating IP30
- Operating temperature 32 °F – 120 °F (0 °C to +49 °C)
- Relative humidity 5…95 % (no moisture condensation)
- Approvals UL 268, VdS; TÜV SÜD

E. Device type designed for up to 15,000 ft^2

Specified product: SIEMENS FDA461

In addition to the common features described above, this device shall also provide the following:

Detector features

1. The ASD shall be UL Listed to cover up to 15,000 ft^2.
2. The Info alarm, Pre-alarm, Fire 1, and Fire 2 smoke density thresholds shall be freely programmable within the range of 0.002 to 6.096 %/ft obs.
3. The time delays for each of the alarm thresholds shall be freely programmable between zero and 300 seconds.
4. A non-volatile event memory shall be provided with time and date stamp. It shall have separate event log storage for smoke levels, alarm conditions, operator actions and faults. As a minimum, the event log shall support up to 40,000 entries.
5. The ASD shall be VdS approved to detect lithium-ion battery off-gas particles during the "pre-thermal runaway" period of battery failure.

Operation and display

As a minimum, the front panel user interface shall provide the following elements:

1. Independent high intensity alarm indicators for:
   a. The four alarm levels: ~~I~~nfo alarm; Pre-alarm; Fire 1; Fire 2
   b. Fault
   c. Power
   d. Connection status (Bluetooth connection to smart phone for configuration purposes)
   e. Alarm Setup and Airflow Setup
   f. Dust

A silence buzzer / LED-test button

Restricted access to the following functions shall be available to authorized personnel:

1. Normalization of airflow and smoke-density (used during commissioning).
2. Reset all the detector's status indicators, including the associated relays. (N.B. **only** when the detector is operating in stand-alone mode).

Inputs/Outputs

1. Three programmable relay outputs (NO/NC, latching/non-latching) shall be provided (e.g. for Pre-alarm, Fire 1 and Fire 2).

A dedicated (normally closed) relay output shall be provided for Fault.

Three general-purpose monitored inputs shall also be provided to trigger one of the following actions:

a. Switching to 'Manned' / 'Unmanned' (NB only possible when the detector is operating in stand-alone mode)
b. Reset
c. Activation of the optional blowing-out unit
d. Deactivation of all relays and alarm outputs

As a minimum, the following optional modules shall be available:

e. A 4…20 mA card with 2 analog outputs, which can be configured to represent smoke-density alarm levels, airflow rates, dust values, or fine dust values.

   Specified product: SIEMENS FDAZ296

f. A relay card with 6 freely programmable relay outputs, which can be mapped to reflect the status of any of the alarm levels.

   Specified product: SIEMENS FDAZ295

Technical details:

• Standards	NFPA 72, NFPA 76, NFPA 70; IEC 62443-4-1; IEC 62443-4-2
• IP-rating	IP30
• Operating temperature	32 °F – 120 °F (0 °C to +49 °C)
• Relative humidity	5…95 % (no moisture condensation)
• Approvals	UL 268, VdS; TÜV SÜD

F. Device type designed for up to 21,500 ft^2

Specified product: SIEMENS FDA462

In addition to the common features described above, this device shall also provide the following:

Detector features

1. The ASD shall be EN approved to cover up to 21,500 ft^2.

The Info alarm, Pre-alarm, Fire1 and Fire 2 smoke density thresholds shall be freely programmable within the range of 0.001 to 6.096 %/ft obs

The time delays for each of the alarm thresholds shall be freely programmable between zero and 300 seconds.

2. A non-volatile event memory shall be provided with time and date stamp. It shall have separate event log storage for smoke levels, alarm conditions, operator actions and faults. As a minimum, the event log shall support up to 40,000 entries.
3. The ASD shall be VdS approved to detect lithium-ion battery off-gas particles during the “pre-thermal runaway” period of battery failure.

Operation and display

As a minimum, the front panel user interface shall provide the following elements:

1. Independent high intensity alarm indicators for:
   a. The four alarm levels (Info alarm; Pre-alarm; Fire 1; Fire 2)
   b. Fault
   c. Power
   d. Connection status (Bluetooth connection to smart phone for configuration purposes)
   e. Alarm Setup and Airflow Setup
   f. Dust

A silence buzzer / LED-test button

Restricted access to the following functions shall be available to authorized personnel:

1. Normalization of airflow and smoke-density (used during commissioning).
2. Reset detector's status indicators, including the associated relays.
   (N.B. **only** when the detector is operating in stand-alone mode).

Inputs/Outputs

1. Three configurable relay outputs (NO/NC, latching/non-latching) shall be provided (e.g. for Pre-alarm, Fire 1 and Fire 2).

A dedicated (normally closed) relay output shall be provided for Fault.

Three general-purpose monitored inputs shall also be provided to trigger one of the following actions:

   a. Switching to 'Manned' / 'Unmanned' (NB only possible when the detector is operating in stand-alone mode)
   b. Reset
   c. Activation of the optional blowing-out unit
   d. Deactivation of all relays and alarm outputs

As a minimum, the following optional modules shall be available:

   e. A 4…20 mA card with 2 analog outputs, which can be configured to represent smoke-density alarm levels, airflow rates, dust values, or fine dust values.

      Specified product: SIEMENS FDAZ296

   f. A relay card with 6 freely programmable relay outputs, which can be mapped to reflect the status of any of the alarm levels.

      Specified product: SIEMENS FDAZ295

Technical details:

- Standards — NFPA 72, NFPA 76, NFPA 70; IEC 62443-4-1; IEC 62443-4-2
- IP-rating — IP30
- Operating temperature — 32 °F – 120 °F (0 °C to +49 °C)
- Relative humidity — 5…95 % (no moisture condensation)
- Approvals — VdS; TÜV SÜD

2.2 DETECTOR ASSEMBLY

The detector, aspirator and relay outputs shall be housed in an enclosure and shall be arranged in such a way that air is drawn from the fire risk area and a sample passed through the detector by the aspirator.

A. Major features

1. The modular design shall enable the detection chamber and the aspirator unit to be replaced in situ (without having to replace the entire assembly)
2. The display can be rotated through 180° to facilitate alternative installation positions.
3. The detector shall have a single detection chamber and an internal flow sensor. Both high flow and low flow faults shall be reported.
4. The detector shall have two independent detection chambers with separate internal flow sensors for each inlet. Both high flow and low flow faults shall be reported.
5. The aspirator shall be capable of supporting a single pipe run of up to 164 ft or a maximum total length of 410 ft for the entire pipe system (or as local codes dictate).
6. The aspirator shall be capable of supporting a single pipe run of up to 394 ft or a maximum total length of 984 ft for the entire pipe system (or as local codes dictate).
7. The aspirator shall be capable of supporting a single pipe run of up to 164 ft per air inlet, or a maximum total length of 820 ft for the entire pipe system (or as local codes dictate).
8. The aspirator shall be capable of supporting a single pipe run of up to 394 ft, per air inlet, or a maximum total length of 1,968 ft for the entire pipe system (or as local codes dictate).

2.3 POWER SUPPLY AND BATTERIES

A. The system shall be powered from a regulated supply of nominally 24V DC. The battery charger and battery shall comply with the relevant codes, standards, or regulations. Typically, 24 hours standby battery backup is required followed by 15 minutes in an alarm condition.

B. Local Power Supply Standards may apply, for example:

UL 864 listed (provided the power supply and standby batteries have been appropriately sized/rated to satisfy the system power requirements).

2.4 SAMPLING PIPE DESIGN

A. Sampling Pipe

The sampling pipe shall be smooth bore. Typical sample pipe with an outside diameter of 1.05” (25 mm) and internal diameter of 0.87” (21 mm) should be used.

The pipe material shall be approved by North American and local regulation rated CPVC Air Sampling Pipe and otherwise be suitable for the environment in which it is installed, or of material as required by the Specifying Body.

All joints in the sampling pipe must be airtight and made by using solvent cement, except at detector inlet pipe & exhaust pipe entries to the detector.

The pipe shall be identified as Air Sampling/Aspirating Smoke Detector Pipe (or similar wording) along its entire length at regular intervals not exceeding the manufacturer's recommendation or that of local codes and standards.

All pipes should be supported at intervals of not more than 5 ft. (1.5 m) or at a distance described in local codes and standards.

The far end of each trunk or branch pipe shall be fitted with an end cap made air-tight by using solvent cement. The use of an end vent will be dependent on pre-engineered pipe design or hydraulic modeling program calculations. Optionally, a test point can be used at the end of each pipe run to facilitate test smoke (test aerosol) entry during smoke transport time tests.

B. Sampling Points

Sampling holes shall not be separated by more than the maximum distance allowed for conventional point detectors as specified in the local codes and standards. Intervals may vary according to calculations. For NFPA 72 the maximum allowable distance is 30 ft (10 m).

Each sampling point port shall be identified in accordance with Codes or Standards.

Consideration shall be given to the manufacturer's recommendations and standards in relation to the number of sampling points and the distance of the sampling points from the ceiling or roof structure and forced ventilation systems.

Sample port size shall be as specified by pre-engineered design requirements or by modeling program hydraulic calculations for the custom sampling pipe networks.

PART 3 - EXECUTION

3.1 THE DETECTION SYSTEM

A. The contractor shall install the system in accordance with the manufacturer's System Design Manual.

3.2 THE CAPILLARY SAMPLING NETWORK

A. Where false ceilings are installed, the sampling pipe shall be installed above the ceiling, and capillary sampling points shall be installed on the ceiling and connected by means of a capillary tube.

B. The minimum internal diameter of the capillary tube shall be 0.25” – 0.50” the maximum length of the capillary tube shall be 10 ft unless the manufacturer in consultation with the engineer have specified otherwise.

C. The capillary tube shall terminate at a ceiling sampling point specifically designed and approved by the manufacturer. The performance characteristics of the sampling points shall be considered during the system design.

3.3 AIR SAMPLING PIPE NETWORK CALCULATIONS

A. Pre-engineered pipework setups are provided in the ASD Product Guide. For specific performance requirements that fall outside the pre-engineered designs, a sampling pipe hydraulic calculation program shall provide air sampling pipe network calculations. Pipe calculations shall be supplied together with the proposed pipe layout design to indicate the performance criteria.

1. The manufacturer’s recommended transport time (i.e. the time taken by test smoke (aerosol) sampled at test point on the end of each pipe run to reach the detector) shall meet NFPA 72 and local standards and detector Listings.

Local codes and standards may also apply, for example NFPA 76 (VEWFD, EWFD).
The maximum transport time must never exceed the local codes of detector Listings.

3.4 SYSTEM CHECKS

A. All pipes shall be visually checked to ensure that all joints, fittings, bends, sampling points, etc., comply with the specification.

B. The system shall be checked to ensure the following features are operational and programmed in accordance with the specification.

1. Alarm threshold levels (for both day and night settings)

Clock and date
Time delays
Air flow fault thresholds
Extra buttons operable (Reset/Isolate)
Units set to Imperial
Additionally:

1. All ancillary warning devices shall be checked to ensure correct operation.

The interconnection with the Fire Alarm Control Panel shall be checked to ensure correct operation.

3.5 TESTS

A. Introduce Smoke into the Detector Assembly to provide a basic functional test.

B. Introduce smoke to the last sample hole or dedicated test point on each pipe run. Transport time shall be checked against calculations made using the manufacturer's hydraulic calculation program and should not exceed NFPA 72 and detector Listings, local codes.

C. Activate the appropriate Fire Alarm zones and advise all concerned that the system is fully operational. Fill out the logbook and commissioning report accordingly.

3.6 EXAMINATION

A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.7 INSTALLATION

A. The installation shall be in accordance with the local codes of practice and conform to the National requirements.

B. Surface cabling should be neatly run and securely fixed at suitable intervals in accordance with the manufacturer's recommendations and NFPA 70 (NEC).

C. Junctions in cables, other than those within equipment enclosures should be avoided wherever possible – follow NFPA 70 (NEC).

D. Where a cable passes through an external wall it should be contained in a smooth bore sleeve of metal or other non-hygroscopic material sealed into the wall. This material will slope downwards towards the outside and should be sealed with a suitable fire-stopping / waterproof compound.

E. Where cables, conduits or trunking pass through floors, walls, partitions, or ceilings the surrounding hole shall be made good with a fire stopping material with sufficient fire resistance to maintain the integrity of the construction.

F. Each junction box will include the legend "Fire Alarm System" on its cover.

G. All wires shall be provided with an identifying permanent label within 2" (50 mm) of its termination.

H. A consistent color code for fire alarm conductors shall be used throughout the installation.

I. Wiring within enclosures will be arranged to allow accessibility to equipment for adjustment & maintenance.

3.8 BOXES, ENCLOSURES AND WIRING DEVICES

A. Boxes shall be installed plumb and firmly in position.

B. Extension rings with blank covers shall be installed on junction boxes where required.

C. Junction boxes served by concealed conduit shall be flush mounted.

D. Upon initial installation, all wiring outlets, junction, pull and outlet boxes shall have dust covers installed. Dust covers shall not be removed until wiring installation when permanent dust covers, or devices are installed.

E. "Fire alarm system" decal or silk-screened labels shall be applied to all junction box covers.

3.9 CONDUCTORS

A. Each conductor shall be identified as shown on the drawings. Permanent wire markers shall be attached within 2” (5 cm) of the wire terminations. Marker legends shall be visible.

B. All wiring shall be supplied and installed in compliance with the local codes of practice and the manufacturer’s requirements.

C. Wiring for strobe and audible circuits shall be a minimum 14 AWG (1.5 $mm^{2)}$, signal line circuits 18 AWG (1.0 mm^2), twisted.

D. All splices shall be made using solderless connectors. All connectors shall be installed in conformance with the manufacturer’s recommendations.

E. Crimp-on type spade lugs shall be used for terminations of stranded conductors to binder screw or stud type terminals. Spade lugs shall have upset legs and insulation sleeves sized for the conductors.

F. The installation contractor shall submit for approval prior to installation of wire, a proposed color code for system conductors to allow rapid identification of circuit types.

G. Wiring within sub panels shall be arranged and routed to allow accessibility to equipment for adjustment and maintenance.

3.10 DEVICES

A. Relays and other devices to be mounted in auxiliary panels shall be securely fastened using DIN rails or other mechanically stable methods.

B. Wiring within enclosures shall be arranged to allow accessibility to equipment for adjustment & maintenance.

C. All devices shall be mounted to (or in) a suitable electrical box.

3.11 IDENTIFICATION

A. All conductors shall be labeled at both ends with permanent alphanumeric wire markers.

B. A consistent color code shall be used for fire alarm system conductors throughout the installation.

3.12 COMMISSIONING TESTS

A. The contractor shall allow the manufacturer's representative to attend commissioning of the entire installation in the presence of the owner and/or their representative.

B. All necessary instrumentation, equipment, materials, and labor shall be provided by the contractor.

C. The Contractor shall record all tests and system calibrations, and a copy of these results shall be retained on site in the System Logbook.

3.13 DOCUMENTATION

A. On completion of the system the contractor shall provide the following documentation:

1. One set of system record drawings & wiring details in printed & CAD formats.
2. Two sets of System Operation, Installation & Maintenance manuals.
3. Complete listings of fitted devices, their programmed parameters, texts and assignments.
4. Documentation of all programmed cause & effects.
5. Documentation of actual field wiring topology.
6. Copy of the system programming on CD or USB memory sticks.
7. System logbook.

3.14 TRAINING

A. Training shall be provided as follows:

1. The contractor shall provide full training on system operation & user responsibilities to at least two persons nominated by the customer.

END OF SECTION 28.4611.25

SECTION 28.5500 RF SURVEY FOR EMERGENCY RESPONDER RADIO ANTENNA/ REPEATER BDA SYSTEM

PART 1 GENERAL

1.1 SUMMARY

A. The purpose of this specification is to establish the requirements and standards for initial survey for public safety radio signal strength per NFPA and IFC

B. Survey should be performed after the building is substantially completed, and prior to start of installation of electrical wiring.

C. Conduct a survey using a RF Spectrum Analyzer, a calibrated, system-compatible radio or another suitable instrument with traceable certificate of calibration to analyze the RF signal strength of Emergency Responder Radio Signal into the building and determine if amplification of the signal is required. Both inbound and outbound signal strength shall be determined, measured, calculated and documented as required by code.

1.2 SURVEY CRITERIA IF REQUIRED

A. The required Public Safety Radio Signal Level inside the Owner's facility must be determined per code, ordinance or AHJ

B. Survey shall be performed by an FCC licensed technician holding a current GROL license.

1.3 REGULATIONS

A. Codes, regulations and standards referenced in the Section are:

1. NFPA 1 – The National Fire Code (including Annex O from 2009)
2. NFPA 70 – The National Electrical Code
3. IFC 510- Emergency Responder Radio Coverage
4. NFPA 101, Life Safety Code, the Ohio Building Code, and Local Code and Building Authority requirements.
5. NFPA 72 National Fire Alarm Code
6. FCC 47 CFR Private Land Mobile Radio
7. 90.219 Services-Use of Signal Boosters
8. ICC International Fire Code, Code and Commentary
9. Local or State Promulgated Fire Code
10. ADA "Americans with Disabilities Act"
11. FCC's OET 65 Standards "Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields"

12. FCC Rules Part 22, Part 90 and Part 101
13. NFPA 1221 2016 Edition
14. International Building Code 2012 / 2015 / 2018
15. UL 2524

1.4 DEFINITIONS

A. Definitions:

1. Bi-Directional Amplifier BDA: Device used to amplify band-selective or multi-band RF signals in the uplink, to the base station and in the downlink from the base station to subscriber devices for enhanced signals and improved coverage.
2. Emergency Responder Radio Coverage System: A two-way radio communication system installed to assure the effective operation of radio communications systems for fire, emergency medical services, or law enforcement agencies within a building or structure. A system used by firefighters, police, and other emergency services personnel.
3. FCC: Federal Communications Commission
4. OET 65 Standards: FCC's Bulletin 65 provides Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields.
5. Public Safety/First Responder: Public Safety or First Responder agencies that are charged with the responsibility of responding to emergency situations. These include, but are not limited to law enforcement departments, fire departments, and emergency medical companies.
6. RSSI: Received signal strength indicator RSSI is a measurement of the power present in a received radio signal.
7. BER: Bit Error Rate is the number of bit errors per unit time
8. GROL- FCC General Radio Operators License
9. ERRCES- Emergency Responder Radio Coverage Enhancement System
10. DAS-Distributed Antenna System

1.5 EXECUTION

A. Testing Procedures

1. Minimum Signal Strength: For testing system signal strength and quality, the testing shall be based on the. -95dBm nominal signal at 100%.
2. Spectrum Analyzer or Calibrated Handheld Radio shall be used as basis for signal measurements or other method as approved by AHJ.
3. Testing should be based on a minimum of 20 grid locations per floor OR maximum of 1600 SQ ft. areas if the floor exceeds 32,000 Sq. Ft. Also, testing should include all critical areas per NFPA. See 1.02 of this specification and NFPA 72 2013 or NFPA 1221 2016. OR per any method determined by the AHJ, local code or ordinance.
4. A minimum signal strength of -95 dBm shall be provided throughout the coverage

area for both uplink and downlink by the Local Fire Department.

a. RSSI measurement only

B. Submit testing data for each level of the building.

1. An RF measurement drawing of each floor of the building which indicates relative RF field strength for each frequency band of interest must be submitted to the AHJ.
2. The drawing should indicate clearly the areas that have passed or failed based on the above parameters.

END OF SECTION 28.5500

SECTION 31.1100 - CLEARING AND GRUBBING

PART 1 - GENERAL

1.01 SECTION DESCRIPTION

A. The Work of This Section Includes:

1. Clearing
2. Grubbing
3. Stripping and stockpiling topsoil
4. Debris disposal

B. Definitions:

1. Clearing is defined as the removal of trees, brush, down timber, rotten wood, rubbish, any other vegetation, and objectionable material at or above original ground elevation not designated to be saved. Clearing also includes removal of fences, walls, guard posts, guard rail, signs, rubble, and other obstructions interfering with the proposed work.

2. Grubbing is defined as the removal from below the surface of the natural ground of stumps, roots and stubs, brush, organic materials and debris.

1.02 JOB CONDITIONS

A. Contractor may clear all obstructions within the limit of disturbance of Owner's property as absolutely necessary to perform the construction work. Contractor shall not disturb portions of Owner's property beyond the limit of disturbance. Removal of trees shall be as shown on the Drawings and coordinated with the Resident Project Representative.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Temporary Fencing:

1. Undamaged orange, open mesh plastic construction fencing, 4' high, or other acceptable, highly visible, weather resistant, easily maintained fencing that provides a substantial barrier.

2. Soil-set fence posts, studded "T" type, 6' high.

B. Tree Wound Dressing:

1. Damage shall be addressed according to National Arborist Association/Tree Care Industry Association standards.

PART 3 - EXECUTION

3.01 PREPARATION

A. Notify Resident Project Representative at least 48 hours prior to beginning any clearing work.

B. Protect benchmarks, utilities, existing trees, shrubs and other landscape features designated for preservation with temporary fencing or barricades satisfactory to the Resident Project Representative. No material shall be stored or construction operation carried on within four (4) feet of any tree to be saved or within the tree protection fence.

3.02 UTILITY RELOCATIONS

A. Inform all companies, individuals and others owning or controlling facilities or structures within the limits of the work which have to be relocated, adjusted or reconstructed in sufficient time for the utility to organize and perform such work in conjunction with or in advance of Contractor's operations.

B. Comply with the provisions of PA Act 287 (1974) and as last amended.

3.03 CLEARING

A. Confine clearing as required to within the limits of disturbance, including within the public rights-of-way, easements, and Owner's property. Attention is called to Paragraph 1.02 of this Section.

B. Fell trees in a manner that will avoid damage to trees, shrubs, and other installations which are to be retained.

C. Grind all stumps.

END OF SECTION

SECTION 31.2000 – EARTHWORK

PART 1 - GENERAL

1.01 SECTION DESCRIPTION:

A. Site grading, removal of topsoil and subsoil, excavation and backfill.

B. Preparing of subgrade for site structures, walks and pavements.

1.02 QUALITY ASSURANCE

A. Testing Agency

1. Any required compaction testing for this Project shall be performed by a qualified soils testing agency engaged and paid for by Contractor.

B. Reference Standards:

1. Pennsylvania Department of Transportation
Publication 408 Specifications

2. American Society for Testing and Materials (ASTM):

ASTM D422 Test Method for Particle-Size Analysis of Soils

ASTM D1557 Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft.-lbf/ft^3)

ASTM D2922 Standard Test Method for Density of Soil and Soil Aggregate in Place by Nuclear Methods (Shallow Depth)

ASTM D4318 Test Method for Liquid Limit, Plastic Limit, and Plasticity Index of Soils

C. Compaction Testing:

1. Conduct compaction tests at locations as directed by the Resident Project Representative during grading operations.

1.03 SUBMITTALS

A. Submit certified test reports on borrow material. Test reports shall include grain size distribution (ASTM D422), Atterberg limits (ASTM D4318) and moisture density relationship (ASTM D1557).

B. Submit certified compaction testing results from the soils testing agency for any required compaction testing.

1.04 JOB CONDITIONS

A. All earthwork shall be performed in accordance with conditions outlined in Section 01 57 13, Soil Erosion and Sediment Control, and the Drawings.

B. Site disturbance and earth moving shall proceed in accordance with the sequence shown on the Drawings.

C. Contractor may conduct earthwork activities within the limits of disturbance as shown on the Drawings.

D. Prior to earth moving activities, all topsoil shall be stripped and stockpiled in accordance with Section 31 11 00 and the Drawings.

E. Classification of Excavation:

1. See Soil Management Plan report and drawing and Drawings for information on limits.

PART 2 - PRODUCTS

2.01 SOIL MATERIALS

A. Topsoil, general site restoration: Excavated or imported friable loam that is reasonably free of subsoil, clay lumps, brush, roots, weeds, other objectionable vegetation, stones or other foreign material. Topsoil shall be free of weeds, weed seeds, foreign grass, and toxic substances, such as pesticides, that are harmful to plant growth.

B. Subbase Material: Washed, evenly graded mixture of crushed stone with 100 percent passing a 2 inch sieve and from 10 to 30 percent passing a No. 16 sieve designated PennDOT No. 2A Modified coarse aggregate, Table C, Section 703.2, Publication 408 Specifications.

C. Drainage Fill: Washed, evenly graded mixture of crushed stone with 100 percent passing a 2 inch sieve and from 10 to 30 percent passing a No. 16 sieve. PennDOT No. 2A Modified coarse aggregate, Table C, Section 703.2, Publication 408 Specifications.

D. Fill Materials: Satisfactory on-site soil materials comprised of less than 40% by weight larger than 3/4 inches in diameter, free of particles larger than 4 inches, and free of debris, slag, waste, frozen material, excessive moisture, organics, or other deleterious material.

PART 3 - EXECUTION

3.01 STORAGE OF EXCAVATED MATERIALS

A. Stockpile excavated materials acceptable for backfill and fill. Place, grade and shape stockpiles for proper drainage and protect as necessary.

1. Locate and retain soil materials away from edge of excavations. Do not store within drip line of trees indicated to remain.

2. Dispose of excess excavated soil material and materials not acceptable for use as backfill or fill.

3.02 EXCAVATION FOR SITE STRUCTURES

A. Conform to elevations and dimensions shown within a tolerance of plus or minus 0.10 foot, and extending a sufficient distance from site structures to permit placing and removal of concrete formwork, installation of services, and other construction and for inspection. In the event that fill deposits or other unsuitable bearing materials are encountered at the given elevations, they shall be over-excavated and replaced with structural backfill as specified hereinafter.

1. Excavations for site structures: Do not disturb bottom of excavation. Excavate by hand to final grade just before concrete reinforcement is placed. Trim bottoms to required lines and grades to leave solid base to receive other work.

B. In the event bedrock is encountered at the footing subgrade elevation, it shall be overexcavated to a level 12 inches below the plan site structure subgrade elevation and 12 inches beyond the perimeter of the site structure on all sides. Bedrock encountered within four (4) inches of the base of the site structure shall be removed to at least six (6) inches below the base elevation for the site structure. The overexcavations specified above shall be restored to the subgrade elevation with PA No. 2A or 2RC processed aggregate which is placed and compacted as specified hereinafter.

C. Any soft, weak and/or unstable soil encountered at the footing subgrade elevation shall be overexcavated to satisfactory bearing material. Subsequently, the overexcavation shall be backfilled to the plan subgrade elevation with either lean concrete or PA No. 2A or 2RC processed aggregate.

3.03 EXCAVATION FOR PAVEMENTS

A. Cut surface under pavements to comply with cross-sections, elevations and grades as indicated.

3.04 COLD WEATHER PROTECTION

A. Protect excavation bottoms against freezing when atmospheric temperature is less than 35 degrees F.

3.05 BACKFILL AND FILL

A. General: Place soil material in layers to required subgrade elevations, for each area classification listed below, using materials specified in Part 2 of this Section.

1. Under grassed area, use satisfactory excavated or borrow material.

2. Under walks and pavements, use subbase material, designated as PennDOT No. 2A Modified coarse aggregate, except for utility trench restoration in paved areas, in which PennDOT No. 2RC coarse aggregate will be used.

3. For utility and pipe trenches see Section 31 23 33.

B. Backfill site structure excavation as promptly as work permits, but not until completion of the following:

1. Acceptance of construction below finish grade including, where applicable, dampproofing, water-proofing and perimeter insulation.

2. Removal of concrete formwork.

3. Removal of shoring and bracing, and backfilling of voids with satisfactory materials. Cut off temporary sheet piling driven below bottom of structure and remove in manner to prevent settlement of the structure, or leave in place if required.

4. Removal of trash and debris from excavation.

5. Permanent or temporary horizontal bracing is in place on horizontally supported walls.

3.06 PLACEMENT AND COMPACTION

A. Ground Surface Preparation: Remove vegetation, debris, unsatisfactory soil materials, obstructions, foundations, pavement sections, topsoil and organic and deleterious materials from ground surface prior to placement of fills (See Section 31 11 00). Plow, strip, or break up sloped surfaces steeper than 1 vertical to 4 horizontal so that fill material will bond with existing surface.

1. When existing ground surface has a density less than that specified under 3.06.E. for particular area classification, break up ground surface, pulverize, moisture-condition to optimum moisture content, and compact to required depth and percentage of maximum density.

2. After stripping and rough excavation grading, carefully inspect areas to provide support for the structural fill and pavement for soft surficial soils and proofroll with a fully loaded triaxle dump truck or similar approved equipment. Proofrolling shall be performed under the observation of the soils testing agency and Resident Project Representative. The proofroller shall make at least eight passes over each location, with the last two passes perpendicular to the first two. Any areas which wave, rut or deflect excessively and continue to do so after several passes of the proofroller shall be undercut to stable soils or as directed by the Owner's geotechnical engineer. The undercut areas shall be backfilled in thin lifts with suitable compacted refill materials.

3. The stripping and proofrolling operations shall be delayed in areas where the construction will not proceed immediately to a finished surface so that the exposed subgrade will not deteriorate under the effects of weather and construction traffic.

B. Place backfill and fill materials in layers not more than 8 inches in loose thickness for material compacted by heavy compaction equipment, and not more than 6 inches in loose thickness for material compacted by hand-operated tampers.

C. Before compaction, moisten or aerate each layer as necessary to provide optimum moisture content. Compact each layer to required percentage of maximum dry density or relative dry density for each area classification. Do not place backfill or fill material on surfaces that are muddy, frozen or contain frost or ice.

D. Place backfill and fill materials evenly adjacent to structures to required elevations. Prevent wedging action of backfill against structures by carrying material uniformly around structure, piping or conduit to approximately same elevation in each lift.

E. Control soil and fill compaction, providing minimum percentage of density specified for each area classification indicated below. Correct improperly compacted areas or lifts as directed by Resident Project Representative if soil density tests indicate inadequate compaction.

1. Percentage of Maximum Density Requirements: Compact soil to not less than the following percentages of maximum dry density, in accordance with ASTM D1557 (Modified Proctor):

a. Under pavements, compact top 12 inches of subgrade and each layer of backfill or fill material at 95% (Modified Effort) of the maximum density, at or near the optimum moisture content.

b. Non-structural areas which lie within five (5) feet of building, pavement and structural areas at 93% (Modified Effort) of the maximum density at or near the optimum moisture content.

c. Under lawn or unpaved areas, compact top 6 inches of subgrade and each layer of backfill or fill material at 90% (Modified Effort) of the maximum density at or near the optimum moisture content.

d. Under walkways, compact top 6 inches of subgrade and each layer of backfill or fill material at 93% (Modified Effort) of the maximum density, at or near the optimum moisture content.

2. Moisture Control: Where subgrade or layer of soil material must be moisture conditioned before compaction, uniformly apply water to surface of subgrade or layer of soil material. Apply water in minimum quantity as necessary to prevent free water from appearing on surface during or subsequent to compaction operations.

a. Remove and replace, or scarify and air dry, soil material that is too wet to permit compaction to specified density.

b. Stockpile or spread soil material that has been removed because it is too wet to permit compaction. Assist drying by discing, harrowing or pulverizing until moisture content is reduced to a satisfactory value.

3.07 GRADING

A. General: Uniformly grade areas within limits of grading under this section, including adjacent transition areas. Smooth finished surface within specified tolerances, compact with uniform levels or slopes between points where elevations are indicated or between such points and existing grades.

B. Grading Outside Building Lines: Grade areas adjacent to building lines to drain away from structures and to prevent low points as shown on the Drawings. Finish surfaces free from irregular surface changes and as follows:

1. Lawn or Unpaved Areas: Finish areas to receive topsoil to within not more than 0.10 foot above or below required subgrade elevations.

2. Walks: Shape surface of areas under walks to line, grade and cross section, with finish surface not more than 0.10 foot above or below required subgrade elevation.

3. Pavements: Shape surface of areas under pavement to line, grade and cross section, with finish surface not more than 1/2 inch above or below required subgrade elevation.

C. Grading Surface of Fill under Site Structure Slabs: Grade smooth and even, free of voids, compacted as specified, and to required elevation. Provide final grades within a tolerance of ½ inch when tested with a 10-foot straightedge.

D. Compaction: After grading, compact subgrade surfaces to the depth and indicated percentage of maximum or relative density for each area classification.

3.08 SITE STRUCTURE SLAB DRAINAGE COURSE

A. General: Drainage course consists of placement of drainage fill material, in layers of indicated thickness over subgrade surface to support concrete site structure slabs.

B. Placing: Place drainage fill material on prepared subgrade in layers of uniform thickness, conforming to indicated thickness.

1. When compacted drainage course is indicated to be 6 inches thick or less, place

material in a single layer. When indicated to be more than 6 inches thick, place material in equal layers, except no single layer more than 6 inches or less than 3 inches in thickness when compacted.

3.09 EROSION CONTROL

A. Provide erosion control methods in accordance with Section 01 57 13 and the Drawings.

3.10 MAINTENANCE

A. Protection of Graded Areas: Protect newly graded areas from traffic and erosion. Keep free of trash and debris.

B. Repair and re-establish grades in settled, eroded and rutted areas to specified tolerances.

C. Reconditioning Compacted Areas: Where completed compacted areas are disturbed by subsequent construction operations or adverse weather, scarify surface, reshape and compact to required density prior to further construction.

D. Settling: Where settling is measurable or observable at excavated areas during general project warranty period, remove surface (pavement, lawn or other finish), add backfill material, compact and replace surface treatment. Restore appearance, quality and condition of surface or finish to match adjacent work, and eliminate evidence of restoration to greatest extent possible.

3.11 DISPOSAL OF EXCESS AND WASTE MATERIALS

A. Removal from Owner's Property: Remove waste materials, including unacceptable excavated material, trash and debris, and properly dispose of it off Owner's property.

END OF SECTION

SECTION 31.2316.13 - TRENCHING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Backfilling and compacting for utilities outside the building to utility main connections.

1.2 RELATED REQUIREMENTS

A. Section 312200 - Grading: Site grading.

B. Section 312316 - Excavation: Building and foundation excavating.

C. Section 312316.26 - Rock Removal: Removal of rock during excavating.

D. Section 312323 - Fill: Backfilling at building and foundations.

E. Section 334600 - Subdrainage: Filter aggregate and filter fabric for foundation drainage systems.

1.3 DEFINITIONS

1.4 REFERENCES

A. AASHTO T 180 - Standard Specification for Moisture-Density Relations of Soils Using a 4.54 kg (10-lb) Rammer and a 457 mm (18 in.) Drop; American Association of State Highway and Transportation Officials; 2010.

B. ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3)); 2012.

C. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN m/m3)); 2012.

1.5 SUBMITTALS

A. Compaction Density Test Reports.

1.6 DELIVERY, STORAGE, AND HANDLING

PART 2 PRODUCTS

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that survey bench marks and intended elevations for the work are as indicated.

3.2 PREPARATION

3.3 TRENCHING

A. Notify Architect of unexpected subsurface conditions and discontinue affected Work in area until notified to resume work.

B. Slope banks of excavations deeper than 4 feet to angle of repose or less until shored.

C. Do not interfere with 45 degree bearing splay of foundations.

D. Cut trenches wide enough to allow inspection of installed utilities.

E. Hand trim excavations. Remove loose matter.

F. Remove excavated material that is unsuitable for re-use from site.

G. Remove excess excavated material from site.

3.4 PREPARATION FOR UTILITY PLACEMENT

A. Cut out soft areas of subgrade not capable of compaction in place. Backfill with general fill.

B. Compact subgrade to density equal to or greater than requirements for subsequent fill material.

C. Until ready to backfill, maintain excavations and prevent loose soil from falling into excavation.

3.5 BACKFILLING

A. Backfill to contours and elevations indicated using unfrozen materials.

B. Fill up to subgrade elevations unless otherwise indicated.

C. Employ a placement method that does not disturb or damage other work.

D. Systematically fill to allow maximum time for natural settlement. Do not fill over porous, wet, frozen or spongy subgrade surfaces.

E. Maintain optimum moisture content of fill materials to attain required compaction density.

F. Granular Fill: Place and compact materials in equal continuous layers not exceeding 6 inches compacted depth.

G. Soil Fill: Place and compact material in equal continuous layers not exceeding 8 inches compacted depth.

H. Slope grade away from building minimum 2 inches in 10 ft, unless noted otherwise. Make gradual grade changes. Blend slope into level areas.

I. Correct areas that are over-excavated.

1. Other areas: Use general fill, flush to required elevation, compacted to minimum 97 percent of maximum dry density.

J. Compaction Density Unless Otherwise Specified or Indicated:

1. Under paving, slabs-on-grade, and similar construction: 97 percent of maximum dry density.
2. At other locations: 95 percent of maximum dry density.

K. Reshape and re-compact fills subjected to vehicular traffic.

3.6 BEDDING AND FILL AT SPECIFIC LOCATIONS

A. Use general fill unless otherwise specified or indicated.

B. Utility Piping, Conduits, and Duct Bank:

3.7 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for general requirements for field inspection and testing.

B. Evaluate results in relation to compaction curve determined by testing uncompacted material in accordance with ASTM D698 ("standard Proctor"), ASTM D1557 ("modified Proctor"), or AASHTO T 180.

C. If tests indicate work does not meet specified requirements, remove work, replace and retest.

END OF SECTION 312316.13

SECTION 31.2316.26 - ROCK REMOVAL

PART 1 GENERAL

1.01 SECTION DESCRIPTION:

A. The Work of This Section Includes:

1. Removal of identified and discovered rock during excavation.
2. Mechanical methods and explosive methods to assist rock removal.

1.02 QUALITY ASSURANCE

A. Reference Standards:

1. National Fire Protection Association (NFPA): NFPA 495 - Code for Manufacture, Transportation, Storage, and Use of Explosive Materials

B. Seismic Monitoring Firm: Company specializing in seismic surveys with five (5) years documented experience.

C. Explosives Firm: Company specializing in explosives for disintegration of rock, with five (5) years documented experience. All blasting shall be performed by or under the supervision of an individual with a valid Commonwealth of Pennsylvania blaster's license.

1.03 DEFINITIONS

A. Rock: Solid mineral material of a size that cannot be removed with a "Trac-Hoe" style machine with a minimum weight of 70,000 pounds (without use of drilling and wedging, blasting, and/or mechanical surface impact equipment).

1.04 REGULATORY REQUIREMENTS

A. Conform to "Regulations for the Storage, Handling and Use of Explosives" of the Pennsylvania Department of Labor and Industry; and to NFPA 495 for handling explosive materials.

B. Obtain all required permits from various local and State agencies.

C. Comply with all permit conditions including timely notifications to all required agencies/officials.

1.05 PROJECT CONDITIONS

A. Advise owners of nearby buildings or structures in writing, prior to performing any blasting operations to explain planned blasting operations, and pre-blast survey.

B. Conduct a pre-blasting survey and document conditions of nearby buildings, structures and wells, prior to blasting, in order to assess, record and photograph existing structural conditions of buildings (interior & exterior) identifying existing irregularities and to monitor water supply wells for water level along with samples for total coliform organisms and turbidity. Nearby buildings, structures and wells are considered to be those within 500 feet of any trench or site excavation requiring rock removal. Monitoring and sample results from the water supply wells and structural observations of buildings shall be immediately forwarded to Owner and Engineer.

C. Store all explosives in a secure and safe manner in strict conformance to all State and local municipal regulations; storage locations shall be clearly marked "DANGEROUS EXPLOSIVES", and shall be in care of a competent watchman at all times. In no case shall caps or other detonators be stored or transported with explosives. Explosives shall be kept on the site only in such quantities as anticipated to be required for the Project and only during the time when being used.

D. Rock excavation within ten (10) feet of underground utilities or structures shall be done by hand or with light charges of explosives with exercise of utmost care to avoid disturbance. Owner reserves the right to direct that rock be removed by methods other than blasting in such cases.

E. No blasting shall be performed within 50 feet of the utility lines being constructed as part of the Work nor for a period of at least 48 hours after concrete has been placed within 100 feet of the blasting operation.

F. Special care shall be exercised in areas where high tension power lines are located.

G. Paving shall be pre-cut before blasting within roads to prevent paving from heaving beyond normal trench width.

1.06 SCHEDULING

A. Schedule Work under the provisions of Section 01 33 00 concerning the submittal for a Construction Progress Schedule.

B. Schedule Work to avoid disruption to occupied buildings nearby.

PART 2 PRODUCTS

2.01 MATERIALS

A. Explosives: Type recommended by explosives firm.

B. Delay Device: Type recommended by explosives firm.

C. Blast Mat Materials: Type recommended by explosives firm.

D. Mechanical Disintegration Compound: Grout mix of materials that expand on curing.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify site conditions and note subsurface irregularities affecting work of this section.

3.02 PREPARATION

A. Identify required lines, levels, contours, and datum.

3.03 ROCK REMOVAL BY A MECHANICAL METHOD

A. Excavate and remove rock by the mechanical method.

B. Drill holes and utilize expansive tools, wedges, and/or mechanical disintegration compound to fracture rock.

C. Cut away rock at bottom of excavation to form level bearing.

D. Remove shaled layers to provide sound and unshattered base for footings and foundations.

E. In utility trenches, excavate to 6 inches below invert elevation of pipe and 12-16 inches wider than pipe outside diameter (minimum 6 inches on each side).

F. Shattered or fractured rock may be allowed by Owner as trench backfill where native backfill material is permitted provided that the size requirement in Section 31 23 33 and Drawings is achieved. Otherwise, excavated rock must be removed from site.

G. Correct unrequired rock removal in accordance with the requirements of Section 31 23 33.

3.04 ROCK REMOVAL BY EXPLOSIVE METHODS

A. If rock is uncovered requiring the explosives method for rock disintegration, notify Owner and Resident Project Representative and execute as follows.

B. Provide seismographic monitoring during progress of blasting operations. Keep and submit to Owner upon request an accurate record of each blast which includes the general location of the blast, the depth and number of drill holes, the kind and quantity of explosive used, particle velocity and displacement, decibels, and other data as required for a complete record.

C. Drill blasting holes, prepare blasting charges and cover area with blasting mats.

D. Perform blasting to disintegrate rock and remove from excavation. Use such quantities and strengths of explosives and perform blasting in such manner as will break the rock approximately to the desired lines and grades, yet will leave rock not requiring excavation in an unshattered condition.

E. Remove rock at excavation bottom to form level bearing.

F. Remove shaled layers to provide a sound and unshattered base for footings, foundations, and utility construction.

G. In utility trenches, excavate to 6 inches below invert elevation of pipe and 12-16 inches wider than pipe outer diameter (minimum 6 inches on each side).

H. Shattered or fractured rock may be allowed by Owner as trench backfill where native backfill material is permitted provided that the size requirement is in Section 31 23 33 and Dwais achieved. Otherwise, excavated rock must be removed from site.

I. Correct unrequired rock removal in accordance with the requirements of Section 31 23 33.

J. Repair any damage from blasting operations including damaged paving beyond trench width.

3.05 FIELD QUALITY CONTROL

A. Contractor shall provide for visual inspection by Resident Project Representative all trench bottoms, foundation bearing surfaces and cavities formed by removed rock prior to further construction.

END OF SECTION

SECTION 31.2333 - EXCAVATION, BACKFILL AND COMPACTION

PART 1 - GENERAL

1.01 SECTION DESCRIPTION

A. The Work of this Section Includes:

1. Excavation, backfill and compaction associated with utility construction, including such related features as protection of adjacent utilities and structures, maintenance and protection of traffic, cutting paved surfaces, support of excavation, control of excavated materials, dewatering, pipe bedding, disposal of excavated materials, rough grading and restoration.

2. Excavation, backfill and compaction associated with construction or installation of structures including such related features as protection of adjacent utilities and structures, support of excavation, control of excavated materials, dewatering, structure bedding, disposal of excavated materials, rough grading and restoration.

1.02 QUALITY ASSURANCE

A. Testing Agent:

1. Compaction testing for this Work shall be performed by Contractor at the discretion of the Resident Project Representative except as required by a PennDOT Highway Occupancy Permit. Where compaction testing is required by permit, such compaction testing shall be performed by an independent soils testing agent engaged and paid for by Contractor.

2. Contractor shall pay the cost of one series of tests on the area being evaluated. Contractor shall also pay the cost for additional testing as required in the event of improper performance of the Work.

B. Reference Standards:

1. Pennsylvania Department of Transportation:

Regulations Governing Occupancy of Highways by Utilities (67 PA Code, Chapter 459)
Publication 408 Specifications
Pennsylvania Test Method, PTM 106
Pennsylvania Test Method, PTM 402
Publication 203, Work Zone Traffic Control

2. American Society for Testing and Materials (ASTM):

ASTM D1557	Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft.- lbf/ft^3)
ASTM D2922	Standard Test Method for Density of Soil and Soil - Aggregate in Place by Nuclear Methods (Shallow Depth)

C. Compaction Testing:

1. Conduct compaction tests at locations during backfilling operations at the discretion of the Resident Project Representative and as required by a PennDOT Highway Occupancy Permit.

1.03 SUBMITTALS

A. Certificates:

1. Submit certification attesting that the composition analysis of pipe embedment and select material stone backfill materials meet specification requirements in accordance with Section 01 33 00.

2. Submit certified compaction testing results from the soils testing agency for any required compaction testing in accordance with Section 01 33 00.

1.04 JOB CONDITIONS

A. Classification of Excavation:

1. See Soil Management Plan report and drawing and Drawings for information on limits.

B. Rock Removal:

1. See Section 31 23 16.26 relative to removal of rock.

C. Compaction of Backfill:

1. Excavations shall be backfilled in lifts not exceeding compacted thicknesses noted in Paragraph 3.11C. Each lift shall be individually compacted.

2. The following percentages of maximum dry density shall be achieved:

	Modified Effort ASTM D1557
• Building Foundation and Structural Slab-on-Grade	95%
• Exterior Side of Structure Walls	95% to point 5' from building wall, then 90%
• Trench Backfill under Pavement (not including base course materials)	95%
• Trench Backfill within Unpaved Areas	90%

3. Contractor shall maintain moisture content of backfill materials at or near the optimum moisture content to attain the required compaction density.

D. Control of Traffic:

1. Employ traffic control measures in accordance with Pennsylvania Department of Transportation Publication 213 Temporary Traffic Control Guidelines and as shown on Drawings.

E. Protection of Existing Utilities and Structures:

1. Take all precautions and utilize all facilities required to protect existing utilities and structures. In compliance with Pennsylvania Act 287 (1974) and as last amended, advise

each Utility at least three (3) working days in advance of intent to excavate, do demolition work or use explosives and give the location of the job site. Request cooperative steps of the Utility and suggestions for procedures to avoid damage to its lines.

2. Advise each person in physical control of powered equipment or explosives used in excavation or demolition work of the type and location of utility lines at the job site, the Utility assistance to expect, and procedures to follow to prevent damage.

3. Immediately report to the Utility, Owner, Engineer, and Resident Project Representative any break, leak or other damage to the lines or protective coatings made or discovered during the work and immediately alert the occupants of premises of any emergency created or discovered.

4. Allow free access to Utility personnel at all times for purposes of maintenance, repair and inspection.

F. Protection of Trees and Shrubs

1. See Section 31 11 00.

2. **Any trees and/or shrubs to be protected which are damaged or destroyed during construction shall be replaced in kind as required by Owner at no cost to Owner.**

PART 2 - PRODUCTS

2.01 PIPE BEDDING AND EMBEDMENT MATERIAL

A. Bedding to Springline of Pipe: AASHTO No. 57 coarse aggregate Table C, Section 703.2, Publication 408 Specifications. Do not use slag or cinders.

B. Springline of Pipe to 12" over Pipe: PennDOT No. 2A coarse aggregate under paved areas and AASHTO #57 for grassed areas, Table C, Section 703.2, Publication 408 Specifications. Do not use slag or cinders.

2.02 BACKFILL MATERIAL

A. All Paved Surfaces:

1. From 12" over top of pipe: Minimum 6” PennDOT No. 2A course aggregate compacted in maximum 12” lifts to bottom of asphalt base course

B. Grassed Areas:

1. From 12" over top of pipe: Select backfill in maximum 12” lifts to bottom of 6” topsoil

PART 3 - EXECUTION

3.01 EXAMINATION & PREPARATION

A. Identify required lines, levels, contours and datum.

B. Notify Resident Project Representative and Engineer of unexpected subsurface conditions and discontinue work in area until notified to resume work.

C. Maintain and protect existing utilities identified by utility users within the Work area (see

paragraph 1.04E).

D. Verify bracing to support surcharge forces imposed by backfilling operations.

3.02 PROTECTION OF ADJACENT WORK

A. Support adjacent structures which may be damaged by excavation work, including asphalt, utilities and pipe chases.

B. Grade excavation top perimeter to prevent surface water runoff into excavation or to adjacent properties.

3.03 MAINTENANCE AND PROTECTION OF TRAFFIC

A. Coordinate the work to ensure the least inconvenience to traffic and maintain traffic in one or more unobstructed lanes unless closing the roadway is authorized.

B. Maintain access to all streets and private drives.

C. Provide and maintain signs, flashing warning lights, barricades, markers, and other protective devices as required to conform with construction operations, protect public safety, and to keep traffic flowing with minimum restrictions.

D. Comply with State and local Municipal codes, permits and regulations.

3.04 CUTTING PAVED SURFACES

A. Where installation of pipelines, structures, and appurtenances necessitate breaking a paved surface, make cuts in a neat uniform fashion forming straight lines parallel with the edge of the excavation. Cut offsets at right angles to the edge of the excavation.

B. Protect edges of cut pavement during excavation to prevent raveling or breaking; square edges prior to pavement replacement.

3.05 EXCAVATION

A. Depth of Excavation:

1. Gravity Pipelines:

a. Excavate trenches to the depth and grade shown on the Drawings for the invert of the pipe plus that excavation necessary for placement of pipe bedding material.

b. Excavation shall provide a straight uniform grade, plus that excavation necessary for placement of pipe bedding material.

2. Structures:

a. Excavate to the minimum depth necessary to install footings, concrete slab or precast base plus that excavation necessary to place the required base material as shown on the Drawings.

3. Where unsuitable bearing material including shattered rock due to drilling or blasting operations is encountered in the bottom of the excavation, continue excavation until the unsuitable material is removed, solid bearing is obtained or can be established, or concrete/concrete cradle can be placed. If no concrete/concrete cradle is to be installed,

refill the excavation to required grade with pipe bedding/embedment or slab/base material as appropriate.

4. Where Contractor, by error or intent, excavates beyond the minimum required depth, backfill the excavation to the required depth with pipe bedding/embedment or slab/base material as appropriate at no cost to Owner.

B. Width of Excavation:

1. Gravity Pipelines:

a. Excavate trenches, including laterals, to a width necessary for placement and jointing of the pipe, and for placing and compacting pipe embedment under, around and over the pipe, but not less than 6" or more than 12" on each side of the pipe.

b. Shape trench walls completely vertical from trench bottom to at least two (2) feet above the top of the pipe.

c. For pressure pipeline fittings, excavate trenches to a width that will permit placement of concrete thrust blocks. Provide earth surfaces for thrust blocks that are perpendicular to the direction of thrust and are free of loose or soft material.

2. Structures:

a. Excavate to the minimum distance necessary for placement/installation of the footings, concrete slab, walls or prefabricated structures and to permit proper backfill procedures to be performed.

C. Length of Open Trench:

1. Limit advanced clearing and grubbing operations to a distance equal to two times the length of pipe installation that can be completed in one day.

2. Work crews and equipment for trenching, placement of pipe, plug construction, and backfilling shall be self contained and separate from work crews for clearing-grubbing and site restoration-stabilization operations.

3. Limit daily trench excavation to the length of pipe placement, plug installation and backfilling that can be completed the same day.

4. On the day following pipe placement and trench backfilling, grade the disturbed area to final contours and stabilize immediately in accordance with the seeding & mulching schedule.

3.06 SUPPORT OF EXCAVATION

A. Support excavations with sheeting, shoring, and bracing or in the case of pipeline construction, a "trench box" as required to comply with Federal and State laws and codes.

B. Install adequate excavation supports to prevent ground movement or settlement to adjacent structures, pipelines or utilities. Damage due to settlement because of failure to provide support or through negligence or fault of Contractor in any other manner, shall be repaired at Contractor's expense.

C. Withdraw shoring, bracing, and sheeting as backfilling proceeds unless otherwise directed by the

Resident Project Representative.

D. The neglect, failure or refusal of the Resident Project Representative to order the use of bracing or sheeting, or a better quality, grade, or section, or larger sizes of steel or timber, or to order sheeting, bracing, struts, or shoring to be left in place, or the giving or failure to give orders or directions as to the manner or methods of placing or driving sheetings, bracing, jacks, wales, stringers, etc., shall not in any way or to any extent relieve Contractor of any responsibility concerning the condition of excavation or of any of his obligations under the Contract, nor shall any delay, whether caused by any action or want of action on the part of Contractor, or by any act of Owner and Engineer or their agents, or employees, resulting in the keeping of an excavation open longer than would otherwise have been necessary, relieve Contractor from the necessity of properly and adequately protecting the excavation from caving or slipping, nor from any of their obligations under the Contract relating to injury of persons or property, nor entitle them to any claim for extra compensation.

3.07 CONTROL OF EXCAVATED MATERIAL

A. Keep the ground surface, within a minimum of 2' of the sides of the excavation, free of excavated material.

B. Provide temporary barricades to prevent excavated material from encroaching on private property, walks, gutters, and storm drains.

C. Maintain accessibility to all fire hydrants, valve pit covers, valve boxes, curb boxes, fire and police call boxes, and other utility controls at all times. Keep gutters clear or provide other satisfactory facilities for street drainage. Do not obstruct natural water courses. Where necessary, provide temporary channels to allow the flow of water either along or across the site of the work.

D. In areas where excavations parallel or cross streams, ensure that no material slides, is washed, or dumped into the stream course. Remove diversion structures and/or cofferdams immediately upon completion of construction within the stream.

3.08 DEWATERING

A. Keep excavations dry and free of water. Dispose of precipitation and subsurface water clear of the work.

B. Maintain pipe trenches dry until pipe has been jointed, inspected, and backfilled, and concrete work has been completed. Prevent trench water from entering pipelines under construction.

C. Intercept and divert surface drainage away from excavations. Design surface drainage systems so that they do not cause erosion on or off the site, or cause unwanted flow of water.

D. Comply with Federal and State requirements for dewatering to any watercourse, prevention of stream degradation, and erosion and sediment control.

3.09 PIPE LAYING

A. Provide required pipe bedding placed in accordance with the Drawings and Specifications (Paragraph 2.01). A minimum bedding depth of 6" shall be provided when bedding is required.

B. Shape recesses for the joints or bell of the pipe by hand. Assure that the pipe is supported on the lower quadrant for the entire length of the barrel.

C. Lay pipe as specified in the appropriate Section of these Specifications for pipeline construction.

3.10 STRUCTURE PLACEMENT/INSTALLATION

A. Provide required base material in accordance with the Drawings and Specifications (Paragraph 2.02).

3.11 BACKFILLING EXCAVATIONS

A. Pipeline Trench:

1. After pipe installation and inspection, provide material to complete the pipe embedment in accordance with the Drawings and Specifications.

2. Unless otherwise shown on the Drawings, the bedding or embedment requirements using the material noted in Paragraph 2.01 shall apply.

3. The material shall be hand-placed and carefully compacted with hand-operated mechanical tampers in layers of suitable thickness to provide specified compaction around and under the haunches of the pipe. Backfill and compact the remainder of the trench with specified backfill material in accordance with the Drawings and any relevant permit conditions. Employ a placement method so not to disturb or damage the utility line in the trench. Use of a Hydra-hammer or jumping-jack type compaction device is not permitted within two (2) feet of the utility line. A vibratory plate type compaction device and/or trench roller is acceptable. Vibratory compaction equipment or trench rollers shall be used for the lifts of coarse aggregate backfill within existing streets and paved areas. Any settlement which occurs because of consolidation of the backfill during the construction period or during the required maintenance period shall be corrected by Contractor.

B. Structure Excavation:

1. After structure installation and inspection, backfill the excavation with specified backfill material in accordance with the Drawings. Employ a placement method so not to disturb or damage foundation perimeter drainage, foundation damp proofing or water proofing and protective cover or utility lines. Backfill against supported foundation walls; backfill simultaneously on each side of unsupported foundation walls. Pipelines entering the structure must be provided with the specified bedding material hand placed and carefully compacted with hand-operated mechanical tampers in layers of suitable thickness to provide specified compaction around and under the haunches of the pipe. Use of a Hydra-hammer or jumping-jack type compaction device is not permitted within two (2) feet of a pipeline. A vibratory plate type compaction device and/or trench roller is acceptable and shall be used for the lifts of coarse aggregate backfill within existing paved areas. Any settlement which occurs because of consolidation of the backfill during the construction period or during the required maintenance period shall be corrected by Contractor.

C. Lift Thickness Limitations:

1. Lift thicknesses shall be limited to six (6) inches for pipe embedment and twelve (12) inches maximum for pipeline trenches and for structure excavations. In no case shall maximum lift thickness placed exceed the maximum limits specified by the manufacturer's recommendations for the compaction equipment to be utilized. Compaction equipment shall not be used over the pipe until sufficient backfill has been placed to ensure that such equipment will not damage or disturb the pipe.

D. Unsuitable Backfill Material and/or Compaction:

1. Where the Resident Project Representative deems backfill material to be unsuitable and rejects all or part thereof due to conditions prevailing at the time of construction, remove the unsuitable material and replace with suitable backfill material.

2. If, during progress of the Work, tests indicate that compacted materials do not meet specified requirements, remove defective material, replace and retest at no cost to Owner, as directed by the Resident Project Representative.

3.12 DISPOSAL OF EXCAVATED MATERIAL

A. Excavated material remaining after completion of backfilling shall remain the property of Contractor, removed from the construction area, and disposed of legally. Contractor shall either allow saturated soils to sufficiently dry prior to any hauling off-site or else use a sealed, watertight truck.

3.13 ROUGH AND FINE GRADING

A. Grade areas disturbed by construction to a uniform finish. Form the bases for terraces, banks, lawns and paved areas.

B. Grade areas to be paved to depths required for placing subbase and paving materials. Top surface of exposed subgrade to be plus or minus one inch.

C. Grade areas to be topsoiled and seeded to 6" below indicated finish contours.

D. Slope grade away from structures at a minimum 2 inches in 10 feet unless otherwise noted on Drawings.

3.14 RESTORATION OF UNPAVED SURFACES

A. Restore unpaved surfaces disturbed by construction to equal the surface condition prior to construction.

B. Restore grassed areas in accordance with Section 32 92 00, Finish Grading, Seeding and Sodding.

3.15 RESTORATION OF PAVED SURFACES

A. See Section 32 12 00.

END OF SECTION

SECTION 32.0116.71 - MILLING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Milling of Asphalt Paving

1.02 DESCRIPTION OF WORK

A. This work is the milling of an existing asphalt pavement surface, with specified equipment, to the specified depth.

1.03 QUALITY ASSURANCE

A. Reference Standards:

1. Pennsylvania Department of Transportation: Publication 408 Specifications

B. Perform Work in accordance with the latest edition of PennDOT Publication 408.

PART 2 PRODUCTS

Not Used

PART 3 EXECUTION

3.01 EQUIPMENT

A. Use a milling machine designed and built for this type and width of work. Provide a machine with an effective automatic grade and slope control system and having the capacity to notch and taper mill and mill concrete patches.

3.02 MILLING OPERATION

A. Mill so the finished surface is free from gouges, grooves, and ridges and is in accordance with the specified surface tolerance requirements, or as directed.

B. Pick up and move milled material, as specified, immediately after the milling operations.

C. Use care to remove the existing asphalt material around all utility facilities within the work areas.

D. Repair or replace, to the satisfaction of the utility owner, utility facilities which are damaged by the milling operation.

E. Control the rate of milling to avoid tearing, resulting in chunky and non-uniformly milled material.

F. Separate oversize and chunky milled material as directed.

G. **Apply water for dust control during milling operations and keep milled pavement surface free of all loose materials and dust.**

H. Do not allow traffic to drive on any milled surface for more than 6 calendar days. Install the overlay asphalt wearing course within 7 calendar days from the start of the milling operation.

3.03 DISPOSITION OF MILLED MATERIAL

A. Contractor shall satisfactorily dispose of the milled material.

END OF SECTION

SECTION 32.0519.13 - GEOTEXTILE

PART 1 - GENERAL

1.01 SECTION DESCRIPTION

A. This work consists of furnishing and placing a geotextile for use as a permeable separator to prevent inter-mixing of dissimilar material such as subgrades and surfaced or unsurfaced pavement materials. The geotextile shall be designed to allow passage of water while retaining in situ-soil. This specification does not address geotextiles used for reinforcement.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Fabric consisting of long chain polymeric filaments or yarns such as polyethylene, polyamide, polyvinylidene-chloride, polypropylene, or polyester formed into a stable network so that the filaments or yarns retain their relative position to each other. Use fabric structure as noted in PennDOT Pub 408, section 735, Table A. Slit film woven fabrics may only be used for Class 3 Geotextiles. Chemically- or thermally-bonded fabrics are not allowed for any class of geotextile. Use fabric inert to commonly encountered construction chemicals or substances.

PART 3 - EXECUTION

3.01 SHIPPING & STORAGE

A. The geotextile shall be kept dry and wrapped such that it is protected from the elements during shipping and storage. If stored outdoors, the geotextile shall be elevated and protected with a waterproof cover. The geotextile rolls shall be labeled in accordance with ASTM D 4873-88, “Standard Guide for Identification, Storage and Handling of Geotextiles.”

B. Protect geotextiles from temperatures greater than 140F, mud, dirt, dust and debris.

C. To the extent possible, shield the fabric from direct sunlight. At no time shall the geotextile be exposed to ultraviolet light for a period exceeding 14 days.

3.02 SITE PREPARATION

A. The installation area shall be prepared by clearing all debris or obstructions that may damage the geotextile.

3.03 GEOTEXTILE PLACEMENT

A. The geotextile shall be unrolled as smoothly as possible on the prepared subgrade and overlapped in the direction of the subbase placement. Where overlapping is necessary, geotextile shall overlap a minimum of 6” and be held in place with 6” staples.

B. Damaged geotextiles, as identified by the Engineer, shall be replaced immediately.

END OF SECTION

SECTION 32.1200 - ASPHALT PAVING

PART 1 GENERAL

1.01 SECTION DESCRIPTION

A. The Work of this Section Includes:

1. Asphalt paving of surfaces

1.02 SYSTEM DESCRIPTION

A. Paving: Designed for traffic anticipated on the asphalt surface

1.03 QUALITY ASSURANCE

A. Reference Standards:

1. Pennsylvania Department of Transportation:

a. Publication 408 Specifications
b. Publication 27 – Specification for Bituminous Mixtures (Bulletin 27)

B. Perform Work in accordance with the latest edition of PennDOT Publication 408.

C. Mixing Plant: Conform to PennDOT Bulletin 27, Chapter 1 Standards.

D. Conform to applicable Borough standards for paving work on public property.

1.04 SUBMITTALS

A. Certificates:

Submit fully signed PennDOT TR-448A certification, dated in the year material will be placed, from asphalt supplier attesting that materials conform to the State Specifications in accordance with Section 01 33 00. Asphalt design mix shall be submitted to Engineer for approval prior to work commencement. No asphalt shall be placed until Engineer has approved the design mix.

1.05 ENVIRONMENTAL REQUIREMENTS

A. Do not place asphalt when base surface temperature is less than 40 degrees F or base surface is wet or frozen.

1.06 JOB CONDITIONS

A. Restore existing paving outside the limits of the Work that is damaged by Contractor’s operations to its original condition at the expense of Contractor.

1.07 PRICE ADJUSTMENT

A. Asphalt price adjustments shall be made in accordance with PennDOT Publication 408, Section 110.04.

PART 2 PRODUCTS

2.01 PAVING MATERIALS

A. Base Course: PennDOT Superpave (Section 313 of Publication 408).

B. Wearing Course: PennDOT Superpave (Section 413 of Publication 408).

C. Tack Coat: TACK or NTT/CNTT (Section 460 of PennDOT Publication 408)

D. Joint Seal: Asphalt PG 64S-22 Sealant (Publication 408).

2.02 SUBBASE COURSE MATERIALS

A. Coarse Aggregate: PennDOT No. 2A (Section 703 of Publication 408).

2.03 PAINTING MATERIALS

A. Thermoplastic and Epoxy Pavement Markings: PennDOT Publication 408 & PennDOT Publication 35.

PART 3 EXECUTION

3.01 EXAMINATION AND PREPARATION

A. Verify gradients and elevations of area to be paved.

B. Trim existing paving with minimum one (1) foot cutbacks to remove damaged areas. Cut straight joint lines and right angle offsets.

C. Remove any temporary paving material.

D. Proofroll subgrade (10 ton roller) and replace any soft or unsuitable material with coarse aggregate. Verify compacted subgrade is dry and ready to support paving and imposed loads.

E. Apply tack coat in accordance with PennDOT Publication 408 requirements prior to placing an overlay over existing paving or prior to placing a wearing coarse over a previous placed binder course.

F. Coat surfaces of any manhole or catch basin frames with oil to prevent bond with asphalt paving.

3.02 SUBBASE COURSE

A. Place PennDOT No. 2A coarse aggregate in continuous layers not exceeding 6 inches loose depth and compact (10 ton roller) to required contours and elevations.

3.03 PLACING TACK COAT

A. Per Section 460 of PennDOT Publication 408, except delete the third paragraph and Table B entirely and add the following:

Apply undiluted emulsifies asphalt tack coat, at a rate approved by the Resident Project Representative, to leave a uniform asphalt residue application rate as specified in Table A. Identify residual application rates on the Paving Operation QC Plan and review with the Representative at the Preplacement Meeting.

TABLE A
Uniform Asphalt Residue Application Rates by Surface Type

Surface Type	Uniform Asphalt Residue Application Rate (gallons per square yard)
New Asphalt Pavement	0.02 to 0.03
Existing Asphalt Pavement	0.03 to 0.05
Milled Pavement (Asphalt & Portland Cement Concrete)	0.05 to 0.07
Portland Cement Concrete Pavement	0.04 to 0.06

3.04 PLACING ASPHALT PAVEMENT

A. Place asphalt concrete base course on surface of compacted subbase course to compacted thickness (10 ton roller where possible; minimum 5 ton roller in trenches) as shown on Drawings.

B. Place binder and wearing courses to compacted thicknesses (10 ton roller except minimum 5 ton roller for binder course in trenches) as shown on the Drawings. Apply tack coat on completed binder course before placing wearing course should there be a delay between completion of binder course and placement of wearing course.

C. Place wearing course overlay to compacted thickness (10 ton roller) as and where shown on the Drawings.

D. Compact pavement by rolling to achieve even and smooth finish, without roller marks. Hand compact in areas inaccessible to rolling equipment.

E. Where proposed asphalt paving adjoins existing asphalt paving, seal the joint with asphalt material in accordance with PennDOT Publication 408 requirements.

F. Provide painted markings where shown on Drawings and in their former location which were covered or destroyed.

3.05 TOLERANCES

A. Flatness: Maximum variation of 1/4 inch measured with 10 foot straight edge.

B. Compacted Scheduled Thickness: Within 1/4 inch of design thickness.

C. Variation from True Elevation: Within 1/2 inch.

END OF SECTION

SECTION 32 12 23 - RESTORATION OF PAVED SURFACES

PART 1 - GENERAL

1.01 SECTION DESCRIPTION

A. The Work of This Section Includes:

1. Temporary Paving
2. Permanent Paving
3. Asphalt Overlay
4. Shoulder Restoration
5. Walkway Restoration
6. Driveways
7. Concrete Curb and Gutter Repairs
8. Stormwater Inlets and Piping
9. Street Signage

B. See Drawings for specific paving cross-sections.

1.02 QUALITY ASSURANCE

A. Referenced Standards:

1. Pennsylvania Department of Transportation:

a. Publication 408 - Specifications
b. Publication 27 - Specification for Bituminous Mixtures (Bulletin 27)
c. Publication 37 - Specification for Bituminous Materials (Bulletin 25)
d. Publication 213 – Temporary Traffic Control Guidelines

1.03 SUBMITTALS

A. Certificates:

1. Submit fully signed PennDOT TR-448A certification, dated in the year material will be placed, for each asphalt mix design in accordance with Section 01 33 00. Asphalt design mix shall be submitted to Engineer for approval prior to work commencement. No asphalt shall be placed until Engineer has approved the design mix.

1.04 JOB CONDITIONS

A. Control of Traffic:

1. Take measures to control traffic during repaving operations. Do not allow traffic on repaved areas until authorized by the Resident Project Representative.

2. Employ traffic control measures in accordance with the requirements of Section 01 55 26 including pertinent permits by PennDOT and/or local municipal agencies having jurisdiction.

B. Restore existing paving outside the limits of the Work that is damaged by Contractor's operations, to its original condition at the expense of Contractor.

PART 2 - PRODUCTS

2.01 CONCRETE

A. Concrete conforming to Section 704, PennDOT Publication 408 Specifications.

1. Requirements for State approved batch plants, design computations and plant inspection shall apply. The acceptability of concrete will be based on conformance with the Cement Concrete Criteria specified in Section 704 of PennDOT Publication 408 for the required Class of concrete and the results of the specified tests.

2. Submit fully signed PennDOT TR-4221 certification, dated in the year material will be placed, for each concrete mix design in accordance with Section 01 33 00. Concrete design mix shall be submitted to Engineer for approval prior to work commencement. No concrete shall be placed until Engineer has approved the design mix.

2.02 ASPHALT PAVING MATERIALS AND AGGREGATES

A. Base Course: PennDOT Superpave (Section 313 of Publication 408).

B. Wearing Course: PennDOT Superpave (Section 413 of Publication 408).

C. Asphalt Tack Coat: Per Section 460 of PennDOT Publication 408:

D. Emulsified Asphalt, Class E-8 (AASHTO CSS-1h or SS-1h)

E. Joint Seal: Asphalt PG 64S-22 Sealant (Section 469 Publication 408).

F. Coarse Aggregate: PennDOT No. 2A (Section 703 of Publication 408).

G. The acceptability of the material will be based on conformance with the Criteria specified in PennDOT Publication 408 for the required material.

H. Cut sheets/submittals for all paving materials and aggregates shall be submitted to Engineer for approval prior to work commencement. No paving materials and/or aggregates shall be placed until Engineer has approved the material.

PART 3 - EXECUTION

3.01 TEMPORARY PAVING

A. Provide temporary paving immediately upon completion of trench backfilling. Unpaved trenches shall not remain unpaved longer than ten (10) working days after backfilling.

B. Complete trench backfill with coarse aggregate in accordance with the Drawings and Publication 408 requirements.

C. Trim existing paving with minimum one (1) foot cutbacks to remove damaged areas. Cut straight joint lines and right angle offsets.

D. Place temporary paving material consisting of bituminous concrete base course to the required depth shown on the Drawings for the entire width of the trench. Place with a maximum lift thickness of three (3) inches and compact each lift individually using a trench roller (minimum 5 ton).

E. Continuously maintain temporary paving to the satisfaction of the Resident Project

Representative and the State and local municipal road departments having jurisdiction. Temporary paving on State roads must remain in place for a minimum of ninety (90) days.

3.02 PERMANENT PAVING

A. Place bituminous concrete base course on surface of compacted subbase course to compacted thickness (10 ton roller where possible; minimum 5 ton roller in trenches) as shown on Drawings.

B. Place base and wearing courses to compacted thicknesses (10 ton roller) as shown on the Drawings. Apply tack coat, per Section 32 12 00, on completed base course before placing wearing course should there be a delay between completion of base course and placement of wearing course.

C. Place wearing course overlay to compacted thickness (10 ton roller) as and where shown on the Drawings.

D. Compact pavement by rolling to achieve even and smooth finish, without roller marks. Hand compact in areas inaccessible to rolling equipment.

E. Where proposed asphalt paving adjoins existing asphalt paving, seal the joint with Asphalt PG 64-22 Sealant in accordance with Publication 408 Specifications.

F. Replace pavement markings in their former location which were covered or destroyed.

G. Maintain permanent paving to the satisfaction of the Resident Project Representative and the local municipal and State road departments having jurisdiction throughout the Contract maintenance period.

3.03 ASPHALT OVERLAY

A. Where indicated on the Drawings, or directed by the Resident Project Representative, place an asphalt overlay.

B. Construct in accordance with Publication 408 Specifications and Drawings.

C. Replace pavement markings in their former location which were covered or destroyed.

3.04 SHOULDER RESTORATION

A. Restore shoulders in accordance with the Drawings.

3.05 WALKWAY RESTORATION

A. Reconstruct portland cement sidewalks to 4" thickness of concrete placed on a 6" layer of 2A aggregate.

B. Reconstruct portland cement sidewalks to the first joint on either side of the damaged portion. Install expansion joint material.

3.06 DRIVEWAYS

A. Trim concrete and bituminous driveway surfaces to remove damaged areas. Saw cut straight joint lines parallel to the centerline of the trench. Cut offsets at right angles to the trench centerline.

B. Restore existing portland cement concrete driveways with a 8" layer of concrete reinforced with mat of #8 grade 60 rebar at 12” on-center each way on a 6” layer of PennDOT 2B coarse aggregate.

C. Restore existing asphalt driveways which are not be altered in kind or with minimum 2" layer wearing course over 6" layer of 2A aggregate.

3.07 CONCRETE CURB AND GUTTER REPAIRS

A. Replace curbs and gutters damaged by construction to match existing.

B. Reconstruct curbs and gutters to the first expansion joint on either side of the damaged portion. Install expansion joint material.

3.08 STORMWATER INLETS AND PIPING

A. Repair or replace storm water inlets and piping damaged by construction to match existing inlets.

B. The Resident Project Representative will determine whether the frame and grate assembly of each affected storm water inlet is suitable for reuse once it has been removed by Contractor.

C. Construct or repair storm water inlets and piping in accordance with relevant section of Publication 408 Specifications.

3.09 STREET SIGNAGE

A. Reinstall any signage removed to allow for construction activities at the original location.

END OF SECTION

SECTION 32 13 13 - PORTLAND CEMENT CONCRETE PAVING

PART 1 - GENERAL

1.01 SECTION DESCRIPTION

A. The Work of This Section Includes:

1. Concrete Sidewalks/Steps
2. Concrete Curbs
3. Concrete Driveway Aprons
4. Concrete Pads

1.02 QUALITY ASSURANCE

A. Reference Standards

1. American Concrete Institute

   ACI 301, 318

2. American Society for Testing and Materials (ASTM):

   A615 Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement
   C31 Practices for Making and Curing Concrete Test Specimens in the Field
   C39 Test Method for Compressive Strength of Cylindrical Concrete Specimens
   C42 Methods of Obtaining and Testing Drilled Cores and Sawed Beams of Concrete
   C172 Method of Sampling Freshly Mixed Concrete
   C260 Specification for Air-Entraining Admixtures for Concrete
   D946 Specification for Penetration - Graded Asphalt Cement for Use in Pavement Construction

3. Pennsylvania Department of Transportation

   Publication 408 Specifications

B. Testing Laboratory

1. Compressive strength tests shall be performed by an independent testing laboratory engaged by and paid for by Owner.

1.03 SUBMITTALS

A. Certificates:

1. Submit certification from the concrete producer attesting that the concrete conforms to Section 704, Publication 408 Specifications for the class of concrete being used.
2. Submit certified results of compressive strength tests performed by an independent testing laboratory.
3. Submit a PennDOT approved Mix Design for each concrete class and use required.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Forms:

1. Forms shall be straight, free from warp and of sufficient strength to resist the pressure of concrete without springing. Forms and template which are worn, bent, warped or broken shall not be used.

2. For sidewalks, steps, pads and driveway aprons, use forms of wood or steel profiled to suit conditions.

3. For curbs, use forms of steel except for sharp curves and short tangent sections where wood forms may be used when approved by the Resident Project Representative. Metal forms shall be of approved sections and shall have a flat surface on top and wood forms shall be of a depth equal to the depth of the curb, designed to permit secure fastening of the face and back forms at the tops. These fastenings shall be constructed in a manner that will not obstruct satisfactory finishing and edging of the top of the curb but will permit removal of the inside or face forms. The outside or back forms shall be straight from top to bottom. The inside of the face forms shall have a batter from the top of the curb to the finished surface line of the pavement, as indicated on the drawings, and shall be straight from this line to the bottom.

B. Expansion Joint Filler: 1/2" thickness conforming to Section 705.1, Publication 408 Specifications.

C. Joint Sealing Material: Asphalt PG 64S-22 Sealant (Section 469 Publication 408)

D. Concrete Curing Material/Compound: Section 711.1 and 711.2(a), Publication 408 Specifications.

E. Coarse Aggregate: No. 2A per Section 703.2, Publication 408 Specifications.

F. Reinforcement Bars: ASTM A615; Grade 60, deformed billet steel bars, finish conforming to Section 709.1, Publication 408 Specifications and Bulletin 15.

G. Welded Steel Wire Fabric: Deformed type; unfinished, coiled rolls, conforming to gage and mesh size as noted on the Drawings and Sections 709.3 and 709.4, Publication 408 Specifications and Bulletin 15.

2.02 CONCRETE MIX

A. Conforming to Section 704, Publication 408 Specifications.

1. Requirements for State approved batch plants, design computations and plant inspection shall apply. The acceptability of concrete will be based on conformance with the Cement Concrete Criteria specified below and the results of the specified tests.

B. Cement Concrete Criteria:

1. All Concrete shall be as defined by PennDOT Publication 408, Section 704.

2. Submit fully signed PennDOT TR-4221 certification, dated in the year material will be placed, for each concrete mix design in accordance with Section 01 33 00. Concrete design mix shall be submitted to Engineer for approval prior to work commencement. No concrete shall be placed until Engineer has approved the design mix.

PART 3 - EXECUTION

3.01 EXAMINATION AND PREPARATION

A. Subgrade Preparation

1. Verify gradients and elevations of subgrade.
2. Soft, spongy, organic or other unsuitable material shall be removed from the subgrade and replaced with dry, firm material.
3. Compact subbase and/or subgrade to a firm unyielding surface at the required depth below the finished line and grade of the required construction work as shown on the Drawings.

B. Aggregate Placement

1. Spread aggregate on prepared subgrade to form a bed of the required depth as shown on Drawings.
2. Compact aggregate thoroughly using mechanical tamping device.

3.02 FORMING

A. Sidewalks, Steps, Pads and Driveway Aprons

1. Place and secure forms to correct location, dimension and grade in a manner to prevent settlement or displacement. Provide sufficient horizontal and vertical support.
2. Radial forms shall be used for all sidewalks with a radius of less than 250 feet.
3. Clean and treat all forms and templates with an approved material as required to prevent the concrete from adhering thereto. Oil, bituminous paper or other material which will adhere to or discolor the concrete shall not be used.
4. Form sidewalks to provide for separate slabs twenty-four (24) feet in length.
5. Place premolded expansion joint filler in joints between slabs, adjacent to existing structures, between the sidewalk and driveway apron, and between the driveway apron and concrete curb. Place premolded expansion joint material vertical in position, in straight lines for the full depth of the concrete.

B. Curbs

1. Place and secure forms to correct location, dimension and grade in a manner to prevent settlement or displacement. Provide sufficient horizontal and vertical support.
2. Clean and treat all forms and templates with an approved material as required to prevent the concrete from adhering thereto. Oil, bituminous paper or other material which will adhere to or discolor the concrete shall not be used.
3. Provide construction joints in uniform lengths not exceeding 15.5 feet except where shorter sections are necessary for closures or curves. No section shall be less than four (4) feet. Saw cut joints may be provided in lieu of hand-formed construction joints.
4. Place premolded expansion joint material, cut to conform to the cross sectional area at all structures and at the end of the day's work.

3.03 REINFORCEMENT

A. Sidewalks, Steps, Pads and Driveway Aprons

1. Place steel reinforcement at the mid-height of sidewalks and driveway aprons.

2. Interrupt reinforcement at expansion joints.

3.04 PLACING AND FINISHING CONCRETE

A. General

1. Moisten subbase/subgrade to minimize absorption of water from fresh concrete.
2. For use, proportioning, mixing and placing, and quality of concrete, follow applicable sections of ACI 318.
3. Place concrete in accordance with ACI 301 and PennDOT Publication 408.
4. Do not disturb formwork components or reinforcement during placement of concrete.
5. Place concrete continuously between predetermined joints.
6. Cure and protect exposed concrete construction as specified in Section 501.3(k), Publication 408 Specifications

B. Field Tests of Concrete During Construction

1. Test each 50 cubic yards or fraction thereof of each class of concrete for compressive strength. Retain an independent testing laboratory to test cylinders at the expense of CONTRACTOR.
    a. Sample concrete in accordance with ASTM C172. One test for slump, air entrainment and air and concrete temperature will be taken from each concrete delivery.
    b. Prepare and cure one set of four (4) test cylinders in accordance with ASTM C31.
    c. Test cylinders in accordance with ASTM C39 at the following schedule: 1 @ 7 days, 2 @ 28 days and 1 held in reserve.
    d. One additional set of test cylinders will be taken during cold weather concreting, cured on job site under same conditions as concrete it represents.
2. If test cylinders fail to meet strength requirements, the Resident Project Representative may require core tests in accordance with ASTM C42 at the expense of CONTRACTOR.

C. Sidewalks, Steps, Pads and Driveway Aprons

1. Provide slopes as indicated on the Drawings. Slope sidewalks within the right-of-way towards the roadway.
2. Finish surface to a semi-smooth condition.
3. Divide sidewalk slabs between expansion joints into blocks four (4) feet in length by scoring transversely. Divide the width of the driveway apron equally. Score the concrete around any obstructions or structures within the sidewalk area. The scoring shall consist of a block eight (8) inches wider than the maximum dimension of the structure at the sidewalk elevation. Scoring shall extend for a depth of at least one-quarter (1/4) of the thickness of the concrete slab.

D. Curbs

1. Place concrete in the forms in horizontal layers not exceeding five (5) inches and spade sufficiently to eliminate all voids. A vibrator may be used when approved by the Resident Project Representative.

2. Provide drainage openings through curb at the elevation and of the size required as shown on the Drawings or as directed by the Resident Project Representative.

3. Provide depressed curb where shown on the Drawings or as directed by the Resident Project Representative.

4. Finish top surface of the curb true to line and grade in a smooth, neat and even manner.

5. Round the edges of the face and back of the top surface of the curb to a radius of not more than 3/4 inch and 1/4 inch respectively while the concrete is still plastic.

6. Saw cut joints where construction joints have not been hand-formed. Sawing of joints shall be done as soon as practicable after the concrete has set sufficiently to preclude raveling during the sawing operation and before any shrinkage cracking occurs. The saw cut depth may be decreased at the edge adjacent to the pavement to obtain a maximum depth that will avoid damage to the pavement. Provide tooled edges on construction joints.

3.05 RESTORATION

A. Backfilling

1. Perform backfilling in accordance as required adjacent to the construction following removal of forms in such a way as to not disturb the concrete construction and in accordance with Conshohocken Borough Specifications and Design Standards and the PennDOT standards.

B. Final Grading and Seeding or Sodding

1. Perform final grading and provide seeding or sodding as noted on the Drawings.

C. Concrete Joints at Asphalt Paving

1. Sealing material shall be applied at the joint between the concrete and asphalt paving.

END OF SECTION

SECTION 32.1416.10: CLAY PAVERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Clay paver units
B. Bedding and joint/opening filler materials
C. Edge restraints
D. Geotextiles

1.02 REFERENCES

A. American Society of Testing Materials (ASTM):

1. C902 Standard Specification for Pedestrian and Light Traffic Paving Brick
2. C1272 Standard Specification for Heavy Vehicular Paving Brick
3. C136 Method for Sieve Analysis for Fine and Coarse Aggregate.
4. C67 Method of Sampling and Testing Brick and Structural Clay Tile.
5. D448 Standard Classification for Sizes of Aggregates for Road and Bridge

B. Definitions:

A. Base Course: Layer of open-graded washed aggregate beneath the bedding course comprised of small to medium particle-sized crushed stone (1/2" to 1" typ.). Recommended depth of base layer shall be 4" but shall not exceed 6".

B. Bedding Course: Commonly called the setting bed is the layer of sand directly beneath the clay paver units. Recommended depth of setting bed is 1".

C. Laying Face: The working edge of the pavement where the laying of the pavers is occurring.

D. Method Statement: The paver installer's and manufacturer's plan for construction and quality control of the pavers.

E. Sub-base Course: Layer of open-graded washed aggregate beneath the base course comprised of large particle-sized crushed stone (2-1/2" to 3" typ.). Recommended depth will vary depending on site conditions and specific water detention volume requirements. Minimum depth of sub-base course shall be 12".

F. Wearing Course: The top surface of the paver.

1.03 QUALITY ASSURANCE

A. Paver Installation Subcontractor Qualifications:

1. Utilize an installer having successfully completed clay paver installation similar in design, material and extent indicated on this project.
2. Utilize an installer holding a completion certificate from the Pave Tech School for Advanced Segmental Paving Permeable Paving Systems course or equivalent.

B. Review the manufacturers' quality control plan, paver installation subcontractor's Method Statement and Quality Control Plan with pre-construction meeting of representatives from the manufacturer, paver installer, general contractor, engineer and/or owner's representative.

1.04 SUBMITTALS

A. Submit shop or product drawings and

B. Submit clay paver product data.

1. Manufacturer's product catalog sheets with specifications.
2. Three representative full-size samples of each paver type, thickness, and color. Submit samples indicating the range of color expected in the finished installation.
3. Accepted samples become the standard of acceptance for the work of this Section.
4. Laboratory test reports certifying compliance of the clay pavers with ASTM C 902 or C1272.
5. Manufacturer's material safety data sheets for the safe handling of the specified materials and products.

C. Submit sieve analysis for grading of bedding materials per ASTM C136

D. Submit test results for compliance of paving unit requirements to ASTM C 902 or ASTM C 1272 from and independent testing laboratory.

E. Erosion and sediment control plan

F. Submit installer qualifications: provide satisfactory evidence that the installer complies with the qualifications set out in section 1.03.

1. The installer shall provide installation history, including references from projects of a similar size and complexity in writing with contact information, demonstrating to the owner's satisfaction their ability to perform the paver installation and related work indicated in the plans and specifications.
2. The installer shall have experienced personnel and a management capability to execute the work detailed in the project drawings and specifications. The installer's foreman should have a minimum of 5 years experience in the installation of unit pavers including clay pavers.

G. Schedule & Work Plan: submit a detailed schedule and work plan

1.05 MOCK-UPS

A. Install a 4 ft. x 4 ft. paver area. This area will be used to determine surcharge of the bedding layer, joint sizes, lines, laying pattern(s), color(s), and texture of the job. This area shall be the standard from which the work will be judged.

1.06 DELIVERY, STORAGE AND HANDLING

A. Deliver brick pavers to the site in steel banded, plastic banded, or plastic wrapped cubes or on pallets capable of transfer by fork lift or clamp lift. Unload pavers at job site in such a manner that no damage occurs to the product.

1.07 ENVIRONMENTAL CONDITIONS

A. Do not install bedding or pavers during heavy rain or snowfall.

B. Do not install frozen bedding.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

Clay brick pavers have spacer bars on each unit. These insure a minimum joint width between each unit in which the aggregate is placed. Spacer bars help prevent contact of the edges with adjacent pavers and subsequent chipping.

A. Clay brick pavers shall be A Grade pavers manufactured/supplied by a member of the Brick Institute of America (BIA). The BIA manufacturer/supplier shall be:
   1. Name: **PINE HALL BRICK**
      Address: P. O. Box 11044
      2701 Shorefair Drive
      Winston-Salem, NC 27116-1044 Phone: (800) 334-8689
   2. Or Approved Equal.

B. Product name/shape, overall dimensions, and thickness of the permeable clay paver units shall be:
   1. Paver Type: Beveled Edge 4X8
      a. Material Standard: Comply with ASTM C1272.
      b. Color : Color and Pattern to be chosen from available standard selections. TBD by architect to coordinate with building materials.
      c. Size: 4 inches x 8 inches x 2.25 inches thick.
   2. Or Approved Equal.

C. Pavers shall meet the following requirements set forth in ASTM C 902, Specification for Pedestrian and Light Traffic Paving Brick and shall conform to the PX standard.

   1. Minimum average compressive strength of 10,000 psi.

   2. The average cold water absorption shall not be greater than 6% with no individual unit testing greater than 7%. Absorption test results may not be achieved through the use of sealers or other products applied to the clay paver.

   3. Resistance of 50 freeze-thaw cycles, when tested in accordance with ASTM C67. In addition, the clay paver must pass CSA-A231.2 freeze thaw test in saline solution without the use of sealers or other products applied to the paver. A test report must be submitted by the manufacturer.

   4. Dimensional tolerances should meet the PX standard. In addition, the dimensional tolerances around the mean values for length, width, and depth shall be 1/16". (Studies show that dimensional tolerances are directly linked to joint width size and proper interlock.)

   5. The pavers should be solid units without core holes or other perforations.

   6. The contractor shall ensure that the manufacturer conducts a test sampling of 24 pavers every 50,000 pavers manufactured to determine the pavers compliance with dimensional and water absorption characteristics. The 24 paver sample shall be representative of the color mix in the typical finished package and chosen on a consistent basis from one kiln car.

2.02 EDGE RESTRAINTS

A. Edge restraints are required on all installations. Edge restraints are to be aluminum as specified in the drawings. Install as per manufacturer's specifications.

2.03 FILTER GEOTEXTILE

A. A PennDOT Class 4 Type A non-woven geotextile fabric shall be placed on the subgrade prior to placement of the subbase stone as shown on the Drawings.

PART 3 EXECUTION

3.01 SUBGRADE

A. The site engineer shall verify that the sub-grade has been shaped and compacted in conformance to the lines, grades and cross-sections shown on the Drawings.

3.02 EDGE RESTRAINTS

A. All edge restraints shall be constructed as shown on the plans and in place prior to the installation of the bedding course and pavers.

3.03 BEDDING COURSE

A. The bedding course shall be spread loose in a uniform layer to give a depth after compaction of the pavers of two inches, plus or minus ½". The contractor shall screed the bedding course using either a mechanical screed beam apparatus or by the use of screed guides and boards.

B. The screeded bedding sand shall not be subjected to any traffic by either mechanical equipment or pedestrian use prior to the installation of the pavers. The voids left after the removal of the screed rails shall be filled with loose aggregate as the paver bedding course proceeds.

3.04 CLAY PAVERS

A. The pavers should be installed according to the information on the cube tag. The pavers should be laid from several cubes throughout the installation.

B. Lay pavers in the pattern as shown on the drawings. Lay pavers away from the existing laying face or edge restraint in such a manner as to ensure that the pattern remains square. Chalk lines (use a heavier chalk cord) shall be used upon the bedding course to maintain straight lines.

C. Pavers should be cut according to the instructions on the cube tag. Pavers shall be cut using a table mounted masonry wet saw.

D. Once the pavers have been placed upon the bedding course and all cut pavers have been inserted to provide the complete surface, inspect the pavers for damaged units and remove and replace those units. Once all pattern lines have been straightened, the void filler shall then be placed into the paver openings to the top of the chamfer on the pavers and the surface swept broom clean.

E. The pavement surface shall be compacted to achieve consolidation of the bedding course and pavers and brought to design levels and profiles by two passes of a suitable plate compactor. Compaction of the pavers shall be accomplished by the use of a vibratory plate compactor capable of a minimum of 4,500 pounds of compaction force. No compaction shall be permitted within three feet of unrestrained edges of the pavement. After compaction, inspect the pavers for damaged units and remove and replace those units.

F. Sweep polymeric sand into joints. Follow poly sand manufacturers application methods.

G. After completing compaction, the surface tolerances shall be plus or minus ½" from finished grades. The pavers shall be flush to ½" above edge restraints. Upon completion, the pavement surface shall be swept clean of all excess materials. Remove from the site all surplus materials, equipment and debris resulting from these operations.

END OF SECTION

SECTION 32.1723.16 - EPOXY PAVEMENT MARKINGS

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. This work is the furnishing and installation of reflectorized, two-component epoxy resin pavement markings of the color indicated, with glass beads, at the locations indicated. All long line markings are to be the epoxy resin material as specified below.

PART 2 PRODUCTS

2.01 MATERIALS

A. Materials used shall be in accordance with most recent edition of PennDOT Publication 408, Section 964. All materials shall be provided from a source listed in Bulletin 15.

B. Epoxy Resin. Do not use polluting solvents or fillers.

1. Color. Furnish white and yellow pavement markings that satisfy the following chromaticity coordinates:

	1		2		3		4	
	x	y	x	y	x	y	x	y
White	0.330	0.370	0.355	0.345	0.310	0.300	0.285	0.325
Yellow	0.515	0.465	0.505	0.430	0.440	0.415	0.420	0.443

Furnish black epoxy that satisfies color chip 37038 of Federal Standard 595B and is equal to the quality of the white epoxy being used.

2. No Track Time. Dry to a no-track condition in 10 minutes or less when tested according to ASTM D 711 at a temperature of 75F ± 2F at a thickness of 20 mils ±1 mil with glass beads applied at a rate of 20 pounds per gallon of epoxy.

C. Glass beads shall conform to Section 1103.14 of PennDOT Publication 408, most recent edition.

D. Black Aggregate. Furnish with the following gradations:

Sieve Size	Retained (%)
No. 20	17 - 37
No. 30	45 - 65
No. 40	14 - 25

E. Furnish c with a copy of the manufacturer specifications for the proper mix ratios of the epoxy component, proper temperatures, proper mixing techniques, and any other necessary data to insure that the epoxy material is being properly installed.

PART 3 EXECUTION

3.01 GENERAL

A. Apply in accordance with applicable 67 Pa Code and PennDOT standards.

B. Employ traffic control measures in accordance with PennDOT Publication 213, Temporary Traffic Control Guidelines, at all times.

C. Construction shall be in accordance with PennDOT Publication 111, Traffic Control – Pavement Markings and Signing Standards

3.02 EQUIPMENT

A. Use application equipment that is capable of:

1. Spraying epoxy material mixed in the proper formulation conforming to manufacturer's requirements
2. Applying symbol markings and longitudinal lines with the specified glass bead application
3. Heating Epoxy Part A to satisfy manufacturer's recommendations
4. Heating Epoxy Part B to satisfy manufacturer's recommendations
5. Mixing Part A with Part B according to manufacturer's recommendations
6. Applying glass beads using the double drop method

B. Provide an operator for the equipment who is fully knowledgeable of all equipment operations and application techniques. Provide a pressure gauge on each proportioning pump to verify pressures. Position these gauges to be easily visible to the operator of the equipment and Resident Project Representative. Obtain from the manufacturer of the epoxy material being used, specifications for the proper mix ratios of the epoxy component, proper temperatures, proper mixing techniques, and any other data to ensure that the epoxy material is being properly installed. Furnish this information to Resident Project Representative at least 5 days before beginning work.

3.03 CONSTRUCTION

A. Surface Preparation: For proper adhesion, perform surface preparation of the road surface and provide the pretreatment according to Bulletin 15 or recommended by the manufacturer. Clean the roadway surface where the epoxy pavement markings will be applied. Remove all surface treatment, laitance, curing compound, or any contaminants that would hinder adhesion. Clear any loose dirt and other debris from the application area. Identify the location of the final pavement markings by applying spots on the pavement at 40-foot intervals. Resident Project Representative will approve the locations. Install epoxy on dry pavement only if the road surface and ambient temperatures are 40 F or higher unless otherwise approved by Resident Project Representative and acceptable to the manufacturer.

B. Before starting work, furnish four sample plates of each color of materials used. Prepare two plates with and two plates without glass beads or aggregate.

C. Uniformly apply the epoxy markings at a wet thickness of 20 mils ± 1 mil. A tolerance of ±1/4 inch from the indicated width will be allowed provided the variation is gradual and does not detract from the general appearance. For skip line patterns maintain a tolerance of ±6 inches for each 40-foot cycle and ±3 inches for each 10 foot skip line.

D. Apply glass beads immediately after application of the epoxy markings. Use the double drop method with a minimum rate of 10 pounds per gallon for Type A beads and 10 pounds per gallon for Type B beads or a total minimum of 20 pounds per gallon of epoxy. Uniformly distribute glass beads on the surface. Provide markings with an average minimum initial retroreflectivity of 250 mcd/m2/lux for white and 200 mcd/m2/lux for yellow. Under the direction and supervision of the Representative measure retroreflectivity with a 30-meter geometry

retroreflectometer conforming to ASTM E-1710 within 21 days after installation in accordance with PTM No. 431.

E. Apply black epoxy markings on Portland cement concrete. Place the black markings, flooded with black aggregate, immediately after all white skip line patterns. Use the same line dimensions for both colors.

3.04 PROTECTION OF SURFACES

A. After the application of epoxy material and glass beads, satisfactorily protect the markings from traffic for a minimum period of 30 minutes or until the epoxy has dried sufficiently to prevent dirt pick-up or tracking from vehicular traffic.

B. Defective Markings: Repaint marked or damaged areas as directed by Resident Project Representative. Remove any markings placed incorrectly and replace them as directed by Resident Project Representative. Repair those markings, which after application and drying, are determined to be defective by Resident Project Representative. Complete this work at no additional cost to Owner. Major problem areas and method of repair include the following:

1. Insufficient thickness or line width, uneven cross-section—Grind or blast clean defective material to remove a substantial amount of beads and to roughen the marking surface. Remove loose particles and debris with compressed air. Restripe the cleaned surface as specified in Section 3.03.

2. Inadequate retroreflectivity, glass bead coverage or retention—Restripe over the defective marking.

3. Poor adhesion, delaminating—Remove defective markings as specified in PennDOT Publication 408 Section 963 and clean pavement surface, including 1 foot beyond each end of the affected area. Remove loose particles and debris with compressed air. Restripe the marking on the cleaned surface as specified in Section 3.03.

C. Guarantee: Guarantee 90% of the pavement marking material against failure due to premature wear or poor adhesion resulting from materials or methods of application for a period of 180 days from the date of acceptance.

3.05 CENTERLINE APPLICATION

A. Where existing centerlines are visible and properly located, apply directly over existing pattern.

B. Where centerlines do not exist or are improperly located, apply at the correct location, as determined by Resident Project Representative. Remove the improperly placed markings as directed by Resident Project Representative in accordance with PennDOT Publication 408 Section 963.

C. On two-lane roadways, evenly divide the roadway. If a portion of the roadway on either or both sides is utilized for parking, evenly divide the traveled way.

3.06 EDGE LINE APPLICATION

A. Field check and paint roadway sections which are 20 feet or greater in width for more than 50% of their length as directed by Resident Project Representative.

END OF SECTION

SECTION 32.1723.33 - HOT THERMOPLASTIC PAVEMENT MARKINGS

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. This Work is the furnishing and installation of thermoplastic traffic lines and markings, of the indicated type and color with a surface application of glass beads. Thermoplastic pavement markings shall be used for all stop bars, gore striping, crosswalks, legends, and arrows.

PART 2 PRODUCTS

2.01 MATERIALS

A. Materials used shall be in accordance with the most recent edition of PennDOT Publication 408, Section 960. All materials shall be provided from a source listed in Bulletin 15 and conforming to AASHTO M 249.

B. Glass beads shall conform to Section 1103.14, Type A, of most recent edition of PennDOT Publication 408.

PART 3 EXECUTION

3.01 GENERAL

A. Apply in accordance with applicable 67 Pa Code and PennDOT standards.

B. Employ traffic control measures in accordance with MUTCD Chapter 6 and PennDOT Publication 213, Temporary Traffic Control Guidelines, at all times.

C. Construction shall be in accordance with PennDOT Publication 111, Traffic Control – Pavement Markings and Signing Standards

3.02 CONSTRUCTION

A. Application for Hot Thermoplastic:

1. Surface Preparation: For proper adhesion, perform surface preparation of the road surface and provide the pretreatment according to Bulletin 15 or recommended by the manufacturer. Clean the roadway surface where the hot thermoplastic pavement markings will be applied. Remove all surface treatment, laitance, curing compound, or any contaminants that would hinder adhesion. Clear any loose dirt and other debris from the application area. Identify the location of the final pavement markings by applying spots on the pavement at 40-foot intervals. The Resident Project Representative will approve the locations. Apply on dry pavement when the air and roadway temperatures are between 50F and 90F and when the wind speed is less than 20 miles per hour.

2. Thermoplastic: Uniformly apply the markings at a minimum thickness of 90 mils ± 3 mils. A tolerance of ± 1/4 inch from the specified width will be allowed provided the variation is gradual and does not detract from the general appearance. For skip line patterns maintain a tolerance of ± 6 inches for each 40-foot cycle and ± 3 inch for each 10-foot skip line.

3. Glass Beads: Apply glass beads immediately after application of the markings at a minimum rate of 10 pounds per 100 square feet of markings. Uniformly distribute glass beads on the surface. Provide markings with an average minimum initial retroreflectivity of 300 mcd/m2/lux for white. Under the direction and supervision of the Representative, measure retroreflectivity with a 30-meter geometry retroreflectometer, conforming to ASTM E-1710 within 21 days after installation in accordance with PTM No. 431.

B. Protection of Surfaces

1. Provide satisfactory protection for pavement markings for at least 30 minutes or until material has dried sufficiently to prevent dirt pick-up and tracking from vehicular traffic.

2. Defective Markings: Repaint marked or damaged areas as directed by Resident Project Representative. Remove any markings placed incorrectly and replace them as directed by Resident Project Representative or Owner. Repair those markings, which after application and drying, are determined to be defective by Resident Project Representative. Complete this work at no additional cost to Owner. Major problem areas and method of repair include the following:

   (a) Insufficient thickness or line width, uneven cross-section—Prepare defective material by grinding or blast cleaning to remove a substantial amount of beads and the marking surface is roughened. Remove loose particles and debris with compressed air. Restripe the cleaned surface as specified in Section 3.02.A.2.

   (b) Inadequate retroreflectivity, glass bead coverage or retention—Remove defective markings and clean pavement surface, including 1 foot beyond each end of the affected area. Remove loose particles and debris with compressed air. Restripe the marking on the cleaned surface as specified in Section 3.02.A.3.

3. Guarantee: Where directed, remove and replace material that has not remained within close conformity to location or has not remained effective in performing useful service for a period of 180 days from the date of acceptance. The minimum acceptable service is as follows:

   (a) Longitudinal Markings. 90% of material remains in each 1,000-foot section of marking where the intersection unit is defined as material on an approach leg within 160 feet of the intersection.

   (b) Transverse Markings, Legends, and Symbols. 90% of material remains for each individual legend, symbol, crosswalk, gore stripe or stop line.

END OF SECTION

SECTION 32.1726 - DETECTABLE WARNING SURFACE PANEL

PART 1 GENERAL

1.01 DESCRIPTION OF WORK

A. This Work is the furnishing and installation of detectable warning surface (DWS) panels on designated surfaces to provide a tactile warning for pedestrians with visual impairments in accordance with the Drawings, Contract Documents, and as directed by the Resident Project Representative.

1.02 SUBMITTALS

A. Certifications: Submit manufacturer’s written literature describing product, installation procedures, maintenance practices, and documentation indicating that DWS panel will meet or exceed Product requirements.

B. Shop drawings: Submit fabrication details, panel surface profile, fastener locations, and plans of panel placement, including joints and any field cutting.

C. Warranty: Submit manufacturer's minimum five (5) year warranty from date of final completion, including defects, breakage, and deformation.

D. Color selection shall be as approved by the Resident Project Representative.

PART 2 PRODUCTS

2.01 MATERIALS

A. DWS panel to be provided from the qualified DWS product list in the current version of PennDOT Bulletin 15 (Publication 35).

B. DWS panel shall be compliant with most recently adopted Department of Justice ADA Standards and International Code Council (ICC) A117.1 Accessible and Usable Buildings and Facilities, including related to truncated domes and slip resistant surface. Slip resistance value shall be equal to or exceed 0.8 wet/dry per ASTM C 1028.

C. DWS panel color shall contrast visually with adjacent walkway surfaces, either light-on-dark or dark-on-light, for the full width of ramp. Use of a DWS panel employing a color coating is prohibited.

PART 3 EXECUTION

3.01 INSTALLATION

A. Coordinate the DWS panel installation with the underlying sidewalk or other designated surface. Place and finish the underlying surface true and smooth to the required dimensions and slope prior to DWS panel placement. Construct notch to provide a full-thickness underlying surface under the DWS panel. For sidewalk, the notch shall be constructed in accordance with the most recent version of the Detectable Warning Surface Embedding detail of PennDOT Publication 72 RC-67.

B. Maintain a minimum temperature of 40°F in spaces to receive the DWS panel for at least 24 hours before installation, during installation, and for not less than 24 hours after

installation.

C. Perform DWS panel installation according to manufacturer's written instructions.

D. Install DWS panel such that the top of the panel (not the top of the truncated dome) is fully seated and flush with the adjacent surface.

E. Align truncated domes on the DWS panel on a square grid pattern in the predominant direction of the ramp and perpendicular to the curb. Comply with the most recent version of the Detectable Warning Surface (DWS) on Curved Surfaces detail of PennDOT Publication 72 RC-67 for installations along curved surfaces.

F. Provide a minimum 24 inch deep DWS, measured in the direction of pedestrian travel, across the full width of ramp at the grade break near the street edge. Extend the detectable warning panel across the full width of the curb ramp or flush surface.

G. Place at least one corner of the DWS panel within 6 inches minimum and 8 inches maximum from the face of curb. No other point on the leading edge of the DWS panel may be more than 60 inches from the face of curb. Where no curbs exist, place the DWS panel within 6 inches minimum to 8 inches maximum from the respective to edge of roadway.

H. Field cut the DWS panel only in accordance with the manufacturer's written instructions while maintaining compliance with the most recently adopted Department of Justice ADA Standards and International Code Council (ICC) A117.1 Accessible and Usable Buildings and Facilities for truncated dome spacing.

3.02 CLEANING AND PROTECTION

A. Package DWS panel to prevent damage in shipment and handling. Store DWS panel in a clean, dry condition and within a temperature range of 40°F – 90°F to prevent contamination or damage to the panel.

B. Protect DWS panel against damage during construction period in compliance with manufacturer's recommendations.

C. Do not allow concrete to cure on DWS panels. Clean excess concrete from DWS panel immediately following installation using a method recommended by the manufacturer.

D. Protect the surface finish of the DWS panel. Do not scratch, chip, or otherwise damage the surface.

END OF SECTION

SECTION 32.3113 - ARCHITECTURE METAL SCREENING GATES

PART 1 - GENERAL:

1.01 SECTION INCLUDES:

A. The work in this section shall include furnishing all labor, materials, equipment and appliances necessary to complete all commercial ornamental swing gates required for this project in strict accordance with this specification section and drawings.

1.02 REFERENCES:

A. Underwriters Laboratory Gate Operator Requirements (UL 325).

B. ASTM F 2200 Standard Specification for Automated Vehicular Gate Construction.

C. American Welding Society AWS D1.2 Structural Welding Code

D. ASTM F 900 Standard Specification for Industrial and Commercial Swing Gates.

1.03 SUBMITTALS:

A. Product Data:

1. Provide manufacturer's printed specifications and installation instructions.

B. Shop Drawings:

1. Supply shop drawings showing the gate system, including details of all major components to be provided.

2. Include details of gate construction, gate height, and post spacing dimensions.

C. Certifications:

1. The aluminum welders and welding process must be certified per AWSD1.2

PART 2 - PRODUCTS:

2.01 SWING GATE MANUFACTURER:

A. The swing gate shall be manufactured by PalmSHIELD, 12330 Cary Circle, La Vista, Nebraska 68128

B. Approved Substitution: All other systems must be submitted to the design team in accordance with substitution requirements as set forth in the general provisions of the specification manual for approval prior to the bid date. Products submitted after the bid date will not be approved.

C. Gate manufacturer shall provide independent certification as to the use of a documented Welding Procedure Specification and Procedure Qualification Record to insure conformance to the AWS D1.2 welding code. Upon request, Individual Certificates of Welder Qualification documenting successful completion of the requirements of the AWS D1.2 code shall also be provided.

2.02 GATE CONSTRUCTION DETAILS:

A. Model: Horizontal Louver Blade Double Drive Gate – Basis of Design.

B. Gate Frame:

1. The gate frame shall be fabricated from 6063-T52 aluminum alloy extrusions. The top member shall be a 3” x 3" x ¼” aluminum structural tube extrusion weighing not less than 3.23 lb/ft. The bottom member shall be a 3” x 3" x ¼” aluminum structural tube weighing not less than 3.23 lb/ft..
2. Vertical Members:The vertical members a 6063-T52 aluminum structureal tubet the ends of the opening portion of the frame shall be 3” x 3” x ¼” (76mm x 76mm) in the cross section weighing not less than 3.23 lb/lf (1.6kg/m).
3. All welds on the gate frame shall conform to Welding Procedure Specification and Procedure Qualification Record to insure conformance to the AWS D1.2 Structural Welding Code. All individual welders shall be certified to AWS D1.2 welding code.
4. Each gate leaf shall be provided with a minimum of two pivoting gorilla hinges to allow proper operation, and shall be connected to the gate side of the hinge by means of a minimum of two through-bolts.

C. Diagonal Bracing:

1. Diagonal "X" bracing of 1/4” diameter stainless steel cable shall be installed throughout the gate to provide additional vertical adjustment. Provide ¼” Aluminum gusset plates type 6061-T6, at each gate corner for attachment of diagonal cable bracing. Plates shall be welded to aluminum gate frame tubes.

D. Louver Reinforcing:

1. Provide ¼” x 1” aluminum flat bar ribs, Type 6061-T6, as required for louver reinforcing.

E. Posts:

1. Gate hanger posts shall be sized in accordance with gate dimensions as specified by the manufacturer. Height of the post and depth of footing shall be as specified by the engineer.

F. Lock:

1. Double gates shall have a Ultra Latch as manufactured by American Fence Company and each leaf shall have a lockable drop rod assembly for securing the gate to the adjoining surface below. Provide a galvanized steel sleeve at each drop rod to accept the drop rods.

G. The gate shall be completed by installation of approved filler as specified. The gate filler will be a architectural solid screening as defined.

1. 6” x .93 louvers of 6063-T6 aluminum alloy extrusion. Louvers shall be horizontal mounted at 2-3/8” offset spacing with ½” overlap, typical.

H. Finish:

1. Gate to be color coated with polyester powder as specified. The gate and all accessories shall be pretreated chemically by sand blasting or other acceptable method to ensure proper

coating adherence. Gate posts (to be supplied by others) shall be galvanized or coated as specified by the design team.

PART 3 - EXECUTION:

3.01 INSTALLATION:

A. Excavate, place concrete and install specified sized posts as detailed, and in accordance with approved shop drawings. Install hinges on gate frame and gateposts. Make final adjustments to maintain alignment of gate leaves. Install equipment of this section in strict accordance with the company's printed instructions unless otherwise shown on the contract drawings.

B. The gate and installation shall conform to ASTM F 900 standards for aluminum swing gates.

END OF SECTION 32.3113

SECTION 32.3119 - ARCHITECTURAL METAL ROOF SCREENING

PART 1 – GENERAL

1.1. DESCRIPTION

A. This section describes the following fence system:

1. Fixed louver modular fencing panels fabricated with extruded aluminum louvers and flat aluminum bars including extruded aluminum fence posts and aluminum louver gates. Louvered security fence and gates shall be furnished and installed as shown on the plans and specified herein, overall height of vertical louver framework shall be as indicated on the Drawings..

1.2. REQUIREMENTS

A. Furnish materials, labor, expertise and equipment necessary to complete all work specified in this section and as shown on the drawings.

B. Structural Performance: Provide product and installation capable of withstanding the effects of gravity lads and the following loads and stresses within limits and under conditions indicated.

i. Uniform pressure of 30 lbf/sq. ft. acting inward or outward.

ii. Thermal Movements resulting from a temperature change (range) of 120 degrees Fahrenheit ambient and 180 degrees Fahrenheit material surfaces.

1.3. SUBMITTALS

A. Shop drawings and manufacturer's literature: Provide specifications and construction detail drawings to substantiate quality of materials and provide details of fabrication and installation.

B. Submittals shall be in accordance with standard construction practices to include complete detailed layout of all panels, posts, and gates. Submittals shall include plan layout, elevations and section views of panels, posts and gates.

C. Certificate: manufacturer’s certification that materials meet specification requirements.

1.4. REFERENCES

A. ASTM B 209 – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

B. ASTM B 221 – Standard Specification for Aluminum and Aluminum-Ally Extruded Bars, Rods, Wire, Profiles and Tubes.

C. ASTM D3363 – Standard Test Method for Film Hardness by Pencil Test.

D. ASTM D2794 – Standard Test Method for Resistance of Organic Coatings to the Effects of Rapid Deformation.

E. ASTM B117 – Standard Practice for Operating Salt Spray Apparatus.

F. ASTM D822 – Standard Practice for Filtered Open-Flame Carbon-Arc Exposures of Paint and Related Coatings.

G. AWS D!.2 Structural Welding Code – Aluminum.

1.5. QUALITY ASSURANCE

A. Installation of fence and materials shall conform to the requirements of the fence manufacturer.

B. The fence shall be warranted from any defects in materials and workmanship for a period as specified in the relevant section of the contract documents.

PART 2 – PRODUCTS

2.1. MATERIALS

A. Louvered security fence:

1. Approved Louvered Fence System, Manufacturer:

a. “PalmSHIELD”

2. Material Descriptions:

a. Extruded Aluminum: ASTM B 221, Alloy 6063 – Temper T-6.

b. Sheet Aluminum: ASTM B211, Alloy 6063 – Temper T6.

c. Powder Coating Material Hardness: ASTM 3363 2H.

2. Louver Panel Description:

    a. Louver Panel Height: As indicated on the Drawings.

    b. Louver Panel Width: Not to exceed 6'.

    c. Louver fencing system consisting of horizontal, fixed louver, modular fence panels fabricated with extruded aluminum framing bars and supported by extruded aluminum fence posts.

    d. Extended Flange to allow for a minimum of ½ inch overlap of louvers for 100% direct visual screening.

    e. Fixed Louver Bars: 0.1250 inch thick louver with an installed profile of 2 inch X 2.873 inch tall.

    f. Vertical Framework: PalmSHIELD exclusive 4" wide x 2" deep x 1/8" tapered aluminum channel compression profile. Patent pending.

    g. Horizontal Top Cap: 4" x 3" x 1/8" aluminum channel.

    h. Horizontal Bottom Cap: 4 inch x 3 inch x 1/8" aluminum channel.

    i. Cross Bar: 1 inch x 1/8 inch aluminum flat bar.

3. Fence Posts:

    a. Panel posts shall be PalmSHIELD exclusive 4 inch deep x 3 inch wide I-Beam Post. Patent pending. extruded tubular aluminum sections with solid aluminum caps. Length as specified on the contract drawings.
        1. 5/16" double walled webbing with 5/8" wide cavity.
        2. 5/16 flanges
        3. Inner flange mechanically fastened to webbing with 3/8" stainless steel fastener.
        4. Outer flange and webbing form one extrusion.

    b. On center post spacing shall be as specified by manufacturer.

    c. All fence posts to be plated with 10" x 10" x ¾" aluminum plates with four ¾" hole for anchors.

4. Fittings and accessories: All fittings and accessories shall be stainless steel and

sized as specified by the fence manufacturer. Fence panels to be attached to posts with ¼" x 1" stainless steel screws. Panels and posts are predrilled to support level installation.

5. Anchor Bolts: Anchor bolts shall be as detailed on the Drawings and adequate to support loads based on screening height, exposures and loading.

6. Factory Finish: Aluminum fence panels, posts and gates shall receive polyester powder coating.

   a. Polyester powder coating: Electrostatically applied colored polyester powder coating heat cured to chemically bond finish to metal substrate.

   b. Color shall be as selected by Owner.

   c. Minimum hardness measured in accordance with ASTM D3363 2H.

   d. Direct impact resistance tested in accordance with ASTM D2794. Withstand 160 inch-pounds.

   e. Salt spray resistance tested in accordance with ASTM B117: No undercutting, rusting, or blistering after 500 hours in 5 percent salt spray at 95° F and 95% relative humidity after 1,000 hours, less than 3/16 inches undercutting.

   f. Weatherability tested in accordance with ASTM D822: No film failure and 88 percent gloss retention after 1 year exposure in South Florida with test panels tilted 45°.

PART 3 – EXECUTION

3.1 INSPECTION

A. Verify that final grading in fence location is completed and without irregularities which will interfere with fence installation. PalmSHIELD is designed to be installed on a level surface. Variations in height, slopes, stairs steeping shall be shown on contract drawings and on submittal drawings.

B. Field verify all fence dimensions and layout prior to commencing installation.

C. Do not commence work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install fence in accordance with manufacturer's installation instructions.

B. Install fence plumb and level. Posts are plated and mounted to top of surface.

C. Do not install bent, bowed or otherwise damaged panels. Remove damaged components from site and replace.

D. Secure fence panels with stainless with ¼" x 1" stainless steel screws to fence posts. All posts and panels will be predrilled to support level installation.

END OF SECTION 32.3119

SECTION 32.9200 - FINISH GRADING, SEEDING, AND SODDING

PART 1 - GENERAL

1.01 DESCRIPTION

A. The Work of This Section Includes, but is not limited to:
   1. Placing topsoil
   2. Soil conditioning
   3. Finish grading
   4. Seeding
   5. Sodding
   6. Maintenance

B. Restore lawn areas as specified and indicated on the Drawings.

C. Refer to Seeding and Mulching Schedule on E&S Notes Plan for seeding restoration requirements at each specific location of Work.

1.02 QUALITY ASSURANCE

A. Testing Agency:
   1. The Contractor has the option to use soil testing to justify decreasing lime and fertilizer rates. When soil testing is selected by the Contractor, the soil and soil supplement testing shall be performed by a Soils Testing Laboratory engaged and paid for by the Contractor and approved by the Engineer. Collect soil samples under the direction of the Resident Project Representative.

B. Reference Standards:
   1. Pennsylvania Department of Transportation Publication 408 Specifications, most recent edition
   2. Pennsylvania Seed Act of 1965, Act 187, as amended
   3. Agricultural Liming Materials Act of 1978, P.L. 15, No. 9 (3P.S. 132-1), as amended
   4. Pennsylvania Soil Conditioner and Plant Growth Substance Law, Act of December 1, 1977, P.L. 258, No. 86 (3P.S.68.2), as amended'
   5. Rules for Testing Seeds of the Association of Official Seed Analysts

1.03 SUBMITTALS

A. Samples:
   1. When directed, furnish three strips of sod, 4-1/2 feet long by 12" wide, laid on 3" of topsoil and tamped in place in accordance with Section 01 33 00. The samples shall be representative of the sod and workmanship to be provided.

B. Certificates:
   1. Prior to use or placement of material, submit certifications of material composition of the following for approval:
      a. Topsoil analysis
      b. Fertilizer

c. Lime
d. Seed mixture(s)

2. If soil tests are performed to justify decreased lime and fertilizer rates, submit certified soil sample analyses, including laboratory's recommend soil supplement formulation.

1.04 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Seed:

1. Deliver seed fully tagged and in separate packages according to species or seed mix. Seed which has become wet, moldy, or otherwise damaged in transit or storage will not be accepted.

B. Sod:

1. Mow sod in the field to a height of not more than 2-1/2" within 5 days prior to lifting.

2. Cut sod to a depth equal to the growth of the fibrous roots, but in no case less than 1-1/2", exclusive of grass and thatch. Do not cut sod when the ground temperature is below 32 degrees Fahrenheit.

3. Deliver sod to the project site within 24 hours after being cut and place sod within 36 hours after being cut. Do not deliver small, irregular, or broken pieces of sod.

4. During wet weather, allow sod to dry sufficiently to prevent tearing during handling and placing. During dry weather, moisten sod to ensure its vitality and to prevent dropping of the soil during handling. Sod which dries out will be rejected.

PART 2 - PRODUCTS

2.01 TOPSOIL

A. Having a pH of between 6.0 and 7.0; containing not less than 2% or more than 10% organic matter as determined by AASHTO T194.

B. Fertile friable loam, sand loam, or clay loam which will hold a ball when squeezed with the hand, but which will crumble shortly after being released.

C. Free of clods, grass, roots, or other debris harmful to plant growth.

D. Free of pests, pest larvae, and matter toxic to plants.

2.02 FERTILIZER

A. Basic Dry Formulation Fertilizer:

1. Analysis 0-20-20 as defined by the Pennsylvania Soil Conditioner and Plant Growth Substance Law.

B. Starter Fertilizer:

1. Analysis 10-5-5 or 12-6-6 as defined by the Pennsylvania Soil Conditioner and Plant Growth Substance Law.

2.03 LIME

A. Raw ground limestone conforming to Section 804.2(a), PennDOT Publication 408 Specifications.

2.04 SEED

A. Fresh, clean, dated material from the last available crop and within the date period specified, with a date of test not more than 9 months prior to the date of sowing. Percentage of pure seed present shall represent freedom from inert matter and from other seeds distinguishable by their appearance. All seeds will be subject to analysis and testing.

2.05 SEED MIXTURES

A. Temporary Seeding Specification Formula E:

100% Annual Rye Grass

B. Permanent Seeding Specification Formula B

50% Kentucky Bluegrass Mixture
30% Pennlawn Red Fescue
20% Perennial Ryegrass Mixture

2.06 INOCULANT

A. Inoculate leguminous seed before seeding with nitrogen fixing bacteria culture prepared specifically for the species.

B. Do not use inoculant later than the date indicated by the manufacturer.

C. Protect inoculated seed from prolonged exposure to sunlight prior to sowing.

D. Re-inoculate seed not sown within 24 hours following initial inoculation.

2.07 MULCHING MATERIALS

A. Mulches for seeded areas shall be one, or a combination of, the following:

1. Hay:
   a. Cured to less than 20% moisture content by weight.
   b. Contain no stems of tobacco, soybeans, or other coarse or woody material.
   c. Timothy hay or mixed clover and timothy hay.

2. Straw:
   a. Cured to less than 20% moisture content by weight.
   b. Contain no stems of tobacco, soybeans, or other coarse or woody material.
   c. Wheat or oat straw.

3. Wood Cellulose:
   a. No growth or germination inhibiting substances.
   b. Green, air dried. Packages shall not exceed 100 pounds.
   c. Requirements:

Moisture content:	12% + 3%
Organic Matter:	98.6% + 0.2% on the oven dry basis.
Ash Content:	1.4% + 0.2%
Minimum Water-Holding Capacity:	1,000%

4. Mushroom Manure:
   a. Organic origin, free of foreign material larger than 2" and substances toxic to plant growth.
   b. Organic Matter: 20% minimum
   c. Water-Holding Capacity: 120% minimum
   d. pH: 6.0

2.08 SOD

A. At least three year old, well-rooted Turf-type Tall Fescue blend sod containing a growth of not more than 10% of other grasses and clovers.

B. Free from noxious weeds such as Bermuda grass, wild mustard, crab grass, and kindred grasses.

PART 3 - EXECUTION

3.01 TIME OF OPERATIONS

A. Apply seed within the following time periods unless otherwise directed by Engineer.

• All seed mixes unless noted otherwise	March 15 to June 1 August 1 to October 15
• Formula T	March 15 to October 15
• Wetlands seed mixes	April 1 to June 15 August 16 to September 15

B. Formula T to be utilized for temporary stabilization of areas disturbed by construction may be applied anytime.

3.02 PREPARATION OF SUBGRADE

A. "Hard pan" or heavy shale:

1. Plow to minimum depth of 6".
2. Loosen and grade by harrowing, discing, or dragging.
3. Hand rake subgrade. Remove stones over 2" in diameter and other debris.

B. Loose loam, sandy loam, or light clay:

1. Loosen and grade by harrowing, discing, or dragging.
2. Hand rake subgrade. Remove rocks over 2" in diameter and other debris.

3.03 PLACING TOPSOIL

A. Replace topsoil and spread over the prepared subgrade to obtain the required depth and grade elevation. Final compacted thickness of topsoil shall not be less than 4".

B. Hand rake topsoil and remove all materials unsuitable or harmful to plant growth.

C. Do not place topsoil when the subgrade is frozen, excessively wet, or extremely dry.

D. Do not handle topsoil when frozen or muddy.

3.04 TILLAGE

A. After seed bed areas have been brought to proper compacted elevation, thoroughly loosen to a minimum depth of 4" by discing, harrowing, or other approved methods. Do not work topsoiled areas when frozen or excessively wet.

B. Liming:

1. Distribute limestone uniformly at a rate of 90 pounds per 1,000 square feet.
2. Thoroughly incorporate into the topsoil to a minimum depth of 4".
3. Incorporate as a part of the tillage operation.

C. Basic Fertilizer:

1. Distribute basic fertilizer uniformly at a rate of 25 pounds per 1,000 square feet.
2. Incorporate into soil to depth of 4" by approved methods.
3. Incorporate as part of tillage operation.

D. Liming and Fertilizer rates may be decreased if lesser rates are indicated by soil tests provided by the Contractor.

3.05 FINISH GRADING

A. Remove unsuitable material larger than 2" in any dimension.

B. Uniformly grade surface to the required contours without the formation of water pockets.

C. Rework areas which puddle by the addition of topsoil and fertilizer. Re-rake.

D. Distribute starter fertilizer at the following rates:

10-5-5: 10 pounds per 1,000 square feet.
12-6-6: 10 pounds per 1,000 square feet.

E. Incorporate starter fertilizer into the upper 1" of soil.

3.06 SEEDING

A. See E&S Plans and Section 2.05 for seed mix to be utilized.

B. Uniformly sow specified seed mix at the rate noted by seed supplier by use of approved hydraulic seeder, power-drawn drill, power-operated seeder, hand-operated seeder or by hand. Do not seed when winds are over 15 mph.

C. Upon completion of sowing, cover seed to an average depth of 1/4" by hand re-raking or approved mechanical methods.

3.07 MULCHING

A. Mulch within 48 hours of seeding.

B. Place hay and straw mulch in a continuous blanket at a minimum rate of 135 pounds per 1,000 square feet.

1. Anchor hay or straw mulch by use of twine, stakes, wire staples, paper, or plastic nets.
2. Emulsified asphalt may be used for anchorage provided it is applied uniformly at a rate not less than 31 gallons per 1,000 square yards.
3. Apply approved chemical mulch binders at the manufacturer's recommended rate.

C. Chemical mulch binders or a light covering of topsoil may be used for anchorage when the size of the area precludes the use of mechanical equipment.

D. Apply wood cellulose fiber hydraulically at a rate of 35 pounds per 1,000 square feet.

1. Incorporate as an integral part of the slurry after seed and soil supplements have been thoroughly mixed.

E. Spread mushroom manure uniformly to a minimum depth of 1/2" or to the depth indicated on the Drawings.

F. When mulch is applied to grass areas by blowing equipment, the use of cutters in the equipment will be permitted to the extent that a minimum of 95% of the mulch is 6" or more in

length. For cut mulches applied by the blowing method, achieve a loose depth in place of not less than 2".

G. When mulching by the asphalt mix method, apply the mulch by blowing. Spray the asphalt binder material into the mulch as it leaves the blower. Apply the binder to the mulch in the proportion of 1.5 to 2.0 gallons per 45 pounds of mulch.

1. Protect structures, pavements, curbs, and walls to prevent asphalt staining.

2. Erect warning signs and barricades at intervals of 50 feet or less along the perimeter of the mulched area.

3. Do not spray asphalt and chemical mulch binders onto any area within 100 feet of a stream or other body of water.

3.08 SODDING

A. Prior to sod placement, complete soil preparation or topsoiling.

B. Apply lime and fertilizer as specified. Work into the soil a minimum of 2".

C. Do not place sod when the temperature is lower than 32 degrees Fahrenheit.

D. Place sod by hand with tight joints and no overlap. Transverse joints shall be broken or staggered.

E. Place sod so that the top of the sod is flush with the surrounding grade.

F. Use of tools which damage the sod or dumping of sod from vehicles will not be permitted.

G. Water sod to the saturation point immediately after placement.

H. After watering, tamp with an approved tamper to close all joints and insure close contact between sod and sod bed. After tamping, the sod shall present a smooth, even surface free from bumps and depressions. If so directed, use a light roller, weighing not more than 65 pounds per foot of roller width to complete firming and smoothing the sod.

I. When placing sod in ditches, place the strip with the long dimension at right angles to the flow of water. At any point where water will start flowing over a sodded area, the upper edge of the sod strips shall be turned into the soil below the adjacent area and a layer of compacted earth placed over this juncture to conduct the water over the edge of the sod.

J. In ditches and on slope areas, stake each strip of sod securely with at least 1 wood stake for each 2 square feet of sod. Stakes shall be 1/2" by 1" with a length of 8" to 12". Drive stakes flush with the top of the sod, with the long face parallel to the slope contour.

3.09 MAINTENANCE OF NEWLY SEEDED AND SODDED AREAS

A. Maintenance of grass areas shall consist of watering, mowing, weeding, re-seeding and/or re-sodding, edging and repair of depressions, washouts or gullies as necessary to obtain a stabilized lawn area. Maintenance shall continue until Owner’s Representative accepts the project.

B. In the absence of rainfall, during the first week of seed or sod installation, watering shall be performed daily by the Contractor or as often as deemed necessary by the Owner’s Representative. Water must be in sufficient quantities to maintain moist soil to a depth of 4 inches. The total shall be equal to the equivalent of at least 1 inch of water per week. Watering shall continue until the stabilized lawn area is accepted. For seeded areas, bare spots, which persist after three weeks of favorable growing weather, shall be re-cultivated, re-seeded, raked and rolled. Re-seeding of bare spots shall be done as many times as necessary until an

acceptable stabilized lawn area is established. For sodded areas, bare spots shall be re-sodded until deemed acceptable. If the turf stand is not accepted by the following seeding and sod season, the Contractor shall re-seed or sod and fertilize, as necessary, the unaccepted areas at no additional charge to the Owner.

1. If lawn area provides between 40% and 90% ground coverage, overseed and fertilize using half of the rates originally applied.
2. If lawn area provides less than 40% coverage, reestablish stand following original rates and procedures.

C. Flooded, washed-out, rilled or otherwise damaged or defective areas of seeding, sod, mulch, grade, swales or berms shall be reconstructed and all grades re-established in accordance with the grade plans or other specifications or when, in the judgment of the Owner's Representative, such defects or damages are the result of poor workmanship, or failure to meet the requirements of the specifications.

D. All mowing shall be the Contractor's responsibility until final acceptance of the project. No mowing shall remove more than one-third of the grass blade length. Heavy mowing, resulting in grass piles shall be "double mowed" or the Contractor shall remove piles. Height of the grass shall be maintained between two and a half and three inches, unless otherwise specified.

E. Following are some examples of delays in final acceptance of a project:

1. Improper Grades:
   a. Low or high spots on flat or fairly level areas.
   b. Improper drainage such as, swales, low areas, rip-rapped outlets and paved areas.
   c. Washed out or rilled areas.
   d. Exposed debris.
2. Turf Grass Conditions:
   a. Poor or thin stand; improper application of sod, dead grass or sod; use of seed mixtures or sod, other than approved in specifications.
   b. Improper fertilizer application - Uneven spreading, insufficient amounts, failure to re-fertilize during extended acceptance.
   c. Persistent weeds established in turf areas.

F. Seeded areas shall be maintained by the Contractor until fully established and accepted by the Owner. Fully established grass areas shall meet the specification for 'stabilized lawn area' as noted on the Drawings.

END OF SECTION

SECTION 33.4100 - STORM DRAIN PIPE

PART 1 - GENERAL

1.01 SECTION DESCRIPTION

A. This Work is the supply and construction of storm sewer pipelines in accordance with the Drawings, Contract Documents, and as directed by the Resident Project Representative.

1.02 QUALITY ASSURANCE

A. Reference Standards:

1. Pennsylvania Department of Transportation:

Publication 408 Specifications

Publication 72 Standards for Roadway Construction

1.03 SUBMITTALS

A. Manufacturer's Literature:

1. Submit manufacturer's descriptive literature for the following items in accordance with Section 01 33 00:

- Pipe
- Pipe fittings
- Joints

2. Submit manufacturer's instructions and recommendations for the following items in accordance with Section 01 33 00

- Assembly of joints

1.04 PRODUCT DELIVERY, STORAGE AND HANDLING

A. During loading, transporting and unloading, exercise care to prevent damage to materials.

B. Do not drop pipe or fittings.

PART 2 - PRODUCTS

2.01 REINFORCED CONCRETE PIPE

A. Pipe and Fittings:

1. Section 601.2(a)3, Publication 408 Specifications

B. Joints:

1. Bell and spigot, or

2. Tongue and groove

2.02 SMOOTH LINED CORRUGATED POLYETHYLENE PIPE

A. Pipe

1. Section 601.2(a)6.d.&e., Publication 408 Specifications

2. Section 601.2(a)6.g, Publication 408 Specifications

B. Joints

1. Hancor Titeline Watertight Joints or approved equal

PART 3 - EXECUTION

3.01 PREPARATION

A. Perform trench excavation to the line and grade shown on the Drawings and as specified in Section 31 23 33.

B. Provide pipe bedding as specified in PennDOT Publication 408 for each type of pipe used. Place aggregate in a manner to avoid segregation, and compact to the maximum practical density so that the pipe can be laid to the required tolerances.

3.02 LAYING PIPE IN TRENCHES

A. Give ample notice to the Resident Project Representative in advance of pipe laying operations.

B. Lower pipe into trench using handling equipment designed for the purpose to assure safety of personnel and to avoid damage to pipe. Do not drop pipe.

C. Lay pipe proceeding upgrade with the bell or groove pointing upstream.

D. Lay pipe to a true uniform line with the barrel of the pipe resting solidly in bedding material throughout its length. Excavate recesses in bedding material to accommodate joints, fittings, and appurtenances.

E. Lay each section of pipe to form a close concentric joint with the adjoining section and to avoid offsets in the flow line.

F. Clean and inspect each pipe and fitting before joining. Align pipe with previously laid sections.

G. Assemble joints in accordance with the pipe manufacturer's instructions. Pipe joints shall consist of a preformed rubber gasket or be mortared except for interlocking style pipe and pipe joined with bands.

1. For mortared joints, mortar the lower half of the joint before placing the succeeding pipe section to bring the inner surface of the abutting pipe flush. Before placing mortar, wet the pipe with as much water as it will readily absorb. Fill the outside of bell- and-spigot pipe joints with mortar, flush with the bell end. Fill tongue-and-groove pipe joints flush with the pipe's outside surface. On the inside of the pipe, fill the lower half of the joint flush with mortar, wipe clean, and finish smoothly. For pipes of 24-inch diameter and larger, fill the joints for the entire inside periphery in the same manner.

Fill voids for lift holes with mortar after pipe is placed.

H. Check each pipe installed as to line and grade in place. Correct deviation from line and grade immediately. A deviation from the designed grade as shown on the Drawings, or deflection of pipe joints, will be cause for rejection.

I. Place and compact sufficient backfill to hold each section of pipe firmly in place as the pipe is laid.

3.03 BACKFILLING TRENCHES

A. Backfill pipeline trenches only after examination of pipe laying by the Resident Project Representative.

1. If joints are mortared, backfilling may proceed immediately only if the operation will avoid joint damage, maintain pipe in proper alignment and grade, and provide satisfactory curing conditions for mortar.

B. Backfill and compact trenches as specified in Section 31 23 33.

END OF SECTION

SECTION 33.4116 - UNDERGROUND STORMWATER MANAGEMENT SYSTEM

PART 1 - GENERAL

1.01 SECTION DESCRIPTION

A. The Work Of This Section Includes:

1. An underground stormwater management system to provide for sediment removal, enhanced groundwater recharge, and/or surface water discharge for excess flow. The underground stormwater management system involves subsurface stormwater storage units rated for use under standard load applications within a stone filled area surrounded by geotextile fabric with associated observation ports, precast inflow diversion structures, and a precast outlet control structure.

B. Acceptable Manufacturer:

1. Precast structures, and frames and covers shall be provided by a firm regularly engaged in the manufacture of such products of the types, materials and sizes required, whose products have been in satisfactory use in similar service for not less than five (5) years.

2. Associated storm sewer structure frames and grates shall be provided from a Pennsylvania Department of Transportation Bulletin 15 listed supplier for that material or approved equal as reviewed and approved by the Engineer.

3. Subsurface stormwater storage units for the Underground Dry Extended Detention Basin shall be:

a. Aquabox by ADS, Inc.
b. DC 780 Stormtech Chamber isolator row by ADS, Inc.
c. N-12 riser by ADS, Inc.
d. A substitute or “or-equal,” subject to review and approved by the Engineer.

1.04 SUBMITTALS

A. Manufacturer's Literature:

1. Submit manufacturer's descriptive literature for the following items in accordance with Section 01 33 00:

- Subsurface stormwater storage unit
- Pipe
- Pipe fittings
- Joints
- Precast inlet boxes
- Precast outlet chamber
- Coarse aggregate
- Geotextile fabric
- Manhole frame & cover
- Inlet frame & grate
- Manhole steps

2. Submit manufacturer's instructions and recommendations for the following items in accordance with Section 01 33 00

   - Assembly of joints

B. Shop Drawings:

1. Submit manufacturer’s detailed shop drawings, including layout and connection of the subsurface stormwater storage units, observation ports, connections to pipes and inflow and outflow structures, and related details.

1.05 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Subsurface stormwater storage units:

1. After fabrication, transport the units to the job site. Protect until required for installation.

2. Handle to avoid damage to surfaces, edges and corners and to avoid creation of stresses within the units.

3. Store and protect the units from rain and wind, and temperatures outside the range dictated by the manufacturer.

B. Pipe or Fittings:

1. Do not drop pipe or fittings.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Coarse Aggregate:

1. Foundation stone and embedment stone surrounding modules must be a clean, crushed, angular stone; AASHTO M43, 467, 5, 56, or 57.

B. Geotextile: per manufacturer’s recommendation(s) and Section 32.0519.13

C. Impermeable liner: 40 mil LLPDE

PART 3 - EXECUTION

3.01 EXCAVATION

A. Perform excavation and compact in conjunction with underground stormwater management system installation, to the line and grade shown on the Drawings and as specified in Section 31 23 33.

B. Locate inlet boxes, outlet chamber, and associated pipes as indicated on the Drawings.

3.02 CONSTRUCTION

A. Construct inlet structures of precast sections in compliance with the type, design and dimensions shown on the Drawings and in accordance with Publication 72.

B. Construct outlet structure of precast sections in compliance with the type design and dimensions shown on the Drawings and as specified herein.

C. Place coarse aggregate and install impermeable liner, geotextile, and in the lower portion of the underground stormwater management system to the bottom of the subsurface stormwater storage units to serve as bedding.

D. Install the subsurface stormwater storage units as shown on the Drawings and in accordance with the manufacturer's instructions.

1. Lay subsurface stormwater storage units to a true uniform line with the bottom of the units resting solidly in bedding material throughout its length. Excavate recesses in bedding material to accommodate joints, fittings, and appurtenances.

2. Lay each subsurface stormwater storage unit to form a close joint with the adjoining section and to avoid gaps.

3. Align subsurface stormwater storage units with previously laid sections in accordance with manufacturer's instructions.

4. Assemble joints in accordance with the manufacturer's instructions.

5. Check each subsurface stormwater storage unit installed as to line and grade in place. Correct deviation from line and grade immediately. A deviation from the designed grade as shown on the Drawings, or deflection of subsurface stormwater storage unit(s), will be cause for rejection.

E. Complete placement of coarse aggregate along, between, and over the piping system per manufacturer's instructions and recommendations and complete installation of impermeable liner on all sides and complete installation of impermeable geotextiles on all sides and over the bed of aggregate. This shall proceed only after examination of the subsurface stormwater storage unit installation by the Resident Project Representative.

F. Backfill area over and around the underground stormwater management system to rough grade elevations as specified in Section 31 23 33.

END OF SECTION

SECTION 33.4414 - STORM INLETS, BOXES, MANHOLES, AND ENDWALLS

PART 1 - GENERAL

1.01 SECTION DESCRIPTION

A. This Work is the supply and construction of storm inlets, boxes, manholes, and endwalls in accordance with the Drawings, Contract Documents, and as directed by the Resident Project Representative.

1.02 QUALITY ASSURANCE

A. Reference Standards:
   1. Pennsylvania Department of Transportation
      a. Publication 408 Specifications
      b. Publication 72 Roadway Construction Standards
         i. RC-31 - Endwalls
         ii. RC-39 – Storm Water Manholes
         iii. RC-45 – Inlet Tops, Grates, and Frames
         iv. RC-46 – Inlet Boxes
      c. Publication 35 (Bulletin 15) Qualified Products List for Construction

B. Acceptable Manufacturer:
   1. Precast concrete structures, inlet grates and frames, manhole frames and covers, and manhole steps, shall be supplied by a manufacturer listed in Bulletin 15 or approved equal.
   2. Galvanizing shall be from a galvanizer listed in Bulletin 15 or approved equal.

1.03 SUBMITTALS

A. Shop Drawings:
   1. Submit detailed shop drawings including reinforcing steel details in accordance with Section 01 33 00.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Precast Concrete Units:
   1. After fabrication and curing, transport the units to the job site. Protect until required for installation.
   2. Handle to avoid damage to surfaces, edges and corners and to avoid creation of stresses within the units.

PART 2 – PRODUCTS

2.01 MATERIALS

A. Coarse Aggregate Subbase: PennDOT #2A or AASHTO #8, Table C, Section 703.2, Publication 408 Specifications.

B. Brick: Section 713.1(a), Publication 408.

C. Masonry Mortar: Section 705.6(b), Publication 408

D. Malleable Iron Castings: Section 1105.2(h)2, Publication 408.

E. Ductile Iron Castings: Section 1105.2(h)3, Publication 408.

F. Structural Steel: Section 1105.2(a)3.c, Publication 408.

2.02 CONCRETE : Class AA, Section 704, Publication 408; except with a minimum 28-day compressive strength of 4,000 psi.

A. Inlets, Grates, and Frames:

1. Comply with the type, design, and dimensions shown on the Drawings and in accordance with Publication 72 (RC-45) for precast units.

B. Inlet Boxes:

1. Comply with the type, designs and dimensions shown on the Drawings and in accordance with Publication 72 (RC-46).

C. Manholes, Frames, and Covers:

1. Comply with the type, design, and dimensions shown on the Drawings and in accordance with Publication 72 (RC-39).

2. Frames and Covers shall include non-slip pattern and be inscribed as shown on the Drawings with raised letters. Letter shall have a height and width of not less than 2 inches.

D. Endwalls:

1. Comply with the type, design, and dimensions shown on the Drawings and in accordance with Publication 72 (RC-31) for precast units.

PART 3 – EXECUTION

3.01 EXCAVATION

A. Perform trench excavation to the line and grade shown on the Drawings and as specified in Section 31 23 33.

B. Location and depth of boxes and manholes as shown on the Drawings.

3.02 CONSTRUCTION

A. Provide precast concrete inlets and boxes, and manholes in compliance with the type, design and dimensions shown on the Drawings and in accordance with Publication 72 (RC-39, RC-45, and RC-46). Cast-in-place construction shall be permitted when indicated on the Drawings or at the direction of the Resident Project Representative.

1. Place precast units on a 12" coarse aggregate subbase placed in 4" layers compacted to 95% of dry weight density.

2. Construct cast-in-place units on undisturbed earth.

3. Shape bottom of inlet boxes and manholes to channel flow of water to the outlet pipe and to prevent water from standing in box.

4. Unless units are cast-in-place, use precast concrete sections or brick to adjust to grade. Mortar in place.

B. Construct endwalls of either precast units or cast-in-place construction in compliance with the type, design and dimensions shown on the Drawings and in accordance with Publication 72 (RC-31).

1. Cast-in-place endwalls shall be monolithically cast reinforced concrete units.

C. Do not permit pipes to project more than 2" into inlets. Do not expose end of pipe through faces of endwalls.

3.03 BACKFILLING

A. Backfill structures only after examination by the Resident Project Representative.

B. Perform backfilling and compaction as specified in Section 31 23 33.

END OF SECTION

SECTION 33.7119 - ELECTRICAL UNDERGROUND DUCTS, DUCTBANKS, AND MANHOLES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Conduit and duct:

1. Galvanized steel rigid metal conduit (RMC).
2. Rigid polyvinyl chloride (PVC) conduit.

B. Precast concrete manholes.

C. Cast-in-place manhole accessories.

D. Accessories:

1. Underground warning tape.

1.2 RELATED REQUIREMENTS

A. Section 03 1000 - Concrete Forming and Accessories.

B. Section 03 2000 - Concrete Reinforcing.

C. Section 03 3000 - Cast-in-Place Concrete.

D. Section 07 1113 - Bituminous Dampproofing.

E. Section 22 1006 - Plumbing Piping Specialties.

F. Section 31 2316 - Excavation.

G. Section 31 2323 - Fill: Bedding and backfilling.

1.3 REFERENCE STANDARDS

A. ANSI C80.1 - American National Standard for Electrical Rigid Steel Conduit (ERSC); 2020.

B. ASTM A48/A48M - Standard Specification for Gray Iron Castings; 2022.

C. ASTM C857 - Standard Practice for Minimum Structural Design Loading for Underground Precast Concrete Utility Structures; 2019.

D. ASTM C858 - Standard Specification for Underground Precast Concrete Utility Structures; 2019.

E. ASTM C891 - Standard Practice for Installation of Underground Precast Concrete Utility Structures; 2020.

F. ASTM C1037 - Standard Practice for Inspection of Underground Precast Concrete Utility Structures; 2016.

G. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit, Electrical Metallic Tubing, and Cable; 2014.

H. NEMA TC 2 - Electrical Polyvinyl Chloride (PVC) Conduit; 2020.

I. NEMA TC 3 - Polyvinyl Chloride (PVC) Fittings for Use with Rigid PVC Conduit and Tubing; 2021.

J. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

K. UL 6 - Electrical Rigid Metal Conduit-Steel; Current Edition, Including All Revisions.

L. UL 514B - Conduit, Tubing, and Cable Fittings; Current Edition, Including All Revisions.

M. UL 651 - Schedule 40, 80, Type EB and A Rigid PVC Conduit and Fittings; Current Edition, Including All Revisions.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide for metallic conduit, nonmetallic conduit, and manhole accessories.

C. Shop Drawings: Indicate dimensions, reinforcement, size and locations of openings, and accessory locations for precast manholes.

D. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency specified under Quality Assurance. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

E. Project Record Documents: Record actual routing and elevations of underground conduit and duct, and locations and sizes of manholes.

1.5 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience and with service facilities within 100 miles of Project.

C. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

PART 2 PRODUCTS

2.1 CONDUIT AND DUCT

A. Galvanized Steel Rigid Metal Conduit (RMC): NFPA 70, Type RMC; comply with ANSI C80.1 and list and label as complying with UL 6.

1. Manufacturers:
   a. Allied Tube & Conduit; _____: www.alliedeg.com/#sle.
   b. Republic Conduit; _____: www.republic-conduit.com/#sle.
   c. Wheatland Tube, a Division of Zekelman Industries; _____: www.wheatland.com/#sle.
   d. Substitutions: See Section 01 6000 - Product Requirements.
2. Fittings: Comply with NEMA FB 1 and list and label as complying with UL 514B; steel or malleable iron, threaded type.
   a. Manufacturers:
      1) Bridgeport Fittings Inc; _____: www.bptfittings.com/#sle.
      2) O-Z/Gedney, a brand of Emerson Electric Co; _____: www.emerson.com/#sle.
      3) Thomas & Betts Corporation; _____: www.tnb.com/#sle.
      4) Substitutions: See Section 01 6000 - Product Requirements.

B. Rigid Polyvinyl Chloride (PVC) Conduit: NFPA 70, Type PVC; comply with NEMA TC 2 and list and label as complying with UL 651; Schedule 40 unless otherwise indicated; rated for use with conductors rated 90 degrees C.

1. Manufacturers:
   a. Cantex Inc; _____: www.cantexinc.com/#sle.
   b. Carlon, a brand of Thomas & Betts Corporation; _____: www.carlon.com/#sle.
   c. JM Eagle; _____: www.jmeagle.com/#sle.
   d. Substitutions: See Section 01 6000 - Product Requirements.
2. Fittings: Comply with NEMA TC 3 and list and label as complying with UL 651.
   a. Manufacturer: Same as manufacturer of conduit to be connected.

2.2 PRECAST CONCRETE MANHOLES

A. Manufacturers:
   1. Substitutions: See Section 01 6000 - Product Requirements.

B. Description: Precast manhole designed in accordance with ASTM C858, comprising modular, interlocking sections complete with accessories.

C. Loading: ASTM C857, Class A-16.

D. Shape: Square.

E. Base Section: Include 3 inch deep x 14 inch round sump with cast sleeve, and two 1 inch ground rod openings.

F. Top Section: Include 39 inch diameter grooved opening for frame and cover.

G. Riser Casting: 6 inch, with manhole step cast into frame.

H. Frames and Covers: ASTM A48/A48M; Class 30B gray cast iron, 27 inch size, machine finished with flat bearing surfaces. Provide cover marked ELECTRIC to indicate utility.

I. Duct Entry Provisions: Single duct knockouts.

J. Duct Entry Size: 4 inch.

K. Cable Pulling Irons: Use galvanized rod and hardware. Locate opposite each duct entry. Provide watertight seal.

L. Cable Rack Inserts: Minimum load rating of 800 pounds (365 kg). Locate at ___ feet on center.

M. Cable Rack Mounting Channel: 1-1/2 x 3/4 inch steel channel, 48 inch length. Provide cable rack arm mounting slots on 1-1/2 inch centers.

N. Cable Racks: Steel channel, 1-1/2 x 3/4 x 14 inches, with fastener to match mounting channel.

O. Cable Supports: Porcelain clamps and saddles.

P. Manhole Steps: Polypropylene plastic manhole step with 1/2-inch steel reinforcement.

Q. Sump Covers: ASTM A48/A48M; Class 30B gray cast iron.

2.3 CAST-IN-PLACE MANHOLE ACCESSORIES

A. Frames and Covers: ASTM A48/A48M; Class 30B gray cast iron, 27 inch size, machine finished with flat bearing surfaces. Provide cover marked ELECTRIC to indicate utility.

B. Cable Pulling Irons: Use galvanized rod and hardware.

C. Cable Rack Inserts: Minimum load rating of 800 pounds.

D. Cable Rack Mounting Channel: 1-1/2 x 3/4 inch steel channel, 48 inch length. Provide cable rack arm mounting slots on 1-1/2 inch centers.

E. Cable Racks: Steel channel, 1-1/2 x 3/4 x 14 inches, with fastener to match mounting channel.

F. Cable Supports: Porcelain clamps and saddles.

G. Manhole Steps: Polypropylene plastic manhole step with 1/2-inch steel reinforcement.

H. Sump Covers: ASTM A48/A48M; Class 30B gray cast iron.

2.4 ACCESSORIES

A. Duct Bank Spacers: Nonmetallic; designed for maintaining conduit/duct spacing for concrete encasement in open trench installation; suitable for the conduit/duct arrangement to be installed.

1. Products:
   a. Advance Products & Systems, LLC; Duct Bank Spacers: www.apsonline.com/#sle.
   b. Substitutions: See Section 01 6000 - Product Requirements.

B. Bore Spacers: Nonmetallic; designed for maintaining conduit/duct spacing for installation within casing; furnished with roller wheels to facilitate installation, openings to facilitate grout flow, and holes for stabilization cable; suitable for the casing and conduit/duct arrangement to be installed.

1. Products:
   a. _____.
   b. Substitutions: See Section 01 6000 - Product Requirements.

C. Underground Warning Tape: Polyethylene tape suitable for direct burial.

1. Manufacturers:
   a. Brady Corporation; _____: www.bradyid.com/#sle.
   b. Brimar Industries, Inc; _____: www.brimar.com/#sle.
   c. Seton Identification Products; _____: www.seton.com/#sle.
   d. Substitutions: See Section 01 6000 - Product Requirements.

2. Foil-backed Detectable Type Tape: 3 inches wide, with minimum thickness of 5 mil, unless otherwise required for proper detection.
3. Legend: Type of service, continuously repeated over full length of tape.
4. Color:
   a. Tape for Buried Power Lines: Black text on red background.
   b. Tape for Buried Communication, Alarm, and Signal Lines: Black text on orange background.

2.5 SOURCE QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Precast Manholes: Inspect in accordance with ASTM C1037.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify routing and termination locations of duct bank prior to excavation for rough-in.

C. Verify locations of manholes prior to excavating for installation.

D. Duct bank routing is shown in approximate locations unless dimensions are indicated. Route as required to complete duct system.

E. Manhole locations are shown in approximate locations unless dimensions are indicated. Locate as required to complete ductbank system.

3.2 DUCT BANK INSTALLATION

A. Install duct to locate top of ductbank at depths as indicated on drawings.

B. Install duct with minimum slope of 4 inches per 100 feet (0.33 percent). Slope duct away from building entrances.

C. Cut duct square using saw or pipe cutter; de-burr cut ends.

D. Insert duct to shoulder of fittings; fasten securely.

E. Join nonmetallic duct using adhesive as recommended by manufacturer.

F. Wipe nonmetallic duct dry and clean before joining. Apply full even coat of adhesive to entire area inserted in fitting. Allow joint to cure for 20 minutes, minimum.

G. Install no more than equivalent of three 90-degree bends between pull points.

H. Provide suitable fittings to accommodate expansion and deflection where required.

I. Terminate duct at manhole entries using end bell.

J. Stagger duct joints vertically in concrete encasement 6 inches minimum.

K. Use suitable separators and chairs installed not greater than 4 feet on centers.

L. Band ducts together before backfilling.

M. Securely anchor duct to prevent movement during concrete placement.

N. Place concrete under provisions of Section 03 3000. Use mineral pigment to color concrete red.

O. Provide minimum 3 inch concrete cover at bottom, top, and sides of ductbank.

P. Provide two No. 4 steel reinforcing bars in top of bank under paved areas.

Q. Provide suitable pull string in each empty duct except sleeves and nipples.

R. Swab duct. Use suitable caps to protect installed duct against entrance of dirt and moisture.

3.3 PRE-CAST MANHOLE INSTALLATION

A. Excavate for manhole installation under the provisions of Section 31 2316.

B. Install and seal precast sections in accordance with ASTM C891.

C. Install manholes plumb.

D. Use precast neck and shaft sections to bring manhole cover to finished elevation.

E. Attach cable racks to inserts after manhole installation is complete.

F. Install drains in manholes and connect to site drainage system under provisions of Section 22 1006.

G. Install drains in manholes and connect to 4 inch pipe terminating in 1/3 cu yd crushed gravel bed under provisions of Section 22 1006.

H. Dampproof exterior surfaces, joints, and interruptions of manholes after concrete has cured 28 days, under provisions of Section 07 1113.

I. Backfill manhole excavation under the provisions of Section 31 2323.

3.4 CAST-IN-PLACE MANHOLE INSTALLATION

A. Excavate for manhole installation under the provisions of Section 31 2316.

B. Formwork: Form inside and outside manhole surfaces in accordance with provisions of Section 03 1000.

C. Reinforcing: Install reinforcing under the provisions of Section 03 2000.

D. Concrete: Provide air-entrained, 2000 psi compressive strength at 28 days under the provisions of Section 03 3000.

E. Shape: Square.

F. Base: Include 14 inch drain opening and two 1 inch ground rod openings. Slope to drain at 0.25 inch per foot (2 percent).

G. Top: Include 39 inch diameter opening; cast 1/2 inch rod in opening to accept ladder hook.

H. Duct Entry: Cast duct openings in walls as indicated.

I. Cable Pulling Irons: Locate opposite each duct entry.

J. Construct brick collar with 30 inch clear opening to bring cover to proper elevation.

K. Manhole Steps: Cast steps at 12 inches on center vertically.

L. Install ladder in each manhole.

M. Attach cable racks to inserts after manhole construction is complete.

N. Install drains in manholes and connect to site drainage system under provisions of Section 22 1006.

O. Install drains in manholes and connect to 4 inch pipe terminating in 0.33 cu yd crushed gravel bed under provisions of Section 22 1006.

P. Dampproof exterior surfaces, joints, and interruptions of manholes after concrete has cured 28 days, under provisions of Section 07 1113.

Q. Backfill manhole excavation under the provisions of Section 31 2323.

END OF SECTION 33.7119
